Subject: Alternative energy planning
Date: Thursday, October 24, 2013 10:05:36 AM

I am a resident of the West antelope Valley, who has seen a growth of alternative energy in industrial scale. I do support alternative energy, however I would like to see incentives for small-scale projects not large industrial scale projects. These large industrial scale projects are impacting our environment negatively as well as marring a beautiful area and discouraging farming, as farmers are having to sell their land due to prices paid to install large scale alternative energy projects, and, their energy costs are at the same time scyrocketing. I believe the power should be used where it is collected, not transmitted. Projects should also be discouraged South of route 138, as this is the beginning of the traditional transitional habitat zone.

Thank you,
Beverly Bernacki
