Revised Mitigation Measure 3-2

MM 3-2: To aid in the prevention of Valley Fever among construction crews on the Project site, the following shall be implemented by the Construction Contractor during all construction activities:

1. Have Tyvek™ coveralls/suits available in a range of sizes for construction worker use upon request. If used, require the worker to remove the Tyvek™ suit at the work site at the end of the day.

2. Hire crews from Los Angeles and/or Kern County populations, or other areas where Valley Fever is endemic, where possible, since it is more likely that they have been previously exposed to the fungus and are therefore immune.

3. Prior to Project construction initiation, and for any personnel additions after initial Project construction initiation, the following California Department of Public Health (CDPH) materials on Valley Fever (or the most updated materials applicable to Los Angeles County) shall be distributed to worksite supervisors:

4. Prior to Project construction initiation, and for any personnel additions after initial Project construction initiation, the following CDPH materials on Valley Fever (or the most updated materials applicable to Los Angeles County) shall be distributed to construction workers:

5. During rough grading and construction, the access way into the Project site from adjoining paved roadways shall be paved or treated with environmentally safe dust control agents.

6. Provide evidence to the Department of Regional Planning that the Project Applicant/Developer has developed a “Valley Fever Training Handout,” training, and schedule of sessions for education to be provided to all construction personnel. All evidence of the training session materials, training handout(s) and training schedule shall be submitted to the Department of Regional Planning within 24 hours of the first training session. Multiple training sessions may be conducted if different work crews will come to the Project site for different stages of construction; however, all construction personnel shall be provided training prior to beginning work. The evidence submitted to the Department of Regional Planning regarding the “Valley Fever Training Handout” and training sessions shall include the following:
   a. A sign-in sheet (to include the printed employee names, signature, and date) for all employees who attended the training session;
b. **Distribution of a written flier or brochure that includes educational information regarding the health effects of exposure to criteria pollutant emissions and Valley Fever (including the CDPH informational materials described in this mitigation measure);**
c. **Training on methods that may help prevent Valley Fever infection; and**
d. **Train employees how to use personal protective equipment, such as respiratory equipment, how to reduce exposure to pollutants, how to recognize of symptoms of Valley Fever, and to promptly report any suspected systems to a work supervisor. Training shall also emphasize the benefits of wearing Tyvek suits in relation to Valley Fever exposure and explain that such protective clothing is available upon request. Proof that the demonstration is included in the training shall be submitted to the Department of Regional Planning.**

7. **Provide construction workers separate, clean eating areas equipped with hand-washing facilities.**
8. **Require crews to use masks or half-faced respirators equipped with a minimum N-95 protection factor and that are adequate to restrict inhalation of particulates during Project clearing, grading, and excavation operations in accordance with California Division of Occupational Safety and Health regulations. Respirator equipment shall be readily available and shall be provided to employees during work.**
9. **Require employees to be medically evaluated, fit-tested, and properly trained on the use of the required masks or respirators**
10. **Provide High-Efficiency Particulate Air (HEPA) filters for heavy equipment with factory enclosed cabs capable of accepting the filters. Require contractors utilizing applicable heavy equipment to furnish proof to the Department of Regional Planning of worker training on proper use of applicable heavy equipment cabs, such as turning on air conditioning prior to using the equipment.**
11. **Provide communication methods, such as two-way radios, for use in enclosed heavy equipment cabs.**
12. **Install equipment inspection stations at each construction equipment access/egress point. Examine construction vehicles and equipment or excess soil materials and clean, as necessary before equipment is moved off-site.**
13. **When possible, position construction workers upwind or crosswind when digging a trench or performing other soil-disturbing tasks.**
14. **Prohibit smoking at the worksite outside of designated smoking areas; designated smoking areas will be equipped with hand-washing facilities.**
15. **Post Valley Fever warnings at on-site construction areas and restrict access to such areas by visitors without adequate training and respiratory protection.**
16. **Audit and enforce compliance with applicable California Occupational Safety and Health Administration health and safety standards on the jobsite.**
Revised Mitigation Measure 3-11:

MM 3-11: The Project Applicant/Developer shall be responsible for the creation of a website on the proposed Centennial community internet that provides public information in both English and Spanish regarding dust-generating activities, to be maintained and updated as appropriate throughout the Centennial Project construction period. The purpose of the website would be to enable interested parties both on- and off-site to easily access information relevant to potential Valley Fever risk, including information relevant to potential Valley Fever risks to pets, horses, and other animals that may be present at or around the Project site during construction activities. The Project Applicant/Developer shall also be responsible for the preparation and one-time distribution to surrounding communities and to all schools located in the communities of Gorman, Lebec, and Frazier Park of a notice describing the availability of this website to provide awareness of the site and its contents.
