# TABLE OF CONTENTS

## Volume I

Section	Page
Introduction.....	I-1
Executive Summary.....	ES-1
1.0 Project Description .....	1.0-1
2.0 Environmental and Regulatory Setting .....	2.0-1
3.0 Cumulative Impact Analysis Methodology.....	3.0-1
4.0 Environmental Impact Analysis.....	4.0-1
4.1 Geotechnical and Soil Resources.....	4.1-1
4.2 Hydrology.....	4.2-1
4.3 Biota.....	4.3-1
4.4 Visual Qualities.....	4.4-1

## Volume II

4.5 Traffic/Access.....	4.5-1
4.6 Noise.....	4.6-1
4.7 Air Quality.....	4.7-1
4.8 Water Service.....	4.8-1
4.9 Wastewater Disposal.....	4.9-1
4.10 Solid Waste Services.....	4.10-1
4.11 Sheriff Services.....	4.11-1
4.12 Fire Protection Services.....	4.12-1
4.13 Education.....	4.13-1
4.14 Parks and Recreation.....	4.14-1
4.15 Library Services.....	4.15-1
4.16 Agricultural Resources.....	4.16-1
4.17 Utilities.....	4.17-1
4.18 Mineral Resources.....	4.18-1
4.19 Environmental Safety.....	4.19-1
4.20 Cultural/Paleontological Resources.....	4.20-1
4.21 Floodplain Modifications.....	4.21-1
4.22 Water Quality.....	4.22-1
4.23 Global Climate Change.....	4.23-1
5.0 Project Alternatives.....	5.0-1
6.0 Significant Irreversible Environmental Changes.....	6.0-1
7.0 Growth-Inducing Impacts.....	7.0-1
8.0 List of EIR Preparers, and Organizations/Persons Consulted.....	9.0-1
9.0 References.....	10.0-1

## LIST OF APPENDICES

### Volume III

- Appendix I Initial Study/Notice of Preparation (NOP), and NOP Comment Letters  
Initial Study/Notice of Preparation (NOP)  
NOP Comment Letters
- Appendix 1.0 Project Description Documentation  
Vesting Tentative Tract Map No. 61105  
Newhall Ranch Fiscal Impact Analysis, September 2006  
Selected Exhibits and Tables from the Newhall Ranch Specific Plan
- Appendix 2.0 Specific Plan Consistency Analysis, September 20, 2010
- Appendix 3.0 Cumulative Impact Analysis Methodology  
Development Monitoring System Database
- Appendix 4.1 Geologic Reports  
Geologic Report – Fault Investigation for Airport Mesa Area, Portion of Mesas  
East VTTM 61105, Newhall Ranch  
Geologic and Geotechnical Report, Review of Vesting Tentative Tract Map 61105

### Volume IV

- Appendix 4.1 Geologic Reports (continued)  
Geologic and Geotechnical Report, Review of Vesting Tentative Tract Map 61105  
(continued)  
Geologic and Geotechnical Report – Addendum No. 1, Response to Los Angeles  
County Geologic Review Sheet  
Geologic and Geotechnical Report – Addendum No. 2, Response to Los Angeles  
County Geologic Review Sheet, January 26, 2005  
Preliminary Geologic/Geotechnical Report, Review of Utility Corridor Plans  
(30% Submittal), Utility Corridor Along Highway 126, Newhall Ranch  
WRP Site to Travel Village, Castaic, May 25, 2007  
Geologic and Geotechnical Report – Addendum No. 3, Response to Los Angeles  
County Geologic Review Sheet, September 17, 2007  
Geologic and Geotechnical Report – Addendum No. 4, Response to Los Angeles  
County Geologic Review Sheet date January 16, 2008; March 13, 2008  
Geologic and Geotechnical Report, Review Revised Vesting Tentative Tract Map  
53108, December 21, 2009

### Volume V

- Appendix 4.1 Geologic Reports (continued)  
Leighton and Associates, Inc., Geotechnical Report, Off-Site Grading for  
Proposed Southern California Edison Substation Alternatives, Responses  
to County of Los Angeles, Department of Public Works Geologic and  
Soils Engineering Review Sheets for TTM No. 61105 (Mission Village  
Project), November 26, 2007

## LIST OF APPENDICES (continued)

### Volume V (continued)

- Appendix 4.1 Geologic Reports (continued)
- Leighton and Associates, Inc., Responses to County of Los Angeles, Department of Public Works Geologic and Soils Engineering Review Sheets for Leighton's Geotechnical Report Off-Site Grading for Proposed Southern California Edison Substation Alternatives, March 11, 2008
  - Leighton and Associates, Inc., 100-Scale Grading Plan Review of Offsite Grading for Proposed Southern California Edison Substation Alternatives 1 and 2 March 2010, Vesting Tentative Tract Map 61105, County of Los Angeles March 16, 2010
  - R.T. Frankian & Associates, Evaluation of Building Setbacks, Airport Mesa (Area E1), Vesting Tentative Tract 61105, Newhall Ranch, Los Angeles County, California. October 14, 2009
  - R.T. Frankian & Associates, 100-Scale Plan Review, Revised Vesting Tentative Tract Map No. 61105, Mission Village, Newhall Ranch, December 21, 2009
  - R.T. Frankian & Associates, Response to County of Los Angeles Review Sheets and Geotechnical Plan Review, Revised Vesting Tentative Tract Map No. 61105, Mission Village, Newhall Ranch. March 30, 2010
  - Geologic/Geotechnical Report – EIR-Level Review of Preliminary Grading Study for Western Access Roads to Proposed Mission Village Development (VTTM 61105)
  - Geologic and Geotechnical Report – Review of Revised VTTM 61105 (Dated 12/21/05) for Screencheck Purposes
  - Geologic/Geotechnical Evaluation for Environmental Impact Report, Vesting Tentative Tracted Map No. 61105, March 31, 2010
  - R.T. Frankian & Associates, *Response to County of Los Angeles Review Sheets and Geotechnical Plan Review, Revised Tentative Tract Map No. 61105, Mission Village, Newhall Ranch.* April 29, 2010
- Appendix 4.2 Hydrological Reports
- Drainage Concept for Mesas VTTM 61105
  - Flood Technical Report – Santa Clara River, February 2007
  - Drainage Concept Report for Mission Village Santa Clara River Bank Protection, July 2007

### Volume VI

- Appendix 4.2 Hydrological Reports (continued)
- California Regional Water Quality Control Board, Los Angeles Region, Review of Newhall Ranch Specific Plan Subregional Stormwater Mitigation Plan Letter, May 2008
  - Request for Conditional Letter of Map Revision, July 2007
  - Balance Hydrologics, Inc., "Assessment of Potential Impacts Resulting From Cumulative Hydromodification Effects, Selected Reaches of the Santa Clara River, Los Angeles County, California," (October 2005)
  - Newhall Ranch Santa Clara River Phase I River Fluvial Study, March 2006

## LIST OF APPENDICES (continued)

### Volume VI (continued)

- Appendix 4.3 Biological Reports  
California Native Plant Society, Inventory of Rare and Endangered Plants  
California Natural Diversity Data Base  
Compliance Biology, Inc., "Results of the Focused Western Spadefoot Toad Surveys on the Mission Village Project Site" (2006)  
Entrix, Inc., "Focused Special-Status Aquatic Species Assessment – Santa Clara River, Mission Village Project, Newhall Ranch, California" (2006)  
Impact Sciences, Inc., "Oak Tree Report: Mission Village VTTM 61105 Los Angeles County, California, March 2010 update" (2010)  
Impact Sciences, Inc., "Mission Village VTTM 61105 Project Oak Tree Report, Los Angeles County, California" (2006)  
Lemons, P., "Focused California Gnatcatcher Surveys for Mission Village, Los Angeles County, California" (January 26, 2008)  
Dudek, "2007 Sensitive Plant Survey Results for the Newhall Ranch Specific Plan Area, Los Angeles County, California" (December 2007)
- Appendix 4.5 Traffic Analysis  
Mission Village Revised Traffic Impact Analysis, Austin-Foust Associates, Inc., October 2010  
Westside Roadway Santa Clarita Valley Phasing Analysis, Austin-Foust Associates, Inc., November 2006  
Westside Santa Clarita Valley Phasing Analysis for the City of Santa Clarita, Austin-Foust Associates, Inc., July 2006

### Volume VII

- Appendix 4.5 Traffic Analysis (continued)  
Caltrans EIR/EIS Excerpts  
City of Santa Clarita Department of Public Works and Los Angeles County Department of Public Works, Valencia B&T District Report Update, March 2008  
City of Santa Clarita Transportation and Engineering Services, Via Princessa Bridge and Major Thoroughfare Construction Fee District Update Report, March 2002
- Appendix 4.6 Noise Calculations  
Noise Measurement Output Data and Analysis
- Appendix 4.7 Air Quality Calculations  
SCAQMD Santa Clarita Subregional Analysis, November 2004  
Grading, Trenching, and Paving Emissions  
Building Construction Emissions  
Operational Emissions  
CO Hotspots

## LIST OF APPENDICES (continued)

### Volume VII (continued)

- Appendix 4.7 Air Quality Calculations (continued)  
Localized Significance Thresholds Analysis  
Health Risk Assessment
- Appendix 4.8 Water Service Reports  
SB 610 Water Supply Assessment  
Water Supply Assessment Mission Village Vesting Tentative Tract Map No. 061105,  
April 2010  
2005 Urban Water Management Plan  
Los Angeles Superior Court Decision on Riverpark  
Santa Barbara Superior Court Decision on West Creek  
Newhall Ranch Revised Additional Analysis, Vol VIII

### Volume VIII

- Appendix 4.8 Water Service Reports (continued)  
Nickel Water Contract Documentation  
Nickel Environmental Documentation  
The State Water Project Deliverability Reliability Report, Public Review Draft,  
November 16, 2005  
The State Water Project Deliverability Reliability Report 2005, Final April 2006  
Water Supply Contracts Between the State of California Department of Water Resources  
and CLWA including Amendment No. 18 (41,000 Acre-Feet Water Transfer)  
Valencia Water Company Water Management Program Approved November 29, 2001,  
and Related CPUC Decisions  
2002 Point of Delivery Agreement (Semitropic Groundwater Banking Program),  
February 13, 2004  
California's Groundwater Bulletin 118, Update 2003, October 2003  
CLWA Data Document Providing Economic Justification for Proposed Facility Capacity  
Fees, April 19, 2003  
2004 Santa Clarita Valley Water Report, Dated May 2005  
2005 Santa Clarita Valley Water Report, Dated April 2006  
Results of Laboratory Testing of Valencia Water Company Wells  
CH2MHill Memorandum, Effect of Urbanization on Aquifer Recharge in the Santa  
Clarita Valley, February 22, 2004  
CH2MHill Final Report, Regional Groundwater Flow Model for the Santa Clarita Valley  
(Model Development and Calibration), April 2004  
CH2MHill, Calibration Update of the Regional Groundwater Flow Model for the Santa  
Clarita Valley, Santa Clarita, California, August 2005  
CH2MHill Final Report, Analysis of Perchlorate Containment in Groundwater Near the  
Whittaker-Bermite Property, December 2004  
CH2MHill Memorandum, Analysis of Near-Term Groundwater Capture Areas for  
Production Wells Located near the Whittaker-Bermite Property,  
December 21, 2004

## LIST OF APPENDICES (continued)

### Volume IX

- Appendix 4.8 Water Service Reports (continued)
- Analysis of Groundwater Basin Yield, Upper Santa Clara River Groundwater Basin, East Subbasin, Dated August 2005
  - Analysis of Groundwater Supplies and Groundwater Basin Yield Upper Santa Clara River Groundwater Basin, East Subbasin (2009 Basin Yield Update)
  - Draft EIR – Supplemental Water Project Transfer of 41,000 Acre-Feet of State Water Project Table A Amount, Dated June 2004
  - CLWA Draft Report, Recycled Water Master Plan, May 2002 and CLWA Resolution Regarding Availability of Recycled Water, Approved May 28, 2003
  - Impact and Response to Perchlorate Contamination, Valencia Water Company Well Q2, Dated April 2005
  - Groundwater Management Plan, Santa Clara River Valley Groundwater Basin, Dated December 2003
  - Memorandum of Understanding Between the Santa Clara River Valley Upper Basin Water Purveyors and United Water Conservation District, August 2001
  - Newhall Ranch Litigation, Statement of Decision, August 1, 2000

### Volume X

- Appendix 4.8 Water Service Reports (continued)
- Slade, 2001 Update Report Hydrogeologic Conditions in the Alluvial and Saugus Formation Aquifer Systems, Dated July 2002
  - Interim Remedial Action plan, Dated December 2005
  - Valencia Water Company Letter to Impact Sciences, March 8, 2006
  - Luhdorf & Scalmanini Technical Memorandum: Evaluation of Groundwater Recharge Methods for the Saugus Formation in the Newhall Ranch Specific Plan Area, March 8, 2006
  - Luhdorf & Scalmanini Technical Memorandum: Potential Capture of Perchlorate Contamination, Valencia Water Company Wells E14-E17, April 26, 2006
  - Final Report, Reclaimed Water System Master Plan, CLWA, September 1993
  - CPUC Decision Dated November 29, 2001
  - CPUC Decision Dated October 16, 2003
  - CPUC Decision Dated August 24, 2006
  - 2003 Point of Delivery Agreement (Semitropic Groundwater Banking Program), February 13, 2004
  - CLWA Resolution Regarding Availability of Recycled Water, Approved May 28, 2003
  - CLWA Memorandum to Board of Directors, June 1, 2007
  - Monterey Settlement Agreement
  - Friends of the Santa Clara River v. Castaic Lake Water Agency*, 2003 WL 22839353 (*Friends II*)
  - DWR “News for Immediate Release,” April 18, 2006
  - DWR Notice to SWP Contractors, May 23, 2007
  - DWR Bulletin 132-04, *Management of the California State Water Project*, September 2005
  - DWR Bulletin 132-03, *Management of the California State Water Project*, December 2004
  - DWR Bulletin 132-02, *Management of the California State Water Project*, January 2004

## LIST OF APPENDICES (continued)

### Volume X (continued)

- Appendix 4.8 Water Service Reports (continued)
- DWR Bulletin 132-01, *Management of the California State Water Project*, December 2002
  - DWR Bulletin 132-06, *Management of the California State Water Project*, December 2007
  - DWR's "Notices to State Water Project Contractors" 2000 to 2006
  - Sacramento County Trial Court's Order (re: Monterey Settlement Agreement)
  - Judgment Granting Peremptory Writ of Mandate, October 25, 2002
  - DWR Brief in the 41K litigation
  - California Water Impact Network, et al. v. Castaic Lake Water Agency*, Appellate Court 2d Civil No. B177978 (Second District Court of Appeal's unpublished decision)
  - CalSim II: Simulation of Historical SWP-CVP Operations, Technical Memorandum, DWR Bay-Delta Office, November 2003
  - CalSimII Benchmark Studies
  - Musings On A Model: CalSim II In California's Water Community*, San Francisco Estuary and Watershed Science, Vol. 3, Issue 1 (March 2005), Article 1, by Inês C. Ferreira, *et al*
  - DWR letter to Mindy McIntyre, Planning and Conservation League, April 20, 2006
  - Order Granting Plaintiff's Application for Temporary Restraining Order, February 3, 2006
  - Order Granting Plaintiff's Motion for Preliminary Injunction, February 15, 2006
  - Governor Schwarzenegger's release issued July 17, 2007

### Volume XI

- Appendix 4.8 Water Service Reports (continued)
- 2006 Santa Clarita Valley Water Report, May 2007
  - 2008 Santa Clarita Valley Water Report, April 2009
  - Statement of Decision, *California Water Network v. Castaic Lake Water Agency*, Los Angeles County Superior Court No. BS098724, filed April 2, 2007 ("Chalfant Decision")
  - California Water Impact Network, Inc. v. Castaic Lake Water Agency*, Second Appellate District, Division Five, Appellate Case No. B205622
  - Castaic Lake Water Agency Litigation Settlement Agreement
  - Order Granting Joint Motion for Court Approval, Good Faith Settlement Determination and Entry of Consent Order, July 13, 2007
  - Stipulation to Dismiss Plaintiffs' Claims and Defendants' Counterclaim, August 20, 2007
  - Carollo Engineers, Treatment of Perchlorate Contaminated Groundwater from the Saugus Aquifer, TM 3 Bench and Pilot Test Results, February 2004
  - DWR's 2009 Comprehensive Water Package, Special Session Policy Bills and Bond Summary, November 2009
  - DWR's Progress on Incorporating Climate Change into Management of California's Water Resources, July 2006
  - Emissions Pathways, Climate Change, Impacts on California, Katharine Hayhoe, et al., August 24, 2004
  - Pondering a Climate Conundrum in Antarctic, *Nature*, January 13, 2002

## LIST OF APPENDICES (continued)

### Volume XI (continued)

- Appendix 4.8 Water Service Reports (continued)  
Buried Soil Cement Evaluation after 2004/05 Winter Storm, PACE, May 8, 2007  
In Hot Water: Water Management Strategies to Weather the Effects of Global Warming, NRDC, July 2007  
Minute Order and Statement of Decision for the 2005 UWMP  
Janavs Decision  
Retired Irrigated Farmland, Tentative Tract Map No. TR61105, 2008  
Valencia Water Company, Well E-15 Water Quality Compliance Monitoring Results – 2006 to 2009  
Progress Letter Report from Hassan Amini, Ph.D., Project Coordinator for AMEC Geomatrix, to DTSC, September 15, 2009  
Letter from Hassan Amini, Ph.D., Project Coordinator for AMEC Geomatrix, to DTSC, June 8, 2009  
CLWA News Release, September 14, 2009  
CLWA Memorandum from Brian J. Folsom to CLWA Board of Directors, October 1, 2009  
U.S. EPA, Perchlorate, and Region 9 Perchlorate Update  
Biological Opinion for Delta smelt, 2008

### Volume XII

- Appendix 4.8 Water Service Reports (continued)  
Biological Opinion for Chinook salmon/sturgeon  
*Natural Resources Defense Council v. Kempthorne*, 506 F.Supp.2d 322 (E.D. Cal. 2007) (“2007 Wanger decision”)  
*Pacific Coast Federation of Fishermen’s Associations, et al. v. Gutierrez, et al.*, No. 06-CV-00245-OWW-GSA (E.D. Cal. 2008) (“2008 Wanger decision”)  
NOAA/NMFS release summarizing the 2009 Biological Opinion, June 4, 2009  
DWR release responding to the 2009 Biological Opinion, June 4, 2009  
SWP Contractors release concerning litigation filed challenging the 2009 Biological Opinion, August 6, 2009  
Coalition for a Sustainable Delta/Kern County Water Agency release concerning the litigation filed challenging the 2009 BO, August 28, 2009
- Appendix 4.9 Wastewater Disposal  
Wastewater Data
- Appendix 4.10 Solid Waste Services  
Calculations Details
- Appendix 4.11 Sherriff Services  
Written correspondence from Captain Patti A. Minutello, Los Angeles County Sheriff’s Department, Santa Clarita Valley Station, November 3, 2004  
Written communication from E. Conley, Captain, Commander, Newhall Area Station, California Highway Patrol, November 14, 2004

## LIST OF APPENDICES (continued)

### Volume XII (continued)

#### Appendix 4.12 Fire Protection Services

Written correspondence, David R. Leininger, Chief, Forestry Division, Prevention Bureau, County of Los Angeles Fire Department, December 22, 2004

#### Appendix 4.13 Education

School Facilities Funding Agreement entered into between the Newhall District and Newhall on October 17, 1995

School Facilities Funding Agreement Between the Saugus Union School District and Newhall Land and Farming Company, Effective February 18, 1997

School Facilities Funding Agreement Between the William S. Hart Union High School District and The Newhall Land and Farming Company, Effective October 1998

Facilities Mitigation and Funding Agreement By and Between Newhall Land Development, LLC, and the Newhall School District, December 1, 2009

Agreement for the Advancement of School Facilities Funds to the Saugus Union School District by the Newhall Land and Farming Company, Effective October 17, 2000

School Facilities Funding Agreement entered into between the Newhall District and Newhall Land and Farming Company (Newhall School Funding Agreement), Effective January 22, 2010

Student Generation Calculations

#### Appendix 4.15 Library Services

Written correspondence from Malou Rubio, Head, Staff Services, County of Los Angeles Public Library, Library Headquarters, August 11, 2004

Written correspondence from Malou Rubio, Head, Staff Services, County of Los Angeles Public Library, Library Headquarters, June 28, 2004

E-mail correspondence from Malaisha Hughes, County of Los Angeles Public Library, Library Headquarters, January 21, 2005

Library Calculations

### Volume XIII

#### Appendix 4.19 Environmental Safety

Phase I Environmental Site Assessment of Proposed The Mesas East, Valencia, California  
Phase I Environmental Site Assessment of Entrada Development Tract Map No. 53295, Henry Mayo Drive and The Old Road, Valencia, California, March 2007 (part 1)

### Volume XIV

#### Appendix 4.19 Environmental Safety (continued)

Phase I Environmental Site Assessment of Entrada Development Tract Map No. 53295, Henry Mayo Drive and The Old Road, Valencia, California, March 2007 (part 2)

Phase I Environmental Site Assessment of Entrada Development Tract Map No. 53295, Henry Mayo Drive and The Old Road, Valencia, California, March 2007 (part 3)

## LIST OF APPENDICES (continued)

### Volume XV

- Appendix 4.19 Environmental Safety (continued)  
Phase I Environmental Site Assessment of Entrada Development Tract Map No. 53295,  
Henry Mayo Drive and The Old Road, Valencia, California, March 2007 (part 4)  
Phase I Environmental Site Assessment of Parcel Map No. 060678, Highway 126,  
Valencia, California, September 2005 (part 1)

### Volume XVI

- Appendix 4.19 Environmental Safety (continued)  
Phase I Environmental Site Assessment of Parcel Map No. 060678, Highway 126,  
Valencia, California, September 2005 (part 2)  
Phase I Environmental Site Assessment of Parcel Map No. 060678, Highway 126,  
Valencia, California, September 2005 (part 3)

### Volume XVII

- Appendix 4.19 Environmental Safety (continued)  
Phase I Environmental Site Assessment of Legacy Village Development Tract Map  
VTTM 061996, Valencia, California, March 2007

### Volume XVIII

- Appendix 4.19 Environmental Safety (continued)  
Phase II Subsurface Investigation of Water Quality Basins, Entrada ME073-02 Basins,  
Valencia, California, September 2006  
BA Environmental, *Phase I Environmental Site Assessment of River Village Tentative Tract  
Map No. 53108, Highway 126, Newhall Ranch, California, September 27, 2004*  
BA Environmental, *Phase I Environmental Site Assessment Addendum Letter of Proposed  
Water Tank Locations and Utility Corridor Easements Associated with the proposed  
River Village Development, Tentative Tract Map No. 53108, Highway 126, Newhall  
Ranch, California, September 28, 2004*  
BA Environmental, Phase I Environmental Site Assessment of Proposed SCE Substation  
Site and Soil Disposal Site, Valencia, California, May 2010
- Appendix 4.20 Cultural Resources  
Phase I Archaeological Survey of the West Ranch Area  
Backhoe Testing Near the Asistencia de San Francisco
- Appendix 4.21 Floodplain Modifications  
PACE, Mission Village Flood Technical Report  
ENTRIX, Focused Special-Status Aquatic Species Assessment

## LIST OF APPENDICES (continued)

### Volume XIX

- Appendix 4.21 Floodplain Modifications (continued)  
Geosyntec Consultants, "Newhall Ranch Specific Plan Sub-Regional Stormwater Mitigation Plan" (April 2008)  
Pacific Advanced Civil Engineering, Inc., "Newhall Ranch River Fluvial Study Phase 1, Final Draft" (March 2006; 2006a)  
Pacific Advanced Civil Engineering, Inc., "Newhall Ranch River Fluvial Study Phase 2" (January 2008)  
Philip Williams and Associates, Ltd., "Newhall Ranch Tributary Channel Design Guidelines" (November 20, 2008)

### Volume XX

- Appendix 4.22 Water Quality  
Mission Village Water Quality Technical Report, March 2010  
Geosyntec, Newhall Ranch Specific Plan Sub-Regional Stormwater Mitigation Plan, April 2008
- Appendix 4.23 Global Climate Change  
ENVIRON, Climate Change Technical Report: Mission Village, August 2010  
GSI Water Solutions, Inc., "Technical Memorandum Regarding Potential Effects of Climate Change on Groundwater Supplies for Newhall Ranch Specific Plan, Santa Clarita Valley, California," March 18, 2008  
Mission Village Sustainability Overview, 2010  
Global Climate Change and Its Effects on Sensitive Biological Resources, July 2010  
Global Climate Change and Its Effects on California Water Supplies, July 2010
- Appendix 5.0 Project Alternatives  
Emissions Calculations

**APPENDIX I**

---

**Initial Study/Notice of Preparation (NOP), and NOP Comment Letters**

---

**Initial Study/Notice of Preparation (NOP)**

# Los Angeles County Department of Regional Planning

*Planning for the Challenges Ahead*

## NOTICE OF PREPARATION

James E. Hartl, AICP  
Director of Planning

### **"The Mission Village Project" (Part of the Newhall Ranch Specific Plan)**

**County Project No. 04-181  
Vesting Tentative Tract Map 061105  
Oak Tree Permit No. ROAK200500032  
Conditional Use Permit No. RCUP200500080  
Conditional Use Permit No. RCUP200500081  
Parking Permit No. RPK200500011  
Modification for Reduced Setbacks-Village Center  
Hillside Review**

The County of Los Angeles will be the lead agency and will prepare an Environmental Impact Report (EIR) for the project identified above, pursuant to the California Environmental Quality Act (CEQA). In compliance with Section 15082 of the *CEQA Guidelines*, the County of Los Angeles is sending this Notice of Preparation (NOP) to responsible agencies, interested parties, and other public agencies, which may be involved in approving or permitting the project. Within 30 days after receiving the NOP, each agency shall provide the County of Los Angeles with specific details about the scope and content of the environmental information to be contained in the EIR related to that agency's area of statutory responsibilities.

The purpose of this NOP is to solicit the views of your agency as to the scope and content of the environmental information germane to your agency's statutory responsibilities in connection with the proposed project. Your agency may need to use the EIR prepared by our agency when considering your permit or other approval for the project.

### PROJECT LOCATION

The Mission Village project is located on the eastern edge of Newhall Ranch Specific Plan area south of State Route 126 (SR-126) and west of Interstate 5 (I-5), directly west of Six Flags Magic Mountain theme park, located in western unincorporated Los Angeles County (see Regional Map, Vicinity Map).

The Specific Plan identifies the five distinct “Villages” within the Specific Plan boundaries: Riverwood, Oak Valley, Potrero Valley, Long Canyon, and Mesas. The proposed “Mission Village” project is the eastern portion of the Mesas Village as defined in the approved Newhall Ranch Specific Plan. Project acreage is approximately 1,252 acres, 38.1 acres of which are located outside of the Newhall Ranch Specific Plan boundary.

## **PROJECT DESCRIPTION**

The proposed project consists of single-family and multi-family residences (including condominiums, duplexes and apartments), mixed-use/commercial development, an elementary school, parks, open space, and a recreational center. Other land uses within the proposed project include open space, containing a San Fernando Valley Spineflower Preserve in the northeastern quadrant of the site. Facilities and infrastructure proposed to support the proposed project consist of roads (including the Commerce Center Drive Bridge and the extension of Magic Mountain Parkway west of its current terminus), trails, drainage improvements and flood protection (including buried bank stabilization within the Santa Clara River), potable and reclaimed water systems (including water tanks), and a sanitary sewer system (see **Tentative Tract Map**). A utility easement is located adjacent to SR-126 and the Santa Clara River that would accommodate utilities (electric, water, gas) necessary to serve the project.

The project is proposing a total of 5,331 residences (i.e., 500 single-family homes with 73 second units, 197 zero-lot-line homes, and 4,634 multi-family units), 1,299,000 million square feet of commercial/mixed uses, an elementary school (9 acres), parks (25.2 acres), public and private recreational facilities, trails, and other roads improvements.

Consistent with the *State CEQA Guidelines*, the Los Angeles County Department of Regional Planning has prepared an Initial Study and determined that a project Draft EIR is required for the Mission Village project. The Draft EIR for the Mission Village project (VTTM 061105) will be tiered to the previously certified Program EIR (SCH No. 1995011015) for the Newhall Ranch Specific Plan and Water Reclamation Plant (WRP) in accordance with Public Resources Code 21093(a) and *State CEQA Guidelines* §15168(c). This EIR will concentrate on site-specific issues, and will incorporate by reference the appropriate discussions and analysis contained in the Program EIR (*State CEQA Guidelines* §15385). Through a combination of project review during the preparation of the Initial Study, incorporation of previously specified mitigation measures identified in the Program EIR, the EIR will focus on the project-specific issues relating to the Mission Village project.

## DISCRETIONARY ACTIONS REQUESTED

- **Vesting Tentative Tract Map No. 061105** to subdivide 1,252-acre property into 1,054 lots, including 697 single-family lots (500 detached single-family and 197 zero lot line), 32 multi-family lots for condominiums, and 10 mixed-use/commercial lots. Additional lots will be created for open space, roadway development, and utility purposes as summarized in **Table 1** on the following page.
- **Oak Tree Permit (ROAK200500032)** for the removal of 219 of the 722 oaks trees located on site in addition to 12 off-site trees associated with the westerly extension of Magic Mountain Parkway.
- **Conditional Use Permit (RCUP200500080)** for impacts to the SEA 23/River Corridor Special Management Area (SMA). The SEA 23/River Corridor SMA impacts result from bank stabilization and infrastructure construction. Development within the SEA 23/River Corridor SMA includes a sewer line connecting the Mission Village project to the adjacent River Village project (VTTM 53108), pending review; overhanging utility lines on Commerce Center Drive Bridge; and bank stabilization at the proposed community park alongside the Santa Clara River. The CUP is also requested to permit construction of 73-second units in the low-density, single-family planning areas. The Mission Village EIR will analyze off-site improvements that are required to accommodate a utility easement adjacent to SR-126 and the Santa Clara River necessary to provide services to the site.
- **Conditional Use Permit (RCUP200500081)** This CUP will also cover grading and water tanks proposed outside of the Specific Plan boundary.
- **Parking Permit (RPKP200500011)** is required for off-site reciprocal parking within portions of the multi-family areas. Under the proposed project, visitor or guest parking for the residential uses located south of Magic Mountain Parkway would be provided as joint-use or shared parking on private streets located adjacent to the residential uses.
- **Modification for Reduced Setbacks in the Village Center area.** The setback requirement for the front/rear and side yard is 10 feet according to the approved Specific Plan. However, Section 5.2 (2) (h) of the Newhall Ranch Specific Plan allows development standards such as setbacks to be modified at the discretion of Planning Director. The modification request is to reduce the 10-foot front and rear yard setbacks to a variable 0-8 feet in the Village Center (i.e., condominium and apartments) area of the Mission Village project.
- **Hillside Review** is required through a Substantial Conformance finding with the Section 5.2(2)(16) Grading and Hillside Management Guidelines set forth in the adopted Newhall Ranch Specific Plan.

**Table 1**  
**Mission Village Statistical Summary**

Land Use	Area (gross acres)	Lots	Lot Sizes or Square Footage	Total Units or Square Footage	Density (du/acre or FAR)
<b>Residential</b>

FAR = floor area ratio      du = dwelling unit

\* = second units      ac = acres

**POTENTIAL ENVIRONMENTAL EFFECTS**

Pursuant to *State CEQA Guidelines* §15063, the Los Angeles County Department of Regional Planning prepared an Initial Study (see attached Initial Study) and determined that a project EIR is required. The Initial Study provides a preliminary analysis of the potential environmental effects to be analyzed in the Mission Village EIR. The Initial Study determined that the Mission Village project may have potentially significant effects relative to various environmental categories. For example, the geotechnical analysis will include analysis of landslides, soil stability, and earthquake shaking. The flood analysis will include flooding potential given the proximity of the site to the Santa Clara River and project water runoff quantities. The fire analysis will examine the location of the site within Fire Zone 4, and the noise analysis will estimate the noise generated by the project. The water resources section will examine the

availability of water to serve the site; the air quality analysis will examine the air emissions generated by the project, and the biota section will examine impacts of the project to sensitive habitat and threatened, endangered, and sensitive species. The cultural resources analysis will examine how sensitive archaeological or cultural resources are treated; the mineral resources section will examine project impacts on such resources; the agricultural resources section will examine the removal of agricultural uses from the project site, and the visual resources section will provide "before and after" simulations of common viewsheds of the project site. The traffic/access analysis will examine the number of traffic trips generated by the project and how roadways would be able to accommodate the additional traffic. Based upon the number of residential and commercial uses proposed, the project would estimate generated wastewater and how it can be accommodated. The EIR will also assess impacts to library services, and impacts to education based upon the number of children generated and how schools could accommodate additional students. Fire and sheriff services will examine existing capacities and the number of additional resources required. The utilities section will examine the amount of electricity and gas needed for the site and how existing services could accommodate the need. Human-made hazards will examine past and proposed uses on the site and potential impacts to future residents. The EIR will address how the project's population generation figures are consistent with regional population, housing, and employment projections. It will also address the recreational facilities proposed by the project and how the project meets Quimby Act requirements.

Pursuant to Public Resources Code §21093 and *State CEQA Guidelines* §15168, the Mission Village EIR will tier from the certified Newhall Ranch Final Program EIR (SCH No. 1995011015). Where appropriate, the Mission Village EIR will incorporate by reference the prior analysis contained in the previously certified Newhall Ranch Final Program EIR.

## **SCOPING MEETING**

To assist in local participation, a scoping meeting will be held to present the proposed project and to solicit suggestions on the content of the Draft EIR. This meeting will be held in the Multi-Purpose Room of the Rancho Pico Junior High School , 26250 W. Valencia Boulevard, Stevenson Ranch, California on June 9, 2005 from 7:00 PM to 8:30 PM.

## **NOTICE OF PREPARATION REVIEW AND COMMENTS**

The official review period for the Notice of Preparation will be from May 24 to June 23, 2005 (30 days). To facilitate your review, the following materials are attached in addition to the above descriptions:

- Los Angeles County Initial Study
- Regional Location Map
- Vicinity Map

- Tentative Tract Map 061105

Copies of the Notice Of Preparation are available for review at Canyon Country Jo Anne Darcy Library located at 18601 Soledad Canyon Road, Santa Clarita, California 91351; Valencia County Library at 23743 West Valencia Boulevard, Santa Clarita, California 91355; Newhall County Library at 22704 West 9<sup>th</sup> Street, Santa Clarita, California 91321; as well as the Department of Regional Planning website [http://planning.co.la.ca.us/drpl\\_agnd.html](http://planning.co.la.ca.us/drpl_agnd.html) under "Tentative Tract Map No. 061105." Due to the time limits mandated by state law, your written response must be sent at the earliest possible date, but not later than **June 30, 2005**.

Please direct all written responses to the Notice of Preparation to the following address:

Mr. Daniel Fierros  
County of Los Angeles Regional Planning Department  
Impact Analysis Section  
320 W. Temple St., Room 1348  
Los Angeles, CA 90012  
Tel (213) 974-6461  
Fax (213) 626-0434

In your written response, please include the name of a contact person in your agency.

**STAFF USE ONLY**

PROJECT NUMBER: 04-181

CASES: TR061105

CP, OTP

\*\*\*\* INITIAL STUDY \*\*\*\*

**COUNTY OF LOS ANGELES  
DEPARTMENT OF REGIONAL PLANNING**

GENERAL INFORMATION

I.A. Map Date: June 14, 2004

Staff Member: Hsiao-ching Chen

Thomas Guide: 4549 G H, J 1-3; 4550 A1-4

USGS Quad: Newhall

Location: South of SR-126, west of I-5, directly west of Six Flags Magic Mountain Theme Park, and east of Lyon Canyon, Valencia

Description of Project: An application to subdivide the subject property for approximately 5,331 residential units (plus 73 second units), approximately 1,299,000 square feet of non-residential mixed-use space, a 9-acre elementary school, a 8.3-acre of private recreation center, and a system of landscaped trails and walkways. The project also includes construction of the 1,250 feet long, 117 feet wide Commerce Center Drive Bridge over the Santa Clara River with required abutments and bank stabilization on either side of the bridge as well as bank stabilization elsewhere along the Santa Clara River. Preserve for San Fernando Valley Spineflower is proposed. Three water tanks for potable and reclaimed water storage are proposed outside of the SP and tract. This Project includes eastermost 1,216 acres of the Mesas Village within the Newhall Specific Plan, which has a certified Program EIR. Project as proposed will also require an Oak Tree Permit for removal of 219 out of the 722 oak trees. A Conditional Use Permit is required for development within SEA.

Gross Area: 1,252.2 acres (including 38.1 acres of land outside of approved Newhall SP area)

Environmental Setting: The project site is bounded to the north by Route-126 and an RV Park and further to the north is Valencia Commerce Center. The Magic Mountain Theme Park lies to the east of the project. To the south and southwest is a vacant property (i.e., the proposed Stevenson Ranch Phase V SP) proposed to be developed for residential and (neighborhood) commercial uses. West of the project site is the undeveloped Newhall Ranch area with some abandoned oil and gas operations. The site currently contains some abandoned oil and gas operations and is used for agricultural purposes. Some off-site improvements which are part of the project are within Santa Clara River containing habitat for endangered unarmored threespine stickleback and San Fernando Valley spineflower is present on-site.

Zoning: Newhall Specific Plan; Heavy Agriculture A-2-5

General Plan: (Newhall) Specific Plan; Non-urban, SEA

Community/Area Wide Plan: Newhall Specific Plan; Non-urban 1 & Hillside Mgt (Santa Clarita Valley Area Plan)

**DEVELOPMENT MONITORING SYSTEM (DMS)** \*

As required by the Los Angeles County General Plan, DMS shall be employed in the Initial Study phase of the environmental review procedure as prescribed by state law.

1. Development Policy Map Designation: Urban expansion and SEA
2.  Yes  No Is the project located in the Antelope Valley, East San Gabriel Valley, Malibu/Santa Monica Mountains or Santa Clarita Valley planning area?
3.  Yes  No Is the project at urban density and located within, or proposes a plan amendment to, an urban expansion designation?

**If both of the above questions are answered "yes", the project is subject to a County DMS analysis.**

Check if DMS printout generated (attached) Date of printout: 10/19/2004

Check if DMS overview worksheet completed (attached)

\*EIRs and/or staff reports shall utilize the most current DMS information available.

**Environmental Finding:**

FINAL DETERMINATION: On the basis of this Initial Study, the Department of Regional Planning finds that this project qualifies for the following environmental document:

NEGATIVE DECLARATION, inasmuch as the proposed project will not have a significant effect on the environment.

An Initial Study was prepared on this project in compliance with the State CEQA Guidelines and the environmental reporting procedures of the County of Los Angeles. It was determined that this project will not exceed the established threshold criteria for any environmental/service factor and, as a result, will not have a significant effect on the physical environment.

MITIGATED NEGATIVE DECLARATION, inasmuch as the changes required for the project will reduce impacts to insignificant levels (see attached discussion and/or conditions).

An Initial Study was prepared on this project in compliance with the State CEQA Guidelines and the environmental reporting procedures of the County of Los Angeles. It was originally determined that the proposed project may exceed established threshold criteria. The applicant has agreed to modification of the project so that it can now be determined that the project will not have a significant effect on the physical environment. The modification to mitigate this impact(s) is identified on the Project Changes/Conditions Form included as part of this Initial Study.

ENVIRONMENTAL IMPACT REPORT\*, inasmuch as there is substantial evidence that the project may have a significant impact due to factors listed above as "significant."

At least one factor has been adequately analyzed in an earlier document pursuant to legal standards, and has been addressed by mitigation measures based on the earlier analysis as described on the attached sheets (see attached Form DRP/IA 101). The EIR is required to analyze only the factors not previously addressed.

Reviewed by: Hsiao-ching Chen  Date: \_\_\_\_\_

Approved by: Daryl Koutnik  Date: 25 OCTOBER 2004

This proposed project is exempt from Fish and Game CEQA filing fees. There is no substantial evidence that the proposed project will have potential for an adverse effect on wildlife or the habitat upon which the wildlife depends. (Fish & Game Code 753.5).

Determination appealed--see attached sheet.

\*NOTE: Findings for Environmental Impact Reports will be prepared as a separate document following the public hearing on the project.

Lot Size                       Project Design                       Approval of Geotechnical Report by DPW

**CONCLUSION**

Considering the above information, could the project have a significant impact (individually or cumulatively) on, or be impacted by, **geotechnical** factors?

Potentially significant     Less than significant with project mitigation     Less than significant/No impact

**HAZARDS - 2. Flood**

**SETTING/IMPACTS**

- Yes No Maybe
- a.    Is a major drainage course, as identified on USGS quad sheets by a dashed line, located on the project site?  
Santa Clara River and tributaries, Castaic Creek, Chiquito Canyon, Lyon Canyon
- b.    Is the project site located within or does it contain a floodway, floodplain, or designated flood hazard zone?  
Portions of the tract are within 100-year FEMA floodplain (LA Co GP Safety Element Plate 6)
- c.    Is the project site located in or subject to high mudflow conditions?  
Santa Clara River, Castaic Creek, Chiquito Canyon, and Lion Canyon
- d.    Could the project contribute or be subject to high erosion and debris deposition from runoff? Earthwork during site development would have the potential to increase erosion and deposition during periods of heavy rain.
- e.    Would the project substantially alter the existing drainage pattern of the site or area?  
A man-made drainage network to capture and control runoff to new storm drain system.
- f.    Other factors (e.g., dam failure)? Site is within the Castaic Lake dam inundation area

**STANDARD CODE REQUIREMENTS**

- Building Ordinance No. 2225 C Section 308A  Ordinance No. 12,114 (Floodways)  
 Approval of Drainage Concept by DPW

**MITIGATION MEASURES** /  **OTHER CONSIDERATIONS**

- Lot Size  Project Design
- 

**CONCLUSION**

Considering the above information, could the project have a significant impact (individually or cumulatively) on, or be impacted by **flood (hydrological)** factors?

- Potentially significant  Less than significant with project mitigation  Less than significant/No impact

**HAZARDS - 3. Fire**

**SETTING/IMPACTS**

- Yes No Maybe
- a.    Is the project site located in a Very High Fire Hazard Severity Zone (Fire Zone 4)?  
*Site is located within Fire Zone 4*
- b.    Is the project site in a high fire hazard area and served by inadequate access due to lengths, widths, surface materials, turnarounds or grade?
- c.    Does the project site have more than 75 dwelling units on a single access in a high fire hazard area?
- d.    Is the project site located in an area having inadequate water and pressure to meet fire flow standards? *New public water system required.*
- e.    Is the project site located in close proximity to potential dangerous fire hazard conditions/uses (such as refineries, flammables, explosives manufacturing)?  
*Petrochemical complexes including oil fields (LA Co General Plan Safety Element Plate 7); Identified abandoned oil and gas operations.*
- f.    Does the proposed use constitute a potentially dangerous fire hazard?
- g.    Other factors?

**STANDARD CODE REQUIREMENTS**

Water Ordinance No. 7834     Fire Ordinance No. 2947     Fire Regulation No. 8

Fuel Modification/Landscape Plan

**MITIGATION MEASURES** /  **OTHER CONSIDERATIONS**

Project Design

Compatible Use

**CONCLUSION**

Considering the above information, could the project have a significant impact (individually or cumulatively) on, or be impacted by **fire hazard** factors?

Potentially significant     Less than significant with project mitigation     Less than significant/No impact

## HAZARDS - 4. Noise

### SETTING/IMPACTS

- Yes No Maybe
- a.    Is the project site located near a high noise source (airports, railroads, freeways, industry)?  
*SR-126; Six Flags Magic Mountain Theme Park*
- b.    Is the proposed use considered sensitive (school, hospital, senior citizen facility) or are there other sensitive uses in close proximity?  
*Residential and school components in this tract map*
- c.    Could the project substantially increase ambient noise levels including those associated with special equipment (such as amplified sound systems) or parking areas associated with the project?  
*The tract map will include commercial activities.*
- d.    Would the project result in a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels without the project?  
*During construction period*
- e.    Other factors? \_\_\_\_\_

### STANDARD CODE REQUIREMENTS

- Noise Ordinance Title 12 Chapter 27  Building Ordinance No. 2225--Chapter 35

### MITIGATION MEASURES / OTHER CONSIDERATIONS

- Lot Size  Project Design  Compatible Use

*Noise study is required.*

### CONCLUSION

Considering the above information, could the project have a significant impact (individually or cumulatively) on, or be adversely impacted by **noise**?

- Potentially significant  Less than significant with project mitigation  Less than significant/No impact

**RESOURCES - 1. Water Quality**

**SETTING/IMPACTS**

- Yes No Maybe
- a.    Is the project site located in an area having known water quality problems and proposing the use of individual water wells?  
Santa Clara River- impaired waterway; groundwater pumping is proposed water resource
- b.    Will the proposed project require the use of a private sewage disposal system?  
\_\_\_\_\_
- If the answer is yes, is the project site located in an area having known septic tank limitations due to high groundwater or other geotechnical limitations or is the project proposing on-site systems located in close proximity to a drainage course?  
\_\_\_\_\_
- c.    Could the project's associated construction activities significantly impact the quality of groundwater and/or storm water runoff to the storm water conveyance system and/or receiving water bodies?  
Grading and other earth movement during construction period.
- d.    Could the project's post-development activities potentially degrade the quality of storm water runoff and/or could post-development non-storm water discharges contribute potential pollutants to the storm water conveyance system and/or receiving bodies?  
Urban runoff
- e.    Other factors? Domestic water for the site, which will be supplied by the Valencia Water Company, is a blend of imported water and groundwater withdrawn primarily from Alluvial and Saugus aquifers. Some remediation efforts for perchlorate contamination by federal and state agencies are underway.

**STANDARD CODE REQUIREMENTS**

- Industrial Waste Permit                       Health Code Ordinance No. 7583, Chapter 5
- Plumbing Code Ordinance No. 2269                       NPDES Permit Compliance (DPW)
- MITIGATION MEASURES** /  **OTHER CONSIDERATIONS**
- Lot Size                       Project Design

**CONCLUSION**

Considering the above information, could the project have a significant impact (individually or cumulatively) on, or be impacted by, **water quality** problems?

- Potentially significant       Less than significant with project mitigation       Less than significant/No impact

**RESOURCES - 2. Air Quality**

**SETTING/IMPACTS**

- |    | Yes                                 | No                       | Maybe                               |                                                                                                                                                                                                                                                                                                                                                                             |

| f. | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/>            | Would the project violate any air quality standard or contribute substantially to an existing or projected air quality violation?<br><u>South Coast Air Basin is a non-attainment area.</u>                                                                                                                                                                                 |
| g. | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/>            | Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?                                                                  |
| h. | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/>            | Other factors: <u>Impacts associated with 26,500,000 cubic yards of grading</u>                                                                                                                                                                                                                                                                                             |

**STANDARD CODE REQUIREMENTS**

Health and Safety Code Section 40506

**MITIGATION MEASURES** /  **OTHER CONSIDERATIONS**

Project Design     Air Quality Report including toxic emission analysis for diesel particulates

**CONCLUSION**

Considering the above information, could the project have a significant impact (individually or cumulatively) on, or be impacted by, **air quality**?

Potentially significant     Less than significant with project mitigation     Less than significant/No impact

### RESOURCES - 3. Biota

#### SETTING/IMPACTS

- Yes    No    Maybe
- a.        Is the project site located within a Significant Ecological Area (SEA), SEA Buffer, or coastal Sensitive Environmental Resource (ESHA, etc.), or is the site relatively undisturbed and natural?  
*Portion of the site is within SEA 23 Santa Clara River*
- b.        Will grading, fire clearance, or flood related improvements remove substantial natural habitat areas?  
*Project will involve approximately 26,500,000 cubic yards of materials*
- c.        Is a major drainage course, as identified on USGS quad sheets by a blue, dashed line, located on the project site?  
*Santa Clara River and tributaries*
- d.        Does the project site contain a major riparian or other sensitive habitat (e.g., coastal sage scrub, oak woodland, sycamore riparian woodland, wetland, etc.)?  
*Southern willow riparian habitat*
- e.        Does the project site contain oak or other unique native trees (specify kinds of trees)?  
*Coast live oaks, cottonwood trees*
- f.        Is the project site habitat for any known sensitive species (federal or state listed endangered, etc.)? *San Fernando Spineflower, SEA 23 is habitat for unarmored threespine stickleback, least Bell's vero, southwestern fly catcher, spadefoot toad.*
- g.        Other factors (e.g., wildlife corridor, adjacent open space linkage)?  
*Santa Clara River, loss of open space and wildlife habitat*

#### MITIGATION MEASURES / OTHER CONSIDERATIONS

Lot Size     Project Design     Oak Tree Permit     SEATAC Review

#### CONCLUSION

Considering the above information, could the project have a significant impact (individually or cumulatively) on **biotic resources**?

Potentially significant     Less than significant with project mitigation     Less than significant/No impact

**RESOURCES - 4. Archaeological / Historical / Paleontological**

**SETTING/IMPACTS**

- Yes No Maybe
- a.    Is the project site in or near an area containing known archaeological resources or containing features (drainage course, spring, knoll, rock outcroppings, or oak trees) which indicate potential archaeological sensitivity? Oak trees and drainage courses.
- b.    Does the project site contain rock formations indicating potential paleontological resources? The Saugus and Pico Formations within the proposed development area are considered high potential to contain a diverse assemblage of marine and non-marine vertebrate fossils in the Santa Clarita Valley
- c.    Does the project site contain known historic structures or sites? Historical use of the site has been primarily agricultural and cattle grazing operation. However, Assistencia de San Francisco Xavier (CA-LAN-962H) is located within the tract boundary but outside of the proposed development footprint.
- d.    Would the project cause a substantial adverse change in the significance of a historical or archaeological resource as defined in 15064.5?  
Project specific mitigation measures to be proposed if development impacts known sites.
- e.    Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature? The construction of proposed development may destroy Pico and Saugus Formations which have high potential for yielding paleontological resources due to project associated grading and other activities.
- f.    Other factors? \_\_\_\_\_

**MITIGATION MEASURES** /  **OTHER CONSIDERATIONS**

- Lot Size       Project Design       Phase I Archaeology Report
- \_\_\_\_\_
- \_\_\_\_\_

**CONCLUSION**

Considering the above information, could the project leave a significant impact (individually or cumulatively) on **archaeological, historical, or paleontological** resources?

- Potentially significant     Less than significant with project mitigation     Less than significant/No impact

**RESOURCES - 5.Mineral Resources**

**SETTING/IMPACTS**

Yes No Maybe  
a.    Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

*Site contains abandoned oil and gas operations.* \_\_\_\_\_

b.    Would the project result in the loss of availability of a locally important mineral resource discovery site delineated on a local general plan, specific plan or other land use plan?

\_\_\_\_\_

c.    Other factors? \_\_\_\_\_

MITIGATION MEASURES /  OTHER CONSIDERATIONS

Lot Size             Project Design

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

**CONCLUSION**

Considering the above information, could the project leave a significant impact (individually or cumulatively) on **mineral** resources?

Potentially significant     Less than significant with project mitigation     Less than significant/No impact

**RESOURCES - 6. Agriculture Resources**

**SETTING/IMPACTS**

- Yes No Maybe
- a.    Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use? Portions of the tract are prime farmland (per County of Los Angeles Important Farmland 2002 map)
- b.    Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?  
\_\_\_\_\_
- c.    Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use?  
Site is currently used for agricultural purposes
- d.    Other factors? \_\_\_\_\_  
\_\_\_\_\_

**MITIGATION MEASURES** /  **OTHER CONSIDERATIONS**

- Lot Size             Project Design
- \_\_\_\_\_
- \_\_\_\_\_
- \_\_\_\_\_
- \_\_\_\_\_

**CONCLUSION**

Considering the above information, could the project leave a significant impact (individually or cumulatively) on **agriculture** resources?

- Potentially significant     Less than significant with project mitigation     Less than significant/No impact

**RESOURCES - 7. Visual Qualities**

**SETTING/IMPACTS**

Yes No Maybe

a.    Is the project site substantially visible from or will it obstruct views along a scenic highway (as shown on the Scenic Highway Element), or is it located within a scenic corridor or will it otherwise impact the viewshed?

*Project is located near the Santa Clara River/SR-126 view corridor*

b.    Is the project substantially visible from or will it obstruct views from a regional riding or hiking trail? *Santa Clara River and Pico Canyon trails are in the area (per County of Los Angeles Trail System map).*

c.    Is the project site located in an undeveloped or undisturbed area, which contains unique aesthetic features? *Area along SR-126 has view of river and mesas to south*

d.    Is the proposed use out-of-character in comparison to adjacent uses because of height, bulk, or other features?

*Site is surrounded mainly by vacant land currently undeveloped*

e.    Is the project likely to create substantial sun shadow, light or glare problems?

*New buildings may have night lighting and glare surfaces*

f.    Other factors (e.g., grading or land form alteration):

**MITIGATION MEASURES** /  **OTHER CONSIDERATIONS**

Lot Size

Project Design

Visual Report

Compatible Use

\_\_\_\_\_  
 \_\_\_\_\_

**CONCLUSION**

Considering the above information, could the project have a significant impact (individually or cumulatively) on **scenic** qualities?

Potentially significant     Less than significant with project mitigation     Less than significant/No impact

**SERVICES - 1. Traffic/Access**

**SETTING/IMPACTS**

- Yes No Maybe
- a.    Does the project contain 25 dwelling units, or more and is it located in an area with known congestion problems (roadway or intersections)? 5,331 residential units (plus 73 second units), a maximum of 1,299,000 square feet of non-residential mixed-used space, and a 9-acre elementary school with traffic congestion on nearby I-5.
- b.    Will the project result in any hazardous traffic conditions?  
New circulation patterns
- c.    Will the project result in parking problems with a subsequent impact on traffic conditions?  
Sufficient parking spaces will be provided according to applicable codes
- d.    Will inadequate access during an emergency (other than fire hazards) result in problems for emergency vehicles or residents/employees in the area?  
\_\_\_\_\_
- e.    Will the congestion management program (CMP) Transportation Impact Analysis thresholds of 50 peak hour vehicles added by project traffic to a CMP highway system intersection or 150 peak hour trips added by project traffic to a mainline freeway link be exceeded? Exceeds CMP thresholds for residential and commercial development
- f.    Would the project conflict with adopted policies, plans, or programs supporting alternative transportation (e.g., bus turnouts, bicycle racks)?  
Specific Plan consistency to be demonstrated according to provisions of the approved SP.
- g.    Other factors? \_\_\_\_\_  
\_\_\_\_\_

**MITIGATION MEASURES** /  **OTHER CONSIDERATIONS**

- Project Design     Traffic Report
- \_\_\_\_\_
- \_\_\_\_\_

**CONCLUSION**

Considering the above information, could the project have a significant impact (individually or cumulatively) on the physical environment due to **traffic/access** factors?

- Potentially significant     Less than significant with project mitigation     Less than significant/No impact

**SERVICES - 2. Sewage Disposal**

**SETTING/IMPACTS**

- Yes   No   Maybe
- a.          If served by a community sewage system, could the project create capacity problems at the treatment plant? Site currently is not serviced by any existing sewage system and treatment plant. Although a 6.8-mgd water reclamation plant servicing the area is proposed in the Newhall Ranch Specific Plan, it will not be completed prior to development of this tract. Interim plan for sewage treatment is necessary and its associated impacts will need to be analyzed.
- b.          Could the project create capacity problems in the sewer lines serving the project site?  
No sewer lines available on site.
- c.          Other factors? \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

**STANDARD CODE REQUIREMENTS**

- Sanitary Sewers and Industrial Waste Ordinance No. 6130
- Plumbing Code Ordinance No. 2269

**MITIGATION MEASURES** /  **OTHER CONSIDERATIONS**

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

**CONCLUSION**

Considering the above information, could the project have a significant impact (individually or cumulatively) on the physical environment due to **sewage disposal** facilities?

- Potentially significant    Less than significant with project mitigation    Less than significant/No impact

**SERVICES - 3. Education**

**SETTING/IMPACTS**

Yes    No    Maybe

- a.           Could the project create capacity problems at the district level? *The site is within Saugus, Newhall, Castaic Union School and William S. Hart Union High School Districts which currently operate over capacity. No residential units of the proposed tract are located within Castaic Union SD. Per SP EIR, overall school demand within the SP area would be met upon completion of SP development. However, interim impact needs to be analyzed.*
- b.           Could the project create capacity problems at individual schools which will serve the project site?  
  
*Interim impact on junior high and high school (s) to be analyzed.*
- c.           Could the project create student transportation problems? *No transportation currently exists; interim student transportation problems will occur before elementary, junior high, and high schools are constructed to adequately serve the Specific Plan area.*
- d.           Could the project create substantial library impacts due to increased population and demand?  
  
*The development of the tract will create new demand to existing library services*
- e.           Other factors? *Although a 9-acre elementary school site will be part of this project.*

**MITIGATION MEASURES** /  **OTHER CONSIDERATIONS**

- Site Dedication             Government Code Section 65995             Library Facilities Mitigation Fee

*The applicant has school mitigation agreements with all effected school districts*

**CONCLUSION**

Considering the above information, could the project have a significant impact (individually or cumulatively) relative to **educational** facilities/services?

- Potentially significant     Less than significant with project mitigation     Less than significant/No impact

**SERVICES - 4. Fire/Sheriff Services**

**SETTING/IMPACTS**

Yes No Maybe  
a.

Could the project create staffing or response time problems at the fire station or sheriff's substation serving the project site? According to the Specific Plan, three fire stations will be funded by the applicant per Newhall Ranch Specific Plan and two of them are within the Specific Plan area. However, these fire stations will not be in place in time before this first-phase development within the Specific Plan. The closest existing fire station is Fire Station 76 located at 27223 Henry Mayo Drive, less than 1 mile from the site. The nearest sheriff station is located at 23740 Magic Mountain Parkway. However, SP DEIR indicates that project specific impacts on sheriff department's services are to be determined at the time of project proposal. Therefore, this factor needs to be analyzed in this EIR.

b.

Are there any special fire or law enforcement problems associated with the project or the general area?

New residential area to be patrolled.

c.

Other factors? \_\_\_\_\_

\_\_\_\_\_  
\_\_\_\_\_

MITIGATION MEASURES /  OTHER CONSIDERATIONS

Fire Mitigation Fees

\_\_\_\_\_  
\_\_\_\_\_

**CONCLUSION**

Considering the above information, could the project have a significant impact (individually or cumulatively) relative to **fire/sheriff** services?

Potentially significant     Less than significant with project mitigation     Less than significant/No impact

**SERVICES - 5. Utilities/Other Services**

**SETTING/IMPACTS**

- |    | Yes                                 | No                                  | Maybe                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

**STANDARD CODE REQUIREMENTS**

- Plumbing Code Ordinance No. 2269                       Water Code Ordinance No. 7834
- MITIGATION MEASURES** /  **OTHER CONSIDERATIONS**
- Lot Size                       Project Design

**CONCLUSION**

Considering the above information, could the project have a significant impact (individually or cumulatively) relative to **utilities/services**?

- Potentially significant     Less than significant with project mitigation     Less than significant/No impact

**OTHER FACTORS - 1. General**

**SETTING/IMPACTS**

- Yes No Maybe
- a.    Will the project result in an inefficient use of energy resources?  
\_\_\_\_\_
- b.    Will the project result in a major change in the patterns, scale, or character of the general area or community?  
*Site is currently vacant and urban density uses are proposed*  
\_\_\_\_\_
- c.    Will the project result in a significant reduction in the amount of agricultural land?  
*See discussion under "Agriculture" resource.*  
\_\_\_\_\_
- d.    Other factors? \_\_\_\_\_  
\_\_\_\_\_

**STANDARD CODE REQUIREMENTS**

State Administrative Code, Title 24, Part 5, T-20 (Energy Conservation)

MITIGATION MEASURES /  OTHER CONSIDERATIONS

Lot size  Project Design  Compatible Use

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

**CONCLUSION**

Considering the above information, could the project have a significant impact (individually or cumulatively) on the physical environment due to any of the above factors? \_\_\_\_\_  
\_\_\_\_\_

Potentially significant  Less than significant with project mitigation  Less than significant/No impact

**OTHER FACTORS - 2. Environmental Safety**

**SETTING/IMPACTS**

Yes No Maybe

- a.    Are any hazardous materials used, transported, produced, handled, or stored on-site?  
\_\_\_\_\_
- b.    Are any pressurized tanks to be used or any hazardous wastes stored on-site?  
*Propane and other pressurized tanks may be used within commercial areas*  
\_\_\_\_\_
- c.    Are any residential units, schools, or hospitals located within 500 feet and potentially adversely affected?  
\_\_\_\_\_
- d.    Have there been previous uses which indicate residual soil toxicity of the site or is the project site located within two miles of a known groundwater contamination source within the same watershed?  
*Site contains several abandoned oil wells; perchlorate contamination or upstream*  
\_\_\_\_\_
- e.    Would the project create a significant hazard to the public or the environment involving the accidental release of hazardous materials into the environment?  
\_\_\_\_\_
- f.    Would the project emit hazardous emissions or handle hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?  
\_\_\_\_\_
- g.    Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or environment?  
*Site contains abandoned oil and gas operations.*  
\_\_\_\_\_
- h.    Would the project result in a safety hazard for people in a project area located within an airport land use plan, within two miles of a public or public use airport, or within the vicinity of a private airstrip? \_\_\_\_\_
- i.    Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?  
\_\_\_\_\_
- j.    Other factors? \_\_\_\_\_

**MITIGATION MEASURES** /  **OTHER CONSIDERATIONS**

Toxic Clean up Plan

**CONCLUSION**

Considering the above information, could the project have a significant impact relative to **public safety**?

Potentially significant     Less than significant with project mitigation     Less than significant/No impact

**OTHER FACTORS - 3. Land Use**

**SETTING/IMPACTS**

Yes No Maybe

a.    Can the project be found to be inconsistent with the plan designation(s) of the subject property? Areas outside of SP have land use categories of Non-urban 1 and Hillside Management. However, there are no developments proposed within these areas of the east. Water tanks are proposed for areas outside SP boundaries and outside of Castaic Lake Water Agency area.

b.    Can the project be found to be inconsistent with the zoning designation of the subject property?  
Areas outside of SP where proposed water tanks are located are zoned A-2-5.

c. Can the project be found to be inconsistent with the following applicable land use criteria:

Hillside Management Criteria?

SEA Conformance Criteria?

Bridge proposed over SEA; proposed development eliminates upland habitat adjacent to SEA.

Other? Specific Plan Resource Management Plan Conformance review.

d.    Would the project physically divide an established community?  
\_\_\_\_\_

e.    Other factors? \_\_\_\_\_  
\_\_\_\_\_

MITIGATION MEASURES /  OTHER CONSIDERATIONS

\_\_\_\_\_  
\_\_\_\_\_

**CONCLUSION**

Considering the above information, could the project have a significant impact (individually or cumulatively) on the physical environment due to **land use** factors?

Potentially significant    Less than significant with project mitigation    Less than significant/No impact

**OTHER FACTORS - 4. Population/Housing/Employment/Recreation**

**SETTING/IMPACTS**

- Yes No Maybe
- a.    Could the project cumulatively exceed official regional or local population projections?  
\_\_\_\_\_
- b.    Could the project induce substantial direct or indirect growth in an area (e.g., through projects in an undeveloped area or extension of major infrastructure)?  
*Road circulation (i.e., "B" South and "VV" Streets) to property to the south.*  
\_\_\_\_\_
- c.    Could the project displace existing housing, especially affordable housing?  
*Site is vacant*  
\_\_\_\_\_
- d.    Could the project result in a substantial job/housing imbalance or substantial increase in Vehicle Miles Traveled (VMT)?  
\_\_\_\_\_
- e.    Could the project require new or expanded recreational facilities for future residents? *New recreational facilities are required for the development of the SP.*  
\_\_\_\_\_
- f.    Would the project displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?  
\_\_\_\_\_
- g.    Other factors? \_\_\_\_\_  
\_\_\_\_\_

**MITIGATION MEASURES** /  **OTHER CONSIDERATIONS**

*This tentative tract map includes a private recreation center of a total of 8.3 acres and a system of landscaped trails and walkways (i.e., paseos). Roadways are proposed into currently inaccessible area.*  
\_\_\_\_\_

**CONCLUSION**

Considering the above information, could the project have a significant impact (individually or cumulatively) on the physical environment due to **population, housing, employment, or recreational factors**?

- Potentially significant    Less than significant with project mitigation    Less than significant/No impact

## MANDATORY FINDINGS OF SIGNIFICANCE

Based on this Initial Study, the following findings are made:

- Yes No Maybe
- a.    Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?

Biota

- b.    Does the project have possible environmental effects which are individually limited but cumulatively considerable? "Cumulatively considerable" means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.

Soild Waste

- c.    Will the environmental effects of the project cause substantial adverse effects on human beings, either directly or indirectly?

Water quality, air quality, noise, growth inducement

## CONCLUSION

Considering the above information, could the project have a significant impact (individually or cumulatively) on the environment?

- Potentially significant     Less than significant with project mitigation     Less than significant/No impact

Re: **The Mission Village Project, No. 04-181**

Dear Mr. Fierros:

The California Water Impact Network (C-WIN) objects to the proposed Mission Village Project relying on a contested transfer of 41,000 acre feet (AF) of SWP allocation from the Kern County Water Agency to the Castaic Lake Water Agency (CLWA) as a reliable source of water supply as indicated in the SB610 Water Assessment Report. The analysis is inappropriately relying on the permanence of a non-final and highly contested transfer of 41,000 acre feet of SWP water from the Kern County Water Agency. This 41,000 acre foot transfer continues to be clouded by ongoing litigation and its very validity is one of the subjects of the forthcoming and very complex EIR known as "Monterey Plus", to be prepared by the state Department of Water Resources.

C-WIN is currently a plaintiff in several cases against CLWA opposing proposed transfers that depend on the 41,000 AF transfer mentioned above. Any transfer that is dependent on a water source that is not free and clear is not reliable. C-WIN hereby incorporates our January 1, 2004 objection letter to the CLWA on the Negative Declaration for a proposed 35,000 AF transfer for a Groundwater Banking Project that depends on this same 41,000 AF transfer and the C-WIN February 3, 2004 objection letter to the LA County Regional Planning Department on the proposed **West Creek Project #98-008 (2,545 units)** that depends on this same 41,000 AF transfer. We also incorporate our February 26, 2004 objection letter to the County of Los Angeles Regional Planning Department regarding the proposed **River Valley Project No.00-196 (1,444 units & 1.5 million square feet of mixed non-residential)** that also relies on this 41,000 acre foot transfer. Further, we incorporate our letter to the City of Santa Clarita on May 4, 2004 objecting to the **River Park Project, Project No. 02-175 (1,183 units)**, our letter of December 16, 2004 objecting to the **Northlake Project No. 98-047 (specific plan of approximately 3,000 units)** and our letter of June 15, 2005 to the City of Santa Clarita opposing the **Synergy Project (946 units)**. All of these projects, depending upon this same questionable 41,000 AF water transfer, must be looked at cumulatively, not as individual projects depending on the same source of water. Urban Water Management Plans require that cumulative impacts must be assessed; cumulative impacts must be addressed here as well.

The Mission Village Project, along with many other developments in California, is dependent on the analysis by DWR and its State Water Project Delivery Reliability Report, Final 2002. This Reliability Report has been seriously criticized for overstating actual available supply, questionable modeling and simulations, and lack of proper peer review. C-WIN hereby incorporates this Final Report, including all of the published comment letters in Appendix E. Please make a special note of those letters submitted by Senator Michael Machado, Robert Wilkinson, Arve Sjøvold, Joan Wells, Dr. Peter Gleick and myself.

C-WIN also incorporates "A Strategic Review of CALSIM II and its Use for Water Planning, Management, and Operations in Central California" submitted by the California Bay Delta Authority Science Program Association of Bay Governments, December 4, 2003. This document raises significant questions as to the reliability of DWR's Delivery Reliability Report.

Please reject the proposed Mission Village Project consisting of 5,331 units, 1,299,000 million square feet of commercial/mixed uses, a new school, etc. on the grounds that the proposed water supply is inadequate and unsubstantiated at this time and cumulative impacts have not been assessed.

Please address all the above issues in the forthcoming Environmental Impact Report. If you are unable to obtain any of the above documents, please contact us and we will provide them.

Please send me any relevant documents that may come out in the future regarding this project.

C-WIN hereby incorporates all other comments by reference opposing the proposed Mission Village Project.

Sincerely,

Carolee K. Krieger

June 20, 2005

Dr. Hsiao-Ching Chen  
Department of Regional Planning  
County of Los Angeles  
320 West Temple Street  
Los Angeles, CA 90012

Dear Dr. Chen:

This responds to the Notice of Preparation of an Environmental Impact Report for the Mission Village Project, County Project No. 04-181. This project meets the threshold requirements of various sections of the California Water Code and Government Code, also known as "SB 610." Consequently, the Mission Village project will require a Water Supply Assessment ("WSA") pursuant to SB 610.

Valencia Water Company (VWC) has been identified as the retail purveyor for this project and is the entity that should prepare the WSA. CLWA and VWC have instituted several water conservation programs that should be incorporated into the planning for the project. In addition, the County may want to consider installing as part of this project recently developed low-water-use landscape technologies, such as ETo controllers (which utilize local weather data to control irrigation systems) and low-water use irrigation devices wherever possible.

If you have any questions, please contact Mary Lou Cotton, Water Resources Manager, or me at (661) 297-1600.

Sincerely,

A handwritten signature in black ink, appearing to read "Dan Masnada".

# California Native Plant Society

6/30/2005

Mr. Daniel Fierros  
County of Los Angeles Regional Planning Department  
Impact Analysis Section  
320 West Temple Street, Room 1348  
Los Angeles CA 90012

RE: Scoping comments on the Notice of Preparation – “The Mission Village Project” (Part of the Newhall Ranch Specific Plan) County Project No. 04-181, Vesting Tentative Tract Map 061105, Oak Tree Permit No. ROAK200500032, Conditional Use Permit No. RCUP200500080, Conditional Use Permit No. RCUP200500081, Parking Permit No. RPK200500011, Modifications for Reduced Setbacks – Village Center Hillside Review

Dear Mr. Fierros,

The California Native Plant Society (CNPS) is a non-profit organization of more than 10,000 laypersons and professional botanists organized into 32 chapters throughout California. The mission of the California Native Plant Society is to increase understanding and appreciation of California’s native plants and to conserve them and their natural habitats, through education, science, advocacy, horticulture and land stewardship. The CNPS has been very involved in Santa Clara River Valley plant issues for years. Based on our experience, we offer the following comments on the Notice of Preparation.

The CNPS requests that seasonal surveys be performed for sensitive plant species and vegetation communities under the direction and supervision of the County and/or resource agencies. Full disclosure of survey results to the public and other agencies without limitations imposed by the applicant must be implemented to assure full NEPA/CEQA compliance. Confidentiality agreements should not be allowed for the surveys in support of the proposed project. These surveys should follow CNPS and CDFG floristic survey guidelines and should be documented as recommended by CNPS and California Botanical Society policy guidelines. Attached are the most current CNPS floristic survey guidelines (Attachment 1) and the CNPS policy on documentation (Attachment 2). A full floral inventory of all species encountered needs to be documented.

The CNPS requests that the vegetation maps be at a large enough scale to be useful for evaluating the impacts. The 1”=9000 meter scale of the Vegetation Map in the Newhall Ranch Specific Plan and the undecipherable scale aerial photo with the proposed project imposed on it that was handed out at the scoping meeting make it impossible to identify the finer details of plant community locations on the project site. Vegetation/wetland habitat mapping should be at such a scale to provide an accurate accounting of wetland and adjacent habitat types that will be directly or indirectly affected by the permitted activities. A half-acre minimum mapping unit size is recommended, such as has been used for the Matilija Dam Removal project along the Ventura River. Habitat classification should follow both CNPS’ *Manual of California Vegetation* and the modified version of Cowardin et al. (1979) developed by Ferren et al. (1996).

*Dedicated to the preservation of California native flora*

## Rare Plants

The CNPS requests that a full analysis of the impacts to a suite of rare plant species be discussed, including but not limited to, the following species:

- *Chorizanthe parryi* var. *fernandina* (San Fernando Valley spineflower) CNPS list 1B, State-listed endangered and a Federal Candidate for listing. Locations of the San Fernando Valley Spineflower are documented from the project site. The number of individuals and the amount of habitat (occupied and potential) needs to be clearly identified and evaluated for the proposed impacts in compliance with the Endangered Species Acts and the California Environmental Quality Act (CEQA). Appropriate mitigation needs to be in addition to the settlement “reserve” that the County and Newhall Land and Farming have already agreed to for prior impacts to the species.
- *Dodecahema leptocerus* (Slender-horned spineflower) CNPS list 1B, State- and federally listed endangered. This species needs to be surveyed for, as potential habitat occurs on the project site. The number of individuals and the amount of habitat (occupied and potential) needs to be clearly identified. Evaluation of proposed impacts in compliance with the Endangered Species Acts and the CEQA and appropriate mitigation needs to be clearly stated.
- *Orcuttia californica* (California Orcutt grass) CNPS list 1B, State- and federally listed endangered. This species needs to be surveyed for, as potential habitat occurs on the project site. The number of individuals and the amount of habitat (occupied and potential) needs to be clearly identified. Evaluation of proposed impacts in compliance with the Endangered Species Acts and the CEQA and appropriate mitigation needs to be clearly stated.
- *Calochortus clavatus* var. *gracilis* (Slender mariposa lily) CNPS list 1B. This species needs to be surveyed for, because it is known to occur on the project site. The number of individuals and the amount of habitat (occupied and potential) needs to be clearly identified. Evaluation of proposed impacts in compliance with CEQA and appropriate mitigation needs to be clearly stated.
- *Calochortus plummerae* (Plummer’s mariposa lily) CNPS list 1B. This species needs to be surveyed for, as potential habitat occurs on the project site. The number of individuals and the amount of habitat (occupied and potential) needs to be clearly identified. Evaluation of proposed impacts in compliance with CEQA and appropriate mitigation needs to be clearly stated.
- *Opuntia basilaris* var. *brachyclada* (Short-joint beavertail cactus) CNPS list 1B. This species needs to be surveyed for, as it is known to occur on the project site. The number of individuals and the amount of habitat (occupied and potential) needs to be clearly identified. Evaluation of proposed impacts in compliance with CEQA and appropriate mitigation needs to be clearly stated.
- *Helianthus nuttallii* ssp. *parishii* (Los Angeles sunflower) CNPS list 1B. This species needs to be surveyed for, because it is known to occur on the project site. The number of individuals and the amount of habitat (occupied and potential) needs to be clearly identified. Evaluation of proposed impacts in compliance with CEQA and appropriate mitigation needs to be clearly stated.

These may not be the only rare plant species that have potential to occur on the project site. Targeted species surveys need to include a complete floristic inventory of every species encountered in the project area, to detect unexpected rare species.

Another issue that the CNPS requests be addressed in the document is the impact of the proposed permitted activities on *locally rare species*. The preservation of regional and local scales of genetic diversity is very important to maintaining species. Therefore, we request that all species found at the edge of their ranges or that occur as disjunct locations be evaluated for impacts by the proposed permitted activities. While a list is not currently available for the project area, checking with local herbaria and knowledgeable botanists can focus a list of such species.

## Rare Plant Communities

According to the State of California (CNDDDB 2003), a suite of rare plant communities are also known from general project site. We request that current, agency-accepted plant community classifications be used to describe all of the rare and common plant communities. Additionally we requests that a full analysis of the impacts to plant communities be discussed. Adequate mitigation for any impact to these rare plant communities must be in compliance with CEQA. The plant communities may include:

- Southern Coast Live Oak Riparian Forest,
- Southern Cottonwood Willow Riparian Forest,
- Southern Riparian Scrub,
- Southern Willow Scrub,
- Mulefat Scrub, and Successional Mulefat Scrub
- Freshwater Marsh
- Alluvial Scrub, including Alluvial Scrub/Chaparral, Scalebroom Scrub and Riverwash
- Arrowweed Scrub,
- Cottonwood/Oak Woodland
- Southern Willow Riparian Woodland,
- Mesic meadows/alkali meadows
- Ponds,
- Valley Freshwater Marsh
- Valley Oak Woodland and Savannahs
- California Walnut Woodland, and
- Mainland Cherry/Coast Live Oak
- Coastal Sage Scrub
- Great Basin Scrub,
- Native Grasslands,
- Non-native Grasslands, and
- Chaparral

Many of these rare plant communities directly depend on mesic sites and drainages. In southern California, these communities are regionally rare due to our arid climate. That fact coupled with the removal of these regionally rare communities for flood control and other structures, which are similar or identical to those proposed in this application has further endangered many of these communities or significantly compromise their ecological functioning. Fifteen year ago, Bowler (1989) documented that over 98% of the wetlands in southern California have been extirpated. Undoubtedly more have disappeared in the last fifteen years, but more current studies are not available. The CNPS requests that cumulative impacts be thoroughly documented and analyzed in these documents.

If any type of restoration is proposed as part of the project, the CNPS requests the analysis of economic advantages of conserving natural vegetation communities versus restoring them be included in the document. Restoration biology has shown that “restored” habitats never support the diversity of species as undisturbed habitats (Longcore et al. 1997). Therefore, the benefits of maintaining current communities and

habitat compared to their destruction and “restoration” needs to be addressed and justified.

The CNPS requests that fire clearance/fuel modification management practices be clearly identified, and the effects of these activities be included as part of the environmental impact, as they are clearly part of the project’s future and ongoing impacts. The impacts from vegetation management for fire (clearance, maintenance, fuel modification, etc) must then be adequately mitigated in compliance with CEQA. The proposed project will likely be situated in plant communities that require periodic, infrequent fire to persist. While periodic fire is not an integral part of riparian vegetation, the proposed project will allow development that will need to be protected from fire. Therefore, “brush-clearance” will occur at the interface between development and any “natural” spaces. The CNPS requests that all fuel modification zones occur as part of the “development footprint” and not infringe upon the “open” space, and that management practices for fire and the impacts to native vegetation as a result of those management practices be addressed in this document.

The CNPS requests that the impacts to species and ecosystems from invasive exotics species be identified and analyzed for impacts. Many of these species invade disturbed areas, and then spread into wildlands. Fragmentation of intact, ecologically functioning communities further aides the spread and degradation of plant communities (Bossard et al 2000). Additionally, landscaping with exotic species is often the vector for introducing invasive exotics into adjacent habitats. Invading landscape species displace native vegetation, degrade functioning ecosystems, provide little/no habitat for native animals, and increase fire danger and carrying capacity. All of these factors for wildland weeds are present in the proposed action, and their affect must be evaluated and mitigated in the EIR.

The CNPS requests the need and justification for the removal of 219 oak trees, and the inclusion of 12 more that are “off-site”. If these trees cannot be avoided, we request that appropriate mitigation is proposed, including success criteria that will actually assure the persistence of on-site oaks as well as any replants.

We generally oppose any CUP that impacts SEA 23. The Santa Clara River is the last significant natural river that retains its ecological functioning integrity in Los Angeles County. Impacts to its hydrological regime will significantly and detrimentally impact many of its native plant communities and therefore the wildlife that it sustains. While thoughtful mitigation for impacts to wetland communities is achievable, unfortunately the most recent data suggest that in southern California, 96% of wetland mitigation sites exhibit suboptimal to poor conditions (Ambrose and Lee 2004). Therefore, we request that wetland impact be avoided not only to the Santa Clara River, but to its tributaries and other mesic areas. If they cannot be avoided, the impacts must be clearly identified. Then, a complete revegetation plan needs to be included as part of the mitigation, with clear, achievable success criteria. We generally do not support impermeable areas in any of the rivers or tributaries, because it decreases the area for native riparian vegetation to occupy, and effectively results in a loss of naturally functioning wetlands.

The CNPS requests if parking areas need to be constructed, then they be constructed with permeable materials to allow for water infiltration to sustain native plant communities in the watershed. We also support a much reduced road size, which reduces construction costs, increases traffic “calming”, decreases the footprint of the

proposed project and increases the potential for natural space conservation and retention of native flora.

Thank you for the opportunity to submit these comments. If you have any questions, please feel free to contact me at (323) 654-5943.

Sincerely,

A handwritten signature in dark ink, appearing to read "Ilene Anderson".

# CNPS Botanical Survey Guidelines

CALIFORNIA NATIVE PLANT SOCIETY

December 9, 1983

Revised June 2, 2001

The following recommendations are intended to help those who prepare and review environmental documents determine when a botanical survey is needed, who should be considered qualified to conduct such surveys, how surveys should be conducted, and what information should be contained in the survey report. The California Native Plant Society recommends that lead agencies not accept the results of surveys unless they are conducted and reported according to these guidelines.

1. Botanical surveys are conducted in order to determine the environmental effects of proposed projects on all botanical resources, including special status plants (rare, threatened, and endangered plants) and plant (vegetation) communities. Special status plants are not limited to those that have been listed by state and federal agencies but include any plants that, based on all available data, can be shown to be rare, threatened, or endangered under the following definitions:

A species, subspecies, or variety of plant is "endangered" when the prospects of its survival and reproduction are in immediate jeopardy from one or more causes, including loss of habitat, change in habitat, over-exploitation, predation, competition, or disease. A plant is "threatened" when it is likely to become endangered in the foreseeable future in the absence of protection measures. A plant is "rare" when, although not presently threatened with extinction, the species, subspecies, or variety is found in such small numbers throughout its range that it may be endangered if its environment worsens.<sup>1</sup>

Rare plant (vegetation) communities are those communities that are of highly limited distribution. These communities may or may not contain special status plants. The most current version of the California Natural Diversity Database's *List of California Terrestrial Natural Communities*<sup>2</sup> should be used as a guide to the names and status of communities.

Consistent with the California Native Plant Society's goal of preserving plant biodiversity on a regional and local scale, and with California Environmental Quality Act environmental impact assessment criteria<sup>3</sup>, surveys should also assess impacts to locally significant plants. Both plants and plant communities can be considered significant if their local occurrence is on the outer limits of known distribution, a range extension, a rediscovery, or rare or uncommon in a local context (such as within a county or region). Lead agencies should address impacts to these locally unique botanical resources regardless of their status elsewhere in the state.

2. Botanical surveys must be conducted to determine if, or to the extent that, special status or locally significant plants and plant communities will be affected by a proposed project when any natural vegetation occurs on the site and the project has the potential for direct or indirect effects on vegetation.
3. Those conducting botanical surveys must possess the following qualifications:
  - a. Experience conducting floristic field surveys;
  - b. Knowledge of plant taxonomy and plant community ecology and classification;
  - c. Familiarity with the plants of the area, including special status and locally significant plants;

---

<sup>1</sup> California Environmental Quality Act Guidelines, §15065 and §15380.

<sup>2</sup> List of California Terrestrial Natural Communities. California Department of Fish and Game Natural Diversity Database. Sacramento, CA.

<sup>3</sup> California Environmental Quality Act Guidelines, Appendix G (Initial Study Environmental Checklist).

- d. Familiarity with the appropriate state and federal statutes related to plants and plant collecting; and,
  - e. Experience with analyzing impacts of a project on native plants and communities.
4. Botanical surveys should be conducted in a manner that will locate any special status or locally significant plants or plant communities that may be present. Specifically, botanical surveys should be:
- a. Conducted in the field at the proper times of year when special status and locally significant plants are both evident and identifiable. When special status plants are known to occur in the type(s) of habitat present in the project area, nearby accessible occurrences of the plants (reference sites) should be observed to determine that the plants are identifiable at the time of survey.
  - b. Floristic in nature. A floristic survey requires that every plant observed be identified to species, subspecies, or variety as applicable. In order to properly characterize the site, a complete list of plants observed on the site shall be included in every botanical survey report. In addition, a sufficient number of visits spaced throughout the growing season is necessary to prepare an accurate inventory of all plants that exist on the site. The number of visits and the timing between visits must be determined by geographic location, the plant communities present, and the weather patterns of the year(s) in which the surveys are conducted.
  - c. Conducted in a manner that is consistent with conservation ethics and accepted plant collection and documentation techniques<sup>4,5</sup>. Collections (voucher specimens) of special status and locally significant plants should be made, unless such actions would jeopardize the continued existence of the population. A single sheet should be collected and deposited at a recognized public herbarium for future reference. All collections shall be made in accordance with applicable state and federal permit requirements. Photography may be used to document plant identification only when the population cannot withstand collection of voucher specimens.
  - d. Conducted using systematic field techniques in all habitats of the site to ensure a thorough coverage of potential impact areas. All habitats within the project site must be surveyed thoroughly in order to properly inventory and document the plants present. The level of effort required per given area and habitat is dependent upon the vegetation and its overall diversity and structural complexity.
  - e. Well documented. When a special status plant (or rare plant community) is located, a California Native Species (or Community) Field Survey Form or equivalent written form, accompanied by a copy of the appropriate portion of a 7.5-minute topographic map with the occurrence mapped, shall be completed, included within the survey report, and separately submitted to the California Natural Diversity Database. Population boundaries should be mapped as accurately as possible. The number of individuals in each population should be counted or estimated, as appropriate.
5. Complete reports of botanical surveys shall be included with all environmental assessment documents, including Negative Declarations and Mitigated Negative Declarations, Timber Harvesting Plans, Environmental Impact Reports, and Environmental Impact Statements. Survey reports shall contain the following information:
- a. Project location and description, including:

---

<sup>4</sup> Collecting Guidelines and Documentation Techniques. California Native Plant Society Policy (adopted March 4, 1995).

<sup>5</sup> Ferren, W.R., Jr., D.L. Magney, and T.A. Sholars. 1995. The Future of California Floristics and Systematics: Collecting Guidelines and Documentation Techniques. *Madroño* 42(2):197-210.

- 1) A detailed map of the location and footprint of the proposed project.
  - 2) A detailed description of the proposed project, including one-time activities and ongoing activities that may affect botanical resources.
  - 3) A description of the general biological setting of the project area.
- b. Methods, including:
- 1) Survey methods for each of the habitats present, and rationale for the methods used.
  - 2) Description of reference site(s) visited and phenological development of the target special status plants, with an assessment of any conditions differing from the project site that may affect their identification.
  - 3) Dates of surveys and rationale for timing and intervals; names of personnel conducting the surveys; and total hours spent in the field for each surveyor on each date.
  - 4) Location of deposited voucher specimens and herbaria visited.
- c. Results, including:
- 1) A description and map of the vegetation communities on the project site. The current standard for vegetation classification, *A Manual of California Vegetation*<sup>6</sup>, should be used as a basis for the habitat descriptions and the vegetation map. If another vegetation classification system is used, the report must reference the system and provide the reason for its use.
  - 2) A description of the phenology of each of the plant communities at the time of each survey date.
  - 3) A list of all plants observed on the project site using accepted scientific nomenclature, along with any special status designation. The reference(s) used for scientific nomenclature shall be cited.
  - 4) Written description and detailed map(s) showing the location of each special status or locally significant plant found, the size of each population, and method used to estimate or census the population.
  - 5) Copies of all California Native Species Field Survey Forms or Natural Community Field Survey Forms and accompanying maps.
- d. Discussion, including:
- 1) Any factors that may have affected the results of the surveys (*e.g.*, drought, human disturbance, recent fire).
  - 2) Discussion of any special local or range-wide significance of any plant population or community on the site.
  - 3) An assessment of potential impacts. This shall include a map showing the distribution of special status and locally significant plants and communities on the site in relation to the proposed activities. Direct, indirect, and cumulative impacts to the plants and communities shall be discussed.
  - 4) Recommended measures to avoid and/or minimize direct, indirect, and cumulative impacts.
- e. References cited and persons contacted.
- f. Qualifications of field personnel including any special experience with the habitats and special status plants present on the site.

# California Native Plant Society

## COLLECTING GUIDELINES AND DOCUMENTATION TECHNIQUES - CNPS POLICY

Adopted 4 March 1995

**Problem Statement:** *Little or no botanical data are being gathered or supported by voucher collections on California's flora while more and more of California's botanical heritage is being lost to urban and agricultural development*

### Policy

**The California Native Plant Society recommends that voucher specimens be collected and stored appropriately to document floristic data included in environmental review projects and scientific studies, and that scientific documentation methods and needs should be included in academic curricula, as outlined in the following 14 recommendations.**

**Recommendation 1:** Environmental review projects (e.g., environmental impact reports [EIRs] and statements [EISs], environmental assessments [EAs], initial studies and negative declarations, natural environmental studies) that are conducted in the State of California and that include botanical field observations should also include voucher specimens, and/or photographic documentation consistent with existing standards, deposited in one or more herbaria listed in *Index Herbariorum, Ed. 8* (Holmgren et al. 1990) or subsequent editions.

**Recommendation 2:** The thoroughness of documentation for a particular project should be commensurate to the importance of the study, but in any case should include collection of voucher specimens for target species studies and noteworthy botanical observations (e.g., range extensions; state and county records; rediscoveries).

**Recommendation 3:** Clients (e.g., private or public permit applicants) for whom environmental studies are conducted should be held financially responsible for the collection, identification, and curation of botanical vouchers; otherwise, there is little chance that documentation will improve.

**Recommendation 4:** Collection of botanical vouchers and the deposition of them in formal herbaria should be a requirement of the CEQA and NEPA processes. CNPS recommends that the responsible agencies and legislative bodies undertake a review of state and federal legislation and make appropriate amendments that will result in the collection and preparation of botanical vouchers becoming a formal part of the environmental review process.

**Recommendation 5:** Preparation of botanical voucher specimens should be encouraged as an important part of the scientific process. Institutions and departments that support herbaria should develop policies regarding the deposition of vouchers by students, staff, and faculty. Support for herbaria should come not only from the host institution or department, but also from the users who deposit specimens. Agencies or corporations that fund research should be made aware of the importance of voucher specimens and should request that the preparation and curation of vouchers be included as a regular part of proposals and budgets.

**Recommendation 6:** Academic institutions should include in their curricula opportunities to expose students to the importance of scientific documentation and the need to prepare and preserve botanical and other biological voucher specimens. There is an urgent need to educate students in the importance and functions of systematics collections, whether these students anticipate a future in academic or applied science or want to be well-rounded citizens with understanding of experimental processes or California's natural resources.

**Recommendation 7:** Herbarium specimen collectors and label preparers should take every opportunity to include a wide range of hierarchical geographic and habitat data on specimen labels, consistent with

## COLLECTING GUIDELINES AND DOCUMENTATION TECHNIQUES - CNPS POLICY PAGE 2

existing standards, that will increase the usefulness of specimens and will make access to the information possible through computerization of label data.

**Recommendation 8:** One category of hierarchical data associated with herbarium specimens should be that which (1) identifies the project for which the specimen serves as a voucher, (2) lists the client, agency, and/or institution associated with the project, and (3) names the report in which the specimen is cited.

**Recommendation 9:** Investigate the feasibility of integrating voucher specimen label data with computerization efforts such as the Specimen Management System for California Herbaria (SMASCH) to provide mechanisms for biogeographical and floristic studies.

**Recommendation 10:** CNPS recommends that the Association of California Herbaria (ACH) should take an active role in organizing support for and preservation of California's herbaria.

**Recommendation 11:** The Association of California Herbaria, CNPS, and CBS should coordinate their activities toward (1) preservation of California's botanical heritage; (2) long-term support for California's botanical education and documentation centers; and (3) improved documentation of California's botanical resources through implementation of statewide policies regarding the collection, preparation, and curation of voucher specimens for academic and applied environmental and experimental botanical studies.

**Recommendation 12:** Local, state, and federal agencies should strengthen and expand (1) their requirements for documentation of environmental reports, particularly the requirement for voucher specimens; and (2) their relationship with academic institutions and organizations (e.g., ACH, CNPS, CBS) to assist with the professional documentation of environmental work and with the education of future agency staff and consultants; and (3) their support for herbaria that house voucher specimens, which document the botanical resources of public lands and which document the disclosures in reports required by the CEQA and NEPA processes.

**Recommendation 13:** Regulatory agencies and other responsible parties should consider developing a formal inter-relationship between (1) agencies or their consultants and (2) academic institutions or museums, whereby the institutions would provide for free the botanical documentation portion of environmental reviews. Such an arrangement would reduce or eliminate any burden public agencies or private corporations might anticipate collecting and curating botanical voucher specimens, while insuring the collection and preservation of important specimens.

**Recommendation 14:** The academic institutions of California with botany programs and herbaria should continue and expand support for those programs and herbaria. The documentation and preservation of California's botanical heritage and the future of botanical research depend upon the education of scientists, resource managers, planners, and consultants who have strong backgrounds in professional botanical training.

### **Background**

At the workshop entitled "The Future of California Floristics and Systematics: Collecting Guidelines and Documentation Techniques" at the Jepson Symposium convened on 4 June 1994, 14 findings and recommendations were approved by the workshop participants (51 in attendance) covering four major areas of concern: (1) documentation of environmental analyses with herbarium voucher specimens, (2) documentation of experimental research with herbarium voucher specimens; (3) presentation of hierarchical data on specimen labels; and (4) what will the future hold for documentation of California's botanical heritage?

### COLLECTING GUIDELINES AND DOCUMENTATION TECHNIQUES - CNPS POLICY PAGE 3

To remedy this lack of data collection and providing substantive supporting evidence, the California Native Plant Society (CNPS) Board of Directors adopts the recommendations of the workshop. CNPS actively encourages that data collection methods be improved as recommended in order to protect California's botanical heritage. The full text of the workshop proceedings is published by the California Botanical Society (CBS) in *Madrono* 42(2).

Mr. Daniel Fierros  
County of Los Angeles Regional Planning Department  
Impact Analysis Section  
320 W. Temple St., Room 1348  
Los Angeles, CA 90012

Dear Mr. Fierros:

Thank you for the opportunity to comment on the Notice of Preparation (NOP) for the "Mission Village Project." This letter conveys recommendations from the Los Angeles County Metropolitan Transportation Authority (Metro) concerning issues that are germane to our agency's statutory responsibilities in relation to the proposed project.

A Traffic Impact Analysis (TIA), with both highway and freeway, and transit components, is required under the State of California Congestion Management Program (CMP) statute. The CMP TIA Guidelines are published in the "2004 Congestion Management Program for Los Angeles County", Appendix B. The geographic area examined in the TIA must include the following, at a minimum:

1. All CMP arterial monitoring intersections, including monitored freeway on/off-ramp intersections, where the proposed project will add 50 or more trips during either the a.m. or p.m. weekday peak hour (of adjacent street traffic); and
2. Mainline freeway-monitoring locations where the project will add 150 or more trips, in either direction, during either the a.m. or p.m. weekday peak hour.

Among the required steps for the analysis of development-related impacts to transit are:

1. Evidence that in addition to Metro, all affected municipal transit operators received the NOP for the Draft EIR;
2. A summary of the existing transit services in the area;
3. Estimated project trip generation and mode assignment for both morning and evening peak periods;
4. Documentation on the assumptions/analyses used to determine the number of percentage of trips assigned to transit;

5. Information on facilities and/or programs that will be incorporated into the development plan that will encourage public transit usage and transportation demand management (TDM) policies and programs; and
6. An analysis of the expected project impacts on current and future transit services along with proposed project mitigation.

Metro looks forward to reviewing the Draft EIR. If you have any questions regarding this response, contact me at 213-922-6908 or by email at [chapmans@metro.net](mailto:chapmans@metro.net). Please send the Draft EIR to the following address:

RE: **Comments on the Notice of Preparation of a Draft Environmental Report for the Mission Village Project**  
SCAG No. I20050345

Dear Mr. Fierros:

Thank you for submitting the Notice of Preparation of a Draft Environmental Report for the Mission Village Project to SCAG for review and comment. As areawide clearinghouse for regionally significant projects, SCAG reviews the consistency of local plans, projects, and programs with regional plans. This activity is based on SCAG's responsibilities as a regional planning organization pursuant to state and federal laws and regulations. Guidance provided by these reviews is intended to assist local agencies and project sponsors to take actions that contribute to the attainment of regional goals and policies.

We have reviewed the Notice and have determined that the proposed Project is regionally significant per California Environmental Quality Act (CEQA) Guidelines (Section 15206). The project proposes more than 500 housing units and more than 500,000sf of commercial space. CEQA requires that EIRs discuss any inconsistencies between the proposed project and the applicable general plans and regional plans (Section 15125 (d)). If there are inconsistencies, an explanation and rationalization for such inconsistencies should be provided.

Policies of SCAG's Regional Comprehensive Plan and Guide, Regional Transportation Plan, and Compass Growth Vision that may be applicable to your project are outlined in the attachment. We expect the EIR to specifically cite the appropriate SCAG policies and address the manner in which the Project is consistent with applicable core policies or supportive of applicable ancillary policies. Please use our policy numbers to refer to them in your EIR. Also, we would encourage you to use a side-by-side comparison of SCAG policies with a discussion of the consistency or support of the policy with the Proposed Project.

SCAG's Compass Growth Vision, adopted in 2004, outlines a future for the region that includes the creation of sustainable, walkable communities that balance a mix of housing with employment opportunities. We are interested in the possibilities in this part of the Newhall Ranch and hope the Mission Village Project will help achieve many these principles. For a clearer understanding of the intent of and possibilities with Compass, please consult the Compass Growth Vision in addition to the guidance offered in this letter. Please provide a minimum of 45 days for SCAG to review the EIR when this document is available. If you have any questions regarding the attached comments, please contact me at (213) 236-1851. Thank you.

Sincerely,

Brian Wallace  
Associate Regional Planner  
Intergovernmental Review

DOCS# 111597v1

**COMMENTS ON THE NOTICE OF PREPARATION OF  
 A DRAFT ENVIRONMENTAL IMPACT REPORT  
 FOR THE  
 MISSION VILLAGE PROJECT  
 SCAG NO. I20050345**

**PROJECT DESCRIPTION**

The proposed Project would consist of five distinct "villages" within the Newhall Ranch Specific Plan area. The project proposes a total of 5,331 residential units, 1,299,000sf of commercial/mixed uses, an elementary school, parks, public and private recreational facilities, trails, and other road improvements.

**CONSISTENCY WITH REGIONAL COMPREHENSIVE PLAN AND GUIDE POLICIES**

The **Growth Management Chapter (GMC)** of the Regional Comprehensive Plan and Guide (RCPG) contains the following policies that are particularly applicable and should be addressed in the Draft EIR for the West Gateway Redevelopment Project.

- 3.01 *The population, housing, and jobs forecasts, which are adopted by SCAG's Regional Council and that reflect local plans and policies, shall be used by SCAG in all phases of implementation and review.*

**Regional Growth Forecasts**

The DEIR should reflect the most current SCAG forecasts, which are the 2004 RTP (April 2004) Population, Household and Employment forecasts. The forecasts for your region and subregion are as follows:

**Adopted SCAG  
 Regionwide  
 Forecasts**

	<u>2005</u>	<u>2010</u>	<u>2015</u>	<u>2020</u>	<u>2025</u>
Population	19,967,835	21,294,093	22,561,643	23,781,797	24,935,979
Households	6,260,842	6,758,353	7,259,762	7,773,287	8,281,758
Employment	8,368,607	9,456,903	10,038,316	10,614,346	11,171,537

**Adopted  
 NLAC  
 (subregion)  
 Forecasts**

	<u>2005</u>	<u>2010</u>	<u>2015</u>	<u>2020</u>	<u>2025</u>
Population	614,502	735,262	852,964	967,387	1,076,013
Households	181,825	221,538	256,966	292,658	327,745
Employment	182,284	215,955	235,070	253,417	270,409

\* The 2004 RTP growth forecast at the regional, county and subregional level was adopted by RC in April, 2004. City totals are the sum of small area data and should be used for advisory purposes only.

3.03 *The timing, financing, and location of public facilities, utility systems, and transportation systems shall be used by SCAG to implement the region's growth policies.*

#### GMC POLICIES RELATED TO THE RCPG GOAL TO IMPROVE THE REGIONAL STANDARD OF LIVING

The Growth Management goals to develop urban forms that enable individuals to spend less income on housing cost, that minimize public and private development costs, and that enable firms to be more competitive, strengthen the regional strategic goal to stimulate the regional economy. The evaluation of the proposed project in relation to the following policies would be intended to guide efforts toward achievement of such goals and does not infer regional interference with local land use powers.

3.04 *Encourage local jurisdictions' efforts to achieve a balance between the types of jobs they seek to attract and housing prices.*

3.05 *Encourage patterns of urban development and land use, which reduce costs on infrastructure construction and make better use of existing facilities.*

3.09 *Support local jurisdictions' efforts to minimize the cost of infrastructure and public service delivery, and efforts to seek new sources of funding for development and the provision of services.*

3.10 *Support local jurisdictions' actions to minimize red tape and expedite the permitting process to maintain economic vitality and competitiveness.*

#### GMC POLICIES RELATED TO THE RCPG GOAL TO IMPROVE THE REGIONAL QUALITY OF LIFE

The Growth Management goals to attain mobility and clean air goals and to develop urban forms that enhance quality of life, that accommodate a diversity of life styles, that preserve open space and natural resources, and that are aesthetically pleasing and preserve the character of communities, enhance the regional strategic goal of maintaining the regional quality of life. The evaluation of the proposed project in relation to the following policies would be intended to provide direction for plan implementation, and does not allude to regional mandates.

3.12 *Encourage existing or proposed local jurisdictions' programs aimed at designing land uses which encourage the use of transit and thus reduce the need for roadway expansion, reduce the number of auto trips and vehicle miles traveled, and create opportunities for residents to walk and bike.*

3.13 *Encourage local jurisdictions' plans that maximize the use of existing urbanized areas accessible to transit through infill and development.*

3.14 *Support local plans to increase density of future development located at strategic points along the regional commuter rail, transit systems, and activity centers.*

- 3.15 *Support local jurisdictions' strategies to establish mixed-use clusters and other transit-oriented developments around transit stations and along transit corridors.*
- 3.22 *Discourage development, or encourage the use of special design requirements, in areas with steep slopes, high fire, flood, and seismic hazards.*
- 3.23 *Encourage mitigation measures that reduce noise in certain locations, measures aimed at preservation of biological and ecological resources, measures that would reduce exposure to seismic hazards, minimize earthquake damage, and to develop emergency response and recovery plans.*

#### **GMC POLICIES RELATED TO THE RCPG GOAL TO PROVIDE SOCIAL, POLITICAL, AND CULTURAL EQUITY**

The Growth Management Goal to develop urban forms that avoid economic and social polarization promotes the regional strategic goal of minimizing social and geographic disparities and of reaching equity among all segments of society. The evaluation of the proposed project in relation to the policy stated below is intended guide direction for the accomplishment of this goal, and does not infer regional mandates and interference with local land use powers.

- 3.24 *Encourage efforts of local jurisdictions in the implementation of programs that increase the supply and quality of housing and provide affordable housing as evaluated in the Regional Housing Needs Assessment.*
- 3.27 *Support local jurisdictions and other service providers in their efforts to develop sustainable communities and provide, equally to all members of society, accessible and effective services such as: public education, housing, health care, social services, recreational facilities, law enforcement, and fire protection.*

#### **REGIONAL TRANSPORTATION PLAN**

The 2004 Regional Transportation Plan (RTP) also has goals and policies that are pertinent to this proposed project. This RTP links the goal of sustaining mobility with the goals of fostering economic development, enhancing the environment, reducing energy consumption, promoting transportation-friendly development patterns, and encouraging fair and equitable access to residents affected by socio-economic, geographic and commercial limitations. The RTP continues to support all applicable federal and state laws in implementing the proposed project. Among the relevant goals and policies of the RTP are the following:

##### Regional Transportation Plan Goals

- Maximize mobility and accessibility for all people and goods in the region.
- Ensure travel safety and reliability for all people and goods in the region.
- Preserve and ensure a sustainable regional transportation system.
- Maximize the productivity of our transportation system.
- Protect the environment, improve air quality and promote energy efficiency.
- Encourage land use and growth patterns that complement our transportation investments.

##### Regional Transportation Plan Policies

- Transportation investments shall be based on SCAG's adopted Regional Performance Indicators.

Performance Indicator	Performance Measures	Definition	Performance Outcome
Mobility	• Average Daily Speed	Speed-experienced by travelers regardless of mode.	10% Improvement
	• Average Daily Delay	Delay-excess travel time resulting from the difference between a reference speed and actual speed. Total daily delay and daily delay per capita are indicators used.	40% Improvement
Accessibility	• Percent PM peak work trips within 45 minutes of home		Auto 90% Transit 37%
	• Distribution of work trip travel times		Auto 8% Improvement Transit 8% Improvement
Reliability	• Percent variation in travel time	Day-to-day change in travel times experienced by travelers. Variability results from accidents, weather, road closures, system problems and other non-recurrent conditions.	10% Improvement
Safety	• Accident Rates	Measured in accidents per million vehicle miles by mode.	0.3% Improvement
Performance Indicator	Performance Measures	Definition	Performance Outcome
Cost Effectiveness	• Benefit-to-Cost (B/C) Ratio	Ratio of benefits of RTP investments to the associated investments costs.	\$3.08
Productivity	• Percent capability utilized during peak conditions	Transportation infrastructure capacity and services provided.	20% Improvement at known bottlenecks
		<ul style="list-style-type: none"> <li>• Roadway Capacity - vehicles per hour per lane by type of facility.</li> <li>• Transit Capacity - seating capacity utilized by mode</li> </ul>	N/A
Sustainability	• Total cost per capita to sustain current system performance	Focus in on overall performance, including infrastructure condition. Preservation measure is a sub-set of sustainability.	\$20 per capita, primarily in preservation costs
Preservation	• Maintenance cost per capita to preserve system at base year conditions	Focus is on infrastructure condition. Sub-set of sustainability.	Maintain current conditions
Environmental	• Emissions generated by travel	Measured/forecast emissions include CO, NOX, PM10, SOX and VOC. CO2 as secondary measure to reflect greenhouse emissions.	Meets conformity requirements
Environmental Justice	• Expenditures by quintile and ethnicity	Proportionate share of expenditures in the 2004 RTP by each quintile.	No disproportionate impact to any group or quintile

	• Benefit vs. burden by quintiles	Proportionate share of benefits to each quintile ethnicity.  Proportionate share of additional airport noise by ethnic group.	
--	-----------------------------------	-------------------------------------------------------------------------------------------------------------------------------------	--

- Ensuring safety, adequate maintenance, and efficiency of operations on the existing multi-modal transportation system will be RTP priorities and will be balanced against the need for system expansion investments.
- RTP land use and growth strategies that differ from currently expected trends will require a collaborative implementation program that identifies required actions and policies by all affected agencies and sub-regions.
- HOV gap closures that significantly increase transit and rideshare usage will be supported and encouraged, subject to Policy #1.

#### **AIR QUALITY CHAPTER CORE ACTIONS**

The Air Quality Chapter core actions related to the proposed project includes:

- 5.07 *Determine specific programs and associated actions needed (e.g., indirect source rules, enhanced use of telecommunications, provision of community based shuttle services, provision of demand management based programs, or vehicle-miles-traveled/emission fees) so that options to command and control regulations can be assessed.*
- 5.11 *Through the environmental document review process, ensure that plans at all levels of government (regional, air basin, county, subregional and local) consider air quality, land use, transportation and economic relationships to ensure consistency and minimize conflicts.*

#### **OPEN SPACE CHAPTER ANCILLARY GOALS**

##### Public Health and Safety

- 9.04 *Maintain open space for adequate protection of lives and properties against natural and man-made hazards.*

##### Resource Production

- 9.07 *Maintain adequate viable resource production lands, particularly lands devoted to commercial agriculture and mining operations.*

##### Resource Protection

- 9.08 *Develop well-managed viable ecosystems or known habitats of rare, threatened and endangered species, including wetlands.*

## WATER QUALITY CHAPTER RECOMMENDATIONS AND POLICY OPTIONS

The **Water Quality Chapter** core recommendations and policy options relate to the two water quality goals: to restore and maintain the chemical, physical and biological integrity of the nation's water, and, to achieve and maintain water quality objectives that are necessary to protect all beneficial uses of all waters.

*11.07 Encourage water reclamation throughout the region where it is cost-effective, feasible, and appropriate to reduce reliance on imported water and wastewater discharges. Current administrative impediments to increased use of wastewater should be addressed.*

## GROWTH VISIONING

The fundamental goal of the Compass Growth Visioning effort is to make the SCAG region a better place to live, work and play for all residents regardless of race, ethnicity or income class. Thus, decisions regarding growth, transportation, land use, and economic development should be made to promote and **sustain** for future generations the region's **mobility, livability and prosperity**. The following "Regional Growth Principles" are proposed to provide a framework for local and regional decision making that improves the quality of life for all SCAG residents. Each principle is followed by a specific set of strategies intended to achieve this goal.

Principle 1: Improve **mobility** for all residents

- Encourage transportation investments and land use decisions that are mutually supportive.
- Locate new housing near existing jobs and new jobs near existing housing.
- Encourage transit-oriented development.
- Promote a variety of travel choices

Principle 2: Foster **livability** in all communities

- Promote infill development and redevelopment to revitalize existing communities.
- Promote developments, which provide a mix of uses.
- Promote "people scaled," walkable communities.
- Support the preservation of stable, single-family neighborhoods.

Principle 3: Enable **prosperity** for all people

- Provide, in each community, a variety of housing types to meet the housing needs of all income levels.
- Support educational opportunities that promote balanced growth.
- Ensure environmental justice regardless of race, ethnicity or income class.
- Support local and state fiscal policies that encourage balanced growth
- Encourage civic engagement.

Principle 4: Promote **sustainability** for future generations

- Preserve rural, agricultural, recreational and environmentally sensitive areas.
- Focus development in urban centers and existing cities.
- Develop strategies to accommodate growth that uses resources efficiently, eliminate pollution and significantly reduce waste.
- Utilize "green" development techniques.

**CONCLUSIONS**

All feasible measures needed to mitigate any potentially negative regional impacts associated with the proposed project should be implemented and monitored, as required by CEQA.

## SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS

### *Roles and Authorities*

THE SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS (SCAG) is a *Joint Powers Agency* established under California Government Code Section 6502 et seq. Under federal and state law, SCAG is designated as a Council of Governments (COG), a Regional Transportation Planning Agency (RTPA), and a Metropolitan Planning Organization (MPO). SCAG's mandated roles and responsibilities include the following:

SCAG is designated by the federal government as the Region's *Metropolitan Planning Organization* and mandated to maintain a continuing, cooperative, and comprehensive transportation planning process resulting in a Regional Transportation Plan and a Regional Transportation Improvement Program pursuant to 23 U.S.C. '134, 49 U.S.C. '5301 et seq., 23 C.F.R. '450, and 49 C.F.R. '613. SCAG is also the designated *Regional Transportation Planning Agency*, and as such is responsible for both preparation of the Regional Transportation Plan (RTP) and Regional Transportation Improvement Program (RTIP) under California Government Code Section 65080 and 65082 respectively.

SCAG is responsible for developing the demographic projections and the integrated land use, housing, employment, and transportation programs, measures, and strategies portions of the *South Coast Air Quality Management Plan*, pursuant to California Health and Safety Code Section 40460(b)-(c). SCAG is also designated under 42 U.S.C. '7504(a) as a *Co-Lead Agency* for air quality planning for the Central Coast and Southeast Desert Air Basin District.

SCAG is responsible under the Federal Clean Air Act for determining *Conformity* of Projects, Plans and Programs to the State Implementation Plan, pursuant to 42 U.S.C. '7506.

Pursuant to California Government Code Section 65089.2, SCAG is responsible for *reviewing all Congestion Management Plans (CMPs) for consistency with regional transportation plans* required by Section 65080 of the Government Code. SCAG must also evaluate the consistency and compatibility of such programs within the region.

SCAG is the authorized regional agency for *Inter-Governmental Review* of Programs proposed for federal financial assistance and direct development activities, pursuant to Presidential Executive Order 12,372 (replacing A-95 Review).

SCAG reviews, pursuant to Public Resources Code Sections 21083 and 21087, Environmental Impacts Reports of projects of regional significance for consistency with regional plans [California Environmental Quality Act Guidelines Sections 15208 and 15125(b)].

Pursuant to 33 U.S.C. '1288(a)(2) (Section 208 of the Federal Water Pollution Control Act), SCAG is the authorized *Areawide Waste Treatment Management Planning Agency*.

SCAG is responsible for preparation of the *Regional Housing Needs Assessment*, pursuant to California Government Code Section 65584(a).

SCAG is responsible (with the Association of Bay Area Governments, the Sacramento Area Council of Governments, and the Association of Monterey Bay Area Governments) for preparing the *Southern California Hazardous Waste Management Plan* pursuant to California Health and Safety Code Section 25135.3.

Revised July 2001

# California Native Plant Society

6/30/2005

Mr. Daniel Fierros  
County of Los Angeles Regional Planning Department  
Impact Analysis Section  
320 West Temple Street, Room 1348  
Los Angeles CA 90012

RE: Scoping comments on the Notice of Preparation – "The Mission Village Project" (Part of the Newhall Ranch Specific Plan) County Project No. 04-181, Vesting Tentative Tract Map 061105, Oak Tree Permit No. ROAK200500032, Conditional Use Permit No. RCUP200500080, Conditional Use Permit No. RCUP200500081, Parking Permit No. RPK200500011, Modifications for Reduced Setbacks – Village Center Hillside Review

Dear Mr. Fierros,

The California Native Plant Society (CNPS) is a non-profit organization of more than 10,000 laypersons and professional botanists organized into 32 chapters throughout California. The mission of the California Native Plant Society is to increase understanding and appreciation of California's native plants and to conserve them and their natural habitats, through education, science, advocacy, horticulture and land stewardship. The CNPS has been very involved in Santa Clara River Valley plant issues for years. Based on our experience, we offer the following comments on the Notice of Preparation.

The CNPS requests that seasonal surveys be performed for sensitive plant species and vegetation communities under the direction and supervision of the County and/or resource agencies. Full disclosure of survey results to the public and other agencies without limitations imposed by the applicant must be implemented to assure full NEPA/CEQA compliance. Confidentiality agreements should not be allowed for the surveys in support of the proposed project. These surveys should follow CNPS and CDFG floristic survey guidelines and should be documented as recommended by CNPS and California Botanical Society policy guidelines. Attached are the most current CNPS floristic survey guidelines (Attachment 1) and the CNPS policy on documentation (Attachment 2). A full floral inventory of all species encountered needs to be documented.

The CNPS requests that the vegetation maps be at a large enough scale to be useful for evaluating the impacts. The 1"=9000 meter scale of the Vegetation Map in the Newhall Ranch Specific Plan and the undecipherable scale aerial photo with the proposed project imposed on it that was handed out at the scoping meeting make it impossible to identify the finer details of plant community locations on the project site. Vegetation/wetland habitat mapping should be at such a scale to provide an accurate accounting of wetland and adjacent habitat types that will be directly or indirectly affected by the permitted activities. A half-acre minimum mapping unit size is recommended, such as has been used for the Matilija Dam Removal project along the Ventura River. Habitat classification should follow both CNPS' *Manual of California Vegetation* and the modified version of Cowardin et al. (1979) developed by Ferren et al. (1996).

Dedicated to the preservation of California's native plants

## Rare Plants

The CNPS requests that a full analysis of the impacts to a suite of rare plant species be discussed, including but not limited to, the following species:

- *Chorizanthe parryi* var. *fernandina* (San Fernando Valley spineflower) CNPS list 1B, State-listed endangered and a Federal Candidate for listing. Locations of the San Fernando Valley Spineflower are documented from the project site. The number of individuals and the amount of habitat (occupied and potential) needs to be clearly identified and evaluated for the proposed impacts in compliance with the Endangered Species Acts and the California Environmental Quality Act (CEQA). Appropriate mitigation needs to be in addition to the settlement "reserve" that the County and Newhall Land and Farming have already agreed to for prior impacts to the species.
- *Dodecahema leptocerus* (Slender-horned spineflower) CNPS list 1B, State- and federally listed endangered. This species needs to be surveyed for, as potential habitat occurs on the project site. The number of individuals and the amount of habitat (occupied and potential) needs to be clearly identified. Evaluation of proposed impacts in compliance with the Endangered Species Acts and the CEQA and appropriate mitigation needs to be clearly stated.
- *Orcuttia californica* (California Orcutt grass) CNPS list 1B, State- and federally listed endangered. This species needs to be surveyed for, as potential habitat occurs on the project site. The number of individuals and the amount of habitat (occupied and potential) needs to be clearly identified. Evaluation of proposed impacts in compliance with the Endangered Species Acts and the CEQA and appropriate mitigation needs to be clearly stated.
- *Calochortus clavatus* var. *gracilis* (Slender mariposa lily) CNPS list 1B. This species needs to be surveyed for, because it is known to occur on the project site. The number of individuals and the amount of habitat (occupied and potential) needs to be clearly identified. Evaluation of proposed impacts in compliance with CEQA and appropriate mitigation needs to be clearly stated.
- *Calochortus plummerae* (Plummer's mariposa lily) CNPS list 1B. This species needs to be surveyed for, as potential habitat occurs on the project site. The number of individuals and the amount of habitat (occupied and potential) needs to be clearly identified. Evaluation of proposed impacts in compliance with CEQA and appropriate mitigation needs to be clearly stated.
- *Opuntia basilaris* var. *brachyclada* (Short-joint beavertail cactus) CNPS list 1B. This species needs to be surveyed for, as it is known to occur on the project site. The number of individuals and the amount of habitat (occupied and potential) needs to be clearly identified. Evaluation of proposed impacts in compliance with CEQA and appropriate mitigation needs to be clearly stated.
- *Helianthus nuttallii* ssp. *parishii* (Los Angeles sunflower) CNPS list 1B. This species needs to be surveyed for, because it is known to occur on the project site. The number of individuals and the amount of habitat (occupied and potential) needs to be clearly identified. Evaluation of proposed impacts in compliance with CEQA and appropriate mitigation needs to be clearly stated.

These may not be the only rare plant species that have potential to occur on the project site. Targeted species surveys need to include a complete floristic inventory of every species encountered in the project area, to detect unexpected rare species.

Another issue that the CNPS requests be addressed in the document is the impact of the proposed permitted activities on *locally rare species*. The preservation of regional and local scales of genetic diversity is very important to maintaining species. Therefore we request that all species found at the edge of their ranges or that occur as disjunct locations be evaluated for impacts by the proposed permitted activities. While a list is not currently available for the project area, checking with local herbaria and knowledgeable botanists can focus a list of such species.

### Rare Plant Communities

According to the State of California (CNDDDB 2003), a suite of rare plant communities are also known from general project site. We request that current, agency-accepted plant community classifications be used to describe all of the rare and common plant communities. Additionally we requests that a full analysis of the impacts to plant communities be discussed. Adequate mitigation for any impact to these rare plant communities must be in compliance with CEQA. The plant communities may include:

- Southern Coast Live Oak Riparian Forest,
- Southern Cottonwood Willow Riparian Forest,
- Southern Riparian Scrub,
- Southern Willow Scrub,
- Mulefat Scrub, and Successional Mulefat Scrub
- Freshwater Marsh
- Alluvial Scrub, including Alluvial Scrub/Chaparral, Scalebroom Scrub and Riverwash
- Arrowweed Scrub,
- Cottonwood/Oak Woodland
- Southern Willow Riparian Woodland,
- Mesic meadows/alkali meadows
- Ponds,
- Valley Freshwater Marsh
- Valley Oak Woodland and Savannahs
- California Walnut Woodland, and
- Mainland Cherry/Coast Live Oak
- Coastal Sage Scrub
- Great Basin Scrub,
- Native Grasslands,
- Non-native Grasslands, and
- Chaparral

Many of these rare plant communities directly depend on mesic sites and drainages. In southern California, these communities are regionally rare due to our arid climate. That fact coupled with the removal of these regionally rare communities for flood control and other structures, which are similar or identical to those proposed in this application has further endangered many of these communities or significantly compromise their ecological functioning. Fifteen year ago, Bowler (1989) documented that over 98% of the wetlands in southern California have been extirpated. Undoubtedly more have disappeared in the last fifteen years, but more current studies are not available. The CNPS requests that cumulative impacts be thoroughly documented and analyzed in these documents.

If any type of restoration is proposed as part of the project, the CNPS requests the analysis of economic advantages of conserving natural vegetation communities versus restoring them be included in the document. Restoration biology has shown that "restored" habitats never support the diversity of species as undisturbed habitats (Longcore et al. 1997). Therefore, the benefits of maintaining current communities and habitat compared to their destruction and "restoration" needs to be addressed and justified.

CNPS Scoping Comments  
Newhall - Mission Village Project  
Page 4 of 6

The CNPS requests that fire clearance/fuel modification management practices be clearly identified, and the effects of these activities be included as part of the environmental impact, as they are clearly part of the project's future and ongoing impacts. The impacts from vegetation management for fire (clearance, maintenance, fuel modification, etc) must then be adequately mitigated in compliance with CEQA. The proposed project will likely be situated in plant communities that require periodic, infrequent fire to persist. While periodic fire is not an integral part of riparian vegetation the proposed project will allow development that will need to be protected from fire. Therefore, "brush-clearance" will occur at the interface between development and any "natural" spaces. The CNPS requests that all fuel modification zones occur as part of the "development footprint" and not infringe upon the "open" space, and that management practices for fire and the impacts to native vegetation as a result of those management practices be addressed in this document.

The CNPS requests that the impacts to species and ecosystems from invasive exotic species be identified and analyzed for impacts. Many of these species invade disturbed areas, and then spread into wildlands. Fragmentation of intact, ecologically functioning communities further aides the spread and degradation of plant communities (Bossard et al 2000). Additionally, landscaping with exotic species is often the vector for introducing invasive exotics into adjacent habitats. Invading landscape species displace native vegetation, degrade functioning ecosystems, provide little/no habitat for native animals, and increase fire danger and carrying capacity. All of these factors for wildland weeds are present in the proposed action, and their affect must be evaluated and mitigated in the EIR.

The CNPS requests the need and justification for the removal of 219 oak trees, and the inclusion of 12 more that are "off-site". If these trees cannot be avoided, we request that appropriate mitigation is proposed, including success criteria that will actually assure the persistence of on-site oaks as well as any replants.

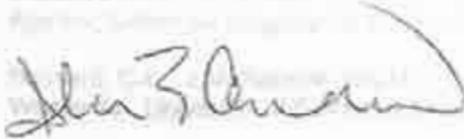

We generally oppose any CUP that impacts SEA 23. The Santa Clara River is the last significant natural river that retains its ecological functioning integrity in Los Angeles County. Impacts to its hydrological regime will significantly and detrimentally impact many of its native plant communities and therefore the wildlife that it sustains. While thoughtful mitigation for impacts to wetland communities is achievable, unfortunately the most recent data suggest that in southern California, 96% of wetland mitigation sites exhibit suboptimal to poor conditions (Ambrose and Lee 2004). Therefore, we request that wetland impact be avoided not only to the Santa Clara River, but to its tributaries and other mesic areas. If they cannot be avoided, the impacts must be clearly identified. Then, a complete revegetation plan needs to be included as part of the mitigation, with clear, achievable success criteria. We generally do not support impermeable areas in any of the rivers or tributaries, because it decreases the area for native riparian vegetation to occupy, and effectively results in a loss of naturally functioning wetlands.

The CNPS requests if parking areas need to be constructed, then they be constructed with permeable materials to allow for water infiltration to sustain native plant communities in the watershed. We also support a much reduced road size, which reduces construction costs, increases traffic "calming", decreases the footprint of the proposed project and increases the potential for natural space conservation and retention of native flora.

# California Native Plant Society

## COLLECTING GUIDELINES AND DOCUMENTATION TECHNIQUES - CNPS POLICY

Adopted 4 March 1995

**Problem Statement:** *Little or no botanical data are being gathered or supported by voucher collections on California's flora while more and more of California's botanical heritage is being lost to urban and agricultural development*

### Policy

*The California Native Plant Society recommends that voucher specimens be collected and stored appropriately to document floristic data included in environmental review projects and scientific studies, and that scientific documentation methods and needs should be included in academic curricula, as outlined in the following 14 recommendations.*

**Recommendation 1:** Environmental review projects (e.g., environmental impact reports [EIRs] and statements [EISs], environmental assessments [EAs], initial studies and negative declarations, natural environmental studies) that are conducted in the State of California and that include botanical field observations should also include voucher specimens, and/or photographic documentation consistent with existing standards, deposited in one or more herbaria listed in *Index Herbariorum, Ed. 8* (Holmgren et al 1990) or subsequent editions.

**Recommendation 2:** The thoroughness of documentation for a particular project should be commensurate to the importance of the study, but in any case should include collection of voucher specimens for target species studies and noteworthy botanical observations (e.g., range extensions; state and county records; rediscoveries).

**Recommendation 3:** Clients (e.g., private or public permit applicants) for whom environmental studies are conducted should be held financially responsible for the collection, identification, and curation of botanical vouchers; otherwise, there is little chance that documentation will improve.

**Recommendation 4:** Collection of botanical vouchers and the deposition of them in formal herbaria should be a requirement of the CEQA and NEPA processes. CNPS recommends that the responsible agencies and legislative bodies undertake a review of state and federal legislation and make appropriate amendments that will result in the collection and preparation of botanical vouchers becoming a formal part of the environmental review process.

**Recommendation 5:** Preparation of botanical voucher specimens should be encouraged as an important part of the scientific process. Institutions and departments that support herbaria should develop policies regarding the deposition of vouchers by students, staff, and faculty. Support for herbaria should come not only from the host institution or department, but also from the users who deposit specimens. Agencies or corporations that fund research should be made aware of the importance of voucher specimens and should request that the preparation and curation of vouchers be included as a regular part of proposals and budgets.

**Recommendation 6:** Academic institutions should include in their curricula opportunities to expose students to the importance of scientific documentation and the need to prepare and preserve botanical and other biological voucher specimens. There is an urgent need to educate students in the importance and functions of systematic collections, whether these students anticipate a future in academic or applied science or want to be well-rounded citizens with understanding of experimental processes or California's natural resources.

**Recommendation 7:** Herbarium specimen collectors and label preparers should take every opportunity to include a wide range of hierarchical geographic and habitat data on specimen labels, consistent with

## COLLECTING GUIDELINES AND DOCUMENTATION TECHNIQUES - CNPS POLICY PAGE 2

existing standards, that will increase the usefulness of specimens and will make access to the information possible through computerization of label data.

**Recommendation 8:** One category of hierarchical data associated with herbarium specimens should be that which (1) identifies the project for which the specimen serves as a voucher, (2) lists the client, agency, and/or institution associated with the project, and (3) names the report in which the specimen is cited.

**Recommendation 9:** Investigate the feasibility of integrating voucher specimen label data with computerization efforts such as the Specimen Management System for California Herbaria (SMASCH) to provide mechanisms for biogeographical and floristic studies.

**Recommendation 10:** CNPS recommends that the Association of California Herbaria (ACH) should take an active role in organizing support for and preservation of California's herbaria.

**Recommendation 11:** The Association of California Herbaria, CNPS, and CBS should coordinate their activities toward (1) preservation of California's botanical heritage; (2) long-term support for California's botanical education and documentation centers; and (3) improved documentation of California's botanical resources through implementation of statewide policies regarding the collection, preparation, and curation of voucher specimens for academic and applied environmental and experimental botanical studies.

**Recommendation 12:** Local, state, and federal agencies should strengthen and expand (1) their requirements for documentation of environmental reports, particularly the requirement for voucher specimens; and (2) their relationship with academic institutions and organizations (e.g. ACH, CNPS, CBS) to assist with the professional documentation of environmental work and with the education of future agency staff and consultants; and (3) their support for herbaria that house voucher specimens, which document the botanical resources of public lands and which document the disclosures in reports required by the CEQA and NEPA processes.

**Recommendation 13:** Regulatory agencies and other responsible parties should consider developing a formal inter-relationship between (1) agencies or their consultants and (2) academic institutions or museums, whereby the institutions would provide for fee the botanical documentation portion of environmental reviews. Such an arrangement would reduce or eliminate any burden public agencies or private corporations might anticipate collecting and curating botanical voucher specimens while insuring the collection and preservation of important specimens.

**Recommendation 14:** The academic institutions of California with botany programs and herbaria should continue and expand support for those programs and herbaria. The documentation and preservation of California's botanical heritage and the future of botanical research depend upon the education of scientists, resource managers, planners, and consultants who have strong backgrounds in professional botanical training.

### **Background**

At the workshop entitled "The Future of California Floristics and Systematics: Collecting Guidelines and Documentation Techniques" at the Jepson Symposium convened on 4 June 1994, 14 findings and recommendations were approved by the workshop participants (51 in attendance) covering four major areas of concern: (1) documentation of environmental analyses with herbarium voucher specimens, (2) documentation of experimental research with herbarium voucher specimens, (3) presentation of hierarchical data on specimen labels; and (4) what will the future hold for documentation of California's botanical heritage?

COLLECTING GUIDELINES AND DOCUMENTATION TECHNIQUES - CNPS POLICY PAGE 3

To remedy this lack of data collection and providing substantive supporting evidence, the California Native Plant Society (CNPS) Board of Directors adopts the recommendations of the workshop. CNPS actively encourages that data collection methods be improved as recommended in order to protect California's botanical heritage. The full text of the workshop proceedings is published by the California Botanical Society (CBS) in *Madrono* 42(2).

## CNPS Botanical Survey Guidelines

### CALIFORNIA NATIVE PLANT SOCIETY

December 9, 1983

Revised June 2, 2001

The following recommendations are intended to help those who prepare and review environmental documents determine when a botanical survey is needed, who should be considered qualified to conduct such surveys, how surveys should be conducted, and what information should be contained in the survey report. The California Native Plant Society recommends that lead agencies not accept the results of surveys unless they are conducted and reported according to these guidelines.

1. Botanical surveys are conducted in order to determine the environmental effects of proposed projects on all botanical resources, including special status plants (rare, threatened, and endangered plants) and plant (vegetation) communities. Special status plants are not limited to those that have been listed by state and federal agencies but include any plants that, based on all available data, can be shown to be rare, threatened, or endangered under the following definitions:

A species, subspecies, or variety of plant is "endangered" when the prospects of its survival and reproduction are in immediate jeopardy from one or more causes, including loss of habitat, change in habitat, over-exploitation, predation, competition, or disease. A plant is "threatened" when it is likely to become endangered in the foreseeable future in the absence of protection measures. A plant is "rare" when, although not presently threatened with extinction, the species, subspecies, or variety is found in such small numbers throughout its range that it may be endangered if its environment worsens.

Rare plant (vegetation) communities are those communities that are of highly limited distribution. These communities may or may not contain special status plants. The most current version of the California Natural Diversity Database's *List of California Terrestrial Natural Communities*<sup>2</sup> should be used as a guide to the names and status of communities.

Consistent with the California Native Plant Society's goal of preserving plant biodiversity on a regional and local scale, and with California Environmental Quality Act environmental impact assessment criteria<sup>3</sup>, surveys should also assess impacts to locally significant plants. Both plants and plant communities can be considered significant if their local occurrence is on the outer limits of known distribution, a range extension, a rediscovery, or rare or uncommon in a local context (such as within a county or region). Lead agencies should address impacts to these locally unique botanical resources regardless of their status elsewhere in the state.

2. Botanical surveys must be conducted to determine if, or to the extent that, special status or locally significant plants and plant communities will be affected by a proposed project when any natural vegetation occurs on the site and the project has the potential for direct or indirect effects on vegetation.
3. Those conducting botanical surveys must possess the following qualifications:
  - a. Experience conducting floristic field surveys;
  - b. Knowledge of plant taxonomy and plant community ecology and classification;
  - c. Familiarity with the plants of the area, including special status and locally significant plants;

<sup>1</sup> California Environmental Quality Act Guidelines, §15065 and §15380.

<sup>2</sup> List of California Terrestrial Natural Communities. California Department of Fish and Game Natural Diversity Database, Sacramento, CA.

<sup>3</sup> California Environmental Quality Act Guidelines, Appendix G (Initial Study Environmental Checklist).

CNPS Botanical Survey Guidelines  
Revised June 2, 2001, Page 3 of 5

- 1) A detailed map of the location and footprint of the proposed project.
  - 2) A detailed description of the proposed project, including one-time activities and ongoing activities that may affect botanical resources.
  - 3) A description of the general biological setting of the project area.
- b. Methods, including:
- 1) Survey methods for each of the habitats present, and rationale for the methods used.
  - 2) Description of reference site(s) visited and phenological development of the target special status plants, with an assessment of any conditions differing from the project site that may affect their identification.
  - 3) Dates of surveys and rationale for timing and intervals; names of personnel conducting the surveys; and total hours spent in the field for each surveyor on each date.
  - 4) Location of deposited voucher specimens and herbaria visited.
- c. Results, including:
- 1) A description and map of the vegetation communities on the project site. The current standard for vegetation classification, *A Manual of California Vegetation*<sup>6</sup> should be used as a basis for the habitat descriptions and the vegetation map. If another vegetation classification system is used, the report must reference the system and provide the reason for its use.
  - 2) A description of the phenology of each of the plant communities at the time of each survey date.
  - 3) A list of all plants observed on the project site using accepted scientific nomenclature, along with any special status designation. The reference(s) used for scientific nomenclature shall be cited.
  - 4) Written description and detailed map(s) showing the location of each special status or locally significant plant found, the size of each population, and method used to estimate or census the population.
  - 5) Copies of all California Native Species Field Survey Forms or Natural Community Field Survey Forms and accompanying maps.
- d. Discussion, including:
- 1) Any factors that may have affected the results of the surveys (e.g., drought, human disturbance, recent fire).
  - 2) Discussion of any special local or range-wide significance of any plant population or community on the site.
  - 3) An assessment of potential impacts. This shall include a map showing the distribution of special status and locally significant plants and communities on the site in relation to the proposed activities. Direct, indirect, and cumulative impacts to the plants and communities shall be discussed.
  - 4) Recommended measures to avoid and/or minimize direct, indirect, and cumulative impacts.
- e. References cited and persons contacted.
- f. Qualifications of field personnel including any special experience with the habitats and special status plants present on the site.

Daniel Fierros  
LA County Dept. of Regional Planning  
320 W. Temple Street  
Los Angeles, CA 90012

SUBJECT: NOTICE OF PREPARATION – EIR FOR MISSION VILLAGE,  
NEWHALL RANCH SPECIFIC PLAN

Dear Mr. Fierros:

Thank you for the opportunity to comment on the Environmental Impact Report (EIR) Notice of Preparation (NOP) for the Mission Village Project, Project No. 04-181, Tract 061105. This is the second subdivision which permits construction under the Newhall Ranch Specific Plan. The "first subdivision map which permits construction" discussed in the Newhall Specific Plan was the River Village project that was subject to an EIR NOP in February 2004.

In our letter regarding the River Village NOP, we discussed a number of studies of interest to Ventura County that are required as part Newhall Ranch Specific Plan. It is our understanding that the River Village EIR is still in preparation. Consequently, we are unable to confirm that the required studies are being conducted. As such, to the extent that the studies are not included in the River Village EIR, we request that the Mission Village EIR include the following studies as specified in the Newhall Ranch Specific Plan and Reclamation Plant Revised Additional Analysis Mitigation Monitoring Plan dated May 2003.

### **SR-126 in Ventura County**

**Measure 4.8-9** requires additional traffic studies to be conducted in Ventura County prior to recordation of the first subdivision allowing construction. Since this study will be evaluating environmental effects, it should be included within the EIR rather than wait until the recordation phase.

### **Noise**

**Measure 4.9-15** requires payment of fees to the Santa Clara Elementary School District prior to issuance of building permits. Since this is an environmental mitigation measure, the cost of sound mitigation and the amount of the fee to be paid by this project should be included in the EIR.

Daniel Fierros  
June 22, 2005  
Page 2 of 4

**Measure 4.9-16** requires participation in noise attenuation programs to mitigate noise impacts on SR-23 north of Casey Road in the City of Moorpark. Updated data and mitigation measures will be available from the City of Moorpark and the County of Ventura by the time the Mission Village EIR is available to the public. This new information should be included in the EIR.

**Measure 4.9-17** requires updated project-specific and cumulative noise studies. These studies should include the following road segments:

SR-126 from the Ventura County line to the Santa Paula city limits. This should be coordinated with the County of Ventura and the City of Fillmore.

SR-23 from its intersection with SR-126 to its intersection with SR-118. This should be coordinated with the County of Ventura and the City of Moorpark.

## **Water Resources**

**Measure 4.11-1** requires installation of a reclaimed water system in order to reduce water demand. This system should be included in the project description or shown as a mitigation measure in the EIR Water Resources analysis.

**Measure 4.11-6** requires that the retail water supplier identify the sources of water available to supply the project. These sources should be specified in the project EIR.

**Measure 4.11-9** requires the Upper Santa Clara Water Committee or the Newhall Land Company prepare an annual water report. The latest report, dated 2004 or 2005, should be included as an EIR Appendix.

**Measure 4.11-15** requires annual reports on agricultural water consumption in LA County by the Newhall Land Company. The latest report, dated 2004 or 2005, should be included as an EIR Appendix. If water from off-site agricultural areas is being "credited" to the Newhall Ranch Specific Plan, the required verification of the transfer of water rights should also be included in the EIR.

**Measure 4.11-18** requires an annual report regarding the amount of water Newhall Land Company has stored in the Semitropic Groundwater Banking Project. The latest report, dated 2004 or 2005, should be included as an EIR Appendix.

**Measure 4.11-19** requires implementation of a Memorandum of Understanding (MOU) and Water Resource Monitoring Program between the United Water Conservation District and the Upper Basin Water Purveyors. The status of this

Daniel Fierros  
June 22, 2005  
Page 3 of 4

mitigation measure should be discussed, along with any future plans. As specified in the mitigation measure, any significant impacts to groundwater resources also should be identified.

**Measure 4.11-20** requires that the rights to the Nickel family water rights be assigned to the Valencia Water Company or the Castaic Lake Water Agency. These rights, as well as the status and/or disposition of the acquired water, should be included in the EIR.

**Measure 4.11-21** requires that prior to approval of the first subdivision map that upstream and downstream surface and groundwater monitoring locations be identified by the Regional Water Quality Control Board and the Newhall Land Company. Since these locations and the required monitoring protocol are necessary to ensure that water quality impacts are adequately monitored, they should be included in the EIR.

**Measure 4.11-22** requires the identification of specific irrigated agricultural lands that will retired from irrigation to provide any water for the project. This identification should be included in the EIR.

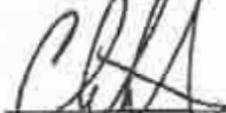

### **Additional Conditions of Specific Plan Approval**

**Condition "e"** requires that prior to approval of the first subdivision map that allows construction, the Newhall Land Company shall evaluate methods of recharging the Saugus Formation, as well as identify appropriate candidate land areas for recharge. Since these are EIR mitigation measures, they should be included in the EIR.

It would be very useful if we could receive a machine readable version of the May 2003 Specific Plan Monitoring Program to help coordinate the long term monitoring of Newhall Ranch with County and non-county agencies. If it would be possible to get a copy, please e-mail it to Scott Ellison, Senior Planner, at [scott.ellison@ventura.org](mailto:scott.ellison@ventura.org).

Thank you again for the opportunity to comment on the Mission Village EIR NOP. If you have any questions, please contact Mr. Ellison at (805) 654-2495, fax at 2509.

Sincerely,

Chris Stephens, Director  
Planning Division

FROM: Larry Hensley   
Planning Division Chief

SUBJECT: NOTICE OF PREPARATION  
MISSION VILLAGE PROJECT  
COUNTY PROJECT NO. 04-181 / TM 61105

The Department of Parks and Recreation has reviewed the Notice of Preparation for the proposed project. The proposed project requires new or expanded recreational facilities for future residents. Some of our specific concerns are as follows:

- A proposed County Trail (#71-Santa Clara River Trail) may traverse the proposed project which would require a 12 foot wide trail easement along the Santa Clara River, outside of the County road right of way.
- The developer's Quimby obligation is 35.53 net acres.
- Provide regional park facilities for the enjoyment of the residents in the Santa Clarita Valley area by meeting the standard of six (6) acres per thousand population\* as established in the County's General Plan. This could take several forms including but not limited to trails, trail heads, and additional facilities for the Santa Clarita Valley.

If you have any questions, please contact me at (213) 351-5098.

File No. 32-00.00-00

Daniel Fierros  
Department of Regional Planning  
Impact Analysis Section  
320 West Temple Street  
Los Angeles, CA 90012

Dear Mr. Fierros:

### The Mission Village Project – County Project No. 04-181/TR061105

The County Sanitation Districts of Los Angeles County (Districts) received a Notice of Preparation (NOP) of a Draft Environmental Impact Report (DEIR) for the subject project on May 26, 2005. The subject project is part of The Newhall Land and Farming Company's (NLFC's) Newhall Ranch Specific Plan development, which proposes to create a new county sanitation district and water reclamation plant in order to manage its wastewater.

The Districts and NLFC have an existing agreement (signed in January 2002) to plan for coordinated wastewater management services between the Districts and the areas that would be served by a new county sanitation district. This agreement is not a joint venture; rather, it serves as a "road map" to help NLFC complete the proposed formation and subsequent operation of a new sanitation district. In short, the agreement outlines the process whereby NLFC would: 1) form a new county sanitation district, 2) have the new sanitation district become party to the Districts' existing Joint Administrative Agreement, and 3) provide for a Joint Powers Agreement that provides for shared ownership and use of the proposed new water reclamation plant. However, the sole responsibility for forming the new sanitation district lies with NLFC. Until the new sanitation district is formed, the Districts have no responsibility for providing sewerage service to this project as it lies outside of the Districts' sphere of influence.

Thus, the Districts request review of the sewage disposal section of the DEIR because NLFC intends for the proposed new county sanitation district to make a formal application to join the Districts in the future. The Districts thank you for the opportunity to review the NOP at this early stage of the CEQA process and look forward to providing additional comments as the DEIR develops. Please contact the undersigned at (562) 699-7411, extension 2766, if you have further questions.

Very truly yours,

James F. Stahl

Mr. Daniel Fierros  
County of Los Angeles  
Regional Planning Department  
Impact Analysis Section  
320 W. Temple St., Room 1348  
Los Angeles, CA 90012

**Subject: NOP for Mission Village Project  
County Project No. 04-181**

Dear Mr. Fierros:

The Department of Conservation's (Department) Division of Oil, Gas, and Geothermal Resources (Division) has reviewed the above referenced project. The Division supervises the drilling, maintenance, and plugging and abandonment of oil, gas, and geothermal wells in California. The Department offers the following comments for your consideration.

Based on information in the NOP and the project map provided, there are several plugged and abandoned wells within the project boundaries.

If any structure is to be located over or in close proximity of a previously plugged and abandoned well, the well may need to be plugged to current Division specifications. Section 3208.1 of the Public Resources Code (PRC) authorizes the State Oil and Gas Supervisor (Supervisor) to order the reabandonment of any previously plugged and abandoned well when construction of any structure over or in close proximity of the well could result in a hazard. The cost of reabandonment operations is the *responsibility of the owner of the property upon which the structure will be located.*

Furthermore, if any plugged or abandoned or unrecorded wells are damaged or uncovered during excavation or grading, remedial plugging operations may be required. If such damage or discovery occurs, the Division's district office must be contacted to obtain information on the requirements for and approval to perform remedial operations.

The Division also recommends the wells within or in close proximity to project boundaries be accurately plotted on all future maps of this project, and a legible copy of the final project map be submitted to the Division.

NOP for Mission Village Project  
County Project No. 04-181  
Page 2 of 2

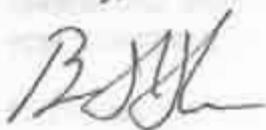

The possibility for future problems from oil and gas wells that have been plugged and abandoned, or reabandoned, to the Division's current specifications are remote. However, the Division suggests that a diligent effort be made to avoid building over any plugged and abandoned well. If construction over an abandoned well is unavoidable, an adequate gas venting system should be placed over the well.

To ensure proper review of building projects, the Division has available an informational packet entitled, "Construction Project Site Review and Well Abandonment Procedure" that outlines the information a project developer must submit to the Division for review. Developers should contact the local building department or our office for a copy of the site-review packet.

Prior to commencing operations, the project applicant should consult with our office for information on the wells located in the project area.

Thank you for the opportunity to comment on the NOP. If you have any questions, please contact me or Steve Fields, Operations Engineer, at (805) 654-4761.

Sincerely,

Bruce H. Hesson, P.E.  
District Deputy - Ventura

Re: **Mission Village, NOP of DEIR**  
IGR/CEQA No. 050313/EA, SCH No. 2004021002  
Vic. LA-126-PM 0.00 – 5.00, LA-005-PM 50.00 – 55.00

Dear Mr. Fierros:

Thank you for including the California Department of Transportation in the environmental review process for the proposed Mission Village development project. It consists of construction of approximately 5,300 residential units, 1.5 million square feet of non-residential mixed-use space, a 7-acre elementary school, and public recreational facilities. The project site is located on the eastern edge of Newhall Ranch Specific Plan area south of State Route 126 and west of Interstate 5, directly west of Six Flags Magic Mountain theme park.

We acknowledge receipt of a copy of the Notice of Preparation (NOP) of an Environmental Impact Report (EIR) and a copy of a draft traffic impact study report that has also been submitted for review and comments. The purposed of the NOP in the California Environmental Quality Act (CEQA) process includes solicitation of comments from this Department as to the scope and content of the environmental information to be contained in the EIR. After a review of the information provided we have the following comments:

We note that build-out the proposed development is projected to generate approximately 72,500 average daily trips with 5,300 occurring in the AM peak hour and approximately 7,100 in the PM peak hour. Many of these vehicle trips are expected to utilize State highways 5, 14, and 126 potentially resulting in significant transportation/circulation impacts.

**General Comments**

Overall, the draft traffic study submitted has not adequately analyzed transportation impacts on the State highway system, mainly I-5, State Route 14, and State Route 126. Typically, for mainline analysis we request traffic studies clearly show:

- (a) Existing volumes, existing plus cumulative volumes, and then add project-related Impacts (See section II, item B2 of the Department's guide);
- (b) Future conditions should extend to build-out of specific plan not just to 2013 as shown

Mr. Daniel Fierros

Page 2 of 3

June 29, 2005

- (c) Level of Service (LOS) for freeway segments should be determined by density. LOS for arterial intersections within State jurisdiction should be determined by control delay, not ICU methodology.

For further guidance, please refer to the Department's statewide Guide for the Preparation of Traffic Impact Studies accessible online at:

<http://www.dot.ca.gov/hq/traffops/developserv/operationalsystems/reports/tisguide.pdf>

The draft traffic study used Los Angeles County's Congestion Management Program (CMP) criteria to analyze transportation impacts and to determine whether they are significant. Based on CMP criteria, the draft traffic study indicated that no significant freeway impacts occur due to this project (page 4-12); therefore, no mitigation measures are proposed. We in this Department do not concur and believe that further analysis is needed.

We request the Department's Traffic Impact Study Guide be followed in determining significant impacts to State highways. Chapter 1, Article 3 of the Streets and Highways Code gives this Department jurisdiction over all State highways. Article 3 of the California Environmental Quality Act (CEQA) guidelines section 15040(c) states "Where another law grants an agency discretionary powers, CEQA supplements those discretionary powers by authorizing the agency to use the discretionary powers to mitigate or avoid significant effects on the environment when it is feasible to so with respect to projects subject to the powers of the agency." Therefore, a traffic impact analysis of State highway facilities consistent with Los Angeles County CMP criteria is not necessarily consistent with CEQA.

The freeway analysis shown on Table 4-7 needs to be revised. The existing capacity of I-5 north of the SR-14 junction is not five continuous lanes to the SR-126 interchange. Existing SR-14 freeway is not five continuous lanes north of the I-5/SR-14 junction. Average Daily Traffic volumes (ADT) are not shown. Also, impacts to SR-126 and I-5 south of SR-14 are not shown.

## Mitigation Measures

### State Route 126

The Statement on page 2-6 "The non-committed improvements have not been assumed to be completed before project occupancy but are used as part of the evaluation of cumulative impacts." Non-committed improvements should not be used when evaluating cumulative impacts, unless the County of Los Angeles conditions the development of Newhall Ranch Specific plan to commit them. We recommend the County do so. The widening of SR-126 to 8 lanes should be scheduled concurrently with the development Newhall Ranch Specific Plan.

The SR-126/Commerce Center Drive interchange is planned to be a grade separated interchange and it is expected to adequately mitigate Mission Village's transportation impacts. As explained on section 6.2 of the traffic study, "When impacts occur solely due to the addition of project traffic or for when improvements are to provide access to the project site, the project is fully responsible for mitigation". Improvements to SR-126/Commerce Center Drive interchange are

Mr. Daniel Pierros

Page 3 of 3

June 29, 2005

needed solely to provide access to Newhall Ranch Specific Plan development; therefore, it should be fully responsible for this improvement.

#### Interstate 5

The traffic study projected that Mission Village would significantly impact the Rye Canyon The Old Road and I-5 SB Ramps intersection as well as I-5 NB/Magic Mountain Parkway ramps and mitigation measures are proposed at those intersections. We remind you that significant modifications to State highways require a project study report with 20-year traffic volume projections and an alternative analysis. An alternative to relocate this intersection north of its existing location should be considered. Proposed improvements will require design details that will need to be addressed during the Department's encroachment permit or project initiation process.

#### **Previous Traffic Impact Study**

An Environmental Impact Report was certified by County of Los Angeles in the past for the Newhall Ranch Specific Plan. We request a background discussion comparing and contrasting previous traffic studies regarding transportation impacts to State highways. Please list previous mitigation measures for the State highway system and explain whether Mission Village will implement any of them.

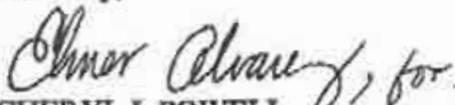

#### **Conclusion**

All modifications to State highways need to meet the State's geometric and operational standards; any design exceptions will need to be justified thoroughly. Therefore, to avoid delays during the permitting process and to discuss feasible transportation mitigation alternatives, please contact this Department as early as possible.

We request that the traffic study be revised to include a clear and complete analysis of impacts to mainline State highways I-5, SR-126 and SR-14. The traffic impact analysis should follow this Department's guide and include traffic projections to at least, build-out of Newhall Ranch Specific Plan. If significant impacts were identified, we would work with the lead agency and project proponents in developing feasible and mutually accepted mitigation measures.

Thank you for the opportunity to comment on this project. We are looking forward to hearing from consulting engineers and lead agency representatives to assist in solving the many issues identified above. You may contact me at (213) 897-3747 or Elmer Alvarez of my staff at (213) 897-6696, please refer to our internal record number 050313/EA.

Sincerely,

  
CHERYL J. POWELL, for:

NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT FOR  
THE MISSION VILLAGE PROJECT, COUNTY PROJECT NO. 04-181, TR 061105,  
SCH NO. 2005051143

Dear Mr. Fierros:

The Department of Toxic Substances Control (DTSC) has received your Notice of Preparation (NOP) of a draft Environmental Impact Report (EIR) for the project mentioned above.

Based on the review of the document, DTSC comments are as follows:

1. The Initial Study of the NOP states that the Project area contains several abandoned oil and gas operations. The draft EIR, therefore, needs to identify and determine whether current or historic uses at the Project area have resulted in any release of hazardous wastes/substances.
2. The draft EIR needs to identify any known or potentially contaminated site within the Project area. For all identified sites, the draft EIR needs to evaluate whether conditions at the site pose a threat to human health or the environment.
3. All environmental investigation and/or remediation should be conducted under a Workplan which is approved by a regulatory agency who has jurisdiction to oversee hazardous waste cleanups. Proper investigation and remedial actions should be conducted at the Site prior to its development.
4. If during construction of the project, soil contamination is suspected, construction in the area should stop, and appropriate health and safety procedures should be implemented. If it is determined that contaminated soils exist, the draft EIR should identify how any required investigation and/or remediation will be conducted, and which government agency will provide regulatory oversight.

Mr. Daniel Fierros  
June 27, 2005

**Notice of Preparation for an Environmental Impact Report for  
Mission Village Project, Project No. 04-181  
SCH # 2005051143, Los Angeles County**

Dear Mr. Fierros:

The Department of Fish and Game (Department) appreciates this opportunity to comment on the above-referenced project, relative to impacts to biological resources. The proposed project involves the subdivision of approximately 1,252 acres for the construction of 5,331 residential units (plus 73 second units), approximately 1,299,000 square feet of non-residential mixed-use space, an elementary school, recreational center and a system of landscape trails and walkways. The project also includes the construction of the 1,250-foot long, 117-foot wide, Commerce Center Drive Bridge over the Santa Clara River with required abutments and bank stabilization on either side of the bridge as well as bank stabilization elsewhere along the Santa Clara River. A preserve for San Fernando Valley Spineflower is also proposed. The proposed Mission Village project is the eastern portion of the Mesas Village as defined in the approved Newhall Ranch Specific Plan and is located on the eastern edge of the Newhall Ranch Specific Plan area south of State Route 126 and west of Interstate 5, directly west of Six Flags Magic Mountain theme park in western unincorporated Los Angeles County. The Specific Plan identified five distinct Villages within the Specific Plan boundaries: Riverwood, Oak Valley, Potrero, Long Canyon, and Mesas. The proposed Mission Village project is the eastern portion of the Mesas Village.

To enable Department staff to adequately review and comment on the proposed project we recommend the following information, where applicable, be included in the Draft Environmental Impact Report:

1. A complete, recent assessment of flora and fauna within and adjacent to the project area, with particular emphasis upon identifying endangered, threatened, and locally unique species and sensitive habitats.
  - a. A thorough recent assessment of rare plants and rare natural communities, following the Department's Guidelines for Assessing Impacts to Rare Plants and Rare Natural Communities (Attachment 1).
  - b. A complete, recent assessment of sensitive fish, wildlife, reptile, and amphibian species. Seasonal variations in use of the project area should also be addressed.

Recent, focused, species-specific surveys, conducted at the appropriate time of year and time of day when the sensitive species are active or otherwise identifiable, are required. Acceptable species-specific survey procedures should be developed in consultation with the Department and U.S. Fish and Wildlife Service.

- c. Rare, threatened, and endangered species to be addressed should include all those which meet the California Environmental Quality Act (CEQA) definition (see CEQA Guidelines, Section 15380).
  - d. The Department's California Natural Diversity Data Base in Sacramento should be contacted at (916) 322-2493 to obtain current information on any previously reported sensitive species and habitats, including Significant Natural Areas identified under Chapter 12 of the Fish and Game Code. Also, any Significant Ecological Areas (SEAs) or Environmentally Sensitive Habitats (ESHs) or any areas that are considered sensitive by the local jurisdiction that are located in or adjacent to the project area must be addressed.
2. A thorough discussion of direct, indirect, and cumulative impacts expected to adversely affect biological resources, with specific measures to offset such impacts. This discussion should focus on maximizing avoidance, and minimizing impacts.
- a. CEQA Guidelines, Section 15125(a), direct that knowledge of the regional setting is critical to an assessment of environmental impacts and that special emphasis should be placed on resources that are rare or unique to the region.
  - b. Project impacts should also be analyzed relative to their effects on off-site habitats and populations. Specifically, this should include nearby public lands, open space, adjacent natural habitats, and riparian ecosystems. Impacts to and maintenance of wildlife corridor/movement areas, including access to undisturbed habitat in adjacent areas, should be fully evaluated and provided. The analysis should also include a discussion of the potential for impacts resulting from such effects as increased vehicle traffic and outdoor artificial lighting.
  - c. A cumulative effects analysis should be developed as described under CEQA Guidelines, Section 15130. General and specific plans, as well as past, present, and anticipated future projects, should be analyzed relative to their impacts on similar plant communities and wildlife habitats.
  - d. Impacts to migratory wildlife affected by the project should be fully evaluated. This can include such elements as migratory butterfly roost sites and neo-tropical bird and waterfowl stop-over and staging sites. All migratory nongame native bird species are protected by international treaty under the Federal Migratory Bird Treaty Act (MBTA) of 1918 (50 C.F.R. Section 10.13). Sections 3503, 3503.5 and 3513 of the California Fish and Game Code prohibit take of birds and their active nests, including raptors and other migratory nongame birds as listed under the MBTA.
  - e. Impacts to all habitats from City or County required Fuel Modification Zones (FMZ). Areas slated as mitigation for loss of habitat shall not occur within the FMZ.
  - f. Proposed project activities (including disturbances to vegetation) should take place outside of the breeding bird season (February 1- September 15) to avoid take (including disturbances which would cause abandonment of active nests containing

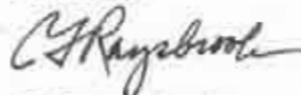

eggs and/or young). If project activities cannot avoid the breeding bird season, nest surveys should be conducted and active nests should be avoided and provided with a minimum buffer as determined by a biological monitor (the Department recommends a minimum 500-foot buffer for all active raptor nests).

3. A range of alternatives should be analyzed to ensure that alternatives to the proposed project are fully considered and evaluated. A range of alternatives which avoid or otherwise minimize impacts to sensitive biological resources including wetlands/riparian habitats, alluvial scrub, coastal sage scrub, native woodlands, etc. should be included. Specific alternative locations should also be evaluated in areas with lower resource sensitivity where appropriate.
  - a. Mitigation measures for project impacts to sensitive plants, animals, and habitats should emphasize evaluation and selection of alternatives which avoid or otherwise minimize project impacts. Compensation for unavoidable impacts through acquisition and protection of high quality habitat elsewhere should be addressed.
  - b. The Department considers Rare Natural Communities as threatened habitats having both regional and local significance. Thus, these communities should be fully avoided and otherwise protected from project-related impacts (Attachment 2).
  - c. The Department generally does not support the use of relocation, salvage, and/or transplantation as mitigation for impacts to rare, threatened, or endangered species. Department studies have shown that these efforts are experimental in nature and largely unsuccessful.
4. A California Endangered Species Act (CESA) Permit must be obtained, if the project has the potential to result in "take" of species of plants or animals listed under CESA, either during construction or over the life of the project. CESA Permits are issued to conserve, protect, enhance, and restore State-listed threatened or endangered species and their habitats. Early consultation is encouraged, as significant modification to the proposed project and mitigation measures may be required in order to obtain a CESA Permit. Revisions to the Fish and Game Code, effective January 1998, require that the Department issue a separate CEQA document for the issuance of a CESA permit unless the project CEQA document addresses all project impacts to listed species and specifies a mitigation monitoring and reporting program that will meet the requirements of a CESA permit. For these reasons, the following information is requested:
  - a. Biological mitigation monitoring and reporting proposals should be of sufficient detail and resolution to satisfy the requirements for a CESA Permit.
  - b. A Department-approved Mitigation Agreement and Mitigation Plan are required for plants listed as rare under the Native Plant Protection Act.
5. The Department opposes the elimination of watercourses and/or their channelization or conversion to subsurface drains. All wetlands and watercourses, whether intermittent, ephemeral, or perennial, must be retained and provided with substantial setbacks which preserve the riparian and aquatic habitat values and maintain their value to on-site and off-site wildlife populations.
  - a. The Department requires a Streambed Alteration Agreement (SAA), pursuant to Section 1600 et seq. of the Fish and Game Code, with the applicant prior to any direct

or indirect impact to a lake or stream bed, bank or channel or associated riparian resources. The Department's issuance of a SAA may be a project that is subject to CEQA. To facilitate our issuance of the Agreement when CEQA applies, the Department as a responsible agency under CEQA may consider the local jurisdiction's (lead agency) document for the project. To minimize additional requirements by the Department under CEQA the document should fully identify the potential impacts to the lake, stream or riparian resources and provide adequate avoidance, mitigation, monitoring and reporting commitments for issuance of the Agreement. Early consultation is recommended, since modification of the proposed project may be required to avoid or reduce impacts to fish and wildlife resources.

The Department suggests a pre-project or early consultation planning meeting for all projects. To make an appointment, please call Morgan Wehtje, at (805) 491-3571. Thank you for this opportunity to provide comment.

Sincerely,

C. F. Raysbrook  
Regional Manager

State of California  
**THE RESOURCES AGENCY**  
 Department of Fish and Game  
 May 4, 1984

**GUIDELINES FOR ASSESSING THE EFFECTS OF PROPOSED  
 DEVELOPMENTS ON RARE AND ENDANGERED PLANTS AND PLANT COMMUNITIES**

The following recommendations are intended to help those who prepare and review environmental documents determine when a botanical survey is needed, who should be considered qualified to conduct such surveys, how field surveys should be conducted and what information should be contained in the survey report.

Botanical surveys that are conducted to determine the environmental effects of a proposed development should be directed to all rare and endangered plants and plant communities. Rare and endangered plants are not necessarily limited to those species which have been "listed" by state and federal agencies but should include any species that, based on all available data, can be shown to be rare and/or endangered under the following definitions.

A species, subspecies or variety of plant is "endangered" when the prospects of its survival and reproduction are in immediate jeopardy from one or more causes, including loss of habitat, change in habitat, over-exploitation, predation, competition or disease. A plant is "rare" when, although not presently threatened with extinction, the species, subspecies or variety is found in such small numbers throughout its range that it may be endangered if its environment worsens.

Rare plant communities are those communities that are of highly limited distribution. These communities may or may not contain rare or endangered species. The most current version of the California Natural Diversity Data Base's Outline of Terrestrial Communities in California may be used as a guide to the names of communities.

It is appropriate to conduct a botanical field survey to determine if, or the extent that, rare plants will be affected by a proposed project when:

- a. Based on an initial biological assessment, it appears that the project may damage potential rare plant habitat;
- b. Rare plants have historically been identified on the project site, but adequate information of impact assessment is lacking; or
- c. No initial biological assessment has been conducted and it is unknown whether or not rare plants or their habitat exist on the site.

Botanical consultants should be selected on the basis of possession of the following qualifications (in order of importance):

- a. Experience as a botanical field investigator with experience in field sampling design and field methods;
- b. Taxonomic experience and a knowledge of plant ecology;
- c. Familiarity with the plants of the area, including rare species; and
- d. Familiarity with the appropriate state and federal statutes related to rare plants and plant collecting.

Field surveys should be conducted in a manner that will locate any rare or endangered species that may be present. Specifically, rare or endangered plant surveys should be:

- a. Conducted at the proper time of year when rare or endangered species are both "evident" and identifiable. Field surveys should be scheduled (1) to coincide with known flowering periods, and/or (2) during periods of

phenological development that are necessary to identify the plant species of concern.

- b. Floristic in nature. "Predictive surveys" (which predict the occurrence of rare species based on the occurrence of habitat or other physical features rather than actual field inspection) should be reserved for ecological studies, not for impact assessment. Every species noted in the field should be identified to the extent necessary to determine whether it is rare or endangered.
- c. Conducted in a manner that is consistent with conservation ethics. Collection of rare or suspected rare species (voucher specimens) should be made only when such actions would not jeopardize the continued existence of the population and in accordance with applicable state and federal permit regulations. Voucher specimens should be deposited at recognized public herbaria for future reference. Photography should be used to document plant identification and habitat whenever possible, but especially when the population cannot withstand collection of voucher specimens.
- d. Conducted using systematic field techniques in all habitats of the site to ensure a reasonably thorough coverage of potential impact areas.
- e. Well documented. When a rare or endangered plant (or rare plant community) is located, a California Native Species (or Community) Field Survey Form or equivalent written form should be completed and submitted to the Natural Diversity Data Base.

h. Reports of botanical field surveys should be included in or with environmental assessments, negative declarations, EIR's and EIS's, should contain the following information:

- a. Project description, including a detailed map of the project location and study area.
- b. A written description of biological setting referencing the community nomenclature used and a vegetation map.
- c. Detailed description of survey methodology.
- d. Dates of field surveys.
- e. Results of survey (including detailed maps).
- f. An assessment of potential impacts.
- g. Discussion of the importance of rare plant populations with consideration of nearby populations and total species distribution.
- h. Recommended mitigation measures to reduce or avoid impacts.
- i. List of all species identified.
- j. Copies of all California Native Species Field Survey Forms or Natural Community Field Survey Forms.
- k. Name of field investigator(s).
- l. References cited, persons contacted, herbaria visited, and disposition of voucher specimens.

## ATTACHMENT 2

Sensitivity of Top Priority Rare Natural  
Communities in Southern California\*

\*Sensitivity rankings are determined by the Department of Fish and Game, California Natural Diversity Data Base and based on either number of known occurrences (locations) and/or amount of habitat remaining (acreage). The three rankings used for these top priority rare natural communities are as follows:

- 1.- Less than 6 known locations and/or on less than 2,000 acres of habitat remaining
- 2.- Occurs in 6-20 known locations and/or 2,000-10,000 acres of habitat remaining
- 3.- Occurs in 21-100 known locations and/or 10,000-50,000 acres of habitat remaining

The number to the right of the decimal point after the ranking refers to the degree of threat posed to that natural community regardless of the ranking. For example:

- S1.1 = very threatened  
 S2.2 = threatened  
 S3.3 = no current threats known

Sensitivity Rankings (February 1992)

Rank	Community Name
1	Mojave Riparian Forest
	Sonoran Cottonwood Willow Riparian
	Mesquite Bosque
	Elephant Tree Woodland
	Crucifixion Thorn Woodland
	Allthorn Woodland
	Arizonan Woodland
	Southern California Walnut Forest
	Mainland Cherry Forest
	Southern Bishop Pine Forest
	Torrey Pine Forest

Mr. Daryl Zerfass  
Austin-Foust Associates, Inc.  
2020 North Tustin Avenue  
Santa Ana, CA 92705

Dear Mr. Zerfass:

**MISSION VILLAGE  
NEWHALL RANCH SPECIFIC PLAN  
TENTATIVE TRACT NO. 61105  
TRAFFIC IMPACT ANALYSIS (JANUARY 24, 2005)  
TRACT MAP, SHEETS 1 THRU 9 (NOVEMBER 15, 2004)  
SITE PLAN, SHEETS 1 THRU 17 (NOVEMBER 11, 2004)  
CASTAIC JUNCTION AREA**

As requested, we have reviewed the above-mentioned document. The project site is generally located west of the Golden State (I-5) Freeway between State Route (SR) 126 to the north and Valencia Boulevard to the south in the unincorporated County of Los Angeles area of Castaic Junction.

The proposed project is part of the approved Newhall Ranch Specific Plan. Mission Village consists of the construction of 578 single-family dwelling units, 3,722 condominium/townhome dwelling units, 1,031 apartment units for a total of 5,331 residential dwelling units, 1.3 million square feet of commercial retail and office uses, an elementary/middle school, two public parks, and a community recreation center. The proposed project is estimated to generate approximately 72,500 vehicle trips daily, with 5,300 and 7,100 vehicle trips during the a.m. and p.m. peak hours, respectively.

Phase I of the project consists of 3,854 residential units, 320,300 square feet of commercial uses, and a 900 student school with a build-out year of 2010. Phase II consists of the remaining residential units and commercial uses with a build-out year of 2013.

The study assumed the roadway improvements to the interchanges and roadways listed in Table 2-2 on page 2-7 to be in place with the project. In accordance with our Traffic Impact Analysis Report Guidelines, these improvements will be made a condition of approval for the project to be in place with the project.

The traffic study shall be revised to include the following:

- The traffic study shall be prepared by or under the supervision of a current registered civil or traffic engineer in the State of California. The report shall be signed and sealed by a registered civil or traffic engineer.
- The traffic study is based on the Santa Clarita Valley Consolidated Traffic Model. The assumed model methodology and assumptions, including but not limited to trip generation rates, trip distributions, ambient growth rates, related projects, and transportation circulation system, shall be reviewed and approved by Transportation Planning Section of Land Development Division.
- A copy of the approved land use and internal transportation circulation plan for the Newhall Ranch Specific Plan. The study shall be expanded to include the internal transportation circulation of Mission Village and build-out of the entire Newhall Ranch Specific Plan to ensure that the Mission Village circulation plan is consistent with the Specific Plan. All related lane configuration diagrams, trip distributions, and trip distribution assumptions shall be provided.
- The most current tract maps submitted dated November 15, 2004, consists of the construction of 500 single-family dwelling units, 3,603 condominium dwelling units, 197 duplex dwelling units, 1,031 apartment units for a total of 5,331 residential dwelling units, 685,300 square feet of mixed use commercial, 691,500 square feet of mixed use commercial/business park, 16,000 square feet of retail and an elementary school, two public parks, and a community recreation center. This scope is different from the project description in the study. This discrepancy shall be clarified and/or corrected as necessary.
- The project will be developed in phases. The level of service analysis shall be conducted and be provided for the following scenarios:
  - (a) Existing traffic;
  - (b) Existing traffic plus ambient growth to Phase I completion year;
  - (c) Traffic in (b) plus Phase I traffic;
  - (d) Traffic in (c) with necessary mitigation measures;

- (e) Existing traffic plus ambient growth to Phase II completion year;
  - (f) Traffic in (e) plus Phase I and II traffic;
  - (g) Traffic in (f) with the necessary mitigation measures;
  - (h) Traffic in (g) plus the cumulative traffic of other developments (including Newhall Specific Plan projects to be completed within the project buildout year );
  - (i) Traffic in (h) with the necessary mitigation measures.
- Expand the study and figures 1-2, 5-1, and 5-4 and other figures as necessary to include the following intersections and roadways superimposed on a Thomas Guide map with grids. Some street names in figures do not correspond to the site plans submitted and shall be corrected as necessary.
    - Six Flags Magic Mountain Driveway at Magic Mountain Parkway
    - Chiquito Canyon Road and Long Canyon Road (Future) at Henry Mayo Drive (SR-126)
    - Wolcott Way at Henry Mayo Drive (SR-126)
    - Commerce Center Drive at Henry Mayo Drive (SR-126) Interchange
    - "LL" Street (TT 61105) south extension south of Lot 860 (TT 61105)
    - "MM" Street (TT 61105) south extension south of "NN" Street (TT 61105)
    - "LL" Street (TT 61105) south extension south of "YY" Street (TT 61105)
    - "S" Street (TT 61105) at "R" Street (TT 61105)
    - "Q" Street (TT 61105) at "R" Street (TT 61105)
    - First raised-median opening on "GG" Street (TT 61105) north of Commerce Center Drive
    - "GG" Street (TT 61105) at first private driveway north of Commerce Center Drive (between Lots 1029 and 1031 of TT 61105)
    - "GG" Street (TT 61105) at second private driveway north of Commerce Center Drive (between Lots 1031 and 1033 of TT 61105)
    - "B" Street (TT 61105) at "K" Street (TT 61105)
  - Traffic counts shall not be more than 1-year from the time the study is submitted. Traffic counts must be taken on Tuesdays, Wednesdays, or Thursdays; must exclude holidays, and the first weekdays before and after the holiday; must be taken on days when local schools or colleges are in session; must be taken on days of good weather, and avoid atypical conditions (e.g., road construction, detours, or major traffic incidents. Because of some construction activities in the area, some older available counts were used in the study. Detailed description of the construction activities and schedules shall be provided.

- Turning movement traffic volumes for all internal intersections (including the driveways) shall be provided.
- A more detailed description including trip generation assumptions, and of the mixed use commercial/business park/service station in areas E1, E2, areas F10, F11, and F14 of the Village Center shall be provided. If detailed project information is not available, then a more conservative trip generation rates shall be used for each lot. If 18-wheeled delivery trucks will be used for delivery at the two mixed use commercial areas, a revised site plan/tract map showing shows loading areas and adequate turning radius for a typical 18-wheeled delivery truck in the parking lots and at the commercial site driveways shall be submitted.
- Use 2,880 vehicles per hour capacity for dual left-turn lanes.
- Provide lane configurations for the remaining nine intersections in Village Center not shown in Figure 5-1.
- Lane configuration diagrams for all intersections analyzed for all traffic scenarios, including scenario for the proposed mitigation measures.
- Description of what the long-range ADT volumes are shown in Figures 5-2 and 5-3.
- Gated residential driveways shall be designed to allow a typical UPS/FedEx truck to make a U-turn without backing up and enough lane width on the ingress side to allow residential vehicles to pass while visitor vehicles are waiting at the keypad to gain entry. If the entry is gated, indicate whether any of the driveway(s) is for emergency and/or fire access only.
- A queuing analysis for the mixed use commercial/service station in area E2 (Lot 967) with a mini-mart and a gasoline pumping station of 8 vehicle fueling positions shown on sheet 16 of the site plan. Internal circulation shall be designed to ensure adequate vehicle stacking and maneuvering.
- Relocate two access locations to parking structure adjacent to private drive located in mixed use commercial Lots 1032 and 1033 further away from the private driveway; otherwise, restrict north access location in Lot 1032 of the parking structure to ingress only and restrict south access location in Lot 1033 of the parking structure to right-turn egress only.

- Additional information regarding the development of the school within the Mission Village. Who will be responsible for the development of the school and when will it be developed? Will the developer of Mission Village be responsible for the necessary traffic mitigation measures for the development of the school or will the school district be responsible? At minimum, the following shall be included in the traffic study for the proposed school.

- The developer shall coordinate with and notify the Castaic Union School District (CUSD) to develop and submit to Public Works, Traffic and Lighting Division, for review and approval of the traffic circulation plan and drop-off/pick-up procedures. The CUSD shall prepare informational packets containing the approved drop-off/pick-up procedures and provide to the parents/guardians of students of the school. The recordation of Lot 1012 containing the proposed elementary school and building permit(s) for the school shall be withheld until the student drop-off/pick-up procedures, the informational packets or brochures, and the revised school site plan(s) have been prepared to the satisfaction by Public Works.

- A legible student enrollment boundary map for the school shall be submitted to us. The map will be used to determine if any additional intersections need to be analyzed in the traffic impact study.

- A trip reduction and management implementation program and/or strategies, such as car pooling and bus operations to minimize traffic generation in the area. The programs shall have specific average vehicle ridership goals for students and staff members.

- To ensure adequate circulation and safety for students/pedestrians, the project shall designate a student drop off/pick-up area on the school site. We recommend a one-way counter-clockwise traffic pattern within the school parking lot and student drop-off/pick-up area to minimize queuing off-site and conflicting traffic movements. We recommend designing "EE" Private Drive (TT 61105) and "FF" Private Drive (TT61105) shall be restricted to one-way westbound/southbound only from "HH" Private Drive (TT61105) at "CC" Private Drive (TT61105). Detailed striping and signing plans shall be prepared for review and approval.

- A 40-foot-scale site plan showing the school access; interior circulation; staff, student, visitor and disabled parking (including car pool spaces); and appropriate traffic control.

Mr. Daryl Zerfass  
May 31, 2005  
Page 6

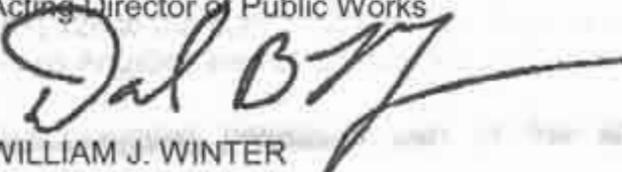

- A peak-hour traffic signal warrant analysis shall be performed for all internal and unsignalized external intersections analyzed in the study.
- A feasibility analysis and cost estimates for all proposed mitigation measures.

A determination shall be made regarding whether the project has a significant impact on the adjacent transportation circulation system within Caltrans and the City of Santa Clarita. Caltrans and the City of Santa Clarita shall be consulted to obtain their written concurrence with the California Environmental Quality Act level of significance determination. If fees are proposed to mitigate the freeway impact, the agency requesting the fees shall be requested to identify the specific project to which the fees will apply. These written comments from these agencies shall be included with the revised study.

If you have any questions regarding the traffic analysis, please contact Mr. Suen Fel Lau of our Traffic and Lighting Division, Land Development Review Section, at (626) 300-4820.

Very truly yours,

DONALD L. WOLFE  
Acting Director of Public Works

WILLIAM J. WINTER  
Assistant Deputy Director  
Traffic and Lighting Division

## FIRE DEPARTMENT

1320 NORTH EASTERN AVENUE  
LOS ANGELES, CALIFORNIA 90063-3294  
(323) 890-4330

P. MICHAEL FREEMAN  
FIRE CHIEF  
FORESTER & FIRE WARDEN

August 3, 2005

Mr. Daniel Fierros  
Department of Regional Planning  
320 West Temple Street, Room #1348  
Los Angeles, CA 90012

Dear Mr. Fierros:

### **NOTICE OF PREPARATION, THE MISSION VILLAGE PROJECT-PART OF THE NEWHALL RANCH SPECIFIC PLAN, COUNTY PROJECT NO. 04-181/TR061105 (LACO) – FFER #200500098**

The Notice of Preparation has been reviewed by the Planning Division, Land Development Unit, and Forestry Division of the County of Los Angeles Fire Department. The following are their comments:

#### **PLANNING DIVISION – FIRE PROTECTION AND EMERGENCY MEDICAL SERVICE AVAILABILITY:**

1. The subject development will receive fire protection and paramedic service from the County of Los Angeles Fire Department. The Initial Study, on Page 19, correctly describes the situation with regard to the future fire stations that will be needed to adequately serve this project. However, it appears to understate the distance to the nearest existing fire station. The response distance is the distance along the existing and proposed roads to the center of the development. We would need a legible, large-scaled map to calculate response distances/times from existing fire stations.

#### **LAND DEVELOPMENT UNIT – INSTITUTIONAL LIMITED ACCESS DEVICES:**

1. All access devices and gates shall comply with California Code of Regulations, Title 19, Article 3.05 and Article 3.16.

#### **SERVING THE UNINCORPORATED AREAS OF LOS ANGELES COUNTY AND THE CITIES OF:**

AGOURA HILLS	BRADBURY	CUDAVY	HAWTHORNE	LA MIRADA	MALIBU	POMONA	SIGNAL HILL
ARTESIA	CALABASAS	DIAMOND BAR	HIDDEN HILLS	LA PUENTE	MAYWOOD	RANCHO PALOS VERDES	SOUTH EL MONTE
AZUSA	CARBON	DUARTE	HUNTINGTON PARK	LAKEWOOD	NORWALK	ROLLING HILLS	SOUTH GATE
BALDWIN PARK	CERRITOS	EL MONTE	INDUSTRY	LANCASTER	PALMDALE	ROLLING HILLS ESTATES	TEMPLE CITY
BELL	CLAREMONT	GARDENA	INGLEWOOD	LAWDALE	PALOS VERDES ESTATES	ROSEMEAD	WALNUT
BELL GARDENS	COMMERCE	GLENDORA	IRVINDALE	LOMITA	PARAMOUNT	SAN DIMAS	WEST HOLLYWOOD
BELLFLOWER	COVINA	HAWAIIAN GARDENS	LA CANADA-FLINTRIDGE	LYNWOOD	PICO RIVERA	SANTA CLARITA	WESTLAKE VILLAGE
			LA HABRA				WHITTIER

GENERAL REQUIREMENTS:

2. The proposed development may necessitate multiple ingress/egress access for the circulation of traffic, and emergency response issues.
3. The development of this project must comply with all applicable code and ordinance requirements for construction, access, water mains, fire flows and fire hydrants.
4. This property is located within the area described by the Forester and Fire Warden as a Fire Zone 4, Very High Fire Hazard Severity Zone (VHFHSZ). All applicable fire code and ordinance requirements for construction, access, water mains, fire hydrants, fire flows, brush clearance and fuel modification plans, must be met.
5. Specific fire and life safety requirements for the construction phase will be addressed at the building fire plan check. There may be additional fire and life safety requirements during this time.
6. Every building constructed shall be accessible to Fire Department apparatus by way of access roadways, with an all-weather surface of not less than the prescribed width. The roadway shall be extended to within 150 feet of all portions of the exterior walls when measured by an unobstructed route around the exterior of the building.
7. Access roads shall be maintained with a minimum of ten (10) feet of brush clearance on each side. Fire access roads shall have an unobstructed vertical clearance clear-to-sky with the exception of protected tree species. Protected tree species overhanging fire access roads shall be maintained to provide a vertical clearance of 13 feet, 6 inches.
8. When a bridge is required to be used as part of a fire access road, it shall be constructed and maintained in accordance with nationally recognized standards and designed for a live load sufficient to carry a minimum of 75,000 pounds. All water-crossing designs are required to be approved by the Department of Public Works prior to installation.
9. The maximum allowable grade shall not exceed 15% except where topography makes it impractical to keep within such grade; in such cases, an absolute maximum of 20% will be allowed for up to 150 feet in distance. The average maximum allowed grade, including topographical difficulties, shall be no more than 17%. Grade breaks shall not exceed 10% in 10 feet.
10. When involved with a subdivision in unincorporated areas within the County of Los Angeles, Fire Department requirements for access, fire flows and hydrants are addressed at the Los Angeles County Subdivision Committee meeting, during the subdivision tentative map stage.
11. Fire sprinkler systems are required in some residential and most commercial occupancies. For those occupancies not requiring fire sprinkler systems, it is strongly suggested that fire sprinkler systems be installed. This will reduce potential fire and life losses. Systems are now technically and economically feasible for residential use.

**INSTITUTION WATER REQUIREMENTS:**

12. The development may require fire flows up to 8,000 gallons per minute at 20 pounds per square inch residual pressure for up to a four-hour duration as outlined in the 2002 County of Los Angeles Fire Code Appendix III-AA. Final fire flows will be based on the size of the buildings, their relationship to other structures, property lines, and types of construction used.
13. Fire hydrant spacing shall be based on fire flow requirements as outlined in the 2002 County of Los Angeles Fire Code Appendix III-BB. Additional hydrants will be required if hydrant spacing exceeds specified distances.

**COMMERCIAL WATER REQUIREMENTS:**

14. The development may require fire flows up to 5,000 gallon per minute at 20 pounds per square inch residual pressure for up to a five-hour duration. Final fire flows will be based on the size of the buildings, their relationship to other structures, property lines, and types of construction used.
15. Fire hydrant spacing shall be 300 feet and shall meet the following requirements:
  - a. No portion of lot frontage shall be more than 200 feet via vehicular access from a public fire hydrant.
  - b. No portion of a building shall exceed 400 feet via vehicular access from a properly spaced public fire hydrant.
  - c. Additional hydrants will be required if hydrant spacing exceeds specified distances.
  - d. When cul-de-sac depth exceeds 200 feet on a commercial street, hydrants shall be required at the corner and mid-block.
  - e. A cul-de-sac shall not be more than 500 feet in length, when serving land zoned for commercial use.

**COMMERCIAL REQUIREMENTS:**

16. Turning radii shall not be less than 32 feet. This measurement shall be determined at the centerline of the road. A Fire Department approved turning area shall be provided for all driveways exceeding 150 feet in length and at the end of all cul-de-sacs.
17. All on-site driveways/roadways shall provide a minimum unobstructed width of 28 feet, clear-to-sky. The on-site driveway is to be within 150 feet of all portions of the exterior walls of the first story of any building. The centerline of the access driveway shall be located parallel to, and within 30 feet of an exterior wall on one side of the proposed structure.

18. Driveway width for Non-Residential developments shall be increased when any of the following conditions will exist:
  - a. Provide 34 feet in width, when parallel parking is allowed on one side of the access roadway/driveway. Preference is that such parking is not adjacent to the structure.
  - b. Provide 42 feet in width, when parallel parking is allowed on each side of the access roadway/driveway.
  - c. Any access way less than 34 feet in width shall be labeled "Fire Lane" on the final recording map, and final building plans.
  - d. For streets or driveways with parking restrictions: The entrance to the street/driveway and intermittent spacing distances of 150 feet shall be posted with Fire Department approved signs stating "NO PARKING - FIRE LANE" in three-inch high letters. Driveway labeling is necessary to ensure access for Fire Department use.

**HIGH-DENSITY RESIDENTIAL REQUIREMENTS:**

19. The development may require fire flows up to 5,000 gallons per minute at 20 pounds per square inch residual pressure for up to a five-hour duration. Final fire flows will be based on the size of the buildings, their relationship to other structures, property lines, and types of construction used.
20. Fire hydrant spacing shall be 300 feet and shall meet the following requirements:
  - a. No portion of lot frontage shall be more than 200 feet via vehicular access from a public fire hydrant.
  - b. No portion of a building shall exceed 400 feet via vehicular access from a properly spaced fire hydrant.
  - c. When cul-de-sac depth exceeds 200 feet, hydrants will be required at the corner and mid-block.
  - d. Additional hydrants will be required if the hydrant spacing exceeds specified distances.
21. Turning radii shall not be less than 32 feet. This measurement shall be determined at the centerline of the road. A Fire Department approved turning area shall be provided for all driveways exceeding 150 feet in length and at the end of all cul-de-sacs.
22. All on-site driveways shall provide a minimum unobstructed width of 28 feet, clear-to-sky. The 28-foot width does not allow for parking, and shall be designated as a "Fire Lane," and have appropriate signage. The centerline of the on-site driveway shall be located parallel to and within 30 feet of an exterior wall on one side of the proposed structure. The on-site driveway is to be within 150 feet of all portions of the exterior walls of the first story of any building.

23. The 28 feet in width shall be increased to:
- a. Provide 34 feet in width when parallel parking is allowed on one side of the access way.
  - b. Provide 36 feet in width when parallel parking is allowed on both sides of the access way.
  - c. Any access way less than 34 feet in width shall be labeled "Fire Lane" on the final recording map, and final building plans.
  - d. For streets or driveways with parking restrictions: The entrance to the street/driveway and intermittent spacing distances of 150 feet shall be posted with Fire Department approved signs stating "NO PARKING - FIRE LANE" in three-inch high letters. Driveway labeling is necessary to ensure access for Fire Department use.
24. When serving land zoned for residential uses having a density of more than four units per net acre:
- a. A cul-de-sac shall be a minimum of 34 feet in width and shall not be more than 700 feet in length.
  - b. The length of the cul-de-sac may be increased to 1,000 feet if a minimum of 36 feet in width is provided.
  - c. A Fire Department approved turning area shall be provided at the end of a cul-de-sac.

**SINGLE-FAMILY/TWO-FAMILY DWELLING REQUIREMENTS:**

25. Single-family detached homes shall require a minimum fire flow of 1,250 gallons per minute at 20 pounds per square inch residual pressure for a two-hour duration. Two-family dwelling units (duplexes) shall require a fire flow of 1,500 gallons per minute at 20 pounds per square inch residual pressure for a two-hour duration. When there are five or more units taking access on a single driveway, the minimum fire flow shall be increased to 1,500 gallons per minute at 20 pounds per square inch residual pressure for a two-hour duration.
26. Fire hydrant spacing shall be 600 feet and shall meet the following requirements:
- a. No portion of lot frontage shall be more than 450 feet via vehicular access from a public fire hydrant.
  - b. No portion of a structure should be placed on a lot where it exceeds 750 feet via vehicular access from a properly spaced public fire hydrant.
  - c. When cul-de-sac depth exceeds 450 feet on a residential street, hydrants shall be required at the corner and mid-block.
  - d. Additional hydrants will be required if hydrant spacing exceeds specified distances.

Mr. Daniel Fierros

August 3, 2005

Page 6

27. A Fire Department approved turning area shall be provided for all driveways exceeding 150 feet in length and at the end of all cul-de-sacs.
28. Fire Department access shall provide a minimum unobstructed width of 28 feet, clear-to-sky and be within 150 feet of all portions of the exterior walls of the first story of any single unit. If exceeding 150 feet, provide 20 feet minimum paved width "Private Driveway/Fire Lane" clear-to-sky to within 150 feet of all portions of the exterior walls of the unit. Fire Lanes serving 3 or more units shall be increased to 26 feet.
29. Streets or driveways within the development shall be provided with the following:
  - a. Provide 36 feet in width on all streets where parking is allowed on both sides.
  - b. Provide 34 feet in width on cul-de-sacs up to 700 feet in length. This allows parking on both sides of the street.
  - c. Provide 36 feet in width on cul-de-sacs from 701 to 1,000 feet in length. This allows parking on both sides of the street.
  - d. For streets or driveways with parking restrictions: The entrance to the street/driveway and intermittent spacing distances of 150 feet shall be posted with Fire Department approved signs stating "NO PARKING - FIRE LANE" in three-inch high letters. Driveway labeling is necessary to ensure access for Fire Department use.
  - e. Turning radii shall not be less than 32 feet. This measurement shall be determined at the centerline of the road.

**LIMITED ACCESS DEVICES:**

30. All access devices and gates shall meet the following requirements:
  - a. Any single gated opening used for ingress and egress shall be a minimum of 26 feet in width, clear-to-sky.
  - b. Any divided gate opening (when each gate is used for a single direction of travel - i.e., ingress or egress) shall be a minimum width of 20 feet clear-to-sky.
  - c. Gates and/or control devices shall be positioned a minimum of 50 feet from a public right-of-way, and shall be provided with a turnaround having a minimum of 32 feet of turning radius. If an intercom system is used, the 50 feet shall be measured from the right-of-way to the intercom control device.
  - d. All limited access devices shall be of a type approved by the Fire Department.
  - e. Gate plans shall be submitted to the Fire Department, prior to installation. These plans shall show all locations, widths and details of the proposed gates.

**TRAFFIC CALMING MEASURES:**

31. All proposals for traffic calming measures (speed humps/bumps/cushions, traffic circles, roundabouts, etc.) shall be submitted to the Fire Department for review, prior to implementation.
32. Should any questions arise regarding subdivision, water systems, or access, please contact the County of Los Angeles Fire Department, Land Development Unit's EIR Specialist at (323) 890-4243.

**HEALTH HAZARDOUS MATERIALS DIVISION:**

The review of the Initial Study indicates that the site was used for agricultural purposes, contains several abandoned oil wells and possibly has perchlorate contamination in groundwater from offsite migration. Past agricultural uses and oil operations may have resulted in contaminating the subject property. The following are recommended to screen the site for potential contamination:

1. A complete Phase I study of the site.
2. Due to prior agricultural use of the site, a statistically valid number of soil samples from the site must be analyzed for pesticides. If preliminary screening identified any pesticides in soil, a complete site investigation must be conducted to define lateral and vertical extent of the contamination prior to remediation.

The abandoned oil wells must be properly closed under jurisdiction of the Oil and Gas Division. Furthermore, additional soil sampling must be conducted in the area of abandoned oil wells and the former oil operation areas. The soil samples in the subject areas must be analyzed for total petroleum hydrocarbons, volatile organic compounds, heavy metal and PCBs. If there is any evidence of contamination, complete site characterization must be conducted prior to remediation.

If off-site Perchlorate migration has contaminated groundwater beneath the site, Los Angeles Regional Water Quality Control Board (RWQCB) must be notified.

If preliminary soil screening results indicate any soil contamination, it is prudent that responsible party obtain a Closure/No further Action Letter from either RWQCB or Department of Toxic Substances Control (DTSC) prior to development of the subject site.

**FORESTRY DIVISION – OTHER ENVIRONMENTAL CONCERNS:**

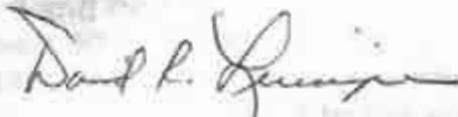

1. The statutory responsibilities of the County of Los Angeles Fire Department, Forestry Division include erosion control, watershed management, rare and endangered species, vegetation, fuel modification for Very High Fire Hazard Severity Zones or Fire Zone 4, archeological and cultural resources, and the County Oak Tree Ordinance. Potential impacts in these areas should be addressed.

Mr. Daniel Fierros  
August 3, 2005  
Page 8

2. The statutory responsibilities of the County of Los Angeles Fire Department, Forestry Division include erosion control, watershed management, rare and endangered species, vegetation, fuel modification for Very High Fire Hazard Severity Zones or Fire Zone 4, archeological and cultural resources, and the County Oak Tree Ordinance. Potential impacts in these areas should be addressed.
3. This project will require an EIR fee deposit of \$1,000 payable to the Los Angeles County Fire Department at the time the DEIR is submitted for review (see attached).

If you have any additional questions, please contact this office at (323) 890-4330.

Very truly yours,

DAVID R. LEINGER, CHIEF, FORESTRY DIVISION

ENCLOSURE

## **LOS ANGELES COUNTY FIRE DEPARTMENT ENVIRONMENTAL REVIEW FEES & DEPOSITS**

Effective September 11, 1991, the County of Los Angeles Fire Department is requiring a deposit fee whenever a review for impact is requested from the Fire Prevention, Forestry, and/or Planning Divisions as part of the environmental review process. The applicant shall pay a minimum deposit fee of \$1,000 from which actual costs shall be billed and deducted. Additional deposits may have to be made if actual review costs exceed 80% of deposited funds. A larger deposit may be made for more complex projects to ensure prompt continuation of environmental review efforts. All unused funds shall be refunded to the applicant.

All Environmental Review Deposits should be made payable and sent to:

Los Angeles County Fire Department  
P.O. Box 910901  
Commerce, CA 90091-0901  
Attn: Financial Management Division

If you have any questions regarding the Environmental Review Fee or Deposit amount, please call the Forestry Division at (323) 890-4330. If you have any questions regarding your Environmental Review Deposit status, please contact the Financial Management Division at (323) 838-2345.

Re: Mission Village Project Notice of Preparation

Dear Mr. Fierros,

Friends of the Santa Clara River offers the following comments on the subject Notice of Preparation (NOP).

The unprecedented growth in the Santa Clara River watershed over the last few decades has caused an array of cumulative impacts to flora and fauna of the River corridor. Encroachment by development into the River floodplain and terrace lands has resulted in habitat loss and fragmentation and will inevitably be followed by a decline in species and loss of biological diversity. These cumulative impacts were not adequately addressed in the EIR for the Newhall Ranch Specific Plan. In its 1998 "Biological Opinion for the Valencia Company's Clean Water Act Section 404 Authorization for Portions of the Santa Clara River, Los Angeles County, California", The U. S. Fish and Wildlife Service (p. 33) states that "The potential increase in urbanization could result in alterations to the Santa Clara River through increasing the pollutant load reaching the river through runoff, human activity in the river, and introduction of additional exotic predators, all of which could adversely affect the unarmored threespine stickleback, southwestern willow flycatcher, and least Bell's vireo." We can see, almost seven years later, the truth of this statement, and that all of this is happening in a major way as numbers of massive projects continue to impact the river. The EIR must completely reexamine cumulative impacts of Santa Clara watershed projects and evaluate the effectiveness of mitigation for cumulative impacts. In this regard, a recent study has shown that wetlands mitigation has been only partially successful at best (see *An Evaluation of Compensatory Mitigation Projects Permitted Under Clean Water Act Section 404 by the Los Angeles Regional Water Quality Control Board, 1991-2002*, by Richard F. Ambrose and Steven F. Lee, Department of Environmental Health Services, University of California at Los Angeles, December 2004).

The Santa Clara River is the largest and one of the last undammed and relatively natural riverine systems remaining in southern California.

Considering the southern California region as a whole, the U. S. Fish and Wildlife Service (Faber et al, 1989) has estimated that 95 to 97 percent of riparian communities have been eliminated due to human influences. Damage occurs primarily because (1) the river is channelized by hardening its banks; (2) riparian and terrace habitats have been lost and fragmented; (3) urban edge effects, including illegal ORV use, degrade riparian biological values; (4) adequate buffer zones protecting the riparian corridor have not been provided; and (5) the function of the river terrace area as wildlife habitat or wildlife corridor is eliminated. The EIR must address the impacts of all above actions on biological resources.

**The Valencia Company's Natural River Management Plan, which is the basis for Army Corps of Engineers permits in the project area, must be re-opened and re-evaluated including public testimony, because it has allowed floodplain and river terrace encroachment that is causing much of the biological degradation cited above. Before more permits can be issued, a thorough analysis must be undertaken of the cumulative impacts of development on the entire upper Santa Clara riparian ecosystem. The EIR must address this issue.**

Project maps show completely inadequate areas for preservation of the San Fernando Valley Spineflower. This must be evaluated in the EIR.

Wildlife corridors within the project area must not only function as corridors but must also connect to other corridors and preserves outside the project. The EIR must examine the wildlife corridor issue and indicate whether there are corridors that truly provide connectivity to surrounding preserve areas such as the Santa Clara River.

The EIR must examine the project impact on the level of chlorides in the Santa Clara River. This issue is already the subject of a working group that has been set up to address studies being done on the chloride issue, and to develop recommendations for dealing with the problem. Chloride levels are being increased by development in the Santa Clara watershed.

From the NOP, it is not clear how wastewater treatment will be handled.

Thank you for considering these comments.

Sincerely,

A handwritten signature in cursive script that reads "Ron Bottorff".

Dear Mr. Fierros:

**RE: MISSION VILLAGE PROJECT, COUNTY PROJECT NO. 04-181,TR 061105  
SCH# 2005051143**

The Department of Health Services (Department) has reviewed the Notice of Preparation (NOP) for the Mission Village Project, County Project No. 04-181, TR061105 draft Environmental Impact Report (EIR), and has the following comments:

1. This proposed project includes 5,331 residential units. The water utility that will be supplying water to this area should be identified and its system capacity evaluated to assess its capability to provide an adequate supply of potable water to all users under maximum demand conditions.
2. There appears to be extensive growth in the Santa Clarita area in recent years. Please provide a discussion on whether the growth in this area is consistent with the regional Urban Water Management Plan.

Responses to the above comments should be addressed in the EIR. If you have any questions, please contact Chun Huang at (213) 580-5760.

Sincerely,

Jeff O'Keefe, P.E.  
District Engineer  
Metropolitan District

Mr. Daniel Fierros  
Los Angeles County Department of Planning  
320 W. Tewmple Street  
Los Angles, CA 90012

Dear Mr. Fierros:

This is in response to your letter dated May 24, 2005, regarding the Mission Village Project SCH# 2005051143. This 1,252 acre project will consist of 5,331 residences, an elementary school, parks, trails and 1,299,000 square feet of commercial space. The proposed project will be located in the unincorporated area of Los Angeles County and within the jurisdiction of the California Highway Patrol. Therefore, traffic enforcement, emergency incident management, public service, assistance and accident investigation will be the responsibility of our agency.

This project, in conjunction with several other proposed developments within the same geographical area, will significantly increase traffic volume on The Old road, Valencia Blvd., SR-126, Magic Mountain Parkway, Rye Canyon and Commerce Center Drive. Additionally, we have great concern for the purposed additional roadways which would necessitate additional resources and officers to provide traffic enforcement, emergency incident management, public service, assistance and accident investigation. This area has been very rural and sparsely populated and therefore not subjected to the level of patrol responsibilities, traffic volume and traffic collision problems which we are currently facing in the Santa Clarita Valley metropolitan area.

Lieutenant M. Odle will be our Department's contact person for the project. If you have any questions or concerns, he may be reached at the above address or telephone number.

Thank you for allowing us the opportunity to comment on this project.

Sincerely,

*E. Conley, Lt.*  
E. CONLEY, Captain  
Commander  
Newhall Area

FROM: Malou Rubio  
Head, Staff Services

SUBJECT: **NEWHALL RANCH – MISSION VILLAGE PROJECT**  
**PROJECT NUMBER 04-181/TR061105**

This is in response to your invitation to submit comments on the Notice of Preparation for the Mission Village Project.

Consistent with Section 4.19 of the Mitigation Monitoring Plan of the Newhall Ranch Specific Plan EIR, the following mitigation measures/conditions of approval apply to the Mission Village portion of the Newhall Ranch Specific Plan:

"Prior to County's issuance of the first residential building permit of Newhall Ranch to the developer, the County Librarian and the developer will mutually agree upon the library construction requirements (location, size, funding and time of construction) based upon the projected development schedule and the population of Newhall Ranch based on the applicable number of average persons per household included in the library facilities mitigation fee in effect at the time. Such mutual agreement regarding the library construction requirements ('Library Construction Plan') and the criteria for timing the completion of the library(s) will be defined in a Memorandum of Understanding between the developer and the County Librarian. Such Memorandum of Understanding shall include an agreement by the developer to dedicate sufficient land and pay the agreed amount of fees on a schedule to allow completion of the library(s) as described below. The developer's funding for library facilities shall not exceed the developer's fee obligation at the time of construction under the developer fee schedule.

"If two libraries are to be constructed, the first library will be completed and operational by the time of County's issuance of the 8,000<sup>th</sup> residential building permit of Newhall Ranch, and the second library will be completed and operational by the time of County's issuance of the 15,000<sup>th</sup> residential building permit of Newhall Ranch. If the County Librarian decides that only one library will be constructed, the library will be completed and operational by the time of County's issuance of the 10,000<sup>th</sup> residential building permit of Newhall Ranch.

"No payment of any sort with respect to library facilities will be required under Section 2.5.3.d of the Specific Plan in order for the developer to obtain building permits for nonresidential buildings."

Re: Notice of Preparation and Initial Study, EIR for "Mission Village" Project

Dear Mr. Ferros:

These comments are submitted on behalf of the Center for Biological Diversity ("Center") on the Notice of Preparation ("NOP") and Initial Study for the Newhall Ranch "Mission Village" project (County Project No. 04-181, Vesting Tentative Tract map 061105, etc.). The Center is a non-profit environmental organization dedicated to the protection of native species and their habitats in the Western Hemisphere through science, policy, and environmental law. The Center has over 13,000 members throughout California and the western United States, including in northern Los Angeles County where the proposed project is located.

#### Flood Hazard

The Initial Study indicates that portions of the project are located within the 100-year FEMA floodplain. The Army Corps and Engineers ("Corps") and the California Department of Fish and Game ("CDFG") are currently processing the permits required for the project's floodplain alterations and preparing an Environmental Impact Statement/Report (EIS/EIR). It is premature to evaluate this project until the EIS/EIR is completed, a record of decision on the Corps' 404 permit completed, mitigation measures adopted, and permit decisions finalized. The EIS/EIR and the federal and state permit decisions are effectively part of the first tier of analysis for the entire Newhall Ranch Specific Plan. A project-level environmental analysis should not be commenced until the upper-tier analysis is completed. The federal and state processes may necessitate design alterations in this project to reduce or avoid the project's impacts. Conversely,

**Tucson • Phoenix • Silver City • San Diego • San Francisco • Joshua Tree • Portland**

---

John Buse, Staff Attorney  
5656 S. DORCHESTER AVE. #3, CHICAGO, IL 60637  
TEL.: (312) 237-1443 • FAX: (501) 633-8375  
Email: [jbuse@biologicaldiversity.org](mailto:jbuse@biologicaldiversity.org) • [www.biologicaldiversity.org](http://www.biologicaldiversity.org)

approval of this project before these permits are issued may foreclose feasible alternatives and mitigation measures that the Corps and CDFG would otherwise consider. Accordingly, sequencing the project-level review after completion of the EIS/EIR and Specific Plan-wide permitting decisions will avoid needless staff time and expense if substantial changes are required in the Project.

Moreover, since many of the issues involved in the Corps/CDFG process will need to be evaluated in the environmental review for the Project, sequencing this review after the completion of the EIS/EIR and Specific Plan-wide permitting decisions will avoid wasteful duplication of effort.

### Water Quality

The EIR must provide detailed descriptions of the project's stormwater impacts and mitigation measures required to control project-related stormwater. The EIR must specify the location, size, and design specifications of stormwater basins and other control measures. Where, as here, the control measures themselves may have environmental effects, these effects must be described in detail and further mitigated.

Studies and research conducted by "[r]egional agencies, academic institutions, and universities have identified storm water and urban runoff as significant sources of pollutants to surface waters in Southern California... Development and urbanization increase pollutant load, volume, and discharge velocity" by converting natural pervious ground, which has the ability to absorb rainwater runoff and remove pollutants, to impervious surfaces such as roadways, which act as pollution highways. *California Regional Water Quality Control Board, Los Angeles Region, Order No. 01-182, NPDES Permit No. CAS004001, Waste Discharge Requirements for Municipal Storm Water and Urban Runoff Discharges Within the County of Los Angeles, December 13, 2001 ("LA County MSWP")*, p. 4.

Furthermore, the "increased volume, increased velocity, and discharge duration of storm water runoff from developed areas has the potential to greatly accelerate downstream erosion and impair stream habitat in natural drainages. Studies have demonstrated a direct correlation between the degree of imperviousness of an area and the degradation of its receiving waters. Significant declines in the biological integrity and physical habitat of streams and other receiving waters have been found to occur with as little as 10 percent conversion from natural to impervious surfaces. Percentage impervious cover is a reliable indicator and predictor of potential water quality degradation expected from new development." LA County MSWP, p.5

The EIR should be directed toward minimizing or avoiding impervious surfaces within the Project area. The environmental effects associated with the dramatic increase in the area covered by impervious surface must be evaluated, together with the impacts of channelizing flood flows and directing high velocity flows into the Santa Clara River or detention basins rather than allowing runoff to permeate through natural vegetated areas. Alternatives that cluster development or reduce the total developed and hard-surfaced area should be considered.

Any stormwater controls should be capable of surpassing the latest stringent standards adopted by the Los Angeles Regional Water Quality Control Board for various municipalities within the Los Angeles Basin. The baseline for evaluating stormwater impacts should be the project site in a pre-development, fully vegetated condition. The project should equal or improve on runoff conditions in such a baseline condition.

The EIR should provide a detailed analysis of pollutant loading associated with the Project. The EIR must consider that the Santa Clara River is listed as an impaired water body for the following pollutants: (1) Ammonia, (2) Chloride, (3) Coliform, (4) Nitrate/Nitrite, and (5) Organic enrichment. Accordingly, the EIR must analyze the project's impact on the Santa Clara River's beneficial uses, and identify how the additional pollutant load generated by the Project will be managed so as not to further impair these beneficial uses.

The EIR must consider the project's effect on the Total Maximum Daily Load (TMDL) for chloride established for the Santa Clara River. The existing ineffective and unenforceable Specific Plan mitigation measure regarding residential water softeners should be strengthened with the goal of ensuring that the project will produce no net increase in chloride loading. Chloride loading is also associated with storm water runoff. Because additional chloride loads will be facilitated by the project, the EIR must take into account the effect of the chloride-laden stormwater on the water quality and habitat of the Santa Clara River. Additionally, an adequate environmental analysis must consider the cumulative impact of this project combined with the dozens of proposed development projects along the Santa Clara River, and address where and how the chloride pollutant load from sewage and stormwater discharges will be allocated.

The EIR must disclose the extent of perchlorate contamination in groundwater that will be used (and potentially discharged) by the project. The EIR should detail current and planned remediation efforts.

### Air Quality

The EIR should consider specific mitigation measures to reduce air quality impacts associated with construction, including a firm requirement for construction equipment to use low-sulfur diesel fuel.

The EIR must disclose the project's net contribution to greenhouse gas emissions and incorporate feasible mitigation measures and alternatives to reduce this impact. For mobile sources, since consistency with the AQMP or conformity with the SCAQMD guidelines will not necessarily achieve the maximum feasible reduction in mobile source greenhouse emissions, the EIR should evaluate specific mitigation measures to reduce greenhouse emissions from mobile sources.

The analysis of the project's contribution to greenhouse gas emissions must also disclose and evaluate the net emissions due to energy use in the project's 5331 residential units. Specific mitigation measures should be incorporated to reduce these emissions to the maximum extent feasible, including but not limited to the following:

- Requiring the use of ultra-efficient appliances and air conditioners capable of exceeding California Energy Commission requirements by at least 25% (i.e. using 75% or less energy than the CEC standards)
- Design standards for residential units and landscaping providing for maximum energy efficiency in order to reduce energy usage associated with cooling and heating
- Use of light-colored roofing and building materials

The Initial Study states (p. 21) that the project will not result in an inefficient use of energy resources. This conclusion is not supported by evidence. The EIR should consider design alternatives and conditions that will promote energy conservation and ensure maximum efficiency in the use of energy resources.

### Biological Resources

New biological resources surveys should be performed for the project site, including multi-season botanical surveys. The Initial Study does not discuss the potential occurrence of the arroyo toad within the project area, although past surveys have indicated that this species is present on or near the project area. Because populations of California gnatcatcher have been expanding northward recently, this species should also be surveyed. It is essential that all survey data be made available to the County and to the public without the limitation of confidentiality agreements or other restrictions.

The EIR must evaluate all direct, indirect, and cumulative impacts to sensitive habitats, including impacts associated with the establishment of fuel modification zones, unpermitted recreational activities, the introduction of non-native plants, the introduction of pets, lighting, noise, and the loss and disruption of essential habitat due to edge effects. The best available data on edge effects for southern California habitats document the collapse of native ant population due the invasion of argentine ants up to 200 m (650 ft) from irrigated areas (Suarez et al. 1998), and predation by house cats which decimate small vertebrate populations (Churcher and Lawton 1987, Hall et al. 2000) within 100 to 300 meters (radius of 32 ha home range reported by Hall et al. 2000). Additionally, landscaping with exotic species is often the vector for introducing invasive exotics into adjacent habitats. Invasive landscape species displace native vegetation, degrade functioning ecosystems, provide little/no habitat for native animals, and increase fire danger and carrying capacity. All of these factors for wildland weeds are present in the project, and their affect must be evaluated in the EIR.

In addition, fire safety concerns and insurance requirements at the wildland urban interface can cause homeowners to clear vegetation up to 61 m (200 ft) around their homes (Longcore 2000). The EIR should identify and evaluate fire clearance/fuel modification management practices associated with the project, including impacts from vegetation management for fire (clearance, maintenance, fuel modification, etc). The project is situated in plant communities that often require periodic, infrequent fire to persist. While periodic fire is not an integral part of riparian vegetation, the proposed permits will allow development that will need to be protected from fire. Therefore, "brush-clearance" will occur at the interface between development and any "open"

spaces. Areas designated as fuel modification zones should be part of the developed area rather than infringing on habitat and open space. Fuel modification zones should not be counted as habitat or open space as they will be subject to periodic vegetation clearing.

Specific, feasible, and enforceable mitigation measures for impacts associated with fuel modification zones, unpermitted recreational activities, the introduction of non-native plants, the introduction of pets, lighting, noise, and the loss and disruption of essential habitat due to edge effects are available and should be included in the EIR, including but not limited to the following:

- setbacks around developed areas and roads, with a minimum 300-foot buffer around Santa Clara River riparian areas
- conditions prohibiting non-leashed outdoor pets (including cats)
- requiring, where appropriate, walls or fences that will inhibit domestic animals from harassing and harming native species including “cat-proof” fencing to prevent feral and house cats from accessing sensitive habitat
- capture programs to control feral cats
- incorporation of low-intensity, shielded, and directional night lighting
- prohibition on motorized vehicle use in the Santa Clara River and its tributaries (with effective enforcement mechanisms – a condition lacking in upstream portions of the river)
- techniques to control non-native invasive species
- limiting the use of pesticides and other toxic chemicals around homes and businesses
- requiring the use of native vegetation in landscaping
- providing public education regarding rare, threatened and endangered species and how local communities can help protect them
- requiring gates to restrict access to lands set aside for habitat preservation

The EIR must evaluate all direct, indirect, and cumulative impacts to wildlife movement corridors. The analysis should cover movement of large mammals, including mountain lion, as well as other taxonomic groups. The EIR should first evaluate habitat suitability within the analysis window for multiple species, including all listed and sensitive species, in addition to target species, such as mountain lion and American Badger. The habitat suitability maps generated for each species should then be used to evaluate the size of suitable habitat patches in relation to the species average territory size to determine whether the linkages provide both live-in and move-through habitat. The analyses should also evaluate if suitable habitat patches are within the dispersal distance of each species. The EIR should address both individual and intergenerational movement (i.e., will the linkages support metapopulations of smaller, less vagile species). The EIR should identify which species the wildlife movement corridors potentially function for under baseline conditions and after build out, and for which species they would not. In addition, the EIR should consider how wildlife movement will be affected by other planned phases of the Newhall Ranch project and other anticipated development in the region.

The EIR should analyze whether the proposed wildlife movement corridors are wide enough to minimize edge effects and allow natural processes of disturbance and subsequent recruitment to function. The EIR should also evaluate whether the proposed wildlife movement corridors would provide key resources for species, such as host plants, pollinators, or other elements. For example, many species commonly found in riparian areas depend on upland habitats during some portion of their cycle. Therefore, in areas with intermittent or perennial streams, upland habitat protection is needed for these species. Upland habitat protection is also necessary to prevent the degradation of aquatic habitat quality.

We have requested that the Corps and CDFG evaluate impacts to the following species that were not analyzed in sufficient detail in the Newhall Ranch Specific Plan Program EIR. If the County proceeds with the Mission Village project prior to completion of the Corps/CDFG analysis, the County’s EIR must consider potential impact to:

- *Myotis thysanodes* (Fringed myotis bat) is a Federal Species of Concern, considered Sensitive by the Bureau of Land Management (BLM), and is a High priority for the Western Bat Working Group (WBWG) (CDFG 2001). While this species has not been observed in the Specific Plan Area (Draft Environmental Impact Report for Newhall Ranch Specific Plan 1996 [“DEIR”]), its roosting and foraging habitat (e.g., oak woodland, caves, rock crevices, cliff faces; Barbour and Davis 1969, Stephenson and Calcarone 1999, Wilson and Ruff 1999) is still extant within the project boundary. Therefore, there is potential for this species to occur on the project site, and if present, to be impacted by the project.
- *Myotis yumanensis* (Yuma myotis) is a Federal and State Species of Special Concern, and is considered Sensitive by the BLM (CDFG 2001). Yuma myotis are threatened by loss of riparian habitats and the decline in permanent water sources (Bat Conservation International 2002). While this species has not been observed in the Specific Plan Area (DEIR 1996), its habitat is still extant within the project boundary. Therefore, there is potential for this species to occur on the project site, and if present, to be impacted by the project.
- *Euderma maculatum* (Spotted bat) is a Federal and State Species of Special Concern, BLM Sensitive, and a High priority for the WBWG (CDFG 2001). Habitats range from arid deserts and grasslands through mixed conifer forests; prefers roosting in rock crevices, with cliffs providing optional roosting habitat (Zeiner et al. 1990). While this species has not been observed in the Specific Plan Area (DEIR 1996), its roosting and foraging habitat is still extant within the project boundary. Therefore, there is potential for this species to occur on the project site, and if present, to be impacted by the project.
- *Corynorhinus townsendii pallescens* (Pale big-eared bat): Federal and State Species of Special Concern, considered Sensitive by the Forest Service (FS) and BLM, and a High priority for the WBWG (CDFG 2001). Typically found in scrub and forested habitats (Bat Conservation International 2002). While this species has not been observed in the Specific Plan Area (DEIR 1996), its roosting and foraging habitat is still extant within the

project boundary. Therefore, there is potential for this species to occur on the project site, and if present, to be impacted by the project.

- *Eumops perotis californicus* (Greater western mastiff bat) is a Federal and State Species of Special Concern, BLM Sensitive, and a High priority for the WBWG (CDFG 2001). While this species has not been observed in the Specific Plan Area (DEIR 1996), its habitat - deciduous woodlands, coastal scrub, annual and perennial grasslands, and chaparral (Zeiner et al. 1990, Stephenson and Calcarone 1999). - is still extant within the project boundary. Therefore, there is potential for this species to occur on the project site, and if present, to be impacted by the project.
- *Antrozous pallidus* (Pallid bat) is a California Special Concern Species, considered Sensitive by the Forest Service and BLM, and is a High priority for the WBWG (CDFG 2001). Occurs in low elevation grasslands, shrublands, woodlands, and forests (Stephenson and Calcarone 1999). Declining primarily due to loss of habitat, especially roost sites (Barbour and Davis 1969). While this species has not been observed in the Specific Plan Area (DEIR 1996), its roosting and foraging habitat is still extant within the project boundary. Therefore, there is potential for this species to occur on the project site, and if present, to be impacted by the project.
- *Lepus californicus bennetti* (San Diego black-tailed jackrabbit) is a Federal and State Species of Species Concern (CDFG 2001). Occurs in grasslands or sparse coastal scrub (Stephenson and Calcarone 1999). This species was observed at the mouth of Potrero Canyon (DEIR 1996), and potentially occurs in the project area. Therefore, there is potential for this species to be impacted by the project.
- *Perognathus longimembris brevinasus* (Los Angeles little pocket mouse) is a Federal and State Species of Special Concern, and is considered Sensitive by the Forest Service (CDFG 2001). Restricted to low elevation grassland and coastal sage associations in the Los Angeles Basin (Stephenson and Calcarone 1999). Declining due to loss of habitat to urbanization and cultivation (Zeiner et al. 1990). While this species has not been observed in the Specific Plan Area (DEIR 1996), potential habitat is still extant within the project boundary. Therefore, there is potential for this species to occur on the project site, and if present, to be impacted by the project.
- *Onychomys torridus Ramona* (Southern grasshopper mouse) is a Federal and State Species of Special Concern (CDFG 2001). Occurs in riparian, coastal scrub, mixed chaparral, sagebrush, low sage, and bitterbrush habitats. While this species has not been observed in the Specific Plan Area (DEIR 1996), potential habitat is still extant within the project boundary. Therefore, there is potential for this species to occur on the project site, and if present, to be impacted by the project.
- *Neotoma lepida intermedia* (San Diego desert woodrat) is a Federal and State Species of Special Concern (CDFG 2001). Prefers rocky outcrops, cliffs, and slopes in coastal sage scrub and chaparral habitats (Stephenson and Calcarone 1999). This species was

observed just west of Magic Mountain (DEIR 1996), and potentially occurs in other areas within the project boundary. Therefore, there is potential for this species to be impacted by the project.

- *Taxidea taxus* (American badger) Once a fairly widespread resident throughout open habitats of California, badger is now uncommon throughout the state and is considered a California Species of Special Concern (CDFG 1999, CDFG 2001). Badgers are largely considered habitat specialists, associated with grasslands and other open habitats (Banfield 1974; de Vos 1969, Sullivan 1996) but they may also be found in drier open stages of shrub and forest communities and riparian habitats (CDFG 1999, Long and Killingley 1983). The applicant's consultants did not observe this species in the Specific Plan Area (DEIR 1996); however, this wide-ranging species has the potential to occur throughout the project area. Therefore, there is potential for this species to be impacted by the project.
- *Puma concolor* (Mountain lion) is a California Fully Protected species (CDFG 2001). The mountain lion is considered a habitat generalist, utilizing brushy stages of a variety of habitat types with good cover (Spowart and Samson 1986). Within these habitats, mountain lions prefer rocky cliffs, ledges, and vegetated ridgetops that provide cover when hunting prey (Spowart and Samson 1986, Chapman and Feldhamer 1982), which is primarily mule deer, *Odocoileus hemionus* (Lindzey 1987). Den sites may be located on cliffs, rocky outcrops, caves, in dense thickets or under fallen logs (Chapman and Feldhamer 1982). In southern California, most cubs are reared in thick brush (Beier et al. 1995). They prefer vegetated ridgetops and stream courses as travel corridors and hunting routes (Spotwart and Samson 1986, Beier and Barrett 1993). Diagnostic sign of this species was observed during additional surveys of the Newhall Ranch Specific Plan area. This species has been recently recorded within the vicinity (Seth Riley, personal communication). This wide-ranging species has the potential to occur throughout the project area. Therefore, there is potential for this species to be impacted by the project.
- *Ardea herodias herodias* (Great blue heron) is associated with a habitat that is declining in California at an alarming rate (DEIR 1996). This species was observed in the Santa Clara River (DEIR 1996), and potentially occurs in other areas within the project boundary, as riparian habitat exists within the project area. Therefore, there is potential for this species to be impacted by the project.
- *Casmerodius albus* (Great Egret) is associated with a habitat that is declining in California at an alarming rate (DEIR 1996). This species was observed in the Santa Clara River (DEIR 1996), and potentially occurs in other areas within the project boundary, as riparian habitat exists within the project area. Therefore, there is potential for this species to be impacted by the project.
- *Egretta thula thula* (Snowy egret) is associated with a habitat that is declining in California at an alarming rate (DEIR 1996). This species was observed in the Santa Clara River (DEIR 1996), and potentially occurs in other areas within the project boundary, as

riparian habitat exists within the project area. Therefore, there is potential for this species to be impacted by the project.

- *Nycticorax nycticorax* (Black-crowned night heron) is associated with a habitat that is declining in California at an alarming rate (DEIR 1996). This species was observed in the Santa Clara River (DEIR 1996), and potentially occurs in other areas within the project boundary, as riparian habitat exists within the project area. Therefore, there is potential for this species to be impacted by the project.
- *Lixobrychus exilis* (Least bittern) is a State Species of Special Concern and is considered a Migratory Nongame Bird of Management Concern (MNBMC) by the US Fish and Wildlife Service (“USFWS”) (CDFG 2001). While this species has not been observed in the Specific Plan Area (DEIR 1996), potential habitat is still extant within the project boundary. Therefore, there is potential for this species to occur on the project site, and if present, to be impacted by the project.
- *Aquila chrysaetos* (Golden eagle) is a fully protected California Special Concern Species, and is considered sensitive by BLM (CDFG 2001). While this species has not been observed in the Specific Plan Area (DEIR 1996), potential habitat is still extant within the project boundary. Therefore, there is potential for this species to occur on the project site, and if present, to be impacted by the project.
- *Buteo regalis* (Ferruginous hawk) is a Federal and State Species of Special Concern; considered a Migratory Nongame Bird of Management Concern (MNBMC) by the USFWS; it is also on the Audubon Watch List and is considered Sensitive by BLM (CDFG 2001). Occur in grasslands, canyons, and open valleys. They may occur along streams or in agricultural areas in migration. While this species has not been observed in the Specific Plan Area (DEIR 1996), potential habitat is still extant within the project boundary. Therefore, there is potential for this species to occur on the project site, and if present, to be impacted by the project.
- *Circus cyaneus* (Northern harrier) is a California Special Concern Species (CDFG 2001). Utilizes open country such as tidal marshes, emergent wetlands, fallow fields, grassland, meadows, and agricultural areas. This species was observed in the grassland area near Potrero Canyon Pond (DEIR 1996), and potentially occurs within the project boundary. Therefore, there is potential for this species to be impacted by the project.
- *Elanus leucurus* (White-tailed kite) is California Fully Protected species and is considered a Migratory Nongame Bird of Management Concern (MNBMC) by the USFWS (CDFG 2001). Favor agricultural areas, grasslands, marshes, savannas, and other open land or sparsely wooded areas (Peregrine Fund). This species was observed in the riparian habitat on site; a nesting pair in woodland north of the Santa Clara River near the confluence with Castaic Creek (DEIR 1996), and potentially occurs in other areas within the project boundary. Therefore, there is potential for this species to be impacted by the project.

- *Accipiter cooperii* (Cooper's hawk) is a California Special Concern Species (CDFG 2001). Occupies deciduous and mixed forests, such as riparian woodlands (Remsen 1978, Garrett and Dunn 1981, Zeiner et al. 1990, Johnsgard 1990, Small 1994). Elimination and degradation of riparian woodlands is the main threat (Remsen 1978, Johnsgard 1990). This species was observed in the riparian habitat on site; a nesting pair in woodland north of the Santa Clara River near the confluence with Castaic Creek (DEIR 1996), and potentially occurs in other areas within the project boundary. Therefore, there is potential for this species to be impacted by the project.
- *Accipiter striatus* (Sharp-shinned hawk) is a California Special Concern Species (CDFG 2001). Nests in riparian areas or on north-facing slopes in forested habitats (Remsen 1978, Zeiner et al. 1990, Johnsgard 1990, Small 1994). While this species has not been observed in the Specific Plan Area (DEIR 1996), potential habitat is still extant within the project boundary. Therefore, there is potential for this species to occur on the project site, and if present, to be impacted by the project.
- *Falco columbarius* (Merlin) is a California Species of Special Concern. These small falcons favor open country (Grove 1999). While this species has not been observed in the Specific Plan Area (DEIR 1996), potential habitat is still extant within the project boundary. Therefore, there is potential for this species to occur on the project site, and if present, to be impacted by the project.
- *Falco mexicanus* (Prairie falcon) is a California Species of Special Concern and is on the Audubon California Watch List (CDFG 2001). Prefers open terrain including sagebrush, grassland, savannah and rangeland habitats (Garrett and Dunn 1981, Johnsgard 1990, Zeiner et al. 1990). While this species has not been observed in the Specific Plan Area (DEIR 1996), potential habitat occurs within the project boundary. Therefore, there is potential for this species to occur on the project site, and if present, to be impacted by the project.
- *Charadrius montanus* (Mountain plover) is a California Fully Protected Species of Special Concern (CDFG 2001). While this species has not been observed in the Specific Plan Area (DEIR 1996), potential habitat occurs within the project boundary. Therefore, there is potential for this species to occur on the project site, and if present, to be impacted by the project.
- *Athene cunicularia hypogaeae* (Burrowing owl) is a Federal and State Species of Special Concern, and is considered Sensitive by BLM, and a Migratory Nongame Bird of Management Concern (MNBM) by the USFWS (CDFG 2001). Prefers open, dry grassland and scrub habitats (Small 1994). They may also occupy agricultural areas or other disturbed habitats (Millsap and Bear 2000, Haug and Oliphant 1990, USFS 2002). Nearly 60% of California burrowing owl colonies that existed in the 1980s were gone by the early 1990s (USFS 2002). While this species has not been observed in the Specific

Plan Area (DEIR 1996), extensive potential habitat occurs within the project boundary. Therefore, if this species is present it could be impacted by the project.

- *Asio otus* (Long-eared owl) is a California Species of Special Concern (CDFG 2001). Inhabits dense riparian and live oak thickets near meadow edges or open spaces, and nearby woodland and forest habitats (Remsen 1978, Zeiner et al. 1990, Small 1994). While this species has not been observed in the Specific Plan Area (DEIR 1996), extensive potential habitat occurs within the project boundary. Therefore, if this species is present it could be impacted by the project.
- *Asio flammeus* (Short-eared owl) is a California Species of Special Concern, on the Audubon California Watch List and is considered a Migratory Nongame Bird of Management Concern (MNBMC) by the USFWS (CDFG 2001). They prefer open country, such as wetlands, grasslands, savannas, and agricultural areas (Peregrine Fund). While this species has not been observed in the Specific Plan Area (DEIR 1996), extensive potential habitat occurs within the project boundary. Therefore, if this species is present it could be impacted by the permitted activities.
- *Pyrocephalus rubinus flammeus* (Vermilion flycatcher) is a California Species of Special Concern (CDFG 2001) dependent on riparian habitats (Remsen 1978). This species was observed along the Santa Clara River in 1993 (DEIR 1996), and potentially occurs in riparian habitat is within the project boundary. Therefore, there is potential for this species to be impacted by the project.
- *Lanius ludovicianus* (Loggerhead shrike) is a Federal and State Species of Special Concern, on the Audubon California Watch List and is considered a Migratory Nongame Bird of Management Concern (MNBMC) by the U.S. Fish and Wildlife Service (CDFG 2001). Resident in open habitats including grasslands, fields, agricultural areas, but may also be found in oak woodlands, chaparral, and coastal sage scrub habitats (Remsen 1978, Stephenson and Calcarone 1999). This species was observed at the edges of grassland and scrub, in the Santa Susana Mountains in Potrero and Salt Creek Canyons (DEIR 1996), and potentially occurs within the project boundary. Therefore, there is potential for this species to be impacted by the project.
- *Dendroica petechia brewsteri* (Yellow warbler) is a California Species of Special Concern (CDFG 2001). Usually found in riparian deciduous; breeds in riparian woodlands in coastal and desert lowlands, montane chaparral, and open ponderosa pine and mixed conifer habitats with substantial amounts of brush. Once a common summer resident in riparian areas throughout California, populations are now seriously reduced (Remsen 1978, Zeiner et al. 1990, Small 1994). This species was observed in 1993 along the Santa Clara River between Castaic Creek and the Ventura County line; also observed in 1994 and 1995 (DEIR 1996), and potentially occurs in other riparian areas within the project boundary. Therefore, there is potential for this species to be impacted by the project.

- *Icteria virens* (Yellow-breasted chat) is a California Species of Special Concern and is considered a Migratory Nongame Bird of Management Concern (MNBMC) by the USFWS (CDFG 2001). Once a fairly common summer resident in riparian woodland throughout California, but has declined dramatically, especially in southern California (Remsen 1978). This species was also observed in 1993 along the Santa Clara River between Castaic Creek and the Ventura County line; also observed in 1994 and 1995 (DEIR 1996), and potentially occurs in other riparian areas within the project boundary. Therefore, there is potential for this species to be impacted by the project.
- *Piranga rubra* (Summer tanager) is a California Species of Special Concern. Nests in riparian groves dominated by mature Fremont cottonwoods (Stephenson and Calcarone 1999). This species was also observed in 1993 along the Santa Clara River (DEIR 1996), and potentially occurs in other riparian areas within the project boundary. Therefore, there is potential for this species to be impacted by the project.
- *Eremophila alpestris actia* (California horned lark) is a California Species of Special Concern (CDFG 2001). This species was observed in grassland habitats on the Ranch (DEIR 1996), and potentially occurs in other areas within the project area. Therefore, there is potential for this species to be impacted by the project.
- *Aimophila ruficeps canescens* (Rufous-crowned sparrow) is a Federal and State Species of Special Concern, on the Audubon California Watch List and is considered a Migratory Nongame Bird of Management Concern (MNBMC) by the USFWS (CDFG 2001). Optimal habitat is coastal sage scrub but also utilizes open chaparral (Stephenson and Calcarone 1999). This species was observed in several widely scattered areas of coastal sage scrub and chaparral on the Newhall Ranch site (DEIR 1996), and potentially occurs in other areas within the project area. Therefore, there is potential for this species to be impacted by the project.
- *Amphispiza belli belli* (Bell's sage sparrow) is a Federal and State Species of Special Concern, on the Audubon California Watch List and is considered a Migratory Nongame Bird of Management Concern (MNBMC) by the USFWS (CDFG 2001). While this species has not been observed in the Specific Plan Area (DEIR 1996), potential habitat occurs within the project boundary. Therefore, if this species is present it could be impacted by the project.
- *Agelaius tricolor* (Tricolored blackbird) is a Federal and State Species of Special Concern, on the Audubon California Watch List, is considered Sensitive by BLM, and a Migratory Nongame Bird of Management Concern (MNBMC) by the USFWS (CDFG 2001). This species was observed in grassland habitat near the mouth of Potrero Canyon (DEIR 1996), and potentially occurs in areas that support grassland habitat within the project area. Therefore, there is potential for this species to be impacted by the project.
- *Spea hammondi* (Western spadefoot toad) is a Federal and State Species of Special Concern and is considered Sensitive by the BLM (CDFG 2001). Inhabits upland habitats

including open chaparral, grassland, and occasionally woodlands; aquatic habitats include vernal pools, washes, alluvial fans, playas, or even alkali flats (Zeiner et al. 1988, Jennings and Hayes 1994). Declining due to loss of ephemeral breeding sites and the introduction of non-native aquatic species. Current data indicates that in southern California (from the Santa Clara River Valley, Los Angeles and Ventura counties, southward), > 80% of habitat once occupied has been developed or converted (Jennings and Hayes 1994). Tadpoles of this species were observed in Potrero Canyon Pond and Via Pond, and adults were observed in Salt Creek Canyon (DEIR 1996); this species potentially occurs in areas within the project area. Therefore, there is potential for this species to be impacted by the project.

- *Diadophis punctatus modestus* (San Bernardino ringneck snake) is a Federal Species of Special Concern. Restricted to mountains or moist woodlands and watercourses in open, relatively rocky areas within valley-foothill riparian, mixed chaparral, coastal sage scrub, and grassland habitats (Jennings and Hayes 1994). While this species has not been observed in the Specific Plan Area (DEIR 1996), extensive potential habitat occurs within the project boundary. Therefore, if this species is present it could be impacted by the project.
- *Salvadora hexalepis virgulata* (Coast patch-nosed snake) is a Federal and State Species of Special Concern (CDFG 2001). It is found in coastal chaparral, desert scrub, washes, sandy flats, and rocky areas (Zeiner et al. 1988, Jennings and Hayes 1994). While this species has not been observed in the Specific Plan Area (DEIR 1996), extensive potential habitat occurs within the project boundary. Therefore, if this species is present it could be impacted by the project.
- *Lichanura trivirgata roseofusca* (Coastal rosy boa) is a Federal Species of Special Concern and is considered Sensitive by the BLM (CDFG 2001). It occurs in rocky coastal sage and chaparral-covered hillsides, canyons, and washes; attracted to streams but does not require permanent water (Zeiner et al. 1988). While this species has not been observed in the Specific Plan Area (DEIR 1996), extensive potential habitat occurs within the project boundary. Therefore, if this species is present it could be impacted by the project.
- *Thamnophis hammondi* (Two-striped garter snake) is a Federal and State Species of Special Concern and is considered Sensitive by both the FS and BLM (CDFG 2001). One of the most aquatic of garter snakes, found in or near permanent and intermittent fresh water, often along pools in streams with rocky beds bordered by willow thickets or other dense vegetation in oak woodland, mixed oak, and chaparral habitats. During summer, snakes use streamside areas, and winter in coastal sage scrub and grassland areas adjacent to riparian areas (Zeiner et al. 1988, Jennings and Hayes 1994). One of the primary causes of decline is the extensive loss of wetland habitats in southern California. Other factors include loss of amphibians (food source), water pollution, urbanization, creation of large reservoirs, and concrete lining of stream channels for flood control (Jennings and Hayes 1994). This species was observed in Via Pond and in Salt Creek

(DEIR 1996), and potentially occurs in other areas within the project area. Therefore, there is potential for this species to be impacted by the project.

- *Clemmys marmorata pallida* (Southwestern pond turtle) is a Federal and State Species of Special Concern and is considered Sensitive by both the Forest Service and BLM (CDFG 2001). Pond turtles typically occur in permanent ponds, lakes, streams, or permanent pools along intermittent streams (Morey 1988). Access to sandy banks is needed for nesting (Storer 1930, Rathburn et al. 1992). The Western pond turtle is the only native freshwater turtle remaining in California. It is an indicator of connections within and between aquatic and upland habitat. This species was observed in the Santa Clara River (DEIR 1996), and potentially occurs in other areas within the project boundary. Therefore, there is potential for this species to be impacted by the project.
- *Cnemidophorus tigris multiscutatus* (Coastal western whiptail) is a Federal Species of Special Concern (CDFG 2001). This species was observed in coastal sage scrub and chaparral habitats on Newhall Ranch (DEIR 1996), and potentially occurs in the project area. Therefore, there is potential for this species to be impacted by the project.
- *Phrynosoma coronatum frontale* (California horned lizard) is a Federal and State Species of Special Concern and is considered Sensitive by the BLM (CDFG 2001). Occurs in several habitat types, including clearings in riparian woodlands, dry chamise chaparral, and annual grassland (Zeiner et al. 1988, Jennings and Hayes 1994). *P. c. frontale* has disappeared from about 35% of its range and extant populations are becoming increasingly fragmented with continued development. Negative effects of human disturbance such as domestic cats have eliminated horned lizards within a several km area from a cat's home base (Jennings and Hayes 1994). This species was observed on the Newhall Ranch site in 1992 surveys; four horned lizards were observed in 1995 but specific identification of the species was debatable (DEIR 1996). Therefore, there is potential for this species to be impacted by the project.
- *Phrynosoma coronatum blainvillei* (San Diego horned lizard) is a Federal and State Species of Special Concern and is considered Sensitive by the FS (CDFG 2001). Occurs in a wide variety of habitats including coastal sage, annual grassland, chaparral, oak woodland, riparian woodland, and coniferous forest; most abundant in riparian and coastal sage habitats (Zeiner et al. 1988, Jennings and Hayes 1994). *P. c. blainvillii* has disappeared from about 45% of its range in southern California due to extensive habitat loss from agriculture, flood control, and urbanization (Jennings and Hayes 1994). This species was potentially observed within the Specific Plan area; four horned lizards were observed in 1995 but specific identification of the species was debatable (DEIR 1996). Therefore, there is potential for this species to be impacted by the project.
- *Anniella pulchra* (Silvery legless lizard) is a Federal and State Species of Special Concern and is considered Sensitive by the FS (CDFG 2001). Occurs in areas with sandy or loose loamy soils with leaf litter in riparian, chaparral, coastal sage scrub, alluvial fan, and woodland habitats that grow on stream terraces (Jennings and Hayes 1994).

Disappeared from about 20% of its known historic range due to habitat loss, fragmentation, and degradation (Jennings and Hayes 1994). While this species has not been observed in the Specific Plan Area (DEIR 1996), extensive potential habitat occurs within the project boundary. Therefore, if this species is present it could be impacted by the project.

- *Gila orcutti* (Arroyo chub) is a Federal and State Species of Special Concern and is considered Sensitive by the FS (CDFG 2001). Lives and spawns in slow-moving or backwater sections of warm to cool streams with mud or sand substrates and depths greater than about 40 cm (Stephenson and Calcarone 1999). The species is scarce within their native range because of habitat loss and degradation (Moyle et al. 1995). This species was observed in several areas of the Santa Clara River in 1992, 1993, and 1995 surveys (DEIR 1996). Therefore, there is potential for this species to be impacted by the project.

We have also requested that the Corps and CDFG evaluate impacts to the following plant species. If the County proceeds with the Mission Village project prior to completion of the Corps/CDFG analysis, the County's EIR must consider potential impact to:

- *Chorizanthe parryi* var. *fernandina* (San Fernando Valley spineflower) – CNPS list 1B, State-listed endangered and a Federal Candidate for listing. Locations of the San Fernando Valley spineflower are proposed as borrow sites for filling of the Santa Clara River (Los Angeles County Initial Study 2003). Other impacts for activities connected to or related to activities covered under the requested permits may also impact this species.
- *Dodecahema leptocerus* (Slender-horned spineflower) – CNPS list 1B, State- and Federally listed endangered. While this species has not been reported recently within the Specific Plan area, its habitat - alluvial scrub - is still extant within the floodplain of the Santa Clara River in the project area. Therefore, there is still potential for this species to occur on the project site, and if present, to be impacted by the project.
- *Orcuttia californica* (California Orcutt grass) - CNPS list 1B, State- and Federally listed endangered. While this species has not been reported recently within the Specific Plan area, its habitat – vernal pools – may still be extant within grasslands on the proposed project. Therefore, there is still potential for this species to occur on the project site and if present, to be impacted by the project.
- *Calochortus clavatus* var. *gracilis* (Slender mariposa lily) - CNPS list 1B. The range of this rare species covers the Specific Plan area, which includes over 6000 acres of suitable chaparral and coastal scrub habitat. Therefore, there is still potential for this species to occur on the project site and if present, to be impacted by the project.
- *Calochortus plummerae* (Plummer's mariposa lily) - CNPS list 1B. The range of this rare species covers the Specific Plan area, which includes over 10,000 acres of suitable chaparral, cismontane woodland, coastal scrub and foothill and valley grasslands.

Therefore, there is still potential for this species to occur on the project site and if present, to be impacted by the project.

- *Opuntia basilaris* var. *brachyclada* (Short-joint beavertail cactus) - CNPS list 1B. There is potential for this species to occur on the project site and if present, to be impacted by the project.
- *Helianthus nuttallii* ssp. *parishii* (Los Angeles sunflower) – CNPS list 1A. Locations of this Los Angeles sunflower are directly within the Santa Clara river floodplain and may occur within the project area.
- *Berberis nevinii* (Nevin’s barberry) – CNPS list 1B, State- and Federally listed endangered. This species is an alluvial scrub inhabitant. Therefore, there is still potential for this species to occur within the project area and if present, to be impacted by the project.
- *Deinandra minthornii* (Santa Susana tarplant) - CNPS list 1B, State listed rare. This species is a primarily known from the Santa Susana mountains in chaparral. Therefore, there is still potential for this species to occur within the project area and if present, to be impacted by the project.
- *Navarretia fossalis* (Spreading navarretia) - CNPS list 1B, Federally listed threatened. This species is a vernal pool species has potential to occur in the grasslands within the project area and if present, to be impacted by the project.
- *Senecio aphanactis* (Rayless ragwort) – CNPS list 2. Only one occurrence of this species is known from the general area. This annual species of the coastal sage scrub and chaparral has potential to occur within the project area. If present, it could be impacted by the project.
- *Juncus acutus* ssp. *leopoldii* – CNPS list 4. This species is known to occur within the project area in the floodplain of the Santa Clara River. Therefore, there is potential to be impacted by the project.
- *Calystegia peirsonii* – CNPS list 4. This species is known to occur within the Specific Plan area. Therefore, there is potential for this species to be impacted by the project.

The EIR should also consider the project’s impact on locally rare species. The preservation of regional and local scales of genetic diversity is very important to maintaining species. Therefore, we request that all species found at the edge of their ranges or that occur as disjunct locations be evaluated for impacts by the proposed project. Such species include but are not limited to:

- *Bowlesia incana*
- *Yabea microcarpa*
- *Brickellia nevinii*

- *Paeonia californica*

These may not be the only rare plant species that have potential to occur within the project area. Targeted species surveys need to include a complete floristic inventory of the project area, to detect unexpected rare species.

The analysis of potential San Fernando Valley spineflower impacts should account for past activities by the applicant that may have reduced the extent and range of the spineflowers on the site, whether or not authorized by law. Under CEQA, these activities may be considered in determining the appropriate mitigation for the project’s impacts. San Fernando Valley spineflower preserve design should allow for maximum preservation of existing spineflower populations in large, connected preserves. Preserve design should be peer-reviewed by independent scientific experts.

The EIR should disclose the portions of the project site that are designated or proposed as critical habitat for the least Bell’s vireo and other listed species.

Where “take” of a species listed under the federal or California Endangered Species Act is anticipated, the EIR must document and quantify past and reasonably foreseeable future take authorizations for that species issued by the USFWS and CDFG in order to evaluate the project’s direct and cumulative impact on the species. The County might consider requesting that USFWS and CDFG provide a database of take authorizations to assist in the County’s analysis.

The EIR must consider the project’s impacts on the recovery of listed endangered and threatened species that may occur on the site. Any potential impairment of species recovery associated with the project must be considered a potentially significant impact.

The EIR must include detailed vegetation mapping to identify sensitive and rare plant communities. For affected sensitive habitat and vegetation types, the EIR should prioritize avoidance, followed by onsite habitat replacement at a mitigation ratio calculated to ensure success, followed by onsite restoration and enhancement, followed by off-site mitigation. The EIR should include alternatives that maximize avoidance of sensitive habitat through clustering and preservation of large, contiguous areas. Identification and purchase of mitigation areas, with establishment of effective long-term management, should occur prior to any grading.

The NOP indicates that the project will remove 219 of the 722 oak trees located on the site. The EIR must evaluate the size and functional value of the trees that are proposed for removal, as well as the cumulative impact associated with oak tree destruction throughout the region. The loss of this many trees, some or all of which are mature, cannot be effectively mitigated by relocation or replacement. The EIR must evaluate alternatives, including project redesign, that avoid or minimize oak tree removal to the maximum extent feasible.

### Transportation/Traffic

The EIR should provide updated traffic models for I-5 and other major highways and roadways that incorporate traffic projections based on current traffic levels and other existing, approved, and planned projects.

### Environmental Safety

The EIR must disclose existing soil contamination, and the discuss in detail the plan for remediating the project site so that it is suitable for residential use. Where those remediation measures may themselves have environmental impacts, the impacts must be disclosed and mitigated.

### Land Use

The EIR must evaluate the project's consistency with the approved Newhall Ranch Specific Plan, the County's General Plan, and other relevant plans. Where there is a potential inconsistency, the project must be changed or the plan amended.

### Population/Housing/Employment/Recreation

The Initial Study states that the project will not result in a substantial increase in Vehicle Miles Traveled. What is the basis for this conclusion? The EIR must evaluate the potential impacts associated with cross-commuting, as those outside the project area commute to businesses on the site and vice versa.

### Cumulative Impacts

As required by CEQA, the EIR must include a list of past, present, and probable future projects producing related or cumulative impacts, together with a summary of the expected environmental impacts from those projects and a reasonable analysis of the cumulative impacts of the relevant projects.

### Alternatives

The EIR should evaluate a river conservation alternative that avoids most or all development in Corps/CDFG jurisdictional waters and wetlands and provides a minimum 300-foot setback between development and riparian areas. Such an alternative would avoid or reduce many of the project's direct and indirect impacts on biological resources.

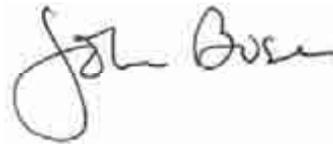

The EIR should evaluate alternatives that avoid the need for bridging the Santa Clara River and that place any bridge structures out of the river's 100 floodplain.

In addition to the alternatives discussed above, the EIR should consider a range of smaller alternatives that reduce or avoid the project's significant environmental impacts. The County

should undertake an independent evaluation of the financial viability of the project, as well as the clustered and reduced-scale alternatives, rather than relying on the unsupported statements of the applicant.

Thank you for your consideration of these comments. Please add me to the distribution list for the EIR and all notices associated with the project.

Sincerely,

A handwritten signature in black ink that reads "John Buse". The signature is written in a cursive style with a large, looped initial "J".

IN REPLY PLEASE REFER TO FILE LD-0

TO: Daryl Koutnik  
Department of Regional Planning

Attention Daniel Fierros

FROM: Dennis Hunter   
for Land Development Division

**RESPONSE TO NOTICE OF PREPARATION  
FOR DRAFT ENVIRONMENTAL IMPACT REPORT  
MISSION VILLAGE PROJECT  
PROJECT NO. 04-181/TRACT NO. 061105  
UNINCORPORATED COUNTY AREA OF VALENCIA**

As requested, we circulated the Notice of Preparation for this project to Environmental Programs, Flood Maintenance, Geotechnical and Materials Engineering, Land Development, Traffic and Lighting, and Waterworks and Sewer Maintenance Divisions for their review. We concur that an Environmental Impact Report is the appropriate document. We offer the following comments for your consideration in completing the Draft Environmental Impact Report (DEIR).

Transportation/Traffic

A traffic impact study for the proposed project was last reviewed by our Traffic and Lighting Division on May 31, 2005, and has not yet been approved. The DEIR shall not be approved until Public Works has approved the traffic study. Once approved, a copy of the traffic impact study should be included in the DEIR.

Also, based on the review by our County's Interdepartmental Engineering Committee, the proposed project requires realignment or precise alignment along several County Highway Plan routes. All new alignments shall be approved by Public Works and/or the County's Interdepartmental Engineering Committee.

### Solid Waste

Solid waste generated in Los Angeles County currently exceeds the available permitted daily landfill capacity. The construction of the proposed project will increase the generation of solid waste and negatively impact the solid waste management infrastructure in the County. Therefore, the proposed DEIR should identify what measures will be implemented to mitigate the impact.

Based on the findings of the Initial Study, the project site contains abandoned oil and gas operations. The Los Angeles County Building Code, Section 110.4 requires that buildings or structures adjacent to or within 200 feet (60.96 m) of active, abandoned, or idle oil or gas well(s) be provided with methane gas protection systems. Our Environmental Programs Division must be contacted for issuance of necessary permits.

Should any operation within the subject project include the construction, installation, modification, or removal of storage tanks, industrial waste treatment or disposal facilities, and/or stormwater treatment facilities, our Environmental Programs Division must be contacted for required approvals and operating permits.

### Sewer

As part of the tentative tract review, a sewer area study is being prepared in conjunction with a Master Sewer Area Study in the Newhall area. Once approved, a copy of the sewer area study shall be included in the DEIR.

The proposed development will be required to annex to the Consolidated Sewer Maintenance District (CSMD). Public Works is responsible for the operation and maintenance of the local sewers within the unincorporated areas of Los Angeles County on behalf of the CSMD. Sewer improvements shall comply with the CSMD sewer design standards. This will be in addition to compliance with the County of Los Angeles Sanitation Districts' requirements for connection to the trunk sewer system and treatment facilities.

If you have any questions regarding the above comments, please contact Juan Sarda at (626) 458-7151.

**Comments on Notice of Preparation for the Mission Village Project (part of the  
Newhall Ranch Specific Plan), County Project No. 04-181, Vesting Tentative  
Tract Map 061105 (SCH# 2005051143)**

Dear Mr. Fierros:

According to the Notice of Preparation (NOP, p. 2) of a Draft Environmental Impact Report (DEIR) for the above-mentioned project, the subject proposed "Mission Village" project is the eastern portion of the Mesas Village as defined in the approved Newhall Ranch Specific Plan. The project acreage is approximately 1,253 acres, 38.1 acres of which ~~are located outside of the Newhall Ranch Specific Plan boundary. The project includes a~~ subdivision for 5,331 residential units, 1,299,000 square feet of non-residential mixed-use space, an elementary school, a private recreation center, landscaped trails and walkways, a bridge over Santa Clara River with abutments and bank stabilization, and a preserve for the San Fernando Valley spineflower.

The County must address why and how additional acreage can be added to the already approved Newhall Ranch project, and whether additional acreage can and will be added in the future. The DEIR must explicitly show on figures the exact location of the additional 38.1 acres being proposed to be added to the Newhall Ranch project. It appears that this area may include the three proposed water tanks, additional grading, a water quality basin, and the extension of Magic Mountain Parkway. The Newhall Ranch Specific Plan now appears to be bleeding into the Stevenson Ranch Phase V project area. Depending on the heights of these tanks, there may be additional viewshed impacts associated with these tanks and grading with respect to parkland and other public areas located to the south.

Evaluating the environmental effects of a large project such as Newhall Ranch comprehensively in a single California Environmental Quality Act (CEQA) document allows reviewers from the public the opportunity to fully understand the real impacts of the project, and whether the mitigation measures adequately offset those impacts. Splitting the

County of Los Angeles  
Mission Village Comments (Project No. 04-181)  
June 20, 2005  
Page 2

project, or adding pieces of the project later, results in piece-mealing of the analysis of the environmental impacts. Why were these additional 38.1 acres not considered in the original Newhall Ranch CEQA document? How can the public be assured that additional acres of land will not be added repeatedly to the Newhall Ranch project in the future?

The Santa Monica Mountains Conservancy (Conservancy) has consistently made recommendations on several County projects in the past to the effect that additional adjacent land owned by the same owners of a proposed project should be considered in one CEQA document, so as to avoid this exact problem. Linked ownerships and linked elements of the same project should be considered in the same CEQA document. For example, the Conservancy has repeatedly recommended that any potential development associated with the property owned by Newhall Ranch east of the subject Mission Village project and west of Interstate 5 should have been considered concurrently with the rest of the Newhall Ranch project. It is clearly linked to the Mission Village portion of Newhall Ranch via the extension of Magic Mountain Parkway through this additional property.

The NOP indicates that the three proposed water tanks for reclaimed and potable water storage are proposed outside of the Specific Plan and tract. In any case, the impacts associated with these project elements must be fully included in the DEIR (e.g., included in the acres of impacts to vegetation types).

If the County proceeds with adding this additional 38.1 acres to the Newhall Ranch project, the DEIR mitigation measures and the County's conditions of approval must require an open space dedication of at least equal impact to mitigation ratio as the Newhall Ranch Specific Plan. At the least, this should include a ratio of 1 to 1 (one acre of open space dedicated for every acre impacted). The same ownership and management arrangement that is ultimately approved for the high country open space for the Newhall Ranch Specific Plan should be adopted for this additional open space dedication. This would ultimately consist of an additional fee title dedication to the Santa Clarita Watershed Recreation and Conservation Authority (SCWRCA) as a condition of map recordation.

In addition, the DEIR mitigation measures and conditions of approval must require that a conservation easement be granted to SCWRCA over any open space along the Santa Clara River. Even if the DEIR may propose that these areas be owned by the homeowners' association, this additional conservation easement is necessary to guarantee the long-term protection of this highly ecologically valuable area. It is important to include in this conservation easement the part of the open space surrounding the Commerce Center Drive bridge abutments proposed in the Santa Clara River.

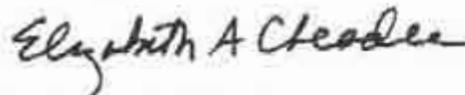

County of Los Angeles  
Mission Village Comments (Project No. 04-181)  
June 20, 2005  
Page 3

The DEIR must explicitly explain, without a doubt, what elements of the project have been approved under the Specific Plan, and what portions of the project are being considered under the current DEIR. Specifically the current DEIR must identify the level of detail of project elements and mitigation measures that have been approved under the Specific Plan CEQA document. It may be necessary to require additional specificity for mitigation measures in the current document. For example, it may be prudent to include additional specificity regarding required mitigation measures for removal of 219 of the 722 oak trees onsite, and 12 off-site trees (associated with the westerly extension of Magic Mountain Parkway).

During the course of the Newhall Ranch Specific Plan project, there has been much difference of opinion amongst experts about the amount of flood terrace and upland buffer necessary to maintain near-full ecological capacity of the Santa Clara River. The DEIR must include at least one economically feasible alternative that provides a minimum of a 500-foot-wide buffer between any and all proposed bank stabilization and the proposed edge of any improvements (except bridge abutments) including hardscaping, non-native landscaping, fencing, and structures. Furthermore, we do not believe that the Specific Plan covered the large proposed debris basin located directly next to the active channel of the Santa Clara River. The DEIR should include an alternative that pulls back this basin at least 500 feet from the proposed bank stabilization.

The Conservancy, County, project applicant, and the public are keenly aware of the extreme environmental sensitivity of the subject area, and the issues identified in this letter must be addressed in the DEIR. Thank you for your consideration of these comments. Please direct any questions and all future correspondence to Judi Tamasi of our staff at the above address and by phone at (310) 589-3200, ext. 121.

Sincerely,

ELIZABETH A. CHEADLE  
Chairperson

Re: Newhall Ranch Mission Village Tract #061108 - Project # 04-181  
Comments on Notice of Preparation

Dear Sirs:

We request that you address the following issues in the environmental document for this project.

### Army Corps 404 permit

Although it appears that most of this project is covered by the Army Corps permit known as the Natural River Management Plan, granted in 1998 for 59 projects along the Santa Clara River, that Plan was supposed to be reviewed for effectiveness every five years. Many people in Santa Clarita are concerned by the failure of this Army Corps permit, originally granted to accommodate Newhall/Lennar's massive buildout in the City of Santa Clarita. Although this permit would supposedly have protected the many endangered species and rare habitats in this area of the river, virtually none of those species exist today, a mere seven years since the permit was granted. Coordination with the Army Corps for a hard look at what went wrong, before additional housing units are approved, is essential.

The permit has failed to protect many endangered species such as the arroyo toad and the three-spined unarmored stickleback, habitat has disappeared and not been replaced, threatening bird species. Species that were only threatened when it was approved are now moving towards extinction. We believe that this permit must be reviewed for effectiveness and adherence to the mitigation requires of the permit before further entitlements are granted under its umbrella. The Castaic Creek confluence area is home to several endangered and threatened species including the arroyo toad and the southwestern pond turtle. We will insist on a this review of the 404 permit prior to the granting of any further entitlements based on this 404 permit. We strongly urge the County to work in coordination with the Army Corps of Engineers and Fish and Game and not approve this project until that review process is completed. Please address this issue in the Environmental Impact Report.

### Initial Study

We generally concur with the impacts identified in the Notice of Preparation with the following exceptions:

#### Geotechnical Hazard

The NOP indicates that the project will not be located near a fault zone. New faults were discovered in the 1994 earthquake in the Westridge area to which this project is adjacent. Please require an updated review of seismic data in the environmental impact report.

#### Fire Hazard

As you know some area of this project was burned in the October 2003 wildfire fueled by Santa Ana winds. We find it inconceivable that your document states there is no fire hazard impact here.

#### Water Supply

Numerous questions remain as to the ability to supply water to this huge project in addition to the other projects that have been approved but are not yet built in the Santa Clarita Valley. The NOP contains a DMS printout indicating that water supplies are adequate for this project. We believe this printout is inaccurate. As you know, Valencia Water Co. is the wholly owned subsidiary of Lennar Corporation headquartered in Florida and incorporated in Delaware. It is in the parent company's interest to see that Valencia Water Company reports an adequate water supply for Lennar's development proposals. It is therefore a conflict of interest to use this information from a developer that has already not provided accurate information in several areas in the past. (i.e., San Fernando Valley Spineflower - criminal charge and failure to disclose the presence of the arroyo toad.) Therefore we request that the County provide an *independent water supply analysis* for the DMS evaluation.

The Development Monitoring System water supply figure includes several water sources that should not be included in this analysis or in the SB 610 analysis, also provided by Valencia Water Co. These sources include water polluted with ammonium perchlorate from wells that are closed, and water from a Monterey Agreement transfer that is not final (See Monterey Settlement Agreement Section II and Secion VII.A., available on line at the Dept. of Water Resources web site). These issues must be addressed in the EIR. A table should be included that excludes these sources, so that the decision makers will be informed of the impact should these sources not become available..

In the settlement agreement reached between the parties in 2000, Castaic Lake Water Agency and other state water contractors agreed to await the completion of an updated Monterey Agreement EIR before further water transfers were completed under that document. Therefore, projects dated after March 2001 are not allowed by this agreement to rely on the Castaic Lake Water Agency 41,000 AF transfer. (Court Order attached. The Agreement is on line at the Dept. of Water Resources website.) The Newhall Ranch Specific Plan purported not to rely on this water, however it now appears doubtful in light of the substantial number of previous housing tract approvals, that sufficient water supply would exist without it. The County will note that the 41,000 AF CLWA transfer is NOT on the list of completed transfers in appendix E of the Settlement Agreement.

The Public Utilities Commission(PUC) stated in their Decision 01-11-048 (relevant excerpt attached) that Valencia Water Co. must do a new Water Management Program before supplying Newhall Ranch. The EIR should discuss this requirement and the time line and impact of a possible negative decision on this review. Also, much of the area covered by this project proposal is outside the Valencia Water Company's current service area and must receive PUC annexation approval before water service can be granted.

A new analysis of water availability must be conducted both for the EIR and under the County's Development Monitoring System that addresses cumulative impacts of previously approved developments on water supplies in the Santa Clarita Valley without the use of the above transfer.

Further, in April of this year, yet another drinking water supply well was closed due to the spread of the ammonium perchlorate pollution plume. The impact of the continued westward spread of this pollution on the water supply must be addressed in the EIR.

United Water Conservation District agreed to settle the Newhall Ranch litigation on the condition that a hydrological study and assessment of impacts on downstream users be completed prior to tract map approvals. This study has not yet been completed. Since this new project includes the use of ground water, it is *essential* that this study be completed to provide a baseline assessment of water supply and water quality. The study was also supposed to have a neutral third party on the investigation team (see Newhall County Water District attachment). This has not only *not* occurred, but instead, Valencia Water Company and their parent company, Newhall/Lennar is again controlling the consultants (see billings attached to the Notice of Preparation for the River Village Tract). We request a County representative attend these meetings. A baseline investigation of water resources must be completed before this project is approved in order to make an adequate evaluation of water resources and impacts to the Santa Clara River and to comply with the settlement agreement.

The 2004 SCV Water Supply Report compiled by a consultant working hired by Valencia Water Company indicates that 87,914 AF of water were used last year by existing customers (Table attached). This amount should be incorporated into the DMS analysis for adequacy of water service. In the past Newhall Land has indicated that they intend to transfer water used for agricultural to municipal uses. Ag water is currently not metered. There must be verifiable information as to how ag water usage is calculated to ensure that the correct amount is identified. Also, transfer from agriculture to municipal use will require permits from the State Water Resources Control Board. Water quality tests must be conducted to ensure that water quality from these wells is acceptable for drinking water purposes.

#### Compliance with the Clean Water and Porter-Colonge Acts

All new water quality data and TMDL evaluations should be included in the EIR in order to adequately assess the impact of this proposal on water quality. The Chloride study currently underway should be completed and included in this environmental document in order to adequately assess the increased chloride levels that will result from effluent generated by this project. A salt removal process should be required on any treatment facility approved for this project in order to reduce chloride levels to an MCL that complies with the Clean Water Act.

Please address whether this project will be served by existing treatment facilities or the new facility proposed in the Newhall Ranch Specific Plan.

**Bridge and Off ramp project must be included in environmental review**

CalTrans has just release an Environmental Assessment for an off-ramp and highway extension that will serve this project and is not needed unless this project is built. We believe that a separate assessment for this off-ramp and bridge over the river constitutes illegal piece-mealing and request that the two projects be reviewed simultaneously (cover page and project description attached).

**Biological Concerns and consultants**

We request that the County promulgate a list of EIR consultants and consider allowing the developers to choose from this County certified list. We request that Impact Sciences, preparer of the Newhall Ranch Specific Plan EIR, be excluded from any such list that might be prepared, due to their known inability to discover and disclose endangered species and archeological sites. New independent biological studies should be conducted at appropriate times of the year to accurately asses the presence of endangered species.

**Assitencia Archeological Site**

Although the NOP states that this historical site is not in the project footprint, we request that the EIR address potential vandalism from the nearby propped new housing developments and how the site will be protected.

**Conformance with the Specific Plan**

This project purposes changes to the previously approved Newhall Ranch Specific Plan. It may therefore not be tiered on that plan and must receive de novo review.

Sincerely,

Pat Saletore

COUNTY, INC., a California not for profit  
corporation,

Plaintiffs and Petitioners,

v.

DEPARTMENT OF WATER RESOURCES, a  
California State Agency, et al.,

Defendants and Respondents.

Case No. 95CS03216

ORDER PURSUANT TO PUBLIC  
RESOURCES CODE SECTION  
21168.9

On remand from the Third District Court of Appeal on May 20, 2003, in Department 53 of the Sacramento Superior Court, the Honorable Loren E. McMaster, presiding, this proceeding came on for a status report and joint motion. Petitioners and Plaintiffs, Planning and Conservation League, Plumas County Flood Control and Water Conservation District, and Citizens Planning Association of Santa Barbara County ("Petitioners"), appeared through Antonio Rossmann and Roger B. Moore. Respondent and Defendant, Central Coast Water Authority (CCWA), appeared through Susan F. Petrovich of the Law Firm of Hatch & Parent. Respondent and Defendant, Department of Water Resources (DWR), appeared through Deputy Attorney General Marian E. Moe.

LA2:671108.1

ORDER PURSUANT TO PUBLIC RESOURCES CODE SECTION 21168.9

1 Robert S. Draper of O'Melveny and Myers, LLP and Clifford W. Schulz appeared,  
2 respectively, on behalf of the Metropolitan Water District of Southern California and  
3 Dudley Ridge Water District, entities that submitted answers to the First Amended  
4 Complaint subsequent to the Court of Appeal's final determination in this action and prior  
5 to any further order of this Court on remand.

6 In light of the direction from the Third District Court of Appeal on remand in  
7 *Planning and Conservation League v. Department of Water Resources* (2000) 83  
8 Cal.App.4th 892, this Court hereby makes the following findings:

9 1. The parties to this lawsuit and other public agencies have engaged in  
10 extensive settlement negotiations, mediated by retired Judge Daniel Weinstein of JAMS  
11 Dispute Resolution, with the intent to avoid further litigation and associated expenses, to  
12 provide for an effective way to cooperate in the preparation of a new environmental  
13 impact report (EIR), and to make other specified improvements in the administration and  
14 operation of the State Water Project.

15 2. The mediation has resulted in an executed Settlement Agreement for  
16 approval by this Court, attached to this Order as Exhibit A.

17 3. DWR as lead agency has commenced the preparation of the new EIR.

18 4. As part of the Settlement Agreement, DWR and the State Water Project  
19 (SWP) contractors who are signatories to the Settlement Agreement have agreed that,  
20 pending DWR's filing of a return in satisfaction of the Writ of Mandate and this Court's  
21 dismissal of the Writ of Mandate, they will not approve any new project or activity (as  
22 defined in section VII.A of the Settlement Agreement) in reliance on the 1995  
23 Environmental Impact Report for the Implementation of the Monterey Agreement.

24 5. This Order is made pursuant to the provisions of Public Resources Code  
25 section 21168.9 and pursuant to this Court's equitable powers. This Court finds that the  
26 actions described in this Order, including actions taken in compliance with the Writ of  
27 Mandate, comprise the actions necessary to assure DWR's compliance with Division 13  
28 of the Public Resources Code. This Court further finds that this Order includes only those

1 mandates necessary to achieve compliance with Division 13.

2 THEREFORE, IT IS HEREBY ORDERED as follows:

3 1. This Court's Final Judgment denying the petition for writ of mandate,  
4 entered August 15, 1996, is reversed in accordance with the directive of the Third District  
5 Court of Appeal's decision in Planning and Conservation League v. Department of Water  
6 Resources (2000) 83 Cal.App.4th 892.

7 2. This Court's order granting the summary adjudication on the fifth cause of  
8 action, entered June 10, 1996, is vacated.

9 3. The Settlement Agreement attached as Exhibit A is hereby approved.

10 4. A Peremptory Writ of Mandate directed to Respondents Central Coast  
11 Water Authority and DWR shall issue under seal of this Court in the form attached hereto  
12 as Exhibit B.

13 5. In accordance with the Settlement Agreement and this Order, pending  
14 DWR's filing of the return in compliance with the Peremptory Writ of Mandate and this  
15 Court's Order discharging the Writ of Mandate, DWR and CCWA shall not approve any  
16 new project or activity (as defined section VII.A of the Settlement Agreement) in reliance  
17 on the 1995 EIR for the Implementation of the Monterey Agreement.

18 6. In the interim, until DWR files its return in compliance with the Peremptory  
19 Writ of Mandate and this Court orders discharge of the Writ of Mandate, the  
20 administration and operation of the State Water Project and Kern Water Bank Lands shall  
21 be conducted pursuant to the Monterey Amendments to the State Water Contracts, as  
22 supplemented by the Attachment A Amendments to the State Water Contracts (as defined  
23 in the Settlement Agreement) and the other terms and conditions of the Settlement  
24 Agreement.

25 7. Plaintiffs and petitioners shall recover such costs and attorney's fees as  
26 provided in prior court orders and in an amount as determined in the arbitration  
27 procedures agreed to in the Settlement Agreement, or as otherwise agreed to by the  
28 parties.

LA2:671108.1

Decision 01-11-048 November 29, 2001

**BEFORE THE PUBLIC UTILITIES COMMISSION OF THE STATE OF CALIFORNIA**

Application of Valencia Water Company (U34-W) seeking approval of its updated Water Management Program as ordered in Commission Resolution W-4154 dated August 5, 1999.

Application 99-12-025  
(Filed December 17, 1999)

Nossaman, Guthner, Knox & Elliott, LLP, by Martin A. Mattes, Attorney at Law, and Robert I. Di Primio, for Valencia Water Company, applicant.

Brecher & Volker, LLP, by Stephan C. Volker, Attorney at Law, for Friends of the Santa Clara River, Santa Clarita Organization for Planning the Environment and Sierra Club, complainants.

James L. McBride, County Counsel, by Dennis L. Slivinski, Assistant County Counsel and Antonette B. Cordero, Assistant County Counsel for the County of Ventura.

Edwin and Joan Dunn, Robert P. Lathrop, for themselves. Peter G. Fairchild, Attorney at Law, and Fred Curry, for the Water Division.

**OPINION APPROVING WATER MANAGEMENT PROGRAM  
AND AUTHORIZING SERVICE AREA EXPANSION**

3. Advice Letters 88 and 90 are accepted for filing and shall become effective as of the date of this decision.

4. If Valencia proposes to expand its service area to serve the Newhall Ranch Specific Plan, or any part of it, Valencia shall file an application requesting authority to expand its service area, and provide an updated Water Management Program and advice letter covering any such service area expansion.

San Francisco, California.

## MEMORANDUM OF UNDERSTANDING

This Memorandum of Understanding ("MOU") is entered into effective July 2001, by and among Castaic Lake Water Agency ("CLWA"), CLWA's Santa Clarita Water Division ("SCWC"), Newhall County Water District ("NCWD"), Valencia Water Company ("VWC") and Los Angeles County Waterworks District No. 36 ("LACWD"), which are collectively referred to as the "Upper Basin Water Purveyors" and United Water Conservation District "UWCD", hereinafter referred together as the "parties."

### RECITALS

**WHEREAS**, UWCD is a public agency that encompasses approximately 214,000 acres of land located in central Ventura County. UWCD's service area covers the downstream portion of the Santa Clara River Valley in Ventura County, as well as the Oxnard Plain (sometimes referred to as the "Lower Santa Clara River Area"). UWCD manages surface and groundwater resources within seven groundwater basins in the Lower Santa Clara River Valley Area. UWCD's Boundary is shown on Figure 1-1; and,

**WHEREAS**, the Upper Basin Water Purveyors meet regularly as a technical group to coordinate conjunctive use of imported, recycled and groundwater resources of the water basins east of the Los Angeles/ Ventura County line (sometimes referred to as the "Upper Santa Clara River Area"), which is located almost entirely within northwestern Los Angeles County. The respective services areas of the Upper Basin Water Purveyors members (CLWA, SCWC, NCWD, VWC and LACWD) are shown on Figure 1-2; and,

**WHEREAS**, UWCD has been involved in the review of water resources in both the Lower Santa Clara River Area and also the Upper Santa Clara River Area as part of UWCD's review of the Newhall Ranch Specific Plan and EIR (NRSP); and,

**WHEREAS**, litigation of the Newhall Ranch Specific Plan and EIR resulted in preparation of an additional analysis to the previously certified EIR for the NRSP, including the section addressing water resource issues; and,

**WHEREAS**, the Additional Analysis includes a water flow model and impact analyses of the future water usage projections for the Upper Santa Clara River Area; and,

**WHEREAS**, UWCD, Newhall Land and Farming Company (NLF) and others have had several technical meetings to further study the Additional Analysis as it relates to the water issues, and, based on this information, and further discussions between UWCD and the Upper Basin Water Purveyors, UWCD believes that it is in the best interests of the parties and the future beneficial water resources management in the upper and lower basins to enter into a cooperative working relationship among the parties; and,

**WHEREAS**, the parties have determined that this MOU is the best format for establishing a program that would be implemented over time for purposes of agreeing upon overall water resources management techniques and an information database that would benefit the upper and lower basins; and,

**WHEREAS**, this MOU is prepared by UWCD and the Upper Basin Water Purveyors because the parties believe that a cooperative water resource monitoring program in the Upper and Lower Santa Clara River Areas is desirable to protect and enhance the conjunctive use of imported water, groundwater and surface water resources within the region; and,

**WHEREAS**, the parties support regional water planning efforts that rely on the provision of accurate and timely information about available water resources; and,

**WHEREAS**, the parties to this MOU desire to create and maintain a cooperative relationship for purposes of gathering information for UWCD and the Upper Basin Water Purveyors to be used in further assessing imported water, surface water and groundwater conditions in both the Upper and Lower Santa Clara River Areas; and,

**WHEREAS**, the parties to this MOU intend to form a reciprocal relationship. In order to do this, UWCD will designate an individual or individuals with technical knowledge and experience appointed by the General Manager of UWCD who will be included in discussions and efforts that take place with the Upper Basin Water Purveyors and others regarding the Upper Santa Clara River Area. Likewise, the Upper Basin Water Purveyors will designate an individual or individuals with technical knowledge and experience appointed by the General Managers of the Upper Basin Purveyors who will be included in discussions and efforts with UWCD and others regarding the Lower Santa Clara River Area, and,

**WHEREAS**, the goal of the MOU is to establish a joint monitoring program, which includes: (a) data collection (monitoring and testing); (b) database management; (c) groundwater flow modeling; (d) assessment of groundwater basin conditions (operational yield); and (e) report preparation and presentation.

**NOW, THEREFORE**, in consideration of the mutual promises and covenants herein contained, the parties to this MOU agree as follows:

- 1.1 **Program Monitoring.** The parties will participate in a joint monitoring program.
- 1.2 **Program Content.** The technical aspects of this joint monitoring program are set forth in a technical memorandum entitled, "Water Resource Monitoring Program Upper Santa Clara River Area," (Program) which is attached as Exhibit 1 and incorporated by this reference.
- 1.3 **Program Meetings.** The General Manager or President of each party to this MOU (or their designee) shall meet as the "Program Committee" within 30 days of the execution of this MOU. The "Program Committee" will establish appropriate subcommittees to initiate the Program and determine the meeting times and locations for the committees. The Program Committee and subcommittees will discuss and coordinate technical aspects of the Program, including the gathering, interpretation and reporting of information as outlined in the technical memorandum (Exhibit 1). Other attendees may be permitted by agreement of the parties to this MOU.

- 1.4 **Monitoring Costs.** The costs incurred in administrating the Monitoring Program will be determined as implementation of the Program takes place. However, it is understood that, unless the parties to this MOU agree otherwise, the Upper River monitoring costs of the program will be borne by the Upper Basin Water Purveyors because such monitoring will take place within their service areas and the Lower River monitoring costs of the program will be borne by UWCD because such monitoring will take place within its service area.
- 1.5 **Program Implementation.** The parties to this MOU have prepared a schedule, attached as Exhibit 2, that describes the tasks and estimated time to implement the Program. The Parties acknowledge that Program Implementation will be an on-going and evolving process and may change due to future amendments to the Program, challenging technical issues or other unforeseen circumstances.
- 1.6 **Water Rights.** Notwithstanding the provisions of this MOU, nothing in either this MOU or the technical memorandum (Exhibit 1) shall be construed as affecting the water rights or operations of any party, person or entity.
- 1.7 **Term.** This MOU shall remain in effect for an initial period of seven (7) years and shall be automatically renewed for additional one year increments unless otherwise unanimously terminated by the members of the Program Committee as that committee exists at the time action is taken to terminate this MOU.
- 1.8 **Counterparts.** This MOU may be executed in any number of counterparts, each of which, when so executed, will be deemed to be an original and all of which taken together will constitute one and the same agreement.

IN WITNESS WHEREOF, the parties have executed this MOU as of the date first set forth above.

### ATTACHMENT TO MEMORANDUM OF UNDERSTANDING BETWEEN UPPER BASIN WATER PURVEYORS AND UWCD

NEWHALL COUNTY WATER DISTRICT strongly supports a cooperative working relationship and establishment of a joint monitoring program among the signatories of the attached Memorandum of Understanding (MOU).

This attachment shall not be construed to alter either the terms of agreement or the proposed activities that are the substance of the MOU. Rather, the intent is to describe the District's interpretation of the document and to convey their resulting expectations to the parties to the MOU.

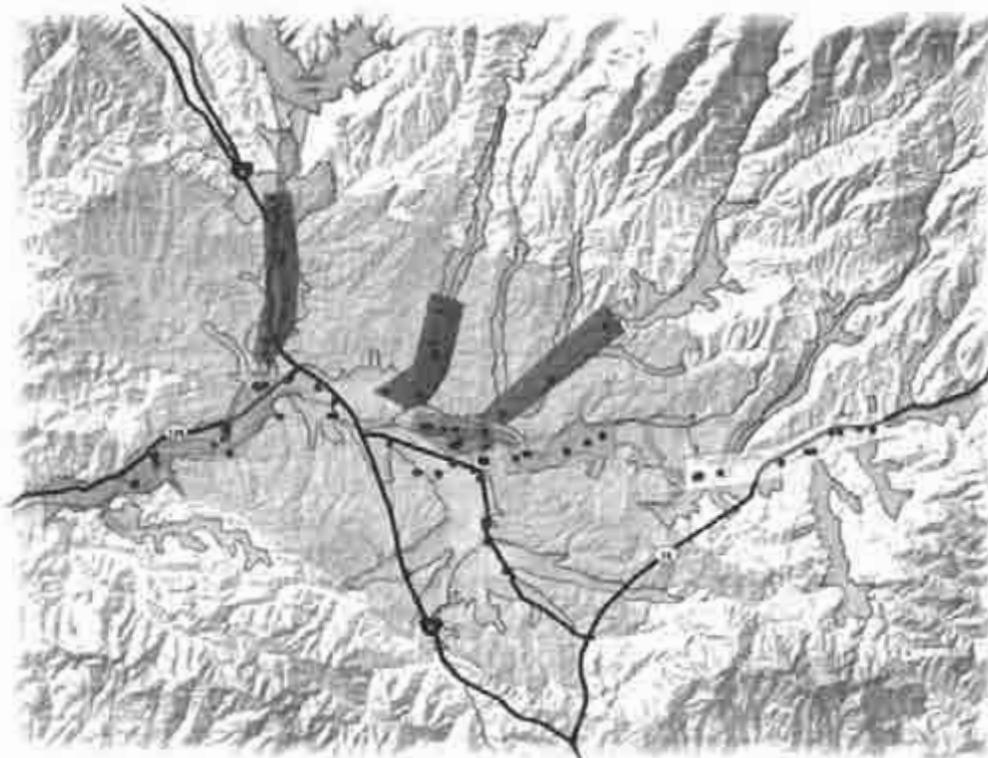

- Subcommittee membership, meeting times, and locations will be finalized within six months. Subcommittee structure and organization will be documented and incorporated into the MOU by reference. Opportunities for public participation will be defined and included in the process.
- Cost estimates, activity plans and schedules, engineering data, models and modeling results, actual expenditures, and reports generated will be considered public information and made available under the terms and conditions of current law and established policies.
- Neutral technical expertise to ensure objective analyses and recommendations will be provided through inclusion of a USGS "expert" as a working member of the Technical Committee. Conclusions, proposals, and extrapolation of data must proceed from a credible foundation.
- As the provisions of the MOU are fulfilled, the parties will undertake regional water planning efforts to protect and enhance the water resources within the region. Water Code Sections 10750 through 10795 describe activities that may be included, where feasible.
- The Upper Basin Water Purveyors recognize the importance of the alluvial aquifer as a source of water supply for the residents of the Santa Clarita Valley, and will cooperatively encourage replenishment projects, particularly in the eastern reaches of the Santa Clara River.

# SR 126/COMMERCE CENTER DRIVE INTERCHANGE PROJECT

## DRAFT INITIAL STUDY/ENVIRONMENTAL ASSESSMENT

State Route 126 and Commerce Center Drive  
County of Los Angeles, State of California

07-LA-126-KP R6.8 – R9.2

(PM R4.2 – R5.7)

EA: 187220

SCH: 2003101127

May 2005

## Negative Declaration

Pursuant to: Division 13, Public Resources Code

### ***Project Description***

The California Department of Transportation (Caltrans), in coordination with the Federal Highway Administration (FHWA), Los Angeles County, and the Newhall Land and Farming Company (Newhall Land), proposes to construct a grade-separated interchange at the existing, signalized intersection of State Route 126 (SR 126) and Commerce Center Drive. The proposed project is located northwest of the City of Santa Clarita in unincorporated Los Angeles County. As part of this proposed interchange project, SR 126 would be realigned to the south over a recently constructed embankment. The project would also result in the reconfiguration of the existing Commerce Center Drive/Henry Mayo Drive intersection to the south.

### ***Determination***

Caltrans has prepared an Initial Study/Environmental Assessment (IS/EA), and determines from this study that the proposed project would not have an adverse effect on the environment for the following reasons:

- There would be no adverse amount of siltation by wind or water, or erosion as a result of this project.
- Air quality, noise, and use of natural resources would not be adversely affected by this project.
- No adverse changes to existing lighting or glare conditions would result from this project.
- With adherence to appropriate measures to minimize harm, fish and wildlife such as endangered species, habitat, and vegetation would not be adversely impacted by this project.
- With adherence to measures to minimize harm outlined in the Natural River Management Plan (NRMP), floodplains, wetlands, and water quality would not be adversely impacted by this project.
- No effect on agricultural lands, land use, or growth would originate from this project.
- With adherence to appropriate measures to minimize harm, no public or recreational facilities, historic or archaeological sites, structures of architectural significance, or important agricultural or scenic resources would be affected by this project.
- No adverse effects on employment, industry, or economic stability of the area would result from this project.

Daniel Fierros, Regional Planning Assistant II  
Impact Analysis Section  
County of Los Angeles  
Department of Regional Planning  
320 West Temple Street, Room 1348  
Los Angeles, California 90012

Dear Mr. Fierros:

**REVIEW ENVIRONMENTAL DOCUMENT  
NOTICE OF PREPARATION THE MISSION VILLAGE PROJECT  
NEWHALL RANCH TENTATIVE TRACT MAP NO. 061105**

This is in response to your letter dated May 19, 2005, requesting our Department's review of the above identified project. Our Department has completed its review and has several concerns. Attached is the letter from Patti A. Minutello, Captain of the Santa Clarita Sheriff's Station addressing these concerns.

We would like to emphasize that the Santa Clarita Sheriff's Station is currently operating beyond its design capacity and is very concerned of their ability to provide adequately service of protection due to the rapidly expanding population of the Santa Clarita Valley. The attached letter references several suggestions to assist crime prevention though site design and building layouts.

Should you have any questions regarding this matter, please contact Mr. Mike Kameya, of my staff at (626) 300-3013.

Sincerely,

LEROY D. BACA, SHERIFF

(661) 255-1121

May 31, 2005

Mr. Gary T.K. Tse, Director  
Facilities Planning Bureau  
1000 South Fremont Avenue  
Building A-9 East 5<sup>th</sup> Floor North  
Alhambra, California 91803

Dear Mr. Tse:

NOTICE OF PREPARATION  
MISSION VILLAGE PROJECT, NEWHALL RANCH  
TENTATIVE TRACT NO. 061105

The proposed Project consisting of 5,331 residential units located south of State Route 126 and the Santa Clara River, and west of Interstate 5 is within the jurisdiction of the Los Angeles County Sheriff's Department, Santa Clarita Valley Station, 23740 Magic Mountain Parkway, Valencia, California. The station is located approximately 9-10 miles from the project site.

It is anticipated that the non-emergent response time to a request for service would be approximately 30-45 minutes. The priority response time would be approximately 10-15 minutes and the response time under emergent circumstances would be approximately 6-10 minutes. All response times are approximations, only, and would be dependent on both the deployment of area radio cars and traffic conditions.

This station serves an area of 656 square miles, which is made up of the City of Santa Clarita and unincorporated County area between the Los Angeles City Limits to the South, the Kern County Line to the North and involving all area between the Ventura County Line to the West and the township of Aqua Dulce to the East. The population served by our station is approximately 200,000 residents.

*A Tradition of Service*

**NOTICE OF PREPARATION  
MISSION VILLAGE PROJECT, TENTATIVE TRACT NO. 061105**

**PAGE 2**

Our ideal officer to population ratio is one deputy per 1,000 residents and with our current staffing of 171 sworn deputies currently assigned, our ratio is less than ideal at one deputy per every 1,169 residents. Assuming a residential density of 3.01 persons per dwelling unit, this proposed project will generate a population increase of 16,046. Based on the above, this project located in the unincorporated area, would require sixteen additional deputies to the station complement.

Our primary concern is our ability to provide an adequate level of protection and service to all areas we police. Due to the rapidly expanding population of the Santa Clarita Valley and its record-setting home building, it is difficult to project the impact of this specific project on law enforcement.

Upon review of your documentation and our understanding of the Newhall Ranch Specific Plan, there will be several more tracts proposed and ultimately built with a population increase of approximately 67,213, which would put our services in dire need of a new station facility located in the area, and an increase of 67 deputy personnel. Additionally, the increase in required field personnel will necessitate an increase in support resources such as detectives, front desk personnel, secretaries, administration, vehicles and portable radios.

While we do not oppose this project, or future projects for the Newhall Ranch area, we are seriously concerned about our ability to adequately police this valley with our current resources. Without a strong commitment from the Board of Supervisors to provide sufficient funding, we may face a situation where we cannot provide timely emergency services.

Adding this project and other projects in progress, either proposed, approved or committed in the Santa Clarita Valley, it is certain they will all significantly strain our departments ability to operate.

It is suggested, for the security and safety of the residents, that the following crime prevention measures be implemented during site and building layout design:

- Provide lighting in open areas and parking lots;
- Ensure the visibility of doors and windows from the street;
- Ensure that the required building address numbers are lighted and readily apparent from the street for emergency response agencies;

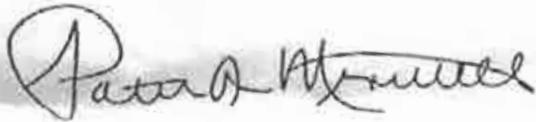

NOTICE OF PREPARATION  
MISSION VILLAGE PROJECT, TENTATIVE TRACT NO. 061105

Re: Comments on Notice of Preparation  
Newhall Ranch Mission Village Tract #061108 - Project # 04-181

According to the Notice of Preparation, this project proposes 5334 units and approximately 1.3 million square feet of commercial in an area south of Highway 126 adjacent to the Santa Clara River. It proposes to build in Significant Ecological 23, the Santa Clara River, and within the 100 foot FEMA floodline. Substantial hillside grading, will require 26.5 million cubic yards of earth to be moved. Visual impacts will be substantial as the proposal will obscure the Santa Clara River from view by travelers on Highway 126. The proposal is not consistent with the Newhall Ranch Specific Plan.

We believe the County should not proceed with the review process for this project until several documents have been completed and can be included in the environmental document. These studies include:

1. The Chloride Study being conducted by Regional Water Quality to asses the effect on increased chloride levels on the downstream farming economy.
2. The ground water study that is being conducted as a result of the settlement agreement between United Water Conservation District and Newhall Land and Farming on the Newhall Ranch Litigation.
3. An updated review of the NRMP 404 permit to assess the success of mitigation in maintaining species and habitat.

We request that the County require independent biological surveys to ensure that accurate information is included in the EIR. Confidentiality Agreements between the developer and the consultants should be strictly prohibited. We note that Newhall was fined for destroying the endangered spine flower in the Newhall Ranch area. The County should take steps to eliminate the potential for such actions to occur in the future.

The NOP addresses the issue of fire service (stating the new stations are not scheduled to be built for this phase) but does not mention sheriff services. Please address how sheriff services will be provided to this area..

Please address sewage treatment capacity and how this capacity will be provided. The Notice of Preparation is unclear on this issue. Will this additional effluent cause a rise in chloride levels?

Page 2

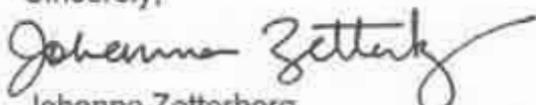

Please address where additional ground water pumping will occur to supply this project and provide water quality tests to ensure that such water supply is potable. Contracts and permits should be in place for transfers of water from outside the Santa Clarita area and for any transfer of water from agricultural to municipal use. The Public Utilities Commission will require an updated Water Management Plan before this project can be served (see PUC decision D. 01-11-048, to which Sierra Club is a party.) Please address how additional pumping will affect the spread of the ammonium perchlorate pollution plume currently spreading westward in both the alluvial and Saugus groundwater basins.

Please address how additional air pollution created by this project will be mitigated. As noted in the NOP, the Santa Clarita Valley is already in a non-attainment zone for ozone and particulate matter. 26.5 million cubic yards of grading will create significant additional impacts. Please address how these impacts will differ from the particulate matter generated by the CEMEX Gravel Mine opposed by the County based on air pollution issues and traffic.

Please address how traffic generated by this project will impact the Newhall Pass area and how these impacts will be mitigated.

Thank-you for your time. We look forward to reviewing the environmental document.

Sincerely,

Johanna Zetterberg  
Conservation Coordinator.

Notice of Preparation

May 24, 2005

To: Reviewing Agencies

Re: Mission Village Project, County Project No. 04-181, TR 061105  
SCH# 2005051143

Attached for your review and comment is the Notice of Preparation (NOP) for the Mission Village Project, County Project No. 04-181, TR 061105 draft Environmental Impact Report (EIR).

Responsible agencies must transmit their comments on the scope and content of the NOP, focusing on specific information related to their own statutory responsibility, within 30 days of receipt of the NOP from the Lead Agency. This is a courtesy notice provided by the State Clearinghouse with a reminder for you to comment in a timely manner. We encourage other agencies to also respond to this notice and express their concerns early in the environmental review process.

Please direct your comments to:

Daniel Fierros  
Los Angeles County Department of Regional Planning,  
320 W. Temple Street  
Los Angeles, CA 90012

with a copy to the State Clearinghouse in the Office of Planning and Research. Please refer to the SCH number noted above in all correspondence concerning this project.

If you have any questions about the environmental document review process, please call the State Clearinghouse at (916) 445-0613.

Sincerely,

Scott Morgan  
Associate Planner, State Clearinghouse

**Type** NOP Notice of Preparation

**Description** The applicant, Newhall Land and Farming Company proposes to subdivide the subject property for 5,331 residential units (plus 73 second units), approximately 1,299,000 square feet of non-residential mixed-use space, a 9-acre elementary school, an 8.3-acre of private recreation center, and a system of landscaped trails and walkways. The project also includes construction of the 1,250 foot long, 117 feet wide Commerce Center Drive Bridge over the Santa Clara River with required abutments and bank stabilization on either side of the bridge as well as bank stabilization elsewhere along the Santa Clara River. Preserve for San Fernando Valley Spiniflower is proposed. Three water tanks for potable and reclaimed water storage are proposed outside of the SP and tract.

## Present Land Use/Zoning/General Plan Use

Vacant/Newhall Specific Plan: Heavy Agriculture A-2-5/ Newhall Specific Plan: Non-urban, SEA

## Project Description

The applicant, Newhall Land & Farming Company, proposes to subdivide the subject property for approximately 5,331 residential units (plus 73 second units), approximately 1,299,000 square feet of non-residential mixed-use space, a 9-acre elementary school, a 8.3-acre of private recreation center, and a system of landscaped trails and walkways. The project also includes construction of the 1,250 feet long, 117 feet wide Commerce Center Drive Bridge over the Santa Clara River with required abutments and bank stabilization on either side of the bridge as well as bank stabilization elsewhere along the Santa Clara River. Preserve for San Fernando Valley Spineflower is proposed. Three water tanks for potable and reclaimed water storage are proposed outside of the SP and tract. This Project includes easternmost 1,216 acres of the Mesas Village within the Newhall Specific Plan, which has a certified Program EIR. Project as proposed will also require an Oak Tree Permit for removal of 219 out of the 722 oak trees. A Conditional Use Permit is required for development within SEA.

NOTE: Clearinghouse will assign identification numbers for all new projects. If a SCH number already exists for a project (e.g., from a Notice of Preparation or previous draft document), please fill it in. Revised October 1989

Urgent     For your review     Reply ASAP     Please comment

Daniel:

I apologize. This came as a "late hit" from the Ventura County Public Works Watershed Protection District. I had not circulated the NOP to them, but they were aware of it and decided to filter their comments through me in my capacity as Outside Environmental Document Coordinator. I hope that you will still include it in the comments from Ventura County as you move forward with this project.

If you have any questions, please feel free to call me at the above number, or e-mail me at

PAUL CALLAWAY, Permit Manager - 805 654-2011**

**DATE:** June 22, 2005  
**TO:** CARL MOREHOUSE  
**FROM:** WATERSHED PROTECTION DISTRICT  
**SUBJECT:** RESPONSE TO NOTICE OF PREPARATION FOR DRAFT  
EIR – THE MISSION VILLAGE PROJECT – RMA 05-038

The Ventura County Watershed Protection District has reviewed the submittal with respect to issues under our purview.

The Mission Village projects construction could increase the peak flow rates in the Santa Clara River. This possible increase, if it occurs, will increase flooding and erosion in Ventura County. This Notice of Preparation contained no mention of how this increase in runoff will be mitigated. The draft EIR should contain mitigation that is sufficient mitigate the flooding and erosion concerns.

The Ventura County Watershed Protection District would like to review and provide comments on the draft EIR.

We are also requesting four copies of the Draft EIR when prepared so we have sufficient copies for our divisions to review in a timely manner.

Mr. Daniel Fierros  
County of Los Angeles Regional Planning Dept.  
Impact Analysis Section  
320 W. Temple Street, Room 1348  
Los Angeles, CA 90012

Dear Mr. Fierros:

## **Notice of Preparation of a Draft Environmental Impact Report for The Mission Village Project**

The South Coast Air Quality Management District (SCAQMD) appreciates the opportunity to comment on the above-mentioned document. The SCAQMD's comments are recommendations regarding the analysis of potential air quality impacts from the proposed project that should be included in the Draft Environmental Impact Report (EIR). Please send the SCAQMD a copy of the Draft EIR upon its completion.

### **Air Quality Analysis**

The SCAQMD adopted its California Environmental Quality Act (CEQA) Air Quality Handbook in 1993 to assist other public agencies with the preparation of air quality analyses. The SCAQMD recommends that the Lead Agency use this Handbook as guidance when preparing its air quality analysis. Copies of the Handbook are available from the SCAQMD's Subscription Services Department by calling (909) 396-3720. Alternatively, lead agency may wish to consider using the California Air Resources Board (CARB) approved URBEMIS 2002 Model. This model is available on the CARB Website at: [www.arb.ca.gov](http://www.arb.ca.gov).

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the project and all air pollutant sources related to the project. Air quality impacts from both construction and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, that is, sources that generate or attract vehicular trips should be included in the analysis. It is recommended that lead agencies for projects generating or

*Cleaning the air that we breathe...*

attracting vehicular trips, especially heavy-duty diesel-fueled vehicles, perform a mobile source health risk assessment. Guidance for performing a mobile source health risk assessment ("Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis") can be found on the SCAQMD's CEQA webpages at the following internet address: [http://www.aqmd.gov/ceqa/handbook/mobile\\_toxic/diesel\\_analysis.doc](http://www.aqmd.gov/ceqa/handbook/mobile_toxic/diesel_analysis.doc). An analysis of all toxic air contaminant impacts due to the decommissioning or use of equipment potentially generating such air pollutants should also be included.

#### **Mitigation Measures**

In the event that the project generates significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized during project construction and operation to minimize or eliminate significant adverse air quality impacts. To assist the Lead Agency with identifying possible mitigation measures for the project, please refer to Chapter 11 of the SCAQMD CEQA Air Quality Handbook for sample air quality mitigation measures. Additionally, SCAQMD's Rule 403 – Fugitive Dust, and the Implementation Handbook contain numerous measures for controlling construction-related emissions that should be considered for use as CEQA mitigation if not otherwise required. Pursuant to state CEQA Guidelines §15126.4 (a)(1)(D), any impacts resulting from mitigation measures must also be discussed.

#### **Data Sources**

SCAQMD rules and relevant air quality reports and data are available by calling the SCAQMD's Public Information Center at (909) 396-2039. Much of the information available through the Public Information Center is also available via the SCAQMD's World Wide Web Homepage (<http://www.aqmd.gov>).

The SCAQMD is willing to work with the Lead Agency to ensure that project-related emissions are accurately identified, categorized, and evaluated. Please call Charles Blankson, Ph.D., Air Quality Specialist, CEQA Section, at (909) 396-3304 if you have any questions regarding this letter.

Sincerely,

Steve Smith, Ph.D.  
Program Supervisor, CEQA Section

Notice of Preparation

May 24, 2005

To: Reviewing Agencies

Re: Mission Village Project, County Project No. 04-181, TR 061105  
SCH# 2005051143

Attached for your review and comment is the Notice of Preparation (NOP) for the Mission Village Project, County Project No. 04-181, TR 061105 draft Environmental Impact Report (EIR).

Responsible agencies must transmit their comments on the scope and content of the NOP, focusing on specific information related to their own statutory responsibility, within 30 days of receipt of the NOP from the Lead Agency. This is a courtesy notice provided by the State Clearinghouse with a reminder for you to comment in a timely manner. We encourage other agencies to also respond to this notice and express their concerns early in the environmental review process.

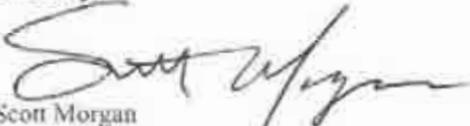

Please direct your comments to:

**Daniel Fierros**  
Los Angeles County Department of Regional Planning  
320 W. Temple Street  
Los Angeles, CA 90012

with a copy to the State Clearinghouse in the Office of Planning and Research. Please refer to the SCH number noted above in all correspondence concerning this project.

If you have any questions about the environmental document review process, please call the State Clearinghouse at (916) 445-0613.

Sincerely,

  
Scott Morgan  
Associate Planner, State Clearinghouse

**Re: Fiscal Impact Analysis of Proposed Newhall Land Westside Communities Development**

Dear Mr. Nakata:

Allan D. Kotin & Associates and CBRE Consulting are pleased to submit this report regarding the fiscal impact of the proposed development of the Westside Communities in Los Angeles County, California which has been prepared at the joint request of your company and the Chief Administrative Officer of Los Angeles County. The report discusses the proposed Project's marginal net fiscal impact on the County of Los Angeles resulting from the development being undertaken in an unincorporated area of the County, as opposed to an incorporated area.

Please note that the research for this analysis was completed in July 2006. Accordingly, we assume no responsibility for events or circumstances pertinent to the development or Los Angeles County's fiscal circumstances occurring after that date.

It has been a pleasure working with you on this assignment. Please let us know if you have any questions or additional needs.

Sincerely,

Allan D. Kotin  
Principal

Ross S. Selvidge, Ph.D.  
Managing Director

## **I. EXECUTIVE SUMMARY**

### **INTRODUCTION**

The purpose of this Study is to estimate a portion of the net fiscal impact on Los Angeles County ("County") of the development of the 3,294 gross acres of land ("Project") in an unincorporated portion of the County in the vicinity of the Santa Clarita Valley and currently owned by Newhall Land and Farming Company ("Newhall Land"). The Study was undertaken at the joint request of Newhall Land and the County.

The Study focuses on the revenues the County will receive and expenses that the County will incur as a result of the proposed Project being developed in an unincorporated area of the County rather than in an incorporated city. Consequently, this Study excludes both revenues that the County receives and the expenditures that the County must incur on a County-wide basis, i.e., in both incorporated and unincorporated areas of the County.

The Study also estimates the one-time economic impacts of developing the Project on both Los Angeles County and Ventura County. These impacts were measured in terms of dollar output, payroll, jobs, and taxes.

The research for the Study was completed in July 2006 based largely on information provided during the first quarter of 2006. Accordingly, Allan D. Kotin & Associates and CBRE Consulting assume no responsibility for changed market conditions events or changes in Los Angeles County's fiscal circumstances occurring after that date.

The study deals only with the operating impacts of the Project. Capital costs for required infrastructure are not considered although the maintenance of such infrastructure and the impact of infrastructure timing on operating costs are both considered.

### **SUMMARY OF FINDINGS**

#### **Project Description and Impact Area**

Upon completion the proposed Project will consist of a wide range of residential and non-residential products. The Project will be divided into seven communities, sometimes referred to as the Westside Communities, each with a different mix of products. A total of 27,893 residential units and 10.9 million square feet of non-residential improvements are planned. The first project components would be completed in 2009 with the final components completed in 2025. The projected resident population of the completed project is 74,250. It is estimated that a total of 32,400 employees will work in the project. The breakdown by major product type for the entire Project and each community is shown in Figure 1.

**Figure 1**

Other incl. Hotel	170,024	0	0	0	0	0	0		170,024
Industrial R&D	115,214	1,090,000	0	0	0	0	1,739,490		2,944,706
Combined	3,002,013	1,250,000	1,257,000	1,299,000	486,000	373,701	3,200,000		10,867,716

The impact area with which this Study deals is the unincorporated area of the County, west of Interstate 5 and north of the City of Los Angeles. Those areas include the developed areas known as Stevenson Ranch and Westridge, as well as the area around Magic Mountain. Exhibits 1 and 2 identify the location of the seven communities in the Project and the adjacent impact areas.

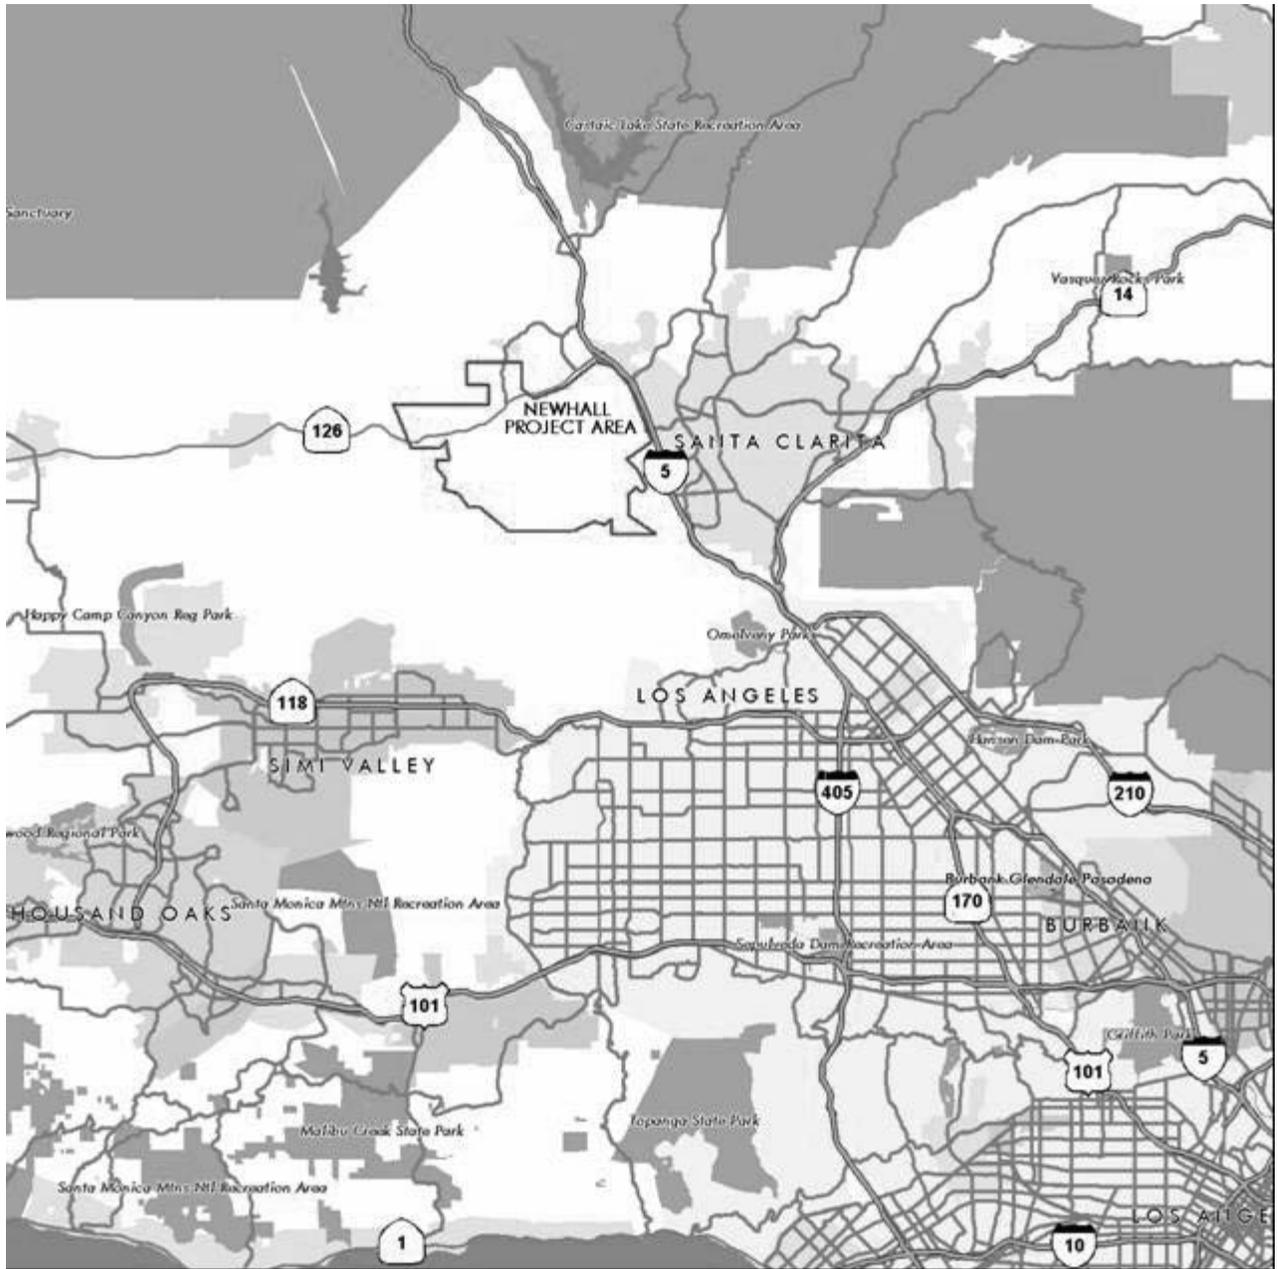

The annual net fiscal impact to the County was estimated on an annual basis in uninflated 2006 dollars for the entire 16-year build-out schedule. Principally because of the need to have a full fire station in place and operating at that point, the Project is projected to have a negative net fiscal impact, i.e. a deficit, in the second year. The net fiscal impact returns to positive, i.e., a surplus, in the third year and by the fifth year the annual surplus is projected to reach approximately \$10.7 million. The net fiscal impact is estimated to reach \$33.9 million in 2017 and \$41.1 million in 2021. Upon completion of the build-and by 2025, the net fiscal impact is estimated to reach at approximately \$42.3 million. The projected annual revenues and expenditures at five points in time during the build-out are shown in Figure 2 and are presented in more detail in Exhibit 3.

**Figure 2**  
**Total Annual Fiscal Impact (000)**

	2009	2013	2017	2021	2025
Revenues	\$1,412	\$26,493	\$66,448	\$78,530	\$80,394
Expenditures	\$682	\$15,802	\$32,540	\$37,475	\$38,047
Net	\$730	\$10,691	\$33,908	\$41,055	\$42,347

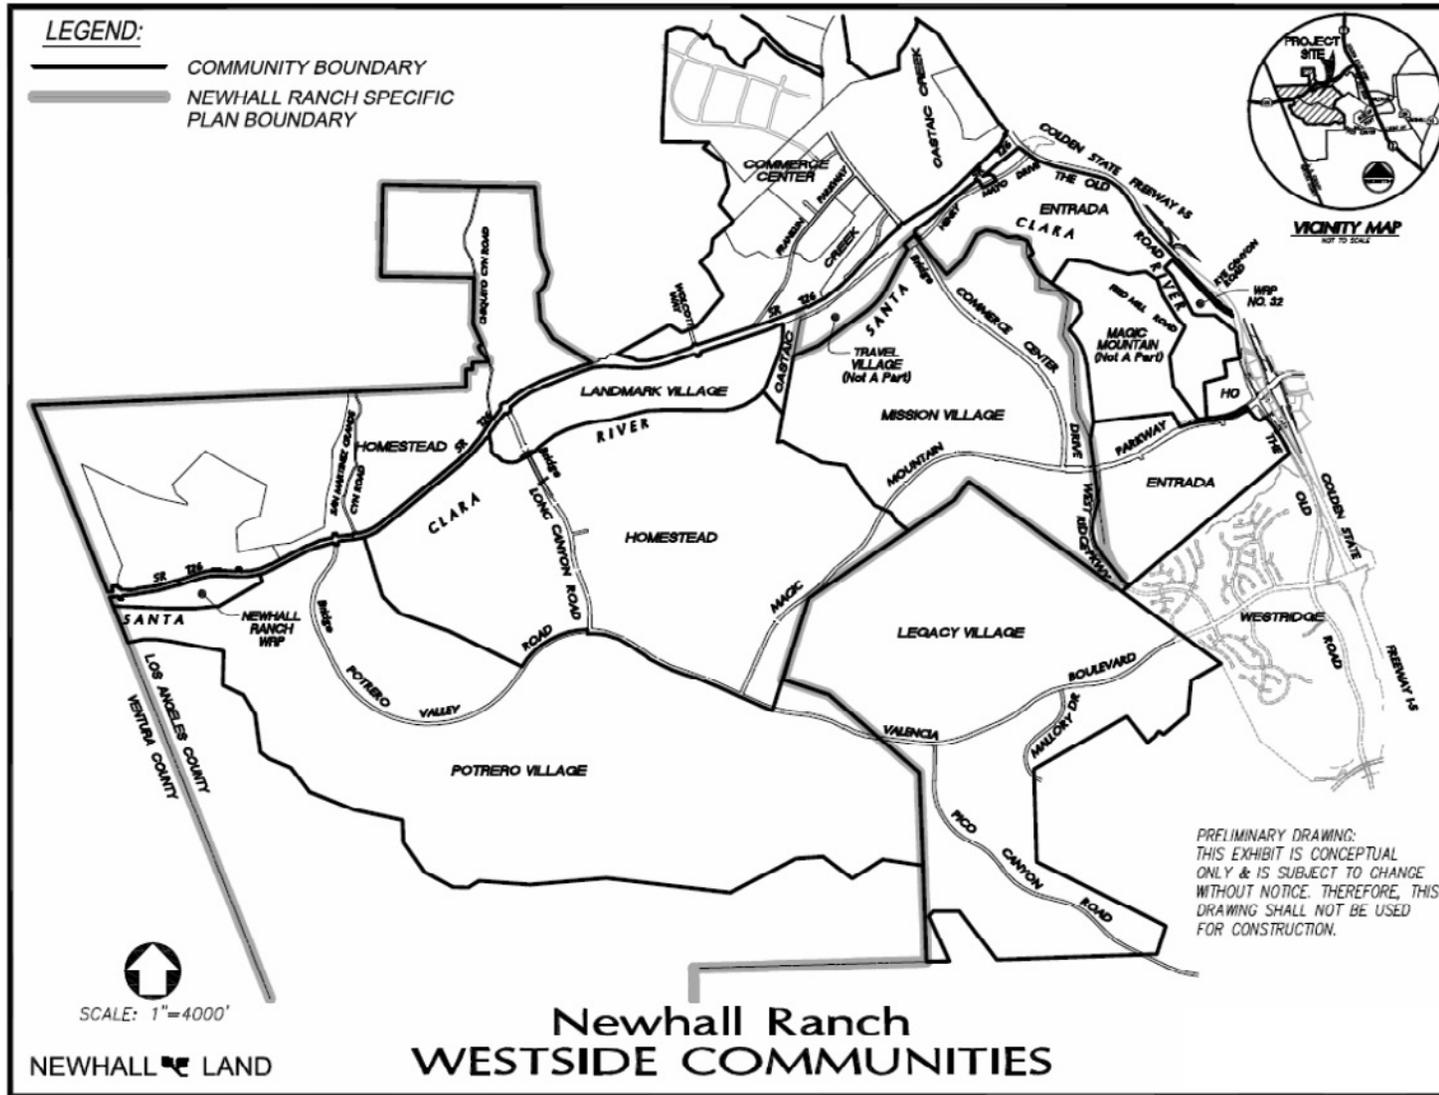

The surplus that emerges as the Project reaches full build-out is attributable to a combination of factors. The County's various shares of the property tax in the Project area is relatively large and the properties will have relatively high assessed values because they will be going on the tax rolls at full market value. This produces a high level of revenues per resident or employee. In addition, a substantial amount of annual maintenance services that the County (or a city) might otherwise have to provide and fund are effectively being privatized or internalized by the Project through funding from homeowners associations or special tax or assessment districts. Annual maintenance of roadways is an example of services that will be funded in part from those alternative sources and reduce what would otherwise be County funding obligations.

General Admin	62	1,437	2,958	3,407	3,459	9.1%	9.1%	9.1%	9.1%	9.1%
<b>SURPLUS/(DEFICIT)</b>	<b>\$730</b>	<b>\$10,691</b>	<b>\$33,908</b>	<b>\$41,054</b>	<b>\$42,347</b>	<b>52%</b>	<b>40%</b>	<b>51%</b>	<b>52%</b>	<b>53%</b>

**Note:**

- Surplus/(Deficit) percent is a percentage of Total Revenues for respective Communities.
- All Dollar Amounts are in Uninflated 2006 Dollars.

Over time, the amount of the surplus as a percent of the total revenues can be expected to decline somewhat. This would be caused by the tendency for 1) municipal service costs to rise at a rate in excess of general inflation, and 2) the total assessed value of properties to lag behind actual market values. However, because of the size of the projected surplus at full build-out, it is unlikely that it could be significantly eroded by this effect.

### **Ventura County Impacts**

There should also be a modest permanent beneficial fiscal impact on Ventura County from the full build out of the project. This modest impact is associated primarily with the completion of the Portrero community which extends virtually to the Ventura County line and which is actually more accessible to the currently limited urban areas of eastern Ventura County than to most of the urbanized portions of Los Angeles County.

Due to this circumstance and to the general proximity of much of the development to residents of eastern Ventura County, there should some positive economic impact on Ventura from the creation of additional jobs, primarily in the service industries, that are readily accessible to Ventura County residents.

Furthermore, to the extent that there currently exists some retail in eastern Ventura County and more is likely to develop over the term of this analysis, the proximity of the Portrero community residents should provide some additional support for Ventura County retailing.

### **Economic Impact**

During the construction period of the Project (extending over 16 years) there will be significant one-time economic impacts on both Los Angeles and Ventura counties. Those impacts were estimated in terms of dollar output, payroll, jobs and taxes (state and local). The cumulative total impact of the Project on Los Angeles and Ventura counties over the term of the build-out is shown in Figure 3. A further breakdown of these impacts is presented in Exhibit 4.

These figures combine direct, indirect and induced impacts. The direct impact is that associated with the development of the Project itself. The indirect and induced impacts result from the direct impact of the Project being multiplied as businesses and households re-spend and spur activity in other sectors of the economy.

There will also be ongoing economic impacts. Notably, there may be a significant positive economic impact in the portion of northeastern Ventura County nearest to the Project. This impact would be expected both because of the proximity of the western portions of the Project to the Ventura County line and the convenience that businesses in that portion of Ventura County could offer to residents of the Project.

**Figure 3**  
**Combined Direct, Indirect & Induced Economic Impacts from Construction of the Project**

	Los Angeles County	Ventura County	Total
<b>Direct Construction Impacts</b>			
Output (Millions)	\$6,984	-	\$6,984
Payroll (Millions)	\$2,969	-	\$2,969
Jobs	55,205	-	55,205
<b>Indirect Impacts</b>			
Output (Millions)	\$2,549	\$174	\$2,723
Payroll (Millions)	\$1,031	\$78	\$1,108
Jobs	23,627	1,776	25,403

<b>Induced Impacts</b>			
Output (Millions)	\$3,081	\$245	\$3,326
Payroll (Millions)	\$1,086	\$86	\$1,172
Jobs	28,649	2,278	30,927
<b>Total Impacts</b>			
Output (Millions)	\$12,613	\$419	\$13,032
Payroll (Millions)	\$5,086	\$164	\$5,250
Jobs	107,481	4,054	111,534
Local Taxes (Millions)	\$378	\$28	\$405

**Sources of Information**

The information on which this analysis is based derives largely from three sources:

1. Project descriptive information has been provided by Newhall Land and reviewed for both internal consistency and consistency with various publicly filed environmental documents.
2. Conversion of project parameters into revenue and employment impacts is based on factors assembled by the consulting team reflecting, for the most part, standard or widely accepted factors with well defined and clearly noted sources.
3. Expenditure data has in all cases come from Los Angeles County and, except for two expenditure areas, reflect responses by County officials to inquiries based specifically on a description of the Project. For Public Works, Recreation and Parks, project specific estimates could not be obtained and instead the consultants have extrapolated the relevant costs from recent County budget data on departmental expenditures in comparable geographic areas.

Finally, it should be noted that the consultant team has, when exercising judgment within a range of estimates, consistently chosen to utilize conservative assumptions, that is to say those which would understate revenues and overstate expenses.

**Exhibit 4**

## **II. INTRODUCTION**

### **PURPOSE OF THE STUDY**

The primary purpose of the Study is to estimate the revenues that the County would receive, and expenditures for which it would be responsible, by virtue of the Project being developed in an unincorporated, as opposed an incorporated area of the County. Both the County and Newhall Land have an interest in the extent to which the new revenues that would be generated by the Project can be expected to cover the cost to the responsible jurisdiction of providing required "municipal" services for the Project. The extent to which the Project is likely to generate a net fiscal burden or a net fiscal surplus is of importance to the County in determining how it would plan to provide the necessary support services for the development.

A secondary purpose of the Study is to estimate the one-time economic impact on both Los Angeles and Ventura counties that would result from the construction of the Project over its build-out period. These are measured in terms of dollar output, payroll, number of jobs, and indirect tax revenues. Those impacts consist of direct, indirect and induced components. In the case of this Project, the direct impacts result from construction of the Project itself. The indirect impacts are new economic activity resulting from new business-to-business activity required to support the direct impact. The induced impact is a result of new spending by households as a result of their increased household income.

### **SOURCES OF INFORMATION**

Information for this Study was obtained from a variety of sources. Newhall Land was the primary source of information on the physical and economic characteristics of the Project such as types and numbers of units, market values and timing of the build-out and were reviewed for reasonableness by the Consultants. The Office of Unincorporated Area Services of the Los Angeles County Chief Administrative Office was a primary contact on general budget matters. Other County departments were contacted for revenue and cost information for specific areas of concern. The Environmental Impact Report ("EIR") for the Project that has been certified by the County was also a source of some data. Data from the Consumer Expenditure Survey published by the U.S. Bureau of Labor Statistics were also used in projecting spending by new residents. Surveys of the surrounding areas were conducted to arrive at estimates of activities such as future shopping patterns. All financial figures are in terms of 2006 dollars.

### **LIMITATIONS**

This Study is based on the Project assumptions presented. To the extent the actual Project differs in a material way from those assumptions, the fiscal impact may also differ materially. The results are also contingent on the basic parameters of the various revenues and expenditures on the part of the county remaining relatively constant over the term of build-out. This report is subject to the appended Assumptions and General Limiting Conditions.

## **ORGANIZATION OF THE REPORT**

The report is organized into eight sections. Those sections are as follows.

- I. Executive Summary
- II. Introduction
- III. Project Description and Specifications
- IV. Analytic Approach
- V. Revenues
- VI. Expenditures
- VII. Net Impact
- VIII. One-Time Economic Impact

Tabulations of certain assumption derivations and projections of detailed findings are included in the Appendix.

## **AUTHORSHIP AND ACKNOWLEDGEMENTS**

The study was conducted and this report was produced as a joint effort of Allan D. Kotin & Associates and CBRE Consulting ("ADK&A/CBRE"). Ross S. Selvidge, Ph.D. of CBRE Consulting was the principal author of this Study. Allan D. Kotin of Allan D. Kotin & Associates and Thomas R. Jirovsky of CBRE Consulting exercised administrative control. Martin Zimmerman of the Office of Unincorporated Area Services of the Los Angeles County Chief Administrative Office was of particular assistance in obtaining information on which this Study was based. Genji Nakata, Manager of Finance of Newhall Land provided extensive assistance in the form of providing information on the Project and development plans.

### **III. PROJECT DESCRIPTION AND SPECIFICATIONS**

#### **PHYSICAL DESCRIPTION**

The Project will be located on 3,294 acres of largely undeveloped land in an unincorporated area of Los Angeles County. The land lies to the west of Interstate 5 ("I-5") on the western edge of the Santa Clarita Valley. State Highway 123 runs from I-5 west through the Project and into Ventura County. The City of Santa Clarita lies just to the east of I-5. The residential communities of Stevenson Ranch and Westridge are in unincorporated areas of the County adjacent to the southeast edge of the Project.

The Project will consist of seven different communities: Entrada, Potrero, Legacy, Homestead, Mission Village, Landmark, and Valencia Commerce Center. Each community will consist of a different mix of residential and non-residential products. These communities are referred to collectively as the Westside Communities.

At full build-out there will be a total of 27,893 residential units. There will be 24,242 owner occupied and 3,651 rental units. Approximately 10.9 million square feet of non-residential improvements are planned. That will consist of 3.1 million square feet of retail space, 4.7 million square feet of office space, 2.9 million square feet of R&D space and a 300-room hotel of approximately 165,000 square feet. Exhibit 5 presents a tabulation of the total number of acres of development, residential units and square feet of non-residential improvements for the entire Project and for each community separately. Exhibit 6 presents a tabulation of the amount of residential development in place in the first year and at four-year intervals thereafter. This proposed development is distinct from existing development on the west side of I-5 such as existing portions of Stevenson Ranch and Westridge.

#### **TIMING OF DEVELOPMENT**

A schedule of when the absorption begins and how long it lasts for each project component is presented in Exhibit 5. The first homes will be completed in 2009. The last homes will be completed in 2024. The Project is estimated to be approximately 50% built-out by 2015, and approximately 75% built-out by 2018. From that point, the amount of development slowly tapers off through the completion in 2024. Other than to note that the sales rates implied in the absorption forecasts seem generally reasonable, the consultants express no opinion as to the validity of the implied time periods for planning, land development, and construction.

#### **POPULATION AND ASSESSED VALUE**

Based on the average number of residents per each unit type specified in the EIR, the Project will contain 74,256 residents at full build-out. Of those, a total of 66,318 and 7,939 residents will live in the owner-occupied and rental portions of the Project, respectively. At full build-out, the Project will also contain 32,399 employees. The figures at full build-out for the entire Project and each community are presented in Exhibit 5. These are critical inputs for the derivation of fiscal impacts shown later in the report. The number of residents and employees in the first year and at four-year intervals thereafter are presented for the entire Project and each community in Exhibit 6.

Newhall Land provided an estimated sales price (in constant 2006 dollars) for each separate home or product type in the Project or the necessary information to derive those values. Based on the unit values, the total assessed value of the Project was computed. The total assessed value of the owner-occupied residential units was computed at approximately \$13.4 billion and the assessed value for rental residential units were estimated at approximately \$867 million. The combined assessed value of the non-residential products was estimated at approximately \$3.6 billion. These total figures for the entire project as well as the individual communities are presented in Exhibit 5. The assessed values for the project components by community in the first year and at four-year intervals thereafter are presented in Exhibit 6.

## **PROJECT SPECIFIC FUNDING MECHANISMS**

In developing new communities, Newhall Land has in the past and plans in the future to establish a number of special districts or other mechanisms by which the annual cost of maintaining certain public and private facilities will be funded. These may include community facilities districts ("CFD"), assessment districts ("AD"), and homeowner associations ("HOA"). In the case of CFDs or ADs, the facilities maintained would have to be publicly owned. An HOA can maintain privately owned facilities. These mechanisms can pay for the annual maintenance and operation of facilities such as streets, rights of way, open space and recreational facilities. To the extent these mechanisms are created and implemented, the County will be relieved of having to fund these costs from its General Fund revenues as is required in many other unincorporated areas.

HOAs rely on regular periodic assessments on properties for their funding. Maintenance of private roadways, recreation facilities and open space are examples of activities that are typically funded by HOAs. To the extent these are effectively substitutes for public facilities, the County is relieved of what could otherwise be its responsibility for maintenance funding.

CFDs and ADs receive their funding from levies that appear on annual property tax bills. They are in addition to the 1.00% general levy and other levies that have been approved by voters. As with HOA maintained facilities, maintaining publicly owned facilities by means of CFDs and ADs relieves the County of what could otherwise be a burden for its general fund.

The consulting team has relied on information from Newhall Land as to which facilities' annual maintenance costs will be financed by CFDs, ADs, and HOAs. These facilities are identified in the discussion of expenditures on section VI. The principal facilities which it was assumed the County would maintain at its own expense were the quantities of roadways and park land that were identified by Newhall Land. The extent to which one or another of these alternative funding mechanisms will be utilized will vary from community to community and will depend on the specific design and facilities in each.

## **IV. ANALYTIC APPROACH**

### **UNINCORPORATED IMPACT APPROACH**

In undertaking this analysis, as expressed both in the consulting team proposal and the formal work statement and contract developed by Newhall Land, the consulting team explicitly contemplated a focus on those fiscal impacts associated with the presence of the new developments in the unincorporated portions of Los Angeles County. The County of Los Angeles provides a meaningful group of services, i.e. health care, social welfare, the court system etc., to the entire population both in cities and in unincorporated areas. It is not the intention of this study to examine these services. Similarly, there is some amount of Project-generated revenues, primarily but not exclusively associated with property tax that accrue to the County by virtue of its role as a County.

There is a separate set of revenues that accrue to the County by virtue of the fact that the projects exist in unincorporated areas. This report focuses on the revenues uniquely associated with unincorporated status rather than the total revenues.

This approach represents a difference from an earlier fiscal impact study prepared by The Levander Company for Newhall Land in 1996 for the predecessor project. In that study, Levander considered all County revenue and all County expenses.

This methodology used has been adapted directly from the current methodology used by the Unincorporated Services and Special Projects Division of the Los Angeles County Chief Administrative Office, in examining and negotiating the fiscal implications of annexations and incorporations.

Briefly stated, it consists of identifying a group of six services that collectively comprise the core services that change status when an area is incorporated or annexed. The costs of these services are, in most cases, transferred from the County to the City. With respect to revenues, there are a whole group of revenues that automatically transfer by virtue of the fact that they are based on the incorporation status of a project. The revenue in question that is not automatically reclassified is property tax.

The basic method used by the Unincorporated Services Group and by Los Angeles County in annexations is to establish the ratio of property tax to the general fund (the Tax Ratio), and then to reallocate to the City that amount of property tax which equals the Tax Ratio, as defined above, applied to the total of the service costs that are transferred to the City.

For example, if the property tax represents 55% of the General Fund and the combined six services represent an annual cost of \$10 million, then 55% of that cost or \$5.5 million in property taxes would be shifted, usually after some period of transition, from the County to the City.

The rationale for this narrower approach lies in the assumption that the market forces that cause housing to be built at this location exist largely independent of whether or not the area remains unincorporated. If, for some reason, the County refused to process applications for development, there is a strong likelihood that the property owners would seek either to annex to an existing incorporated city or to incorporate a new jurisdiction. This pattern has characterized several other areas in Southern California and seems likely to occur at this location, absent the imposition of urban growth boundaries or some rule comparable to the SOAR initiative in Ventura County. Whether or not development processing in such alternative jurisdictions would cause changes in the pattern of development or result in more or less exactions is outside the scope of this study. But historical evidence and the collective

experience of the consulting team confirm the core assumption that all or most of the development would occur anyway.

### **PRICE LEVEL ASSUMPTION**

The analysis was conducted on a constant dollar basis. All figures in the Study are presented in terms of uninflated 2006 dollars. This eliminates the effects of price level changes that can lead to misinterpretation of results, particularly over the long term. As noted in the introduction and elsewhere in the analysis, this assumption may mask some deterioration in the surplus over time due to the lag between inflation in housing costs and a corresponding increase in property taxes.

### **REVENUES**

The revenues that were included in the analysis are primarily taxes from major categories that will be received by the County as a consequence of the Project being located in an unincorporated area of the County. There are five separate property-specific taxes as well as sales tax, utility user tax, documentary transfer tax, and transient occupancy tax. Franchise fees are also included in the analysis. There are a number of other smaller revenues that will produce some revenues for the County. However, they are relatively small and due to unavailability of data, the portions attributable to the Project's unincorporated status cannot be calculated or estimated with any degree of reliability.

Most of the real estate based taxes are linked to the assessed value of the properties being taxed. The sales tax revenues are estimated based on both the typical sales of the type of retail development proposed and the propensity of the new residents to make taxable purchases outside of the Project, but still in an unincorporated area of the County. Utility user taxes were estimated based on anticipated utility usage. The transient occupancy tax was based on the projected gross room revenues of the hotel component. The documentary transfer tax revenue was estimated based on assumed turnover (i.e., resale) rates for the residential and non-residential components, in addition to the initial development of those properties. The estimates of franchise fees and gasoline tax subventions were based on per capita factors derived from the County's Fiscal Year 2005-2006 budget.

### **EXPENDITURES**

There are eight principal categories of expenditures that the County would have to fund because the Project is in an unincorporated area of the County that it would not or might not be required to fund if the development was in an incorporated area. Those categories are:

1. Law enforcement (Sheriff),
2. Fire protection,
3. Library,
4. Public works,
5. Animal care and control,
6. Parks and recreation,
7. Planning and
8. General administrative support.

There is a wide range of services that the County provides irrespective of whether an area is unincorporated or incorporated. Those services were not included in the analysis

The Sheriff expenditures were estimated by the Sheriff's Department on the basis of an unincorporated area level of service average cost.

The fire protection costs were based on station estimates from the County Fire Department.

Annual Library expenditures and timing of the construction of the library facilities were based on information provided by the County Library. Public works expenditures were estimated based on unit costs provided by the County

Public Works department and physical specifications provided by Newhall Land. Parks maintenance expenditures were estimated based on the unit cost factors from the 1996 Levander fiscal analysis and physical specifications from Newhall Land, inflated to 2006 levels.

Animal care and control, recreation, and planning expenditures were estimated based on per capita factors derived from the County Fiscal Year 2005-2006 budget. For purposes of this calculation of per capita estimates, only the population of the unincorporated area of the County was utilized.

There exists no statutory definition of fiscal impact and it is manifest that fiscal impact will be measured differently as a function of the choice of jurisdiction and the scope of analysis. In this analysis of expenditures the following conventions are used for the reasons given:

- Only operating expenditures are considered since the funding of infrastructure is itself the subject of at least two other processes outside the scope of his analysis: (1) conditions of planning or subdivision approval; and (2) imposition of impact fees.
- Only those expenditures associated with unincorporated status of the project are considered specifically excluding countywide operating costs which would apply if the same improvements were constructed in an incorporated area. The rationale for this is that market forces would likely create the same improvements independent of their "unincorporated" status
- No consideration is given to cost or revenue impacts on jurisdictions other than Los Angeles County although it is manifest that such impacts exist. This convention reflects the critical and dominant nexus between fiscal impact measurement and the development approval process which tends to inevitably focus such impact measurement on the jurisdiction granting development approval.

## **V. REVENUES**

### **PROPERTY TAXES**

#### **General Levy**

The general levy property tax in California is set at 1.00% of assessed value. The assessed value of a property in California is set at its full market value each time it is sold or transferred. Between transactions, the assessed value of a property cannot be increased by more than 2.00% per year. Because this analysis is in terms of uninflated 2006 dollars, no change in the assessed values was assumed.

Different taxing entities receive different shares of the 1.00% general levy based on what is called the tax rate area ("TRA") in which a property is located. The vast majority of the land in the Project is in ten different TRAs. In each of those different TRAs, the taxing entities receive a different share of the 1.00% general levy. In addition, the County receives several shares of the 1.00% general levy for different designated purposes. The County share for its General Fund in those TRAs ranges from approximately 20% to 30% of the general levy. For the County Library the shares range from between 2% to 3% of the general levy. For the County Fire Department the share ranges from approximately 17% to 18% of the general levy.

As has already been indicated, if the Project area were to incorporate, the County would lose a part of the share of the general levy allocated to the County's General Fund. At the same time, The County would also shed the financial burden for providing certain "municipal" type services. The County's Chief Administrative Office estimates that the percent of their share of the general levy that is contingent on an area being unincorporated is not less than 55% and probably slightly higher. To avoid overstating the County's General Fund portion of their general levy property tax revenue that is dependent on the area being unincorporated, a 55% factor was used in the analysis.

To estimate the County's several allocations of the property taxes based on assessed value, the TRAs for each community were tabulated and the different allocations of shares of the general levy were averaged for each community. The County's General Fund shares for each community were also multiplied by the 55% factor to obtain the amount of that component of the property tax attributable to its unincorporated status. The County only receives the other two shares of the general levy (for fire protection and the Library) if the County also provides and funds those services. Exhibit 7 presents a derivation of the shares of the general levy for each of those shares for each of the communities.

After adjustment, the County's General Fund share of the general levy that is dependent on the area being unincorporated ranges from approximately 12% to 16% depending on the community involved. The County's general levy share for the Library varies slightly just above 2% in the six communities. The County's General Fund share of the general levy ranges from just below 18% to just over 19%, depending on the community. The combined shares of the general levy for the different communities are in the low to mid 30% range.

Note: All Dollar Amounts are in Uninflated 2006 Dollars

The assessed values for each of the separate owner-occupied residential unit types were based on target sales prices in 2006 dollars that were provided by Newhall Land. The assessed values for each of the separate income producing product types (rental residential and commercial) were derived based on projected rental income, as well as estimates of expense ratios and market capitalization rates. The total Project assessed value is estimated at approximately \$300 million in the first year. Upon completion the assessed value is estimated at a total of approximately \$17.8 billion. The residential component is valued at approximately \$14.2 billion and the non-residential component is valued at approximately \$3.6 billion.

In each community, each year’s cumulative assessed value is multiplied by the appropriate percent share of the general levy to produce the annual property tax revenues for the different allocations (General Fund, fire protection and Library). As indicated in Figure 4a, the general levy revenues begin at approximately \$1.1 million in the first year and rise to approximately \$62.2 million at full build-out in 2025. The largest component of those funds are the share of the general levy dedicated to fire protection, followed closely by the General Fund component and then the Library component.

**Figure 4a**

	2009	2013	2017	2021	2025
Property Taxes – General Levy (000)	\$1,091	\$20,620	\$49,645	\$60,473	\$62,207

**Special Taxes**

There are two special taxes that are levied in addition to the general levy and which the County would not receive if it were not required to provide certain services. One special tax is an augmentation to the County Library funding. That tax is levied at an annual rate of \$25.72 per residential unit (owner-occupied or rental). During the build-out of the Project, this annual revenue is estimated to start at \$14,000 and rise to approximately \$717,000 in 2025.

The other special tax is dedicated to funding fire protection. It is levied on the basis of a formula that applies different rates to the square feet of improvements of different types of non-owner occupied residential and commercial properties. A flat rate per unit is applied to owner-occupied residential properties. During the build-out of the Project, this annual revenue is estimated to start at approximately \$26,000 and rise to approximately \$1.7 million in 2025, giving total special taxes starting at \$40,000 in 2009 and rising to approximately \$2.4 million in 2025 (Figure 4b). The derivation of the rates applied to the different product types in the Project is presented in Exhibit 7.

**Figure 4b**

	2009	2013	2017	2021	2025
Special Taxes (000)	\$40	\$788	\$1,893	\$2,322	\$2,401

**DOCUMENTARY TRANSFER TAX**

This tax is levied on the value transferred in most real estate transactions in California. The County receives a share of this value-based tax. The amount the County receives is 0.055% of the value of the real estate transferred. The County will receive these revenues when the various properties are first developed and sold to initial buyers, as well as when properties in the Project re-sell over time.

In each year the value of the new properties developed and sold to their initial purchasers is multiplied by the 0.055% rate to produce the documentary transfer tax from the initial sale. In addition, in each year, the value of all the previously developed properties is multiplied by a factor to estimate the value of the properties that, on average, can be expected to resell each year. That value of the resold properties is also multiplied by the 0.055% tax rate to produce the other component of the County's annual documentary transfer tax revenues. Residential real estate in California is widely believed on average, to sell at an interval of less than 10 years. Commercial real estate is believed to sell at a less frequent interval. To avoid overestimating the County's documentary transfer tax revenues, it was assumed that the owner-occupied residential properties sold on average of once every ten years. This would produce a 10% annual turnover for those properties. It was assumed that the other properties sold on average at a 20-year interval which would produce a 5% annual turnover for those properties.

In the first year, it is estimated that the County will receive approximately \$166,000 in revenue from the documentary transfer tax, all from the initial purchases of the newly developed properties. The annual revenue is estimated to rise to \$908,000 in 2025 at full build-out when the revenue would be generated by the resale transactions. Figure 4c presents these revenues at five points in time over the build-out.

**Figure 4c**

	2009	2013	2017	2021	2025
Documentary Transfer Taxes (000)	\$166	\$1,262	\$1,665	\$1,101	\$908

**UTILITY USER TAX**

The County levies a 5.00% tax on the consumption of electric power, water, natural gas, and telephone service for both residential and non-residential users. The Project contains residential units of varying size and different types of non-residential products. An average annual dollar usage for the different utilities per residential unit was estimated. Those estimates were based on industry standard assumptions and trade sources such as the Building Owners and Managers Association (BOMA) and International Conference of Shopping Centers (ICSC). Those estimates were then multiplied by the number of completed units to produce the total annual dollar amount of utility usage by residential properties in each year. This dollar usage was multiplied by the 5.00% tax rate to produce the total annual utility user tax revenue for the County. The usage by the non-residential properties was estimated on a usage per square foot basis for electric power, water and natural gas and on a per employee basis for telephone service. These factors are presented in Exhibit 7.

In the first year, it is estimated that the County will receive approximately \$57,000 in revenue from the utility user tax. The annual revenue is estimated to rise to \$5.3 million in 2025 at full build-out. Figure 4d presents these revenues at five points in time over the build-out.

**Figure 4d**

	2009	2013	2017	2021	2025
Utility User Taxes (000)	\$57	\$1,699	\$4,414	\$5,167	\$5,300

**TRANSIENT OCCUPANCY TAX**

The County levies a 12.00% transient occupancy tax (“TOT”) on room revenues for hotels and motels located in unincorporated areas of the County. The Project contains a 300-room hotel that is scheduled to be completed in 2016. Based on estimates of average daily room rates (“ADR”) and occupancy, an estimate of the annual gross room revenues was derived. This 12.00% was then applied to produce an estimate of the annual TOT revenue that the County would receive. Based on a relatively conservative estimate of the potential ADR, the annual TOT revenue is estimated to be in the range of \$1.2 million. This derivation is presented in Exhibit 7.

**Figure 4e**

	2009	2013	2017	2021	2025
Transient Occupancy Taxes (000)	\$0	\$0	\$1,232	\$1,232	\$1,232

In estimating the revenue from TOT generated by the new hotel facilities in the Project, the consultants have not considered any offset for possible transfer of patronage from existing hotels. However, at the same time, no effort has been made to estimate the additional patronage of existing hotels that will be created by visitors to the more than ten million square feet of new commercial space and over 27,000 new housing units developed as part of the Project. Consequently, the overall additional TOT revenues are likely to be understated, a result consistent with the general approach taken by the consultants. In this instance, any attempt to quantify induced hotel demand would require a host of essentially unverifiable assumptions about travel mix, access patterns, room rates and other items that would be highly speculative at this time.

**SALES TAX**

The County receives a 1.00% sales tax on all taxable purchases that take place at retailers located in the unincorporated areas of the County. The Project will produce new sales tax revenue for the County from two sources. The first source is the new taxable sales that will occur at the new retail space that is developed in the Project itself. The second source of new sales tax revenue will be from taxable purchases by the Project’s residents and employees in nearby retailers in unincorporated areas of the County.

**Shopping Patterns**

The retail development that is planned in the Project is both local and regional serving. It can be expected to capture a large portion of the residents’ spending on goods that are normally purchased close to home. The Project will also capture a portion of their other retail sales. Employees who work in the commercial portions of the Project can also be expected to spend a small but measurable amount on purchases near their workplace.

Based on the type of retailing that the Project will offer and a thorough survey of the shopping alternatives that are available outside of the Project, it was estimated that Project residents would make in the range of 32% of their non-automobile related retail purchases at new retailers in the Project. That same analysis also estimated that the residents of the Project would make approximately 15% of their non-automobile related retail purchases in nearby unincorporated areas of the County. Sales tax from both of those sources would be new sales tax revenue for the County.

## **Sales in Project Retail Components**

Retail sales at the Project's retail components were estimated by dividing the components into categories to which industry standard sales productivity rates were then applied. Allowances were made for taxable and non-taxable sales and services as well as vacancies. The average annual taxable sales per square foot for each community were then multiplied by the number of retail square feet in operation in each community in each year. There will also be some sales tax associated with the hotel operation from "in house" taxable retail purchases by guests. The annual total taxable sales were multiplied by the 1.00% tax rate to derive the sales tax revenue to the County. The derivation of the sales per square foot figures is presented in Exhibit 7.

As previously noted, spending by the residents of the Project will account for a portion of the total retail sales in the Project. The remainder will be derived from spending by persons employed in the Project and other patrons who both live and work elsewhere. At full build-out and assuming the Project's retail achieves an industry standard level of sales productivity, the annual taxable sales are projected to reach \$517 million.

Unlike virtually all other revenue estimates in this report, this projection of sales tax was not based essentially on endogenous, i.e. internal, characteristics of this project. In this instance, the large amount of proposed retail space must rely on patronage from other growth in the north county area for market support if it is to achieve target sales levels per square foot. The consultants have determined that, as of this date, projections show substantial non-Newhall Land growth in population and no apparent competitive projects in locations as well suited to capturing this growth as the Entrada and Valencia Commerce Center communities. Nevertheless, the consultants feel that it is appropriate to note that this estimate, unlike most of the others in this report, relies on the realization of projections and development patterns outside the control of Newhall land.

## **Total Sales Tax**

In order to estimate the amount of new retail spending that may be generated by Project residents, it is necessary to estimate both the household incomes of the new residents as well as their spending patterns. The household incomes were computed by estimating how much household income would be required to afford and occupy the residential units in the Project. This was done utilizing factors such as the value of the owner-occupied house or rent, the amount of household income commonly spent on housing and home financing parameters such as down payments and interest rates. The required household incomes were divided into ranges and for each range a spending pattern was applied to derive the amount of total retail spending and the taxable portion.

The data on retail spending patterns by income level were obtained from the Consumer Expenditure Survey compiled by the Bureau of Labor Statistics. Based on that data, households in the Project area will spend between 18% and 26% of their income on non-automotive retail purchases. Across all income levels, the portion of that retail spending spent on taxable purchases ranges from 86% to 89%. The estimate of spending by employees was based on survey data from the ICSC which has analyzed employee spending patterns.

In the first year, before retail in the Project is completed, it is estimated that the County will receive approximately \$48,000 in revenue that will come from sales tax on new purchases by Project residents outside the Project. The new annual sales tax revenue is estimated to rise to \$7.8 million in 2025 at full build-out. Approximately 66% of the County's sales tax revenue is expected to be generated by the new

retail space in the Project with the balance coming from residents' expenditures elsewhere in the unincorporated County.

The geographic distribution of retail facilities within the project is not at all uniform as between the six communities. The Entrada and Potrero communities will ultimately account for approximately 66% of the total taxable retail sales in the Project. Figure 4f presents total sales tax revenues at five points in time over the build-out.

**Figure 4f**

	2009	2013	2017	2021	2025
Retail Sales Taxes (000)	\$48	\$1,951	\$7,203	\$7,734	\$7,825

**FRANCHISE FEES**

These fees are charged to providers of services such as cable television in unincorporated areas. The amount of the revenues is considered to be generally correlated with the population in the unincorporated areas. Based on the County Fiscal Year 2005-2006 budget, the average annual per capita revenue to the County from this source is approximately \$7.00. This will produce approximately \$11,000 in revenues in the first year and rise to approximately \$520,000 at full build-out in 2025. The amounts of these revenues at five different points in time during the build-out are presented in Figure 4g.

**Figure 4g**

	2009	2013	2017	2021	2025
Franchise Fees (000)	\$11	\$173	\$395	\$502	\$520

## VI. EXPENDITURES

### SHERIFF

The County will provide law enforcement services to the Project via the Sheriff's Department. The cost of those services will be funded from the County's General Fund.

The Sheriff's Department provided an estimate of the cost of services to the Project. It is based on a specified level of staffing and the fully burdened cost per deputy. The level of service specified is one deputy per 1,000 residents. The current fully burdened annual cost per deputy is \$179,000. On that basis and at full build-out, the total annual cost for law enforcement services for the Project will equal approximately \$13.2 million. This is equivalent to approximately \$179 per capita based on resident population.

**Figure 5a**

	2009	2013	2017	2021	2025
Sheriff Costs (000)	\$291	\$4,399	\$10,036	\$12,743	\$13,200

For any jurisdiction law enforcement services are a function of the character of the area to be served and the desire on the part of elected officials to have a certain level of service. As a point of comparison for the estimate of the cost for the Project, the cost of contract law enforcement from the Sheriff's Department for the City of Santa Clarita was investigated. The City of Santa Clarita is generally similar demographically to the Project and has a very similar ratio of resident population to employees. The City of Santa Clarita currently pays approximately \$13.8 million per year for contract law enforcement services from the Sheriff's Department. This is equivalent to approximately \$82 per capita. The difference between these two per capita cost figures for generally similar areas is not known. However, it is a strong indicator that the estimated cost for the Project is very unlikely to be underestimated. Figure 5a presents the law enforcement cost for five points in time during the build-out.

### FIRE PROTECTION

The Los Angeles County Fire Department will provide fire and paramedic services to the Project. Based on analyses by the County, the Project will require four fire stations to serve the Project. The County also provided an annual operating cost for each of the two fire stations. The costs ranged from \$2.4 million to \$4.4 million per station depending on the type of equipment at each station. The total annual cost for all four stations combined is \$12.5 million. The Valencia Commerce Center community is in the service area of an existing fire station which has sufficient available capacity to serve that community.

The County was not able to provide a timing or sequencing for the fire stations because they lacked the necessary data on exactly when each element of the Project would be built and in exactly what location.

In the absence of a schedule from the County, the consulting team developed a deliberately conservative schedule of fire station development in which each of four stations was provided at the beginning of the relevant development cycle. The annual costs of the four stations were incorporated, one by one, beginning with the first station in the first year that properties are sold. The cost of the

second station was added when the Project was 25% built-out. The cost of the third station was added when the Project was 50% built-out and the fourth was added when the Project was 75% built-out. This sequencing has the effect of the cost of a new station being incorporated in years one, four, seven and nine by which time the full cost of the fire protection is being borne. Figure 5b presents the expenditures at five different points in time during the build-out.

**Figure 5b**

	2009	2013	2017	2021	2025
Fire Protection Costs (000)	\$0	\$5,660	\$12,513	\$12,513	\$12,513

**LIBRARY**

The Los Angeles County Library will provide library services to the Project. The County has studied the need for library services for the Project and surrounding unincorporated areas. It has determined that the most reasonable approach to providing those library services for the area would be to construct an initial 30,000 square foot library and to later expand it to 60,000. The annual operating cost of the initial library would be approximately \$2.7 million. The annual operating cost of the 60,000 square foot library would be approximately \$4.6 million. Based on the build-out schedule for the Project and estimates of population growth in the other unincorporated areas to be served, the County has determined that the first library should begin operations in 2010 and the expanded should be completed in 2020.

The library is expected to ultimately serve a population of 117,000. The Project’s 74,256 population represents approximately 65% of the total population that will be served. Therefore, the annual cost of the two different levels of library facilities will be multiplied by a 65% factor to compute the amount of the annual library cost that can fairly be allocated to the Project.

Based on this approach, the Project’s annual library service costs will begin at approximately \$1.7 million in 2010 and rise to approximately \$2.9 million in 2020. Figure 5c presents the expenditures at five different points in time during the build-out.

**Figure 5c**

	2009	2013	2017	2021	2025
Library Costs (000)	\$0	\$1,714	\$1,714	\$2,940	\$2,940

**PUBLIC WORKS**

The principal costs to the County in the Public Works category will be the maintenance of public roadways. Those costs are commonly estimated in terms of dollars per lane mile which allows for roadways of different widths. The bulk of the costs are associated with periodic maintenance of the streets and adjacent rights of way as well as lighting. Newhall Land estimates that approximately 182 lane miles of local and major collector roadways in the Project that would be maintained by the County. Appendix Exhibit A-5 details the lane miles by individual community and major, collector or local classification, which will be maintained by the County. It should be pointed out that a significant amount of the local streets in the Project (both private and public-access) will maintained by special districts or homeowners’ associations and not by the County.

The County provided estimates of costs per lane mile for both street maintenance and lighting for local and major collector streets. The annual street maintenance costs per lane mile are \$6,400 for major streets, \$5,600 for collector streets and \$4,700 for local streets. The annual cost per lane mile for lighting is \$4,500 for major and collector streets, and \$2,800 for local streets.

These costs are applied only to the publicly dedicated streets and explicitly exclude private streets within gated communities, the maintenance costs for which are covered by HOA or property owner association fees. Maintenance costs for a significant amount of the streets outside of the gated portions of the Project will also be maintained by special tax or assessment district funding.

The estimated annual Public Works expenditures are \$242,000 in the first year and rise to a total of \$1.7 million annually at full build-out in 2025. Figure 5d presents the annual expenditures at five different points of time during the build-out.

**Figure 5d**

	2009	2013	2017	2021	2025
Public Works Costs (000)	\$242	\$1,044	\$1,483	\$1,675	\$1,675

**ANIMAL CARE AND CONTROL**

The County will provide animal care and control services for the project. The County was not able to independently provide an estimate of the cost for the Project. In the absence of that information, the cost to the Project was estimated on a per capita basis. The County has budgeted a net cost for these services of approximately \$7.9 million in Fiscal Year 2005-2006. That is equivalent to \$7.29 per capita for the unincorporated areas of the County and may overstate the cost to provide the service in the Project. Nevertheless, that factor was used to estimate the Project’s cost in this service area to avoid understating the cost. At that per capita cost, the County’s annual expenditures will begin at approximately \$12,000 and rise to approximately \$541,000 at full build-out in 2025. Figure 5e presents the annual expenditures at five different points in time during the build-out.

**Figure 5e**

	2009	2013	2017	2021	2025
Animal Care & Control Costs (000)	\$12	\$180	\$412	\$523	\$541

**PARKS AND RECREATION**

The Parks and Recreation Department will incur costs in two different categories to serve the Project. The first is recreation services. This is the cost to provide various physical, educational and cultural programs and services. Levander estimated that the net per capita cost of recreation program services for unincorporated area residents was approximately \$4.65. Cumulative inflation since 1996 is 26.6%. In abundance of caution and in order to not under estimate the current cost, the 1996 cost was increased by two times the overall inflation rate. This produced an annual per capita cost of approximately \$7.00. As shown in Figure 5f, applying that factor to the Project results in an initial annual expenditure of approximately \$11,000 and rising to \$520,000 annually in 2025.

**Figure 5f**

	2009	2013	2017	2021	2025
Recreation Costs (000)	\$11	\$173	\$395	\$502	\$520

The other cost category is the physical maintenance of any public parkland not maintained by a special district. Newhall Land estimates that approximately 254 acres of active parkland in the project that will have to be maintained by the County. Any recreational land and open space that would not be maintained by the County was excluded. The County was not able to provide a current estimate of the annual cost of operating and maintaining an acre of active parkland. In the absence of a current per acre cost being provided by the County, a cost was extrapolated from the unit cost used by Levander in its 1996 fiscal analysis of the predecessor project.

Levander estimated a \$6,400 annual per acre cost in 1996 for active parks based on tabulations of actual unit costs provided by the Parks and Recreation Department. An inflation adjustment similar to that for recreation program services was applied to this cost factor. This produced an annual per acre cost of operations and maintenance of \$9,700. As presented in Figure 5g, applying that cost factor to the number of acres that will be maintained by the County results in an initial annual cost of \$49,000 rising to \$2.5 million in 2016 and thereafter, by which time all of the parkland will be in place.

**Figure 5g**

	2009	2013	2017	2021	2025
Parks Costs (000)	\$49	\$958	\$2,487	\$2,487	\$2,487

Exhibit 3 presents the annual cost or both recreation and parks expenditures at five different points in time during the build-out. There will be additional park land and open space in the Project which will not be a responsibility of the County to maintain. Maintenance of those facilities will be funded by HOA, special tax or assessment mechanisms. It is possible that Newhall Land will establish assessment districts to maintain some of the 254 acres of park land which it is assumed in this analysis will be maintained by the County from its general fund. If that occurs, the County will be relieved of \$9,700 in annual maintenance costs for every acre whose annual maintenance burden is transferred to an assessment district.

**PLANNING**

The County provides a full range of regional planning services in the unincorporated areas. The County was unable to provide an estimate of the cost of providing those services to the Project or to provide cost factors that could be used to derive a cost estimate. Consequently, it was decided to derive a per capita net cost factor for those services. In the County Fiscal Year 2005-2006 budget the net cost of providing regional planning services is approximately \$10.4 million. This is equivalent to \$9.57 per capita. Applying that per capita cost factor, produces an initial annual cost of \$16,000 in the first year that properties are completed. The annual expenditure rises to approximately \$711,000 in 2025. Figure 5h presents the annual cost for planning services at five different points of time during the build-out.

**Figure 5h**

	2009	2013	2017	2021	2025
Planning Costs (000)	\$16	\$237	\$541	\$686	\$711

Note that these costs exclude application fees and other charges. Therefore, they represent the net cost to the County and not the total cost of processing new proposals.

**OTHER SERVICE CATEGORIES**

Two other specific service categories are also associated with the unincorporated areas of the County. Those are the District Attorney and the Treasurer and Tax Collector. Discussions were held with representatives of each of those offices. Neither office believed that their operations would be affected in a material way as a consequence of the development of the Project.

**GENERAL ADMINISTRATIVE SERVICES**

The County provides a variety of support and overhead support to the various departments that provide direct services. In the 1996 fiscal analysis Levander determined that the cost of that overhead support cost the County approximately 7.7% of other activities. That analysis differed from this analysis in that it examined countywide services in addition to services that are associated only with unincorporated areas. Data is not available to allocate those general administrative service costs among countywide services and services for unincorporated areas. To avoid understating the cost of this overhead support services, a 10% factor has been used to compute the cost of providing general administrative services to accompany the other unincorporated area services for which individual costs have been estimated.

**Figure 5i**

	2009	2013	2017	2021	2025
General Administration Costs (000)	62	1,437	2,958	3,407	3,459

**SPECIAL TAX AND ASSESSMENT CONSIDERATIONS**

As mentioned previously, Newhall Land has announced its intention to establish both special districts and homeowners associations to fund the necessary annual operation and maintenance costs associated with a number of the facilities that will be constructed with the Project. Those facilities consist primarily of roadways. The presence of those funding mechanisms will very significantly reduce some of the usual funding burdens that the County bears in other unincorporated areas of the County. For the purpose of estimating annual County service expenditures, this analysis has focused on only those facilities that would in fact be operated and maintained by the County from its General Fund.

## **VII. NET IMPACT**

### **COMBINED PROJECT**

With the exception of the second year, the net fiscal impact of the Project will be positive (i.e., a surplus) and substantially so. A year-by-year tabulation of the individual categories of revenues and expenditures is presented in Exhibit 8. The somewhat anomalous condition in which in the first year is positive and the second year is negative is attributable to a one year delay in having to fund the new library facility and fire station.

The largest factor creating a negative fiscal impact in the second year is the need to construct and operate a new fire station at that point to serve the new houses that will be completed. That second year deficit is also attributable to cost of the new library, the first phase of which would begin operation in that year. Both of those facilities will have excess capacity during the first several years. The gross and net fiscal figures reach approximately 95% of their final amount in 2021, which is 13 years into the 16-year build-out term.

The large \$42.3 million surplus at full build-out represents 53% of total revenues. This existence of a large surplus is attributable to several factors. The most significant factor is the relatively large combined share of property tax revenues to which the County is entitled. That high share of property tax and the relatively high property values produces unusually large revenue per capita.

Contributing to that effect is the fact that the Project is an entirely new community. This means that it does not have on the tax rolls a large stock of properties that have not transacted for years. It is common in other communities for there to be a significant number of properties that are carried on the books at very low assessed value because their ownership has not changed for many years and their assessed value has lagged far behind market values. All of the properties in the Project will be going onto the tax rolls at their full market value.

Also of note is the very large contribution that the fire protection share of the general levy makes to total revenues. It is the largest component (even larger than the General Fund share) of the 1.00% property tax general levy.

An additional significant factor contributing to there being a large positive fiscal impact is Newhall Land's plan to create special funding mechanisms to cover a number of annual service costs that are usually the responsibility of the general fund of a city or county. These mechanisms will include HOA fees as well as special tax or assessment districts. They will fund significant amount of the annual maintenance for roadways in the communities.

One aspect of the expenditure figures is unusual compared to what is commonly found in fiscal analyses. That aspect is that the annual fire protection cost is very close to the annual law enforcement cost. It is common to find that law enforcement costs exceed fire protection costs by 25% to 30% or sometimes more. This raises the question of whether the law enforcement costs could be understated or the fire protection costs overstated. The consultants necessarily must respect the estimates provided by County personnel. The consulting team would hypothesize that the newness of the community, the absence of poverty, and the absence of large public venues as well as some gated portions of the Project all contribute to a lower policing costs while leaving fire protection unchanged at the same time that low development density and higher property values may contribute to higher fire protection costs.

As indicated in the section of the report dealing with expenditures, the current annual cost of the Sheriff's Department providing law enforcement services under contract to the adjacent City of Santa Clarita is approximately \$82 per capita. As indicated in that section it the Sheriff's Department estimates the law enforcement costs for the Project will be \$179 per capita. That is a 118% higher cost than the contract services for the City of Santa Clarita. This suggests that the law enforcement costs are not likely to be understated. The fire protection expenditures are based on budget figures provided by the County after careful analysis of the Project's development characteristics. Thus, they are not likely to be overstated. The relative relationship between the law enforcement and fire protection expenditures may be attributable to the level of fire protection service being particularly extensive compared to a less severe law enforcement burden.

## **INDIVIDUAL COMMUNITIES**

Breakdowns of the total revenues and expenditures for the seven different communities at five different points in time during the build-out term are presented in Exhibit 9. Breakdowns for individual revenue and expenditure line items for each community at full build-out are presented in Exhibit 10.

As a percent of the entire Project's net fiscal impact, Entrada at 24% and Potrero at 23% are the largest contributors. The principal factors in their large contribution to the entire Project's positive net fiscal revenue is the relatively large amount of sales tax being generated by both and the transient occupancy tax generated by the hotel in Entrada. Potrero also has a significantly higher total assessed value than the other communities.

## **SURPLUS OVER TIME**

The results described in Exhibits 3 and 8 show a significant fiscal surplus to the County at full build-out. This surplus, which would appear to apply to each of the communities separately and in the aggregate amounts to approximately \$42.3 million a year, requires some further discussion. There are two reasons that such a discussion is needed. One is the fact that the surplus is somewhat counterintuitive since residential development, which is the dominant form of development under study here, often yields negative rather than positive fiscal impacts. A second factor has to do with a convention adopted in the analysis which is to use only constant uninflated 2006 dollars.

In this section of the report, there will be a brief discussion of the reasons for this surplus and why they are not ultimately consistent with the more intuitive judgment that housing development, particularly under Proposition 13, is not "profitable" for cities. Separately, there will be a discussion of both the consequences and the implications of using constant uninflated dollars. The reason for this latter discussion is the fact that Proposition 13 does materially change the way in which assessed value and, by extension, property tax revenues fail to keep up with housing values. This phenomenon requires some discussion and analysis.

### **Origins of the Surplus**

Broadly speaking, there appear to be three critical reasons for the fact that this analysis shows a substantial surplus:

1. All properties are "fully assessed".

2. Their properties are generally higher valued properties than county-wide medians.
3. Newhall Land has incorporated a significant number, though by no means all or even a majority, of municipal services in private development thereby relieving the County of some otherwise anticipated costs.

Each of these three warrants some further brief discussion.

At any given point in time, the property tax revenue from an older and settled area reflects a mixture of homes that have not been reassessed for long periods of time, a modest number of new homes, and an indeterminate number of homes that have recently turned over in the resale market and consequently have had their property tax income brought up to "full assessment".

In the analysis presented herein, all the properties are the equivalent of "fully assessed" because at the point where the analysis is being done, they are all "new". In part, this is an artifact of using constant dollars. The consulting team seriously considered whether or not to incorporate housing inflation, and concluded that such incorporation would create more problems than it would resolve. First of all, there was the issue of which housing inflation or appreciation rate to use. Recent inflation rates consistently in strong double digits may not be an appropriate characterization of the next 17 years. At the same time, if one set of numbers incorporates inflation, then the question becomes should all the other numbers --- notably including the costs of providing County services ---be also inflated and, if so, by what rate.

Accordingly, the originally stipulated framework for analysis, i.e. constant uninflated 2006 dollars, was maintained. In so doing, there is some risk that the impact of slower than "real" inflation in assessed value, due to Proposition 13, is possible. This will be discussed at greater length below.

The second major reason is that the housing proposed by Newhall Land for the west side of the I-5 Freeway in the six communities under study is generally higher than the median value of new housing in the area or for that matter in the County as a whole. This also leads to larger revenues relative to costs than would otherwise be expected in some sort of normal distribution of prices.

Finally, many parts of the proposed six communities will in fact be private gated communities, or pay directly for services and infrastructure maintenance through the use of locally funded municipal services entities of various types. Lighting and landscaping districts and in some cases actual private streets will all mitigate the costs otherwise normally incurred by the County in supporting residential development.

Collectively, these three factors account for the surplus.

## **IMPLICATION OF THE USE OF CONSTANT DOLLARS**

Since the passage of Proposition 13 in 1978, assessed values, on which most property taxes are based, no longer reliably track actual market values on a current basis since re assessment occurs only on sale. This "lagging" effect creates a calculation problem in determining fiscal impact using constant dollars. Constant dollars reliably reflect the balance between revenues and costs only if increases in property assessed valuation, which accounts for the bulk of County revenues, precisely parallel the inflation in municipal service costs. Under Proposition 13, however, this is clearly not the case since it is likely, perhaps even inevitable, that growth in assessed valuation will lag the growth in housing values.

Although assessed values will always lag behind changes in market value, it is possible that even so assessed value will keep up with general inflation. For over sixty years, real estate values have, on average, inflated at a higher rate than the general inflation rate. Therefore some of the lag factor associated with Proposition 13 and the lack of reassessment except at sale will be offset by the premium associated with "real" real estate appreciation.

Another issue to be considered is the fact County service costs are likely to rise faster than general inflation. Such costs are dominated by labor costs and labor costs have traditionally risen more rapidly than general inflation---although that has not been true in the current extended recovery. Over the planning horizon of this analysis it is possible---even likely---that there will a higher than average inflation rate for municipal service costs.

As noted earlier in this report, any attempt to quantify these impacts requires a whole host of complex assumptions the detailed resolution of which is out the scope of this analysis. Nevertheless, it is appropriate and perhaps even necessary, to consider how much the apparent surplus advantage of this project might deteriorate as a function of the lag in property values assessment as compared to ongoing inflation in municipal service costs.

To illustrate the potential for a deterioration in the estimated surplus, the consulting team has prepared an example analysis shown in Exhibit 20. In this Exhibit, assumptions are made about the different rates of inflation in different components and also the turnover in housing.

It is assumed, based on historical research undertaken by ADK&A that the long term rate of housing inflation is at least 1.25% greater than the long term rate of general inflation. Research, based in part on the index of housing values maintained by the Real Estate Research Committee of Southern California, supports this differential.

ADK&A and CB Richard Ellis Consulting have no formal data on the increase in municipal service costs. This increase is, itself, a very complex factor reflecting a change in the scope of mandates as well as the change in actual service costs for a constant bundle of functions. In an attempt to be deliberately conservative, the consulting team has used an assumed 2% premium over general inflation for municipal service costs.

Once again, it is important to realize that this is merely an illustration to demonstrate that, even with the differential inflation rates and the lag time associated with property values, the surplus would be maintained throughout the 17 years covered in this analysis. It would, however, cause the surplus to deteriorate as a proportion of total revenue. By the end of the period, the surplus would represent 48% of total revenues as compared to 59% at the beginning.

In the particular set of assumptions shown in Exhibit 11, it is assumed that the average turnover in housing is ten years or 10% per year. This is a deliberately conservative assumption with respect to ownership housing which is the dominant land use. Builder association and census statistics suggest 7-8 years as an average length on tenure. On the other hand, commercial properties tend to turn over at a slower rate.

It is further assumed that there is a premium for housing inflation of 1.25% and that in the absence of turnover of housing, the property values and assessed valuation occur at the statutory rate of 2%.

Based on analysis of several of the individual communities, it is assumed that at "stabilization", the surplus of revenues over municipal service costs represents roughly 48% of revenues.

For a hypothetical \$10 million of fiscal impacts, this would be a surplus of \$5.9 million.

It appears that approximately 81% of fiscal revenue is generated by property tax.

Combining these assumptions shows that there is in fact some deterioration of the surplus as a proportion of total revenue due to the assumed higher rate of inflation in municipal service costs than in real estate. In whole dollars, the surplus continues to grow. Notwithstanding this differential, even at the end of 17 years, there is a surplus roughly equal to 48% of total revenues.

In conclusion, it may be said that the factors that create the surplus while subject to some degradation over time are in fact fairly stable, and the County should be able to look forward to a continued substantial surplus of revenues over expenses for the full duration of this analysis.

**Exhibit 11:**

## **VIII. ONE-TIME ECONOMIC IMPACT**

### **DEFINITIONS**

Economic impacts are generally estimated in terms of output (in dollars), payroll and jobs. This differs from fiscal impacts which are actual dollar revenues or expenditures by a governmental entity. The jobs component is quantified in terms of full time equivalents ("FTE"). Each of those impacts is divided into direct, indirect and induced components. Direct impacts are those associated with the specific activity being analyzed. In the case of the Project, the direct activity would consist of the actual development and construction of the Project elements on site. Indirect impacts result from spending by the businesses (such as purchases from their suppliers) involved in the direct activity. Induced impacts consist of the spending by households that have received income from the direct and indirect activities. The addition of the indirect and induced economic activity to the direct activity is often referred to as the multiplier or effect or "spin off."

### **LOS ANGELES AND VENTURA COUNTIES**

To estimate the one-time economic impacts, factors had to be derived that could be applied to various Project specifications. To derive those factors, it was necessary to define three prototype developments that represent the types that would occur in the Project. The developments include 100 units of single-family housing, 100 units of multi-family housing and 100,000 square feet of commercial space.

While the actual construction will take place in Los Angeles County, supplier purchases could be made from vendors in either county or elsewhere. In addition, workers may live in either county and generate household spending near their place of residence. This analysis focuses on the impact on Los Angeles County and Ventura County. Figure 6 on following page summarizes the output of this analysis.

The following describes the approach used to estimate the impacts. The IMPLAN economic impact model created by Minnesota IMPLAN Group, Inc. was used in the analysis. It is very widely used for estimating the economic impact of projects. The first step consisted of estimating the total impacts of construction for each project type on the two-county area. While multipliers exist for each county individually, they are not designed to calculate impacts comparatively. Using combined two-county multipliers, it is possible to estimate direct, indirect, induced and total impacts for each type prototype development. Each aspect of the impact is represented in terms of dollar output, payroll, and number of jobs. The direct output is the estimated total construction cost. Direct jobs and payroll correspond to the workers on the site in the Project. All of these numbers are annualized.

Indirect impacts represent business-to-business purchases. Output can be interpreted as the increase in demand for supplies as a result of the direct construction project activity. As suppliers increase their production to meet this demand, they in turn create additional jobs and payroll. These jobs, payroll and production are spread across a wide range of local businesses in the two-county area.

Induced impacts primarily represent consumer type purchases made by the direct and indirect employees and their families. The total economic impact is the sum of these three components.

The next step involved allocating the impacts between the two counties. Los Angeles and Ventura counties are very disparate in size and economic diversity, so even though a portion of the Project is

adjacent to the Ventura County line, the vast majority of impacts would likely occur in Los Angeles County. All direct impacts are by definition in Los Angeles County at the site of the Project.

**Figure 6**  
**Comparative Impacts of Project**  
**Los Angeles and Ventura Counties**  
**(Thousands of 2006 Dollars)**

	Direct Impacts			Indirect Impacts			Induced			Total Impacts		
	Output	Payroll	Jobs	Output	Payroll	Jobs	Output	Payroll	Jobs	Output	Payroll	Jobs
<b>100 Single Family Units</b>

<b>100 Multi Family Units</b>												
Los Angeles	\$13,200	\$5,892	109	\$4,200	\$1,728	40	\$5,867	\$2,067	55	\$23,267	\$9,687	203
Ventura	0	0	0	300	134	3	466	164	4	766	298	7
Total	13,200	5,892	109	4,500	1,862	43	6,333	2,232	59	24,033	9,986	210
<b>100,000 SF Non-Residential</b>												
Los Angeles	\$16,000	\$9,016	169	\$5,430	\$2,249	48	\$8,652	\$3,049	80	\$30,082	\$14,314	298
Ventura	0	0	0	380	175	4	688	242	6	1,068	417	10
Total	16,000	9,016	169	5,810	2,423	52	9,340	3,291	87	31,150	14,731	308

In order to distribute the indirect impacts, it is necessary to break those impacts down by industry. The indirect output impacts are converted into indirect job impacts using industry-specific job multipliers that define the relationship between number of jobs and output by industry. Jobs are distributed based on the share of jobs by industry in each county and summed. Payroll was distributed based on the share of jobs in each county.

The distribution of induced impacts is more straightforward since the availability of consumer goods and services is fairly evenly distributed throughout the urbanized area. In this case, place of residence is assumed to be the driver for consumer purchases by construction workers and the supplier industry workers. Thus, induced impacts are distributed based on the relative population of each county. Since Los Angeles has a population of over 10 million, while Ventura County has a population of only 813,000, most of the impacts will occur in Los Angeles County. From a transportation and access perspective, the Project location is also linked more directly to Los Angeles County than to Ventura County.

The impact factors derived for the three representative prototype developments were applied to the actual Project development specifications over the full build-out term. This produced the total projected cumulative economic impact for the Project in both Los Angeles and Ventura counties. For all components of the Project (and combining direct, indirect and induced impacts), the dollar value of the total output that will occur in both counties is approximately \$13.0 billion. The total new payroll impact in both counties will be approximately \$5.2 billion. The jobs impact (direct construction and others) for the two counties will be approximately 111,500 man-years of employment. The distribution of these benefits is approximately 97% to Los Angeles County and 3% to Ventura County. These total combined impacts are presented in Exhibit 4.

In relative terms, the Project's impact on Ventura County is as follows. The Ventura County output impact distributed over 16 years is equivalent to approximately 0.94% of the County's current annual total economic output. The Ventura County payroll impact is equivalent to approximately 1.10% of the County's current annual payroll. The dollar amount of these impacts will be distributed over the entire 16-year term of the build-out. Those proportionate impacts will not occur in a single year.

While estimating the economic impact with this approach it was also possible to estimate a fiscal impact not yet covered. State and local tax revenues from the *indirect* impacts were also estimated. A portion of that category of taxes from the *direct* impacts is already being measured in main portion of this Study. It was estimated that the state and local taxes paid by businesses as a result of the indirect impacts is approximately \$405 million. It was also estimated that approximately 93% of those taxes will be generated in Los Angeles County and 7% in Ventura County.

### **POTENTIAL ON-GOING VENTURA COUNTY IMPACT**

There will also be ongoing economic impacts. The creation of more than 24,000 new jobs at locations at least as close to east Ventura County as they are to many parts of Los Angeles County will create at least a minor positive impact for Ventura County residents seeking the types of jobs created, e.g. largely in the service industries. Notably, there may be a significant positive economic impact in the portion of eastern Ventura County nearest to the Project.

This impact would be expected both because of the proximity of the western portions of the Project to the Ventura County line and the convenience that businesses in that portion of Ventura County could offer to residents of the Project.

This same proximity could, under certain circumstances, create additional retail sales in eastern Ventura County. Currently there is little other than local serving retail in the communities of Santa Paula and Fillmore in eastern Ventura County. This situation could change in which event pure proximity could create a situation in which residents of those portions of the project closest to the County line would find it more convenient to shop in Ventura than in Los Angeles County.

Neither of these factors is likely to be significant in the near or even in the medium term, but as urbanization in both counties continues, the interchange of employment and shopping will increase and probably somewhat to the benefit of Ventura County.

## **ASSUMPTIONS AND GENERAL LIMITING CONDITIONS**

ADK&A/CBRE has made extensive efforts to confirm the accuracy and timeliness of the information contained in this study. Such information was compiled from a variety of sources, including interviews with government officials, review of County documents, and other third parties deemed to be reliable. Although ADK&A/CBRE believes all information in this study is correct, it does not warrant the accuracy of such information and assumes no responsibility for inaccuracies in the information by third parties. We have no responsibility to update this report for events and circumstances occurring after the date of this report. Further, no guarantee is made as to the possible effect on development of present or future federal, state or local legislation, including any regarding environmental or ecological matters.

The accompanying projections and analyses are based on estimates and assumptions developed in connection with the study. In turn, these assumptions, and their relation to the projections, were developed using currently available economic data and other relevant information. It is the nature of forecasting, however, that some assumptions may not materialize, and unanticipated events and circumstances may occur. Therefore, actual results achieved during the projection period will likely vary from the projections, and some of the variations may be material to the conclusions of the analysis.

This report may not be used for any purpose other than that for which it is prepared. Neither all nor any part of the contents of this study shall be disseminated to the public through publication advertising media, public relations, news media, sales media, or any other public means of communication without prior written consent and approval of ADK&A/CBRE.

**Notes on Assumptions:**

**Cap Rate:** Per Real Estate Research Corporation, "RERC Real Estate Report - Winter 2006"  
**Household Size:** Per Newhall Ranch Specific Plan Revised Draft EIR  
**Square Feet per Employee:** Per Newhall Ranch Specific Plan Revised Draft EIR  
**Real Home Price Inflation:** Calculated based on historic differential of Housing Price Appreciation data (California Association of Realtors), and Consumer Price Index (Bureau of Labor Statistics) for Los Angeles County.

1 Second Units require a CUP.

2 The residential dwelling units within RW-22 are restricted to residences, single-family detached, which may include clustered single-family/court homes. Planning Area RW-22 shall not be converted to commercial land use.

3 The total number of residential dwelling units within the Planning Areas of the Indian Dunes portion of the Specific Plan Area (i.e., RW-27 and RW-29 through RW-34) shall not exceed 1,444.

4 Planning Area RW-36 has been identified as a potential site for a transit station.

## Mission Village Specific Plan Consistency Analysis

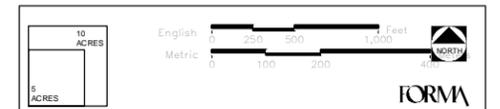

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>I. INTRODUCTION</b>	
<b>A. Monitoring Program</b>	
<p>The intent of the Monitoring Program of the Newhall Ranch Specific Plan is to provide assurances to the County that Newhall Ranch is developed in a manner which is consistent with the provisions of the Specific Plan. The Monitoring Program for the Specific Plan will serve two functions. The primary function is to establish a system to record annual progress in the phasing of the development and the implementation of corresponding required infrastructure. The secondary function of the Monitoring Program is to establish a system whereby periodic adjustments to Planning Areas and/or land use designations pursuant to Section 3.5 within the Specific Plan Area may be accomplished and documented.</p> <p>This Specific Plan Section 5.4 provides the mechanisms by which the County will monitor the implementation of the Land Use Plan (Exhibit 2.3-1), the Overall Land Use Plan Statistical Summary (Table 2.3-1), the Newhall Ranch Park Requirements (Section 2.7, paragraph 4) and the Spineflower Preserve Area Monitoring and Mitigation Plan.</p> <p>A revised Annotated Land Use Plan (Exhibit 5.4-1), a revised Annotated Land Use Plan Statistical Summary Table (Table 5.4-1), a revised Park and Recreation Improvements Summary (Table 5.4-2), and a revised Infrastructure and Community Amenities Improvement Summary Table (Table 5.4-3) will be provided annually and accompany each tentative subdivision map(s) and/or parcel map(s) submitted to the County. In a like manner, a revised Annotated Land Use Plan, Statistical Table, and Park and Recreation Improvements Table shall be submitted with each conversion, transfer or adjustment to Planning Area(s) regardless of whether or not a subdivision map is filed.</p> <p>The Annotated Land Use Plan, Exhibit 5.4-1, is consistent with the Land Use Plan (Exhibit 2.3-1) and identifies Planning Areas and corresponding land use designations by Village and Planning Area number, along with other planning information relative to implementation of the Land Use Plan (Exhibit 2.3-5) for the Specific Plan.</p> <p>The Annotated Land Use Plan Statistical Table, Table 5.4-1, contains the statistical breakdown for each of the Planning Areas shown on the Annotated Land Use Plan in terms of gross acreage. For Residential and Mixed-Use Planning Areas, the planned and maximum number of permitted dwelling units are set forth; and for Mixed-Use, Commercial, Business Park and Visitor-serving Planning Areas, the planned and maximum non-residential building square footages are given. The estimated gross acres, planned units and planned non-residential building square footages shown in the Annotated Land Use Plan Statistical Table shall be revised only in accordance with the regulations contained in Section 3.5. The total residential dwelling units (i.e., 20,885 dwelling units and 423 Second Units) and the total non-residential building square footage (i.e., 5,549,000) as set forth in the Annotated Land Use Plan Statistical Table shall not be exceeded without amendment to the Specific Plan.</p> <p>The Park and Recreation Improvements Summary, Table 5.4-2, is intended to provide for an ongoing, updated documentation of the fulfillment of Local Park Dedication requirements over the life of the Specific Plan. An updated, revised Park and Recreation Improvements Summary must be submitted to Los Angeles County annually and with each tentative subdivision map permitting construction. A revised summary is also required when dwelling units between Planning Areas are transferred or conversion of residential units is effected (see Section 3.5).</p>	<p>A revised Annotated Land Use Plan (Exhibit 5.4-1), a revised Annotated Land Use Plan Statistical Summary Table (Table 5.4-1), a revised Park and Recreation Improvements Summary (Table 5.4-2), and a revised Infrastructure and Community Amenities Improvement Summary Table (Table 5.4-3) are provided in this document as submitted with the Tentative Tract Map 61105 submitted to the County for Mission Village.</p>

## Mission Village Specific Plan Consistency Analysis

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>II. SPECIFIC PLAN OBJECTIVES</b>	
<b>A. Land Use Plan Objectives</b>	
<b>Objective No. 1:</b>	
Create a major new community with interrelated villages that allows for residential, commercial, and industrial development, while preserving significant natural resources, important landforms, and open areas.	The design of Mission Village is based upon the basic planning principles of urban villages such as those found in Europe, which have not changed over the centuries. Mission Village is terrain driven, located in a prominent location within the Specific Plan area, with a true center and edge, public scale, a combination of focal points and defined limits creating a vibrant urban neighborhood. The design principles used in developing the Mission Village tract map are consistent with the objective of creating an inter-related village that allows for residential, commercial and other development, while still preserving significant natural resources and open areas such as the river corridor, Lion Canyon and spineflower preserve.
<b>Objective No. 2:</b>	
Avoid leapfrog development and accommodate projected regional growth in a location which is adjacent to existing and planned infrastructure, urban services, transportation corridors, and major employment centers.	<p>Overall, both the Newhall Ranch and Mission Village sites are within the Los Angeles County Santa Clarita Valley Planning Area. The Newhall Ranch property site is one-half mile west of the Golden State Freeway (I-5) and largely southwest of the junction of I-5 and State Route 126 (SR-126). The City of Santa Clarita is located east of the Specific Plan site, just beyond I-5, approximately one-mile from the Specific Plan site. Therefore, due to its overall location, the Los Angeles County Board of Supervisors has already determined that the Newhall Ranch project site avoids leapfrog development and accommodates projected regional growth in a location that is adjacent to existing and planned infrastructure, urban services, transportation corridors and major employment centers (e.g., City of Santa Clarita). The Mission Village Tract Map 61105 is generally located in the easterly portions of the Newhall Ranch site, and development of the Mission Village site remains consistent with the objectives articulated by the Board of Supervisors in approving Newhall Ranch.</p> <p>Mission Village Tract Map 61105 provides a logical geographic distribution of land uses within the Newhall Ranch and neighboring community. Higher intensity uses such as Mixed-Use, Commercial, Business Park and Medium and High Residential land use designations will all have direct access to a major or secondary highway. The arrangement of land uses was based upon comprehensive studies of access and traffic, and environmental and topographic conditions, as discussed in the Newhall Ranch Specific Plan Program EIR ("Newhall Ranch EIR").</p>
<b>Objective No. 3:</b>	
Cluster development within the site to preserve regionally significant natural resource areas, sensitive habitat, and major landforms.	Mission Village Tract Map 61105 provides a logical geographic distribution of land uses within Newhall Ranch that takes into consideration the presence of natural resource areas, sensitive habitat and natural landforms such as the River Corridor, Lion Canyon and spineflower preserves. This clustering of development around a centralized core provides for growth in a concentrated, rather than dispersed pattern, thus helping to preserve Open Area and SMAs.
<b>Objective No. 4:</b>	
Provide development and transitional land use patterns which do not conflict with surrounding communities and land uses.	Mission Village Tract Map 61105 provides for the transition from more intensive to less intensive development near adjacent land uses. Impacts to adjacent development have been minimized by and incorporated into the design of the Land Use Plan. The tract map provides a logical geographic distribution of land uses within Newhall Ranch. Higher intensity uses will all have direct access to major roadways. The arrangement of land uses was based upon comprehensive studies of access and traffic, and environmental and topographic conditions, as discussed in the Newhall Ranch EIR.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>II. SPECIFIC PLAN OBJECTIVES</b>	
<b>A. Land Use Plan Objectives</b>	
<b>Objective No. 5:</b>	
Arrange land uses to reduce vehicle miles traveled and energy consumption	Mission Village’s traffic circulation plan would minimize vehicle trips and reduce greenhouse gas emissions through the design of internal roads in conjunction with homes, school site, commercial areas, and trail system. The Land Use Plan for Mission Village Tract Map 61105 minimizes travel time and thereby energy consumption by siting facilities reduce automobile trips and promote the use of pedestrian and bicycle trails. Gathering places such as schools, parks, and shopping occur at three to five minute walk intervals, ensuring pedestrian use of walkways, trails, and public spaces.
<b>Objective No. 6:</b>	
Provide a complementary and supportive array of land uses which will enable development of a community with homes, shopping, employment, schools, recreation, cultural and worship facilities, public services, and open areas.	Mission Village Tract Map 61105 will have a full range of services to meet the needs of its residents. Facilities will include a Library, Fire Station, Mixed-use Village Center, Mixed-use Office Center, School and Community Recreation Center, Community Park, Neighborhood Park, and Pocket Parks. The Specific Plan land use designations allow cultural facilities and religious institutions to be built within or near the Village core. Recreational uses include Neighborhood Parks, a Community Park, Community Center, neighborhood recreation centers, and a system of pedestrian, equestrian and bicycle trails.
<b>Objective No. 7:</b>	
Organize development into villages to create a unique identity and sense of community for each.	Design Guidelines for Mission Village Tract Map 61105 will establish a unique identity for Mission Village. Natural geologic features such as prominent ridges and rock outcroppings have been preserved by the Specific Plan. These unique features provide a scenic backdrop to the development areas and help to create a sense of place within Mission Village.
<b>Objective No. 8:</b>	
Design villages in which a variety of higher intensity residential and nonresidential land uses are located in proximity to each other and to major road corridors and transit stops.	Mission Village Tract Map 61105 provides for the transition from more intensive to less intensive development near adjacent land uses. Impacts to adjacent development have been minimized by and incorporated into the design of the Land Use Plan. First, Open Area and roadways are used to separate and buffer adjacent development areas. Second, in Mission Village, the Village concept locates the highest intensity of uses in and around the Village Center allowing for a range of housing products to have convenient access to the mixed-use village center which will contain a variety of uses and employment opportunities. This clustering of development around a centralized core provides for growth in a concentrated, rather than dispersed pattern, thus helping to preserve Open Area and SMAs. Mission Village Tract Map 61105 provides a logical geographic distribution of land uses within Newhall Ranch. Higher intensity uses will all have direct access to major roadways. The arrangement of land uses was based upon comprehensive studies of access and traffic, and environmental and topographic conditions, as discussed in the Newhall Ranch EIR.
<b>Objective No. 9:</b>	
Establish land uses and development regulations which permit a wide range of housing densities, types, styles, prices, and tenancy (for sale and rental).	The residential neighborhoods in Mission Village Tract Map 61105 are designed to provide a varied mix of housing types. The residential neighborhoods will contain a range of single-family and attached homes with higher density multi-family units in the Village Center. In addition, age qualified and affordable housing will be provided within Mission Village
<b>Objective No. 10:</b>	
Designate sites for needed public facilities such as schools, fire stations, libraries, a water reclamation plant, and parks.	Mission Village will contain many uses necessary for the community as well as residential and commercial opportunities. The integrated uses are to be implemented consistent with the principles of the Newhall Ranch Specific Plan. Facilities will include an elementary school, Community Recreation Center, Community Park, a Library, a neighborhood park and a fire station.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>II. SPECIFIC PLAN OBJECTIVES</b>	
<b>A. Land Use Plan Objectives</b>	
<b>Objective No. 11:</b>	
Allow for the development of community services and amenities by the public and private sectors, such as medical facilities, child care, colleges, worship facilities, cultural facilities, and commercial recreation.	Please see consistency analysis for Objective No. 10 above.
<b>Objective No. 12:</b>	
Create a physically safe environment by avoiding building on fault lines and avoiding or correcting other geologically unstable landforms; by constructing flood control improvements to protect urban areas; and by implementing a fuel modification program to protect against wildfire.	The Specific Plan identifies several project constraints, including those potentially hazardous to public health, safety and welfare, such as fault zones, major landslides, major slopes, and drainage areas. The Mission Village design reflects these constraints. The tract map also reflects flood control improvements to protect the community. In addition, landscape plans for Mission Village Tract Map 61105 will include a fuel modification zone to protect against wildfire.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>II. SPECIFIC PLAN OBJECTIVES</b>	
<b>B. Economics</b>	
<b>Objective No. 1:</b>	
Adopt development regulations which provide flexibility to respond to and adjust to changing economic and market conditions over the life of Newhall Ranch.	Mission Village Tract Map 61105 has been designed using the flexibility of the Specific Plan to respond to current and changing economic and market conditions
<b>Objective No. 2:</b>	
Provide a tax base to support public services.	The proposed residential and commercial land uses in Mission Village Tract Map 61105 will generate significant economic benefits, thereby increasing County revenues, while expanding the tax base.
<b>Objective No. 3:</b>	
Adopt development regulations and guidelines which allow site, parking, and facility sharing and other innovations which reduce the costs of providing public services.	The commercial uses in the Village Center propose reciprocal and offsite parking, including the use of parking on the private drives. In addition, a shared parking program will be proposed once specific commercial uses are identified.
<b>Objective No. 4:</b>	
Earn a reasonable return on investment.	The applicant confirms that the Mission Village Tract Map 61105 will result in a reasonable return on investment.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>II. SPECIFIC PLAN OBJECTIVES</b>	
<b>C. Mobility</b>	
<b>Objective No. 1:</b>	
Design a mobility system which includes alternatives to automobile use.	The Mission Village Tract Map 61105 Circulation Plan seeks to implement the Mobility Objectives to the greatest degree

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>II. SPECIFIC PLAN OBJECTIVES</b>	
<b>C. Mobility</b>	
	<p>possible, and remain consistent with the requirements and intent of the Specific Plan. By privatizing the interior roadways of the Village Center and Planning Area C, greater flexibility over multiple uses of the public spaces can be achieved.</p> <p>The Master Trails Plan of the Specific Plan provided general trail alignments and classifications. It ensured that the Mission Village area would be linked to the greater Newhall Ranch via the Regional River Trail and the Community Trail network. The Mission Village Trails Plan fulfills the intent of the Specific Plan and provides the level of specificity necessary to ensure that each residence and all community service areas are linked via a pedestrian trail system. The Mission Village Trails Plan provides a tract map level of detail. It implements the Specific Plan goals and objectives by:</p> <ul style="list-style-type: none"> <li>• Delineating a clearly defined hierarchy of trail sizes and functionality; and</li> <li>• Adding specific access points to off-project regional trail systems; and</li> <li>• Providing locations for observation/interpretive points.</li> </ul> <p>In addition, class II bike lanes are included on Magic Mountain Parkway and Commerce Center Drive. Mission village will also provide bus stops and a bus transfer station located in the Village Center.</p>
<b>Objective No. 2:</b>	
Provide a safe, efficient, and aesthetically attractive street system with convenient connections to adjoining regional transportation routes.	The roadway network of the Mission Village Tract Map 61105 Mobility Plan has been designed as an extension of the regional circulation element. The Mission Village Circulation Plan is designed to integrate modes of travel, accommodate anticipated traffic demands generated by the Project and surrounding development, and provide important roadway extensions and improvements such as the extensions of Magic Mountain Parkway and Westridge Parkway, and construction of the Commerce Center Drive Bridge which provide safer access to SR-126.
<b>Objective No. 3:</b>	
Facilitate public transit by reserving right-of-way for future MetroLink line, space for a park-and-ride and/or MetroLink station, and by providing bus pull-ins along highways.	The Mission Village Tract Map 61105 design includes bus stops and a bus transfer station.
<b>Objective No. 4:</b>	
Provide an efficient street circulation system that minimizes impacts on residential neighborhoods and environmentally sensitive areas.	The Mission Village Circulation Plan seeks to implement the Specific Plan’s Mobility Objectives to the greatest degree possible, and remain consistent with the requirements and intent of the Specific Plan and County codes to reduce impacts on residential neighborhoods and environmentally sensitive areas.
<b>Objective No. 5:</b>	
Establish a diverse system of pedestrian and bicycle trails, segregated from vehicle traffic, to serve as an alternative to automobile use.	<p>The Master Trails Plan of the Specific Plan provided general trail alignments and classifications. It ensured that the Mission Village Area would be linked to the greater Newhall Ranch via the Regional River Trail and the Community Trail network. The Mission Village Tract Map 61105 Trails Plan fulfills the intent of the Specific Plan and provides the level of specificity necessary to ensure that each residence and all community service area are linked via a practical, aesthetically-pleasing pedestrian trail system. The Mission Village Trails Plan provides a tract map level of detail. It implements the Specific Plan goals and objectives by:</p> <ul style="list-style-type: none"> <li>• Delineating a clearly defined hierarchy of trail sizes and functionality;</li> <li>• Adding specific access points to off-project regional trail systems; and</li> <li>• Providing locations for observation/interpretive points.</li> </ul>

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>II. SPECIFIC PLAN OBJECTIVES</b>	
<b>C. Mobility</b>	

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>II. SPECIFIC PLAN OBJECTIVES</b>	
<b>D. Parks, Recreation, and Open Area</b>	
<b>Objective No. 1:</b>	
Retain a major Open Area which could act as a regional recreational park and an ecological reserve.	Mission Village Community Park and Neighborhood Park provides both active and passive recreation opportunities for the entire community. Mission Village Tract Map 61105 preserves the River Corridor as a major open area providing a natural environment experience. In addition, a 65 acre Spineflower Preserve is proposed.
<b>Objective No. 2:</b>	
Provide for the recreational use of open areas that is compatible with protection of significant natural resources.	In an effort to provide connectivity to permanent open space and preserving known spineflower populations, Mission Village Tract Map 61105 proposes additional preserve and buffer areas to the original Spineflower Conservation Easement shown in the Specific Plan.
<b>Objective No. 3:</b>	
Provide neighborhood and Community Parks and improvements which satisfy park dedication requirements and meet the recreational needs of local residents.	Mission Village Tract Map 61105 includes one community and one neighborhood park, as well as a Community Recreation Center and recreational centers and pocket parks, which provide the community with a wealth of recreational opportunities.
<b>Objective No. 4:</b>	
Locate Neighborhood Parks adjacent to schools and establish joint-use agreements between park and school districts.	The elementary school would be located adjacent to the 11.6 –acre “arroyo” park that will be owned and maintained by the HOA. This park will be in a naturalized setting with trails that provide direct access to the neighborhood park.
<b>Objective No. 5:</b>	
Provide a range of recreational opportunities including passive and active parks, an 18-hole golf course, and a recreational lake.	Open to all residents of Newhall Ranch, the urban-themed Mission Village Community Recreation Center will feature a variety of both active and passive recreational activities. Community and neighborhood parks, as well as a variety of pocket parks provide the community with a wealth of recreational opportunities. A golf course proposed elsewhere in the Specific Plan is not a part of Mission Village Tract Map 61105.
<b>Objective No. 6:</b>	
Provide an extensive system of pedestrian, bicycle, and hiking trails within the villages and hiking trails in the Special Management Areas (SMAs) and Open Area.	<p>The Master Trails Plan of the Specific Plan merely gave broad, general trail alignments and classifications. It ensured that the Mission Village Area would be linked to the greater Newhall Ranch via the Regional River Trail and the Community Trail network. The Mission Village Trails Plan fulfills the intent of the Specific Plan and provides the level of specificity necessary to ensure that each residence and all community service area are linked via a practical, aesthetically-pleasing pedestrian trail system. In addition, class II bike lanes are provided along Commerce Center Drive and Magic Mountain Parkway. The Mission Village Trails Plan provides a tract map level of detail. It implements the Specific Plan goals and objectives by:</p> <ul style="list-style-type: none"> <li>• Delineating a clearly defined hierarchy of trail sizes and functionality.</li> <li>• Adding specific access points to off-project regional trail systems; and</li> <li>• Providing locations for observation/interpretive points.</li> </ul>

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>II. SPECIFIC PLAN OBJECTIVES</b>	
<b>E. Resource Conservation Objectives</b>	
<b>Objective No. 1:</b>	
Protect wetland and endangered species in the Santa Clara River.	Mission Village Tract Map 61105 contains portions of Significant Ecological Area 23 (the Santa Clara River) which was designated for its ecological resources. Mission Village Tract Map 61105 conserves these resources by maintaining the SEA designations, and by setting aside major portions of the SEAs as Special Management Areas, or SMAs. Under the Specific Plan, the SEA/SMAs will continue to be regulated by County standards and procedures for SEAs. Mission Village implements the Specific Plan Resource Management Plan (Section 2.6) standards and criteria for the land uses and activities that may occur in the SEAs in the future, including the Resource Management Plan regulations mitigating activities that may be carried out to restore or enhance biotic resources, and provision for public access and certain types of recreational use.
<b>Objective No. 2:</b>	
Preserve the Santa Clara River Corridor and adjacent uplands containing significant natural resources for their resource value, Open Area, and recreational use.	Mission Village Tract Map 61105 preserves Open Area and SMAs, including some of the most prominent features of the site: the Santa Clara River and the river bluffs, along with views of the River Corridor bluffs and the major ridgeline of the High Country.
<b>Objective No. 3:</b>	
Retain major Open Area and its natural vegetation as a wildlife or ecological reserve.	Acreage within the SMA/SEA 23 boundary, including the Santa Clara River, will remain in a viable condition in terms of important ecological functions, even with implementation of Mission Village Tract Map 61105. The acreage within the SMA/SEA 23 boundary would continue to function as an east/west wildlife movement corridor and as habitat for the unarmored three spine stickleback, because the Project retains both the riparian vegetation in the Santa Clara River and the natural flow of the water without the need for periodic vegetation clearing. In addition, Mission Village would include a 65-acre Spineflower preserve situated in the northeast portion of the project.
<b>Objective No. 4:</b>	
Preserve significant stands of oak trees.	Of the 501 oak trees located on the project site, subject to the County's oak tree ordinance, 147 would be removed as a result of project development, and 49 would be encroached upon, leaving 305 trees unaffected by the project. Any affected Oak Trees will be mitigated consistent with the Newhall Ranch Specific Plan approval.
<b>Objective No. 5:</b>	
Preserve the site of the historical Asistencia (San Fernando Mission Annex).	The historical site of the Asistencia de San Francisco lies within the boundary of the Newhall Ranch and within the Mission Village site and it is protected from disturbance from project related grading because it will be incorporated into the Open Area. This site is to be dedicated to the Archaeological Conservancy, a national cultural resource conservation organization, which will protect the resource and educate the public as to its history.
<b>Objective No. 6:</b>	
Identify and protect significant resources within the two Los Angeles County Significant Ecological Areas (SEAs).	Please see consistency analysis for Objective No. 1 above.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>II. SPECIFIC PLAN OBJECTIVES</b>	
<b>E. Resource Conservation Objectives</b>	
<b>Objective No. 7:</b>	
Preserve or minimally impact the most significant ridgelines and other major topographical landforms.	The Hillside Preservation and Grading Plan (Chapter 2, Section 2.7) for Mission Village Tract Map 61105 has been prepared in accordance with Los Angeles County Performance Review Criteria for Hillside Management Areas. The Specific Plan includes reducing hillside grading and development by concentrating development in the lower, flatter areas such as the Mission Village site, thus preserving prominent ridgelines, as identified in the Specific Plan, and avoiding more severe terrain that may be more susceptible to flood, erosion, landslides, and mudslides.
<b>Objective No. 8:</b>	
Provide a water reclamation plant and supplementary distribution system to use reclaimed water.	A water reclamation plant (WRP) will be developed to serve the Specific Plan land uses, but is not a part of Mission Village Tract Map 61105. Following construction of the WRP, a recycled water distribution system is designed to use tertiary treated wastewater from the WRP to irrigate land uses within Mission Village Tract Map 61105 that can accept non-potable water.
<b>Objective No. 9:</b>	
Promote water conservation through design guidelines that encourage use of drought-tolerant and native plants.	The Design Guidelines for Mission Village will describe landscape that is drought tolerant and in compliance with the recently adopted drought tolerant ordinance. In addition, development adjacent to the River Corridor SMA and Spineflower Preserve must be more sensitive to native species and intrusive plants than development within an urban village where more ornamental species may be appropriate. In addition, the Resource Management Plan, Section 2.6, contains a detailed list of native species which must be used when revegetation or enhancement occurs within the River Corridor SMA.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>III. RESOURCE PROTECTION, CONSERVATION, AND MANAGEMENT</b>	
<b>A. River Corridor Special Management Area (SMA)</b>	
<b>Objective No. 1:</b>	
<p>The Santa Clara River is a regionally significant biological resource. Its value is derived from the inherent value of its wetland and riparian habitats and associated species, and from its function as a regional wildlife corridor. Four federally-listed endangered species and numerous other sensitive species have been observed or detected in riparian habitats of the river. As part of the development of the Specific Plan, a River Corridor has been delineated which is sufficiently wide to handle the capital flood while retaining nearly all of the riparian vegetation that exists in the river. The river is also a part of SEA 23. Where riparian vegetation must be disturbed, mitigation for impacts on riparian resources will include restoration of riparian habitat and may include enhancement activities as well. The general areas in which riparian mitigation activities may take place are shown on Specific Plan Exhibit 2.6-3, Candidate Riparian Restoration/Enhancement Areas.</p>	<p>Development adjacent to the River Corridor SMA/SEA 23 must be more sensitive to native species and intrusive plants than development within an urban village where more intensive development may be appropriate. To accomplish this objective, Mission Village Tract Map 61105 will use the detailed list of native species found in the Resource Management Plan, Section 2.6, when revegetation or enhancement occurs within the River Corridor SMA area within the Project.</p>
<b>Objective No. 2:</b>	
<p>Mitigation for impacts of the Specific Plan on riparian resources will include restoration of riparian habitat and may include enhancement activities as well. The general areas in which riparian mitigation activities may take place are shown on Exhibit 2.6-3, Candidate Riparian Restoration/Enhancement Areas. The mitigation of project impacts through restoration of habitat and enhancement of existing habitat quality shall conform to the requirements set forth in Specific Plan, Section 2.6.</p>	<p>As directed in the Resource Management Plan, Section 2.6, the mitigation of project impacts through restoration of habitat and enhancement of existing habitat quality in Mission Village Tract Map 61105 will conform to the requirements set forth in the Resource Management Plan.</p>
<b>Objective No. 3:</b>	
<p>Habitat restoration as referred to in this Specific Plan means the revegetation of native plant communities on sites that have had the habitat removed due to past activities such as agricultural or oil and natural gas operations.</p> <p>Riparian resources along the Santa Clara River that are impacted by the Newhall Ranch project will require restoration of similar habitat and values. Avoidance of impacts to riparian resources shall be the primary goal during the design of the individual stages of the project. Unavoidable impacts to riparian resources shall be minimized through project design, and then mitigated by the implementation of a revegetation plan. The revegetation plan may be prepared as part of a California Department of Fish and Game 1603 Streambed Alteration Agreement or U.S. Army Corps of Engineers Section 404 Permit.</p>	<p>Removal of grazing is an important means of enhancement of habitat values. Without ongoing disturbance from cattle, many riparian areas will recover naturally. Grazing, except as permitted as a long-term resource management activity, has been removed from the Mission Village Tract Map 61105 portion of the River Corridor SMA/SEA 23, pursuant to the Long-Term Management Plan set forth in Specific Plan Section 2.6, Management Requirements (subsection (3)(d)).</p> <p>The impacts of the Mission Village project relative to habitat and riparian resources have been fully analyzed in the environmental impacts report (EIR), and identified significant impacts to these resources will be mitigated to the extent feasible.</p> <p>The High Country SMA/SEA 20, which is not a part of Mission Village Tract Map 61105, is identified as a primary location for oak resource planting to mitigate impacts that might occur within the development areas of the project.</p>
<b>Objective No. 4:</b>	
<p>Habitat enhancement as referred to in this Specific Plan means the rehabilitation of areas of native habitat that have been moderately disturbed by past activities (e.g., grazing, roads, oil and natural gas operations, etc.) or have been invaded by non-native plant species such as giant cane (<i>Arundo donax</i>) and tamarisk (<i>Tamarix</i> sp.).</p>	<p>Please see consistency analysis for Objective No. 3 above.</p>

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>III. RESOURCE PROTECTION, CONSERVATION, AND MANAGEMENT</b>	
<b>A. River Corridor Special Management Area (SMA)</b>	
<b>Objective No. 5:</b>	
The quality of the habitat values that are conserved in the River Corridor SMA will benefit from the control of access to riparian areas.	Access to the River Corridor SMA will be limited to the Mission Village Tract Map 61105 Trails Plan. It implements the specific plan by delineating a hierarchy of trail sizes and functionality, adding specific access points to the regional trail system and providing locations for observation /interpretive points.
<b>Objective No. 6:</b>	
Where development lies adjacent to the boundary of the River Corridor SMA a transition area shall be designed to lessen the impact of the development on the conserved area. Transition areas may be comprised of Open Area, natural or revegetated manufactured slopes, other planted areas, bank stabilization areas, and trails.	The south side of the River Corridor SMA is separated from development by the river bluffs along the majority of the project interface with River Corridor SMA. In areas where the bluffs do not exist, buffer is provided through the use of planted manufactured slopes and revegetated areas. Along the north side, no development is proposed except Commerce Center Drive Bridge which was contemplated in the Specific Plan.
<b>Objective No. 7:</b>	
Grading perimeters shall be clearly marked and inspected by the project biologist prior to grading occurring within or immediately adjacent to the River Corridor SMA. The project biologist shall work with the grading contractor to avoid inadvertent impacts to riparian resources.	Mission Village Tract Map 61105 implementation will include a project biologist to inspect all marked grading perimeters prior to grading beginning and will work with the grading contractor during grading to avoid inadvertent impacts to riparian resources.
<b>Objective No. 8:</b>	
Upon final approval of the Newhall Ranch Specific Plan, the Special Management Area designation for the River Corridor SMA shall become effective. The permitted uses and development standards for the SMA are governed by the Development Regulations, Chapter 3 of the Specific Plan.	Upon final approval of the Newhall Ranch Specific Plan in 2003, the SMA designation for the River Corridor SMA/SEA 23 became effective. The portion of the SMA within Mission Village Tract Map 61105 is governed by the Development regulations, Chapter 3 of the Specific Plan.
<b>Objective No. 9:</b>	
Upon completion of development of all land uses, utilities, roads, flood control improvements, bridges, trails, and other improvements necessary for implementation of the Specific Plan within the River Corridor in each subdivision allowing construction within or adjacent to the River Corridor, a permanent, non-revocable conservation and public access easement shall be offered to the County of Los Angeles pursuant to the objectives that follow over the portion of the River Corridor SMA within that subdivision.	Upon final approval of the Newhall Ranch Specific Plan, the SMA designation for the River Corridor SMA/SEA 23 became effective. Upon completion of development of all land uses, utilities, roads, flood control improvements, bridges, trails, and other improvements necessary for implementation of the Specific Plan within the River Corridor in Mission Village Tract Map 61105, a permanent, non-revocable conservation and public access easement shall be offered to the County of Los Angeles over the portion of the River Corridor SMA/SEA 23 within Mission Village Tract Map 61105 prior to the transfer of the River Corridor SMA ownership, or portion thereof, to a management entity, as described in Specific Plan Section 2.6(3)(d).
<b>Objective Nos. 10, 11, and 12:</b>	
The River Corridor SMA conservation and public access easement shall prohibit grazing, except as a long-term resource management activity, and agriculture within the River Corridor and shall restrict recreation use to the established trail system.	The portion of the River Corridor SMA/SEA 23 conservation and public access easement in Mission Village Tract Map 61105 will prohibit grazing, except as a long-term resource management activity, and agriculture within the River Corridor and will restrict recreation use to the established trail system.
<b>Objective No. 13:</b>	
The River Corridor SMA conservation and public access easement shall be consistent in its provisions with any other conservation easements to state or federal resource agencies, which may have been granted as part of mitigation or mitigation banking activities.	The River Corridor SMA/SEA 23 conservation and public access easement within Mission Village Tract Map 61105 will be consistent in its provisions with any other conservation easements to state or federal resource agencies which may have been granted as part of mitigation or mitigation banking activities.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>III. RESOURCE PROTECTION, CONSERVATION, AND MANAGEMENT</b>	
<b>A. River Corridor Special Management Area (SMA)</b>	
<b>Objective No. 14:</b>	
<p>Prior to the recordation of the River Corridor SMA conservation and public access easement as specified above, the land owner shall provide a plan to the County for the permanent ownership and management of the River Corridor SMA, including any necessary financing. This plan shall include the transfer of ownership of the River Corridor SMA to the Center for Natural Lands Management, or if the Center for Natural Lands Management is declared bankrupt or dissolved, ownership will transfer or revert to a joint powers authority consisting of Los Angeles County (4 members), the City of Santa Clarita (2 members), and the Santa Monica Mountains Conservancy (2 members).</p>	<p>The River Corridor SMA/SEA 23 management plan required by the Specific Plan is part of Mission Village Tract Map 61105. It will meet the criteria included in Specific Plan, Section 2.6(3) (d).</p>

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>III. RESOURCE PROTECTION, CONSERVATION, AND MANAGEMENT</b>	
<b>B. High Country Special Management Area/SEA 23</b>	
<b>Objective No. 1:</b>	
<p>Upon final approval of the Newhall Ranch Specific Plan, the Special Management Area designation for the High Country SMA shall become effective. The permitted uses and development standards for the SMA are governed by the Development Regulations, Chapter 3 of the Specific Plan.</p>	<p>The High Country SMA shall be offered for dedication in three approximately equal phases of approximately 1,400 acres each proceeding from north to south, as follows:</p> <ul style="list-style-type: none"> <li>▪ The first offer of dedication will take place with the issuance of the 2,000th residential building permit of Newhall Ranch ; and</li> <li>▪ The second offer of dedication will take place with the issuance of the 6,000th residential building permit of Newhall Ranch.</li> </ul> <p>It is anticipated that the first offer of dedication would occur during the buildout of Mission Village.</p>
<b>Objective No. 2:</b>	
<p>Prior to dedication of the High Country SMA a conservation and public access easement shall be offered to the County of Los Angeles and a conservation and management easement offered to the Center for Natural Lands Management. The High Country SMA conservation and public access easement shall be consistent in its provisions with any other conservation easements to state or federal resource agencies, which may have been granted as part of mitigation or mitigation banking activities.</p>	<p>The High Country SMA shall be offered for dedication in three approximately equal phases of approximately 1,400 acres each proceeding from north to south, as follows:</p> <ul style="list-style-type: none"> <li>▪ The first offer of dedication will take place with the issuance of the 2,000th residential building permit of Newhall Ranch ; and</li> <li>▪ The second offer of dedication will take place with the issuance of the 6,000th residential building permit of Newhall Ranch.</li> </ul> <p>It is anticipated that the first offer of dedication would occur during the buildout of Mission Village.</p>
<b>Objective No. 3:</b>	

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>III. RESOURCE PROTECTION, CONSERVATION, AND MANAGEMENT</b>	
<b>B. High Country Special Management Area/SEA 23</b>	
<p>The High Country SMA shall be offered for dedication in fee to a joint powers authority consisting of Los Angeles County (4 members), the City of Santa Clarita (2 members), and the Santa Monica Mountains Conservancy (2 members). The joint powers authority will have overall responsibility for recreation within and conservation of the High Country.</p>	<p>The phased dedication of the High Country SMA will be to the joint powers authority.</p>
<b>Objective No. 4:</b>	
<p>The High Country SMA shall be offered for dedication in three approximately equal phases of approximately 1,400 acres each proceeding from north to south, as follows:</p> <ol style="list-style-type: none"> <li>(1) The first offer of dedication will take place with the issuance of the 2,000th residential building permit of Newhall Ranch;</li> <li>(2) The second offer of dedication will take place with the issuance of the 6,000th residential building permit of Newhall Ranch; and</li> <li>(3) The remaining offer of dedication will be completed by the 11,000th residential building permit of Newhall Ranch.</li> </ol>	<ol style="list-style-type: none"> <li>(1) See High Country SMA Objective No. 1 above.; and</li> <li>(2) See High Country SMA Objective No. 1 above 's</li> <li>(3) Not anticipated to occur with Mission Village.</li> </ol>
<b>Objective No. 5:</b>	
<p>The High Country SMA conservation and public access easement shall prohibit grazing within the High Country; except for those grazing activities associated with long-term resource management programs, and shall restrict recreation to the established trail system.</p>	<p>The High Country SMA conservation and public access easement will prohibit grazing within the High Country; except for those grazing activities associated with long-term resource management programs, and shall restrict recreation to the established trail system.</p>
<b>Objective No. 6:</b>	
<p>The High Country SMA conservation and public access easement shall be consistent in its provisions with any other conservation easements to state or federal resource agencies, which may have been granted as a part of mitigation or mitigation banking activities.</p>	<p>The High Country SMA conservation and public access easement will be consistent in its provisions with any other conservation easements to state or federal resource agencies which may have been granted as a part of mitigation or mitigation banking activities.</p>
<b>Objective No. 7:</b>	
<p>An appropriate type of service or assessment district shall be formed under the authority of the Los Angeles County Board of Supervisors for the collection of up to \$24 per single-family detached dwelling unit per year and \$15 per single-family attached dwelling unit per year, excluding any units designated as Low and Very Low affordable housing units pursuant to Section 3.10, Affordable Housing Program of the Specific Plan. This revenue would be assessed to the homeowner beginning with the occupancy of each dwelling unit and distributed to the joint powers authority for the purposes of recreation, maintenance, construction, conservation and related activities within the High Country Special Management Area.</p>	<p>An appropriate type of service or assessment district will be formed under the authority of the Los Angeles County Board of Supervisors for the collection of up to \$24 per single-family detached dwelling unit per year and \$15 per single-family attached dwelling unit per year, excluding any units designated as Low and Very Low affordable housing units pursuant to Section 3.10, Affordable Housing Program of the Specific Plan. This revenue would be assessed to the homeowner beginning with the occupancy of each dwelling unit and distributed to the joint powers authority for the purposes of recreation, maintenance, construction, conservation and related activities within the High Country Special Management Area.</p>

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>III. RESOURCE PROTECTION, CONSERVATION, AND MANAGEMENT</b>	
<b>C. Open Area</b>	
<b>Objective No. 1:</b>	
<p>Open Area is a land use designation, which includes a total 1,010 acres outside of the SMAs, which will be preserved to protect significant resources and to provide open areas and village identification for Newhall Ranch residents. Included in Open Area are (1) Community Parks; (2) major drainages, which are those with flows of 2,000 cubic feet per second (cfs) or more; (3) significant landforms such as the river bluffs, Sawtooth Ridge, and Ayers Rock; (4) oak woodlands and savannahs, which are not part of the SMAs; and (5) cultural sites, including the Asistencia and archaeological sites.</p>	<p>Mission Village Tract Map 61105 preserves in perpetuity 147 acres of designated open area such as river adjacent open space, Lion Canyon, spineflower preserve, community park, and the Asistencia.</p>
<b>Objective No. 2:</b>	
<p>Suitable portions of Open Area may be used for mitigation of riparian, oak resources, or elderberry scrub. Mitigation activities within Open Area shall be subject to the requirements presented in the Specific Plan, Section 2.6(2) (c) (2).</p>	<p>Portions of open area will be used for mitigation of riparian, oak resources, or elderberry scrub.</p>
<b>Objective No. 3:</b>	
<p>Drainages with flows greater than 2,000 cfs will have soft bottoms. Bank protection will be of ungrouted rock, or buried bank stabilization as described in Specific Plan Section 2.5.2.a, except at bridge crossings and other areas where public health and safety considerations require concrete or other stabilization.</p>	<p>The Mission Village Drainage and Water Quality Plan represents a comprehensive series of flood control and water quality options designed to allow for a flexible state-of-the-art system to both protect development and preserve the Santa Clara River. The features of this plan are intended to blend into the community as an extension of the landscaping. Innovative buried bank stabilization will be implemented, which will provide control protection for facilities residents, while at the same time allowing for a natural riverfront edge. The Lion Canyon tributary does not have flows greater than 2,000 cfs, however, existing conditions within Lion Canyon include deep channel incision as a result of stormwater runoff from historically disturbed portions of the Newhall Ranch Specific Plan site due to ongoing agriculture, grazing and oil and gas operations. In order to stabilize and restore the Lion Canyon drainage, a geomorphic channel design is proposed. This design will utilize boulder step-pool structures, biotechnical stabilization, soil cement, and turf reinforcement mat (TRM) to enhance and restore Lion Canyon drainage.</p>
<b>Objective No. 4:</b>	
<p>The precise alignments and widths of major drainages will be established through the preparation of drainage studies to be approved by the County at the time of subdivision maps, which permit construction.</p>	<p>Drainage studies, to be approved by the County, will be prepared consistent with Objective No. 4 and the alignments and widths of major drainages established accordingly.</p>

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>III. RESOURCE PROTECTION, CONSERVATION, AND MANAGEMENT</b>	
<b>C. Open Area</b>	
<b>Objective No. 5:</b>	
<p>While Open Area is generally intended to remain in a natural state, some grading may take place, especially for parks, major drainages, trails, and roadways. Trails are also planned to be within Open Area.</p>	<p>Lion Canyon and the River Corridor are the only Open Areas within Mission Village where grading would occur. Within the River Corridor, a few improvements are proposed: Commerce Center Drive and Commerce Center Drive bridge, water quality basin and a neighborhood park, all consistent with the Specific Plan. The existing conditions of Lion Canyon, located on the westerly boundary, include deep channel incisions as a result of stormwater runoff from historically disturbed portions of the Newhall Ranch Specific Plan site due to ongoing agriculture, grazing and oil and gas operations. In order to stabilize the effects of this hydromodification and to restore the Lion Canyon drainage, a geomorphic channel design is proposed. This design will utilize boulder step-pool structures, biotechnical stabilization, soil cement, and turf reinforcement mat (TRM) to enhance and restore Lion Canyon drainage. This canyon will also include trails and the Magic Mountain Parkway crossing.</p>
<b>Objective No. 6:</b>	
<p>At the time that final subdivision maps permitting construction are recorded, Open Area will be offered for dedication to the Center for Natural Lands Management. Community Parks within Open Area are intended to be public parks. Prior to the offer of dedication of Open Area to the Center for Natural Lands Management, all necessary conservation and public access easements, as well as easements for infrastructure shall be offered to the County.</p>	<p>Prior to the offer of dedication of Open Area to the Center for Natural Lands Management, all necessary conservation and public access easements, as well as easements for infrastructure shall be offered to the County.</p>

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>III. RESOURCE PROTECTION, CONSERVATION, AND MANAGEMENT</b>	
<b>D. Mitigation Banking</b>	
<b>Objective No. 1:</b>	
<p>The RMP permits the use of mitigation banking if it is approved by state or federal agencies, as applicable. As defined by federal guidance, mitigation banking is a process whereby a type of biotic resource, such as a wetland or riparian habitat, is created, enhanced, or in some cases preserved, as a means of providing compensatory mitigation in advance for authorized impacts to similar resources. The sponsor of the mitigation bank receives mitigation "credits" which can be used by the sponsor or by other parties for the mitigation of impacts that occur on the sponsor's property or in other locations. Mitigation banking can be advantageous to the protection of resources in that mitigation occurs in advance of impacts and generally results in consolidated mitigation in a single area.</p> <p>Mitigation Banking will be permitted within the River Corridor SMA, the High Country SMA, and the Open Area land use designations, subject to the following requirements:</p> <ul style="list-style-type: none"> <li>(a) Mitigation banking activities for riparian habitats will be subject to state and federal regulations, and shall be conducted pursuant to the mitigation requirements set forth in the Specific Plan, Section 2.6, subsection (2)(a)(2).</li> <li>(b) Mitigation banking for oak resources shall be conducted pursuant to the Oak Resources Replacement Program, of the Specific Plan, Section 2.6, subsection (3).</li> <li>(c) Mitigation banking for elderberry scrub shall be subject to approval of plans by the County Forester.</li> </ul>	<p>Mitigation Banking will be permitted within the River Corridor SMA land use designations located within Mission Village Tract Map 61105, subject to the following requirement: Mitigation banking activities for riparian habitats will be subject to state and federal regulations, and shall be conducted pursuant to the mitigation requirements set forth in the Specific Plan, Section 2.6, subsection (2) (a) (2).</p>

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>III. RESOURCE PROTECTION, CONSERVATION, AND MANAGEMENT</b>	
<b>E. Spineflower Special Study Mitigation Overlay and Preserve Program Open Area</b>	
<b>Objective No. 1:</b>	
<p>The San Fernando Valley spineflower (spineflower) was recently listed as Endangered by the State Fish and Game Commission. Although not listed under the Federal Endangered Species Act, it is designated as a candidate species at the federal level. When initial biological field surveys were conducted within the Specific Plan area, the spineflower was presumed to be extinct, having not been documented since 1929.</p> <p>Recent surveys have identified spineflower in three known locations within the Specific Plan Area. In consultation with the County and California Department of Fish and Game a mitigation program to minimize impacts to the spineflower has been established and is set forth in Section 2.6 of the Specific Plan. In addition, two conservation easements exist in the Specific Plan Area as shown on Specific Plan Exhibit 5.4-1 Annotated Land Use Plan for the preservation of spineflower.</p>	<p>The conservation easement for the spineflower preserve that currently exists on Mission Village is approximately 20 acres. The project proposes a larger overall preserve that will bring the total preserve area on mission village to approximately 65 acres.</p>

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>III. RESOURCE PROTECTION, CONSERVATION, AND MANAGEMENT</b>	
<b>F. Oak Resources Replacement Program</b>	
<b>Objective No. 1:</b>	
<p>Oak resources include oak trees of the sizes regulated under the County Oak Tree Ordinance, Southern California black walnut trees, Mainland cherry trees, and Mainland cherry shrubs.</p> <p>The Specific Plan area is estimated to contain more than 16,314 oak trees. These are predominantly coast live oaks (<i>Quercus agrifolia</i>), while a smaller percentage are Valley oaks (<i>Quercus lobata</i>). Oak woodlands and savannahs occur primarily on the north facing slopes and within the major canyons and drainages of the Specific Plan Area. The Concept Grading Plan for the Specific Plan results in preservation of at least an estimated 15,681 oaks. This represents 96 percent of the total estimated oak trees within the Specific Plan Area. Mainland cherry trees and Mainland cherry shrubs are found in Long and Lion Canyons, intermixed with Coast live oaks, while Southern California black walnut is found mainly in the High Country SMA.</p> <p>Based upon the preliminary oak tree impact analysis in the EIR, approximately 633 oak trees may potentially be impacted over the course of the long-term build out of the Specific Plan. At the time engineering plans are completed for the subdivision process, a more precise oak tree survey shall be conducted and oak tree permits pursuant to Title 22 of the Los Angeles County Code, Part 16 shall be obtained.</p>	<p>(1) An oak tree survey was conducted as part of the Mission Village EIR based on the proposed grading plan.</p> <p>(2) Oak Trees on the Mission Village Tract Map 61105 site and affected off-site areas will be transplanted or replaced at ratios required by the Specific Plan.</p> <p>(3) The Mission Village requested project approvals include Oak Tree Permit No. ROAK 200500032 and ROAK 200500043.</p>
<b>Objective No. 2:</b>	
<p>Suitable areas exist in the High Country SMA for the restoration of oak resources and the enhancement of existing stands of oak trees (Specific Plan Exhibit 2.6-9, Potential Oak Tree Restoration Areas). These include areas in the upper elevations of the Santa Susana Mountains that have been disturbed by grazing. Additional opportunities exist within Open Area where oak resources can be planted as an expansion of existing oak woodlands or savannahs and in other areas that exhibit suitable topographic and soil conditions.</p>	<p>Please see objective #1 above</p>

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>III. RESOURCE PROTECTION, CONSERVATION, AND MANAGEMENT</b>	
<b>G. Wildfire Fuel Modification</b>	
<b>Objective No. 1:</b>	
<p>The Specific Plan area is within the extreme and moderate fire hazard zones as identified in the Los Angeles County General Plan. The moderate fire hazard zone extends to those areas of Newhall Ranch where native brush can be found growing in its natural state. This is most common in the hillside areas. The extreme fire hazard zone includes high brush and woodlands, and all steep slopes regardless of vegetation.</p> <p>Development of Newhall Ranch will reduce the amount of native flammable vegetation present within the Specific Plan Area. However, the development of homes potentially exposes residences of the Specific Plan Area to wildfire hazards. Fire fighting capabilities will be provided by three fire stations within the Specific Plan area (see Land Use Plan, Exhibit 2.3-1), other nearby stations, and a system of improved roads and an urban water system with fire flows as required by the County Fire Department. Existing and proposed off-site fire facilities will also serve the Specific Plan Area.</p>	<p>A fire station site has been incorporated into Mission Village... The landscape plans will further define and implement the requirements of the Specific Plan in regards to a fuel modification plan.</p>
<b>Objective No. 2:</b>	
<p>To minimize the potential exposure of the development areas, Open Area, and the SMAs to fire hazards, the Specific Plan is subject to the requirements of the Los Angeles County Fire Protection District (LACFPD), which provides fire protection for the area. At the time of final subdivision maps permitting construction in development areas that are adjacent to Open Area and the High Country SMAs, a wildfire fuel modification plan shall be prepared in accordance with the fuel modification ordinance standards in effect at that time and shall be submitted for approval to the County Fire Department.</p>	<p>Mitigation proposed as part of the project requires preparation of a fuel modification plan prior to approval of the final Mission Village subdivision map. See mitigation measure MV4.12-1.</p>

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>III. RESOURCE PROTECTION, CONSERVATION, AND MANAGEMENT</b>	
<b>H. Cultural Resources Program</b>	
<b>(a) Archaeological Sites</b>	
<b>Objective No. 1:</b>	
<p>In order to avoid significant impact on the site's archaeological and paleontological resources, Phase I and Phase II archaeological survey work has been conducted. An intensive Phase I archaeological survey of the Specific Plan Area revealed eight prehistoric sites (and the Asistencia and Newhall Ranch headquarters), which represents a low density of archaeological remains for a project site of this size. As a result of Phase II archaeological fieldwork and artifact recovery, it was concluded that future development will not result in adverse impacts to cultural resources for four sites and a part of a fifth site. Sites CA-LAN-2133, -2235, -2241, and the northern portion of -2233, contain subsurface archaeological deposits and intact prehistoric artifacts that may require Phase III recovery if site avoidance and/or preservation is not feasible.</p>	<p>Development of the Mission Village project will comply with County of Los Angeles and CEQA requirements regarding the preservation of significant archaeological resources.</p>
<b>Objective No. 2:</b>	
<p>Any adverse impacts to CA-LAN-2133, -2235, and the northern portion of -2233 are to be mitigated by avoidance and preservation. Should preservation of these sites be infeasible, a Phase III data recovery (salvage excavation) project is to be completed on the sites so affected, with archaeological monitoring of grading to occur during subsequent soils removals on the site. This will serve to collect and preserve the scientific information contained therein, thereby mitigating all adverse impacts to the effected cultural resource.</p>	<p>Development of the Mission Village project will comply with County of Los Angeles and CEQA requirements regarding the preservation of significant archaeological resources.</p>
<b>Objective No. 3:</b>	
<p>Any adverse effects to CA-LAN-2241 are to be mitigated through site avoidance and preservation. Should this prove infeasible, an effort is to be made to re-locate, analyze, and re-enter the disturbed site in the arroyo bottom at some more appropriate and environmentally secure locale within the region.</p>	<p>Development of the Mission Village project will comply with County of Los Angeles and CEQA requirements regarding the preservation of significant archaeological resources.</p>
<b>Objective No. 4:</b>	
<p>To ensure that no additional adverse impacts occur on CA-LAN-2236, -2242 and the southern portion of -2233, an archaeological monitor will be present should any subsurface grading or soils removals occur at these locales.</p>	<p>Development of the Mission Village project will comply with County of Los Angeles and CEQA requirements regarding the preservation of significant archaeological resources.</p>
<b>Objective No. 5:</b>	
<p>In the unlikely event that additional artifacts are found during grading within the development area or future roadway extensions, an archaeologist will be notified to stabilize, recover and evaluate such finds.</p>	<p>An archaeologist will be available in the unlikely event that additional artifacts are found during grading associated with the Mission Village project to stabilize, recover and evaluate such finds.</p>
<b>Objective No. 6:</b>	
<p>The Asistencia de San Francisco/Newhall Ranch Headquarters site is located outside of the development area and is proposed to be preserved as a part of Community Open Area. The Asistencia site is of historical interest and may contain historical structures and artifacts of significant historical value.</p>	<p>The project boundaries have been adjusted to include the historical site of the Asistencia de San Francisco, however, it still remains outside the development footprint. Nevertheless, upon the recordation of the appropriate tract map, the site will be dedicated to the Archaeological Conservancy.</p>

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>III. RESOURCE PROTECTION, CONSERVATION, AND MANAGEMENT</b>	
<b>H. Cultural Resources Program</b>	
<b>(b) Paleontological Resources</b>	
<b>Objective No. 7:</b>	
<p>The Newhall Ranch Specific Plan area is underlain by rocks ranging in age from the late Miocene Epoch (approximately 8 million years B.P.) to the Recent and rated from high to low paleontologic potential. Of the seven geologic units found within the Specific Plan Area, the Modelo, Towsley, Pico, and Saugus formations have high paleontological potential; the Terrace and Older Alluvium formations have moderate paleontological potential; and the Young Alluvium formation has a low paleontological potential.</p> <p>As part of an inspection testing program, a Los Angeles County Natural History Museum-approved inspector is to be on-site during an appropriate number of excavations into the Pico Formation, Saugus Formation, Quaternary Terrace Deposits, and Quaternary Older Alluvium. Should the excavations yield significant paleontological resources, excavation is to be stopped or redirected until the extent of the find is established and the resources are salvaged.</p>	<p>Development of the Mission Village project will comply with County of Los Angeles and CEQA requirements regarding the preservation of significant archaeological resources.</p>

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>III. RESOURCE PROTECTION, CONSERVATION, AND MANAGEMENT</b>	
<b>I. Hillside Preservation and Grading Plan</b>	
<b>Objective No. 1:</b>	
<p>The Specific Plan Design Guidelines in Chapter 4 contain grading guidelines designed to achieve the goals of the Specific Plan and assure development that is safe, aesthetic, and cost effective. The Conceptual Grading Plan, Specific Plan Exhibit 2.7-1, identifies areas of grading activities within the Specific Plan Area. As determined by the Conceptual Grading Plan, grading for the project will consist of approximately ninety (90) million cubic yards of earthwork. The grading will be balanced within the Specific Plan Area and will entail the use of four (4) grading elements: mass grading for development areas; final grading for development pads; remedial grading; and custom grading.</p>	<p>Grading associated with Mission Village will be balanced within the Specific Plan area.</p>

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>III. RESOURCE PROTECTION, CONSERVATION, AND MANAGEMENT</b>	
<b>J. Drainage and Flood Control</b>	
<b>Objective No. 1:</b>	
The flood corridor must allow for the passage of Los Angeles County Capital Flood Flow without the permanent removal of natural river vegetation (except at bridge crossings).	The Mission Village Tract Map 61105 Drainage and Water Quality Plan demonstrates conformance with the requirements of the Specific Plan, including this objective. The Drainage and Water Quality Plan incorporates innovative methodologies to meet or exceed the continually upgraded National Pollutant Discharge Elimination System requirements. The plan represents a comprehensive series of flood control and water quality options designed to allow for a flexible state-of-the-art system to both protect development and preserve the Santa Clara River. The features of this plan are intended to blend into the community as an extension of the landscaping. Innovative buried bank stabilization will be implemented, which will provide flood control protection for facilities while at the same time allowing for natural Riverfront edge.
<b>Objective No. 2:</b>	
The banks of the river will generally be established outside of the "Waters of the United States," as defined by federal laws and regulations and as determined by the delineation completed by the United States Army Corps of Engineers (ACOE) in August 1993.	The banks of the river within the Mission Village project site will be established outside of the "Waters of the United States," as defined by federal laws and regulations and as determined by the delineation completed by the United States Army Corps of Engineers (ACOE) in August 1993.
<b>Objective No. 3:</b>	
Where the ACOE delineation width is insufficient to contain the Capital Flood flow, the flood corridor will be widened by an amount sufficient to carry the Capital Flood flow without the necessity of permanently removing vegetation or significantly increasing velocity.	This objective is not applicable to Mission Village
<b>Objective No. 4:</b>	
Where development is proposed within the existing Los Angeles County floodplain, the land where development is to occur will be elevated in accordance with Los Angeles County policies to remove it from the floodplain.	In accordance with this objective, land uses in Mission Village will be raised above the floodplain, where applicable, consistent with Los Angeles County Department of Public Works requirements.
<b>Objective No. 5:</b>	
Bank stabilization will occur only where necessary to protect against erosion.	In accordance with this objective, bank stabilization has been placed only in areas necessary to protect against erosion.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>IV. ADJUSTMENT/TRANSFER/CONVERSIONS</b>	
<b>A. Planning Area Adjustments and Transfers</b>	
<b>Objective No. 1: (a) Dwelling Units</b>	
<p>Precise Planning Area boundaries shall be established by the recordation of subdivision maps. A subdivision map submittal may incorporate an adjustment to the current Annotated Land Use Plan boundaries and Annotated Land Use Plan Statistical Table acreages on file at the County without necessitating a Specific Plan Amendment or a Substantial Conformance review, provided that each Planning Area affected by the boundary adjustment must retain a minimum of eighty (80) percent of the original total gross acreage and cannot exceed 120 percent of the original gross acreage approved under the Specific Plan.</p>	<p>The Mission Village Tract Map 61105 is in direct conformance with the approved Specific Plan.</p>
<b>Objective No. 2:</b>	
<p>The transfer of dwelling units between planning areas shall not result in exceeding the maximum units for any Planning Area, as set forth on the Annotated Land Use Plan Statistical Table (Specific Plan Table 5.4-1).</p>	<p>The transfer of dwelling units between planning areas in Mission Village Tract Map 61105 does not result in exceeding the maximum units for any planning area, as set forth on the Annotated Land Use Plan Statistical Table (Specific Plan. Table 5.4-1) (see Section I, Exhibit 1), on page 2.</p>
<b>Objective No. 3:</b>	
<p>The transfer of dwelling units between Planning Areas shall not result in an increase in the total number of planned units permitted in the Newhall Ranch Specific Plan (i.e., 20,885 dwelling units and 423 Second Units).</p>	<p>The transfer of dwelling units between Planning Areas in Mission Village Tract Map 61105 does not result in an increase in the total number of planned units permitted in the Newhall Ranch Specific Plan in these planning areas.</p>
<b>Objective No. 4:</b>	
<p>An updated revised Annotated Land Use Plan (Specific Plan Exhibit 5.4-1) and Annotated Land Use Plan Statistical Table (Specific Plan Table 5.4-1), and an updated revised Park and Recreation Improvements Summary (Specific Plan Table 5.4-2) must be submitted to Los Angeles County.</p>	<p>An updated, revised Annotated Land Use Plan and Annotated Land Use Plan Statistical Table, and a revised Parks and Recreation Improvements Summary (Table 5.4-2) showing adjusted dwelling unit and Second Unit totals and/or adjusted park acreage totals for all planning areas affected has been submitted to the County with Mission Village Tract Map 61105.</p>
<b>Objective No. 5: (b) Commercial/Mixed-Use/Visitor-Serving Planning Areas</b>	
<p>The transfer shall not increase the amount of planned non-residential building square footage within a given Planning Area by more than 50 percent as set forth in the Annotated Land Use Plan Statistical Table (Specific Plan Table 5.4-1).</p>	<p>The transfer of building square footage in Mission Village Tract Map 61105 does not increase the amount of planned non-residential building square footage within a given Planning Area as set forth in the Annotated Land Use Plan Statistical Table (Specific Plan. Table 5.4-1) (see Section I, Exhibit 1), on page 2.</p>
<b>Objective No. 6:</b>	
<p>The transfer of building square footage between planning areas shall be subject to a traffic study which confirms that all traffic impacts will be mitigated.</p>	<p>A traffic study has been conducted which confirms that all traffic impacts will be mitigated.</p>
<b>Objective No. 7:</b>	
<p>The transfer of building square footage between planning areas shall not result in an increase in the total planned non-residential building square footage permitted in Newhall Ranch (i.e., 5,549,000 sq. ft.).</p>	<p>The transfer of building square footage between planning areas in Mission Village Tract Map 61105 does not result in an increase in the total planned non-residential building square footage permitted in Newhall Ranch (i.e., 5,549,000 sq. ft.).</p>
<b>Objective No. 8:</b>	
<p>An updated revised annotated Land Use Plan (Specific Plan Exhibit 5.4-1) and Annotated Land Use Plan Statistical Table (Specific Plan Table 5.4-1) must be submitted to Los Angeles County.</p>	<p>An updated, revised Annotated Land Use Plan and Annotated Land Use Plan Statistical Table, and a revised Parks and Recreation Improvements Summary (Table 5.4-2) showing adjusted dwelling unit and Second Unit totals and/or adjusted park acreage totals for all planning areas affected has been submitted to the County with Mission Village Tract Map 61105.</p>

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>IV. ADJUSTMENT/TRANSFER/CONVERSIONS</b>	
<b>A. Planning Area Adjustments and Transfers</b>	
<b>Objective No. 9: (c) Business Park Planning Areas</b>	
The transfer shall not increase the amount of planned non-residential building square footage within a given Planning Area by more than 50 percent, as set forth in the Annotated Land Use Plan Statistical Table (Specific Plan Table 5.4-1).	The transfer in Tract 61105 of planned non-residential building square footage within a given planning area does not increase by more than 50% the amount of planned non-residential building square footage within a given Planning Area, as set forth in the Annotated Land Use Plan Statistical Specific Plan Table (5.4-1) (see Section I, Exhibit 1).
<b>Objective No. 10:</b>	
The transfer of non-residential building square footage between Planning Areas shall be subject to a traffic study, which confirms that all traffic impacts will be mitigated.	A traffic study has been conducted that confirms that all traffic impacts will be mitigated.
<b>Objective No. 11:</b>	
The transfer of building square footage between Planning Areas shall not result in an increase in the total planned non-residential building square footage permitted in Newhall Ranch (i.e., 5,549,000 sq. ft.).	The transfer of building square footage between Planning Areas in Mission Village Tract Map 61105 does not result in an increase in the total planned non-residential building square footage permitted in Newhall Ranch (i.e., 5,549,000 sq. ft.).
<b>Objective No. 12</b>	
An updated, revised Annotated Land Use Plan (Specific Plan Exhibit 5.4-1) and Annotated Land Use Plan Statistical Table (Specific Plan Table 5.4-1) must be submitted to Los Angeles County.	An updated, revised Annotated Land Use Plan and Annotated Land Use Plan Statistical Table, and a revised Parks and Recreation Improvements Summary (Table 5.4-2) showing adjusted dwelling unit and Second Unit totals and/or adjusted park acreage totals for all planning areas affected has been submitted to the County with Mission Village Tract Map 61105.
<b>Objective No. 13:</b>	
Dwelling units from any Planning Area on the Annotated Land Use Plan Statistical Table may be exchanged for Second Units at a rate of one (1) dwelling unit for each one (1) Second Unit.	Mission Village Tract Map 61105 proposes 73 Second Units, as set forth in the Annotated Land Use Plan Statistical Table (5.4-1) (see Section I; Exhibit 1). These 73 Second Units will be developed in Planning Area TM-14, a Low Residential planning area that allows up to 122 Second Units. 58 of the Second Units will be transferred/exchanged from Estate Planning Area RW-02 and the remaining 15 Second Units will be transferred/exchanged from Estate Planning Area RW-21. The transferred Second Units from RW-02 and RW-21 will not be replaced by other <u>dwelling units</u> .
<b>Objective No. 14:</b>	
The transfer of Second Units between Planning Areas shall not result in exceeding the maximum Second Units for each Planning Area, as set forth in the Annotated Land Use Plan Statistical Table (Specific Plan Table 5.4-1).	See Response to Objective No. 13, above
<b>Objective No. 15:</b>	
The exchange and/or transfer shall be documented by the submittal to the County of an updated, revised Annotated Land Use Plan and Annotated Land Use Plan Statistical Table, and a revised Parks and Recreation Improvements Summary (Specific Plan Table 5.4-2). The updated, revised tables will show adjusted dwelling unit and Second Unit totals and/or adjusted park acreage totals for all Planning Areas affected.	An updated, revised Annotated Land Use Plan and Annotated Land Use Plan Statistical Table, and a revised Parks and Recreation Improvements Summary (Specific Plan Table 5.4-2) (see Section 1; Exhibits 1, 2, and 3) showing adjusted dwelling unit and Second Unit totals and/or adjusted park acreage totals for all planning areas affected have been submitted to the County with Mission Village Tract Map 61105.
<b>Objective No. 16:</b>	
In no case shall the total number of dwelling units and Second Units allowed in the Specific Plan Area exceed 21,308 (see Overall Land Use Plan Statistical Table, Specific Plan Table 2.3-1, and Annotated Land Use Plan Statistical Table, Specific Plan Table 5.4-1).	The total number of dwelling units and Second Units in the Mission Village Tract Map 61105 area is consistent with the Newhall Ranch Specific Plan (see Section 1, Exhibit 1).

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>IV. ADJUSTMENT/TRANSFER/CONVERSIONS</b>	
<b>B. Land Use Conversions</b>	
<b>Objective No. 1: (a) Commercial or Mixed-Use to Residential</b>	
No more than twenty (20) acres of Mixed-Use or Commercial in any village may be converted.	This objective is not applicable to the Mission Village project – no conversion of Mixed-Use or Commercial is proposed.
<b>Objective No. 2:</b>	
The conversion of Commercial or Mixed-Use acreage to Residential uses shall be subject to a traffic study, which confirms that all traffic impacts will be mitigated.	See response to Objective No. 1.
<b>Objective No. 3:</b>	
The Residential dwelling units designated for the converted area may be transferred from other Planning Areas pursuant to Specific Plan Section 3.5, paragraph 2b and shall not affect an increase in the total number of planned units in the Specific Plan (i.e., 21,308 dwelling units). The transfer shall be documented by the submittal to the County of a revised Annotated Land Use Plan and Annotated Land Use Plan Statistical Table in which dwelling units transferred shall become the planned units for the new Planning Area.	The transfer of dwelling units will not result in an increase in the total number of planned units in the Specific Plan (i.e., 21,308 dwelling units). An updated, revised Annotated Land Use Plan and Annotated Land Use Plan Statistical Table, (Specific Plan Table 5.4-2) (see Section 1; Exhibits 1, and 2) showing adjusted dwelling unit and Second Unit totals and/or adjusted park acreage totals for all planning areas affected have been submitted to the County with Mission Village Tract Map 61105.
<b>Objective No. 4:</b>	
The transfer of the non-residential building square footage from the Mixed-Use or Commercial Planning Area being converted to a Residential planning area shall be subject to Section 3.5, paragraph 2c of the Specific Plan.	The transfer of the non-residential building square footage from the Mixed-Use or Commercial Planning Area being converted to a Residential planning area shall comply with Section 3.5, paragraph 2c of the Specific Plan.
<b>Objective No. 5: (b) Residential to Commercial or Mixed-Use</b>	
Each site proposed for conversion must not be less than five (5) acres, unless the conversion is of land immediately adjacent to an existing Commercial or Mixed-Use Planning Area, in which case no minimum acreage is required.	Mission Village Tract 61105 propose one area of conversion of residential to mixed use in new Planning area 33a as shown on the updated, revised Annotated Land Use Plan and Annotated Land Use Plan Statistical Table. This area is 9.7 acres.
<b>Objective No. 6:</b>	
A maximum of ten (10) acres of land within a Planning Area originally designated for Residential uses under the Specific Plan may be converted to Commercial or Mixed-Use in each Village (i.e., the total acres converted in a given Village shall not exceed ten (10) acres).	Mission Village Tract 61105 proposes one area of conversion of residential to mixed use in new Planning area 33a as shown on the updated, revised Annotated Land Use Plan and Annotated Land Use Plan Statistical Table. This area is 9.7 acres.
<b>Objective No. 7:</b>	
Sites proposed for conversion to Commercial or Mixed-Use are located on and must have frontage on a secondary or higher classification highway, unless the conversion is of land immediately adjacent to an existing Commercial or Mixed-Use Planning Area.	The area being converted fronts on Magic Mountain Parkway a major and secondary highway.
<b>Objective No. 8:</b>	
The conversion of Residential to Commercial or Mixed-Use shall be subject to a traffic study, which confirms that all traffic impacts will be mitigated.	A traffic study has been conducted that confirms that all traffic impacts will be mitigated.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>IV. ADJUSTMENT/TRANSFER/CONVERSIONS</b>	
<b>B. Land Use Conversions</b>	
<b>Objective No. 9:</b>	
The planned non-residential building square footage of the newly created Commercial or Mixed-Use Planning Area shall be transferred from planned non-residential building square footage from existing Mixed-Use or Commercial Planning Areas and shall not result in an increase in the total planned non-residential building square footage approved under the Specific Plan (i.e., 5,549,000 sq. ft.). The transfer shall be documented by the submittal to the County of a revised Annotated Land Use Plan Statistical Table in which the non-residential building square footage transferred will become the planned non-residential building square footage for the new Planning Area.	A revised Annotated Land Use Plan Statistical Table has been submitted to the County documenting this change.
<b>Objective No. 10:</b>	
The conversion of Residential uses to Commercial or Mixed-Use uses within Planning Areas RW-20 and RW-21 (see Annotated Land Use Plan Exhibit 5.4-1 of the Specific Plan) shall be subject to a Conditional Use Permit.	These Planning Areas are not within Mission Village.
<b>Objective No. 11:</b>	
The conversion of Residential uses, which are within 500 feet of occupied dwelling units to Commercial or Mixed-Use uses, shall be subject to a Conditional Use Permit.	There are no occupied dwelling units within 500 feet of the proposed Commercial or Mixed-Use uses in Mission Village.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>IV. ADJUSTMENT/TRANSFER/CONVERSIONS</b>	
<b>C. Second Units</b>	
<b>Objective No. 1:</b>	
The intent of the Second Unit provisions for Newhall Ranch include: (1) Providing affordable housing opportunities without public subsidies, while maintaining the general character of a single-family neighborhood; (2) Providing a means for homeowners of new or existing homes to meet mortgage payment and household expenses; (3) Providing security for senior residents; and (4) Providing housing opportunities for extended family.	Mission Village Tract 61105 allows for a maximum of 122 Second Units; 73 are proposed.
<b>Objective No. 2: (a) Estate Residential</b>	
423 Second Units are permitted in the Estate Residential land use designation (see Specific Plan Table 3.4-3) subject to the following regulations: (1) One attached or detached Second Unit shall be permitted upon issuance of a CUP. (2) Maximum living area of a Second Unit shall not exceed 1,200 square feet on Estate lots. (3) Second Units shall meet main building setbacks, standard height limits, lot coverage, floor area ratio, and other applicable requirements for Estate Residential (see Specific Plan Section 3.4.)	The Second Units developed as part of Mission Village Tract 61105 will comply with the Specific Plan regulations.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>IV. ADJUSTMENT/TRANSFER/CONVERSIONS</b>	
<b>C. Second Units</b>	
<p>(4) Second Units must be on the same lot as the primary residence; and cannot be subdivided or sold. Second Units may contain kitchen facilities.</p> <p>(5) Planned Second Units for Estate Residential may be transferred to Planning Areas designated for Low Residential pursuant to Specific Plan Section 3.5, paragraph 2b.</p> <p>(6) The total number of Second Units shall not exceed the maximum Second Units for a given Planning Area, as set by the Annotated Land Use Plan Statistical Table, Specific Plan Table 5.4-1.</p>	
<b>Objective No. 3: (b) Low Residential</b>	
<p>Second Units are permitted in the Low-Residential land use designation areas (see Specific Plan Table 3.4-3) subject to the following regulations:</p> <p>(1) One attached or detached Second Unit shall be permitted upon issuance of a CUP, provided a transfer of dwelling units pursuant to Specific Plan Section 3.5, paragraph 3 has been submitted to the County.</p> <p>(2) Maximum living area of a Second Unit shall not exceed 800 square feet on Low-Residential lots.</p> <p>(3) Second Units shall meet main building setbacks, standard height limits, lot coverage, floor area ratio, and other applicable requirements for the Low-Residential land use designation.</p> <p>(4) Second Units must be on the same lot as the primary residence; and cannot be subdivided or sold. Second Units may contain kitchen facilities.</p> <p>(5) The total number of Second Units shall not exceed the maximum Second Units for a given Planning Area, as set by the Annotated Land Use Plan Statistical Table, Specific Plan Table 5.4-1.</p>	<p>The Second Units developed as part of Mission Village Tract 61105 will comply with the Specific Plan regulations.</p>

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>IV. ADJUSTMENT/TRANSFER/CONVERSIONS</b>	
<b>D. Affordable Housing Program</b>	
<b>Objective No. 1:</b>	
<p>The Newhall Ranch Affordable Housing Program provides for the direct inclusion of very low, low, and moderate income affordable housing opportunities (as defined in Specific Plan) within the Specific Plan Area.</p>	<p>The Mission Village community will contain up to 300 affordable homes in up to 3 different locations within the development.</p>
<b>Objective No. 2:</b>	
<p>The Newhall Ranch Affordable Housing Program provides very low, low and moderate-income affordable housing opportunities in several housing categories including for-sale units and rental units. While affordable units may be located within any planning area, which allows for residential development, it is anticipated that most units will be located within the land use designations Medium Residential (M), High Residential (H) and Mixed Use (MU). These categories allow for higher-intensity residential uses associated with housing types that can provide sales and rental rates that lower income households can afford. This allows Affordable Housing opportunities to be dispersed throughout the community and within convenient proximity to employment and retail centers.</p>	<p>The Mission Village community will contain up to 300 affordable homes in up to 3 different locations within the development. These homes will be located with access to transportation services, employment opportunities, school facilities, retail services, recreation, and parks.</p>

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>IV. ADJUSTMENT/TRANSFER/CONVERSIONS</b>	
<b>D. Affordable Housing Program</b>	
<b>Objective No. 3:</b>	
Affordable Housing Units shall be designated and made available at rental rates or sales prices as required in Specific Plan Section 3.10, paragraph 3, Implementation of Affordable Housing Program.	Please see Objective No. 1, this section.
<b>Objective No. 4:</b>	
<p>The following Affordable Housing categories shall be allowed under the Newhall Ranch Affordable Housing Program:</p> <ol style="list-style-type: none"> <li>(1) Rental units;</li> <li>(2) For-sale units; and</li> <li>(3) Any units supported by state, local, or private affordable housing programs. Nothing set forth in Specific Plan Section 3.10 shall preclude the use of any affordable housing assistance from any sources, private, public or non-profit, for achieving the Affordable Housing Unit Requirement, provided additional Affordable Housing Units in excess of those set forth in Section 3.10, paragraph 2a are also provided in conjunction with the affordable housing assistance.</li> </ol>	<p>The Mission Village community will contain up to 300 affordable homes in up to 3 different locations within the development.</p> <p>Any units may be supported by state, local, or private affordable housing programs. Nothing set forth in Specific Plan Section 3.10 shall preclude the use of any affordable housing assistance from any sources, private, public or non-profit, for achieving the Affordable Housing Unit Requirement, provided additional Affordable Housing Units in excess of those set forth in Section 3.10, paragraph 2a of the approved Specific Plan are also provided in conjunction with the affordable housing assistance.</p>
<b>Objective No. 5:</b>	
Affordable Housing Units as defined in the Specific Plan may be located within any area designated Low-Medium Residential (LM), Medium Residential (M), High Residential (H) or Mixed-Use (MU) on the Newhall Ranch Land Use Plan, Specific Plan Exhibit 2.3-1.	The Mission Village community will contain up to 300 affordable homes in up to 3 different locations within the development. These homes will be located with access to transportation services and employment opportunities, school facilities, retail services, recreation, and parks.
<b>Objective No. 6:</b>	
A monitoring program and Affordable Housing Phasing Increments shall be established as set forth in Specific Plan Section 3.10 to provide Very Low, Low Income (65 percent), Low Income (80 percent), and Moderate Income Affordable Housing Units along with the construction of total residential development within the Specific Plan area. The monitoring program shall be initiated when the Newhall Ranch Tentative Tract Map that includes the 5,000th planned residential unit is submitted to Los Angeles County.	The monitoring program will be initiated when the Newhall Ranch Tentative Tract Map that includes the 5,000th planned residential unit is submitted to Los Angeles County.
<b>Objective No. 7:</b>	
Following the first Affordable Housing Report, Annual Affordable Housing Reports shall be submitted to Los Angeles County Department of Regional Planning and CDC on an annual basis no later than March 1 covering the Affordable Housing Program through December 31 of the previous year until such time as it is demonstrated that the Affordable Housing Unit Requirement set forth in Specific Plan Section 3.10, paragraph 2a has been achieved.	Following the first Affordable Housing Report, Annual Affordable Housing Reports will be submitted to Los Angeles County Department of Regional Planning and CDC on an annual basis no later than March 1 covering the Affordable Housing Program through December 31 of the previous year until such time as it is demonstrated that the Affordable Housing Unit Requirement set forth in Specific Plan Section 3.10, paragraph 2a has been achieved.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>A. Sign Regulations</b>	
<b>Objective No. 1:</b>	
<p>Sign regulations are intended to promote and protect the public health, safety and welfare by regulating proposed signs of all types within Newhall Ranch in order to assure that they are:</p> <ol style="list-style-type: none"> <li>(1) Legible in the circumstances in which they are seen;</li> <li>(2) Compatible with their surroundings and aesthetically attractive;</li> <li>(3) Appropriate to the type of activity to which they pertain; and</li> <li>(4) Expressive of the identity of individual properties, villages or of the community as a whole.</li> </ol> <p>All signage within the Specific Plan Area shall be subject to the General Provisions in Specific Plan Section 3.6, paragraph 3 and the Sign Standards set forth in Specific Plan Section 3.6, paragraph 5 and the non-conflicting provisions of LACPZC Section 22.52, part 10. As an alternative to the Sign Standards in Specific Plan Section 3.6, paragraph 5, individual projects (ranging from individual buildings to centers, and Villages) may elect to develop unique individual Sign Programs subject to the provisions set forth in Specific Plan Section 3.6, paragraph 4.</p>	<p>A unique individual Sign Program will be detailed for Mission Village. These guidelines will specify that all signs will be:</p> <ol style="list-style-type: none"> <li>1. Legible in the circumstances in which they are seen;</li> <li>2. Compatible with their surroundings and aesthetically attractive;</li> <li>3. Appropriate to the type of activity to which they pertain; and</li> <li>4. Expressive of the identity of individual properties, villages or of the community as a whole.</li> </ol> <p>The guidelines will also specify that all signage is subject to the General Provisions in Specific Plan Section 3.6, paragraph 3. In addition, the Mission Village Sign Program will meet the provisions set forth in Specific Plan Section 3.6, paragraph 4.</p>

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>B. Parking</b>	
<b>Objective No. 1:</b>	
<p>The parking regulations govern motor vehicle parking within the Specific Plan Area. They provide parking facilities of sufficient capacity to discourage traffic congestion and provide safe and convenient facilities for motorists and pedestrians. They also establish regulations for the preparation of a Parking Program to provide an alternative to standard parking requirements enabling joint-use or shared parking solutions. Except as otherwise specified in the Specific Plan, parking requirements for the Specific Plan Area shall be in accordance with Los Angeles County Planning and Zoning Code (LACPZC) Section 22.52.1000.</p>	<p>Mission Village Tract Map 61105 parking facilities will be consistent with Los Angeles County Planning and Zoning Code (LACPZC) Section 22.52.1000. To maximize safety, traffic calming components such as traffic circles, medians, landscape parking bays, and innovatively designed crossing points has been incorporated into the street design. Revitalization of the interior roadways of the urban core allows for greater flexibility and safety.</p>

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>C. Home Occupations</b>	
<b>Objective No. 1:</b>	
<p>Home occupations are permitted as an accessory use within all Residential and Mixed-Use land use designations (see Specific Plan Table 3.4-3), subject to all of the regulations provided in Specific Plan Section 3.8.</p>	<p>Mission Village Tract Map 61105 allows home occupations as an accessory use within all Residential and Mixed-Use land use designations, subject to all of the regulations provided in Specific Plan Section 3.8. In addition, live/work opportunities would be available in the Village Center.</p>

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>D. Design Themes</b>	
<b>Objective No. 1:</b>	
Newhall Ranch will not have a single design theme. A variety of architectural, landscape and other theme elements should be employed in order to create diversity and interest.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. Mission Village will have several architectural styles that will emulate the early California architectural styles. This theme will be carried out in all of the project components.
<b>Objective No. 2:</b>	
Consideration should be given to strengthening Village identity through the use of landscape palettes, landmark buildings, signage, and other such elements.	Mission Village Tract Map 61105 Design Guidelines are being prepared. The Village Center is designed to take advantage of using landmark buildings to strengthen village identity with the Community Recreation Center and Library. They will further define and implement the requirements of the Specific Plan.
<b>Objective No. 3:</b>	
Major natural features should be protected and incorporated into the overall design theme of development areas.	Mission Village protects and incorporates major natural features into the theme such as the river and river bluffs, the spineflower preserve and Lion Canyon which will be stabilized and restored. The river bluffs will be preserved and enhanced by the placement of larger lots along the bluff. A neighborhood park located just above the river leading up the hill is a recreated arroyo, simulating the existing arroyo. Located within this arroyo is a trail that leads to the Village Center.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>E. View Considerations</b>	
<b>Objective No. 1:</b>	
The siting and design of structures should consider the impact on valuable and sensitive views from all residences or public areas within the Specific Plan Area.	Mission Village Tract Map 61105 has implemented the original conceptual viewshed analysis and the siting and design of structures has considered the impact on views from all subject areas.
<b>Objective No. 2:</b>	
Intermittent view opportunities to the Open Area and SMAs should be established along ridges and bluff edges within development areas.	Mission Village has been designed to allow for view opportunities into the river corridor, spineflower preserve, Lion Canyon, and the major ridgelines of the High Country within development areas.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>F. State Route 126 (SR-126)</b>	
<b>Objective No. 1:</b>	
Where the elevations of buildings will obstruct the views from SR-126 to the south, the location and configuration of individual buildings, driveways, parking, streets, signs and pathways shall be designed to provide view corridors of the river, bluffs and the ridge lines south of the river. Those view corridors may be perpendicular to SR-126 or oblique to it in order to provide for views of passengers within moving vehicles on SR-126.	The development area of Mission Village is located to the south of the river corridor above the bluffs of the river. Therefore, building elevations will not obstruct the views of the river and river bluffs from SR-126.
<b>Objective No. 2:</b>	
The Community Park between SR-126 and the Santa Clara River shall be designed to promote views from SR-126 of the river, bluffs and ridge lines to the south of the river.	The referenced Community Park is not located in Mission Village, and as a result, this objective does not apply to this project.
<b>Objective No. 3:</b>	
Residential Site Planning Guidelines set forth in Specific Plan Section 4.3.1 and Residential and Architectural Guidelines set forth in Specific Plan Section 4.4.1 shall be employed to ensure that the views from SR-126 are aesthetically pleasing and that views of the river, bluffs and ridge lines south of the river are preserved to the extent practicable.	The Guidelines will be employed to ensure that views from SR-126 are aesthetically pleasing and existing views are preserved to the extent feasible.
<b>Objective No. 4:</b>	
Mixed-Use and the Commercial site Planning Guidelines set forth in Specific Plan Section 4.3.2 and Architectural Guidelines set forth in Specific Plan Section 4.4.2 shall be incorporated to the extent practicable in the design of the Riverwood Village Mixed-Use and Commercial land use designations to ensure that the views from SR-126 are aesthetically pleasing and to preserve views of the river, bluffs and ridge lines south of the river.	The referenced Guidelines will be employed to ensure that views from SR-126 are aesthetically pleasing and existing views are preserved to the extent feasible.
<b>Objective No. 5:</b>	
Landscape improvements along SR-126 shall incorporate the Landscape Design Guidelines, set forth in Specific Plan Section 4.6 in order to ensure that the views from SR-126 are aesthetically pleasing and to preserve views of the river, bluffs and ridge lines south of the river.	The referenced Guidelines will be employed to ensure that views from SR-126 are aesthetically pleasing and existing views are preserved to the extent feasible.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>G. Site Planning - 1. Residential (a) General Guidelines</b>	
<b>Objective No. 1:</b>	
Residential streets should be designed to direct traffic to the highway system as directly as possible. Circuitous street patterns and very long residential streets should be avoided.	The Mission Village Circulation Plan implements the Specific Plan Mobility Objectives to the greatest degree possible and is consistent with the requirements and intent of the Specific Plan. Collectors are designed to direct traffic to the highway system as directly as possible.
<b>Objective No. 2:</b>	
Multi-family homes should be located in or near the Village Centers.	Multi-family homes are located in and adjacent to the mixed-use Village Center.
<b>Objective No. 3:</b>	
Design solutions for residential street layouts should consider landform, grades, and circulation hierarchy, and employ appropriate street configurations.	The Mission Village Circulation Plan implements the Specific Plan Mobility Objectives to the greatest degree possible and is consistent with the requirements and intent of the Specific Plan. Mission Village is proposing the use of private drives, consistent with the Private Drive Manual, in some neighborhoods of the tract map. In most cases these drives are narrow and allow for the access to conform to the landforms and circulation opportunities in the neighborhood.
<b>Objective No. 4:</b>	
Structures should not dominate the landform as seen from lower elevations; creative siting, design and landscaping solutions should be utilized to blend structures into the terrain, to the extent possible, and to soften their silhouette.	The existing landforms of the Mission Village site are elevated above the River plain on bluffs and continue to increase in elevation as you move south of the River. The Mission Village Tract Map 61105 was designed to conform with the existing landform to the extent possible. Land uses are proposed such that the less intense uses, such as single family detached homes, are located closer to the river bluffs and the more intense uses, such as multi-family and commercial, are located near the Village Center. The intensity of use lessens the further south you are from the Village Center.
<b>Objective No. 5:</b>	
Pedestrian and vehicular circulation should be designed to create a consistent community image of landscaped corridors.	A consistent community image of landscaped corridors will be a part of the Mission Village Tract Map 61105. Along major corridors such as Commerce Center Drive and Magic Mountain Parkway a 24-foot landscape development zone in addition to the 8-foot parkway is provided along one side with the other side containing an 8-foot parkway generally adjacent to landscaped hillside or open space. The streets in the hierarchy will contain generous parkways and landscape setbacks. The Village Center area will capture the true feeling of an urban environment.
<b>Objective No. 6:</b>	
Entries to major residential developments should be visually reinforced through techniques such as broader setbacks, landscape treatments, monument signage, and/or pavement details.	The design guidelines and landscape plans will further define and implement the requirements of the Specific Plan. Entries to major residential developments will be visually reinforced through techniques such as broader setbacks, landscape treatments, monument signage, and/or pavement details.
<b>Objective No. 7:</b>	
Where development adjoins Open Area or SMAs, intermittent view corridors should be provided.	Mission Village Tract Map 61105 is designed to provide views of both the River Corridor and open space. View opportunities include a neighborhood park that overlooks the river corridor and provides significant view opportunities for the entire community and a trail system into Lion Canyon with a river overlook opportunity.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>G. Site Planning - 1. Residential (b) Estates</b>	
<b>Objective No. 1:</b>	
Estate homes should be sited to conserve natural landforms when possible. This includes accessory structures such as barns, tennis courts, and guest houses.	There are no estates within Mission Village Tract Map 61105, and as a result, this objective does not apply to this project.
<b>Objective No. 2:</b>	
Higher elevation Estate areas should be sited and designed to capture view opportunities but harmonize with the natural surroundings when viewed from lower elevations.	There are no estates within Mission Village Tract Map 61105, and as a result, this objective does not apply to this project.
<b>Objective No. 3:</b>	
Buildings should be sited and designed to minimize disturbance to significant natural resources.	There are no estates within Mission Village Tract Map 61105, and as a result, this objective does not apply to this project.
<b>Objective No. 4:</b>	
Exterior radio, television, or other type of antennas and satellite reception disks should be sited or screened so as to reduce visual impact.	There are no estates within Mission Village Tract Map 61105, and as a result, this objective does not apply to this project.
<b>Objective No. 5:</b>	
Tennis and other play courts should meet the following criteria: <ul style="list-style-type: none"> <li>• Courts should be situated so that fencing and lighting fixtures do not unreasonably impair views from, or otherwise inappropriately impact, adjacent dwellings; and</li> <li>• These should also be built to blend with the natural terrain to the extent possible.</li> </ul>	There are no estates within Mission Village Tract Map 61105, and as a result, this objective does not apply to this project.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>G. Site Planning – 1. Residential (c) Single-Family Detached/Attached</b>	
<b>Objective No. 1:</b>	
Varying house configurations on corner lots is encouraged to promote variety in the street scene and, in the interest of safety, to provide adequate sight distance at intersections.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. Mission Village is designed to provide a varied mix of housing types and configurations. The residential neighborhoods will contain a range of single-family and attached homes incorporating the design principles shown in the Mission Village Planning notebook. Home configurations on corner lots are varied and consistent with this objective.
<b>Objective No. 2:</b>	
A combination of side-entering and front-entering garages and varied driveway locations are encouraged to break-up repetitive curb cuts and yard patterns.	Mission Village design guidelines will further define and implement the requirements of the Specific Plan. A variety of garage configurations are used in Mission Village Tract Map 61105 including a combination of side-entering and front-entering garages.
<b>Objective No. 3:</b>	
Common area fencing, walls, gates, and other security features should be sited to accommodate access to pedestrian walkways.	Common area fencing, walls, gates, and other security features are sited to accommodate access to pedestrian walkways.
<b>Objective No. 4:</b>	
Neighborhoods bordering Open Areas should be sited to optimize views, but discourage access into the Open Areas except via established pedestrian trails.	Mission Village neighborhoods bordering Open Areas are sited to optimize views, but discourage access into the Open Areas except via established pedestrian trails.
<b>Objective No. 5:</b>	
Cul-de-sacs are encouraged to improve neighborhood safety and character.	Cul-de-sacs are incorporated into the Tract Map design where appropriate.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>G. Site Planning – 1. Residential (d) Multi-Family</b>	
<b>Objective No. 1:</b>	
Improve the quality of the "front yard" streetscape by minimizing curb cuts and driveway aprons.	The Village Center neighborhood of Mission Village is designed to resemble a true urban environment that is pedestrian friendly with walkable access to the adjacent amenities such as the Community Recreation Center, library, parks and commercial facilities. The sidewalk area minimizes curb cuts and driveway aprons and includes extra width to access and social interaction.
<b>Objective No. 2:</b>	
Cul-de-sacs are encouraged to improve neighborhood safety and character.	Cul-de-sacs are incorporated into the Tract Map design where appropriate.
<b>Objective No. 3:</b>	
Buildings should be staggered to create interest in both architectural facades and in adjoining streetscape.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. A variety of building designs, placement, and street fronts will create visual interest.
<b>Objective No. 4:</b>	
Carports and garages may be detached, but should be clustered in parking "courts" which are removed and/or suitably screened from public thoroughfares.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. Parking areas are included and clustered as appropriate.
<b>Objective No. 5:</b>	
Guest parking should be conveniently accessible.	Guest parking will be designed to be conveniently accessible.
<b>Objective No. 6:</b>	
Parking areas should be screened through the use of berms, landscaping, "headlight" walls, or a combination of these.	Mission Village Design Guidelines and landscape plans will further define and implement the requirements of the Specific Plan. Parking area screening is included.
<b>Objective No. 7:</b>	
Walkways should be provided within multi-family neighborhoods.	Walkways are provided within multi-family neighborhoods and are connected to the Master Trails Plan of Mission Village creating a 'walkable' environment.
<b>Objective No. 8:</b>	
Neighborhoods bordering Open Area and/or SMAs should be sited to optimize views, but discourage access into the Open Area except via established pedestrian trails.	Mission Village Tract Map 61105 is designed to provide views of both the River Corridor and open space and includes pedestrian trails to discourage inappropriate access to these areas.
<b>Objective No. 9:</b>	
Recreation areas/greenbelt features should be visible upon entry to neighborhoods to enhance neighborhood value.	The community has been designed to allow for view opportunities into the river habitat, parks and open space.
<b>Objective No. 10:</b>	
Avoid long linear stretches of parking. Maximum use of parking courts is encouraged.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. Mixed-use areas and Multi-family residential areas incorporate parking courts into their design.
<b>Objective No. 11:</b>	

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>G. Site Planning – 1. Residential (d) Multi-Family</b>	
Individual multi-family buildings should be separated sufficiently to provide a visual break and accommodate walks and other circulation elements.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. Walkways are provided within multi-family neighborhoods and are connected to the Master Trails Plan of Mission Village creating a 'walkable' environment.
<b>Objective No. 12:</b>	
All service areas should be screened from view from adjacent streets and land uses.	All service areas will be screened from view from adjacent streets and land uses.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>G. Site Planning – 1. Residential (e) Gated Communities</b>	
<b>Objective No. 1:</b>	
<p>Gated Communities should contain the following features:</p> <ul style="list-style-type: none"> <li>• Separate access lanes for residents and guests, when feasible;</li> <li>• Provide turnaround capacity in front of the control entry gate;</li> <li>• Separate pedestrian entry from the vehicular access gate;</li> <li>• Provide adequate stacking distance for cars waiting for admittance at entry gate; and</li> <li>• Provide clear, visible signage to accommodate residents, service deliveries, and guests.</li> </ul>	The entrances to Mission Village Gated Communities have been designed to implement the requirements of the Specific Plan.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>G. Site Planning – 2. Mixed-Use/Commercial/Public Facilities</b>	
<b>Objective No. 1:</b>	
Prominent buildings should be sited in key landmark locations and easily accessible.	Mission Village proposes two key buildings, Library and Community Recreation Center, within the Village Center neighborhood. Each will be located in the Village Center in and around the village green (private park). Additionally, at the intersection of Commerce Center Drive and Magic Mountain Parkway commercial buildings will be sited to create an urban entry.
<b>Objective No. 2:</b>	
Service areas should be effectively screened.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that service areas be effectively screened.
<b>Objective No. 3:</b>	
Outdoor space should be designed to create a pedestrian experience, which is visually stimulating, and one, which includes activities that create a sense of variety and excitement.	Outdoor spaces are designed to create a pedestrian experience which is visually stimulating and one which includes activities that create a sense of variety and excitement as exemplified in the Village Center which will contain, in addition to the Community Recreation Center, a Village Green along the central street. This Village Green will offer opportunities for street fairs, farmers markets and a café scene to attract pedestrians in the direction of the Community Park and Library.
<b>Objective No. 4:</b>	
Pedestrian access routes between adjacent uses should be incorporated into the commercial site design, where feasible.	The Village Center commercial site design provides pedestrian routes to and from the adjacent commercial uses.
<b>Objective No. 5:</b>	
Mixed-Use land use areas should be master planned to the maximum extent feasible. Individual uses should be integrated to provide functional and cohesive relationships.	Mission Village Tract Map 61105 is part of the Newhall Ranch Master Plan (NRMP). All uses have been integrated in a functional and cohesive manner within the village and relative to the NRMP.
<b>Objective No. 6:</b>	
Pedestrian spaces should be provided by creating plazas, courtyards, and promenades.	Mission Village includes a vibrant Village Center creating an urban center of plazas, courtyards and promenades and multi-story buildings containing office and retail opening onto a Village Green, a public space designed to encourage community interaction.
<b>Objective No. 7:</b>	
Parking should be oriented to permit pedestrian flow without having to cross numerous traffic aisles.	The Mission Village commercial facilities will be designed so that parking is oriented to permit pedestrian flow without having to cross numerous traffic aisles. Mission Village also includes angled and parallel street parking and medians which help to reduce traffic speeds, increasing pedestrian safety.
<b>Objective No. 8:</b>	
Parking areas should be screened through the use of berms, landscaping, "headlight" walls, or a combination of these.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify landscaping criteria to screen parking areas through the use of berms, landscaping, "headlight" walls, or a combination of these.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>G. Site Planning – 2. Mixed-Use/Commercial/Public Facilities</b>	
<b>Objective No. 9:</b>	
Pedestrian courts are encouraged.	Mission Village includes a vibrant Village Center creating an urban center of multi-story buildings containing office and retail opening onto a village plaza, a public space designed to encourage community interaction.
<b>Objective No. 10:</b>	
Within the Mixed-Use land use designation, commercial and office buildings should be clustered around central gathering places such as plazas.	Mission Village includes a vibrant Village Center creating an urban center of multi-story buildings containing office and retail opening onto a village plaza, a public space designed to encourage community interaction.
<b>Objective No. 11:</b>	
Within the Mixed-Use land use designation the shared use of service areas, parking, access, etc., should be integrated into the design.	The Mission Village Tract Map site planning incorporates the shared use of service areas, parking, access, etc. In addition, Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify how shared use of service areas, parking, access, etc., are integrated into the design of the mixed-use urban core.
<b>Objective No. 12:</b>	
Public entrances to buildings should be visible from entry streets as much as possible.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. Public entrances to buildings are visibly located on entry streets as much as possible.
<b>Objective No. 13:</b>	
When rear or side building facades are adjacent to different land uses, employ one or more techniques such as landscaping, berms, walls or variable setbacks to avoid visibility of extensive unbroken wall planes.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that when rear or side building facades are adjacent to different land uses, one or more techniques such as landscaping, berms, walls or variable setbacks to avoid visibility of extensive unbroken wall planes are designated to be used.
<b>Objective No. 14:</b>	
Pedestrian access to adjacent uses is encouraged.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. The Mission Village Mobility Plan ensures that pedestrian access to adjacent uses is provided.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>G. Site Planning – 3. Business Park</b>	
<b>Objective No. 1:</b>	
Site designs should minimize view impacts.	There is no Business Park in Mission Village Tract Map 61105, and as a result, this objective does not apply to this project.
<b>Objective No. 2:</b>	
Trash areas should be enclosed with a minimum six (6) foot high masonry wall and located away from public streets.	There is no Business Park in Mission Village Tract Map 61105, and as a result, this objective does not apply to this project.
<b>Objective No. 3:</b>	
Within the Business Park in Chiquito Canyon (Planning Area RW-24), roof equipment shall be screened from view from public streets.	There is no Business Park in Mission Village Tract Map 61105, and as a result, this objective does not apply to this project.
<b>Objective No. 4:</b>	
Parking areas should be screened through the use of berms, landscaping, "headlight" walls, or a combination of these.	There is no Business Park in Mission Village Tract Map 61105, and as a result, this objective does not apply to this project.
<b>Objective No. 5:</b>	
Truck parking should not be located on the street side of any site.	There is no Business Park in Mission Village Tract Map 61105, and as a result, this objective does not apply to this project.
<b>Objective No. 6:</b>	
Outside storage areas and/or equipment yards should be screened with walls.	There is no Business Park in Mission Village Tract Map 61105, and as a result, this objective does not apply to this project.
<b>Objective No. 7:</b>	
Outside storage should not be located on the street side of any site.	There is no Business Park in Mission Village Tract Map 61105, and as a result, this objective does not apply to this project.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>G. Site Planning - 4. Parks/Open Area</b>	
<b>Objective No. 1:</b>	
Neighborhood Parks should be located within residential areas and adjacent to schools where feasible.	Neighborhood and pocket parks are appropriately located throughout Mission Village. A focal point of the village center will be the Community Recreation Center, Village Green and central paseo.
<b>Objective No. 2:</b>	
Streambeds and other large natural features should be incorporated as neighborhood focal points.	Mission Village proposes to stabilize and restore Lion Canyon. As part of the restoration, trails along the restored stream channel are proposed to allow the community to take advantage of natural and restored features of this canyon. The Mission Village neighborhood park is designed in a manner to take full advantage of river corridor views.
<b>Objective No. 3:</b>	
Pedestrian circulation systems should link recreation and Open Areas with development.	The Mission Village Trails Plan fulfills the intent of the Specific Plan and ensures that each residence and all community service areas are linked via a practical, aesthetically pleasing pedestrian trail system. The trail system in Lion Canyon is linked with the community trail system.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>G. Site Planning - 5. Visitor-Serving</b>	
<b>Objective No. 1:</b>	
The design of the Visitor-Serving Center shall be sensitive to and integrated into the natural setting of the High Country Special Management Area.	The Visitor-Serving area is located in Potrero Valley, and as a result, this objective does not apply to this project.
<b>Objective No. 2:</b>	
Special landscape and siting techniques should be used to make all structures within the Visitor-Serving land use designation fit the natural resource surroundings.	The Visitor-Serving area is located in Potrero Valley, and as a result, this objective does not apply to this project.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>H. Architecture – 1. Residential</b>	
<b>Objective No. 1:</b>	
A diversity of architectural styles is encouraged to enhance the character of the community.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. Architectural styles will be controlled by Design Guidelines ensuring a diversity of styles which reflect the California heritage of Newhall Ranch.
<b>Objective No. 2:</b>	
Use of roof overhangs to enhance energy conservation is encouraged.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that use of roof overhangs to enhance energy conservation is encouraged.
<b>Objective No. 3:</b>	
Roof equipment should be screened from view from public streets.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that roof equipment is to be screened from view from public streets.
<b>Objective No. 4:</b>	
All utility and service areas should be treated (i.e., color, landscaping, screening) to minimize visual impact.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that all utility and service areas will be treated (i.e., color, landscaping, screening) to minimize visual impact.
<b>Objective No. 5:</b>	
The architecture of ancillary structures (guesthouses, cabanas, barns, storage sheds, etc.) should be compatible with the main structure through the corporation of compatible materials and colors into the design of building walls, roofs, trellises, fence/wall connections, and/or landscaping components.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that the architecture of ancillary structures (guesthouses, cabanas, barns, storage sheds, etc.) is to be compatible with the main structure through the incorporation of compatible materials and colors into the design of building walls, roofs, trellises, fence/wall connections, and/or landscaping components.
<b>Objective No. 6:</b>	
Integrate separate carport structures with materials used in architectural palette and theme walls.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that separate carport structures are to be integrated with materials used in architectural palette and theme walls.
<b>Objective No. 7:</b>	
Siting variations in building facades, articulation, height, mass, and scale is encouraged to create and enhance architectural interest.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. Architectural styles and siting variations will be controlled by Design Guidelines ensuring a varied mix of homes which reflect the California heritage of Newhall Ranch.
<b>Objective No. 8:</b>	
Landscaping and architecture should be designed to minimize garage impact on street scenes in narrow lot product types.	Mission Village Landscaping and Design Guidelines will further define and implement the requirements of the Specific Plan. Architectural styles will be controlled by Design Guidelines which will minimize garage impacts on street scenes.
<b>Objective No. 9:</b>	
Rear or side elevations of residential units should be enhanced with architectural treatments and/or landscaping where visible from streets, parking areas, Open Areas, etc.	Architectural styles will be controlled by Design Guidelines providing that rear or side elevations of residential units should be enhanced with architectural treatments and/or landscaping where visible from streets, parking areas, Open Areas, etc.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>H. Architecture – 1. Residential</b>	
<b>Objective No. 10:</b>	
Elements such as stairways should be architecturally compatible and integrated into buildings.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. Architectural styles will be controlled by Design Guidelines providing that elements such as stairways are to be architecturally compatible and integrated into buildings.
<b>Objective No. 11:</b>	
Reversing floor plans to minimize repetition is encouraged.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. Architectural styles will be controlled by Design Guidelines providing that a variety of floor plans and the reversing of floor plans are to be used to increase the sense of individuality of each home.
<b>Objective No. 12:</b>	
Roof equipment should be screened from public view.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that roof equipment should be screened from public view.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>H. Architecture – 2. Mixed-Use/Commercial/Public Facilities</b>	
<b>Objective No. 1:</b>	
The design of public facilities such as police, fire, recreation facilities, and schools should be compatible with the surrounding neighborhood.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan and specify that the design of public facilities is to be compatible with the surrounding neighborhood.
<b>Objective No. 2:</b>	
Overhangs, trellises, and other architectural elements should be incorporated into the design of retail buildings where feasible, to protect pedestrians from exposure to climatic conditions.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that overhangs, trellises, and other architectural elements are to be incorporated into the design of retail buildings where feasible, to protect pedestrians from exposure to climatic conditions.
<b>Objective No. 3:</b>	
Each Mixed-Use land use area should include a significant architectural, landscape or other special design feature.	The Village Green Area and the central paseo are carefully planned public space located in the mixed use Village Center.
<b>Objective No. 4:</b>	
Signage and lighting should be included as an integral element of buildings.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that signage and lighting are to be included as an integral element of buildings.
<b>Objective No. 5:</b>	
Architectural detailing should be used in Mixed-Use developments to assist in creating a design theme.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan and specify that architectural detailing is to be used in Mixed-Use developments to assist in creating a design theme.
<b>Objective No. 6:</b>	
The use of energy conservation measures such as roof overhangs for sun protection of glass areas, low energy outdoor lighting, and passive solar systems should be used, where practical.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that the use of energy conservation measures such as roof overhangs for sun protection of glass areas, low energy outdoor lighting, and passive solar systems is to be used where practical.
<b>Objective No. 7:</b>	
Roofs or soffits should be sloped to minimize building scale.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that roofs or soffits should be sloped to minimize building scale.
<b>Objective No. 8:</b>	
Multi-storied buildings should relate to the pedestrian. Ground-story front facades should be designed to strengthen a pedestrian scale. Pedestrian scale along streets should also be established through the use of pedestrian arcades and awnings that add horizontal articulation to facades.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. The Guidelines will specify that multi-storied buildings relate to the pedestrian. In this regard, the Village Center has been planned to incorporate pedestrian scale along streets and horizontal articulation.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>H. Architecture – 2. Mixed-Use/Commercial/Public Facilities</b>	
<b>Objective No. 9:</b>	
Architectural elements that are discouraged include: <ul style="list-style-type: none"> <li>• Highly reflective surfaces;</li> <li>• Large blank walls;</li> <li>• Split-face block;</li> <li>• Exposed concrete block;</li> <li>• Metal siding; and</li> <li>• Plastic siding.</li> </ul>	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that the following architectural elements are discouraged: <ul style="list-style-type: none"> <li>• Highly reflective surfaces;</li> <li>• Large blank walls;</li> <li>• Split-face block;</li> <li>• Exposed concrete block;</li> <li>• Metal siding; and</li> <li>• Plastic siding.</li> </ul>
<b>Objective No. 10:</b>	
Roof equipment should be screened from view from public streets.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that roof equipment should be screened from view from public streets.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>I. Fencing – 1. General Guidelines</b>	
<b>Objective No. 1:</b>	
Fencing should be compatible with the architectural theme and character of the neighborhood or development project.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan and specify that fencing be compatible with the architectural theme and character of the development.
<b>Objective No. 2:</b>	
A fencing system should be developed that produces aesthetically-pleasing divisions between uses.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that the fencing system is to have aesthetically-pleasing divisions between uses.
<b>Objective No. 3:</b>	
Fencing should be consistent in style.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that fencing should be consistent in style.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>I. Fencing – 2. Residential</b>	
<b>Objective No. 1:</b>	
Fencing and walls should be designed to reflect the architectural character of the individual home or neighborhood.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that fencing and walls are to be designed to reflect the architectural character of the individual home or neighborhood.
<b>Objective No. 2:</b>	
Finish colors and materials should integrate with the colors and materials of the individual home or neighborhood.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that finish colors and materials are to integrate with the colors and materials of the individual home or neighborhood.
<b>Objective No. 3:</b>	
Walls constructed parallel to the front face of the house should be stepped back to articulate the front elevation.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that walls constructed parallel to the front face of the house are to be stepped back to articulate the front elevation.
<b>Objective No. 4:</b>	
<p>All fencing and walls of extended length should have posts and/or pilasters to provide for:</p> <ul style="list-style-type: none"> <li>a. transition breaks between fencing and walls;</li> <li>b. change of over twelve inches in the heights of walls;</li> <li>c. awkward corners and intersections of 45 degrees and greater; and</li> <li>d. transitions between fencing materials.</li> </ul>	<p>Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan and specify that all extended length fencing and walls are to have posts and/or pilasters to provide for:</p> <ul style="list-style-type: none"> <li>a. transition breaks between fencing and walls;</li> <li>b. change of over twelve inches in the heights of walls;</li> <li>c. awkward corners and intersections of 45 degrees and greater; and</li> <li>d. transitions between fencing materials.</li> </ul>
<b>Objective No. 5:</b>	
Wall and fencing material should not be reflective. If a glass panel is used, it should be polarized or treated with anti-reflective coating and bright colors should be avoided.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that wall and fencing material not be reflective. If a glass panel is used, it is to be polarized or treated with anti-reflective coating and bright colors are to be avoided.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>I. Fencing – 3. Mixed-Use/Commercial/Business Park/Public Facilities</b>	
<b>Objective No. 1:</b>	
Walls should be designed as an integral part of the overall site design. They should be constructed with materials that are complementary to the style of adjacent buildings and incorporate the same finishes and colors.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that walls be designed as an integral part of the overall site design, be constructed of materials that complement the style of adjacent buildings, and incorporate the same finishes and colors.
<b>Objective No. 2:</b>	
Walls should be used to lengthen the horizontal elements of elevations and reduce visual impacts where possible.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that walls are to be used to lengthen the horizontal elements of elevations and reduce visual impacts where possible.
<b>Objective No. 3:</b>	
Wall or fencing sections should be horizontally offset at regular intervals to provide visual relief and landscape opportunities.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that the wall or fencing sections are to be horizontally offset at regular intervals to provide visual relief and landscape opportunities.
<b>Objective No. 4:</b>	
Wall or fencing should not be installed immediately in back of a sidewalk or other hardscape, without intervening landscaping.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that wall or fencing will not be installed immediately in back of a sidewalk or other hardscape, without intervening landscaping.
<b>Objective No. 5:</b>	
Thinly applied stucco walls are discouraged.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that thinly applied stucco walls are discouraged.
<b>Objective No. 6:</b>	
Corrugated metal walls are discouraged.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that corrugated metal walls are discouraged.
<b>Objective No. 7:</b>	
Walls between the landscape setback area and building frontages should not exceed a height of 3 feet.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that walls between the landscape setback area and building frontages should not exceed a height of 3 feet.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>J. Landscape Design – 1. General Guidelines</b>	
<b>Objective No. 1:</b>	
Landscape concept plans should include a palette rich in drought-tolerant and native plants including highlights of ornamentals for accents, area identification, etc. The use of drought-tolerant plant materials is highly encouraged.	Mission Village Design Guidelines and landscape plans will further define and implement the requirements of the Specific Plan, including a landscape concept plan. These guidelines will specify that landscape concept plans include a palette rich in drought-tolerant and native plants including highlights of ornamentals for accents, area identification, etc. The use of drought-tolerant plant materials is highly encouraged.
<b>Objective No. 2:</b>	
Major manufactured slopes should be landscaped with materials that will eventually naturalize, requiring minimal irrigation.	Mission Village Design Guidelines and landscape plans will further define and implement the requirements of the Specific Plan. The landscape plan for major manufactured slopes will specify the use of materials that will eventually naturalize, requiring minimal irrigation.
<b>Objective No. 3:</b>	
Landscaping should be considered to help shade major parking areas.	Mission Village Design Guidelines and landscape plans will further define and implement the requirements of the Specific Plan. These guidelines will include landscaping that is designed to help shade major parking areas.
<b>Objective No. 4:</b>	
The use of landscaped medians at neighborhood entries is encouraged.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan and specify the use of landscape medians at neighborhood entries is encouraged.
<b>Objective No. 5:</b>	
Consider using large groupings of plant materials to create a logical sense of order and continuity throughout the community.	Mission Village Design Guidelines and landscape plans will further define and implement the requirements of the Specific Plan and specify that large groupings of plant materials be considered to create a logical sense of order and continuity throughout the community.
<b>Objective No. 6:</b>	
Groups of accent trees may be used at community, village, and neighborhood focal points to provide distinctive contrast.	Mission Village Design Guidelines and landscape plans will further define and implement the requirements of the Specific Plan and specify that groups of accent trees may be used at focal points to provide contrast.
<b>Objective No. 7:</b>	
Water conservation measures should be incorporated into all irrigation systems.	Mission Village Design Guidelines and landscape plans will further define and implement the requirements of the Specific Plan. The Mission Village Potable and Reclaimed Water Plan provides a detailed framework for implementation within Mission Village and incorporates water conservation measures into all irrigation systems.
<b>Objective No. 8:</b>	
The use of reclaimed water is encouraged.	The Mission Village Potable and Reclaimed Water Plan provides a detailed framework for implementation within Mission Village and encourages the use of reclaimed water.
<b>Objective No. 9:</b>	
Trash, storage areas, and tanks should be screened from view.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that trash, storage areas, and tanks are to be screened from view.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>J. Landscape Design – 1. General Guidelines</b>	
<b>Objective No. 10:</b>	
Landscape concept plans should avoid the use of invasive exotic plant materials such as those shown in the latest available list of “Exotic Pest Plants of Greatest Ecological Concern in California” published by the California Exotic Pest Plant Council.	Mission Village Design Guidelines and landscape plans will further define and implement the requirements of the Specific Plan. A list of approved plant materials is included that is consistent with the referenced list.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>J. Landscape Design – 2. Landscape Zones</b>	
<b>Objective No. 1:</b>	
<p>Landscape zones are distinguished by their water and maintenance requirements. Landscape concept plans submitted pursuant to the subdivision process will incorporate delineation of landscape zones as described below.</p> <ul style="list-style-type: none"> <li>• Full Maintenance Landscape - Full maintenance landscape is characterized as areas of high visual impact requiring the greatest amount of care and water. Community and neighborhood entries and accent planting areas fall within this category. The size of these areas should be minimized to conserve water and energy.</li> <li>• Ornamental Landscape - Ornamental landscape requires routine maintenance and water; however, a less intense degree than full maintenance landscape. Limited lawn and groundcover/shrub beds are in this zone; however, seasonal flower color or plants of a highly sensitive nature are not included here. This is intended for parkways, parks, schools, and other areas where a good foundation of ornamental planting is required. Enhanced slopes will also include this type of landscaping.</li> <li>• Drought-Tolerant/Naturalized Landscape - This zone is used in low intensity use areas, and where a natural appearance is more appropriate. It will require much less maintenance and water. In many areas, the landscape will be allowed to naturalize. This zone includes plantings at transitions into native areas and major slopes.</li> <li>• Fuel Modification Areas - Fuel modification zones between development and natural open areas should utilize fire retardant and low fuel plant materials. The location and extent of this zone will be determined and regulated by the Fire Department in conjunction with the approval of parcel-level landscape plans and site conditions. Fuel modification zones are further described in the Wildfire Fuel Modification Program of Section 2.6, Resource Management Plan.</li> <li>• Native Landscape - A native landscape zone is an area where existing vegetation will remain with little or no modification. This zone generally includes native canyons and slopes, as well as the Special Management Areas.</li> </ul>	Mission Village landscape plans will further define and implement the requirements of the Specific Plan. These guidelines will delineate landscape zones within Mission Village according to the descriptions included in the Specific Plan.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>K. Lighting – 1. General Guidelines</b>	
<b>Objective No. 1:</b>	
Lighting of streets, public facilities (such as ball fields), and commercial areas will be used appropriately to minimize visual nuisance and maximize safety.	Mission Village 5 Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that the lighting of streets, public facilities (such as ball fields), and commercial areas be used appropriately to minimize visual nuisance and maximize safety.
<b>Objective No. 2:</b>	
Light standards should blend in scale and character with buildings, pedestrian areas, landscape, and plaza areas.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that the light standards blend in scale and character with buildings, pedestrian areas, landscape, and plaza areas.
<b>Objective No. 3:</b>	
Lighting fixtures should be in compliance with all state and local safety and illumination standards.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that the lighting fixtures be in compliance with all state and local safety and illumination standards.
<b>Objective No. 4:</b>	
Shielding should be used to avoid lighting glare adversely affecting adjacent properties, uses, buildings, and roadways.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that shielding be used to avoid lighting glare adversely affecting adjacent properties, uses, buildings, and roadways.
<b>Objective No. 5:</b>	
Outdoor lighting should be energy-efficient, and shielded and screened to prevent direct rays from reaching adjacent properties.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that the outdoor lighting be energy-efficient, and shielded and screened to prevent direct rays from reaching adjacent properties.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>K. Lighting – 2. Lighting Fixtures</b>	
<b>Objective No. 1:</b>	
Lighting fixtures and standards located along streets and public places should play a role in establishing the identity and theme of the development.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that the lighting fixtures and standards located along streets and public places should play a role in establishing the identity and theme of the development.
<b>Objective No. 2:</b>	
<b>Roadways</b> – Lighting should be designed to enhance the safety of vehicular and pedestrian flows. Lighting should be concentrated at intersections and crosswalks. This lighting should be in compliance with all government standards.	Roadway lighting will be consistent with Specific Plan requirements and be in compliance with all government standards.
<b>Objective No. 3:</b>	
<b>Parking</b> – The lighting standards should be located within the parking islands. These fixtures should reflect the theme of the village or neighborhood. Fixtures should be shielded to prevent unwanted glare and intrusion into adjacent areas.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that for parking, the lighting standards should be located within the parking islands. These fixtures should reflect the theme of the village or neighborhood. Fixtures should be shielded to prevent unwanted glare and intrusion into adjacent areas.
<b>Objective No. 4:</b>	
<b>Pedestrian and Entry Lighting</b> – To ensure the safety of pedestrians at twilight and evening hours, light fixtures should be located at building entries and along walkway locations. The fixtures should be designed to reflect the character or theme of the village and must be positioned in such a manner as to minimize any glare or distraction for the pedestrian or motorist.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that for the safety of pedestrians at twilight and evening hours, light fixtures should be located at building entries and along walkway locations. The fixtures should be designed to reflect the character or theme of the village and must be positioned in such a manner as to minimize any glare or distraction for the pedestrian or motorist.
<b>Objective No. 5:</b>	
<b>Architectural Lighting</b> – The use of architectural lighting to highlight monument signs and architectural features is an important aspect of the nighttime image of Newhall Ranch and should be considered at entry points and intersections. Wall-washing lighting should be used sparingly. All architectural lighting fixtures should be carefully integrated into building details or concealed.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that the use of architectural lighting to highlight monument signs and architectural features is an important aspect of the nighttime image of Newhall Ranch and should be considered at entry points and intersections. Wall-washing lighting should be used sparingly. All architectural lighting fixtures should be carefully integrated into building details or concealed.
<b>Objective No. 6:</b>	
<b>Landscape</b> – Lighting can be used to highlight key landscape features such as specimen trees, walkways, and public plazas. As with architectural lighting, all light sources should be shielded to eliminate the potential for nighttime glare.	Mission Village Design Guidelines will further define and implement the requirements of the Specific Plan. These guidelines will specify that lighting can be used to highlight key landscape features such as specimen trees, walkways, and public plazas. As with architectural lighting, all light sources should be shielded to eliminate the potential for nighttime glare.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>L. Grading</b>	
<b>Objective No. 1:</b>	
Los Angeles County Hillside Development Guidelines should be followed in hillside areas in order to minimize grading impacts.	The Board of Supervisors concluded in their approval of the Newhall Ranch Specific Plan that the Hillside Preservation and Grading Plan for the Newhall Ranch Specific Plan was prepared in accordance with the County Grading Ordinance and incorporates provisions of the Performance Review Criteria for Hillside Management Areas. The proposed Mission Village project will be developed in conformance with the Hillside Preservation and Grading Plan for the Newhall Ranch Specific Plan and all applicable County codes including, but not limited to, the Subdivision Code, Building Code, and Fire Code. An Environmental Impact Report (EIR) has been prepared to County standards, and the project will comply and monitor all required mitigation measures adopted by the Board of Supervisors. Furthermore, the development will incorporate all conditions and comments from the Department of Public works (DPW) in connection with the review of grading and geotechnical reports.
<b>Objective No. 2:</b>	
Significant ridges, knolls, and rock outcroppings should be respected in the site design and incorporated as features where feasible.	The Board of Supervisors concluded in their approval of the Newhall Ranch Specific Plan that the Hillside Preservation and Grading Plan for the Newhall Ranch Specific Plan was prepared in accordance with the County Grading Ordinance and incorporates provisions of the Performance Review Criteria for Hillside Management Areas. No significant ridgelines, knolls or outcroppings exist in the Mission Village area. The Project would leave the river bluffs intact and undisturbed.
<b>Objective No. 3:</b>	
Contour grading should be employed where feasible to lessen the visual impact of large slopes and long major uniform slopes should be avoided.	The proposed Mission Village project is designed so that it will follow the natural contour lines where feasible and the project design employs contour grading on major slopes.
<b>Objective No. 4:</b>	
Avoid the removal of oak trees to the maximum extent feasible and minimize grading to the edge of tree driplines.	The proposed project will avoid impact to oak trees to the maximum extent feasible. An oak tree permit is requested to remove 158 oak trees and to grade within the protected zone of 49 trees of a total of 564 trees (on-site and off-site) in connection with the development of Vesting Tentative Tract Map 61105.
<b>Objective No. 5:</b>	
Grading should emphasize and accentuate scenic vistas and natural landforms.	The Board of Supervisors concluded in their approval of the Newhall Ranch Specific Plan that the Hillside Preservation and Grading Plan for the Newhall Ranch Specific Plan was prepared in accordance with the County Grading Ordinance and incorporates provisions of the Performance Review Criteria for Hillside Management Areas. The proposed Mission Village project will be developed in conformance with the Hillside Preservation and Grading Plan for the Newhall Ranch Specific Plan. The proposed grading plan preserves the river bluffs and 65 acres of spineflower preserve. The residential and commercial developments are designed to be situated so as to accentuate scenic vistas and natural landforms.
<b>Objective No. 6:</b>	
Slopes requiring special erosion control or fuel modification prevention should be designed for ease of maintenance.	The Development that encroaches within the hillside management area includes grading operations that will include adequate erosion control (to include landscaping) to ensure that the site is not left in a state that would otherwise be unsafe and that is designed for ease of maintenance. The remaining hillside management areas will follow guidelines and landscape criteria that would implement special erosion control or a fuel modification plan to help reduce the threat of fire in high hazard areas.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>V. DESIGN GUIDELINES</b>	
<b>L. Grading</b>	
<b>Objective No. 7:</b>	
Special attention should be given to arrangement of landscape materials as means of creating a natural, hillside appearance.	Special attention will be made with respect to landscaping so to create a natural appearing hillside, whenever feasible. Native and naturalized plant material will be incorporated into the landscape palette to the extent feasible and where fire codes allow.
<b>Objective No. 8:</b>	
Graded slopes should be planted and stabilized in compliance with County-approved landscape, irrigation, and maintenance requirements.	Grading operations will include adequate erosion control, including landscaping, to ensure that the site is stabilized in a safe manner. In addition, those portions of the proposed Mission Village project within hillside management areas will follow guidelines and landscape criteria that would implement special erosion control, a fuel modification plan, and maintenance plan.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>VI. VAL VERDE CIVIC ASSOCIATION AGREEMENT</b>	
<b>Objective No. 1:</b>	
Newhall Ranch Company will plant a total of 15 oak trees of approximately 20 inch circumference in the following locations: the north end of the Business Park near existing Val Verde homes, the entrance to the proposed fire station off Chiquito Canyon Road, the neighborhood park near Chiquito Canyon Road. If space permits, an equal number of oak trees (5 trees) will be planted at each location. The trees will be planted when water lines are installed as part of the Business Park development.	As none of these sites are found within Mission Village Tract Map 61105, this objective does not apply to this project.
<b>Objective No. 2:</b>	
Newhall Ranch Company will add the following to the Specific Plan (Chapter 4, Section 3 a.) as a mandatory Design Guideline for the Chiquito Canyon Business Park: "Within the Business Park in Chiquito Canyon, roof equipment shall be screened from view from public streets."	As the Chiquito Canyon Business Park is not a part of the Mission Village Tract Map 61105 site, this objective does not apply to this project.
<b>Objective No. 3:</b>	
The Chiquito Canyon Community Trail will be relocated to the west side of Chiquito Creek. Newhall Ranch Company agrees to the following provisions for the area of Chiquito Canyon Road between the intersection of Chiquito Canyon/Business Park Drive and the northerly Newhall Ranch Boundary.	As the Chiquito Canyon Community Trail is not a part of the Mission Village Tract Map 61105 site, this objective does not apply to this project.
<b>Objective No. 4:</b>	
An 8-foot-wide equestrian trail will be added to the Community Trail with fencing.	As the Chiquito Canyon Community Trail is not a part of the Mission Village Tract Map 61105 site, this objective does not apply to this project.
<b>Objective No. 5:</b>	
The Community Trail will be lighted with the lighting directed so as to light the trail only with minimal or no spillover.	As the Chiquito Canyon Community Trail is not a part of the Mission Village Tract Map 61105 site, this objective does not apply to this project.
<b>Objective No. 6:</b>	
Chiquito Canyon Road will not have street lighting, subject to approval by the Department of Public Works.	As the Chiquito Canyon Road is not a part of the Mission Village Tract Map 61105 site, this objective does not apply to this project.
<b>Objective No. 7:</b>	
Trees and groundcover will be planted within the easterly 8-foot parkway of Chiquito Canyon Road adjacent to the Community Trail. The trees will be staggered asymmetrically and will have varied heights and canopies. A second row of trees and bushes will be planted between the east side of the Creek and the Business Park. The objective of the tree planting is to reduce the visibility of the Business Park buildings nearest to Chiquito Canyon Road. The Val Verde Civic Association will be consulted as to the types of trees to be planted, and the Civic Association may provide a list of tree types that are preferred.	As the Chiquito Canyon Community Trail is not a part of the Mission Village Tract Map 61105 site, this objective does not apply to this project.
<b>Objective No. 8:</b>	
The Community Trail section will include a 2-foot wide area in which bushes will be planted, to be located immediately east of the equestrian trail.	As the Chiquito Canyon Community Trail is not a part of the Mission Village Tract Map 61105 site, this objective does not apply to this project.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>VI. VAL VERDE CIVIC ASSOCIATION AGREEMENT</b>	
<b>Objective No. 9:</b>	
The Specific Plan areas adjacent to Val Verde will have Open Area, Estate and Low-Medium Residential land uses only, as shown on the revised Land Use Plan for the Specific Plan.	Mission Village Tract Map 61105 is not adjacent to Val Verde, and as a result, this objective does not apply to this project.
<b>Objective No. 10:</b>	
Adoption of the Specific Plan will result in the existing Commercial land use on Planning Area RW-22 being changed to Low-Medium Residential. The Low-Medium Residential land use area (RW-22) is restricted to not more than 30 detached homes. A footnote will be added to Table 5.4-1 Annotated Land Use Plan in Chapter 5 of the Specific Plan to state that Planning Area RW-22 shall not be converted to Commercial land use.	RW-22 is not in Mission Village Tract Map 61105, and as a result, this objective does not apply to this project.
<b>Objective No. 11:</b>	
Chiquito Canyon Road north of Business Park Drive is to be retained as a two lane Limited Secondary Highway as shown in the "Alternate Highway Plan".	Chiquito Canyon Road north of Business Park Drive is not in Mission Village Tract Map 61105, and as a result, this objective does not apply to this project.
<b>Objective No. 12:</b>	
Newhall Ranch Company agrees to provide directional signage for the Val Verde Community at the intersection of Chiquito Canyon Road and Business Park Drive.	The intersection of Chiquito Canyon Road and Business Park Drive is not in Mission Village Tract Map 61105, and as a result, this objective does not apply to this project.
<b>Objective No. 13:</b>	
In the design of the directional sign above, Newhall Ranch Company will consider the use of sign elements to be provided by the Val Verde Civic Association. The Val Verde Civic Association recognizes that the directional sign must be compatible with other Newhall Ranch and Business Park signage.	See response to Objective No. 12.
<b>Objective No. 14:</b>	
Within 30 days of recordation of a final subdivision map for purposes of construction within the Estates Planning Area (RW-21), Newhall Ranch Company will pay the costs, not to exceed \$2,000, for a community identification sign to identify the Val Verde Community. This community identification sign will be located along Chiquito Canyon Road, north of the Specific Plan boundary. The Val Verde Civic Association is responsible for acquiring a site or the necessary rights to erect the sign.	See response to Objective No. 12.
<b>Objective No. 15:</b>	
Newhall Ranch Company agrees to support the Val Verde Civic Association's efforts to retain the Caltrans directional sign to Val Verde which is located on SR-126.	Mission Village Tract Map 61105 is not adjacent to Val Verde, and as a result, this objective does not apply to this project.
<b>Objective No. 16:</b>	
For grading in hillside areas, the Specific Plan states that the Los Angeles County Hillside Development Guidelines should be followed. These call for contour grading and other techniques to maintain the natural appearance of hillsides, and are more restrictive than the County's Grading Ordinance standards which are normally followed.	The development of Mission Village Tract Map 61105 will comply with all applicable requirements relative to grading in hillside areas.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>VI. VAL VERDE CIVIC ASSOCIATION AGREEMENT</b>	
<b>Objective No. 17:</b>	
Newhall Ranch Company agrees to request that the Board of Supervisors adopt a resolution prohibiting trucks weighing more than 14,000 pounds from using that portion of Chiquito Canyon Road north of Business Park Drive, except for any such trucks making local deliveries within Val Verde.	Mission Village Tract Map 61105 is not adjacent to Val Verde, and as a result, this objective does not apply to this project.
<b>Objective No. 18:</b>	
Lighting in the Business Park will conform to the Lighting Design Guidelines in Section 4.7 Design Guidelines of the Specific Plan. (See the attached Section 4.7.)	Mission Village Tract Map 61105 does not include Business Park uses, and as a result, this objective does not apply to this project.
<b>Objective No. 19:</b>	
Newhall Ranch Company will make its best efforts to preserve as many existing oak trees in the Business Park as feasible consistent with the reasonable development of the Business Park.	Mission Village Tract Map 61105 does not include Business Park uses, and as a result, this objective does not apply to this project.
<b>Objective No. 20:</b>	
Trail access will be provided from the Chiquito Canyon Community Trail to the easterly Neighborhood Park north of SR-126 in the Riverwood Village and to the Regional River Trail. Pedestrian crossings of Chiquito Canyon Road and SR-126 will be at grade, except the trail will use a sidewalk across SR-126 when the interchange is built. Equestrian crossings will use the creek bed under Chiquito Canyon Road and SR-126.	As the Chiquito Canyon Community Trail is not a part of the Mission Village Tract Map 61105 site, this objective does not apply to this project.
<b>Objective No. 21:</b>	
Newhall Ranch Company agrees to provide a traffic signal at the Chiquito Canyon/Business Park Road intersection. Newhall Ranch Company agrees to request that the Department of Public Works approve a signal type which has a left-turn arrow for traffic northbound on to Chiquito Canyon Road, and which permits left turns when the arrow is not lighted if there is no opposing traffic. In addition, Newhall Ranch Company agrees to provide a southbound "free-right" turn movement at the above intersection.	The intersection of Chiquito Canyon Road and Business Park Drive is not in Mission Village Tract Map 61105, and as a result, this objective does not apply to this project.

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>VI. VAL VERDE CIVIC ASSOCIATION AGREEMENT</b>	
<b>Objective No. 22:</b>	
<p>In regard to the sewer main lines in SR-126 from the new Water Reclamation Plant to Chiquito Canyon Road, and in Chiquito Canyon Road from SR-126 to the northerly Specific Plan boundary, Newhall Ranch Company agrees:</p> <ol style="list-style-type: none"> <li>If in the future the above sewer lines need to be oversized and those sewer lines can be reserved to provide capacity to serve existing and planned land uses in the Val Verde Community Standards District which are tributary by gravity flow to the Newhall Ranch Water Reclamation Plant, Newhall Ranch Company agrees to fund the costs of over sizing the above sewer lines. (Capacity would not be provided to serve subdivisions proposed by commercial builders or developers.)</li> <li>Subject to approval by the County Sanitation Districts of Los Angeles County (CSDLAC), Newhall Ranch Company has no objection to the reservation of the additional sewer main line capacity for the land uses within the Val Verde Community Standards District after the sewer main lines are dedicated to the CSDLAC.</li> <li>Newhall Ranch Company and the Val Verde Civic Association mutually agree that in order to avoid delays in construction of the sewer main lines, the amount of over sizing needed to serve the Community Standards District will be estimated by the appropriate County Department or Agency if the Val Verde Community Standards District is not yet adopted by the Board of Supervisors by the time that sewer sizing must be determined. Newhall Ranch Company currently estimates the need to determine sewer sizing could occur in about year 2001.</li> </ol>	<p>Mission Village Tract Map 61105 is not adjacent to Val Verde, and as a result, this objective does not apply to this project</p> <p>To the extent the development of Mission Village involves consideration/placement of newer lines in the referenced roads, the project would be consistent with the requirements of Objective No. 22.</p>
<b>Objective No. 23:</b>	
<p>Due to the rapid changes in communications technology, including development of "wireless" systems, Newhall Ranch Company does not know at this time whether underground TV cable would be provided to the 30 homes in Planning Area RW-22 adjacent to Val Verde. If cable is extended to Planning Area RW-22, it will be extended to the northerly boundary of that planning area, and Newhall Ranch Company would have no objection to the system being further extended into Val Verde by the cable company.</p>	<p>To the extent the development of Mission Village includes the extension of cable utilities to Planning Area RW-22, such extension would be consistent with the requirements of Objective No. 23.</p>
<b>Objective No. 24:</b>	
<p>Newhall Ranch Company agrees to fund the preparation of a Community Standards District for Val Verde up to a maximum of \$75,000. The funding would be provided to Los Angeles County after the final approval of Newhall Ranch by the Board of Supervisors, and final resolution of all legal challenges to the approvals.</p>	<p>The County of Los Angeles has adopted a Castaic Area Community Standards District which has established development standards for the Val Verde community.</p>
<b>Objective No. 25:</b>	
<p>All of the work needed to determine the standards and set up the District would be completed by the Department of Regional Planning.</p>	<p>See response to Objective No. 25.</p>
<b>Objective No. 26:</b>	
<p>Newhall Ranch Company agrees to provide a representative to attend meetings and provide advice regarding the formation of the Community Standards District.</p>	<p>See response to Objective No. 25.</p>

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>VI. VAL VERDE CIVIC ASSOCIATION AGREEMENT</b>	
<b>Objective No. 27:</b>	
<p>The Val Verde Civic Association and Newhall Ranch Company agree that the "frontage road" or "outer highway" is not feasible because it would require large amounts of grading, would intrude into an already-filled portion of the Chiquita Landfill, and because it is not supported by the Department of Public Works. Also, an east-west frontage road is being provided on the south side of SR-126 by the extension of Wolcott Avenue from SR-126 eastward to Long Canyon Road, as shown on Specific Plan Revised Exhibit 2.3-1 Land Use Plan.</p>	<p>In accordance with this objective, a frontage road north of SR 126 was not included within the approved Specific Plan.</p>
<b>Objective No. 28:</b>	
<p>The 5.3-acre parcel on the east side of Chiquito Canyon Road (Planning Area RW-22) was changed from Medium Residential to Low Medium Residential. This change reduces the maximum number of homes that can be built on the parcel from 90 homes to 30 homes, and the overall density to 5.7 dwelling units per acre.</p>	<p>Planning Area RW-22 is not in Mission Village Tract Map 61105, and as a result, this objective does not apply to this project.</p>
<b>Objective No. 29:</b>	
<p>Planning Area RW-22 was restricted to single-family detached homes only, which may include clustered single-family detached homes such as the Court Homes in Valencia.</p>	<p>Planning Area RW-22 is not in Mission Village Tract Map 61105, and as a result, this objective does not apply to this project.</p>
<b>Objective No. 30:</b>	
<p>The northern edge of the Chiquito Canyon Business Park was moved southward, creating an Open Area land use designation adjacent to existing Val Verde residences. (Planning Area RW-23).</p> <p>At the request of Newhall Ranch Company and after review by the Department of Public Works, the Regional Planning Commission approved the "Alternate Highway Plan" which retains the existing two-lane Limited Secondary Highway on Chiquito Canyon Road north of Business Park Drive. There would be a traffic signal at the intersection of Chiquito Canyon Road and Business Park Drive. A southbound "free right" turn would be provided at this intersection. The northerly Business Park access to Chiquito Canyon Road would be for emergencies only.</p>	<p>As the Chiquito Canyon Business Park is not a part of the Mission Village Tract Map 61105 site, this objective does not apply to this project.</p>
<b>Objective No. 32:</b>	
<p>Newhall Ranch Company agreed to seek Caltrans approval for and to fund construction of a traffic signal at the intersection of SR-126 and Chiquito Canyon Road along with the first construction at that intersection.</p>	<p>. Mission Village Tract Map 61105 improvements do not include this intersection, and as a result, this objective does not apply to this project.</p>

OBJECTIVE	IMPLEMENTATION and CONSISTENCY
<b>VII. PHASING PROGRAM</b>	
<b>Objective No. 1:</b>	
<p>The basic phasing mechanism of the Specific Plan is the tentative subdivision map. As each tentative subdivision map is processed, infrastructure requirements for that subdivision will be established. The infrastructure requirements for each tentative subdivision map will be consistent with the Conceptual Backbone Infrastructure systems set forth in Section 2.5 of the Specific Plan, subject to review for substantial compliance with the Specific Plan by the Planning Director (see Section 5.2, paragraph 2).</p>	<p>Mission Village Tract Map 61105 is consistent with the Conceptual Backbone Infrastructure system set forth in Section 2.5 of the Specific Plan.</p>
<b>Objective No. 2:</b>	
<p>Concurrent with the submittal of each tentative subdivision map, updated Annotated Land Use Plan Statistical Table and Park and Recreation Improvements Table will be filed with the County, as set forth in Section 5.4 of the Specific Plan.</p>	<p>An updated Annotated Land Use Plan Statistical Table and Park and Recreation Improvements Table was filed with the County when Mission Village Tract Map 61105 was submitted.</p>

Valencia, CA 91355

Dated July 20, 2004  
Job No: 04-1703H-1

### EXECUTIVE SUMMARY

The main purposes of the investigation were (1) to evaluate possible fault-related features and lineaments in the Airport Mesa area; (2) to determine their significance, lateral extent and activity; and (3) to make appropriate recommendations to mitigate potential ground rupture hazards. This was accomplished by interpretation of aerial photographs and published maps and reports, by field mapping, by excavating, sampling and logging 82 backhoe trenches and 17 bucket-auger borings, and by geologic analysis of the data.

Most of the site is underlain by the Plio-Pleistocene, nonmarine Saugus Formation. This unit is overlain by extensive late Pleistocene terrace deposits ( $Qt_1$ ) in the Airport Mesa area. Recent alluvium is present in the larger canyon areas. No significant ground water was encountered during our subsurface investigations.

Previous geologic mapping suggested the presence of poorly defined, complex geologic structure and possible faulting in the Airport Mesa area. Review of stereoscopic, aerial photographs and topography of the area also indicated possible fault-related geomorphic expression along two alignments designated as the Saddle Lineament to the south and the Airport Mesa Lineament to the north. Our multi-phase investigation revealed that the Saugus Formation bedrock has been tectonically deformed to produce several east-plunging folds and local faulting. The overlying  $Qt_1$  terrace deposits are also tectonically deformed along the Saddle and Airport Mesa Lineaments. The block between the two lineaments was found to have been uplifted at least 40 ft. as a result of folding and reverse faulting within the last 100,000 ( $\pm$ ) years. A zone of normal faults was discovered in the terrace deposits overlying the trace of the anticlinal fold on the northwestern portion of Airport Mesa. This style of deformation is consistent with tensional stresses at the crest of a tightening anticline. Because the anticline intersects the Airport Mesa Lineament and minor, oblique strike-slip faults were encountered between the lineament and the anticline, the structures are considered to be related.

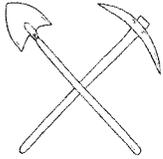

Based on the observed geologic conditions and discussions with Dr. Roy Shlemon regarding the age of the materials cut by faulting and the style of deformation, building setbacks were recommended for the Airport Mesa and Saddle Lineaments and for the anticline. Because of the potential for sympathetic movement, zones of restricted development and structural mitigation are also recommended between the two lineaments, in the area between the

Airport Mesa Anticline and the Airport Mesa Lineament/Fault, and for 100 ft. beyond the recommended building setbacks.

Based on our investigations we have prepared a geologic map (see **Plate I**) using the 1999 digital topography prepared by Psomas for a base. The fault and fold traces, building setback zones, areas of restricted development, as well as geologic units, bedding orientations, and the locations of our subsurface investigations (verified with GPS survey control) are illustrated on the geologic map. Geologic cross sections have been prepared to illustrate the three-dimensional structural geometry of the bedrock and terrace deposits. The following report describes the results of our investigation and presents preliminary conclusions and recommendations regarding potential ground rupture hazard and appropriate mitigation measures. Dr. Roy Shlemon reviewed evidence for the age of the soils developed on Airport Mesa and reviewed critical trench exposures. He has prepared an Appendix for this report which presents his description of the soils and summarizes his opinions on the age of the soils and implications for the age of fault movements.

**Attention:** Mr. Corey Harpole

**Subject: Geologic Report**  
Fault Investigation for Airport Mesa Area  
Portion of Mesas East, VTT 61105, Newhall Ranch  
Castaic, California

**References:** see end of text

Dear Mr. Harpole:

The following report presents the findings of our fault investigations of the Holser Structural Zone in the Airport Mesa area of Newhall Ranch.. The purpose of this investigation was to evaluate the existence of possible fault-related features and lineaments in the Airport Mesa area, to determine their significance, lateral extent, and activity, and to make appropriate recommendations to mitigate potential ground rupture hazards. The following report is based on the findings of our detailed investigations in 1999 and 2000 and has been reviewed and updated in consideration of the proposed development grades for vesting tentative tract map 61105 dated June 14, 2004.

## **1.0 SCOPE OF WORK**

1. Review of published geologic maps and geologic reports covering the subject site.
2. Review of the Alquist-Priolo earthquake fault zone map of the Newhall quadrangle.

3. Review of the L.A. County Safety Element and the ground rupture hazard map presented therein.
4. Review of the site topography and the following aerial photographs to evaluate geomorphic evidence for faulting and fault-related features:

<b>Date</b>	<b>Photograph</b>	<b>Scale</b>	<b>Agency</b>
1928	C300-E94, E95, E120, and E121	1"=2000' ±	Fairchild
1945	9800-14-1529	1"=1200' ±	Fairchild
1977	1 Ven 2-47	1"=1500' ±	Continental
1980	1080-150 and 1080-151	1"=4000' ±	USDA
?	02714-0048 and 0049	1"=2775' ±	? (Infrared)

5. Field mapping of existing outcrops and road cuts.
6. Coordination with Underground Service Alert and agricultural personnel with Newhall Land and Farming Company prior to starting our subsurface investigations.
7. Excavation and geologic logging of 82 trenches and one existing dozer cut, designated T-1H through T-82H and DC-1H respectively. Of these excavations, 58 were backhoe pits and the rest were elongate trenches and dozer trenches totaling 4820 lineal ft. Five of the backhoe pits were excavated for Dr. Shlemon to examine the stratigraphy and development of the soils (pedogenic profiles) present on and adjacent to Airport Mesa.
8. Excavation and geologic logging of 17 bucket-auger borings (B-1H through B-17H), drilled to a maximum depth of 82 ft., to evaluate variations in the elevation of the base of the terrace deposits and the geologic structure in the underlying bedrock.
9. Review of pertinent trench and boring logs excavated and logged for our landslide investigation of the Mesas Area (Q designation) and our landslide investigation of the Mesas Entertainment Area (M designation).

**LOCATION MAP**

Job No.: 04-1703H-1

Date: 7/20/04

10. Location of all exploratory excavations with Trimble GPS instrumentation. We have coordinated with Psomas to have all of our GPS locations incorporated into the data base for Newhall Ranch.
11. Laboratory testing of selected drive samples to determine the engineering properties of the site materials. Testing included dry density and moisture content of in-situ soils.
12. Preparation of the attached boring and trench logs (Appendices B and D) which graphically illustrate the observed geologic conditions.
13. Preparation of five geologic cross sections (Appendix C) illustrating the three-dimensional geometry of folding and faulting observed in the bedrock and overlying terrace deposits and proposed grades from the tentative map dated June 14, 2004.
14. Preparation of the attached location map and our geologic map (Appendix D) which illustrates the approximate limits of exposed geologic units, structural attitudes, faults, folds and boring and trench locations based on GPS surveying. Our geologic maps were prepared using the AutoCAD Computer Program and topographic base provided by Psomas.
15. Preparation of our conclusions and recommendations and this report.

## **2.0 PROPOSED DEVELOPMENT**

We understand that the Airport Mesa Area is proposed for mixed use/commercial development and Open Space areas. Conventional cut/fill grading operations are proposed to provide building pads, parking areas and roads.

## **3.0 SITE DESCRIPTION**

Airport Mesa is located on the northeastern portion of Mesas East (See location map). The mesa is informally named for a small landing strip which was abandoned many years ago. The main mesa area is currently utilized for various agricultural crops. The adjacent slope areas are typically covered by annual grasses and sparse chaparral vegetation. Oak trees are locally present in protected areas. Previous site development is minimal and consists primarily of dirt roads and pads associated with past oil well drilling and production. The site topography is dominated by a broad, elevated mesa, bounded by the Santa Clara River to the north and by tributary canyons to the east and west. Steep bluffs occur on the northern and western margins of the mesa. Three north-draining canyons dissect the mesa. The mesa

is underlain by old, uplifted stream and fan deposits. Elevations at the site range from approximately 980 ft. along the Santa Clara River to 1200 ft. on the south side of Airport Mesa. Details of the site topography are presented on the **Location Map** and **Plate I**.

#### **4.0 GEOLOGIC SETTING**

The Airport Mesa area is located in the Transverse Ranges geomorphic province of southern California in the eastern portion of the Ventura Basin. The Ventura Basin has been tectonically downwarped in the geologic past to produce a large-scale synclinal structure in which a thick sequence of Cenozoic sediments have accumulated. The site is underlain by sedimentary rock of the Saugus Formation, which has been tectonically deformed into southeast-plunging folds with local faulting. Younger fluvial and fan terrace deposits discordantly overlie the bedrock. Alluvium is present in the larger drainages and soil and slopewash mantle most of the site.

#### **5.0 GEOLOGIC UNITS**

##### **5.1 Bedrock**

###### **5.1.1 Saugus Formation (TQs and TQsu)**

The bedrock underlying the site consists of Plio-Pleistocene, non-marine, sedimentary rock of the Saugus Formation. The age of this formation ranges from 2.5Ma to 0.7Ma based on magnetostratigraphic studies in this area (Levi et al. 1986; Levi and Yeats, 1993). South of the Saddle Lineament (Plate I), this formation includes interbedded light-gray to yellowish-gray sandstone, pebbly sandstone and pebble to cobble conglomerate and light yellowish-brown to olive-brown sandy siltstone, siltstone and mudstone, and rare moderate-brown to dark yellowish-brown claystone. Siltstone and mudstone units are typically very expansive. The Saugus Formation observed north of the Saddle Lineament is dominantly coarse grained and moderately to well indurated.

Our subsurface investigations and field mapping indicate that the upper section of the Saugus Formation is lithologically distinct from the lower section. The lower (older) stratigraphic section of the Saugus Formation is generally coarse grained, moderately to well indurated, and lithologically similar to its type section as exposed along railroad cuts near Bouquet Junction (Hershey, 1902). The upper (younger) stratigraphic section (exposed south of the Saddle Lineament) is less indurated and commonly contains more

thinly bedded siltstone and mudstone than the type section. Thick reddish-brown "red beds" are not common.

In contrast to the geologic maps of Kew (1924), Winterer and Durham (1962) and Dibblee (1996), the maps by Weber (1982) and Treiman (1986) have designated the upper section of the Saugus Formation as Pacoima Formation. Review of Oakeshott (1958), however, indicates that the type section of the Pacoima Formation consists of a very poorly sorted mix of angular pebbles, cobbles and boulders in a dark-brown to reddish-brown mudstone matrix which was rapidly deposited in an alluvial fan environment. In contrast, the upper section of the Saugus Formation on Newhall Ranch is dominated by thinly bedded siltstone, mudstone and sandy siltstone with sandstone and rounded pebble to cobble conglomerate interbeds. Unlike the Pacoima Formation, the upper Saugus Formation is moderately well bedded and appears to be a fluvial deposit. Oakeshott (1958) also indicates that the Pacoima Formation lies with distinct angular discordance above the Saugus Formation, but this distinction is not prominent on Newhall Ranch.

We have designated the bedrock exposed to the south of the Saddle Lineament as the upper member of the Saugus Formation (TQ<sub>Su</sub>). The bedrock exposed north of the Saddle Lineament is mostly coarse grained and is designated as undifferentiated Saugus Formation (TQs).

#### 5.1.2 Terrace Deposits (Qt<sub>1</sub> and Qt<sub>2</sub>)

Deposits of typically flat-lying older alluvium occur up to 200 feet above active stream channels, and are designated as terrace deposits on the attached Geologic Maps (**Plate I**). This older alluvium was deposited in a fluvial and/or alluvial fan environment. At least two fill-terrace levels occur on site. The dominant upper terrace deposit (designated Qt<sub>1</sub> on the geologic map) underlies the Airport Mesa area approximately 180 to 200 ft. above the active Santa Clara River. Three remnants of younger terrace deposits (designated Qt<sub>2</sub> the geologic map) are located between approximately 120 and 160 ft. above the Santa Clara River on the north and eastern sides of Airport Mesa (**Plate I**).

The Qt<sub>1</sub> deposit typically consists of yellowish-gray to yellowish-brown sandstone, pebbly sandstone, silty sandstone and local siltstone up to 60 feet thick. The base of this deposit is typically marked by a coarse basal layer approximately 6 to 10 ft. thick consisting of interbedded, friable sands and gravels. Cobbles and boulder-sized clasts

are common at the basal contact. Borings B-11H through B-14H show that a local coarse-grained layer, up to 15 ft. thick, underlies the laterally extensive, cobble- to boulder-rich bed (see Cross Section 3H-3H'). North of the Saddle Lineament, the stratigraphy and sedimentary structures are consistent with a fluvial depositional environment. South of the Saddle Lineament, the terrace deposits are less sorted, and the north-dipping geomorphic surfaces suggest that the sediments were deposited in a fan environment. These fan deposits probably interfinger with or grade into the fluvial deposits observed at Airport Mesa.

The three remnants of terrace deposits on the north and eastern margins of Airport Mesa are designated as  $Qt_2$  on the geologic map (**Plate I**). These terrace deposits may represent separate levels or one level, which has since been tilted down to the east. The western remnant is designated as  $Qt_{2a}$ , and the central is designated as  $Qt_{2b}$  (**Plate I**). A third terrace deposit on the eastern margin of the site, between the Saddle and Airport Mesa Lineaments, is queried as part of the  $Qt_2$  level (**Plate I**). The  $Qt_{2a}$  deposit is fine grained at the top and has a coarse-grained bed containing common pebbles and cobbles at the base. No subsurface explorations were completed in the  $Qt_{2b}$  deposit.

Although a distinct angular discordance is generally present between the  $Qt_1$  terrace deposits and the underlying Saugus Formation at Airport Mesa, the angularity is minor south of the Saddle Lineament and the two units are sometimes indistinguishable in isolated exposures.

## 5.2 Landslides (Qls)

Two landslides are recognized east of Airport Mesa along the eastern extension of the Airport Mesa Lineament. Evidence of landslide movement overprinting apparent tectonic faulting was observed in trench T-42H and boring B-24M.

## 5.3 Surficial Deposits

### 5.3.1 Alluvium (Qal)

The larger canyon areas and Santa Clara River floodplain are underlain by alluvium. Older, incised alluvium is commonly present on the margins of the canyons. Both of these units are mapped as Qal on the attached Geologic Map. These deposits typically consist of sands and gravel with cobbles, boulders and local silty interbeds.

### 5.3.2 Slopewash (Qsw)

Slopewash (colluvium) is a non-bedded, heterogeneous accumulation of soil and weathered bedrock deposited by gravity on nearly all of the site slopes. It consists of yellowish-brown silty sand with scattered pebbles and clasts of sandstone and mudstone derived from the adjacent parent rock. Deposits of possible older slopewash were locally identified in trenches excavated on slopes located below the Qt<sub>1</sub> terrace deposits. The maximum thickness of slopewash encountered was 17 ft. and includes colluvium and minor debris flow deposits. This unit is noted on our Geologic Logs, but only the larger accumulations are shown on the Geologic Map (**Plate I**).

### 5.3.3 Soil

A thick mantle of soil (pedogenic profiles) has developed over most of the site, except at bedrock outcrops, areas of steep slopes, and areas disturbed by man. Typical soils above the bedrock consist of yellowish-brown silty sand to sand with scattered pebbles. Soils observed on the Qt<sub>1</sub> geomorphic surface are typically strongly developed with distinct argillic and calcic B-horizons. The stratigraphy of the Qt<sub>1</sub> soils was reviewed in the field by Dr. Roy Shlemon in order to evaluate the age of soil development, the age of the Qt<sub>1</sub> geomorphic surface, and provide a minimum age for the underlying terrace deposits. Detailed descriptions of the Qt<sub>1</sub> soils and the results of Dr. Shlemon's review are presented in **Appendix A**.

### 5.4 Artificial Fill (af)

Artificial fill is present on many portions of the site as shown on the attached Geologic Map. Most fill is the result of past oil well drilling and oil production. All uncompacted fill should be removed and recompacted prior to placement of compacted fill.

## 6.0 Geologic Structure

South of the Airport Mesa area, bedrock of the Saugus Formation strikes northwest and typically dips 10° to 25° to the northeast. In the Airport Mesa area, the Saugus Formation is folded into two easterly plunging synclines and an anticline. Much of the Mesa is part of the "Holser Structural Zone" as defined by Weber (1982). Faulting is associated with the Airport Mesa Lineament, the syncline along the Saddle Lineament, and the Airport Mesa Anticline. The overlying terrace deposits have been deformed as well along these features.

Specific details of the geologic structure at Airport Mesa are described under **Section 7.5** below and illustrated on the attached Geologic Map (**Plate I**) and Cross Sections (**Plate II**).

## **7.0 FAULT INVESTIGATION**

### **7.1 Approach of Investigation**

Although new faults may develop during a seismic event, significant ground rupture is generally expected to occur along pre-existing faults because they are zones of weakness that accommodated movement in the past. By documenting evidence of recent activity, the potential for ground rupture hazard under the current tectonic framework can be assessed. Ground rupture cannot be prevented; therefore, mitigation of the ground rupture hazard involves identifying major faults, which show evidence of recent activity, and avoiding construction of structures for human occupancy (as defined by the Alquist-Priolo Act) over their surface traces. Recognition and mapping of these pre-existing fault breaks is accomplished by field mapping, by review of topography and geomorphology, by evaluation of aerial photo lineaments, by geophysical techniques, by review of data from nearby oil wells, and by excavating appropriate trenches and geologically logging the trench walls with an emphasis on identifying faults and features potentially indicative of faulting.

Fault zones typically consist of a main zone of deformation along which most of the accumulated movement has occurred, and secondary faults and splay faults which have accommodated substantially less slip and are laterally discontinuous. Although secondary faults may rupture during an earthquake along the main fault zone, the potential hazard is substantially less than along the main zone. The relative density of faulting and magnitude of displacements along these secondary faults tend to decrease away from the main zone to a point where little or no faulting is present. Geomorphic and structural indicators for the location of the more distant secondary faults is generally lacking and, therefore, it is not realistically feasible to discover and evaluate all potential secondary faults. The Alquist-Priolo Act (Hart and Bryant, 1997) addresses this issue by requiring a 50-foot setback around active fault traces to incorporate nearby fault splays unless they are demonstrated not to exist. For the purposes of this investigation, discontinuous minor faults more than 50 ft. beyond zoned fault strands are defined as subsidiary. The potential for significant primary ground rupture on subsidiary faults is reasonably considered negligible within the life of proposed structures.

## 7.2 Methods and Procedures

The boundary between main fault zones and subsidiary faults is generally gradational and; therefore, the delineation of main zones of deformation relative to subsidiary faults is somewhat subjective. However, a distinction can be made between the continuous main zone and the subsidiary faults by utilizing data collected on the style and magnitude of deformation and activity of a fault.

The following five criteria were used to evaluate the style of deformation within the Holser Structural zone.

1. Evaluation of slip magnitude
2. Determination of fault gouge thickness
3. Evaluation of structural and lithologic disparities across a given fault
4. Determination of the lateral continuity (length) of a given fault
5. Evaluation of evidence for Holocene activity.

Main zones of deformation will display one or more of these five criteria. Large separation across a fault zone is considered to be the result of repeated movement along a few, discrete fault surfaces. Bedrock adjacent to a fault surface is crushed and sheared to form a fine-grained gouge during seismic events. Thicker gouge, therefore, suggests that repeated movements have occurred along a given fault in the past, and that there is a greater likelihood of additional movement in the future. As the separation across a fault increases through time, bedding adjacent to the fault may be folded owing to drag. Therefore, bedding attitudes may change abruptly adjacent to a main fault zone that has accommodated substantial slip. Such faults may also juxtapose bedding with different orientations or even different rock units. The larger the fault, the more disparate the structure or rock units may be. Because large earthquakes are generated along larger faults, and faults can only display a certain amount of displacement over a given length, main fault zones are typically laterally continuous for a significant distance (typically tens of meters or more). Because faults can only display a certain amount of displacement over a given length, those faults which cannot be traced a significant distance have probably not experienced large surface displacement. Exceptions to this rule include blind thrust faults, which may not be laterally extensive at the surface yet have the capability to generate relatively high magnitude earthquakes.

In brief, main zones of deformation will usually display large separation, thick gouge, structural and/or lithologic disparities across their traces, lateral continuity and evidence for Holocene activity. However, subsidiary fault zones will not. Evidence for Holocene activity on main faults may be lacking at a given site. Nevertheless, because of their size and continuity (both laterally and at depth), such faults may require mitigation owing to potential sympathetic movements.

### **7.3 Criteria for Aerial Photo Analysis**

In order to locate and assess the significance of potential fault lineaments, a series of historic aerial photographs (listed in Item #4 of Section 1.0) were obtained and analysed. Photographic lineaments were identified and assessed based on their relative strength, continuity, topographic expression, tonal (color) contrast, and vegetation contrast and/or alignment. Each significant photo lineament was assigned a strength based on the following criteria:

1. Strong = very distinct
2. Moderate = distinct
3. Weak = not very distinct to indistinct.

The lateral continuity of each lineament was assigned based on the following definitions:

1. Continuous = an uninterrupted lineament
2. Intermittent = a segmented lineament
3. Discontinuous = a lineament apparently unconnected to any other lineament

The strength of a lineament can be an important indicator of the relative age of associated faulting, depending on the age of the geologic units and stability of the geomorphic surface traversed. The continuity of a lineament may indicate the lateral extent of associated faulting or possible segmentation of faulting. However, variations in the continuity and strength of a lineament along strike may result from changes in the age of the units traversed rather than from changes in the existence or activity of a fault. Changes in topographic expression may provide direct evidence of offset along a fault and may document the style and relative age of movement. Variations in color (tonal contrast) along a lineament may indicate juxtaposition of different units by fault movement, or fault-controlled deposition. Vegetation alignments or changes along a lineament may represent different underlying units across a fault or possibly the presence of ground water concentrated along, or ponded adjacent to a fault.

Alternatively, apparent photo lineaments may be unrelated to faulting. Natural processes such as differential erosion or weathering along bedding or geologic contacts, active and/or abandoned channel margins and associated color or vegetation changes may also produce lineaments. Human activities such as the placement of roads, pipelines, fences and grading activities may also produce non-tectonic lineaments. Therefore, subsurface explorations are typically required in order to verify the origin and significance of each lineament. Subsurface investigations during this investigation identified two moderate to strong lineaments in the Airport Mesa area, as described under **Section 7.5** below.

#### **7.4 Summary of Fault Investigation Program**

Geologic maps by Weber (1982), Winterer and Durham (1962), Dibblee (1996) and Treiman (1986) suggested the possible existence of faulting in the Airport Mesa area on Newhall Ranch. Weber (1982) defined a broad zone of possible fault-related features and lineaments near the southeastern end of the Holser Fault as the "Holser Structural Zone". The southern portion of this zone includes the Airport Mesa area. Detailed review of aerial photographs by this firm also indicated the possible presence of faulting in this area. We therefore conducted a multi-phase geologic fault investigation in order to assess the existence, lateral extent and activity of possible faults in this area.

The first phase of the investigation included the excavation and geologic logging of 16 exploratory fault trenches, totaling over 2700 lineal ft. to evaluate the structural geometry of the bedrock and overlying terrace deposits. This work revealed evidence for faulting and folding within the terrace deposits along two lineaments, designated as the Airport Mesa and Saddle Lineaments (**Plate I**). In order to evaluate the significance of the faulting at depth below the shallow, weathered terrace deposits and within the underlying bedrock, we completed additional trenches and 8 bucket-auger borings. This verified that substantial late Quaternary fault movement had occurred along the Airport Mesa Lineament, the presence of folding and faulting along the Saddle Lineament, and evidence for possible faulting associated with a structure change on the northwestern portion of Airport Mesa. Two additional borings were then completed to verify the geometry and lateral extent of the Saddle Lineament. A dozer trench and two hand-dug pits were also completed on the northwestern margin of the mesa in order to evaluate possible faulting at the change in structure. These excavations demonstrated that the structure change is an antclinal fold (designated the Airport Mesa Anticline, on **Plate I**) in the bedrock rather than a fault, but evidence of minor faulting was observed in the overlying terrace deposits. Oil well data obtained from the California Division of Oil and Gas were reviewed, and

evidence of faulting was indicated at depth near Airport Mesa. However, correlation with the faulting observed during our investigation was inconclusive, owing to the wide spacing of the oil wells in this area and paucity of available dip logs.

Dr. Roy Shlemon was contracted to review critical trench exposures, evaluate the age of the soils developed on the surface of the terrace deposits, assist in determining the scope of additional subsurface investigations needed to delineate the extent of faulting at Airport Mesa, and develop appropriate mitigation measures. Based on discussions with Dr. Shlemon, additional subsurface investigations, including 7 additional borings and over 2100 lineal ft. of trenches and dozer trenches, were completed to evaluate the significance and extent of minor faulting associated with the Airport Mesa Anticline and adjacent area to the west, and to check for evidence of minor sympathetic faulting between the Saddle and Airport Mesa Lineaments. Minor normal faulting was found to consistently occur in the terrace deposits along a broad zone above the anticline and minor strike-slip faults were found southwest of the anticline. Local evidence of minor sympathetic faulting was observed between the two lineaments.

The remaining portion of this report presents the details of our investigation, our conclusions and recommendations for mitigation of potential fault rupture hazards, a geologic map illustrating fault mitigation zones and the locations of our subsurface explorations, geologic cross sections illustrating the three-dimensional geometry of the bedrock at depth, and geologic logs describing and illustrating the geologic conditions observed in our subsurface explorations.

## **7.5 Results of Investigation**

### **7.5.1 Airport Mesa Lineament/Fault**

Review of aerial photographs indicated the presence of a continuous strong, west-trending lineament as defined by a break in slope on the southern portion of Airport Mesa, and by a linear color change and vegetation alignment on the descending slope to the west. This is designated as the "Airport Mesa Lineament" in this report and on the Geologic Map (**Plate I**). This lineament becomes weak east of Airport Mesa and nonexistent along the Santa Clara River.

Geologic maps by Kew (1924), Winterer and Durham (1962), Treiman (1986), and Dibblee (1996) do not show any faulting at the Airport Mesa Lineament. However, mapping of the Holser Structural Zone by Weber (1982) suggested a north-side-down

fault along the eastern portion of the lineament. This possible fault was also included on the fault rupture hazard map in the Technical Appendix of the L.A. County Safety Element. However, no active faults are shown in this area on the Alquist-Priolo map of the Newhall Quadrangle.

Trenches T-37H, T-39H and T-43H were excavated across the lineament on Airport Mesa proper. These trenches revealed evidence for a south-dipping fault cutting  $Qt_1$  terrace deposits with splay faults and drag features in the hanging wall indicative of reverse movement. Stratigraphic units could not be matched across the main fault suggesting more movement than the height of the trench exposures. Borings B-1H and B-2H were therefore drilled on either side of the main fault to verify the sense and amount of offset within the terrace deposits and the structural geometry in the underlying bedrock. These borings documented that the base of the terrace has been vertically displaced approximately 40 ft. along a south-dipping reverse fault (see **Cross-Section 3H-3H', Plate II**). Total dip-slip movement is near 50 ft., and there was no evidence for a substantial strike-slip component of fault movement. Based on our observations and trench logging, we interpret this to be a bedding-plane fault within the steeply south-dipping Saugus Formation bedrock. At least some of the splay faults in the upper plate of the main fault are also the result of slippage along bedding planes in the underlying bedrock (see T-38H for example).

West of Airport Mesa, trenches T-45H and T-46H confirmed that faulting continues along the observed lineament and follows the strike of bedding (approximately east-west). Dozer trench T-76H was excavated within the young alluvium/slopewash just west of T-46H; however, no evidence of faulting was observed.

East of trench T-39H, the fault apparently truncates the southeastern end of the Airport Mesa Anticline at depth below the terrace deposits. East of the anticline, the fault cuts across bedding in the lower plate, as documented in trench T-41H (see **Cross Sections 1H-1H' and 2H-2H', Plate II**). The fault dips 30-37° south in this trench exposure, which is shallower than that observed to the west. Farther east, the fault zone appears to be overprinted and obscured by landslide movement, as identified in trench T-42H and boring B-24M. However, the distribution and elevations of the terrace deposits indicates that the fault at least continues to the eastern property boundary of Newhall Ranch.

The 40 ft. of uplift documented at the base of the terrace deposits across the Airport Mesa Fault is roughly the same as the change in elevation of the  $Qt_1$  geomorphic surface across the fault. This suggests that all of the observed movement occurred after

deposition of the terrace deposits. The selective development of soils suggests a minimum approximate age of 100,000 years for the  $Qt_1$  surface (**Appendix A**). Exposures in trench T-43H indicate that a colluvial wedge is present along the fault scarp. A portion of the colluvial wedge appears to have been subsequently tilted beyond the angle of repose and possibly offset by recurrent fault movement.

No unequivocal evidence for fault movement in Holocene times (i.e. the last 11,000 years) was observed during this investigation. However, ~100,000 year-old terrace deposits have been displaced ~50 ft., yielding an average slip rate of ~5 ft. every 10,000 years. The presence of a well defined lineament, a well preserved scarp, and evidence of tilted and offset colluvial wedge deposits also suggest recent activity. We therefore, judge that the airport lineament fault is active for the purposes of developing appropriate mitigation measures.

#### 7.5.2 Saddle Lineament/Fault

The site topography indicates the presence of aligned saddles and tributary drainages that are designated as the "Saddle Lineament" in this report and on **Plate I**. Review of aerial photographs indicates the presence of a continuous, moderate strength lineament to the east and a possible weak lineament within Middle Canyon to the west (**Plate I**). Geologic mapping by Kew (1924) shows a syncline along this trend and Weber (1982), Treiman (1986) and Dibblee (1996) show possible faulting as well. However, no faults are shown at this location on the Alquist-Priolo map of the Newhall Quadrangle or the fault rupture hazard map in the L.A. County Safety Element.

In order to evaluate the origin of the Saddle Lineament, trenches T-7H, T-8H, T-21H, T-23H, T-31H and T-40H and dozer cut DC-1H were initially excavated and logged. These exposures showed the presence of tilted terrace deposits and minor, north-dipping reverse faults. Bucket-auger borings were therefore drilled to evaluate the significance and geometry of these features at depth. These borings revealed that the terrace deposits are folded and cut by north-dipping reverse faults above a faulted syncline within the Saugus Formation bedrock (see **Cross Section 2H-2H'** for details). The basal terrace gravels have been uplifted to the north approximately 50 ft. The observed relationships and structural geometry above and below the basal  $Qt_1$  unconformity indicate that the trace of the syncline has migrated southward since the time when the basal terrace gravels were initially deposited.

In order to trace the fault laterally and to observe the bedrock structure along the Saddle Lineament to the west, trenches T-65H and T-75H were excavated and logged. Trench T-65H verified the structural geometry indicated in the borings and also exposed a north-dipping reverse fault in the bedrock underlying the zone of folded terrace deposits. A bedding plane fault which offsets the basal terrace gravel was also observed in the upper plate of the reverse fault. Trench T-75H revealed shearing along clay-rich bedding planes adjacent to a dominant north-dipping fault.

Evidence of Holocene activity along the Saddle fold/fault zone was not unequivocally demonstrated during this investigation. However, as shown in the cross-sections provided in Plate II, the north-dipping reverse faults along the Saddle Lineament likely intersect with the Airport Mesa Fault at depth and are probably genetically related. As shown on the cross sections, the basal  $Qt_1$  gravel is uplifted approximately 50 ft. to the north, which is roughly the same as the displacement on the subparallel Airport Mesa Fault. In addition, the alluvium in the drainage at trench T-72H appears to narrow down canyon where it crosses the trace of the Saddle Lineament. These lines of corroborating evidence all suggest uplift during Holocene time. In Middle Canyon, the active drainage bends northwesterly within the canyon and appears to follow the trend of the Saddle Lineament. This could indicate uplift of the alluvium on the north side or, alternatively, could be related to changes down canyon in the quantity of sediments derived from the adjacent canyon margins. Just east of the project boundary, the mapped  $Qt_2$  terrace deposit, which is younger than the  $Qt_1$  deposit, also appears to possibly be elevated between the Saddle and Airport Mesa Lineaments. Based on these multiple lines of evidence, we conclude that the Saddle Lineament is a locus of late Quaternary tectonic deformation and faulting for the purposes of developing appropriate mitigation measures.

### 7.5.3 Airport Mesa Anticline

Previous mapping by Kew (1924) and Treiman (1986) suggested the presence of a southeast-plunging anticline in the bedrock below the northern portion of Airport Mesa. Winterer and Durham (1962) and Weber (1982) indicated the possible existence of a fault at this location. However, review of aerial photographs and the site topography did not reveal any distinct evidence for a fault-related lineament and no fault is shown on the Alquist-Priolo map of the Newhall Quadrangle. However, Weber (1982) correlated his fault with the Airport Mesa Lineament to the southeast and this feature was included on the fault rupture hazards map in the L.A. County Safety Element.

In order to determine if the mapped changes in structure were the result of folding or faulting, we first logged two hand-dug exposures on the steep bluff slopes north of Airport Mesa. These trenches (T-66H and T-67H) showed that the structure change is primarily the result of folding. Borings B-6H, B-7H and B-16H were drilled across the trend of the anticlinal fold and evidence for substantial offset of the basal terrace gravels was not observed. However, minor faulting was observed in the bedrock in B-7H and steeply dipping, sheared clay beds were observed in B-6H.

Dozer trench T-64H was subsequently excavated across the projected trace of the anticline to determine if the terrace deposits were affected by faulting. Four minor northwest-tending normal faults with up to 12 inches of offset were encountered. Based on discussions with Dr. Shlemon, we recommended additional subsurface explorations to refine the trend of the Airport Mesa Anticline and to evaluate if faulting in the overlying  $Qt_1$  terrace deposits were consistently associated with the fold. Accordingly, borings B-11H through B-15H and B-17H were excavated across the Mesa to search for the fold at depth. The axis of the fold was encountered in boring B-14H, thus providing a tight constraint on the concealed trace of the fold. Minor faults were observed in the bedrock at the anticline and in the overlying terrace deposits in B-14H and B-15H. Trenches T-79H and T-80H were excavated across the fold trend and a zone of northwest-trending, southwest-dipping normal faults was observed with a maximum observed displacement of 20 inches on a single fault. The northeastern limits of the zone appears to be defined in trench T-79H and the southwestern limits appear to be defined in trench T-80H. A maximum cumulative normal displacement of over 7 ft. was observed across the zone in trench T-80H.

Unequivocal evidence of Holocene activity was not observed along the Airport Mesa Anticline during this investigation. However, many of the logged faults were traceable up through the 100 ka soil on Airport Mesa and silty backfills were locally observed along the upper portions of the faults just below the plow pan. Stone lines within the soil were commonly displaced the same as beds within the underlying terrace deposits, indicating that all of the observed movement occurred after deposition of the terrace deposits and probably after formation of the overlying soil. The data also suggest that the observed offsets were possibly the result of rare large events rather than many small events. The minor faults generally parallel the anticline and the observed displacements are normal, which is consistent with tensional deformation along the crest of a tightening anticline. The density of minor faults appears to increase along the trend of the anticline from T-64H to T-80H toward the Airport Mesa Fault and the two structures intersect

east of trench T-39H. This suggests that faulting above the anticline may be related to or triggered by earthquakes on the Airport Mesa and/or the Saddle Faults. Accordingly, the Airport Mesa Anticline is similarly judged to be a broad zone of late Quaternary, and probably on-going deformation.

#### 7.5.4 Other Features

During our investigation, several additional areas were reviewed for evidence of potential fault rupture hazard. These included the area between the Airport Mesa and Saddle Lineaments, the area between the Airport Mesa Anticline and the Airport Mesa Lineament, the Airport Mesa Syncline, and the slope break on the northwestern portion of Airport Mesa at Trench T-47H (**Plate I**).

Trench exposures along the Airport Mesa Lineament/Fault (e.g. T-39H) indicate the presence of secondary splay faults in the upper plate south of the main fault trace. Bedding plane shears and faults were also observed north of the main Saddle Lineament/Fault in trenches F-65H and T-75H. In order to assess the extent of secondary faulting between the two lineaments, continuous trenches were excavated and logged across this zone at two locations (T-44H and T-77H at Airport Mesa and T-78H to the east). No significant faults were observed to cut the terrace deposits in this area, although one minor fault with approximately 1 inch of reverse offset was observed in trench T-78H.

During our initial investigations, a pair of small faults were observed to cut  $Qt_1$  terrace deposits and the overlying soil in trench T-35H located north of the Airport Mesa Lineament/Fault and southwest of the Airport Mesa Anticline. These faults strike approximately N15W to N30W and dip steeply to the southwest. This is oblique to the dominant fault trend, to the underlying steeply south-dipping bedding structure, and to the anticline trace. No distinct aerial photo lineament or geomorphology representative of these faults was observed. However, evidence of strike-slip movement was observed, as indicated by changes in unit thickness, by variations in the amount and apparent sense of vertical separation observed on individual beds, and by truncation of beds across the faults. Tentative correlations of channel deposits observed in opposite walls of trench T-35H indicate a right-lateral sense of movement. In order to evaluate the lateral extent of these faults, trenches T-81H and T-82H were excavated and logged. Additional faults with similar characteristics were encountered in these trenches and at the south end of T-80H. These faults are interpreted to be the result of local stresses between the tightening anticline and the Airport Mesa Fault.

The trace of a broad, east-plunging syncline, which intersects the Airport Mesa Anticline to the west, was delineated during this investigation (See **Cross-Sections 2H-2H' and 3H-3H'**). Dozer trench T-68H was excavated across the trend of this fold to assess if any faulting were present. This trench verified the location of the fold and found only very minor faulting, which is typical of the core area of most folds. Vertical displacements observed in the bedrock were less than 3 inches. Boring B-17H also penetrated the fold axis and further constrained the fold trace. One minor fault was observed above the fold in the terrace deposits in Boring B-17H.

In order to assess the significance of a break in slope on the northwestern margin of Airport Mesa, we conducted field mapping of the adjacent bluff area and excavated and logged dozer trench T-47H across the slope break. The field mapping found that bedding structure in the Saugus Formation is consistent across the trend of the slope break. The trench exposed the basal  $Qt_1$  gravels overlying regionally oriented Saugus Formation to the south, and a deep zone of slopewash and soil above the lower  $Qt_{2a}$  surface to the north. Review of the basal gravels of the  $Qt_{2a}$  terrace exposed on the northern bluff indicates it is not as coarse as the typical  $Qt_1$  basal gravel. These exposures indicate that the break in slope likely represents the old drainage margin present at the time the  $Qt_{2a}$  terrace materials were deposited rather than a scarp related to faulting.

#### 7.5.5 Summary

The Airport Mesa area is underlain by Saugus Formation bedrock at depth which has been complexly deformed to produce a series of east-plunging folds and several zones of related faulting. Continued activity along these structures during late Quaternary times is recorded by deformation of late Pleistocene terrace deposits ( $Qt_1$ ) which overly most of the mesa. At least 40 ft. of late Quaternary vertical uplift has occurred on the fault block lying between the Airport Mesa and Saddle Lineaments/Faults. The overall structure geometry of the bedrock and south vergence of the Airport Mesa Anticline and Saddle Syncline suggest that the north-dipping fold/fault zone along the Saddle Lineament is a locus of uplift and thrust faulting, which is beginning to cut through the overlying terrace deposits along a south-migrating syncline. The Airport Mesa Fault is interpreted as a bedding-plane slip splaying off of the Saddle Fault at depth.

The Airport Mesa Anticline intersects and apparently is offset or truncated by the Airport Mesa Fault to the southeast. Minor normal faulting above this fold is interpreted to be the result of tensional deformation above the crest of a tightening anticline and

may be triggered by movement on the adjacent Airport Mesa Fault. The minor strike-slip faults observed between the Airport Mesa Anticline and the Airport Mesa Fault are not related to any known structure at depth and are considered subsidiary features that accommodate local stresses between the anticline and the fault. Minor faults associated with the Airport Mesa syncline are also judged to be subsidiary.

## 8.0 MITIGATION

### 8.1 Building Setbacks

The locations of late Quaternary folding and faulting observed along the Airport Mesa and Saddle Lineaments during this investigation are illustrated on the attached Geologic Map (**Plate I**). All of the subsurface excavations and most of the significant fault features were located in the field with Trimble GPS instrumentation. Unequivocal evidence for Holocene activity was not observed on the faults mapped during this investigation. However, there is substantial evidence for at least 40 ft. of vertical uplift during the last 100,000 years along both fold/fault zones based on offset of the  $Qt_1$  terrace deposits. No evidence constraining the observed fault movement as pre-Holocene was observed. An uplift rate of 40 ft. in 100,000 years corresponds to 4.4 ft. (1.34 m) of uplift in Holocene times (i.e. the last 11,000 years). This average level of movement along with the presence of strong aerial photo lineaments, a distinct fault scarp preserved on the terrace surface, deformed colluvial wedge deposits, and “flowering” of faults near the ground surface all strongly suggest the presence of Holocene activity along the Airport Mesa and Saddle Fold/Fault zones. Building setbacks have therefore been recommended to mitigate potential ground rupture hazard along these zones.

A zone of normal faults was observed cutting the  $Qt_1$  terrace deposits overlying the crest of Airport Mesa Anticline. Cumulative offset exceeded 7 ft. in trench T-80H. These faults also cut the soil zone and appear to be related to continued tightening of the underlying anticline. The anticline intersects the Airport Mesa Fault and the observed faulting is probably related to and/or possibly triggered by events on the Airport Mesa Fault and/or Saddle Fold/Fault zone. Potential distress resulting from regional compression along the anticline during a seismic event includes offset along the observed faults, uplift, tensional cracking, tilting and/or flexural slip along inclined bedding planes in the Saugus Formation. Therefore, a **Building Setback** zone extending at least 75 ft. on either side of the anticline trace and at least 20 additional feet beyond any associated minor faulting has therefore been designated on the attached map (**Plate I**). The zone is

wider on the south side of the anticline trace because of the up-dip projection of the anticline axial plane, and the observed distribution of minor faults.

In accordance with the requirements and policies of the State of California and the Los Angeles County Department of Public Works, Geology Group, a Building Setback has been established at least 50 feet beyond faults interpreted by this firm to be active or potentially hazardous along the Airport Mesa and Saddle lineament fault zones. A minimum 75 ft setback from the Airport Mesa anticline and 20 ft. setback from associated minor faults has also been established. Structures for human occupancy are prohibited within the setback zone. Human occupancy is defined in the Alquist-Priolo act as structures which are utilized for more than 2000 man hours per year. Alternative uses include roadways, yards, parking lots, parks, equestrian areas, golf courses and open space areas. Specific uses should be approved on a case-by-case basis with the reviewing agency. It is also recommended that pipelines (including gas, water, storm drain and sewer) crossing this zone should be constructed to allow for some flexure. It may also be prudent to incorporate emergency shut-off valves for gas and water lines in the building setback zone in case of leaks resulting from ground rupture during a future earthquake.

The **Building Setbacks** delineated on the attached geologic map are based on current information and are therefore subject to modification based on additional data obtained during future geologic investigations or grading operations. The proposed grades shown on vesting tentative tract map 61105 dated June 14, 2004 were taken into consideration in establishing the Building Setbacks shown on the attached maps. **Building Setback** zones will be designated as restricted use areas on the final map. Grading operations in the vicinity of the mapped fault zone should be conducted under **continuous** geologic observation to confirm the anticipated conditions.

The zone of minor strike-slip faults observed between the Airport Mesa Anticline and the Airport Mesa Lineament/Fault are not related to any known, specific fold or fault at depth. These faults are therefore considered subsidiary as previously defined in Section 7.1. Minor faults locally observed along the Airport Mesa syncline and elsewhere which are isolated from the main fault and fold structures are also considered subsidiary and **Building Setbacks** are not recommended for these faults.

## 8.2 Areas of Restricted Development

Because minor, sympathetic movement may occur along subsidiary faults during an earthquake on a nearby fault, particularly on the Airport Mesa and/or Saddle Faults, and

because ground cracking and unusually strong ground motions may occur near the mapped faults during future potential earthquakes, zones of restricted development have been designated as follows:

1. The area between the Saddle and Airport Mesa Faults;
2. The wedge shaped area of minor strike-slip faults observed between the Airport Mesa Anticline and the Airport Mesa Lineament/Fault; and
3. The area within 100 ft. of any **Building Setback** zone.

To be reasonably conservative in the interest of public health and safety, the following restrictions are recommended within these areas:

1. No construction of so-called "critical" and "essential facilities", as defined in the Uniform Building Code.
2. If standard structures are proposed in these areas, a minimum 8 ft. thick fill cap should be constructed below the pad and the foundation and slab should be constructed with increased reinforcement (e.g. post tension slabs). Thicker fill caps may be required if sheared clayey beds are encountered in the Saugus Formation.
3. Pipelines, including gas, water, storm drain and sewer, should be constructed to allow for some flexure and emergency shut off valves may be prudent for gas and water lines within these zones in case of possible ground deformation during an earthquake.
4. Specific recommendations should be provided at the Grading Plan or Building Plan stages.

## 9.0 LIMITATIONS

This report has been prepared for the exclusive use of Newhall Ranch Company® and their design consultants for the specific site discussed herein. This report should not be considered transferable. Prior to use by others, we should be notified, as additional work may be required to update this report.

In the event that any modifications in the design or location of the proposed development, as discussed herein, are planned, the conclusions and recommendations contained in this report will require a written review by this firm with respect to the planned modifications.

In performing these professional services, we have used the degree of care and skill ordinarily exercised, under similar circumstances, by reputable engineering geologists and geotechnical engineers practicing in this or similar localities.

The analyses and interpretations presented in this report have been based on the results of pertinent field and laboratory soil investigations. It should be recognized that subsurface conditions can vary in time and laterally and with depth at a given site. Our conclusions and recommendations are based on the data available and our interpretation of the data based on our experience and background. Hence, our **conclusions** and **recommendations** are **professional opinions** and are **not meant** to be a control of nature; therefore, **no warranty** is herein **expressed** or **implied**.

It should be noted that faulting is normally confined to the area immediately adjacent to a known fault, or within a few feet of the last fault movement. Regardless of what criteria are used however, absolute assurance against future fault displacement or strong ground motion cannot be obtained in tectonically active areas. New faults can form, as the orientation and magnitude of deformational forces in the earth's crust change with time. Therefore, the location of new breaks or ground motions during a seismic event cannot be located or anticipated.

**This report may not be duplicated without the written consent of this firm.**

This opportunity to be of service is appreciated. If you have any questions concerning this report, please give us a call.

## **APPENDIX A**

### **GOMORPHIC AND SOIL-STRATIGRAPHIC ASSESSMENT OF FAULT ACTIVITY, AIRPORT MESA AREA, NEWHALL RANCH, CASTAIC, CALIFORNIA**

#### **INTRODUCTION**

This report summarizes geomorphic field observations, soil-stratigraphic measurements and critique of a draft report, geologic maps and cross-sections prepared by Allan E. Seward Engineering Geology, Inc. (AES) concerning the location and age (relative activity) of faults encountered on the Airport Mesa area of the Newhall Ranch in Castaic, California. The main objectives of the AES investigations were four-fold: to determine the origin of aerial-photographic lineaments; to date Quaternary geomorphic surfaces and soils; to assess the relative activity of faults encountered; and to recommend appropriate setbacks or other mitigation consistent with professional standards-of-care and current health and safety codes.

Field observations and reviews of AES draft trench logs and maps were carried out periodically throughout 2000 and 2001 as exposures became available. Pertinent geologic maps, logs and sections are given in the AES report, and hence are referred to, but not replicated in this Appendix. Field support was kindly provided by the AES staff, in particular by Brian J. Swanson, Senior Engineering Geologist.

#### **TECTONIC SETTING**

As documented by AES (Plate I), the Airport Mesa site is crossed by several distinct aerial-photographic lineaments. Based on regional geologic mapping, on trenching and on examination of roadcuts and natural exposures, AES determined that two lineaments and the axis of one tectonic anticline were the locus of Quaternary age faults. These faults are within the Holser structural zone, some faults of which have demonstrable late Quaternary activity (AES

report, p. 11). The AES investigation was therefore designed to date the offset sediments, to determine the relative activity (time of last displacement) of the faults, and to recommend appropriate setbacks or other structural mitigation in accordance with California law (Hart and Bryant, 1997).

AES designated the major site lineaments as the "Saddle" and the "Airport Mesa," respectively (Plate I), and documented their tectonic origin (Appendices B and C). Other site geologic structures were informally named the "Airport Mesa Anticline" and "Syncline," respectively (Plate I). The "Anticline" similarly proved to be fault related, but the Syncline was demonstrated to be a general fold zone affecting underlying Tertiary and Quaternary sediments, and although inherently an area of deformation, has not been the locus of extensive Holocene, near-surface faulting (Plate II).

### **GEOMORPHIC SETTING**

The Airport Mesa is mostly underlain by the Plio-Pleistocene Saugus formation. This formation contains a wide variety of lithologies and grain-sizes, ranging from expansive clays to local zones of boulder conglomerates.

At and near Airport Mesa, the Saugus is overlain by several flights of Quaternary alluvial fan and fluvial terrace deposits. The fan deposits graded northward to ancestral base levels (fluvial terraces) associated with now-abandoned channels of the Santa Clara River. The two main fluvial terrace deposits (AES units Qt1 and Qt2) occur at elevations approximately 180-200 and 120-160-ft above the modern channel. Lower incised terraces - some fill and some strath - occur lower than the Qt2 deposits, but these are too poorly preserved to warrant distinct mapping-unit descriptions (Plate I). Nevertheless, the major fan and fluvial terrace surfaces provide excellent site-specific and regional stratigraphic markers and levels to assess the general locality, timing and relative magnitude of late Quaternary deformation.

### **DATING THE AIRPORT MESA DEPOSITS**

In the absence of abundant detrital charcoal or other materials amenable to unequivocal numeric dating, the age of most Quaternary sediments and geomorphic surfaces is traditionally deduced by relative-dating techniques. Specifically, soil-stratigraphic age assessments have long been used to date geomorphic surfaces, and hence provide a minimum age for the underlying sediments (Shlemon, 1985; Birkeland, 1999). The principles of soil stratigraphy and the terminology follow those of the Natural Resources Conservation Service (Soil Survey Staff, 1992; Soil Survey Division Staff, 1993). In brief, once an active surface is abandoned (for example, an uplifted floodplain becomes a non-

inundated terrace), the soil (weathering profile) begins to form. As mainly controlled by the well-known, five major soil-forming factors (Jenny, 1980), a well-drained profile slowly evolves with the passage of time, giving rise to sequential relative soil formation qualitatively deemed "slightly developed" to "very strongly developed" (Birkeland, 1999). As calibrated by various numeric dating methods (Harden, 1982; Harden and Taylor, 1983; Busaka et al., 1989; McCalpin, 1996; Noller, et al., 2000) soils on stable landforms in Mediterranean climates usually reach "very strong" development in about 100,000 years. So-called "moderately" or "slightly developed" soils are inherently younger, but often can be relatively dated by association with the marine, oxygen-isotope stage chronology (Shackleton and Opdyke, 1976; Shlemon, 1985).

Once the relative ages of sediments and geomorphic surfaces are established, it is possible to deduce the approximate time of last displacement (relative age) of faults encountered at a site. Accordingly, in the Airport Mesa area, AES observed the relative development of soil profiles in various trenches and cuts. Additionally, a representative soil-stratigraphic section was formally measured and described from exposures (Trench 69-H; Plate I) in the upper (oldest) Qt1 fluvial terrace. This soil is typified by a thick, strongly developed argillic horizon, with distinct reddish-brown, angular blocky structure, and common thick clay films that line ped faces, fill root pores and bridge mineral grains. Additionally, horizon boundaries are visibly abrupt and smooth (Table 1). This soil thus provides a minimum ~100,000-yr age for the underlying fan deposits on which it has formed. Conceivably, the soil may represent some ~200,000 years of weathering, but this is difficult to discern in the field, for generally there is little megascopic change in profile characteristics after about 100,000 years (Shlemon, 1985).

## **RELATIVE ACTIVITY OF THE AIRPORT MESA FAULTS**

The ~100,000 soil-stratigraphic age estimate for the Airport Mesa fan and fluvial terrace sediments provides a means to date the AES-documented faults associated with the Airport Mesa and Saddle Lineaments and the Airport Mesa Anticline.

### **Airport Mesa Lineament**

AES identified a strong aerial-photographic lineament in the southern part of the site. Deemed the "Airport Mesa lineament," the AES mapping and trenching showed that this lineament was the locus of up to 50-ft of total dip-slip separation (see AES trench logs and cross-section 3-3, Plate III). These faults

extend up through the Saugus formation and the overlying, late Quaternary deposits. Although not demonstrably Holocene, the fault is reasonably judged to be active based on (1) the ~50-ft displacement of probably 100,000-yr old sediments; (2) the presence of offset colluvial wedges indicative of recurrent movement; and (3) the strong aerial-photographic and geomorphic expression. Though only approximate, the age of the sediments and the total offset yields an average slip rate of ~0.5 ft/1,000 years. This rate, though not extremely high, is reasonable, for the Airport Mesa lineament/fault may well be one of several, concurrently active splays that comprise the eastern extension of the Holser structural zone (Plate I; see AES references). Based on the high likelihood of Holocene activity, AES has therefore recommended an appropriate setback zone for the Airport Mesa lineament/fault (Plate I).

### **Saddle Lineament**

AES identified the Saddle Lineament as the aerial-photographic expression of aligned topographic saddles and drainage (Plate I). Emplacement of borings and trenches showed that the Lineament defines a zone of late Quaternary folding and local faulting. The AES cross-sections (Plate II) also demonstrate that the Saddle and Airport Mesa lineament/fault zones are probably genetically related and thus are judged as "active" for purposes of seismic-hazard mitigation.

### **Airport Mesa Anticline**

Based on geological mapping, AES recognized an abrupt change of regional dip within the Saugus formation. Based on trenching, this proved to mark the "Airport Mesa Anticline," another generally west-trending structure within the Airport Mesa area of investigation (Plate I). Several AES trenches showed that the anticlinal axis is characterized by many, relative short faults, almost all with dip-slip offset. These faults, with up to 7-ft of apparent cumulative displacement, extend up through the Saugus formation and the overlying ~100,000-yr old terrace deposits, and even into the base of the argillic horizon. Locally, even near-surface stone lines are offset (see for example, AES trench logs T-79H and T-80H). Also, the faults generally parallel the anticline axis, consistent with continued deformation on an increasingly compressed fold. Based on the common trend and on the probable genetic relation of these faults with those of the nearby Airport Mesa and Saddle lineaments, AES judges that the probability of Holocene activity along the Airport Mesa Anticline faults is high. Accordingly, this zone of through-going, near-surface deformation similarly warrants setbacks and other structural mitigation (Plate I).

## **Airport Mesa Syncline**

AES mapping also identified a broad syncline in the north-central part of the Airport Mesa (Plate I). Trenching and interpretation of boring logs show that only a few minor faults characterize this structure (Plates I and II). Therefore, the probability of new-fault generation in this area is very low, and a structural setback zone is not warranted.

## **SUMMARY AND CONCLUSIONS**

The Airport Mesa area lies adjacent to the extension of several, nearby west-trending splays associated with the late Quaternary, Holser structural zone. As part of their paleoseismic investigations, AES identified aerial-photographic lineaments, and determined the origin of these features primarily by geologic mapping, trenching and interpretation of boring logs. The Airport Mesa and Saddle lineaments, as well as the Airport Mesa anticline, proved to be zones of near-surface faulting. In contrast, the Airport Mesa syncline, though broadly deformed, was essentially devoid of faults.

In order to determine relative fault activity (time of last displacement), soil-stratigraphic and geomorphic techniques were used to date the age of late Quaternary alluvial fan and fluvial terrace deposits that cap much of the Airport Mesa. These techniques indicate that the Qt1 "high-level" terrace, well over 100-ft above the floodplain of the modern Santa Clara River, is at least ~100,000-years old. However, trench exposures show that many faults within the three zones extend through the underlying Plio-Pleistocene Saugus formation and the capping terrace deposits. Further, trench evidence indicates that up to 50-ft of recurrent late Quaternary displacement has occurred, with at least some likely taking place within Holocene time. Accordingly, AES has established appropriate setback and structural foundation zones to mitigate potential near-surface ground rupture and related surface deformation. The AES investigations have been extensive, and therefore produced above-average, site-specific data to justify recommended variable-width setback zones. The variable widths are based on local fault geometry, are reasonable, and are consistent with applicable professional standards-of-care and seismic safety codes.

Table 1

Soil Profile Measurement and Description, Qt1 High-Level Terrace  
Airport Mesa, Newhall Ranch, Castaic, California

Trench 69-H, East Wall, Station 0+3

<u>Depth (ft)</u>	<u>Horizon</u>	<u>Description</u>
0.0 – 0.2	O/Ap	Dark brown (7.5YR 3/2, dry and moist) pebbly loamy fine sand; moderate medium platy structure; soft, non-sticky and non-plastic; many fine to medium vertical roots; common fine pores; abrupt smooth boundary. Surface plowed, slightly disturbed; horizon incorporates agricultural-derived duff and fragments of eroded, reddish-brown clayey sediments (argillic horizon).
0.2 – 0.6	A1	Dark yellowish brown (10YR 3/4) to dark brown (10YR 3/3) when moist, fine sandy loam with few subrounded pebbles; weak, moderate angular blocky structure; firm, non-sticky and slightly plastic; common fine to medium vertical roots; few fine pores; few worm casts; gradual diffuse boundary.
0.6 – 1.1	A2/Bh	Dark yellowish brown (10YR 3/4) to dark brown (10YR 3/3) when moist, fine sandy clay loam; soft to firm; non-sticky and slightly plastic; few to common fine vertical roots; few to common fine pores; few thin fine sand lenses to 3/4-inches thick; few subrounded pebbles increasing in frequency near base; gradual wavy to diffuse boundary.
1.1 – 1.4	Bh/Bt1	Dark brown (7.5YR 3/4) to brown to dark brown (7.5YR 3/2) when moist, fine sand and loamy clay; moderate medium subangular blocky structure; soft to friable, slightly sticky and plastic; few fine vertical roots; common fine pores; few krotovinas to 1-inch diameter; abrupt wavy boundary.

Table 1 (continued)

<u>Depth ft</u>	<u>Horizon</u>	<u>Description</u>
1.4 – 2.0	Bt2	Yellowish red (5YR 4/6) dry and moist, pebbly coarse sandy loamy clay; moderate to strong medium angular blocky structure; extremely hard, sticky and plastic; common very fine vertical roots; common very fine, reddish brown (5YR 3/3) clay films lining ped faces and filling root pores; gradual wavy boundary.
2.0 – 2.2	Bt3	Reddish brown (5YR 4/4) to dark brown (7.5YR 3/3) when moist, subrounded pebbly sandy clay loam; weak moderate angular blocky structure; hard, firm, non-sticky and slightly plastic; few vertical roots; few very fine, reddish brown (5YR 4/4) clay films lining ped faces, bridging mineral grains and filling root pores; lenticular pebble lenses common; abrupt wavy boundary.
2.2 – 3.0	2Bt4	Brown to dark brown (7.5YR 4/4) to dark brown (7.5YR 3/4) and dark yellowish brown (10YR 3/4) when moist, gravelly sandy loam; massive to weak fine subangular blocky structure; hard to firm; slightly sticky, non-plastic; few very fine vertical roots; few very fine, brown to dark brown (7.5YR 4/4) clay films lining ped faces and filling root pores; angular and subrounded mixed metamorphic and granitic clasts to 2-inches diameter; gradual diffuse boundary.
3.0 – 3.6	2Bt5	Brown to dark brown (7.5YR 4/4) to dark yellowish brown (10YR 4/4) when moist, pebbly to coarse sandy clay; massive; hard to firm; non-sticky and slightly plastic; few fine vertical roots; few fine pores; few very fine clay films lining ped faces near base; common lenticular pebble lenses; gradual wavy boundary.
3.6 – 4.2	2Bt6	Dark yellowish brown (10YR 4/6) to dark yellowish brown (10YR 4/4) when moist, very gravelly coarse sandy loam; massive; hard to firm; non-sticky; slightly plastic; few very fine and patchy, strong brown (7.5YR 4/6) clay films lining clast faces; many gussified clasts; gradual wavy boundary.

Table 1 (continued)

<u>Depth (ft)</u>	<u>Horizon</u>	<u>Description</u>
4.2 – 5.3	2Bt7/C1	Dark yellowish brown (10YR 4/6) dry and moist pebbly loamy coarse sand; massive, hard, friable; non-sticky and non-plastic; very few, thin strong brown (7.5YR 4/6) clay films on clast faces; common angular metamorphic and granitic clasts to 4-inches diameter; abrupt wavy boundary.
5.3 – 6.3+	3C2	Light yellowish brown (10YR 6/4) to brownish yellow (10YR 6/6) when moist, pebbly coarse sand; massive; hard, friable; non-sticky and non-plastic; common rounded to subrounded metamorphic and granitic clasts to 2-inches diameter; common, brown to dark brown (7.5YR 4/4) lamellae ("beta horizons") to ~1-inch thick near base of trench.

---

Notes:

1. Profile measurement and description by RJS, 11 February 2000; field assistance by B. Swanson, AES.
2. Exposure from east wall of AES trench T-69H, station 0+3.
3. Trench emplaced across "high-level" Qt1 terrace sediments on Airport Mesa ~150 ft above floodplain of modern Santa Clara River (see AES Plate 1 for location).
4. Profile is very strongly developed; estimated age at least ~100,000 years (see Appendix A for discussion).

**GEOLOGIC LOGS LEGEND**

LITHOLOGY		UNITS	
	Conglomerate	af	Artificial Fill - Road Fill and old dump fill
	Sandstone	soil	Soil - Hachures indicate approximate base of B Soil horizon
	Sandy Siltstone and Silty Sandstone	Qsw	Stopwash - Includes minor debris flow deposits and colluvium
	Siltstone	Qal	Alluvial Deposits
	Mudstone	Qls	Landslide Material
	Heterogeneous Material	Qt <sub>1</sub> /Qt <sub>2</sub>	Terrace Deposits - See map legend
	Concretions and Caliche Pods	TQs/TQs.	Saugus Formation - See map legend
	Krotovina		
	Fault Gouge - Arrows indicate relative separation; Gouge in TQs consists of olive-brown to dark gray plastic clay. Gouge along minor faults typically consists of thin (<1/16") sandy silt in coarser units, a parting with minor clay in fine-grained units, or is lacking entirely		

**Definitions**

The terms used to describe the faults and related features illustrated in the attached Geologic Logs have been defined as follows:

1. Fault - a break in an earth material that exhibits offset; usually contains significant gouge.
2. Minor Fault - a break in an earth material that exhibits minor offset (separation generally less than the height of the excavation) and may be discontinuous and/or contain minor gouge.
3. Shear - a deformed zone parallel to bedding or contained within a single bed; commonly found in mudstone beds and within landslides.
4. Fracture or Joint - a break in an earth material without offset; no gouge, commonly related to weathering or creep.
