

AIR MONITORING NEAR OIL WELLS IN AB 617 COMMUNITIES

OIL WELLS IN WILMINGTON CARSON WEST LONG BEACH COMMUNITY

- Distance to the Closest Sensitive Receptor (m)
- <100 (closest)
 - 100-600
 - >600 (furthest)
- Residential
- Community Boundary

MONITORING EQUIPMENT OPTICAL REMOTE SENSING (ORS) MOBILE LABORATORY

Multiple wells / facilities can be sampled in a relatively short amount of time

Air pollutants measured

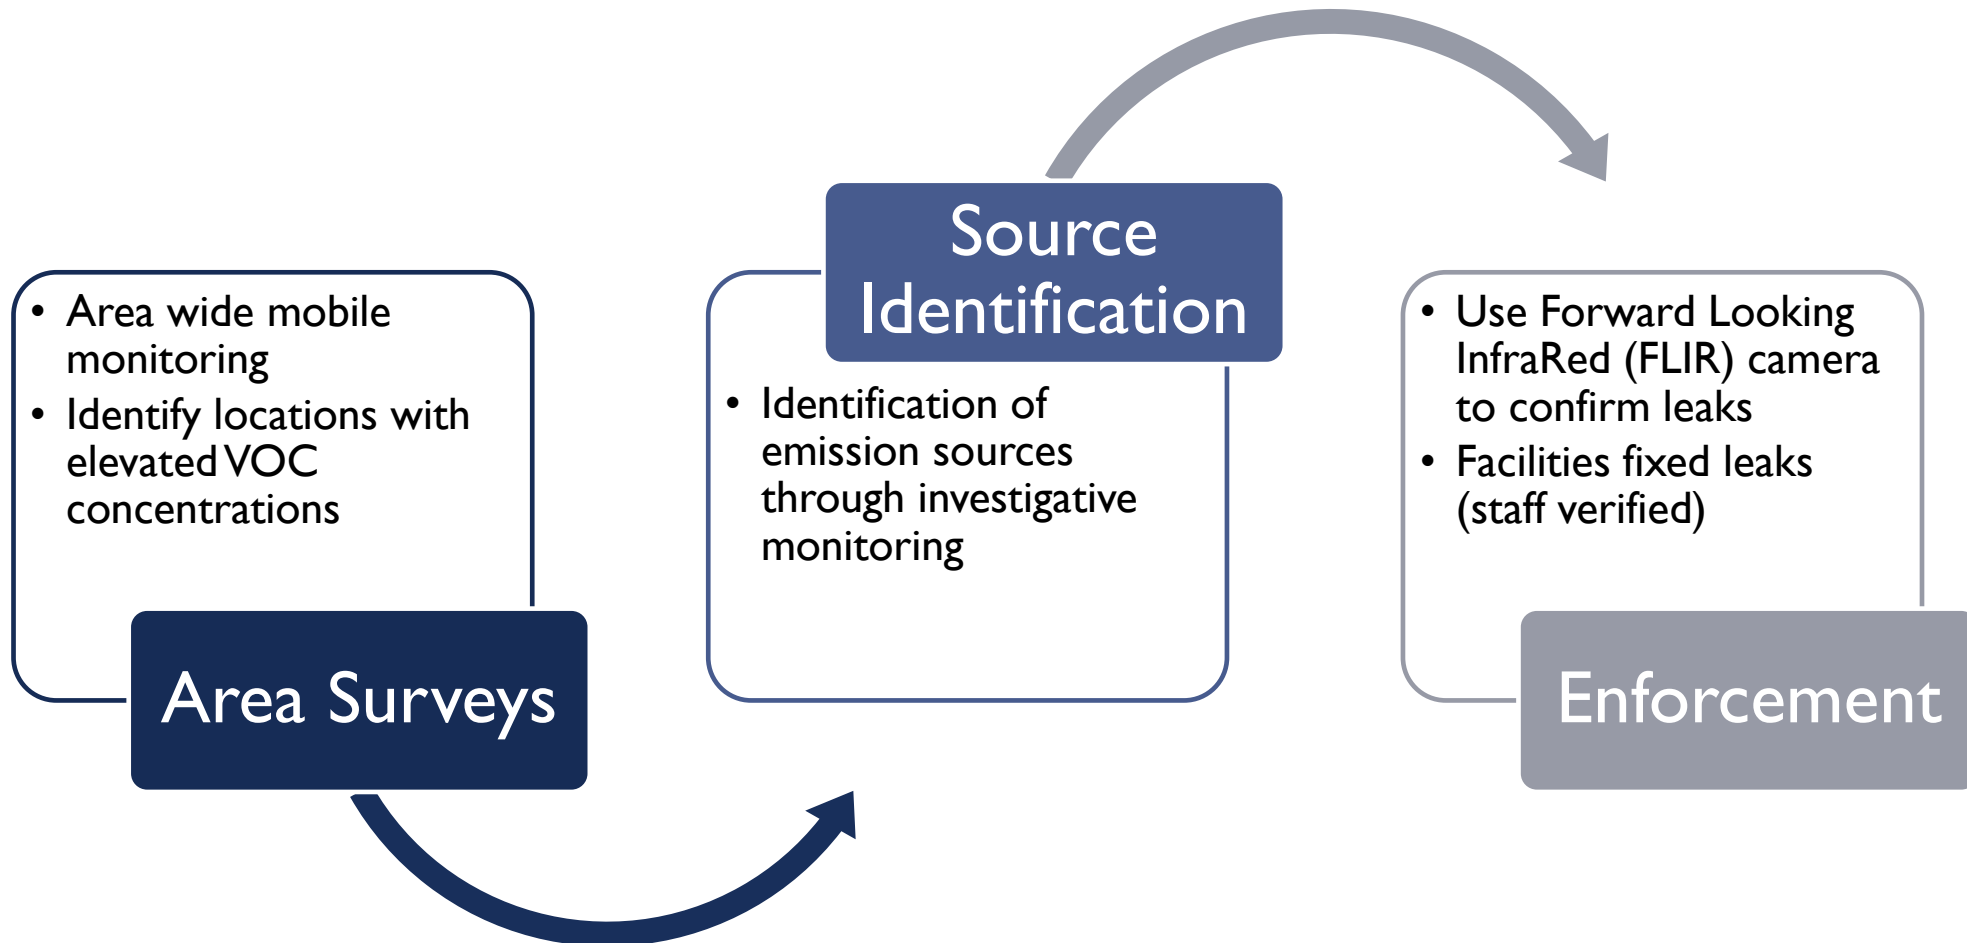

- Total Alkanes, Methane, Benzene, Toluene, Ethylbenzene, Xylenes, Styrene, other

Instrumentation

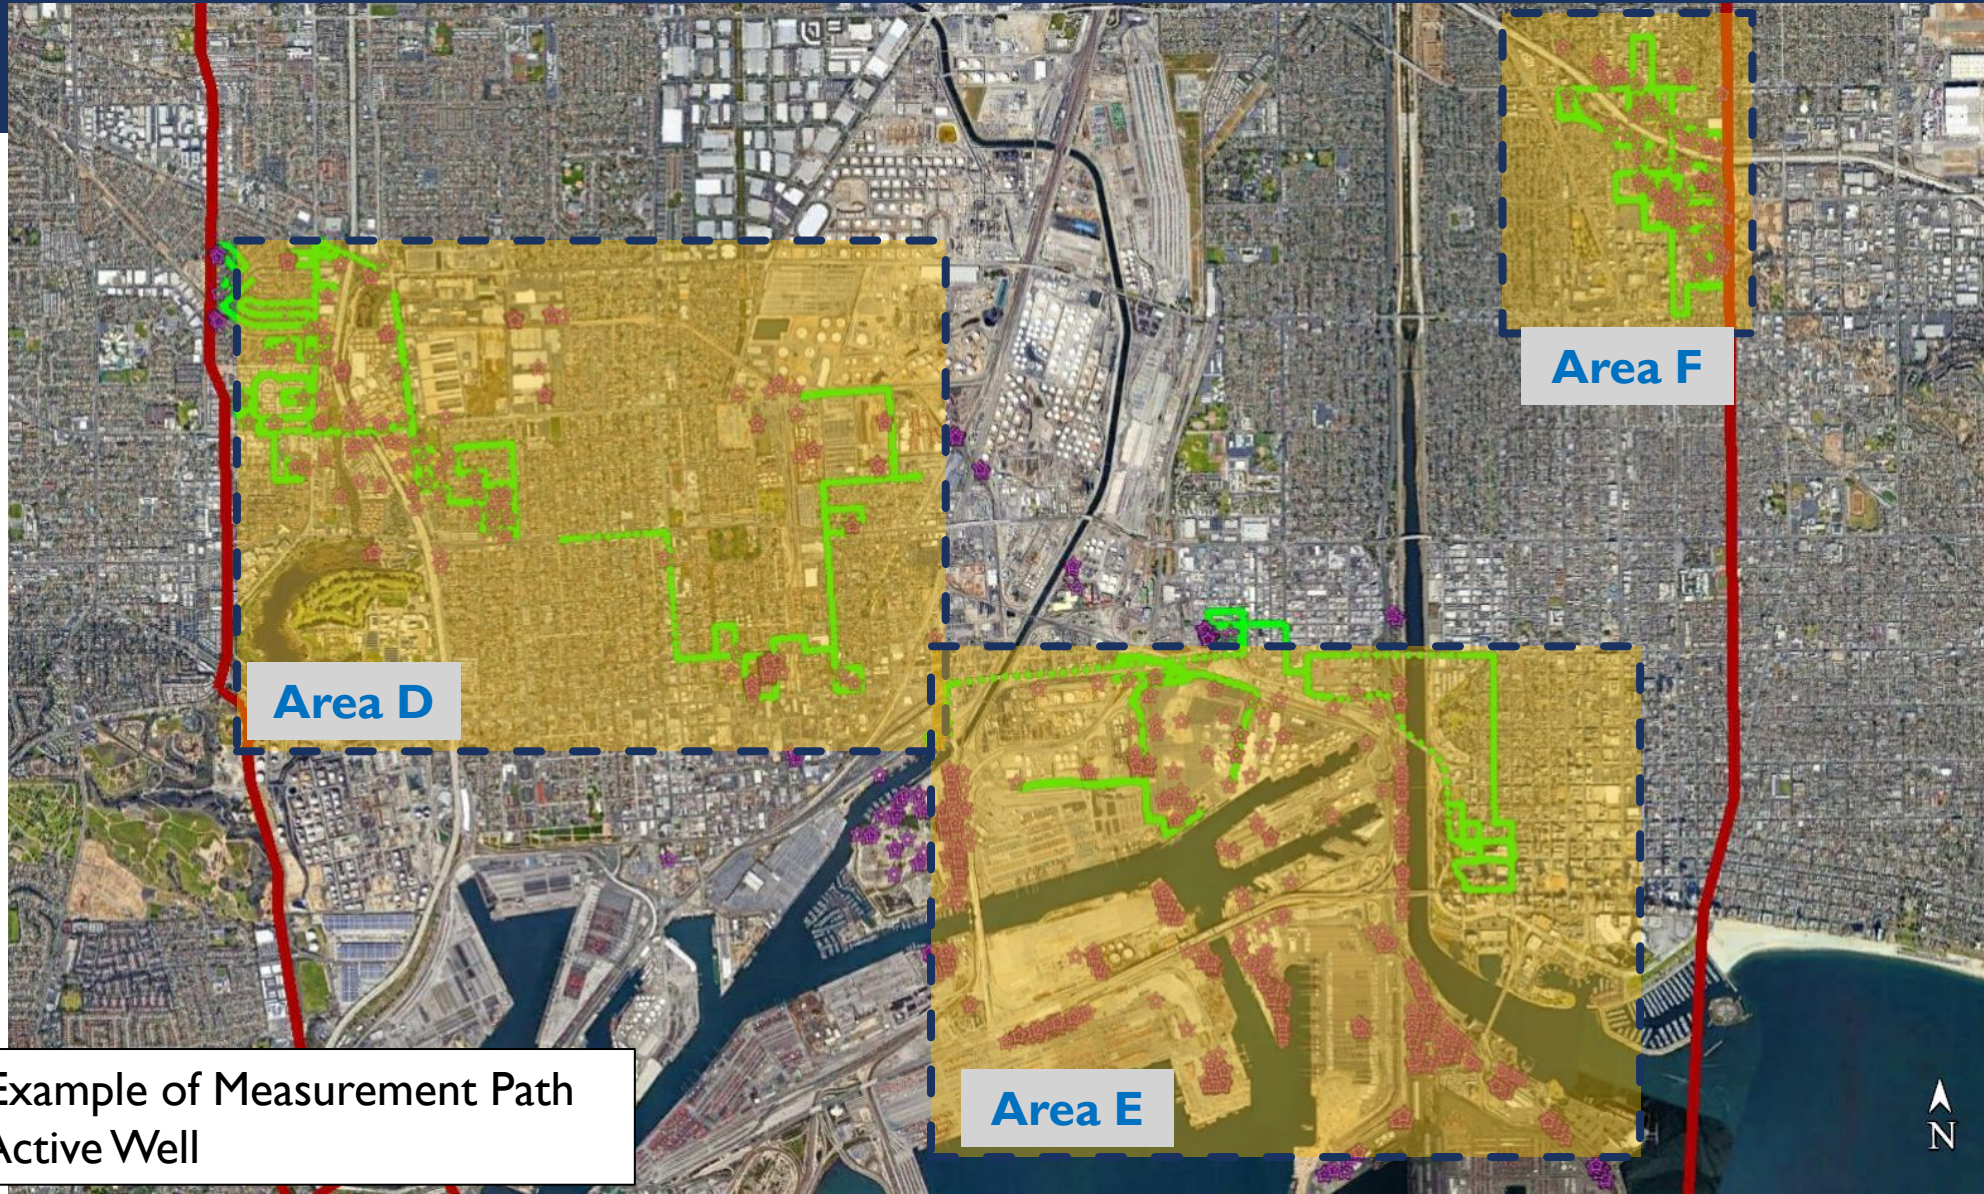

- Differential Optical Absorption Spectroscopy (DOAS)
- Fourier-Transform InfraRed (FTIR) Spectroscopy
- Solar Occultation Flux (SOF)
- Zenith-looking DOAS

Measurement frequency ~ 5 – 10 sec.

AIR MONITORING ACTIVITIES NEAR OIL WELLS

MOBILE AIR MONITORING NEAR OIL WELLS IN THE COMMUNITY

- Example of Measurement Path
- Active Well

SUMMARY OF OVER 2 YEARS OF MEASUREMENTS NEAR OIL WELLS

Area D

- ~ 300 active oil wells
- 2 locations with elevated VOC concentrations
- 1 location with persistent elevated VOCs*

Area E

- ~ 160 active oil wells
- 1 location with elevated VOC concentrations#
- 0 locations with persistent elevated VOCs*

Area F

- ~ 75 active oil wells
- 3 locations with elevated VOC concentrations
- 3 locations with persistent elevated VOCs*

- Example of Measurement Path
- Active Well

EXAMPLE OF MOBILE AREA AIR QUALITY SURVEY

Total Alkanes

Benzene

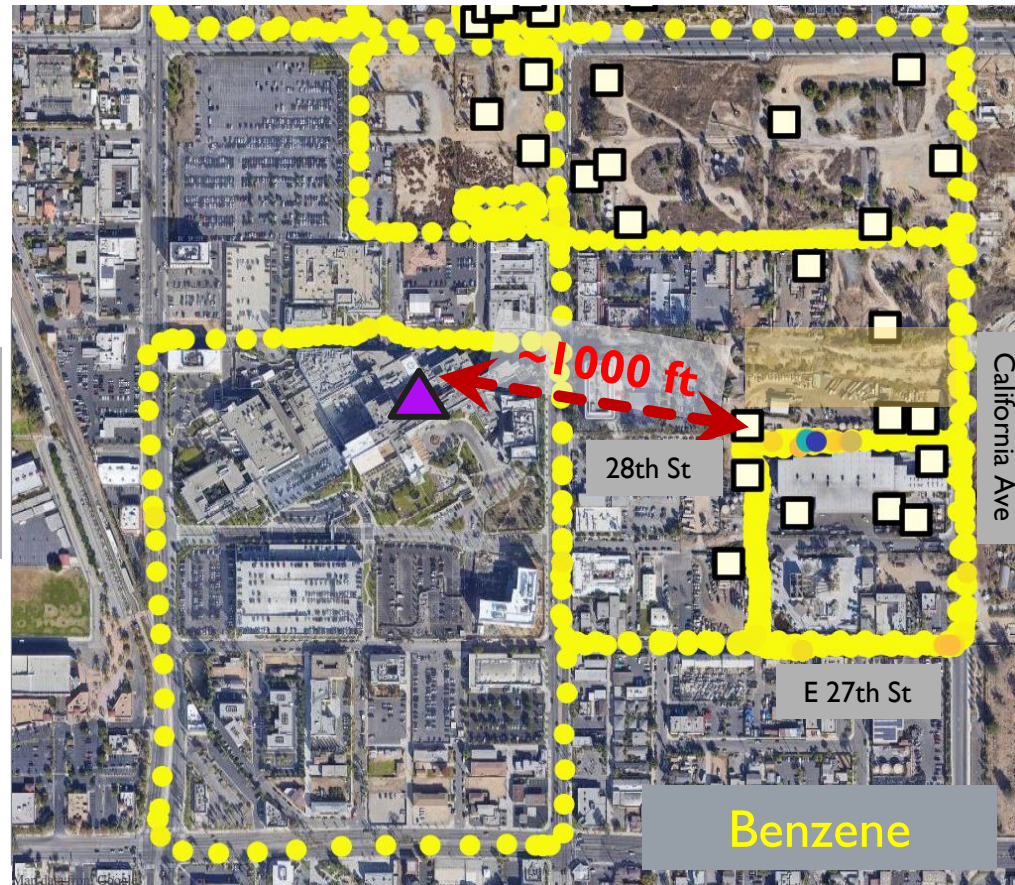

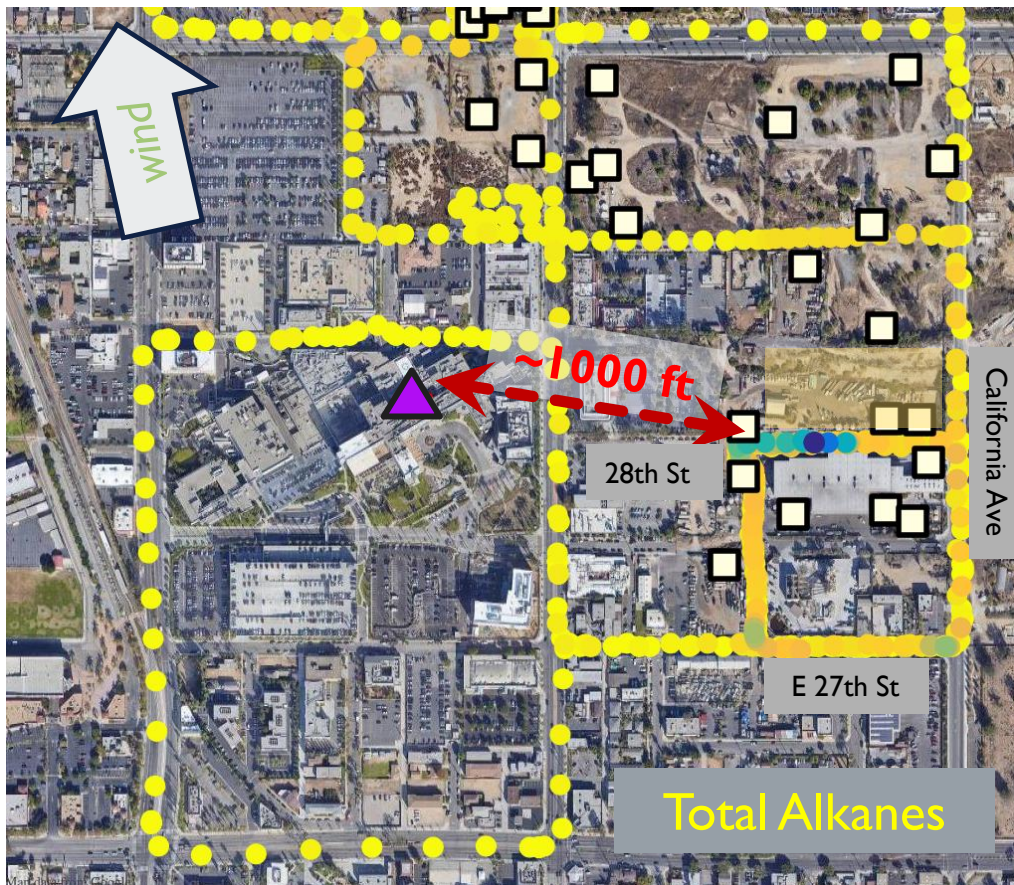

March 9, 2022

Oil Wells

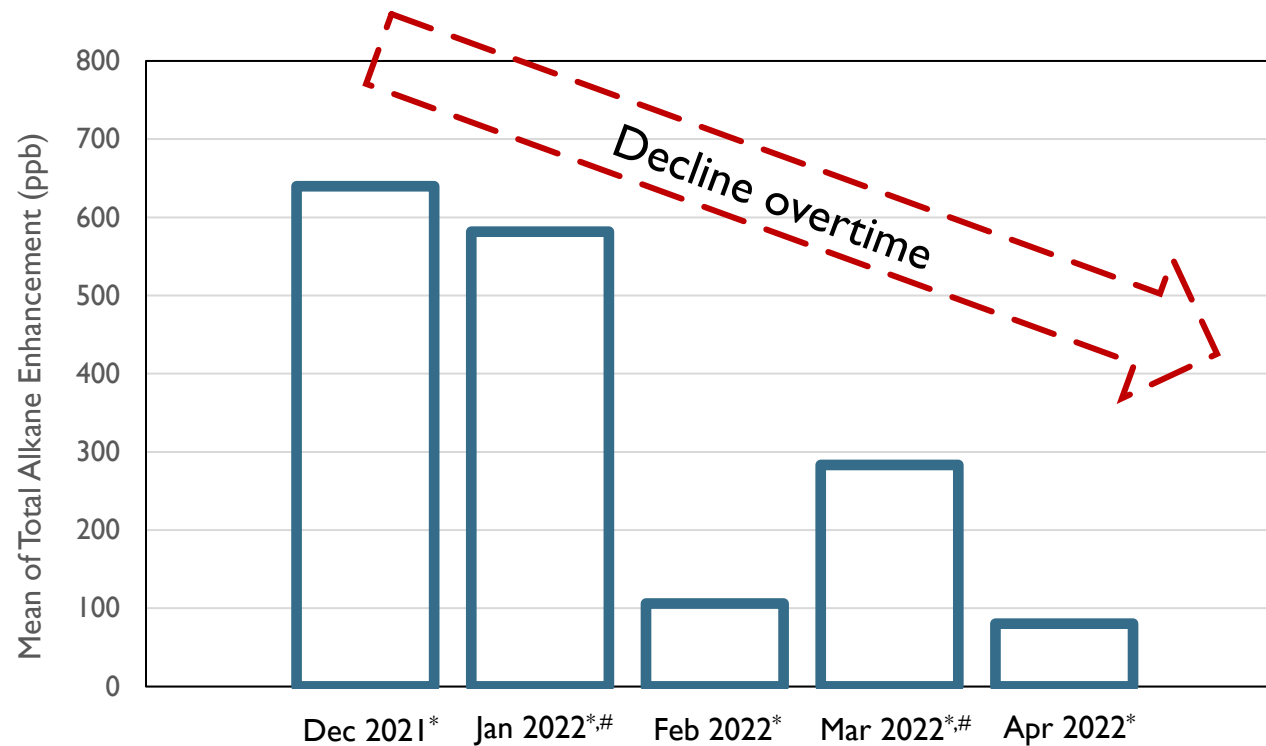

ASSESSMENT OF COMMUNITY IMPACT

□ Oil Wells ▲ Hospital

March 9, 2022

TRACKING PERSISTENT ELEVATED CONCENTRATIONS OVERTIME

Mean concentration in the area with persistent elevated VOCs

*Mean concentrations calculated based on at least 300 individual instantaneous measurements near the facility

#Emissions detected in January and March 2022 were due to routine maintenance activities at the site

EXAMPLE OF LEAK IDENTIFICATION

Total Alkanes

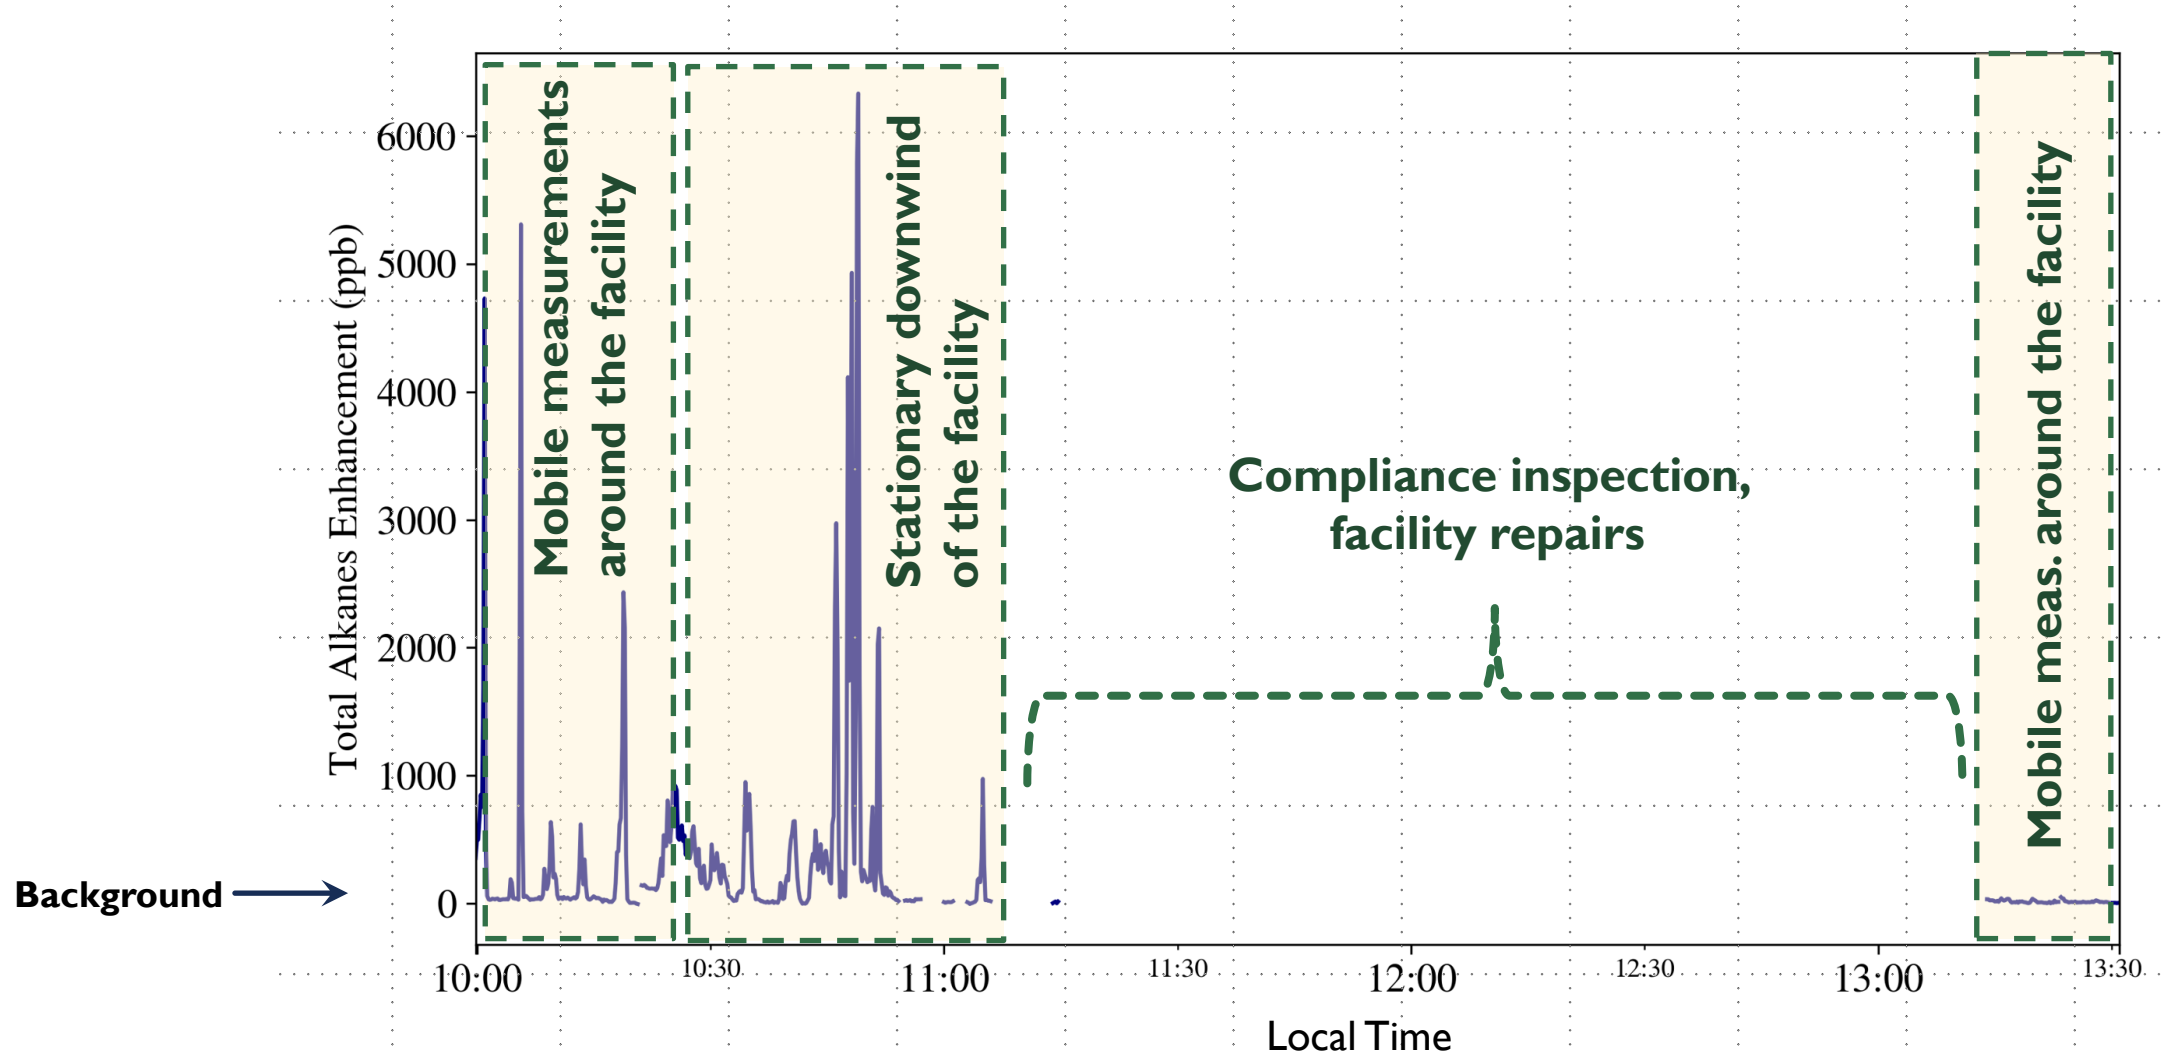

Benzene

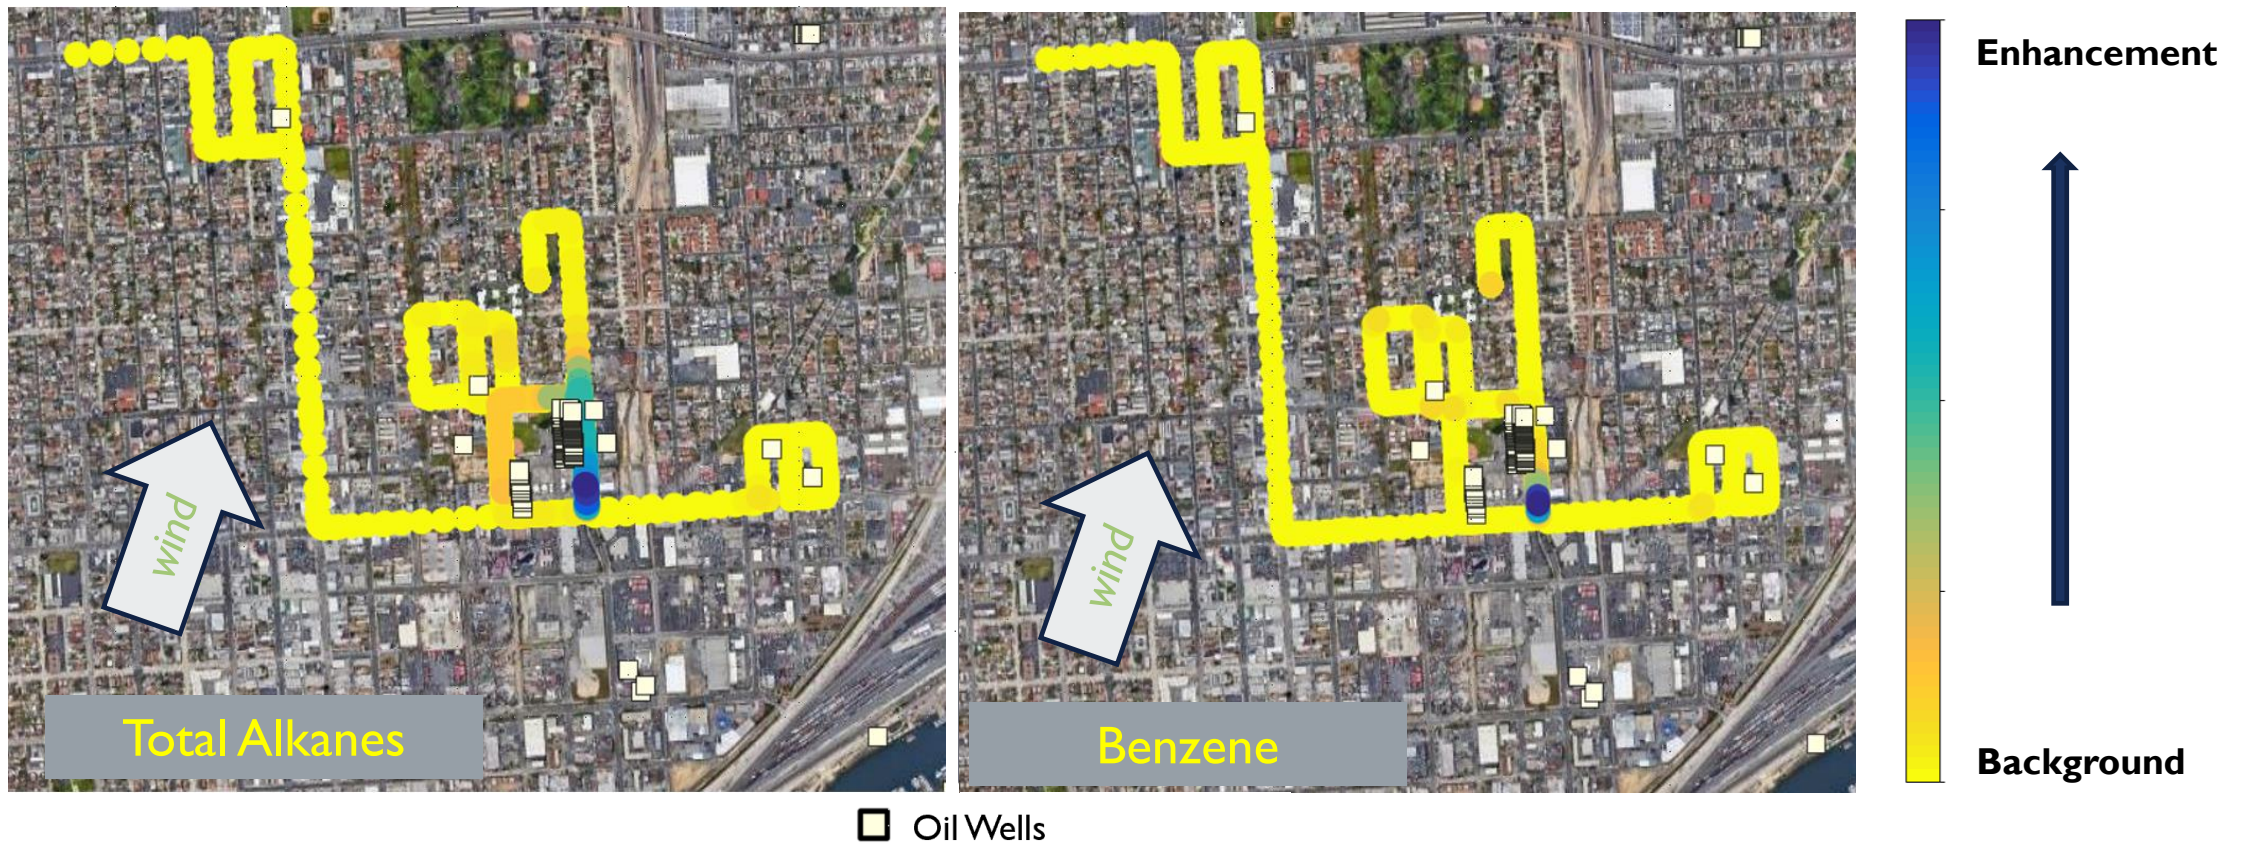

□ Oil Wells

EXAMPLE OF LEAK IDENTIFICATION

ASSESSMENT OF COMMUNITY IMPACT

EMISSION IDENTIFICATION AND INSPECTION TOOLS

Forward Looking InfraRed Camera (FLIR)

Toxic Vapor Analyzer (TVA)

Verification by TVA

OIL WELLS IN SOUTH LOS ANGELES COMMUNITY

SUMMARY

- Mobile platforms are effective tools to survey numerous sources / facilities and identify areas of elevated pollutant concentrations in a relatively short amount of time
- Elevated VOC readings near oil extraction operations often intermittent and confined to areas adjacent to the facility
- Mobile monitoring is conducted in coordination with facility inspections
- Preliminary mobile monitoring in SLA community near Jefferson, Murphy and Allenco sites conducted in April 2022
- Mobile monitoring in all portions of SLA community adjacent to oil and gas operations will be conducted later in 2022 as part of AB617 implementation
