Goal LU 2: A land use pattern that protects environmental resources <ul style="list-style-type: none">Policy LU 2.1: Limit the amount of potential development in Significant Ecological Areas, including Joshua Tree Woodlands, wildlife corridors, and other sensitive habitat areas, through appropriate land use designations with very low residential densities, as indicated in the Land Use Policy Map (Map 2.1) of this Area PlanPolicy LU 2.2: Except within economic opportunity areas, limit the amount of potential development within Scenic Resource Areas, including water features, significant ridgelines, and Hillside Management Areas, through appropriate land use designations, as indicated in the Land Use Policy Map (Map 2.1) of this Area PlanPolicy LU 2.3: Except within economic opportunity areas, limit the amount of potential development in Agricultural Resource Areas, including important farmlands designated by the State of California and historical farmland areas, through appropriate land use designations with very low residential densities, as indicated in the Land Use Policy Map (Map 2.1) of this Area Plan.Policy LU 2.4: Except within economic opportunity areas, limit the amount of potential development in Mineral Resource Areas, through appropriate land use designations with very low residential densities, as indicated in the Land Use Policy Map (Map 2.1) of this Area Plan.Policy LU 2.5: Except within economic opportunity areas, limit the amount of potential development in riparian areas and groundwater recharge basins, through appropriate land use designations with very low residential densities, as indicated in the Land Use Policy Map (Map 2.1) of this Area Plan.Policy LU 2.6: Except within economic opportunity areas, limit the amount of potential development near the National Forests and on private lands within the National Forests, through appropriate land use designations with very low residential densities, as indicated in the Land Use Policy Map (Map 2.1) of this Area Plan.	Consistent	Consistent	The purpose of the Ordinance is to improve the environment, thereby protecting environmental resources. Furthermore, analyses of biological, visual, agricultural, mineral, and forestry resources have shown that the proposed program would be compatible with these policies given the limited development.
Goal LU 3: A land use pattern that minimizes threats from hazards. <ul style="list-style-type: none">Policy LU 3.1: Except within economic opportunity areas, prohibit new development on fault traces and limit the amount of development in Seismic Zones, through appropriate land use designations with very low residential densities, as indicated in the Land Use Policy Map (Map 2.1) of this Area PlanPolicy LU 3.2: Except within economic opportunity areas, limit the amount of potential development in Very High Fire Hazard Severity Zones, through appropriate land use designations with very low residential densities, as indicated in the Land Use Policy Map (Map 2.1) of this Area Plan.Policy LU 3.3: Except within economic opportunity areas, limit the amount of potential development in Flood Zones designated by the Federal Emergency Management Agency, through appropriate land use designations with very low residential densities, as indicated in the Land Use Policy Map (Map 2.1) of this Area Plan.Policy LU 3.4: Except within economic opportunity areas, limit the amount of potential development on steep slopes identified as Hillside Management Areas, through appropriate land use designations with very low residential densities, as indicated in the Land Use Policy Map (Map 2.1) of this Area Plan.Policy LU 3.5: Except within economic opportunity areas, limit the amount of potential development in landslide and liquefaction areas, through appropriate land use designations with very low residential densities, as indicated in the Land Use Policy Map (Map 2.1) of this Area PlanPolicy LU 3.6: Except within economic opportunity areas, limit the amount of potential residential development in airport influence areas and near military lands, through appropriate land use designations with very low residential densities, as indicated in the Land Use Policy Map (Map 2.1) of this Area Plan.Policy LU 3.7: All development projects located on parcels that are within an airport influence area shall be consistent with all policies of that airport’s land use compatibility plan*	Consistent*	Consistent*	<p>The purpose of the Ordinance is to reduce threats from environmental issues, thereby minimizing threats from hazards. Furthermore, regarding Policy LU 3.1-3.6, the Ordinance would not change the existing land use designations which are compatible with the Area Plan, and therefore would not result in a change that would cause exposure to these hazards.</p> <p>*The Green Zone Districts do not fall within Airport Influence Areas; however, the Recycling and Waste Management Revisions and Supermarket Recycling Center Revisions do. These revisions would comply with the relevant airport land use computability plan(s).</p>

TABLE 2.11-1
LAND USE PLAN CONSISTENCY WITH THE GREEN ZONES ORDINANCE

Consistent = The Ordinance is consistent with the policy or it fulfills the goal or objective listed in the respective land use plan.
No conflict = The Ordinance does not conflict with the goal/policy/objective list in the respective land use plan.
Potential conflict = The Ordinance has the potential to be incompatible with the goal/policy/objective list in the respective land use plan.

Land Use Goals and Policies	Potential Conflict		Discussion
	Recycling and Waste Management Revisions	Storage Enclosures for Recycling and Solid Waste Revisions	
Goal LU 4: A land use pattern that promotes the efficient use of existing and/or planned infrastructure and public facilities.	No conflict	No conflict	The proposed program would make minimal development changes to existing uses.
Goal LU 5: A land use pattern that decreases greenhouse gas emissions. <ul style="list-style-type: none">Policy LU 5.4: Ensure that there is an appropriate balance of residential uses and employment opportunities within close proximity of each other.	No conflict	No conflict	
Goal LU 6: A land use pattern that makes the Antelope Valley a sustainable and resilient place to live.	Consistent	Consistent	The Ordinance improves the environment and the livability of the communities, thereby fitting into the land use pattern which makes the Antelope Valley a sustainable and resilient place to live.

TABLE 2.11-1
LAND USE PLAN CONSISTENCY WITH THE GREEN ZONES ORDINANCE

Consistent = The Ordinance is consistent with the policy or it fulfills the goal or objective listed in the respective land use plan.
No conflict = The Ordinance does not conflict with the goal/policy/objective list in the respective land use plan.
Potential conflict = The Ordinance has the potential to be incompatible with the goal/policy/objective list in the respective land use plan.

Santa Clarita Valley Area Plan – One Valley One Vision

Land Use Goals and Policies	Potential Conflict		Discussion
	Recycling and Waste Management Revisions	Storage Enclosures for Recycling and Solid Waste Revisions	
Goal LU-1: Urban Form: An interconnected Valley of Villages providing diverse lifestyles, surrounded by a greenbelt of natural open space.	No conflict	No conflict	
Goal LU-2: Mixed Land Uses: A mix of land uses to accommodate growth, supported by adequate resources and maintaining community assets. <ul style="list-style-type: none">Objective LU-2.1 Provide adequate, suitable sites for housing, employment, business, shopping, public facilities, public utility facilities, and community services to meet current needs and the anticipated needs of future growth.<ul style="list-style-type: none">Policy LU-2.1.5: Identify areas with hazardous conditions and ensure that uses in or adjacent to these areas pose minimal risk to public health or safety.	Consistent	No conflict	Per Policy LU-2.1.5, the Ordinance identifies areas with hazardous environmental conditions, such as industrial uses, and minimizes the impact of these risks.
Goal LU-3: Healthy Neighborhoods: Healthy and safe neighborhoods for all residents. <ul style="list-style-type: none">Objective LU-3.3 Ensure that the design of residential neighborhoods considers and includes measures to reduce impacts from natural or man-made hazards.<ul style="list-style-type: none">Policy LU-3.3.3: Identify neighborhoods in which uses that pose a potential hazard to human health and safety may be over-concentrated, and address public safety through use of buffer areas, policies on siting decisions for such uses, changing land use designations, or other means as deemed appropriate.	Consistent	Consistent	The purpose of the Ordinance is to improve the environment, thereby creating healthy and safe neighborhoods for residents. It also identifies areas with hazardous environmental conditions, such as industrial uses, and minimizes the impact of these risks.
Objective LU-4: Economic Vitality: A diverse and healthy economy.	No conflict	No conflict	
Goal LU-7: Environmentally Responsible Development: Environmentally responsible development through site planning, building design, waste reduction, and responsible stewardship of resources. <ul style="list-style-type: none">Objective LU-7.5 Promote waste reduction through site and building design.<ul style="list-style-type: none">Policy LU-7.5.1: Ensure that all new development provides adequate space for recycling receptacles and bins on site.Objective LU-7.6 Protect natural habitats through site design where reasonable and feasible.<ul style="list-style-type: none">Policy LU-7.6.1: Limit outdoor lighting levels to the minimum needed for safety and security, and encourage lower lighting levels when businesses are closed.	Consistent	Consistent	Per Policy LU-7.5.1, the Storage Enclosures for Recycling and Solid Waste requirements would Encourage waste reduction through proper design of storage enclosures, and would also ensure that adequate space is provided for recycling receptacles and bins on site The lighting which would be required on Supermarket Recycling Collection Centers would be compatible with Policy LU-8.3.1.
Goal LU-8: Environmental Justice Equitable and convenient access to social, cultural, educational, civic, medical, and recreational facilities and opportunities for all residents.	Consistent	Consistent	The purpose of the Ordinance is to improve the environment for surrounding uses and address environmental justice.
Goal LU-9: Public Facilities Adequate public facilities and services, provided in a timely manner and in appropriate locations to serve existing and future residents and businesses. <ul style="list-style-type: none">Objective LU-9.1 Coordinate land use planning with provision of adequate public services and facilities to support development.<ul style="list-style-type: none">Policy LU-9.1.2: Coordinate review of development projects with other agencies and special districts providing utilities and other services.Policy LU-9.1.7: Provide for location of additional waste transfer stations and other facilities to promote recycling and reuse of materials within Industrial designations on the Land Use Map, subject to the provisions of the County Zoning Ordinance.	Consistent	Consistent	

SOURCE: Los Angeles County Department of Regional Planning. 2012. Chapter 2: Land Use Element. Santa Clarita Valley Area Plan – One Valley One Vision. http://planning.lacounty.gov/assets/upl/project/ovov_2012-ch-02-landuse.pdf

c) Conflict with the goals and policies of the General Plan related to Hillside Management Areas or Significant Ecological Areas?

Existing Conditions

As discussed in Section 2.1, *Aesthetics*, the County General Plan designates HMAs for natural slope gradients of 25 percent or steeper, with the intent to conserve the natural beauty and public benefit of hillsides (see Figure 2.1-2, *Slope*). Hillsides are protected by the HMA Ordinance, which was adopted as a component of the County General Plan and requires development in HMAs to comply with the Hillside Design Guidelines in a manner that respects the natural topography and biological resources of the area.^{37,38} The new County HMA Ordinance became effective on November 5, 2015.³⁹

The most recent SEA Ordinance became effective on January 16, 2020. There are 28 SEAs in Los Angeles County.⁴⁰ The SEA Ordinance establishes the permitting, design standards, and review process for development within SEAs, balancing preservation of the County's natural biodiversity with private property rights.

Threshold of Significance

A significant impact would occur if the proposed program conflicted with the goals or policies of the County General Plan related to HMAs or SEAs.⁴¹

Impact Analysis

The potential for impacts in regard to conflicting with the goals and policies of the General Plan related to HMAs or SEAs has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated (please see Section 1, Table 1.IV-1, and Table 1.IV-2). The analysis considers the incremental changes to the physical environment as a result of new and/or revised development standards, in relation to the historic and anticipated permits for affected uses. The proposed revisions to the development standards that have the potential result in physical changes in the environment have been evaluated in regard to conflicting with the goals and policies of the General Plan related to HMAs or SEAs. The Ordinance includes the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

⁴¹ Los Angeles County Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035. Available at: <http://planning.lacounty.gov/generalplan/generalplan>

Element 1 – Green Zone Districts

Green Zone Districts would result in less than significant impacts regarding conflicting with the goals and policies of the General Plan related to HMAs or SEAs. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling or solid waste, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in impacts to land use in regard to conflicting with the goals and policies of the General Plan related to HMAs or SEAs. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, 27 28 parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, 14 45 of the 27 28 parcels proposed for a zone change within the Green Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to 7 40 years of adoption of the Ordinance. Approximately 5 percent of the area of the Green Zone Districts is located with an area with a slope over 25 percent (Figure 2.1.2). The revisions to the Ordinance would not revise any of the development requirements of the Hillside Management Ordinance. Any development proposed in an HMA would be required to meet the requirements of the HMA Ordinance and Hillside Design Guidelines.⁴² There are no SEAs within the Green Zone Districts. There are 16 policies in the Land Use Element and the Conservation Element of the General Plan that are applicable to SEAs. The proposed revisions to the Green Zone Districts are consistent with all of these policies (Table 2.11-2, *Hillside Management Areas and Significant Ecological Area Consistency with The Green Zones Ordinance*). In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would result in impacts regarding conflicting with the goals and policies of the General Plan related to HMAs or SEAs. The new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts regarding conflicting with the goals and policies of the General Plan related to HMAs or SEAs. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in less than significant impacts regarding conflicting with the goals and policies of the General Plan related to HMAs or SEAs. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, in close proximity to existing industrial uses permitted in the zones where they are located. The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows;

⁴² County of Los Angeles Department of Regional Planning. Adopted 6 October 2016 and Accessed 31 March 2020. Title 22 – Planning and Zoning – Hillside Management Areas, Chapter 22.56.217 – Section VI: Sensitive Hillside Design Features. Available at: <http://planning.lacounty.gov/hma>.

placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses. In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from existing conditions, such that they would result in impacts regarding conflicting with the goals and policies of the General Plan related to HMAs or SEAs. Large areas of the parcels affected by the New Sensitive Uses element of the Green Zones Program are located in areas with a slope over 25 percent (Figure 2.1.2). The revisions to the Ordinance would not revise any of the development requirements of the Hillside Management Ordinance. Any development proposed in an HMA would be required to meet the requirements of the HMA Ordinance and Hillside Design Guidelines.⁴³ Multiple SEAs overlap the boundaries of the New Sensitive Uses element of the Green Zones Program (Figure 2.4.2). However, the revisions to the Ordinance would not revise any of the development requirements of the SEA program. Any development proposed in an SEA would be required to meet the requirements of the SEA Program.⁴⁴ There are 16 policies in the Land Use Element and the Conservation Element of the General Plan that are applicable to SEAs. The proposed revisions to the New Sensitive Uses are consistent with all of these policies (Table 2.11-2). In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would result in impacts regarding conflicting with the goals and policies of the General Plan related to HMAs or SEAs.

These measures to reduce the incompatibility of new sensitive uses with existing industrial uses through development standards such as construction of landscaping and planting trees, buffering, and open space, would not result in significant impacts in regard to conflicting with the goals and policies of the General Plan related to HMAs or SEAs. Therefore, the new development standards for New Sensitive Uses near Industrial, Recycling and Solid Waste, or Vehicle-Related Uses would result in less than significant impacts regarding conflicting with the goals and policies of the General Plan related to HMAs or SEAs. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in less than significant impacts regarding conflicting with the goals and policies of the General Plan related to HMAs or SEAs. The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards. Large areas of the parcels affected by the Recycling and Waste Management element of the Green Zones Program are located in areas with a slope over 25 percent (Figure 2.1.2). Multiple SEAs overlap the boundaries of the New Sensitive Uses element of the Green Zones Program (Figure 2.4.2). Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited in HMAs and SEAs. Additionally, pallet yards, chipping and grinding, mulching facilities would be prohibited in HFHSZs and VHFHSZs; solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways; and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. ~~However, the revisions to the~~

⁴³ County of Los Angeles Department of Regional Planning. Adopted 6 October 2016 and Accessed 31 March 2020. Title 22 – Planning and Zoning – Hillside Management Areas, Chapter 22.56.217 – Section VI: Sensitive Hillside Design Features. Available at: <http://planning.lacounty.gov/hma>.

⁴⁴ County of Los Angeles. SEA Ordinance. December 17, 2020. Available at: <http://file.lacounty.gov/SDSInter/bos/supdocs/142693.pdf>

~~Ordinance would result in the prohibition of automobile dismantling yards, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs or SEAs.~~ There are 16 policies in the Land Use Element and the Conservation Element of the General Plan that are applicable to SEAs. The proposed revisions to the Recycling and Waste Management are consistent with all of these policies (Table 2.11-2). In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would result in impacts regarding conflicting with the goals and policies of the General Plan related to HMAs or SEAs. Therefore, impacts to Recycling and Waste Management Revisions would be less than significant in regard to conflicting with the goals and policies of the General Plan related to HMAs or SEAs. No further analysis is warranted.

The Supermarket Accessory Recycling Collection Centers revisions would result in less than significant impacts in regard to conflicting with the goals and policies of the General Plan related to HMAs or SEAs. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed Supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County’s waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be constructed on existing parking lots, and no new structures will be built. Large areas of the parcels affected by the Supermarket Accessory Recycling Collection Centers revisions are located in areas with a slope over 25 percent (Figure 2.1.2). The revisions to the Ordinance would not revise any of the development requirements of the Hillside Management Ordinance. Any development proposed in an HMA would be required to meet the requirements of the HMA Ordinance and Hillside Design Guidelines.⁴⁵ Multiple SEAs overlap the boundaries of the Supermarket Accessory Recycling Collection Centers revisions (Figure 2.4.2). However, the revisions to the Ordinance would not revise any of the development requirements of the SEA program. Any development proposed in an SEA would be required to meet the requirements of the SEA Program.⁴⁶ There are 16 policies in the Land Use Element and the Conservation Element of the General Plan that are applicable to SEAs. The proposed revisions to the Supermarket Accessory Recycling Collection Centers revisions are consistent with all of these policies (Table 2.11-2). In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would result in impacts regarding conflicting with the goals and policies of the General Plan related to HMAs or SEAs. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts regarding conflicting with the goals and policies of the General Plan related to HMAs or SEAs. Any new development or

⁴⁵ County of Los Angeles Department of Regional Planning. Adopted 6 October 2016 and Accessed 31 March 2020. Title 22 – Planning and Zoning – Hillside Management Areas, Chapter 22.56.217 – Section VI: Sensitive Hillside Design Features. Available at: <http://planning.lacounty.gov/hma>.

⁴⁶ County of Los Angeles. SEA Ordinance. December 17, 2020. Available at: <http://file.lacounty.gov/SDSInter/bos/supdocs/142693.pdf>

expansion of existing development would be required to meet the current development standards of the zone in which they are permitted. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development.

Large areas of the parcels affected by the Storage Enclosures for Recycling and Solid Waste revisions are located in areas with a slope over 25 percent (Figure 2.1.2). The revisions to the Ordinance would not revise any of the development requirements of the Hillside Management Ordinance. Any development proposed in an HMA would be required to meet the requirements of the HMA Ordinance and Hillside Design Guidelines.⁴⁷ Multiple SEAs overlap the boundaries of the Storage Enclosures for Recycling and Solid Waste revisions (Figure 2.4.2). However, the revisions to the Ordinance would not revise any of the development requirements of the SEA program. Any development proposed in an SEA would be required to meet the requirements of the SEA Program.⁴⁸ There are 16 policies in the Land Use Element and the Conservation Element of the General Plan that are applicable to SEAs. The proposed revisions to the Storage Enclosures for Recycling and Solid Waste revisions are consistent with all of these policies (Table 2.11-2). In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would result in impacts regarding conflicting with the goals and policies of the General Plan related to HMAs or SEAs. Therefore, the Storage Enclosures for Recycling and Solid Waste revisions would result in less than significant impacts regarding conflicting with the goals and policies of the General Plan related to HMAs or SEAs. No further analysis is warranted.

⁴⁷ County of Los Angeles Department of Regional Planning. Adopted 6 October 2016 and Accessed 31 March 2020. Title 22 – Planning and Zoning – Hillside Management Areas, Chapter 22.56.217 – Section VI: Sensitive Hillside Design Features. Available at: <http://planning.lacounty.gov/hma>.

Policy C/NR 3.9: Consider the following in the design of a project that is located within an SEA, to the greatest extent feasible: <ul style="list-style-type: none">• Preservation of biologically valuable habitats, species, wildlife corridors and linkages;• Protection of sensitive resources on the site within open space;• Protection of water sources from hydromodification in order to maintain the ecological function of riparian habitats;• Placement of the development in the least biologically sensitive areas on the site (prioritize the preservation or avoidance of the most sensitive biological resources onsite);• Design required open spaces to retain contiguous undisturbed open space that preserves the most sensitive biological resources onsite and/or serves to maintain regional connectivity;• Maintenance of watershed connectivity by capturing, treating, retaining, and/or infiltrating storm water flows on site; and• Consideration of the continuity of onsite open space with adjacent open space in project design.	No conflict	No conflict	No conflict	No conflict
Policy C/NR 3.10: Require environmentally superior mitigation for unavoidable impacts on biologically sensitive areas, and permanently preserve mitigation sites.	No conflict	No conflict	No conflict	No conflict
Policy C/NR 3.11: Discourage development in riparian habitats, streambeds, wetlands, and other native woodlands in order to maintain and support their preservation in a natural state, unaltered by grading, fill, or diversion activities.	No conflict	No conflict	No conflict	No conflict
Policy C/NR 4.1: Preserve and restore oak woodlands and other native woodlands that are conserved in perpetuity with a goal of no net loss of existing woodlands.	No conflict	No conflict	No conflict	No conflict

2.12. MINERAL RESOURCES

This analysis is undertaken to determine if the proposed program may have a significant impact to mineral resources, thus requiring the consideration of mitigation measures or alternatives, in accordance with Section 15063 of the State CEQA Guidelines.¹ The analysis covers all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated with regard to California Department of Conservation (CDC) data from the California Geologic Survey and the Division of Mine Reclamation,^{2,3} Title 22 of the Los Angeles County Municipal Code,⁴ and the Conservation and Natural Resources Element of the Los Angeles County General Plan 2035.⁵

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?				

Existing Conditions

Under the 1975 Surface Mining and Reclamation Act (SMARA, PRC 2710 et seq.), Mineral Land Classification (MLC) studies are conducted by the State Geologist through the California Geologic Survey (previously the Division of Mines and Geology). MLC reports identify areas with potentially important mineral resources that should be considered in local and regional planning, and then designate and map Mineral Resource Zones (MRZs) according to the existence or nonexistence of significant mineral resource deposits. There are four MRZ designations: areas with no significant mineral deposits or low likelihood (MRZ-1), areas with significant mineral deposits or high likelihood (MRZ-2), areas with mineral deposits of unknown significance (MRZ-3), and areas with inadequate information (MRZ-4).⁶ In addition, the California Department of Conservation, Division of Mine Reclamation, provides a map service, “Mines Online,” which is updated daily and shows the commodities produced by California’s mines and their statuses.⁷The Recycling

and Waste Management Revisions include land with mineral resources that fall under MRZ-2s,⁸ and there are 11 mines in the County that are located within parcels that are subject to these revisions due to their location on land with an M-2 or A-2 land use zoning designation (Table 2.12-1, *Mines Located in Parcels Subject to the Ordinance*).⁹

SOURCE: California Department of Conservation, Division of Mine Reclamation, Mines Online, last updated 2020.

Threshold of Significance

A significant impact would occur if the proposed program would cause the loss of availability of a known mineral resource. An example would be the construction of a residential subdivision on top of a known sand and gravel mineral resource.

Impact Analysis

The proposed program would result in no impacts to mineral resources in relation to the loss of availability of a known mineral resource that would be of value to the region and the residents of the state. The potential for impacts to mineral resources has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated (please see Section 1, *Project Description*; Table 1.IV-1, *Planning and Permitting Requirements*, and Table 1.IV-2, *Development Standards*). The analysis considers the incremental changes to the physical environment as a result of new and/or revised development standards, in relation to the historic and anticipated permits for affected uses. The proposed revisions to the development standards that have the potential result in physical changes in the environment and mineral resources include the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

Element 1 – Green Zone Districts

Green Zone Districts would result in no impacts to in relation to the loss of availability of a known mineral resource that would be of value to the region and the residents of the state. The Green Zone Districts cover approximately 1,950

⁸ California Department of Conservation, California Geological Survey. Mineral Land Classification Studies Index. Updated 01 October 2015. Accessed 12 March 2020. <https://maps.conservation.ca.gov/cgs/informationwarehouse/index.html?map=mlc>

⁹ California Department of Conservation, Division of Mine Reclamation. Mines Online. Accessed 5 March 2020. <https://maps.conservation.ca.gov/mol/index.html>

acres of the County, which includes land with mineral resources that fall under MRZ-2s.¹⁰ However, despite the proposed program's location within areas which contain significant mineral resources, the Green Zone Districts would have no impact on these mineral resources, as the Ordinance would not result in the loss of their availability.

The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties. Currently, the zoning and land use designations for the 11 districts under consideration for proposed revision allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum floor area ratio (FAR) requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, 27 28 parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, 14 45 of the 27 28 parcels proposed for a zone change within the Green Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to 7 40 years of adoption of the Ordinance.

In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, as they would be minor additions to existing industrial land uses. The industrial uses would already exist within any MRZ, and therefore, the proposed program would not result in the loss of availability of a mineral resource as it would not differ substantially from existing conditions. The existing land uses would already exist within an MRZ-2, and the new development standards would not result in a substantial change from existing conditions. Any construction resulting from compliance with development standards would be minimal and would not substantially alter the existing conditions for existing industrial uses such that the mineral resources would be lost.

Additionally, based on a comparison of the maps of the proposed Green Zone Districts and the mines shown on the maps provided by the CDC, there are no mines located within areas subject to the Green Zone Districts.¹¹ Therefore, the Green Zone Districts would result in no impacts to in relation to the loss of availability of a known mineral resource that would be of value to the region and the residents of the state. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses revisions would result in no impacts to in relation to the loss of availability of a known mineral resource that would be of value to the region and the residents of the state. These revisions are applicable to all unincorporated territory of the County, which includes land with mineral resources that fall under MRZ-2s.¹²

Currently, the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, ~~in close proximity to existing industrial uses~~ permitted in the

¹⁰ California Department of Conservation, California Geological Survey. Mineral Land Classification Studies Index. Updated 1 October 2015. Accessed 12 March 2020. <https://maps.conservation.ca.gov/cgs/informationwarehouse/index.html?map=mlc>

¹¹ California Department of Conservation, Division of Mine Reclamation. Mines Online. Accessed 5 March 2020. <https://maps.conservation.ca.gov/mol/index.html>

¹² California Department of Conservation, California Geological Survey. Mineral Land Classification Studies Index. Updated 01 October 2015. Accessed 12 March 2020. <https://maps.conservation.ca.gov/cgs/informationwarehouse/index.html?map=mlc>

zones where they are located. The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, ~~in close proximity adjacent to or adjoining legally-established,~~ existing industrial, recycling or solid waste, or vehicle-related uses.

In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from the sensitive use being proposed, such that they would result in the loss of a mineral resource. These measures to reduce the incompatibility of new sensitive uses with existing industrial uses through development standards such as construction of landscaping and planting trees, buffering, and open space, would be minor additions to the design of the proposed new sensitive use, which would be evaluated on an individual project basis under CEQA for impacts to mineral resources. Any construction resulting from compliance with development standards would be minimal and would not be substantially different from the design of the individual project in an MRZ-2 without the proposed measures.

Therefore, the New Sensitive Uses Element of the Green Zones Program would result in no impacts to in relation to the loss of availability of a known mineral resource that would be of value to the region and the residents of the state. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in no impacts to in relation to the loss of availability of a known mineral resource that would be of value to the region and the residents of the state.

The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards. Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited in HMAs and SEAs. Additionally, pallet yards, chipping and grinding, mulching facilities would be prohibited in HFHSZs and VHFHSZs; solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways; and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. ~~The proposed revisions will prohibit automobile dismantling yards, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in-vessel organic waste facilities are prohibited in ARAs.~~

The Recycling and Waste Management Revisions would have no impact on the existing mineral resources and active mines, as the Recycling and Waste Management Revisions place development standards and new permit and review processes on specific uses. In the case of updated standards for specific uses, the construction of these measures would not differ substantially from existing conditions, such that they would result in the loss of a mineral resource. These measures to reduce the impacts existing industrial recycling and solid waste uses through development standards such as construction of landscaping and planting trees, buffering, and open space, would be minor additions to existing

industrial uses. The existing land uses would already exist within an MRZ-2, and the new development standards would not result in a substantial change from existing conditions. Any construction resulting from compliance with development standards would be minimal and would not substantially alter the ~~existing~~ conditions for existing ~~or proposed~~ industrial uses such that the mineral resources would be lost. Furthermore, permitting an organic waste, recycling, or solid waste facility would remain a discretionary action, and each development would be analyzed for project-level impacts in relation to conversion of mineral resources. Therefore, Recycling and Waste Management Revisions would result in no impacts to in relation to the loss of availability of a known mineral resource that would be of value to the region and the residents of the state. No further analysis is warranted.

The Supermarket Accessory Recycling Collection Centers revisions would result in no impacts to in relation to the loss of availability of a known mineral resource that would be of value to the region and the residents of the state. The Supermarket Accessory Recycling Collection Centers revisions include land with mineral resources that fall under MRZ-2s,¹³ and there are two active mines in the County which are located within parcels that are subject to Supermarket Recycling Center Revisions due to their location on land with an M-2 land use zoning designation (Table 2.12-1).¹⁴ The Supermarket Accessory Recycling Collection Centers would have no impact on the existing mineral resources or active mines, as the revisions pertain to standards, conditions, and procedures that support and facilitate the development of recycling collection center as an accessory use to an existing supermarket.

The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed Supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County’s waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones.

These uses would be constructed on existing parking lots, and no new structures will be built. As such, these revisions would not affect the mines given that mines are not supermarket or supermarket recycling facilities and would not result in development on an MRZ-2. The construction of a recycling collection center as an attachment to an existing supermarket or compliance with development standards would not substantially alter the existing conditions such that the mineral resources would be lost.

Therefore, the Supermarket Accessory Recycling Collection Centers would result in no impacts to in relation to the loss of availability of a known mineral resource that would be of value to the region and the residents of the state. No further analysis is warranted.

¹³ California Department of Conservation, California Geological Survey. Mineral Land Classification Studies Index. Updated 01 October 2015. Accessed 12 March 2020. <https://maps.conservation.ca.gov/cgs/informationwarehouse/index.html?map=mlc>

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions element of the Green Zones Program would result in no impacts to in relation to the loss of availability of a known mineral resource that would be of value to the region and the residents of the state. Any new development or expansion of existing development would be required to meet the current development standards of the zone they are permitted in. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development.

The Storage Enclosures for Recycling and Solid Waste Revisions would have no impact on the existing mineral resources and active mines, as these revisions would not affect the mines given that they are not recycling or waste facilities and would not result in development within an MRZ-2. Any construction of storage enclosures or areas resulting from compliance with development standards would be minimal and would not substantially alter the existing conditions for existing land uses such that the mineral resources would be lost. Should the revisions to on-site waste storage standards be relevant to any waste produced by the mines, the mines would comply, and this would not result in the loss of availability of the mineral resource recovery site.

Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to in relation to the loss of availability of a known mineral resource that would be of value to the region and the residents of the state. No further analysis is warranted.

b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

Existing Conditions

The Conservation and Natural Resources Element of the County General Plan 2035 addresses the use and management of valuable energy and mineral resources in the unincorporated areas of the County, and the importance of sustaining and maintaining these resources for future users. The County does not delineate a specific locally important mineral resource recovery site; however, it depends on the California Geological Survey to identify deposits of regionally significant mineral resources (MRZ-2s). The County General Plan 2035 specifies four major MRZ-2s in, or partially within, the unincorporated County (Table 2.12-2, *Mineral Resources Inventory in the County General Plan*).¹⁵

**TABLE 2.12-2
MINERAL RESOURCES INVENTORY IN THE COUNTY GENERAL PLAN**

Production Region	Aggregate Reserves as of 1999	Per Capita Consumption Rates	Estimated Depletion Year
Irwindale Production Area	250 million tons	4.0 tons	2017
Little Rock Creek Fan	250 million tons	12.7 tons	2046
Soledad Production Area	160 million tons	9.9 tons	2046
Sun Valley Production Area	20 million tons	2.4 tons	Near depletion

SOURCE: Los Angeles County General Plan 2035, Chapter 9: Conservation and Natural Resources Element, Section VI. Mineral and Energy Resources, adopted 2015.

Threshold of Significance

A significant impact would occur if the proposed program resulted in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan. An example would be the construction of a residential subdivision on top of a known sand and gravel mineral resource that is designated as a mineral resource in jurisdiction's general plan conservation element.

¹⁵ California Department of Conservation, Division of Mine Reclamation. Mines Online. Accessed 05 March 2020. <https://maps.conservation.ca.gov/mol/index.html>

Impact Analysis

The proposed program would result in no impacts to mineral resources in relation to the loss of availability of a known mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. The potential for impacts to mineral resources has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated (please see Section 1, *Project Description*; Table 1.IV-1, *Planning and Permitting Requirements*, and Table 1.IV-2, *Development Standards*). The analysis considers the incremental changes to the physical environment as a result of new and/or revised development standards, in relation to the historic and anticipated permits for affected uses. The proposed revisions to the development standards that have the potential result in physical changes in the environment and mineral resources include the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

Element 1 – Green Zone Districts

Green Zone Districts would result in no impacts to mineral resources in relation to the loss of availability of a known mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. Based on a comparison of the proposed Green Zone Districts and the maps of the County MRZ-2s, the proposed Florence-Firestone District overlaps with the Sun Valley Production Area MRZ-2, and the Avocado Heights District overlaps with the Irwindale Production Area. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties. As previously discussed, despite the proposed program's location within an area which contains significant mineral resources, the Green Zones Program would have no impact on these mineral resources, as the Ordinance would not result in the loss of their availability.

Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, 27 28 parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, 14 45 of the 27 28 parcels proposed for a zone change within the Green Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to 7 40 years of adoption of the Ordinance.

Updated standards for existing industrial uses include minimal construction activities which would not substantially alter the existing conditions for existing industrial uses, and which would not affect new industrial facilities which are subject to environmental review under CEQA in relation to mineral resources. Additionally, the Green Zones Program would

have no impact on any mineral resource recovery sites, as there are no mines located within areas subject to the Green Zone Districts.¹⁶

Therefore, the Green Zone Districts would result in no impacts to mineral resources in relation to the loss of availability of a known mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. No further analysis is warranted.

Element 2 – New Sensitive Uses

The New Sensitive Uses would result in no impacts to mineral resources in relation to the loss of availability of a known mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, in close proximity to existing industrial uses permitted in the zones where they are located. The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses. In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from the sensitive use being proposed, such that they would result in the loss of a mineral resource. This element of the Ordinance applies to all unincorporated territory of the County, and therefore includes the four MRZ-2s delineated in the County General Plan 2035. However, these measures to reduce the incompatibility of new sensitive uses with existing industrial uses through development standards such as construction of landscaping and planting trees, buffering, and open space, would be minor additions to the design of the proposed new sensitive use, which would be evaluated on an individual project basis under CEQA for impacts to mineral resources. Any construction resulting from compliance with development standards would be minimal and would not be substantially different from the design of the individual project without the proposed measures in a County-delineated MRZ-2. Therefore, the new development standards for New Sensitive Uses would result in no impacts to mineral resources in relation to the loss of availability of a known mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in no impacts to mineral resources in relation to the loss of availability of a known mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. Based on a comparison of the proposed Recycling and Waste Management Revisions areas and the maps of the County MRZ-2s, parcels which are subject to these revisions are located within all four MRZ-2s that the County delineates.¹⁷ However, despite its location within an area which contains significant mineral resources, the Recycling and Waste Management Revisions would have no impact on these mineral resources, as the Ordinance would not result in the loss of their availability.

The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in

¹⁶ California Department of Conservation, Division of Mine Reclamation. Mines Online. Accessed 05 March 2020. <https://maps.conservation.ca.gov/mol/index.html>

¹⁷ County of Los Angeles Department of Regional Planning. Accessed 5 March 2020. Figure 9.6: Mineral Resources. Available at http://planning.lacounty.gov/assets/upl/project/gp_2035_2014-FIG_9.6_mineral_resources.pdf

M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards. Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited in HMAs and SEAs. Additionally, pallet yards, chipping and grinding, mulching facilities would be prohibited in HFHSZs and VHFHSZs; solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways; and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. ~~The proposed revisions will prohibit automobile dismantling yards, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in-vessel organic waste facilities are prohibited in ARAs.~~

The Recycling and Waste Management Revisions would implement development standards and new permit and review processes for specific industrial recycling and waste use. Any construction resulting from compliance with development standards would be minimal and would not substantially alter the existing conditions for existing industrial uses such that the mineral resources would be lost. These revisions would not affect these mineral resources or any mines given that they are not recycling or waste facilities. Furthermore, permitting an organic waste, recycling, or solid waste facility would remain a discretionary action, and each development would be analyzed for project-level impacts in relation to conversion of mineral resources. Therefore, impacts to mineral resources in relation to the loss of availability of a known mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan would result in no impacts to mineral resources in relation to the loss of availability of a known mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. No further analysis is warranted.

The Supermarket Accessory Recycling Collection Centers revisions would result in no impacts to mineral resources in relation to the loss of availability of a known mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. Based on a comparison of the proposed Supermarket Accessory Recycling Collection Centers areas and the maps of the County MRZ-2s, parcels which are subject to these revisions are located within all four MRZ-2s that the County delineates.¹⁸ However, despite its location within an area which contains significant mineral resources, the Supermarket Accessory Recycling Collection Centers would have no impact on these mineral resources, as the Ordinance would not result in the loss of their availability.

The Supermarket Accessory Recycling Collection Centers revisions pertain to standards, conditions, and procedures that support and facilitate the development of recycling collection center as an accessory use to an existing supermarket. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed Supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for

¹⁸ County of Los Angeles Department of Regional Planning. Accessed 5 March 2020. Figure 9.6: Mineral Resources. Available at http://planning.lacounty.gov/assets/upl/project/gp_2035_2014-FIG_9.6_mineral_resources.pdf

recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County's waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be constructed on existing parking lots, and no new structures will be built.

The addition of a recycling collection center as an attachment to an existing supermarket or compliance with development standards would not substantially alter the existing conditions such that the mineral resources would be lost. These revisions would not affect these any mines given that mines are not recycling or supermarket facilities. Therefore, the Supermarket Accessory Recycling Collection Centers would result in no impacts to mineral resources in relation to the loss of availability of a known mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to mineral resources in relation to the loss of availability of a known mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. These revisions implement new development standards and requirements for storage enclosures and areas. Any new development or expansion of existing development would be required to meet the current development standards of the zone they are permitted in. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. The Storage Enclosures for Recycling and Solid Waste Revisions would have no impact on the County MRZ-2s or any mines, as these revisions would not affect mines given that mines are not recycling or waste facilities and would not result in development within an MRZ-2. Any construction of storage enclosures or areas in an MRZ-2 resulting from compliance with development standards would be done on an existing land use in the MRZ-2, and it would be minimal and would not substantially alter the existing conditions for existing land uses such that the mineral resources would be lost. Should the revisions to on-site waste storage standards be relevant to any waste produced by the mines, the mines would comply, and this would not result in the loss of availability of the mineral resource recovery site. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to mineral resources in relation to the loss of availability of a known mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. No further analysis is warranted.

2.13. NOISE

This analysis is undertaken to determine if the proposed program may have a significant impact to noise, thus requiring the consideration of mitigation measures or alternatives in accordance with Section 15063 of the State CEQA Guidelines.¹ The analysis covers all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated with regard to the Los Angeles County General Plan 2035 – Noise Element,² County Noise Control Ordinance,³ and available noise and vibration data from the U.S. Environmental Protection Agency (EPA) and the Federal Transit Administration.

The potential for impacts to noise has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts (please see Section 1, *Project Description*, Table 1.IV-1, *Planning and Permitting Requirements*, and Table 1.IV-2, *Development Standards*). The qualitative and geospatial analysis considers the incremental changes to the physical environment as a result of new and/or revised development standards, in relation to the historic and anticipated permits for affected uses. The proposed revisions to the development standards that have the potential result in physical changes in the environment in relation to noise include the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

Definitions

Ambient Noise: The level of the total noise in an area.

CNEL: The Community Noise Equivalent Level (CNEL) is the average sound level over a 24-hour period, with a penalty of 5 decibels (dB) added between the hours of 7:00 p.m. and 10:00 p.m., and a penalty of 10 dB added for the nighttime hours between 10:00 p.m. and 7:00 a.m. These increases account for reduced ambient noise levels during these time periods and increased human sensitivity to noise during the quieter periods of the day.

dBA: A-weighted decibels (dBA) are an expression of the relative loudness of sounds in air as perceived by the human ear. In the A-weighted system, the decibel values of sounds at low frequencies are reduced compared with unweighted decibels, in which no correction is made for audio frequency.

Leq: The equivalent-continuous sound (Leq) is the level of a constant sound, expressed in decibels (dB), which in a given time period ($T = T_2 - T_1$) has the same energy as a time varying sound.

Point Source: A single identifiable, localized source of noise.

Sensitive Receptors: These include, but are not limited to, hospitals, schools, daycare facilities, playgrounds, long-term health care facilities, elderly housing and convalescent facilities. These are areas where the occupants are more susceptible to noise impacts.

Existing Conditions

Presumed ambient noise levels for the proposed program area are referenced from the *Information on Levels of Environmental Noise Requisite to Protect Public Health and Welfare with an Adequate Margin of Safety*, prepared by the EPA Office of Noise Abatement and Control in March 1974,⁴ and review of available data from noise studies conducted in comparable areas. According to the published document, the range of day-night noise levels (L_{dn}) in the United States is very large, extending from the region of 20–30 dB estimated for a quiet wilderness area to the region of 80–90 dB in the most noisy urban areas. The measured range of values of day-night noise levels outside a residential unit extends from 44 dB on a farm to 88.8 dB outside an apartment located adjacent to a freeway.

The County Noise Control Ordinance, Title 12 of the County Code, was adopted by the Los Angeles County Board of Supervisors in 1977 “to control unnecessary, excessive, and annoying noise and vibration.” It declares that the purpose of the County policy is to “maintain quiet in those areas which exhibit low noise levels and to implement programs aimed at reducing noise in those areas within the county where noise levels are above acceptable values” (Section 12.08.010).

On August 14, 2001, the Board of Supervisors approved an ordinance amending Title 12 of the County Code to prohibit loud, unnecessary, and unusual noise that disturbs the peace and/or quiet of any neighborhood or which causes discomfort or annoyance to any reasonable person of normal sensitivity residing in the area. Regulations can include requirements for sound barriers, mitigation measures to reduce excessive noise, or the placement and orientation of buildings, and can specify the compatibility of different uses with varying noise levels (Table 2.13-1, *Los Angeles County Community Noise Criteria [dBA]*).

⁴ United States Environmental Protection Agency. March 1974. *Information on Levels of Environmental Noise Requisite to Protect Public Health with an Adequate Margin of Safety*. Prepared by the U.S. Environmental Protection Agency Office of Noise Abatement and Control.

**TABLE 2.13-1
LOS ANGELES COUNTY COMMUNITY NOISE CRITERIA (dBA)**

Noise Zone	Land Use of Receptor Property	Time	Std 1 L50 30 min/hr	Std 2 L25 15 min/hr	Std S L8.3 5 min/hr	Std 4 L1.7 1 min/hr	Std 5 L0 at No Time

SOURCE: County of Los Angeles Municipal Code, Title 12, Chapter 8, Noise Control.

* Maximum noise levels for nonscheduled, intermittent, short-term operation (less than 10 days) of mobile equipment.

** Maximum noise levels for repetitively scheduled and relatively long-term operation (periods of 10 days or more) of stationary equipment.

Based on the findings of the EPA, and assuming a worst-case scenario for rural or non-urban areas, it is anticipated that noise sensitive uses within the parcels that are zoned for single-family residential development would experience Ldn noise levels of 35–50 dB. Furthermore, the EPA estimates that quiet suburban residential areas typically experience Ldn noise levels of 48–52 dBA, which is within the range of the County’s community noise criteria (see Table 2.13-4).

Furthermore, parcels zoned for sensitive uses within the Green Zones Program are located within and in the vicinity of developed and undeveloped agriculture zones; rural, urban, and mixed-use residential zones; and commercial, manufacturing, and industrial zones. Based on the community noise criteria, the Los Angeles County Municipal Codes established noise standards for noise levels ranging from 45–60 dBA for noise sensitive uses at any given time. Based on a review of the geospatial data prepared for the proposed program, it is found that the areas subject to the proposed Green Zones Program would experience ambient Ldn noise levels consistent with the community noise criterion.

There are over 16,000 parcels in the unincorporated areas of the County, or lands immediately adjacent to the unincorporated areas, where there are includes sensitive uses within 500 feet of areas under consideration as the subject of the Green Zones Program (Table 2.13-5, *Parcels Including Sensitive Uses within 500 feet of Areas Subject to Green Zones Program*).

**TABLE 2.13-5
PARCELS INCLUDING SENSITIVE USES WITHIN 500 FEET OF AREAS SUBJECT TO GREEN ZONES PROGRAM**

Facility	Number of Parcels within 500 Feet of Project Footprint	Number of Parcels within 500 Feet of Green Zone Districts
Residential Parcels	206,208	9,910
Parks	420	14
Libraries	28	0
Senior Living Homes	2	0
Hospitals	11	1
Public Elementary School	87	6
Public Middle School	25	1
Public High School	44	5
Early Childhood Centers	68	8
Private and Charter Schools	113	7
Colleges and Universities	14	0

Sensitive Receptors

Residential Parcels

The areas that would be subject to the proposed program consists of 3,714 residential parcels in the unincorporated area of Los Angeles County and 12,758 residential parcels located within incorporated areas (Table 2.13-5). The County's Green Zones Ordinance specifies that if an area under the jurisdiction of the County is subject to the revisions and is within 500 feet of a sensitive receptor that is under the jurisdiction of an incorporated city, the program revisions would apply. Thus, the sensitive receptor calculations include areas from both the unincorporated and the incorporated areas included in the project area as subject to the County's noise standards. In addition, the proposed Green Zones Program would apply to all current and future development on those parcels included as either developed or zoned for development of sensitive uses and are included in the 16,472 parcels considered as sensitive receptors.

Early Childhood Centers and Schools

In addition to residential parcels, schools, and hospitals, parks are often considered sensitive receptors due to the likely presence of children. There 68 early childhood centers, 113 private charter school, 87 public elementary schools, 25 public middle schools, 44 public high schools, and 14 colleges or universities located adjoining or in the vicinity of the parcels within all the proposed program area. In addition, there are 8 early childhood centers, 8 public elementary schools, 1 public middle school, and 5 public high schools within 500 feet of the Green Zone Districts (refer to Section 3.15, *Public Services* for further discussion on schools).

Hospitals and Senior Housing

There are 11 hospitals and two senior living homes located adjoining or in the vicinity of the parcels within all the proposed program areas and one hospital located within 500 feet of the Green Zone Districts (Table 2.13-5) (refer to Section 3.15, *Public Services* for further discussion on hospitals and senior housing services).

Parks

There are 420 parks located within a 500-foot radius of the proposed program consisting of totaling 805,218 acres, including the Angeles National Forest, located within the proposed program area. Of that, 14 are within 500 feet of the Green Zone Districts, totaling 202 acres (refer to Section 3.15, *Recreation*, for further discussion on parks and recreation).

When evaluating changes in 24-hour community noise levels, a difference of 3 dB is a barely perceptible increase to most people. A 5 dB increase is readily noticeable, while a difference of 10 dBA is generally perceived as a doubling of loudness. An increase in ambient noise levels between 7:00 p.m. and 7:00 a.m. of 5 dB, of between 7:00 a.m. and 7:00 p.m. of 10 dB would be considered to be a significant impact.

Impact Analysis

Construction Noise

The purpose of the Green Zones Program is to address incompatible land uses in proximity to sensitive uses by changing regulatory requirements for specific industrial land uses. The Green Zones Program, and the areas within the unincorporated areas of the County that are subject to revisions in development standards resulting from the proposed program are defined in the project description (see Section 1, Table 1.IV-1, and Table 1.IV-2).

A basis for a reasonable worst-case impact analysis was prepared by using the most intense construction noise associated with construction, operation, or maintenance of improvements required pursuant to the project, including the construction of small structures such as landscape barriers, fencing, solid wall screenings, enclosures, and air filtration systems. Noise impacts from construction of the proposed program occurring within the proposed program area would be a function of the noise generated by construction equipment, the location of the equipment, the timing and duration of the noise-generating construction activities, and the relative distance to noise sensitive receptors. Construction activities would generally include ground clearing, site grading for landscaping and building construction of small

structures such as walls and enclosures. Each phase of construction would involve the use of various types of construction equipment and would, therefore, have its own distinct noise characteristics. To accurately characterize construction-phase noise levels, the average noise level associated with various phases of construction is calculated based on the quantity, type, and usage factors for each type of equipment that would be used during each construction phase. These noise levels are typically associated with multiple pieces of equipment operating simultaneously.

During each phase of construction, there would be a different mix of equipment operating, and noise levels would vary based on the amount of equipment in operation and the location of the activity. The EPA has compiled data regarding the noise generating characteristics of specific types of construction equipment during typical construction phases. This analysis was based on a reference distance of 50 feet and the EPA rating for each piece of equipment (Table 2.12.3-6, *Typical Outdoor Construction Noise Levels*). These noise levels would attenuate with distance from the construction site at a rate of approximately 6.0 dB per doubling of distance.

TABLE 2.13-6
TYPICAL OUTDOOR CONSTRUCTION NOISE LEVELS

Construction Phase	Noise Level (dBA Leq)	
	50 Feet	50 Feet with Mufflers
Ground clearing	84	82
Excavation, grading	89	86
Foundations	78	77
Structural, paving	85	83
Finishing	89	86

SOURCE: U.S. Environmental Protection Agency. 1971. *Noise from Construction Equipment and Operation, Building Equipment and Home Appliances*. PB 206717. Washington, DC.

The excavation/grading phase and finishing phase of construction would generate the highest levels of noise (Table 2.13-6). This is due in large part to the operation of heavy equipment, though it should be noted that only a limited amount of equipment would be operating near a given location at a particular time. Base on a worst-case scenario, construction noise levels could periodically reach 77 to 89 dBA at a distance of 50 feet from the construction site (Table 2.13-6). According to the Los Angeles County Noise Ordinance, daily construction noise is limited to 75 dBA at single-family residences, 80 dBA at Multifamily Residential, and 85 dBA at Semiresidential/Commercial (see Table 2.13-4); and therefore, construction of residential properties has the potential to exceed the County noise restrictions by approximately 14 dBA during the loudest phases of construction when measured at a distance of 50 feet.

Based on these noise levels, and the fact that noise attenuates from a point source at a rate of approximately 6.0 dBA per doubling of distance, the noise impacts on sensitive receptors can be determined by Equation 1 for noise attenuation over distance:

$$(1) \qquad L_2 = L_1 - 20 \log_{10} \left(\frac{d_1}{d_2} \right)$$

Where

- L_1 = known sound level at d_1
- L_2 = desired sound level at d_2
- d_1 = distance of known sound level from the noise source
- d_2 = distance of the sensitive receptor from the noise source

Noise levels from a particular source decline as distance to the receptor increases. Other factors, such as the weather and reflecting or shielding, also help intensify or reduce the noise level at any given location. A commonly used rule of thumb for roadway noise is that for every doubling of distance from the source, the noise level drops off by about 3 dB at acoustically “hard” locations (i.e., the area between the noise source and the receptor is nearly complete asphalt, concrete, hard-packed soil, or other solid materials) and 4.5 dB at acoustically “soft” locations (i.e., the area between the source and receptor is earth or has vegetation, including grass). Noise from stationary or point sources drops off by

about 6 dB for every doubling of distance at acoustically hard locations and 7.5 dB at acoustically soft locations. Noise levels may also be reduced by intervening structures. Generally, a single row of buildings between the receptor and the noise source reduces the noise level by about 5 dBA, while a solid wall or berm reduces noise levels by 5 to 10 dBA. The normal noise attenuation within residential structures with open windows is about 17 dB, while the noise attenuation with closed windows is about 25 dB.⁷

Element 1 – Green Zone Districts

The Green Zone Districts element of the proposed program would result in potentially significant impacts to noise in relation to the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the County General Plan or noise ordinance. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties and would result in potentially significant impacts would result in potentially significant impacts to noise in relation to the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the County General Plan or noise ordinance. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, 27 ~~28~~ parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, 14 ~~45~~ of the 27 ~~28~~ parcels proposed for a zone change within the Green Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to 7 ~~40~~ years of adoption of the Ordinance.

By assigning the highest potential noise level during construction at 89 dBA (L_1) at a distance of 50 feet (d_1), the distance at which construction activities would reach a maximum of 75 dBA (L_2) and be below the County's noise restrictions for sensitive uses and parcels zoned for single-family residences is approximately 250 feet (d_2). The anticipated duration and range of construction phasing for the proposed improvements within in each location would vary based on level of construction activities. However, all activities would be required to be limited to and adhere to hours allowable by the most restrictive noise Ordinance, either the County Ordinance or the Ordinance of the adjacent City in which the sensitive receptor is located. Further, construction activities would be excluded during weekends and holidays and would be performed outside of when schools are in session and during nonschool hours on weekdays.

The new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties have the potential to result in significant impacts to noise in relation to the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the County General Plan or noise ordinance, requiring further analysis.

⁷ Transportation Research Board. 1976. National Cooperative Highway Research Report 174m Highway Noise: A Design Guide for Prediction and Control. Available at: http://onlinepubs.trb.org/Onlinepubs/nchrp/nchrp_rpt_174.pdf

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in potentially significant impacts to noise in relation to the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the County General Plan or noise ordinance. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, in close proximity to existing industrial uses permitted in the zones where they are located. The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses.

By assigning the highest potential noise level during construction at 89 dBA (L1) at a distance of 50 feet (d1), the distance at which construction activities would reach a maximum of 75 dBA (L2) and be below the County's noise restrictions for sensitive uses and parcels zoned for single-family residences is approximately 250 feet (d2). The anticipated duration and range of construction phasing for the proposed improvements within in each location would vary based on level of construction activities. However, all activities would be required to be limited to and adhere to hours allowable by the most restrictive noise Ordinance, either the County Ordinance or the Ordinance of the adjacent City in which the sensitive receptor is located. Further, construction activities would be excluded during weekends and holidays and would be performed outside of when schools are in session and during non-school hours on weekdays.

Thus, while temporary in nature, implementation of the New Sensitive Uses element of the proposed program has the potential to exceed standards established in the County's Noise Ordinance, and therefore, have a significant impact on noise if constructed within 250 feet of a single-family residence or other noise sensitive land use. Therefore, this issue warrants further analysis.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in potentially significant impacts to noise in relation to the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the County General Plan or noise ordinance. The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards (Table 1.IV-1). Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited in HMAs and SEAs. Additionally, pallet yards, chipping and grinding, mulching facilities would be prohibited in HFHSZs and VHFHSZs; solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways; and anaerobic digestion, construction and

~~demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. The proposed revisions would prohibit automobile dismantling yards, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHHHSZs. Additionally, in-vessel organic waste facilities are prohibited in ARAs.~~

By assigning the highest potential noise level during construction at 89 dBA (L1) at a distance of 50 feet (d1), the distance at which construction activities would reach a maximum of 75 dBA (L2) and be below the County's noise restrictions for sensitive uses and parcels zoned for single-family residences is approximately 250 feet (d2). The anticipated duration and range of construction phasing for the proposed improvements within in each location would vary based on level of construction activities. However, all activities would be required to be limited to and adhere to hours allowable by the most restrictive noise Ordinance, either the County Ordinance or the Ordinance of the adjacent City in which the sensitive receptor is located. Further, construction activities would be excluded during weekends and holidays and would be performed outside of when schools are in session and during non-school hours on weekdays.

Thus, while temporary in nature, implementation of the Recycling and Waste Management Revisions element of the proposed program has the potential to exceed standards established in the County's Noise Ordinance, and therefore, have a significant impact on noise if constructed within 250 feet of a single-family residence or other noise sensitive land use. Therefore, this issue warrants further analysis.

The Supermarket Accessory Recycling Collection Centers revisions would result in potentially significant impacts to noise in relation to the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the County General Plan or noise ordinance. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that "contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code" (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones, would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials would be visible. The CalRecycle requirements are set forth to meet the County's waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be constructed on existing parking lots, and no new structures would be built.

By assigning the highest potential noise level during construction at 89 dBA (L1) at a distance of 50 feet (d1), the distance at which construction activities would reach a maximum of 75 dBA (L2) and be below the County's noise restrictions for sensitive uses and parcels zoned for single-family residences is approximately 250 feet (d2). The anticipated duration and range of construction phasing for the proposed improvements within in each location would vary based on level of construction activities. However, all activities would be required to be limited to and adhere to hours allowable by the most restrictive noise Ordinance, either the County Ordinance or the Ordinance of the adjacent City in which the sensitive receptor is located. Further, construction activities would be excluded during weekends and holidays and would be performed outside of when schools are in session and during non-school hours on weekdays.

Thus, while temporary in nature, implementation of the Recycling and Waste Management Revisions element of the proposed program has the potential to exceed standards established in the County's Noise Ordinance, and therefore,

have a significant impact on noise if constructed within 250 feet of a single-family residence or other noise sensitive land use. Therefore, this issue warrants further analysis.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in potentially significant impacts to noise in relation to the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the County General Plan or noise ordinance. Any new development or expansion of existing development would be required to meet the current development standards of the zone they are permitted in. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development.

By assigning the highest potential noise level during construction at 89 dBA (L1) at a distance of 50 feet (d1), the distance at which construction activities would reach a maximum of 75 dBA (L2) and be below the County's noise restrictions for sensitive uses and parcels zoned for single-family residences is approximately 250 feet (d2). The anticipated duration and range of construction phasing for the proposed improvements within in each location would vary based on level of construction activities. However, all activities would be required to be limited to and adhere to hours allowable by the most restrictive noise Ordinance, either the County Ordinance or the Ordinance of the adjacent City in which the sensitive receptor is located. Further, construction activities would be excluded during weekends and holidays and would be performed outside of when schools are in session and during non-school hours on weekdays.

Thus, while temporary in nature, implementation of the Storage Enclosures for Recycling and Solid Waste Revisions element of the proposed program has the potential to exceed standards established in the County's Noise Ordinance, and, therefore, have a significant impact on noise if constructed within 250 feet of a single-family residence or other noise sensitive land use. Therefore, this issue warrants further analysis.

Operations

Parcels zoned for sensitive uses within the Green Zones Program are located within and in the vicinity of developed and undeveloped agriculture zones; rural, urban, and mixed-use residential zones; and commercial, manufacturing, and industrial zones. Based on the community noise criteria, the Los Angeles County Municipal Codes established noise standards for residential dwellings noise levels ranging from 45–60 dBA for noise sensitive uses at any given time. (see Table 2.13-3). Under the Green Zones Ordinance revisions to Title 22, *Green Zone Districts* (Chapter 22.84), new development standards and/or new entitlement processes (i.e., requiring a CUP for certain uses that previously were allowed with a Ministerial Site Plan Review) would be required for specific industrial, recycling, or vehicle-related uses. However, implementation of the new development standards and/or new entitlement processes under the Green Zones Program would not introduce the construction, development, or maintenance of incompatible uses in relation to existing and future residential and sensitive uses within the project area.

Element 1 – Green Zone Districts

Green Zone Districts would result in potentially significant impacts to noise potentially significant impacts to noise in relation to the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the County General Plan or noise ordinance. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, 27 28 parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, 14 45 of the 27 28 parcels proposed for a zone change within the Green Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to

ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to 7 40 years of adoption of the Ordinance.

Once development of the landscaping barriers, enclosures, fencing, solid walls, signage, and lighting, are installed, there would be no permanent change in ambient noise levels in relation to an increase in noise levels within the project area. In addition, the development of barriers such as landscaping, enclosures, and walls are anticipated to screen sensitive uses from the noise created during operations of the facilities. These barriers are expected to reduce noise at a reduction of 3dbA audible change in noise and an approximate 3 dBA reduction in ambient noise levels in the vicinity of sensitive receptors. The new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in (no, less than significant, potentially significant) impacts. Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to ambient noise levels.

The Green Zone Districts element of the proposed program proposes the construction of small structures, including landscaping barriers, enclosures, fencing, solid walls, signage, and lighting, as measures to decrease impacts to surrounding sensitive uses. However, implementation of the proposed program would only require minor routine maintenance and would not involve excessive noise activities. Further, the proposed program establishes greater stringency in conditions and development standards than those currently existing for proposed facilities and require conditions of approval as an additional permitting requirement. However, while the proposed element includes the construction of barriers, enclosures, walls and other screening methods for the purpose of reducing any audible change in noise at sensitive uses and reduction in ambient noise levels in the vicinity of sensitive receptors, this issue warrants further analysis.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in potentially significant impacts to noise in relation to the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the County General Plan or noise ordinance. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, in close proximity to existing industrial uses permitted in the zones where they are located. The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, in close proximity to adjacent or adjoining legally-established, existing industrial,

recycling or solid waste, or vehicle-related uses. In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from existing conditions.

As discussed, the New Sensitive Uses element of the proposed program proposes the construction of small structures, includes landscaping barriers, ~~enclosures, fencing, solid walls, signage, lighting,~~ and air filtration as measures to decrease impacts ~~to from~~ surrounding sensitive uses, ~~and propose new Special Uses under Standards for Specific Uses (Chapter 22.140).~~ However, implementation of the proposed program would only require minor routine maintenance and would not involve excessive noise activities. ~~Further, the proposed program establishes greater stringency in conditions and development standards than those currently existing for proposed facilities and require conditions of approval as an additional permitting requirement. Based on the proposed Standards for Specific Uses (Chapter 22.140), recycling processing and organic waste facilities would be processed on a project by project basis and subject to environmental review under CEQA in relation to noise.~~ Thus, it is anticipated that there would be no substantial permanent increase in ambient noise levels. However, while the proposed element includes the construction of barriers, enclosures, walls and other screening methods for the purpose of reducing any audible change in noise at sensitive uses and reduction in ambient noise levels in the vicinity of sensitive receptors, this issue warrants further analysis.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in potentially significant impacts to noise potentially significant impacts to noise in relation to the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the County General Plan or noise ordinance. The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards (Table 1.IV-1). Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited in HMAs and SEAs. Additionally, pallet yards, chipping and grinding, mulching facilities would be prohibited in HFHSZs and VHFHSZs; solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways; and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. ~~The proposed revisions would prohibit automobile dismantling yards, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in-vessel organic waste facilities are prohibited in ARAs.~~

As discussed, the Recycling and Waste Management Revisions element of the proposed program proposes the construction of small structures, include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures to decrease impacts to surrounding sensitive uses. , and propose new Special Uses under Standards for Specific Uses (Chapter 22.140). However, implementation of the proposed program would only require minor routine maintenance and would not involve excessive noise activities. Further, the proposed program establishes greater stringency in conditions and development standards than those currently existing for proposed facilities and require conditions of approval as an additional permitting requirement. Thus, it is anticipated that there would be no substantial permanent increase in ambient noise levels. However, while the proposed element includes the construction of barriers, enclosures, walls and other screening methods for the purpose of reducing any audible change in noise at sensitive uses and reduction in ambient noise levels in the vicinity of sensitive receptors, this issue warrants further analysis.

The Supermarket Accessory Recycling Collection Centers revisions would result in potentially significant impacts to noise in relation to the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the County General Plan or noise ordinance. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California

Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones, would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials would be visible. The CalRecycle requirements are set forth to meet the County’s waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be ~~constructed~~ established on existing parking lots, and no new structures would be built.

Implementation of the proposed program would only require minor routine maintenance and would not involve excessive noise activities. Further, the proposed program establishes greater stringency in conditions and development standards than those currently existing for proposed facilities and require conditions of approval as an additional permitting requirement. Thus, it is anticipated that there would be no substantial permanent increase in ambient noise levels. However, while the proposed element includes the construction of barriers, enclosures, walls and other screening methods for the purpose of reducing any audible change in noise at sensitive uses and reduction in ambient noise levels in the vicinity of sensitive receptors, this issue warrants further analysis.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions could result in potentially significant impacts to noise in relation to the generation of a permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the County General Plan or noise ordinance. Any new development or expansion of existing development would be required to meet the current development standards of the zone they are permitted in. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development.

Implementation of the proposed program would only require minor routine maintenance and would not involve excessive noise activities. Further, the proposed program establishes greater stringency in conditions and development standards than those currently existing for proposed facilities and require conditions of approval as an additional permitting requirement. Thus, it is anticipated that there would be no substantial permanent increase in ambient noise levels. However, while the proposed element includes the construction of barriers, enclosures, walls and other screening methods for the purpose of reducing any audible change in noise at sensitive uses and reduction in ambient noise levels in the vicinity of sensitive receptors, this issue warrants further analysis.

b) Generation of excessive groundborne vibration or groundborne noise levels?

he proposed program would result in less than significant impacts to noise in relation to generation of excessive ground-borne vibration or ground-borne noise levels as a result of construction or operational activities associated with the Green Zones Program.

Existing Conditions

Vibration is sound radiated through the ground. The rumbling sound caused by the vibration of room surfaces is called groundborne noise. The ground motion caused by vibration is measured as particle velocity in inches per second and, in the U.S., is referenced as vibration decibels (VdB). The background vibration velocity level in residential and educational areas is usually around 50 VdB. The vibration velocity level threshold of perception for humans is approximately 65 VdB. A vibration velocity level of 75 VdB is the approximate dividing line between barely perceptible and distinctly perceptible levels for many people. Most perceptible indoor vibration is caused by sources within buildings, such as operation of mechanical equipment, movement of people, or the slamming of doors. Typical outdoor sources of perceptible groundborne unincorporated areas of the County includes highway traffic, construction equipment, piling, and steel-wheeled trains. Solid waste and recycling facilities have been documented to cause occasional groundborne vibration as a result of piling and operation of heavy equipment.⁸ If a roadway is smooth, the groundborne vibration from traffic is rarely perceptible. The range of interest is from approximately 50 VdB, which is the typical background vibration velocity level, to 100 VdB, which is the general threshold where minor damage can occur in fragile buildings.

The County has received complaints from residents adjacent to landfill and recycling facilities regarding perceivable groundborne vibration, particularly in relation to truck traffic and operation of heavy equipment.

Threshold of Significance

The Federal Railway Administration has developed vibration impact thresholds for noise-sensitive buildings, residences, and institutional land uses. These thresholds are 80 VdB at residences and buildings where people normally sleep (e.g., nearby residences and daycare facility) and 83 VdB at institutional buildings (e.g., schools and churches). These thresholds apply to conditions where there are an infrequent number, less than 70 events per day.

Impact Analysis

Construction

Construction activities can generate varying degrees of ground-borne vibration, depending on the construction procedures and the type of construction equipment used. Construction equipment generates vibrations that spread through the ground and diminish in amplitude with distance from the source. The effect on buildings located in the vicinity of the construction site often varies depending on soil type, ground strata, and construction characteristics of the receptor buildings. The results from vibration can range from no perceptible effects at the lowest vibration levels, to low rumbling sounds and perceptible vibration at moderate levels, to slight damage at the highest levels.

Los Angeles County currently does not have significance thresholds to assess vibration impacts during construction. Therefore, the Federal Transit Administration (FTA) guidelines set forth in its technical manual, *Transit Noise and Vibration Impacts*, are utilized in determining the vibration impacts associated with the proposed program.⁹ The FTA measures building vibration damage in peak particle velocity (PPV) described in inches per second. The FTA establishes vibration criteria applicable to construction activities (Table 2.13-7, *FTA Construction Vibration Impact Criteria for Building Damage*). According to the FTA guidelines, a vibration criterion of 0.2 inch per second should be considered as the significant impact level for non-engineered timber and masonry buildings. Furthermore, structures or buildings constructed of reinforced-concrete, steel, or timber have vibration damage criteria of 0.50 inch per second pursuant to the FTA guidelines.

⁹ Federal Transit Administration. May 2006. *Transit Noise and Vibration Assessment*. Washington, DC.

TABLE 2.13-7
FTA CONSTRUCTION VIBRATION IMPACT CRITERIA FOR BUILDING DAMAGE

Building Category	PPV (inches per second)
I. Reinforced-concrete, steel or timber (no plaster)	0.5
II. Engineered concrete and masonry (no plaster)	0.3
III. Non-engineered timber and masonry buildings	0.2
IV. Buildings extremely susceptible to vibration damage	0.12

NOTE: PPV = peak particle velocity.

SOURCE: Federal Transit Administration. May 2006. *Transit Noise and Vibration Impact Assessment*. Washington, DC.

The proposed program would generate ground-borne construction vibration during construction activities, where heavy construction equipment, such as haul trucks, would be used. The FTA has published standard vibration velocities for various construction equipment operations. The FTA has established typical vibration levels (in terms of inches per second PPV) at a reference distance of 25 feet, 50 feet, and 100 feet for construction equipment used during construction activities (Table 2.13-8, *Vibration Source Levels for Construction Equipment*).

TABLE 2.13-8
VIBRATION SOURCE LEVELS FOR CONSTRUCTION EQUIPMENT

Equipment	PPV at 25 feet (inches per second)	PPV at 50 feet (inches per second)	PPV at 100 feet (inches per second)
Vibratory roller	0.210	0.074	0.026
Hoe ram	0.089	0.031	0.011
Large bulldozer	0.089	0.031	0.011
Caisson drilling	0.089	0.031	0.011
Loaded trucks (haul truck)	0.076	0.027	0.010
Jackhammer	0.035	0.012	0.004
Small bulldozer	0.003	0.001	0.000

NOTE: PPV = peak particle velocity.

SOURCE: Federal Transit Administration. May 2006. *Transit Noise and Vibration Impact Assessment*. Washington, DC.

As discussed under Threshold 3.13 (a), the purpose of the Green Zones Program is to address incompatible land uses in proximity to sensitive uses by changing regulatory requirements for specific industrial land uses. The most intense construction activities associated with the proposed program would include construction of small structures such as landscape barriers, enclosures, walls and screenings, and air filtration systems and was used as the basis for a reasonable worst-case impact analysis.

Element 1 – Green Zone Districts

Green Zone Districts would result in less than significant impacts to noise in relation to generation of excessive ground-borne vibration or ground-borne noise levels. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in less than significant impacts to noise in relation to generation of excessive ground-borne vibration or ground-borne noise levels. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, 27 28 parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, 14 45 of the 27 28 parcels proposed for a zone change within the Green Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone

Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to 7 years of adoption of the Ordinance. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would result in less than significant impacts to noise impacts in relation to generation of excessive ground-borne vibration or ground-borne noise levels.

Vibration velocities from most heavy construction operations that would be used during construction of the proposed program would range from 0.001 to 0.074 inch per second PPV at a reference distance of 50 feet from the equipment (Table 2.13-8). The estimated vibration velocity levels at a distance of 100 feet would be well below the most stringent significance threshold of 0.12 inch per second PPV established by the FTA.¹⁰ Therefore, ground-borne vibration or noise impacts associated with potential building damage during construction would be less than significant, and no further analysis is warranted.

The new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in less than significant impacts to noise in relation to generation of excessive ground-borne vibration or ground-borne noise levels. Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in less than significant impacts to noise in relation to generation of excessive ground-borne vibration or ground-borne noise levels. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in less than significant impacts to noise in relation to generation of excessive ground-borne vibration or ground-borne noise levels. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, ~~in close proximity to existing industrial uses permitted in the zones where they are located.~~ The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, ~~in close proximity~~ adjacent to or adjoining legally-established existing industrial uses.

Vibration velocities from most heavy construction operations that would be used during construction of the proposed program would range from 0.001 to 0.074 inch per second PPV at a reference distance of 50 feet from the equipment (Table 2.13-8). The estimated vibration velocity levels at a distance of 100 feet would be well below the most stringent significance threshold of 0.12 inch per second PPV established by the FTA.¹¹ Thus, these measures to reduce the incompatibility of new sensitive uses with existing industrial uses through development standards such as construction of landscaping and planting trees, buffering and screenings, and open space, would not result in noise impacts in relation

¹⁰ Federal Transit Administration. May 2006. Transit Noise and Vibration Assessment. Washington, DC.

¹¹ Federal Transit Administration. May 2006. Transit Noise and Vibration Assessment. Washington, DC.

to generation of excessive ground-borne vibration or ground-borne noise levels. Therefore, the new development standards for New Sensitive Uses near Industrial, Recycling and Solid Waste, or Vehicle-Related Uses would result in less than significant impacts to noise in relation to generation of excessive ground-borne vibration or ground-borne noise levels. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in less than significant impacts to noise in relation to generation of excessive ground-borne vibration or ground-borne noise levels. The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards (Table 1.IV-1). Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited in HMAs and SEAs. Additionally, pallet yards, chipping and grinding, mulching facilities would be prohibited in HFHSZs and VHFHSZs; solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways; and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. ~~The proposed revisions would prohibit automobile dismantling yards, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in-vessel organic waste facilities are prohibited in ARAs.~~

Vibration velocities from most heavy construction operations that would be used during construction of the proposed program would range from 0.001 to 0.074 inch per second PPV at a reference distance of 50 feet from the equipment (Table 2.13-8). The estimated vibration velocity levels at a distance of 100 feet would be well below the most stringent significance threshold of 0.12 inch per second PPV established by the FTA.¹² Therefore, impacts to Recycling and Waste Management Revisions would be less than significant in relation to generation of excessive ground-borne vibration or ground-borne noise levels. No further analysis is warranted.

The Supermarket Accessory Recycling Collection Centers revisions would result in less than significant impacts to noise in relation to generation of excessive ground-borne vibration or ground-borne noise levels. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones, would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials would be visible. The CalRecycle requirements are set forth to meet the County’s waste diversion goals.

¹² Federal Transit Administration. May 2006. Transit Noise and Vibration Assessment. Washington, DC.

The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be constructed on existing parking lots, and no new structures would be built. Vibration velocities from most heavy construction operations that would be used during construction of the proposed program would range from 0.001 to 0.074 inch per second PPV at a reference distance of 50 feet from the equipment (Table 2.13-8). The estimated vibration velocity levels at a distance of 100 feet would be well below the most stringent significance threshold of 0.12 inch per second PPV established by the FTA.¹³ Therefore, the Supermarket Accessory Recycling Collection Centers would result in less than significant impacts to noise in relation to generation of excessive ground-borne vibration or ground-borne noise levels. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts to noise in relation to generation of excessive ground-borne vibration or ground-borne noise levels. Any new development or expansion of existing development would be required to meet the current development standards of the zone they are permitted in. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. Vibration velocities from most heavy construction operations that would be used during construction of the proposed program would range from 0.001 to 0.074 inch per second PPV at a reference distance of 50 feet from the equipment (Table 2.13-8). The estimated vibration velocity levels at a distance of 100 feet would be well below the most stringent significance threshold of 0.12 inch per second PPV established by the FTA.¹⁴ Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts to noise in relation to generation of excessive ground-borne vibration or ground-borne noise levels. No further analysis is warranted.

Operations

Ground-borne vibration or noise associated with operation of the proposed program would include vehicular traffic from routine maintenance and operational activities within the proposed program subareas.

Element 1 – Green Zone Districts

The Green Zone Districts element would result in less than significant impacts to noise in relation to generation of excessive ground-borne vibration or ground-borne noise levels. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in less than significant impacts to noise in relation to generation of excessive ground-borne vibration or ground-borne noise levels. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, 27 28 parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, 14 45 of the 27 28 parcels proposed for a zone change within the Green Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come

¹³ Federal Transit Administration. May 2006. Transit Noise and Vibration Assessment. Washington, DC.

¹⁴ Federal Transit Administration. May 2006. Transit Noise and Vibration Assessment. Washington, DC.

into compliance within 3 to ~~7~~ 40 years of adoption of the Ordinance. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would result in noise impacts in relation to generation of excessive ground-borne vibration or ground-borne noise levels.

Implementation of the proposed program would require minor routine operation activities and maintenance. Based on an anticipated worst-case scenario related to operation and maintenance, a haul truck traveling on a rough road surface would generate a ground-borne vibration level of 0.076 inch per second PPV at a distance of 25 feet from the haul truck (Table 2.13-8). Therefore, the estimated ground-borne vibration level of 0.076 inch per second PPV due to the haul truck activities would be well below the most stringent significance threshold of 0.12 inch per second PPV established by the FTA. Thus, operation and maintenance activities associate with the implementation of these measures would not result in noise impacts in relation to generation of excessive ground-borne vibration or ground-borne noise levels.

The new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in would result in less than significant impacts to noise in relation to generation of excessive ground-borne vibration or ground-borne noise levels. Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in less than significant impacts to noise in relation to generation of excessive ground-borne vibration or ground-borne noise levels. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in less than significant impacts to noise in relation to generation of excessive ground-borne vibration or ground-borne noise levels. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, in close proximity to existing industrial uses permitted in the zones where they are located. The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses. Construction of these measures would not differ substantially from existing conditions.

Implementation of the proposed program would require minor routine operation activities and maintenance. Based on an anticipated worst-case scenario related to operation and maintenance activities, a haul truck traveling on a rough road surface would generate a ground-borne vibration level of 0.076 inch per second PPV at a distance of 25 feet from the haul truck (Table 2.13-8). Therefore, the estimated ground-borne vibration level of 0.076 inch per second PPV due to the haul truck activities would be well below the most stringent significance threshold of 0.12 inch per second PPV established by the FTA. Thus, operation and maintenance activities associate with the implementation of these measures to reduce the incompatibility of new sensitive uses with existing industrial uses through development standards such as construction of landscaping and planting trees, buffering and screenings, and open space, would not result in noise impacts in relation to generation of excessive ground-borne vibration or ground-borne noise levels. Therefore, the new development standards for New Sensitive Uses would result in would result in less than significant impacts to noise in

relation to generation of excessive ground-borne vibration or ground-borne noise levels. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in less than significant impacts to noise in relation to generation of excessive ground-borne vibration or ground-borne noise levels. The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards (Table 1.IV-1). Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited in HMAs and SEAs. Additionally, pallet yards, chipping and grinding, mulching facilities would be prohibited in HFHSZs and VHFHSZs; solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways; and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. ~~The proposed revisions would prohibit automobile dismantling yards, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in-vessel organic waste facilities are prohibited in ARAs.~~

Implementation of the proposed program would require minor routine operation activities and maintenance. Based on an anticipated worst-case scenario related to operation and maintenance activities, a haul truck traveling on a rough road surface would generate a ground-borne vibration level of 0.076 inch per second PPV at a distance of 25 feet from the haul truck (Table 2.13-8). Therefore, the estimated ground-borne vibration level of 0.076 inch per second PPV due to the haul truck activities would be well below the most stringent significance threshold of 0.12 inch per second PPV established by the FTA. Thus, operation and maintenance activities associate with the implementation of these measures would not result in noise impacts in relation to generation of excessive ground-borne vibration or ground-borne noise levels. Therefore, impacts to Recycling and Waste Management Revisions would be less than significant in relation to generation of excessive ground-borne vibration or ground-borne noise levels. No further analysis is warranted.

The Supermarket Accessory Recycling Collection Centers revisions would result in less than significant impacts to noise in relation to generation of excessive ground-borne vibration or ground-borne noise levels. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones, would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials would be visible. The CalRecycle requirements are set forth to meet the County’s waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD,

MXDRU designated zones. These uses would be ~~constructed~~ established on existing parking lots, and no new structures would be built.

Implementation of the proposed program would require minor routine operation activities and maintenance. Based on an anticipated worst-case scenario related to operation and maintenance activities, a haul truck traveling on a rough road surface would generate a ground-borne vibration level of 0.076 inch per second PPV at a distance of 25 feet from the haul truck (Table 2.13-8). Therefore, the estimated ground-borne vibration level of 0.076 inch per second PPV due to the haul truck activities would be well below the most stringent significance threshold of 0.12 inch per second PPV at a distance of 25 feet or more as established by the FTA. No vibration impacts would occur, as a result of truck hauling, loading, and access, near sensitive receptors located 25 feet or farther from vibratory inducing uses such as waste management facilities. In addition, the use of concrete masonry walls would further reduce potential impacts related to vibration. Equipment related to the construction of walls, landscaping, and enclosures would be minimal in relation to vibratory effects in proximity to sensitive receptors. Construction of barriers and enclosures would further avoid potential impacts related to vibration near sensitive receptors adjacent to roadways and would be further reduced by greater stringency in allowable truck hauling and operational hours. However, truck trips, loading, and access routes located within 25 feet of existing sensitive uses may result in potentially significant impact requiring the evaluation of mitigation measures and/or project design features to reduce impacts. Thus, the analysis of vibration as a result of operation of the proposed program will be carried forward for further analysis.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts to noise in relation to generation of excessive ground-borne vibration or ground-borne noise levels. Any new development or expansion of existing development would be required to meet the current development standards of the zone they are permitted in. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. Vibration velocities from most heavy construction operations that would be used during construction of the proposed program would range from 0.001 to 0.074 inch per second PPV at a reference distance of 50 feet from the equipment (Table 2.13-8). The estimated vibration velocity levels at a distance of 100 feet would be well below the most stringent significance threshold of 0.12 inch per second PPV established by the FTA.¹⁵ Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts to noise in relation to generation of excessive ground-borne vibration or ground-borne noise levels.

Implementation of the proposed program would require minor routine operation activities and maintenance. Based on an anticipated worst-case scenario related to operation and maintenance, a haul truck traveling on a rough road surface would generate a ground-borne vibration level of 0.076 inch per second PPV at a distance of 25 feet from the haul truck (Table 2.13-8). Therefore, the estimated ground-borne vibration level of 0.076 inch per second PPV due to the haul truck activities would be well below the most stringent significance threshold of 0.12 inch per second PPV established by the FTA. Thus, operation and maintenance activities associate with the implementation of these measures would not result in noise impacts in relation to generation of excessive ground-borne vibration or ground-borne noise levels. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts to noise in relation to generation of excessive ground-borne vibration or ground-borne noise levels. No further analysis is warranted.

No vibration impacts would occur, as a result of truck hauling, loading, and access, near sensitive receptors located 25 feet or farther from vibratory inducing uses such as waste management facilities. In addition, the use of concrete masonry walls would further reduce potential impacts related to vibration for landscaping. Equipment related to the construction of walls, landscaping, and enclosures would be minimal in relation to vibratory effects in proximity to sensitive receptors. Construction of barriers and enclosures would further avoid potential impacts related to vibration near sensitive receptors adjacent roadways and would be further reduced by greater stringency in allowable truck hauling and operational hours. However, truck trips, loading, and access routes located within 25 feet of existing sensitive uses may result in potentially significant impact requiring the evaluation of mitigation measures and/or project design

¹⁵ Federal Transit Administration. May 2006. Transit Noise and Vibration Assessment. Washington, DC.

features to reduce impacts. Thus, the analysis of vibration as a result of operation of the proposed program will be carried forward for further analysis.

- c) **For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?**

Existing Conditions

There are nine public use and private use airports located within 2 miles of the proposed Green Zones Program area (Table 2.13-9, *Public/Private Airports within 2 Miles of Proposed Green Zones Program*; Figure 2.9-3, *Airports within 2 Miles of Project Location*). However, the proposed program would involve construction landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures to decrease impacts to surrounding sensitive uses. The program would not involve inducing development or employment of housing in areas within the program area but rather involve greater stringency in development standards and requirements for proposed development and new sensitive uses, in addition to reducing placement of incompatible uses in areas to avoid impacts on sensitive uses.

Threshold of Significance

The project would result in significant impacts if it would expose people residing or working in the project area to excessive noise levels, if located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport.

Impact Analysis

Implementation of the proposed program would result in less than significant impacts in relation to a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, exposing people residing or working in the project area to excessive noise levels.

Element 1 – Green Zone Districts

The Green Zone Districts element would result in less than significant impacts in relation to a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, exposing people residing or working in the project area to excessive noise levels. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in less than significant impacts in relation to a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, exposing people residing or working in the project area to excessive noise levels. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, 27 28 parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, 14 45 of the 27 28 parcels proposed for a zone change within the Green Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject

properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to 7 40 years of adoption of the Ordinance.

The Green Zones District element does not include the development of housing. Nor would it require an increase in the number of people working at locations within 2 miles of an airport, as there is no change in the underlying land use. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, as they would be minor additions to existing industrial land uses. These industrial uses currently exist within the proposed area, and therefore, the proposed program would not introduce or propose new development of excessive noise uses. Further, the proposed program establishes greater stringency in conditions and development standards than those currently existing for proposed facilities and require conditions of approval as an additional permitting requirement. The proposed program would not directly or indirectly induce development or placement of sensitive uses within an airport land use plan or within 2 miles of a public airport or public use airport, exposing people residing or working in the proposed program area to excessive noise levels.

The new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in less than significant impacts in relation to a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, exposing people residing or working in the project area to excessive noise levels. Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in less than significant impacts in relation to a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, exposing people residing or working in the project area to excessive noise levels. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in less than significant impacts in relation to a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, exposing people residing or working in the project area to excessive noise levels. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, ~~in close proximity to existing industrial uses permitted in the zones where they are located.~~ The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, ~~in close proximity~~ adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses. In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from existing conditions.

The New Sensitive Uses element does not include the development of housing. Nor would it require an increase in the number of people working at locations within 2 miles of an airport, as there is no change in the underlying land use. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, as they would be minor additions to existing industrial land uses. These industrial uses currently exist within the proposed area, and therefore, the proposed program would not introduce or propose new development of excessive noise uses. Further, the proposed program establishes greater stringency in conditions

and development standards than those currently existing for proposed facilities and require conditions of approval as an additional permitting requirement. The proposed program would not directly or indirectly induce development or placement of sensitive uses within an airport land use plan or within 2 miles of a public airport or public use airport, exposing people residing or working in the proposed program area to excessive noise levels.

These measures to reduce the incompatibility of new sensitive uses with existing industrial uses through development standards such as construction of landscaping and planting trees, buffering, and open space, would not result in significant impacts in relation to a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, exposing people residing or working in the project area to excessive noise levels. Therefore, the new development standards for New Sensitive Uses would result in less than significant impacts in relation to a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, exposing people residing or working in the project area to excessive noise levels. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in less than significant impacts in relation to a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, exposing people residing or working in the project area to excessive noise levels. The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards (Table 1.IV-1). Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited in HMAs and SEAs. Additionally, pallet yards, chipping and grinding, mulching facilities would be prohibited in HFHSZs and VHFHSZs; solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways; and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. ~~The proposed revisions would prohibit automobile dismantling yards, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in-vessel organic waste facilities are prohibited in ARAs.~~ While Element 3 would allow for development of Recycling and Waste Management facilities, the proposed improvements would not include the development of housing and would require that all future primary use recycling and solid waste facilities be subject to a CUP. In addition, no change in the underlying land use would occur. Therefore, impacts to Recycling and Waste Management Revisions would be less than significant impacts in relation to a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, exposing people residing or working in the project area to excessive noise levels. No further analysis is warranted.

The Recycling and Waste Management Revisions element does not include the development of housing. Nor would it require an increase in the number of people working at locations within 2 miles of an airport, as there is no change in the underlying land use. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, as they would be minor additions to existing industrial land uses. These industrial uses currently exist within the proposed area, and therefore, the proposed program would not introduce or propose new development of excessive noise uses. Further, the proposed program establishes greater stringency in conditions and development standards than those currently existing for proposed facilities and require conditions of approval as an additional permitting requirement. The proposed program would not directly or indirectly induce development or placement of sensitive uses within an airport land use plan or within 2 miles of a public airport or public use airport, exposing people residing or working in the proposed program area to excessive noise levels.

The Supermarket Accessory Recycling Collection Centers revisions would result in less than significant impacts in relation to a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, exposing people residing or working in the project area to excessive noise levels. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones, would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials would be visible. The CalRecycle requirements are set forth to meet the County’s waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be constructed on existing parking lots, and no new structures would be built.

The Supermarket Accessory Recycling Collection Centers element does not include the development of housing. Nor would it require an increase in the number of people working at locations within 2 miles of an airport, as there is no change in the underlying land use. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, as they would be minor additions to existing industrial land uses. These industrial uses currently exist within the proposed area, and therefore, the proposed program would not introduce or propose new development of excessive noise uses. Further, the proposed program establishes greater stringency in conditions and development standards than those currently existing for proposed facilities and require conditions of approval as an additional permitting requirement. The proposed program would not directly or indirectly induce development or placement of sensitive uses within an airport land use plan or within 2 miles of a public airport or public use airport, exposing people residing or working in the proposed program area to excessive noise levels. Therefore, the Supermarket Accessory Recycling Collection Centers would have less than significant impacts in relation to a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, exposing people residing or working in the project area to excessive noise levels. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste would result in less than significant impacts in relation to a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, exposing people residing or working in the project area to excessive noise levels. Any new development or expansion of existing development would be required to meet the current development standards of the zone they are permitted in. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development.

The Storage Enclosures for Recycling and Solid Waste Revisions element does not include the development of housing. Nor would it require an increase in the number of people working at locations within 2 miles of an airport, as there is no change in the underlying land use. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, as they would be minor additions to existing

industrial land uses. These industrial uses currently exist within the proposed area, and therefore, the proposed program would not introduce or propose new development of excessive noise uses. Further, the proposed program establishes greater stringency in conditions and development standards than those currently existing for proposed facilities and require conditions of approval as an additional permitting requirement. The proposed program would not directly or indirectly induce development or placement of sensitive uses within an airport land use plan or within 2 miles of a public airport or public use airport, exposing people residing or working in the proposed program area to excessive noise levels. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts in relation to a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, exposing people residing or working in the project area to excessive noise levels. No further analysis is warranted.

2.14. POPULATION AND HOUSING

This analysis is undertaken to determine if the proposed program may have a significant impact to population and housing, thus requiring the consideration of mitigation measures or alternatives, in accordance with Section 15063 of the State CEQA Guidelines. The analysis covers all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated with regard to state, regional, and local data and forecasts for population and housing in accordance with the Los Angeles County General Plan 2035,¹ U.S. Census Bureau and Southern California Association of Governments (SCAG) data,^{2,3} and the State of California Economic Development Department data.⁴

	<i>Potentially Significant Impact</i>	<i>Less than Significant Impact with Mitigation Incorporated</i>	<i>Less than Significant Impact</i>	<i>No Impact</i>
Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Displace substantial numbers of existing people or housing, especially affordable housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?				

Existing Conditions

According to SCAG's 2019 Profile of Unincorporated Los Angeles County,⁵ the unincorporated territory of Los Angeles County has an estimated population of 1,057,162 persons. Between 2000 and 2018, the unincorporated regions of Los Angeles County have shown a growth rate of 7.2 percent and has accounted for 10.3 percent of the total population of Los Angeles County.

The Housing Element of the County General Plan 2035 analyzes existing housing and plans for the future needs of the unincorporated areas of Los Angeles County, including new housing and jobs in anticipation of population growth in the unincorporated areas and regions of the County.⁶ As of 2018, the total number of residential homes in the unincorporated areas of Los Angeles County was 293,730. Between 2000 and 2018, the total number of households in

⁶ Department of Regional Planning. County of Los Angeles General Plan 2014-2021: Housing Element. Retrieved from: http://planning.lacounty.gov/assets/upl/project/housing_element.pdf

unincorporated Los Angeles County increased by 14,949 units, or 5.3 percent. This total accounts for 8.8 percent of Los Angeles County's total number of homes. In this 18-year period, there was a 5.3 percent household growth rate, which was lower than the County's 6.5 percent growth rate.

Thresholds of Significance

A substantial adverse effect on a population growth would normally occur as a result of new residential development or expansion of utilities into an undeveloped area that would cause unplanned population growth either directly or indirectly.

Impact Analysis

The proposed program would result in no impacts to population and housing in relation to inducing substantial direct or indirect population growth. The potential for impacts to population and housing has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated (please see Section 1, *Project Description*, Table 1.IV-1, *Planning and Permitting Requirements*, and Table 1.IV-2, *Development Standards*). The analysis considers the incremental changes to the physical environment as a result of new and/or revised development standards, in relation to the historic and anticipated permits for affected uses. The proposed revisions to the development standards that have the potential result in physical changes in the environment considered in regard to population and housing include the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

Element 1 – Green Zone Districts

Green Zones Districts would result in no impacts to population and housing related to inducing substantial unplanned population growth in an area. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to population and housing. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum floor area ratio (FAR) requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, 27 28 parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, 14 45 of the 27 28 parcels proposed for a zone change within the Green Zones Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green Zones Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a Conditional Use Permit. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

The program requires the nonconforming uses to come into compliance within 3 to 7 40 years of adoption of the Ordinance. The applicable land uses zones to the Green Zones District apply to are M-1, M-1.5, M-2, M-2.5 (only

within Green Zones Districts boundary). According to SCAG's 2019 Profile of Unincorporated Los Angeles County,⁷ the population of the areas subject to the four elements consists primarily of employees at manufacturing facilities that account for approximately 9.2 percent of all jobs by sector, based on 2017 data. The proposed program would not require new or expanded facilities, increasing the need for employees. Additionally, the proposed program is not a residential project and does not include the development of new homes. The Green Zones Program does not include or require the extension of infrastructure into areas not currently served by roads and utilities. Construction activities for the proposed program would not require temporary housing for the manufacturing facility workers due to the urban context. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure). Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to population and housing related to inducing substantial unplanned population growth in an area, either directly or indirectly. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in no impacts to population and housing related to inducing substantial unplanned population growth in an area. The proposed new development standards for New Sensitive Uses do include the development of new homes or businesses and does not include or require the extension of infrastructure into areas not currently served by roads and utilities. Construction activities for the proposed program would not require temporary housing for the manufacturing facility workers due to the urban context. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure). Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, in close proximity to existing industrial uses permitted in the zones where they are located. The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2).

~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130). These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses. In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from existing conditions, such that they would induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure. These measures to reduce the incompatibility of new sensitive uses with existing industrial uses through development standards such as construction of landscaping and planting trees, buffering, and open space, would not induce substantial unplanned population growth in an area, either directly or indirectly. Therefore, the new development standards for New Sensitive Uses would result in no impacts to population and housing related to inducing substantial unplanned population growth in an area, either directly or indirectly. No further analysis is warranted.~~

⁷ Southern California Association of Governments. 2019. Profile of Unincorporated Los Angeles County. Retrieved from: <https://www.scag.ca.gov/Documents/UnIncAreaLosAngelesCounty.pdf>

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in no impacts to population and housing related to inducing substantial unplanned population growth in an area. The Recycling and Waste Management Revisions would apply to the following zoning designations: C-1, C-2, C-3, C-M, C-MJ, C-R, C-RU, MXD, MXD-RU, M-1, M-1.5, M-2, M-2.5, A-2, IT.

According to SCAG's 2019 Profile of Unincorporated Los Angeles County,⁸ the population of the areas subject to the Recycling and Waste Management Revisions consists primarily of employees at manufacturing facilities that account for approximately 9.2 percent of all jobs by sector, based on 2017 data. Agriculture jobs accounts for an additional 0.5 percent. There are no specific available data for Institutional land uses. These revisions would not affect population and housing given that they are not recycling or waste facilities.

The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards (see Table 1.IV-1). Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited in HMAs and SEAs. Additionally, pallet yards, chipping and grinding, mulching facilities would be prohibited in HFHSZs and VHFHSZs; solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways; and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. ~~The proposed revisions would prohibit automobile dismantling yards, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in-vessel organic waste facilities are prohibited in ARAs.~~

The proposed Recycling and Waste Management Revisions does not include the development of new homes or generate construction activities to indirectly result in the need for unplanned housing. The development standards do not include or require the extension of infrastructure into areas not currently served by roads and utilities. Construction activities for the proposed program would not require temporary housing for the manufacturing facility workers due to the urban context. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure). Therefore, there would be no impacts from Recycling and Waste Management Revisions to population and housing related to inducing substantial unplanned population growth in an area, either directly or indirectly. No further analysis is warranted.

The Supermarket Accessory Recycling Collection Centers revisions would result no impacts to population and housing related to inducing substantial unplanned population growth in an area. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed Supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-

⁸ Southern California Association of Governments. 2019. Profile of Unincorporated Los Angeles County. Retrieved from: <https://www.scag.ca.gov/Documents/UnIncAreaLosAngelesCounty.pdf>

3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County's waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be ~~constructed~~ established on existing parking lots, and no new structures will be built. The Supermarket Accessory Recycling Collection Centers do not include or require the extension of infrastructure into areas not currently served by roads and utilities. The proposed revisions would not increase the development of new homes or businesses. Therefore, the Supermarket Accessory Recycling Collection Centers would result in no impacts to population and housing related to inducing substantial unplanned population growth in an area, either directly or indirectly. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to population and housing related to inducing substantial unplanned population growth in an area. Any new development or expansion of existing development would be required to meet the current development standards of the zone in which they are permitted. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. The Storage Enclosures for Recycling and Solid Waste Revisions do not include or require the extension of infrastructure into areas not currently served by roads and utilities. The proposed program would not increase the development of new homes or businesses. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in in no impacts to population and housing related to inducing substantial unplanned population growth in an area, either directly or indirectly. No further analysis is warranted.

b) Displace substantial numbers of existing people or housing, especially affordable housing, necessitating the construction of replacement housing elsewhere?

The proposed program would result in no impacts to population and housing in relation to the displacement of substantial amounts of existing people or housing, necessitating the construction of replacement housing elsewhere.

Existing Conditions

The County is required to ensure the availability of residential sites at adequate densities and appropriate development standards in the unincorporated areas of the County.⁹ According to the Housing Element of County General Plan 2035, there are 76 affordable housing projects in the unincorporated areas, which provide 2,589 units for low-income households.¹⁰ There are 30,145 residential units assigned a Regional Housing Needs Assessment (RHNA) allocation for the 2014-2021 planning period. The proposed program does not involve the construction or relocation of housing.

Threshold of Significance

A substantial adverse effect on a housing unit that would normally occur as a result of a physical change in the environment that would cause displacement of existing residential buildings or people residing at a location, such as

⁹ Los Angeles County Department of Regional Planning. 2014-2021. Housing Element. In the Los Angeles County General Plan 2035. http://planning.lacounty.gov/assets/upl/project/housing_element.pdf

¹⁰ Los Angeles County Department of Regional Planning. 2014-2021. Housing Element. In the Los Angeles County General Plan 2035. http://planning.lacounty.gov/assets/upl/project/housing_element.pdf

affordable housing, necessitating the development and construction of replacement housing elsewhere to meet housing needs.

Impact Analysis

The potential for impacts to population and housing has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated (please see Section 1, Table 1.IV-1, and Table 1.IV-2). The analysis considers the incremental changes to the physical environment as a result of new and/or revised development standards, in relation to the historic and anticipated permits for affected uses. The proposed revisions to the development standards that have the potential result in physical changes in the environment to population and housing include the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

Element 1 – Green Zone Districts

Green Zones Districts would result in no impacts to population and housing in relation to the displacement of existing people or housing necessitating the construction of replacement housing elsewhere. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to population and housing. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, 27 ~~28~~ parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, 14 ~~45~~ of the 27 ~~28~~ parcels proposed for a zone change within the Green Zones Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green Zones Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

The program requires the nonconforming uses to come into compliance within 3 to 7 ~~40~~ years of adoption of the Ordinance. Residential uses are prohibited in M-1, M-1.5, M-2, and M-2.3 land use zoning; therefore, the proposed program would not require vacating existing residences, as no people reside in the Green Zones Districts. There is no affordable housing located or planned for the parcels subject to the new development standards for Green Zones Districts, and in the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would result in the displacement of people or housing necessitating the construction of replacement housing elsewhere. Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to population and housing in relation to the displacement of people or housing, especially affordable housing, necessitating the construction of replacement housing elsewhere. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in no impacts to population and housing in relation to the displacement of existing people or housing necessitating the construction of replacement housing elsewhere. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, in close proximity to existing industrial uses permitted in the zones where they are located. The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid, or vehicle-related uses. In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from existing conditions, such that they would cause displacement of housing necessitating the construction of replacement housing elsewhere.

The proposed program would not require vacating existing residences, as no people resides in the applicable zoning areas. Additionally, there is no affordable housing located or planned for the areas subject to New Sensitive Uses to the ordinance. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would result in the displacement of people or housing necessitating the construction of replacement housing elsewhere. These measures to reduce the incompatibility of new sensitive uses with existing industrial uses through development standards such as construction of landscaping and planting trees, buffering, and open space, would not cause displacement of people or housing necessitating the construction of replacement housing elsewhere. Therefore, the new development standards for New Sensitive Uses would result in no impacts to population and housing in relation to the displacement of people or housing, especially affordable housing, necessitating the construction of replacement housing elsewhere. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result no impacts to population and housing in relation to the displacement of people or housing necessitating the construction of replacement housing elsewhere. The Recycling and Waste Management Revisions would apply to zones C-1, C-2, C-3, C-M, C-MJ, C-R, C-RU, MXD, MXD-RU, M-1, M-1.5, M-2, M-2.5, A-2, IT. Residential uses are prohibited in M-1, M-1.5, M-2, and M-2.3 land use zoning. Likewise, residential uses are also prohibited in A-2 and IT land use zoning. Therefore, the majority of the properties do not include existing housing. The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards (Table 1.IV-1). Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited in HMAs and SEAs. Additionally, pallet yards, chipping and grinding, mulching facilities would be prohibited in HFHSZs and VHFHSZs; solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways; and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion

technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. The proposed revisions would prohibit automobile dismantling yards, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in-vessel organic waste facilities are prohibited in ARAs.

The proposed program would not require vacating existing residences, as ~~no people resides in the applicable zoning areas~~ there are minimum distance requirements from sensitive uses. Additionally, there is no affordable housing located or planned for the areas subject to Recycling and Waste Management Revisions to the ordinance. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would result in the displacement of people or housing necessitating the construction of replacement housing elsewhere. These measures to reduce the incompatibility of new sensitive uses with existing industrial uses through development standards such as construction of landscaping and planting trees, buffering, and open space, would not cause displacement of people or housing necessitating the construction of replacement housing elsewhere. Therefore, impacts to Recycling and Waste Management Revisions would be no impacts to population and housing in relation to the displacement of housing necessitating the construction of replacement housing elsewhere. No further analysis is warranted.

The Supermarket Accessory Recycling Collection Centers revisions would result in no impacts to population and housing in relation to the displacement of people or housing necessitating the construction of replacement housing elsewhere. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed Supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible.

The CalRecycle requirements are set forth to meet the County’s waste diversion goals. The proposed revisions would apply to Supermarket Accessory Recycling Collection Centers in zones: C-1, C-2, C-2, C-3, C-M, C-MJ, C-R, C-RU, MXD, MXD-RU, M-1, M-1.5, M-2, and M-2.5. Residential uses are prohibited in County commercial zones (C-1, C-2, C-2, C-3, C-M CMJ, CR, CRU) and industrial zones (M-1, M-1.5, M-2, and M-2.5).¹¹ These uses would be ~~constructed~~ established on existing parking lots, and no new structures would be built. The proposed program would not require vacating existing residences, as no people resides in the applicable zoning areas. Additionally, the proposed program does not include the construction of new homes and there is no affordable housing located or planned for the areas subject to Supermarket Accessory Recycling Collection Centers. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would result in the displacement of people or housing necessitating the construction of replacement housing elsewhere. Therefore, the Supermarket Accessory Recycling Collection Centers would have no impacts to population and housing in relation to the displacement of people or housing, including affordable housing, necessitating the construction of replacement housing elsewhere. No further analysis is warranted.

¹¹ Los Angeles County Department of Regional Planning. Zoning Ordinance Summary. 2009. Retrieved from: http://planning.lacounty.gov/luz/summary/category/commercial_zones

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to population and housing in relation to the displacement of people or housing necessitating the construction of replacement housing elsewhere. The proposed program does not include the construction of new homes and, as result, would not result in the displacement of housing necessitating the construction of replacement housing elsewhere. The proposed program would not require vacating existing residences. Additionally, there is no affordable housing located or planned for the areas subject to Storage Enclosures for Recycling and Solid Waste Revisions. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would result in the displacement of people or housing necessitating the construction of replacement housing elsewhere. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to population and housing in relation to the displacement of people or housing, including affordable housing, necessitating the construction of replacement housing elsewhere. No further analysis is warranted.

2.15. PUBLIC SERVICES

This analysis is undertaken to determine if the proposed program may have a significant impact to public services, thus requiring the consideration of mitigation measures or alternatives, in accordance with Section 15063 of the State CEQA Guidelines. The analysis covers all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated based on review of the Public Services and Facilities Element,¹ the Parks and Recreation Element,² and the Safety Element of the County General Plan 2035.³

	<i>Potentially Significant Impact</i>	<i>Less than Significant Impact with Mitigation Incorporated</i>	<i>Less than Significant Impact</i>	<i>No Impact</i>
a) Would the project create capacity or service level problems, or result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
Fire protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Sheriff protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Parks?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Libraries?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Other public facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

The potential for impacts to public services has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated (please see Section 1, *Project Description*, Table 1.IV-1, *Planning and Permitting Requirements*, and Table 1.IV-2, *Development Standards*). The analysis considers the incremental changes to the physical environment as a result of new and/or revised development standards, in relation to the historic and anticipated permits for affected uses. The proposed revisions to the development standards with the potential to result in physical changes in the environment and public services include the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building

¹ Los Angeles County Department of Regional Planning. Adopted 6 October 2015. Los Angeles County 2035 General Plan: Chapter 13: Public Services and Facilities Element. http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch13.pdf

² Los Angeles County Department of Regional Planning. Adopted 6 October 2015. Los Angeles County 2035 General Plan: Chapter 10: Parks and Recreation Element. http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch10.pdf

³ Los Angeles County Department of Regional Planning. Adopted 6 October 2015. Los Angeles County 2035 General Plan: Chapter 12: Safety Element. http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch12.pdf

height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

Fire protection?

Existing Conditions

The Los Angeles County Fire Department provides fire, safety, and emergency medical services to the unincorporated areas of the County. There are 413 fire stations in Los Angeles County.⁴ Within the project footprint, there are 27 County Fire Department fire stations. Additionally, there are 142 service boundaries which service the project area for fire protection.⁵ The Office of Emergency Management (OEM) is responsible for organizing and directing the preparedness efforts of the Emergency Management Organization of Los Angeles County. The Safety Element of the County's General Plan works in conjunction with the Operational Area Emergency Response Plan (OAERP). The OAERP strengthens short- and long-term emergency response and recovery capability and identifies emergency procedures and emergency management routes in Los Angeles County. The Safety Element of the County General Plan 2035 incorporates the County of Los Angeles Strategic Fire Plan by reference and is amended annually, and lists the following goals and policies for fire hazards relevant to fire protection services in consideration of the proposed program:⁶

- **Goal S 3:** An effective regulatory system that prevents or minimizes personal injury, loss of life, and property damage due to fire hazards.
 - **Policy S 3.1:** Discourage development in Very High Fire Hazard Severity Zones (VHFHSZs), particularly in areas with significant biological resources.
 - **Policy S 3.6:** Ensure adequate infrastructure, including ingress, egress, and peak load water supply availability for all projects located in VHFHSZs.
- **Goal S 4:** Effective County emergency response management capabilities.
 - **Policy S 4.3:** Coordinate with other County and public agencies, such as transportation agencies, and health care providers on emergency planning and response activities, and evacuation planning.

According to the Safety Element of the County General Plan 2035, Los Angeles County faces wildland fire threats due to its topography, rainfall patterns, and fire-adapted vegetation. The at-risk areas are designated as Fire Hazard Severity Zones (FHSZ). In the unincorporated areas of the County, FHSZs are classified as Very High, High, and Moderate in State Responsibility Areas and Very High in Local and Federal Responsibility Areas. The Forestry Division of the Los Angeles County Fire Department (Fire Department) is responsible for the implementation of the CAL FIRE FHSZ model designation in Los Angeles County.

Threshold of Significance

A significant impact would occur if the proposed program exceeded or caused services level problems with fire protection services related to maintaining acceptable service ratios, response times or other performance objectives.

Impact Analysis

The proposed program would result in no impacts to public services in relation to the need to construct expanded or new facilities to support fire protection and emergency response services.

⁴ Los Angeles County Fire Department. Accessed June 3, 2020. Search Results > Fire Stations. Available at: <https://locator.lacounty.gov/fire/Search?cat=86&find=Fire+Stations&page=42>

⁶ Los Angeles County Department of Regional Planning. Adopted 6 October 2015. Los Angeles County 2035 General Plan: Chapter 12: Safety Element. http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch12.pdf

Element 1 – Green Zone Districts

Green Zone Districts would result in no impacts to public services in relation to the need to construct expanded or new facilities to support fire protection and emergency response services. The proposed program is located in areas of unincorporated Los Angeles County that are zoned for manufacturing. Areas subject to Green Zone Districts include M-1, M-1.5, M-2, M-2.5 (County Manufacturing Zones). The combined footprint of the project comes to a total of approximately 1,429,299 acres affected by the zoning changes, of which 1,950 acres affected by the zoning changes are within the Green Zone Districts. Of the 142 service boundaries that service the project area for fire protection, 17 serve the Green Zone Districts.⁷ The subject properties are located near incorporated areas in the urbanized Los Angeles Basin with fire response services provided by multiple city fire departments.

The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum floor area ratio (FAR) requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, 27 28 parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, 14 45 of the 27 28 parcels proposed for a zone change within the Green Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to 7 40 years of adoption of the Ordinance. As discussed in Section 2.14, *Population and Housing*, the proposed Green Zone Districts would not induce unplanned population growth. The proposed Green Zone Districts would not cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services. The Green Zone Districts would not change the underlying land use designation but would rather provide requirements to improve compatibility with adjacent sensitive land uses. Therefore, the Green Zone Districts would result in no change in land use, employment, or housing. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would result in any changes to public services as it relates to fire protection.

Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to public services in relation to the need to construct expanded or new facilities to support fire protection and emergency response services. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in no impacts to public services in relation to the need to construct expanded or new facilities to support fire protection and emergency response services. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent

⁷ Los Angeles County. Location Management System (LMS) GIS Data. 2018.
<http://geohub.lacity.org/datasets/6f6c4677365b4418bd585db2ef8e201f>

uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, in close proximity to existing industrial uses. The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, ~~or adjoining industrial, recycling, or vehicle-related uses~~ permitted in the zones where they are located. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses.

The proposed development standards for New Sensitive Uses would not cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services. As discussed in Section 2.14, the proposed new development standards for New Sensitive Uses would not induce unplanned population growth. The development standards for New Sensitive Uses would not change the underlying land use designation but would rather provide requirements to improve compatibility with adjacent sensitive land uses. The new sensitive uses include dwelling units, schools, parks, and other land uses which may increase housing or employment and increase the need for greater fire protection and emergency response services. However, the development standards would be minimal additions to the design of individual proposed new sensitive uses, which would undergo project-specific review under CEQA. The development standards would be minor additions to these projects, and they would not cause development but rather be incorporated to decrease impacts of proposed development. Thus, the development standards for New Sensitive Uses would result in no change in land use, employment, or housing.

Therefore, the new development standards for New Sensitive Uses near Industrial, Recycling and Solid Waste, or Vehicle-Related Uses would result in no impacts to public services in relation to the need to construct expanded or new facilities to support fire protection and emergency response services. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in no impacts to public services in relation to the need to construct expanded or new facilities to support fire protection and emergency response services. Areas subject to Recycling and Waste Management Revisions include: M-1, M-1.5, M-2, M-2.5 (County Manufacturing Zones), A-2 (Heavy Agricultural Zone), and IT (Institutional Zone).

The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited in HMAs and SEAs. Additionally, pallet yards, chipping and grinding, mulching facilities would be prohibited in HFHSZs and VHFHSZs; solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways; and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. ~~These construction improvement requirements are already subject to current development standards. The proposed revisions will prohibit automobile dismantling yards, pallet yards, recycling~~

~~collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in-vessel organic waste facilities are prohibited in ARAs.~~

The proposed program would not change existing fire protection and emergency response services. As discussed in Section 2.14, the proposed recycling and waste management revisions would not induce unplanned population growth. The Recycling and Waste Management Revisions would not change the underlying land use designation but would rather provide requirements to improve compatibility with adjacent sensitive land uses. Therefore, the Recycling and Waste Management Revisions would result in no change in land use, employment, ~~or~~ housing, fire hazard designation, or flood zones. Therefore, the new development standards for New Sensitive Uses near Industrial, Recycling and Solid Waste, or Vehicle-Related Uses would result in no impacts to public services in relation to the need to construct expanded or new facilities to support fire protection and emergency response services. No further analysis is warranted.

The Supermarket Accessory Recycling Collection Centers revisions would result in no impacts to public services in relation to the need to construct expanded or new facilities to support fire protection and emergency response services. The Supermarket Accessory Recycling Collection Centers apply to the same five manufacturing land use zoning designations as the Green Zone Districts and New Sensitive Uses Adjacent to Industrial, Recycling and Solid Waste, or Vehicle-Related Uses and nine additional land use zoning designations: C-1, C-2, C-3, C-M, C-MJ, C-R, C-RU, MXD, MXD-RU (County Commercial and Mixed Use Zones).

The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed Supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County’s waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be ~~constructed~~ established on existing parking lots, and no new structures will be built.

The Supermarket Accessory Recycling Collection Centers would be minimal additions to existing supermarkets, and would not cause a change in land use, employment, ~~or~~ housing, fire hazard designation, or flood zones. Therefore, the Supermarket Accessory Recycling Collection Centers would result in no impacts to public services in relation to the need to construct expanded or new facilities to support fire protection and emergency response services. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to public services in relation to the need to construct expanded or new facilities to support fire protection and emergency response services. Any new development or expansion of existing development would be required to meet the current development standards of the zone they are permitted in. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and

expansion of existing development. These revisions apply to new or expanded residential development units with four or more units, and housing can increase the need for greater fire protection and emergency response services. However, the storage enclosures themselves would be minimal additions to the design of individual proposed residential uses, which would undergo project-specific review under CEQA. The development standards would be minor additions to these projects, and they would not cause development but rather be incorporated to decrease impacts of proposed development. As discussed in Section 2.14, the proposed storage enclosures for recycling and solid waste revisions would not induce unplanned population growth. The Storage Enclosures for Recycling and Solid Waste Revisions would result in no change in land use, employment, or housing. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to public services in relation to the need to construct expanded or new facilities to support fire protection and emergency response services. No further analysis is warranted.

Sheriff protection?

Existing Conditions

Sheriff Protection services in unincorporated Los Angeles County are provided by the Los Angeles County Sheriff's Department (LASD). The Los Angeles County Sheriff's Department is the largest sheriff's department in the world, employing over 10,000 sworn deputies, and over 8,000 civilian staff. LASD provides general law enforcement services to 42 contract cities, 141 unincorporated communities, 216 facilities, hospitals, and clinics located throughout the County, 9 community colleges, the Metropolitan Transit Authority, and 37 Superior Courts across 4,084 square-miles with a county population of approximately 10 million people.⁸ There are 3 law enforcement stations within the project footprint itself. Additionally, there are 58 law enforcement stations which service the project area for law enforcement protection. Of these 58 law enforcement stations, 21 are sheriff stations.⁹ The Safety Element of the County General Plan 2035 establishes that the LASD requires a staff level of one deputy sheriff per each 1,000 population to fulfill all of its functions effectively and efficiently.

Threshold of Significance

A significant impact would occur if the proposed program exceeded or caused services level problems with sheriff protection services related to maintaining acceptable service ratios, response times or other performance objectives.

Impact Analysis

The proposed program would result in no impacts to public services in relation to the need to construct expanded or new facilities to support sheriff protection.

Element 1 – Green Zone Districts

Green Zone Districts would result in no impacts to public services in relation to the need to construct expanded or new facilities to support sheriff protection. The proposed program is located in regions of unincorporated Los Angeles County which is zoned for manufacturing. Areas subject to Green Zone Districts include: M-1, M-1.5, M-2, M-2.5 (County Manufacturing Zones) (see Section 1). The combined footprint of the project comes to a total of approximately 1,429,299 acres affected by the zoning changes, of which 1,950 acres affected by the zoning changes are within the Green Zone Districts. Of the 58 law enforcement stations that serve the project area, 12 serve the Green Zone Districts, of which 6 are sheriff stations.¹⁰

The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision,

⁸ Los Angeles County Sheriff's Department. 2017. About Us. https://www.lasd.org/about_us.html

⁹ Los Angeles County. 2013. Law Enforcement Station Boundaries GIS Data. <https://egis3.lacounty.gov/dataportal/2010/10/21/law-enforcement-station-boundaries/>

¹⁰ Los Angeles County. 2013. Law Enforcement Station Boundaries GIS Data. <https://egis3.lacounty.gov/dataportal/2010/10/21/law-enforcement-station-boundaries/>

allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, ~~27~~ 28 parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, ~~14~~ 45 of the ~~27~~ 28 parcels proposed for a zone change within the Green Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to ~~7~~ 40 years of adoption of the Ordinance. As discussed in Section 2.14, the proposed Green Zone Districts would not induce unplanned population growth.

The proposed Green Zone Districts would not cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services. The Green Zone Districts would not change the underlying land use designation but would rather provide requirements to improve compatibility with adjacent sensitive land uses. Therefore, the Green Zone Districts would result in no change in land use, employment, or housing.

Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to public services in relation to the need to construct expanded or new facilities to support sheriff protection. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in no impacts to public services in relation to the need to construct expanded or new facilities to support sheriff protection.

Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, in close proximity to existing industrial uses permitted in the zones where they are located. The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130). These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses.

The proposed development standards for New Sensitive Uses would not cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services. As discussed in Section 2.14, the proposed new development standards for New Sensitive Uses would not induce unplanned population growth. The development standards for New Sensitive Uses would not change the underlying land use designation but would rather provide requirements to improve compatibility with adjacent sensitive land uses. The new sensitive uses include dwelling units, schools, parks, and other land uses which may increase housing or employment and increase the need for greater police protection services. However, the development standards would be minimal additions to the design of individual proposed new sensitive uses, which would undergo project-specific review under CEQA. The development standards would be minor additions to these projects, and they would not cause development but rather be incorporated to decrease impacts of proposed development. Thus, the development standards for New Sensitive Uses would result in no change in land use, employment, or housing. Therefore, the new development standards for New Sensitive Uses near Industrial, Recycling and Solid Waste, or Vehicle-Related Uses would result in no impacts to public services in relation to the need to construct expanded or new facilities to support sheriff protection. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in no impacts to public services in relation to the need to construct expanded or new facilities to support sheriff protection. Areas subject to Recycling and Waste Management Revisions include: M-1, M-1.5, M-2, M-2.5 (County Manufacturing Zones), A-2 (Heavy Agricultural Zone), and IT (Institutional Zone) (see Section 1).

The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards. Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited in HMAs and SEAs. Additionally, pallet yards, chipping and grinding, mulching facilities would be prohibited in HFHSZs and VHFHSZs; solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways; and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. ~~The proposed revisions would prohibit automobile dismantling yards, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZ. Additionally, in vessel organic waste facilities would be prohibited in ARAs.~~

The proposed program would not change existing sheriff protection and emergency response services. As discussed in Section 2.14, the proposed recycling and waste management revisions would not induce unplanned population growth. The Recycling and Waste Management Revisions would not change the underlying land use designation but would rather provide requirements to improve compatibility with adjacent sensitive land uses. Therefore, the Recycling and Waste Management Revisions would result in no change in land use, employment, or housing.

Therefore, the new development standards for New Sensitive Uses near Industrial, Recycling and Solid Waste, or Vehicle-Related Uses would result in no impacts to public services in relation to the need to construct expanded or new facilities to support sheriff protection. No further analysis is warranted.

The Supermarket Accessory Recycling Collection Centers revisions would result in no impacts to public services in relation to the need to construct expanded or new facilities to support sheriff protection. The Supermarket Accessory Recycling Collection Centers apply to the same five manufacturing land use zoning designations as the Green Zone Districts and New Sensitive Uses Adjacent to Industrial, Recycling and Solid Waste, or Vehicle-Related Uses and nine

additional land use zoning designations: C-1, C-2, C-3, C-M, C-MJ, C-R, C-RU, MXD, MXD-RU (County Commercial and Mixed Use Zones). Within the Supermarket Accessory Recycling Collection Centers element of the program, there are 13 fire stations.

The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed Supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County’s waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be ~~constructed~~ established on existing parking lots, and no new structures will be built.

The Supermarket Accessory Recycling Collection Centers would be minimal additions to existing supermarkets, and would not cause a change in land use, employment, ~~or housing~~, fire hazard designation, or flood zones. Therefore, the Supermarket Accessory Recycling Collection Centers would result in no impacts to public services in relation to the need to construct expanded or new facilities to support sheriff protection. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to public services in relation to the need to construct expanded or new facilities to support sheriff protection. Any new development or expansion of existing development would be required to meet the current development standards of the zone they are permitted in. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. These revisions apply to new or expanded residential development units with four or more units, and housing can increase the need for greater police protection services. However, the storage enclosures themselves would be minimal additions to the design of individual proposed residential uses, which would undergo project-specific review under CEQA. The development standards would be minor additions to these projects, and they would not cause development but rather be incorporated to decrease impacts of proposed development. As discussed in Section 2.14, the proposed storage enclosures for recycling and solid waste revisions would not induce unplanned population growth. Thus, the Storage Enclosures for Recycling and Solid Waste Revisions would result in no change in land use, employment, or housing. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to public services in relation to the need to construct expanded or new facilities to support sheriff protection. No further analysis is warranted.

Schools?

Existing Conditions

According to the Public Services and Facilities Element of the County General Plan 2035,¹¹ the County's role in developing and managing educational facilities and programs is limited. However, the Los Angeles County Office of Education (COE), which is the country's largest regional education agency, serves as an intermediary between the local school districts and the California Department of Education.

The Public Services and Facilities Element of the County General Plan 2035 establishes three policies for Early Care and Education Facilities:

- **Policy PS/F 7.1:** Encourage the joint use of school sites for community activities and other appropriate uses.
- **Policy PS/F 7.2:** Proactively work with school facilities and education providers to coordinate land use and facilities planning.
- **Policy PS/F 7.3:** Encourage adequate facilities for early care and education.

The early childhood centers, public schools, private schools, and higher education facilities located within 500 feet of the project footprint are shown in Table 2.15-1, *Schools within the Areas Subject to the Ordinance*.

TABLE 2.15-1
SCHOOLS WITHIN THE AREAS SUBJECT TO THE ORDINANCE

School Facility	Total within 500 feet of Project Footprint
Public Elementary School	87
Public Middle School	25
Public High School	44
Early Childhood Centers	68
Private and Charter Schools	113
Colleges and Universities	14

SOURCE: Los Angeles County. Location Management System (LMS) GIS Data. 2018.

Threshold of Significance

A significant impact would occur if the proposed program exceeded or caused services level problems with schools related to maintaining acceptable service ratios, or other performance objectives such as maintaining classroom size.

Impact Analysis

The proposed program would result in no impacts to public services in relation to the need for new or expanded facilities to support public schools.

Element 1 – Green Zone Districts

Green Zone Districts would result in no impacts to public services in relation to the need for new or expanded facilities to support public school services. The proposed program is located in regions of unincorporated Los Angeles County which is zoned for manufacturing. Areas subject to Green Zone Districts include M-1, M-1.5, M-2, M-2.5 (County Manufacturing Zones) (see Section 1). The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain

¹¹ Los Angeles County Department of Regional Planning. Adopted 6 October 2015. Los Angeles County 2035 General Plan: Chapter 13: Public Services and Facilities Element. http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch13.pdf

consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, ~~27~~ ²⁸ parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, ~~14~~ ¹⁵ of the ~~27~~ ²⁸ parcels proposed for a zone change within the Green Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a Conditional Use Permit. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to ~~7~~ ⁴⁰ years of adoption of the Ordinance. As discussed in Section 2.14, the proposed Green Zone Districts would not induce unplanned population growth. As the new development standards would not result in additional population or employment, there would be no associated increase in the need for school services. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would result in any changes to public services as it relates to schools.

The proposed Green Zone Districts would not cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services. The Green Zone Districts would not change the underlying land use designation but would rather provide requirements to improve compatibility with adjacent sensitive land uses. Therefore, the Green Zone Districts would result in no change in land use, employment, or housing and no need to construct new or expanded schools. Rather, there would be a benefit to schools in relation to aesthetics, air quality, and noise.

Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to public services in relation to the need to construct expanded or new facilities to support schools. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in no impacts to public services in relation to the need to construct expanded or new facilities to support school services.

Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, ~~in close proximity to existing industrial uses permitted in the zones where they are located.~~ The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals,

shelters, and daycares, or preschools as accessory use to a place of worship, ~~in close proximity adjacent to or adjoining legally-established existing industrial, recycling or solid waste, or vehicle-related uses.~~

The proposed development standards for New Sensitive Uses would not cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services. As discussed in Section 2.14, the proposed new development standards for New Sensitive Uses would not induce unplanned population growth. As the new development standards would not result in additional population or employment, there would be no associated increase in the need for school services. The development standards for New Sensitive Uses would not change the underlying land use designation but would rather provide requirements to improve compatibility with adjacent sensitive land uses. The new sensitive uses include dwelling units, schools, parks, and other land uses which directly increase schools or indirectly increase the need for schools. However, the development standards would be minimal additions to the design of individual proposed new sensitive uses, which would undergo project-specific review under CEQA. The development standards would be minor additions to these projects, and they would not cause development but rather be incorporated to decrease impacts of proposed development. Therefore, the development standards for New Sensitive Uses would result in no change in land use, employment, or housing.

Therefore, the new development standards for New Sensitive Uses near Industrial, Recycling and Solid Waste, or Vehicle-Related Uses would result in no impacts to public services in relation to the need to construct expanded or new school facilities. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in no impacts to public services in relation to the need to construct expanded or new school facilities. Areas subject to Recycling and Waste Management Revisions include M-1, M-1.5, M-2, M-2.5 (County Manufacturing Zones), A-2 (Heavy Agricultural Zone), and IT (Institutional Zone) (see Section 1).

The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards. Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited in HMAs and SEAs. Additionally, pallet yards, chipping and grinding, mulching facilities would be prohibited in HFHSZs and VHFHSZs; solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways; and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. The proposed revisions will prohibit automobile dismantling yards, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZ. Additionally, in-vessel organic waste facilities are prohibited in ARAs.

The proposed program would not change existing school facilities. As discussed in Section 2.14, the proposed recycling and waste management revisions would not induce unplanned population growth. As the recycling and waste management revisions would not result in additional population or employment, there would be no associated increase in the need for school services. The Recycling and Waste Management Revisions would not change the underlying land use designation but would rather provide requirements to improve compatibility with adjacent sensitive land uses. Therefore, the Recycling and Waste Management Revisions would result in no change in land use, employment, or housing. Rather, there would be a benefit to schools in relation to aesthetics, air quality, and noise. Additionally, should a school fall under the land uses which are subject to these revisions, the school would comply with the relevant waste management and storage regulations, and the Recycling and Waste Management Revisions would not result in the need

for a new school. Therefore, the Recycling and Waste Management Revisions would result in no impacts to public services in relation to the need to construct expanded or new school facilities. No further analysis is warranted.

The Supermarket Accessory Recycling Collection Centers revisions would result in no impacts to public services in relation to the need to construct expanded or new school facilities. The Supermarket Accessory Recycling Collection Centers apply to the same five manufacturing land use zoning designations as the Green Zone Districts and New Sensitive Uses Adjacent to Industrial, Recycling and Solid Waste, or Vehicle-Related Uses and nine additional land use zoning designations: C-1, C-2, C-3, C-M, C-MJ, C-R, C-RU, MXD, MXD-RU (County Commercial and Mixed Use Zones) (see Section 1).

The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed Supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County’s waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be ~~constructed~~ established on existing parking lots, and no new structures will be built.

The development of the Green Zones Program would not change public services as it relates to schools but rather provide requirements to improve compatibility with adjacent sensitive land uses, including schools. Therefore, there would be no change in land use, employment, or housing and no need to construct new or expanded schools. Rather, there would be a benefit to schools in relation to aesthetics, air quality, and noise. Therefore, the Supermarket Accessory Recycling Collection Centers would result in no impacts to public services in relation to the need to construct expanded or new school facilities. No further analysis is warranted.

Element 4 – Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to public services in relation to the need to construct expanded or new school facilities. Any new development or expansion of existing development would be required to meet the current development standards of the zone they are permitted in. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. These revisions apply to new or expanded residential development units with four or more units, and housing can increase the need for greater school services. However, the storage enclosures themselves would be minimal additions to the design of individual proposed residential uses, which would undergo project-specific review under CEQA. The development standards would be minor additions to these projects, and they would not cause development but rather be incorporated to decrease impacts of proposed development. As discussed in Section 2.14, the proposed storage enclosures for recycling and solid waste revisions would not induce unplanned population growth. As the enclosures for recycling and solid waste revisions would not result in additional population or employment, there would be no associated increase in the need for school services. Thus, the development standards for New Sensitive Uses would result in no change in

land use, employment, or housing. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to public services in relation to the need to construct expanded or new school facilities. No further analysis is warranted.

Parks?

Existing Conditions

According to the Parks and Recreation Element of the County General Plan 2035,¹² the County's park system, including facilities that are owned, operated, and maintained by the County, totals approximately 70,000 acres. The County of Los Angeles is dedicated to providing two sources of parks to meet recreation and park needs which include both local and regional park systems. The County has an average of 3.3 acres of local parks and regional recreation parks per 1,000 people.¹³ As established by the Parks and Recreation Element of the County General Plan 2035, the standard for parklands is 4 acres of local parkland and 6 acres of regional parkland per 1,000 County residents in unincorporated areas.¹⁴

Based on the Parks and Recreation Element of the County General Plan 2035, in 2013, the local parkland totaled approximately 608 acres, regional parkland totaled approximately 68,986 acres, and the overall parkland totaled approximately 69,594 acres (see Section 3.16, *Recreation*, Table 2.16-1, *Existing County Parkland*, and Figure 2.16-1, *Parks within 500 Feet of Areas Subject to Ordinance*). The Parks and Recreation Element determined that the demand for local parkland (neighborhood and community parks) in unincorporated Los Angeles County exceeds the supply throughout the proposed initiative study area. Parks constitute one of the sensitive uses that the proposed Green Zones program is intended to protect. As of 2020, there are approximately 420 parks within 500 feet of the project area, including the Angeles National Forest.¹⁵

Threshold of Significance

A significant impact would occur if the proposed program exceeded or caused services level problems with park services related to maintaining acceptable service ratios such as per capita park acreage.

Impact Analysis

The proposed program would result in no impacts to public services in relation parks.

Element 1 – Green Zone Districts

Green Zone Districts would result in no impacts to public services in relation to parks. The proposed program is located in regions of unincorporated Los Angeles County which is zoned for manufacturing. Areas subject to Green Zone Districts include: M-1, M-1.5, M-2, M-2.5 (County Manufacturing Zones) (see Section 1). There are 14 parks within 500 feet of areas affected by zoning changes in the Green Zone Districts, totaling 202 acres of park.¹⁶

The Green Zone Districts would not result in substantial adverse physical impacts associated with the parks. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree

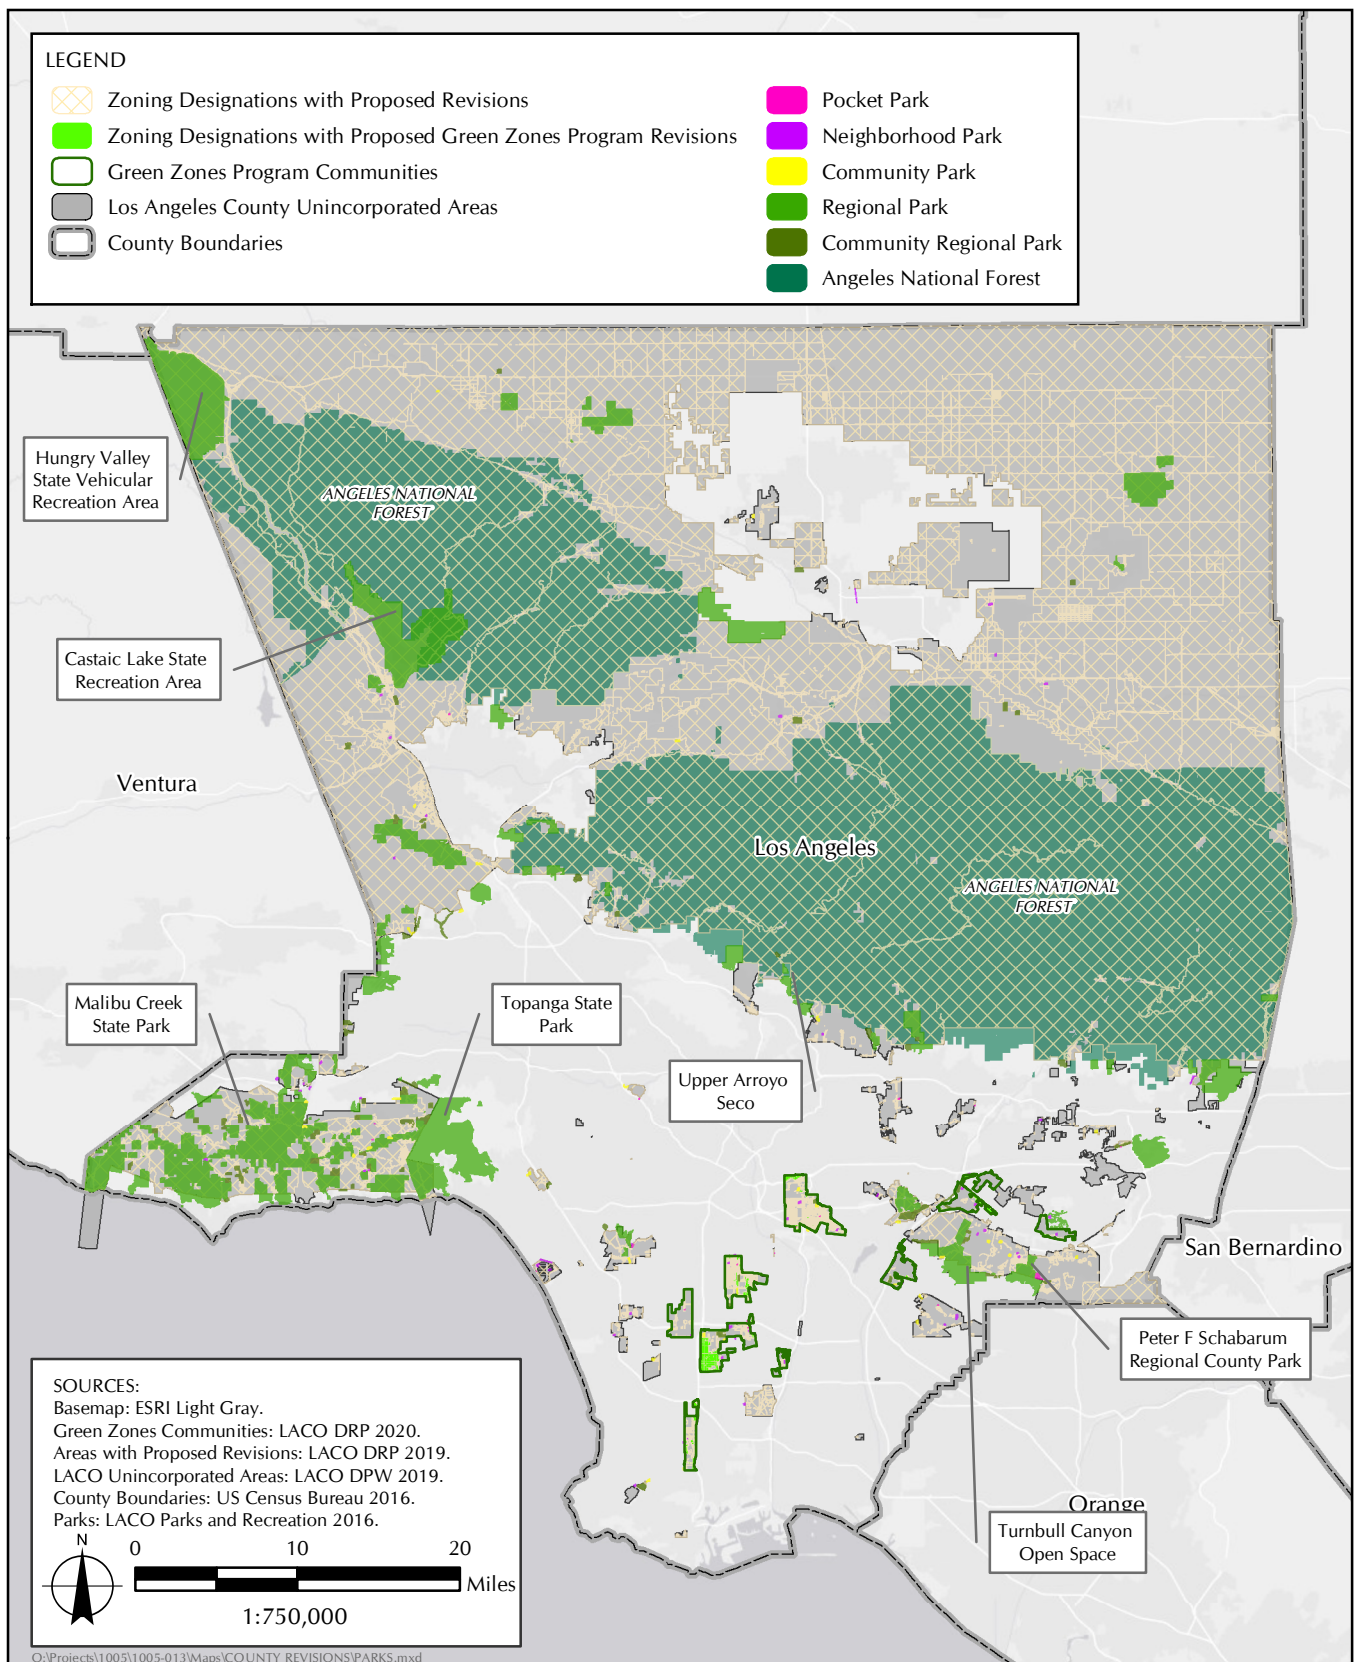

FIGURE 2.16-1
 Parks within 500 Feet of Project Location

planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, ~~27~~ ~~28~~ parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, ~~14~~ ~~45~~ of the ~~27~~ ~~28~~ parcels proposed for a zone change within the Green Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to ~~7~~ ~~40~~ years of adoption of the Ordinance. As discussed in Section 2.14, the proposed Green Zone Districts would not induce unplanned population growth.

There is no proposed increase in housing or employment that would have the potential to affect existing parks. The proposed program would not cause an increase in population which would lead to the increase of use in existing neighborhood and regional parks causing degradation. Thus, there would be no impact. The proposed program would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for parks.

Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to public services in relation parks. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in no impacts to public services in relation to parks. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, ~~in close proximity to existing industrial uses permitted in the zones where they are located.~~ The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 4, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, ~~in close proximity~~ adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses.

The proposed development standards for New Sensitive Uses would not cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services. As discussed in Section 2.14, the proposed new development standards for New Sensitive Uses would not induce unplanned

population growth. The development standards for New Sensitive Uses would not change the underlying land use designation but would rather provide requirements to improve compatibility with adjacent sensitive land uses. The new sensitive uses include dwelling units, schools, parks, and other land uses which directly increase parks or indirectly increase the need for parks. However, the development standards would be minimal additions to the design of individual proposed new sensitive uses, which would undergo project-specific review under CEQA. The development standards would be minor additions to these projects, and they would not cause development but rather be incorporated to decrease impacts of proposed development. Thus, the development standards for New Sensitive Uses would result in no change in land use, employment, or housing. Therefore, the new development standards for New Sensitive Uses near Industrial, Recycling and Solid Waste, or Vehicle-Related Uses would result in no impacts to public services in relation to parks. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in no impacts to public services in relation to parks. Areas subject to Recycling and Waste Management Revisions of the program would be in the M-1, M-1.5, M-2, M-2.5 (County Industrial Zones), the A-2 (Heavy Agricultural Zone), and the IT (Institutional Zone). With the implementation of the Recycling and Waste Management Revisions, a total of 134 parks would benefit from the proposed program.

The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards. Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited in HMAs and SEAs. Additionally, pallet yards, chipping and grinding, mulching facilities would be prohibited in HFHSZs and VHFHSZs; solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways; and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. ~~The proposed revisions will prohibit automobile dismantling yards, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZ. Additionally, in vessel organic waste facilities are prohibited in ARAs.~~

As discussed in Section 2.14, the proposed recycling and waste management revisions would not induce unplanned population growth. The Recycling and Waste Management Revisions would not change the underlying land use designation but rather provide requirements to improve compatibility with adjacent sensitive land uses. Thus, there would be no change in land use, employment, ~~or~~ housing, fire hazard designation, or flood zones and no need for construction of new or expanded parks. Rather, there would be a benefit to parks within unincorporated Los Angeles County. Therefore, the Recycling and Waste Management Revisions would result in no impacts to public services in relation to parks. No further analysis is warranted.

The Supermarket Accessory Recycling Collection Centers revisions would result in no impacts to public services in relation to the need to construct expanded or new park facilities. Areas subject to Supermarket Accessory Recycling Collection Centers and Storage Enclosures for Recycling and Solid Waste Revisions, which include the C-1, C-2, C-3, C-M, C-MJ, C-R, C-RU, MXD, MXD-RU (County Commercial Zones and Mixed Use Zones), and the M-1, M-1.5, M-2, M-2.5, and M3 (County Industrial Zones; see Figure 2.16-1).

The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would

require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed Supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County's waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be ~~constructed~~ established on existing parking lots, and no new structures will be built.

These revisions would not affect parks given that they are not recycling or supermarket facilities. According to the Environmental Protection Agency (EPA), recycling reduces the amount of waste sent to landfills and incinerators, conserves natural resources, saves energy and prevents pollution by reducing the need to collect new raw materials.¹⁷ Creating development standards for recycling will provide greater protection for existing sensitive land uses and parks in particular. The Supermarket Accessory Recycling Collection Centers will benefit a total of 94 parks countywide. There would be no change in land use, employment, ~~or~~ housing, fire hazard designation, or flood zones and no need to construct new or expanded parks. Rather, there would be a benefit to parks related to aesthetics, air quality, and noise. Therefore, the proposed program would result in no impacts to public services in relation to the substantial adverse physical impacts associated with the provision of new or physically altered park facilities. Therefore, the Supermarket Accessory Recycling Collection Centers would result in no impacts to public services in relation to the need to construct expanded or new school facilities. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to public services in relation to parks. Any new development or expansion of existing development would be required to meet the current development standards of the zone in which they are permitted. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. These revisions apply to new or expanded residential development units with four or more units, and housing can increase the need for greater parks services. However, the storage enclosures themselves would be minimal additions to the design of individual proposed residential uses, which would undergo project-specific review under CEQA. The development standards would be minor additions to these projects, and they would not cause development but rather be incorporated to decrease impacts of proposed development. As discussed in Section 2.14, the proposed storage enclosures for recycling and solid waste revisions would not induce unplanned population growth. As the enclosures for recycling and solid waste revisions would not result in additional population or employment, there would be no associated increase in the need for park services. Thus, the development standards for New Sensitive Uses would result in no change in land use, employment, or housing. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to public services in relation to parks. No further analysis is warranted.

Libraries?

Existing Conditions

The Los Angeles County Public Library (County Library) provides library services to over 3.4 million residents living in unincorporated Los Angeles County and within 49 of the 88 incorporated cities of Los Angeles County within a service area of over 3,000 square miles.¹⁸ In June 2019, the County Library had 85 regional and communities libraries, one institutional library, and three bookmobiles that served 2,390,816 registered borrowers at a budgeted expenditure rate of \$45.05 per capita for fiscal year 2018/2019.¹⁹ There are 28 libraries within 500 feet of the project footprint.²⁰

The Public Services and Facilities Element of the Los Angeles County General Plan 2035 promotes the orderly and efficient planning of public facilities and infrastructure in conjunction with land use development and growth regarding the relevant topics of early care and education and libraries.²¹ The County guideline for library facility space is a minimum of 0.5 gross square feet per capita. The Public Services and Facilities Element has established the following goal and policies relevant to libraries:

- **Goal PS/F 8:** A comprehensive public library system.
 - **Policy PS/F 8.1:** Ensure a desired level of library service through coordinated land use and facilities planning.
 - **Policy PS/F 8.2:** Support library mitigation fees that adequately address the impacts of new development.

Threshold of Significance

A significant impact would occur if the proposed program exceeded or caused services level problems with library services related to maintaining acceptable service ratios such as requiring the construction of new libraries due to population growth caused by the project.

Impact Analysis

The proposed program would result in no impacts to public services in relation to the need to construct expanded or new facilities to support libraries.

Element 1 – Green Zone District

Green Zone Districts would result in no impacts to public services in relation to the need for new or expanded facilities to support public libraries. The proposed program is located in regions of unincorporated Los Angeles County which is zoned for manufacturing. Areas subject to Green Zone Districts include: M-1, M-1.5, M-2, M-2.5 (County Manufacturing Zones) (see Section 1). There are no libraries within 500 feet of the areas affected by zoning changes in the Green Zone Districts.²²

The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, 27 ~~28~~ parcels are proposed for a zone

²¹ Los Angeles County Department of Regional Planning. Adopted 6 October 2015. Los Angeles County 2035 General Plan: Chapter 13: Public Services and Facilities Element. http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch13.pdf

²² Los Angeles County. Location Management System (LMS) GIS Data. 2018. <http://geohub.lacity.org/datasets/6f6c4677365b4418bd585db2ef8e201f>

change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, ~~14 45~~ of the ~~27 28~~ parcels proposed for a zone change within the Green Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to ~~7 40~~ years of adoption of the Ordinance. As discussed in Section 2.14, the proposed Green Zone Districts would not induce unplanned population growth. As the new development standards would not result in additional population or employment, there would be no associated increase in the need for library services. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would result in any changes to public services as it relates to libraries.

The Green Zone Districts would not change the County's existing library services. The new development standards would provide requirements to improve compatibility with adjacent sensitive land uses. Thus, there would be no change in land use, employment, or housing and no need to construct new or expanded libraries. Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to public services in relation to the need to construct expanded or new facilities to support schools. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in no impacts to public services in relation to libraries. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, ~~in close proximity to existing industrial uses permitted in the zones where they are located.~~ The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 4, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, ~~in close proximity~~ adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses.

The proposed development standards for New Sensitive Uses would not cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services. As discussed in Section 2.14, the proposed new development standards for New Sensitive Uses would not induce unplanned population growth. The development standards for New Sensitive Uses would not change the underlying land use designation but would rather provide requirements to improve compatibility with adjacent sensitive land uses. The new

sensitive uses include dwelling units, schools, parks, and other land uses which can indirectly increase the need for libraries. However, the development standards would be minimal additions to the design of individual proposed new sensitive uses, which would undergo project-specific review under CEQA. The development standards would be minor additions to these projects, and they would not cause development but rather be incorporated to decrease impacts of proposed development. Therefore, the development standards for New Sensitive Uses would result in no change in land use, employment, or housing. Therefore, the new development standards for New Sensitive Uses near Industrial, Recycling and Solid Waste, or Vehicle-Related Uses would result in no impacts to public services in relation to libraries. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in no impacts to public services in relation to libraries. Areas subject to Recycling and Waste Management Revisions include M-1, M-1.5, M-2, M-2.5 (County Manufacturing Zones), A-2 (Heavy Agricultural Zone), and IT (Institutional Zone) (see Section 1).

The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards. Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited in HMAs and SEAs. Additionally, pallet yards, chipping and grinding, mulching facilities would be prohibited in HFHSZs and VHFHSZs; solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways; and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. ~~The proposed revisions will prohibit automobile dismantling yards, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in vessel organic waste facilities are prohibited in ARAs.~~

As discussed in Section 2.14, the proposed recycling and waste management revisions would not induce unplanned population growth. The Recycling and Waste Management Revisions would not change the public services as it relates to libraries. It would provide requirements to improve compatibility with adjacent sensitive land uses. Thus, there would be no change in land use, employment, or housing and no need to construct new or expanded libraries. Therefore, the Recycling and Waste Management Revisions would result in no impacts to public services in relation to libraries. No further analysis is warranted.

The Supermarket Accessory Recycling Collection Centers revisions would result in no impacts to public services in relation to libraries. Areas subject to Supermarket Accessory Recycling Collection Centers and Storage Enclosures for Recycling and Solid Waste Revisions include M-1, M-1.5, M-2, M-2.5, and M3 (County Manufacturing Zones), and C-1, C-2, C-3, C-M, C-MJ, C-R, C-RU, MXD, MXD-RU²³ (County Commercial and Mixed Use Zones) (see Section 1).

The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in

²³MXD and MXD-RU are considered to be Mixed Use Land Use Zoning (Commercial and Residential). For the purposes of this proposed program, the Green Zones Program only focuses on commercial zones.

applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed Supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County's waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be ~~constructed~~ established on existing parking lots, and no new structures will be built.

The Supermarket Accessory Recycling Collection Centers would not change the County's existing library services. These revisions would not affect public services given that they are not recycling or supermarket facilities. Therefore, there would be no change in land use, employment, or housing and no need to construct new or expanded libraries. Thus, the proposed Ordinance would result in no impacts to public services in relation to the substantial adverse physical impacts associated with the provision of new or physically altered library facilities. Therefore, the Supermarket Accessory Recycling Collection Centers would result in no impacts to public services in relation to libraries. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to public services in relation to libraries. Any new development or expansion of existing development would be required to meet the current development standards of the zone they are permitted in. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. These revisions apply to new or expanded residential development units with four or more units, and housing can increase the need for greater library services. However, the storage enclosures themselves would be minimal additions to the design of individual proposed residential uses, which would undergo project-specific review under CEQA. The development standards would be minor additions to these projects, and they would not cause development but rather be incorporated to decrease impacts of proposed development. As discussed in Section 2.14, the proposed storage enclosures for recycling and solid waste revisions would not induce unplanned population growth. As the enclosures for recycling and solid waste revisions would not result in additional population or employment, there would be no associated increase in the need for library services. Thus, the Storage Enclosures for Recycling and Solid Waste Revisions would result in no change in land use, employment, or housing. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to public services in relation to libraries. No further analysis is warranted.

Other Public Facilities?

Existing Conditions

There is one hospital within 500 feet of areas affected by zoning changes in the Green Zone Districts.²⁴

Threshold of Significance

A significant impact would occur if the proposed program exceeded or caused services level problems with other public services such as requiring the construction of new hospitals due to population growth caused by the project.

²⁴ Los Angeles County. Location Management System (LMS) GIS Data. 2018.
<http://geohub.lacity.org/datasets/6f6c4677365b4418bd585db2ef8e201f>

Impact Analysis

The proposed program would result in no impacts to public services in relation to the need for new or expanded other facilities, such as hospitals. There are 11 hospitals within 500 feet of the project footprint and 2 senior living homes.²⁵

Element 1 – Green Zone Districts

Green Zone Districts would result in no impacts to public services in relation to the need for new or expanded other facilities. The proposed program is located in regions of unincorporated Los Angeles County which is zoned for manufacturing. Areas subject to Green Zone Districts and New Sensitive Uses Adjacent to Industrial, Recycling and Solid Waste, or Vehicle-Related Uses include: M-1, M-1.5, M-2, M-2.5 (County Manufacturing Zones) (see Section

The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, 27 28 parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, 14 45 of the 27 28 parcels proposed for a zone change within the Green Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The Program requires the nonconforming uses to come into compliance within 3 to 7 40 years of adoption of the Ordinance. As discussed in Section 2.14, the proposed Green Zone Districts would not induce unplanned population growth.

The Green Zone Districts would not change public services as it relates to hospitals but would rather provide requirements to improve compatibility with adjacent sensitive land uses, including hospitals. Therefore, there would be no change in land use, employment, or housing and no need to construct new or expanded hospitals. Rather, there would be a benefit to hospitals related to aesthetics, air quality, and noise. Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to public services in relation to the need for new or expanded other facilities. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in no impacts to public services in relation to the need for new or expanded other facilities. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, ~~in close proximity to existing industrial uses~~ permitted in the zones where they are located. The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include

²⁵ Los Angeles County. Location Management System (LMS) GIS Data. 2018.
<http://geohub.lacity.org/datasets/6f6c4677365b4418bd585db2ef8e201f>

development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, ~~in close proximity adjacent to or adjoining legally-established existing industrial, recycling or solid waste, or vehicle-related uses.~~

The proposed development standards for New Sensitive Uses would not cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services. As discussed in Section 2.14, the proposed new development standards for New Sensitive Uses would not induce unplanned population growth. The development standards for New Sensitive Uses would not change the underlying land use designation but would rather provide requirements to improve compatibility with adjacent sensitive land uses. The new sensitive uses include hospitals; however, the development standards would be minimal additions to the design of individual proposed new sensitive uses, which would undergo project-specific review under CEQA. The development standards would be minor additions to these projects, and they would not cause development but rather be incorporated to decrease impacts of proposed development. Thus, the development standards for New Sensitive Uses would result in no change in land use, employment, or housing. Therefore, the new development standards for New Sensitive Uses near Industrial, Recycling and Solid Waste, or Vehicle-Related Uses would result in no impacts to public services in relation to the need for new or expanded other facilities. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in no impacts to public services in relation to the need for new or expanded other facilities. Areas subject to Recycling and Waste Management Revisions include M-1, M-1.5, M-2, M-2.5 (County Manufacturing Zones), A-2 (Heavy Agricultural Zone), and IT (Institutional Zone) (see Section 1).

The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards. Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited in HMAs and SEAs. Additionally, pallet yards, chipping and grinding, mulching facilities would be prohibited in HFHSZs and VHFHSZs; solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways; and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. ~~The proposed revisions will prohibit automobile dismantling yards, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in-vessel organic waste facilities are prohibited in ARAs.~~

The Green Zones Program would not change public services as it relates to hospitals but would rather provide requirements to improve compatibility with adjacent sensitive land uses, including hospitals. As discussed in Section 2.14, the proposed recycling and waste management revisions would not induce unplanned population growth. As the recycling and waste management revisions would not result in additional population or employment, there would be no

associated increase in the need for library services. Therefore, there would be no change in land use, employment, or housing, fire hazard designation, or flood zones and no need to construct new or expanded hospitals. Rather, there would be a benefit to hospitals and other public services related to aesthetics, air quality, and noise. Therefore, impacts to Recycling and Waste Management Revisions would result in no impacts to public services in relation to the need for new or expanded other facilities.

The Supermarket Accessory Recycling Collection Centers revisions would result in no impacts to public services in relation to the need for new or expanded other facilities. Supermarket Accessory Recycling Collection Centers and Storage Enclosures for Recycling and Solid Waste Revisions apply to the same five manufacturing land use zoning designations as the Green Zone Districts and New Sensitive Uses Adjacent to Industrial, Recycling and Solid Waste, or Vehicle-Related Uses and nine additional land use zoning designations: C-1, C-2, C-3, C-M, C-MJ, C-R, C-RU, MXD, MXD-RU (County Commercial and Mixed Use Zones) (see Section 1).

The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed Supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County’s waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be ~~constructed~~ established on existing parking lots, and no new structures will be built.

The development of the proposed program would not result in a change to public services as it relates to other facilities such as hospitals. These revisions would not affect public services given that they are not recycling or supermarket facilities. The Supermarket Accessory Recycling Collection Centers would not change public services as it relates to hospitals but would rather provide requirements to improve compatibility with adjacent sensitive land uses, including hospitals. Thus, there would be no change in land use, employment, ~~or housing, fire hazard designation, or flood zones~~ and no need to construct new or expanded hospitals. Rather, there would be a benefit to hospitals and other public services related to aesthetics, air quality, and noise. Therefore, the Supermarket Accessory Recycling Collection Centers would have no impacts to public services in relation to the need for new or expanded other facilities.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to public services in relation to other public facilities. Any new development or expansion of existing development would be required to meet the current development standards of the zone in which they are permitted. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. These revisions apply to new or expanded residential development units with four or more units, and housing can increase the need for a variety of greater public services. However, the storage enclosures themselves would be minimal additions to the design of individual proposed residential uses, which would undergo project-specific review under CEQA. The development

standards would be minor additions to these projects, and they would not cause development but rather be incorporated to decrease impacts of proposed development. As discussed in Section 2.14, the proposed storage enclosures for recycling and solid waste revisions would not induce unplanned population growth. As the enclosures for recycling and solid waste revisions would not result in additional population or employment, there would be no associated increase in the need for other public facilities. Thus, the development standards for New Sensitive Uses would result in no change in land use, employment, or housing. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to public services in relation to other public services. No further analysis is warranted.

2.16. RECREATION

This analysis is undertaken to determine if the proposed program may have a significant impact to recreation, thus requiring the consideration of mitigation measures or alternatives in accordance with Section 15063 of the State CEQA Guidelines.¹ The analysis covers all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated with regard to the Parks and Recreation Element (Chapter 10) of the Los Angeles County General Plan 2035,² County Parks and Open Space GIS Data,³ and the 2016 Los Angeles Countywide Comprehensive Parks and Recreation Needs Assessment.⁴

	<i>Potentially Significant Impact</i>	<i>Less than Significant Impact with Mitigation Incorporated</i>	<i>Less than Significant Impact</i>	<i>No Impact</i>
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Does the project include neighborhood and regional parks or other recreational facilities or require the construction or expansion of such facilities which might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Would the project interfere with regional trail connectivity?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?				

Existing Conditions

The Los Angeles County General Plan,⁵ states that the County's park system, including facilities that are owned, operated, and maintained by the County, contains approximately 70,000 acres of park space. Local parkland is classified by the County as park nodes, pocket parks, neighborhood parks, and community parks. Regional parkland classifications include community regional parks, regional parks, and special use facilities. The County also treats trails as linear parks, as they provide community access to increased health and fitness activities in urbanized regions. The County has adopted a regional park service standard of 6 acres per 1,000 County residents and a local park services standard of 4

¹ California Code of Regulations. Title 14, Division 6, Chapter 3, Sections 15000–15387, Appendix G.

⁵ Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Parks and Recreation Element. http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch10.pdf

acres per 1,000 County residents.⁶ According to the 2016 Los Angeles Countywide Comprehensive Parks and Recreation Needs Assessment, Los Angeles County has an average of 3.3 acres of local parks per 1,000 people.⁷

According to the County General Plan, total parkland in Los Angeles County in 2013 was approximately 608 acres. Regional parkland totaled approximately 68,986 acres and the overall parkland in the County totaled approximately 69,594 acres (please see Table 2.16-1, *Existing County Parkland*; Figure 2.16-1, *Parks within 500 Feet of Areas Subject to Ordinance*, for more information). The Parks and Recreation Element of the County General Plan identified goals of 4 acres of local parkland per 1,000 residents, and 6 acres of regional parkland per 1,000 residents, the Study showed that unincorporated areas face a significant deficit in local parkland by approximately 3,719 acres. Based on these projections, the County predicts that the unincorporated areas of the County of Los Angeles will have deficits of 5,987 acres in local parkland and 5,046 acres in regional parkland by the year 2035, if no new parks are created.

As of 2020, there are a total of 420 parks within a 500-foot distance of the areas subject to the proposed program totaling 805,218 acres that include Park Nodes, Pocket Parks, Neighborhood Parks, Community Parks, Community Regional Parks, and Regional Parks as well as most of the Angeles National Forest within the project footprint (Figure 2.16-1; Table 2.16-2, *Park Acreage 500 feet from Green Zones Program*). Within the Green Zone Districts, there are approximately 14 acres of parks within 500 feet totaling 202 acres.

Threshold of Significance

A significant impact would occur if population growth were induced, either from new residences or new employee residents in the area generated from construction or operations activities, that would increase the use of existing parks and recreation facilities beyond their existing capacity, such that substantial physical deterioration of the facility would occur or be accelerated.

Impact Analysis

The proposed program would result in no impacts to recreation due to increased use of existing neighborhood and regional parks or other recreational facilities that would contribute to their physical deterioration. The potential for impacts to recreation and the possible deterioration of existing park facilities has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated (please see Section 1, *Project Description*, Table 1.IV-1, *Planning and Permitting Requirements*, and Table 1.IV-2, *Development Standards*). The analysis considers the incremental changes to the physical environment as a result of new and/or revised development standards, in relation to the historic and anticipated permits for affected uses. The proposed revisions to the development standards that have the potential to result in physical changes in the environment with the potential for increase in use of existing recreational facilities such that there would be substantial or accelerated physical deterioration. The proposed program includes the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

Element 1 – Green Zone Districts

Green Zone Districts would result in no impact to recreation in relation to increased use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impact to recreation in relation to an increase in use of existing parklands, local and regional, such that substantial or accelerated physical deterioration would occur. Parks constitute one of the sensitive uses that the proposed Green Zones Program is intended to protect. As discussed in Section 2.14, *Population and Housing*, the Green Zone Districts would not induce unplanned population growth. There is no proposed increase in housing or employment that would have the potential to affect existing parks. The proposed program would not cause an increase in population which would lead to the increase of use in existing neighborhood and regional parks causing degradation. Currently the zoning and land use designations for the 11 districts under consideration for

proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum floor area ratio (FAR) requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, ~~27~~ 28 parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, ~~14~~ 45 of the ~~27~~ 28 parcels proposed for a zone change within the Green Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to ~~7~~ 40 years of adoption of the Ordinance. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would cause substantial or accelerated physical deterioration to existing recreational facilities due to increase in use. As stated in Section 2.14, *Population and Housing*, the project would not induce growth or concentration of population. The project would not include the development of new homes, businesses, roads, or utilities and would thereby not induce substantial unplanned population growth, directly or indirectly, in the County. The project would entail improvements that would apply to specific industrial, recycling, or vehicle-related uses and would not be expected to result in a significant increase in the number of people, residents, or visitors to existing park facilities that would increase use of existing neighborhood and regional parks or other recreational facilities such that it would contribute to their physical deterioration. Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to recreation in relation to increased use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in no impacts to recreation in relation to increased use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. Parks constitute one of the sensitive uses that the proposed Green Zones Program is intended to protect. As discussed in Section 2.14, the proposed new development standards for New Sensitive Uses would not induce unplanned population growth. There is no proposed increase in housing or employment that would have the potential to affect existing parks. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, ~~in close proximity to existing industrial uses permitted in the zones where they are located~~. The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses.

In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from existing conditions, such that they would increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. These measures to reduce the incompatibility of new sensitive uses with existing industrial uses through development standards such as construction of landscaping and planting trees, buffering, and open space, would not cause an increase in population that would lead to the increase of use in existing neighborhood and regional parks causing degradation. The development standards for New Sensitive Uses would not change the underlying land use designation but would rather provide requirements to improve compatibility with adjacent sensitive land uses. The new sensitive uses include dwelling units, schools, parks, and other land uses which directly increase parks or indirectly increase the need for parks. However, the development standards would be minimal additions to the design of individual proposed new sensitive uses, which would undergo project-specific review under CEQA. The development standards would be minor additions to these projects, and they would not cause development but rather be incorporated to decrease impacts of proposed development. Thus, the development standards for New Sensitive Uses would result in no change in land use, employment, or housing. Therefore, the new development standards for New Sensitive Uses would result in no impacts to recreation in relation to increased use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in no impacts to recreation in relation to increased use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. These revisions would not affect recreation facilities given that they are not recycling or waste facilities. However, the proposed program is intended to better protect sensitive land uses such as parks where individuals are most susceptible to poor air quality, toxins, or other environmental impacts. The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards (Table 1.IV-1). Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited in HMAs and SEAs. Additionally, pallet yards, chipping and grinding, mulching facilities would be prohibited in HFHSZs and VHFHSZs; solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways; and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. ~~The proposed revisions would prohibit automobile dismantling yards, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in-vessel organic waste facilities are prohibited in ARAs.~~ As discussed in Section 2.14, the proposed recycling and waste management revisions would not induce unplanned population growth. The Recycling and Waste Management Revisions would not change the underlying land use designation but rather provide requirements to improve compatibility with adjacent sensitive land uses. Thus, there would be no change in land use, employment, ~~or~~ housing, fire hazard designations, or flood zones and no associated increased use of parks. Rather, there would be a benefit to parks within unincorporated Los Angeles County. Therefore, the Recycling and Waste Management Revisions would result in no impacts to recreation in relation to increased use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. No further analysis is warranted.

The Supermarket Accessory Recycling Collection Centers revisions would result in no impacts to recreation in relation to increased use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods,

perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed Supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County’s waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be constructed on existing parking lots, and no new structures will be built. The construction of a recycling collection center or compliance with development standards would not substantially alter the existing conditions. These revisions would not affect parks given that they are not recycling or supermarket facilities. As these revisions would not induce population growth, they would not increase the use of existing parklands, local or regional, such that substantial or accelerated physical deterioration would occur. According to the Environmental Protection Agency (EPA) recycling reduces the amount of waste sent to landfills and incinerators, conserves natural resources, saves energy and prevents pollution by reducing the need to collect new raw materials.⁹ Creating development standards for recycling would provide greater protection for existing sensitive land uses and parks in particular. The proposed program is intended to better protect sensitive land uses such as parks where individuals are most susceptible to poor air quality, toxins, or other environmental impacts. The proposed program is intended to better protect sensitive land uses such as parks where individuals are most susceptible to poor air quality, toxins, or other environmental impacts. There would be no expected impacts to recreation related to increase housing or employment that would have the potential to affect existing parks. Therefore, the Supermarket Accessory Recycling Collection Centers would have no impacts to recreation in relation to increased use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to recreation in relation to increased use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. Any new development or expansion of existing development would be required to meet the current development standards of the zone in which they are permitted. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. These revisions would not induce population growth and thereby would not increase the use of existing parklands, local or regional, such that substantial or accelerated physical deterioration would occur. According to the EPA, recycling reduces the amount of waste sent to landfills and incinerators, conserves natural resources, saves energy, and prevents pollution by reducing the need to collect new raw materials.¹⁰ Creating development standards for recycling will provide greater protection for existing sensitive land uses and parks in particular. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to recreation in relation to increased use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. No further analysis is warranted.

⁹ Environmental Protection Agency. 2019. Recycling Basics. <https://www.epa.gov/recycle/recycling-basics#Benefits>

¹⁰ Environmental Protection Agency. 2019. Recycling Basics. <https://www.epa.gov/recycle/recycling-basics#Benefits>

- b) Does the project include neighborhood and regional parks or other recreational facilities or require the construction or expansion of such facilities which might have an adverse physical effect on the environment?**

Existing Conditions

The combined footprint for the Green Zones Program is comprised of a total of approximately 1,429,299 acres on 135,383 parcels of unincorporated areas of the County where there are industrial, manufacturing, recycling and waste management, including supermarket recycling centers, or the development of such facilities in locations adjacent to sensitive users. Sensitive receptors as it pertains to the Green Zones programs includes recreational facilities such as parks. There are 420 existing parks within a 500-foot distance of the areas subject to the proposed program, totaling 805,218 acres (see Figure 2.16-1; Table 2.16-2). Within the Green Zone Districts, there are approximately 14 acres of existing parks within 500 feet, totaling 202 acres.

Threshold of Significance

A significant impact would occur if the scope of the project included development or expansion of parks or recreational facilities within a sensitive environment or if population growth were induced, either from new residences or new employee residents in the area generated from construction or operations activities, that would require the development of new parks and recreation facilities to meet State- and County-mandated recreation service standards to support new residential development within a sensitive environment that could be adversely affected by park development, such as a greenfield.

Impact Analysis

The proposed program would result in no impacts to recreation in relation to adverse physical effects on the environment as a result of existing recreational facilities or proposed construction or expansion of recreational facilities. The potential for impacts to recreation regarding including neighborhood and regional parks or other recreational facilities or requiring the construction or expansion of such facilities which might have an adverse physical effect on the environment has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated (please see Section 1, Table 1.IV-1, and Table 1.IV-2). The analysis considers the incremental changes to the physical environment as a result of new and/or revised development standards, in relation to the historic and anticipated permits for affected uses. The proposed revisions to the development standards that have the potential result in physical changes in the environment that might have the potential for adding, local or regional, parklands or requiring new or expansion of such facilities include the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

Element 1 – Green Zone Districts

Green Zone Districts would result in no impacts to recreation including neighborhood and regional parks or other recreational facilities or requiring the construction or expansion of such facilities which might have an adverse physical effect on the environment. The proposed program would not include the construction or expansion of recreational facilities that would increase the use of recreational facilities or require the construction or expansion of recreational facilities. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties and would result in less than significant impacts to recreation regarding including neighborhood and regional parks or other recreational facilities or requiring the construction or expansion of such facilities which might have an adverse physical effect on the environment. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain

consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, ~~27~~ ²⁸ parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, ~~14~~ ¹⁵ of the ~~27~~ ²⁸ parcels proposed for a zone change within the Green Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to ~~7~~ ¹⁰ years of adoption of the Ordinance. The proposed program would serve and benefit areas disproportionately affected by surrounding land uses by providing appropriate zoning requirements for industrial uses, vehicle-related uses, and recycling uses while improving the health and quality of life for surrounding residents, aligned with the State's environmental justice initiatives such as the Planning for Healthy Communities Act (SB 1000) and California Global Warming Solutions Act of 2006 (AB 32 and SB 535). In addition, the Green Zones Program would address incompatible land uses in proximity to sensitive uses, develop new regulation for recycling and solid waste facilities, which are major sources of pollution while providing new land uses for areas adjacent to sensitive receptors. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would include or require the construction or expansion of recreation facilities as a result of induced population growth. There is no proposed increase in housing or employment that would have the potential to affect existing parks. As discussed in Section 2.14, the proposed Green Zone Districts would not induce unplanned population growth which would lead to the increase of use in existing neighborhood and regional parks causing degradation. Therefore, there would be no expected impacts to recreation related to adverse physical effects on the environment as a result of existing recreational facilities or proposed construction or expansion of recreational facilities. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in no impacts to recreation including neighborhood and regional parks or other recreational facilities or requiring the construction or expansion of such facilities which might have an adverse physical effect on the environment. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, ~~in close proximity to existing industrial uses permitted in the zones where they are located.~~ The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses. In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from existing conditions, such that they would include or require the construction or expansion of recreation facilities as a result of induced population growth. These measures to reduce the incompatibility of new sensitive uses with existing industrial uses through development standards such as construction of landscaping and planting trees, buffering, and open space, would not include the construction or expansion of recreational facilities that

would increase the use of recreational facilities or require the construction or expansion of recreational facilities. Therefore, there would be no expected impacts to recreation related to adverse physical effects on the environment as a result of existing recreational facilities or proposed construction or expansion of recreational facilities. There is no proposed increase in housing or employment that would have the potential to affect existing parks. As discussed in Section 2.14, the proposed new development standards for New Sensitive Uses would not induce unplanned population growth which would lead to the increase of use in existing neighborhood and regional parks causing degradation. Therefore, the new development standards for New Sensitive Uses would result in no impacts to recreation regarding including neighborhood and regional parks or other recreational facilities or requiring the construction or expansion of such facilities which might have an adverse physical effect on the environment. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in no impacts to recreation including neighborhood and regional parks or other recreational facilities or requiring the construction or expansion of such facilities that might have an adverse physical effect on the environment. The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards (Table 1.IV-1). Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited in HMAs and SEAs. Additionally, pallet yards, chipping and grinding, mulching facilities would be prohibited in HFHSZs and VHFHSZs; solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways; and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. ~~The proposed revisions would prohibit automobile dismantling yards, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in-vessel organic waste facilities are prohibited in ARAs.~~ The construction of these measures and development standards for specific recycling and solid waste uses would not differ substantially from existing conditions, such that they would include or require the construction or expansion of recreation facilities as a result of induced population growth. The proposed program would not include the construction or expansion of recreational facilities that would increase the use of recreational facilities or require the construction or expansion of recreational facilities. There is no proposed increase in housing or employment that would have the potential to affect existing parks. As discussed in Section 2.14, the proposed recycling and waste management revisions would not induce unplanned population growth which would lead to the increase of use in existing neighborhood and regional parks causing degradation. Therefore, there would be no expected impacts to recreation related to adverse physical effects on the environment as a result of existing recreational facilities or proposed construction or expansion of recreational facilities. Therefore, the Recycling and Waste Management Revisions would result in no impacts to recreation including neighborhood and regional parks or other recreational facilities or requiring the construction or expansion of such facilities which might have an adverse physical effect on the environment. No further analysis is warranted.

The Supermarket Accessory Recycling Collection Centers revisions would result in no impacts to recreation including neighborhood and regional parks or other recreational facilities or requiring the construction or expansion of such facilities which might have an adverse physical effect on the environment. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed supermarket locations in urbanized

locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County's waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be constructed on existing parking lots, and no new structures would be built. Thus, the construction of Supermarket Accessory Recycling Collection Centers on existing supermarket lots would not differ substantially from existing conditions, such that they would include or require the construction or expansion of recreation facilities as a result of induced population growth. The proposed program would not include the construction or expansion of recreational facilities that would increase the use of recreational facilities or require the construction or expansion of recreational facilities. There is no proposed increase in housing or employment that would have the potential to affect existing parks. Supermarket Accessory Recycling Collection Centers would not induce unplanned population growth which would lead to the increase of use in existing neighborhood and regional parks causing degradation. Therefore, there would be no expected impacts to recreation related to adverse physical effects on the environment as a result of existing recreational facilities or proposed construction or expansion of recreational facilities. Therefore, the Supermarket Accessory Recycling Collection Centers would have no impacts to recreation regarding including neighborhood and regional parks or other recreational facilities or requiring the construction or expansion of such facilities which might have an adverse physical effect on the environment. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to recreation regarding including neighborhood and regional parks or other recreational facilities or requiring the construction or expansion of such facilities which might have an adverse physical effect on the environment. Any new development or expansion of existing development would be required to meet the current development standards of the zone they are permitted in. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. The construction of these measures and development standards for Storage Enclosures for Recycling and Solid Waste Revisions would not differ substantially from existing conditions, such that they would include or require the construction or expansion of recreation facilities as a result of induced population growth. The proposed program would not include the construction or expansion of recreational facilities that would increase the use of recreational facilities or require the construction or expansion of recreational facilities. There is no proposed increase in housing or employment that would have the potential to affect existing parks. As discussed in Section 2.14, the proposed storage enclosures for recycling and solid waste revisions would not induce unplanned population growth which would lead to the increase of use in existing neighborhood and regional parks causing degradation. Therefore, there would be no expected impacts to recreation related to adverse physical effects on the environment as a result of existing recreational facilities or proposed construction or expansion of recreational facilities. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to recreation regarding including neighborhood and regional parks or other recreational facilities or requiring the construction or expansion of such facilities which might have an adverse physical effect on the environment. No further analysis is warranted.

c) Would the project interfere with regional trail connectivity?

Existing Conditions

As stated in Section 2.1, *Aesthetics*, existing regional trails were identified based on the *Park and Recreation Element* of the County General Plan 2035,¹¹ the County trails website,^{12,13} and information from the Angeles National Forest Land Management Plan¹⁴ (see Figure 2.1-3, *Regional Hiking Trails*). Los Angeles County, with its extensive regional trails reaching over 2,000 miles, also includes a portion of the Pacific Crest National Scenic Trail (PCT) as well as trails managed by various agencies as identified in Section 2.1.¹⁵ The PCT crosses through Los Angeles County primarily within the Angeles National Forest, generally at a distance from industrial land uses.¹⁶ Los Angeles County offers unique trail opportunities that showcase its diverse scenery and provides connectivity to parks, open spaces, cultural resources, and wilderness areas.¹⁷ The County, per the County Trails Manual, maintains existing trails and develop additional high-quality trails as the most cost-effective means of addressing the deficiency of recreational facilities in the County.¹⁸ In addition, the County Trails Manual sets guidelines for all trails under the jurisdiction of the DPR that includes unpaved trails (soft trail), small portions of paved trails (hard trails) are allowed where pavement can extend up to approximately 100 feet on a soft trail, hard or paved trails, are under the jurisdiction of the County of Los Angeles Department of Public Works (Public Works). Adherence to trail design guidelines facilitates the ability to consistently provide high-quality trails to serve the diverse needs of County. The county-wide trails consist of 948 miles of trails, of which 287 miles are within parks and 661 miles are trails located outside of parks. The County Trails Manual states that “the ability for individuals to access the multiple recreational assets within the County can be greatly enhanced through the development of ... new and connecting trails.” As such, the County trail planning process includes designing trails for interconnectivity of regional trail systems, such as connecting multiple trails or trail facilities.¹⁹ Thus, it is important to prevent interference with regional trail connectivity in the County.²⁰

Threshold of Significance

A significant impact would occur if the scope of the project included development that would obstruct access to regional trails require removal or partial removal of regional trails such that regional trail connectivity would be substantially reduced.

Impact Analysis

The proposed program would result in no impacts to recreation in relation to interfering with regional trail connectivity. The potential for impacts to recreation in relation to regional trail connectivity has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated (please see Section 1, Table 1.IV-1, and Table 1.IV-2). The analysis considers the incremental changes to the physical environment as a result of new and/or revised development standards, in relation to the historic and anticipated permits for affected uses. The

proposed revisions to the development standards that have the potential to result in a physical changes in the environment include the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

Element 1 – Green Zone Districts

Green Zone Districts would result in no impacts to recreation interfering with regional trail connectivity. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties and would result in no impacts to recreation regarding interfering with regional open space connectivity. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, 27 28 parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, 14 45 of the 27 28 parcels proposed for a zone change within the Green Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to 7 40 years of adoption of the Ordinance. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would interfere with regional trail connectivity. These development standards would be minimal additions to existing industrial, recycling, or vehicle-related uses and would be made behind property lines. Thus, they would not interfere with existing trails nor regional trail connectivity.

Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to recreation regarding interfering with regional trail connectivity. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in no impacts to recreation and would not interfere with regional trail connectivity. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, ~~in close proximity to existing industrial uses~~ permitted in the zones where they are permitted. The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses~~

~~(Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, ~~in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses.~~ In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from existing conditions, such that they would not interfere with open space connectivity. These measures to reduce the incompatibility of new sensitive uses with existing industrial uses through development standards such as construction of landscaping and planting trees, buffering, and open space, would not interfere with regional trail connectivity. These development standards would be minimal additions to the design of individual proposed new sensitive uses, which would undergo project-specific review under CEQA. The development standards would be minor additions to these projects, and they would not cause development but rather be incorporated to decrease impacts of proposed development. Thus, they would not interfere with existing trails nor regional trail connectivity. Therefore, the new development standards for New Sensitive Uses would result in no impacts to recreation regarding interfering with regional trail connectivity. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in no impacts to recreation interfering with regional trail connectivity. The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards (Table 1.IV-1). Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited in HMAs and SEAs. Additionally, pallet yards, chipping and grinding, mulching facilities would be prohibited in HFHSZs and VHFHSZs; solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways; and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. ~~The proposed revisions would prohibit automobile dismantling yards, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in-vessel organic waste facilities are prohibited in ARAs.~~

In the case of updated standards for specific recycling and solid waste uses, the construction of these measures would not differ substantially from existing conditions, such that they would interfere with regional trail connectivity. These development standards would be minimal additions to specific recycling and solid waste uses and would be made behind property lines. Thus, they would not interfere with existing trails nor regional trail connectivity. Therefore, impacts to Recycling and Waste Management Revisions would be no impacts to recreation regarding interfering with regional trail connectivity. No further analysis is warranted.

The Supermarket Accessory Recycling Collection Centers revisions would result in no impacts to recreation regarding interfering with regional trail connectivity. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed Supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection

centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County's waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be constructed on existing parking lots, and no new structures will be built. Thus, the construction of Supermarket Accessory Recycling Collection Centers would not differ substantially from existing conditions, such that they would interfere with regional trail connectivity. They would be limited to existing supermarket lots and would be made behind property lines. Thus, they would not interfere with existing trails or regional trail connectivity. Therefore, the Supermarket Accessory Recycling Collection Centers would have no impacts to recreation regarding interfering with regional trail connectivity. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to recreation interfering with regional trail connectivity. Any new development or expansion of existing development would be required to meet the current development standards of the zone in which they are permitted. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. The construction of storage enclosures for recycling and solid waste would not differ substantially from existing conditions, such that they would interfere with regional trail connectivity. These development standards would be minimal additions to existing land uses and would be made behind property lines. Thus, they would not interfere with existing trails nor regional trail connectivity. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to recreation regarding interfering with regional trail connectivity. No further analysis is warranted.

2.17. TRANSPORTATION

This analysis is undertaken to determine if the proposed program may have a significant impact to transportation, thus requiring the consideration of mitigation measures or alternatives in accordance with Section 15063 of the State CEQA Guidelines.¹ The analysis covers all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated with regard to AB 1358 (the Complete Streets Act),^{2,3} SB 743,⁴ the SCAG 2016-2040 RTP/SCS,⁵ Mobility Element of the Los Angeles County General Plan 2035,⁶ Title 22 of the Los Angeles County Municipal Code,⁷ the Mobility Element of the Los Angeles County General Plan 2035,⁸ the adopted Los Angeles County Congestion Management Program (CMP),² 2020 Los Angeles County Regional Transportation Improvement Program (RTIP),⁹ and the State of California Governor's Office of Planning and Research (OPR) Technical Advisory on Evaluating Transportation Impacts in CEQA.¹⁰

	<i>Potentially Significant Impact</i>	<i>Less than Significant Impact with Mitigation Incorporated</i>	<i>Less than Significant Impact</i>	<i>No Impact</i>
Would the project:				
a) Conflict with an applicable program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Substantially increase hazards due to a road design feature (e.g., sharp curves) or incompatible uses (e.g., farm equipment)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Result in inadequate emergency access?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

a) Conflict with an applicable program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Existing Conditions

Four plans were considered in the evaluation of potential for conflicts with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities: the California Complete Streets Act (AB 1358), the Mobility Element of the County General Plan 2035, SCAG RTP/SCS, and the County CMP were consulted to analyze impacts associated with transportation for the proposed program.

Los Angeles County General Plan. The Mobility Element of the County General Plan 2035 identifies the safe and efficient movement of goods as an important issue that has been negatively impacted by inefficient transportation networks, especially with existing roadway and rail networks reaching capacity.¹¹ As required by AB 1358, the Mobility Element includes policies and programs that consider all modes of travel, with the goal of making streets safer, accessible and more convenient to walk, ride a bicycle, or take transit. The Mobility Element includes seven goals:

- M 1: Street designs that incorporate the needs of all users.
- M 2: Provide transportation corridors/networks that accommodate pedestrians, equestrians, and bicyclists, and reduce motor vehicle accidents through a context-sensitive process that addresses the unique characteristics of urban, suburban, and rural communities whenever appropriate and feasible.
- M 3: Streets that incorporate innovative designs.
- M 4: An efficient multimodal transportation system that serves the needs of all residents.
- M 5: Land Use planning and transportation management that facilitates the use of transit.
- M 6: The safe and efficient movement of goods.
- M 7: Transportation networks that minimize the negative impacts to the environment and communities.

The Mobility Element includes three subelements, the Master Plan of Highways,¹² a Bicycle Master Plan, and a Pedestrian Plan.¹³ The Pedestrian Plan, *Step by Step LA County: Pedestrian Plans for Unincorporated Communities*, provides a policy framework for how the County proposes to get more people walking, make walking safer and support healthy active lifestyles. The Pedestrian Plan establishes policies and actions towards seven goals, summarized below:

1. Implementing Vision Zero Los Angeles County to eliminate traffic-related pedestrian fatalities and severe injuries;
2. Making transportation, land use, and building design or site planning decisions to promote walking and healthy living;
3. Developing and maintaining a complete pedestrian network that links transit, schools, parks, and other key destinations in the community;
4. Implementing pedestrian projects equitably, prioritizing the needs of low-income communities of color and the most vulnerable communities and supporting people of all abilities;
5. Addressing both real and perceived personal safety concerns to encourage walking.
6. Implementing pedestrian projects and programs to enhance the natural environment including clean air and water; and
7. Coordinated County implementation.

The Bicycle Master Plan guides the County Bikeways Unit in implementing proposed bikeways as well as various bicycle-friendly policies and programs to promote bicycle ridership amongst users of all ages and skill sets within the County.¹⁴

¹¹ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035. Chapter 7: Mobility Element. http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch7.pdf

¹² Los Angeles County GIS Data Portal. Master Plan of Highways. <https://egis3.lacounty.gov/dataportal/2017/04/20/master-plan-of-highways/>

¹³ County of Los Angeles Department of Public Health. Effective October 3, 2019. Step by Step Los Angeles County: Pedestrian Plans for Unincorporated Communities. <http://www.publichealth.lacounty.gov/place/stepbystep/lacounty.htm>

¹⁴ Los Angeles County Department of Public Works. Adopted 2012. Bicycle Master Plan. <https://dpw.lacounty.gov/pdd/bike/masterplan.cfm>

The Bicycle Master Plan proposes approximately 831 miles of new bikeways throughout the County for implementation through 2032. The goals of the Bicycle Master Plan include providing an expanded, improved, and interconnected system of County bikeways and bikeway support facilities; increased safety of roadways for all users; encouraging County residents to walk or ride a bike for transportation and recreation; and a community supported bicycle network.

Los Angeles County Congestion Management Plan. The 2010 County of Los Angeles CMP is a State-mandated program enacted by the State Legislature with the passage of Proposition 111 in 1990 to address the impact of local growth on the regional transportation system. On October 28, 2010, the Los Angeles County Metropolitan Transportation Authority (LA Metro) adopted the 2010 CMP for Los Angeles County, which includes Traffic Impact Analysis (TIA) guidelines. The 2010 CMP summarized the results from 18 years of highway and transit monitoring and 15 years of monitoring local growth outlining key trends. According to the County's 2010 CMP, half of the County's freeway system operated at level of service (LOS) E and F, the two most congested levels in 2009, with approximately 20 percent of arterial intersections operating at LOS E and F in the morning and afternoon rush hours.

Overall, the properties subject to the Ordinance would be located within 1 mile of approximately 497 miles of freeway, along 34 freeway routes: 1, 2, 10, 14, 18, 19, 22, 23, 27, 39, 42, 47, 57, 60, 66, 71, 72, 90, 91, 101, 103, 105, 107, 110, 118, 126, 134, 138, 170, 210, 213, 405, 605, and 710 (Figure 2.17-1, *Freeways within One Mile of Areas Subject to Ordinance*). The subject properties would be located within 500 feet of approximately 932 miles of existing bikeways, including bike paths (Class I), bike lanes (Class II), bike routes (Class III), and separated bikeways (Class IV; Figure 2.17-2, *Bikeways within 500 Feet of Areas Subject to Ordinance*). There are thousands of transit stops located within a half-mile of the subject properties, including 2,718 bus stops and 18 Metro rail stops operated by LA Metro alone (Figure 2.17-3, *Transit Stops within One-Half Mile of Areas Subject to Ordinance*).

Threshold of Significance

A significant impact would occur if development of the project would interfere with adopted policies or impede upon State, regional, and/or County plans to increase multimodal transportation access, either by obstructing or reducing the extent of existing proposed multi-modal transportation routes within the right-of-way.

Impact Analysis

The proposed program would result in no impacts to program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities. The proposed program would not impede upon State, regional, and County plans to increase multimodal transportation access.

The potential for impacts to transportation has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated (please see Section 1, *Project Description*, Table 1.IV-1, *Planning and Permitting Requirements*, and Table 1.IV-2, *Development Standards*). The analysis considers the incremental changes to the physical environment as a result of new and/or revised development standards, in relation to the historic and anticipated permits for affected uses. The proposed revisions to the development standards that have the potential result in physical changes in the environment and transportation include the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

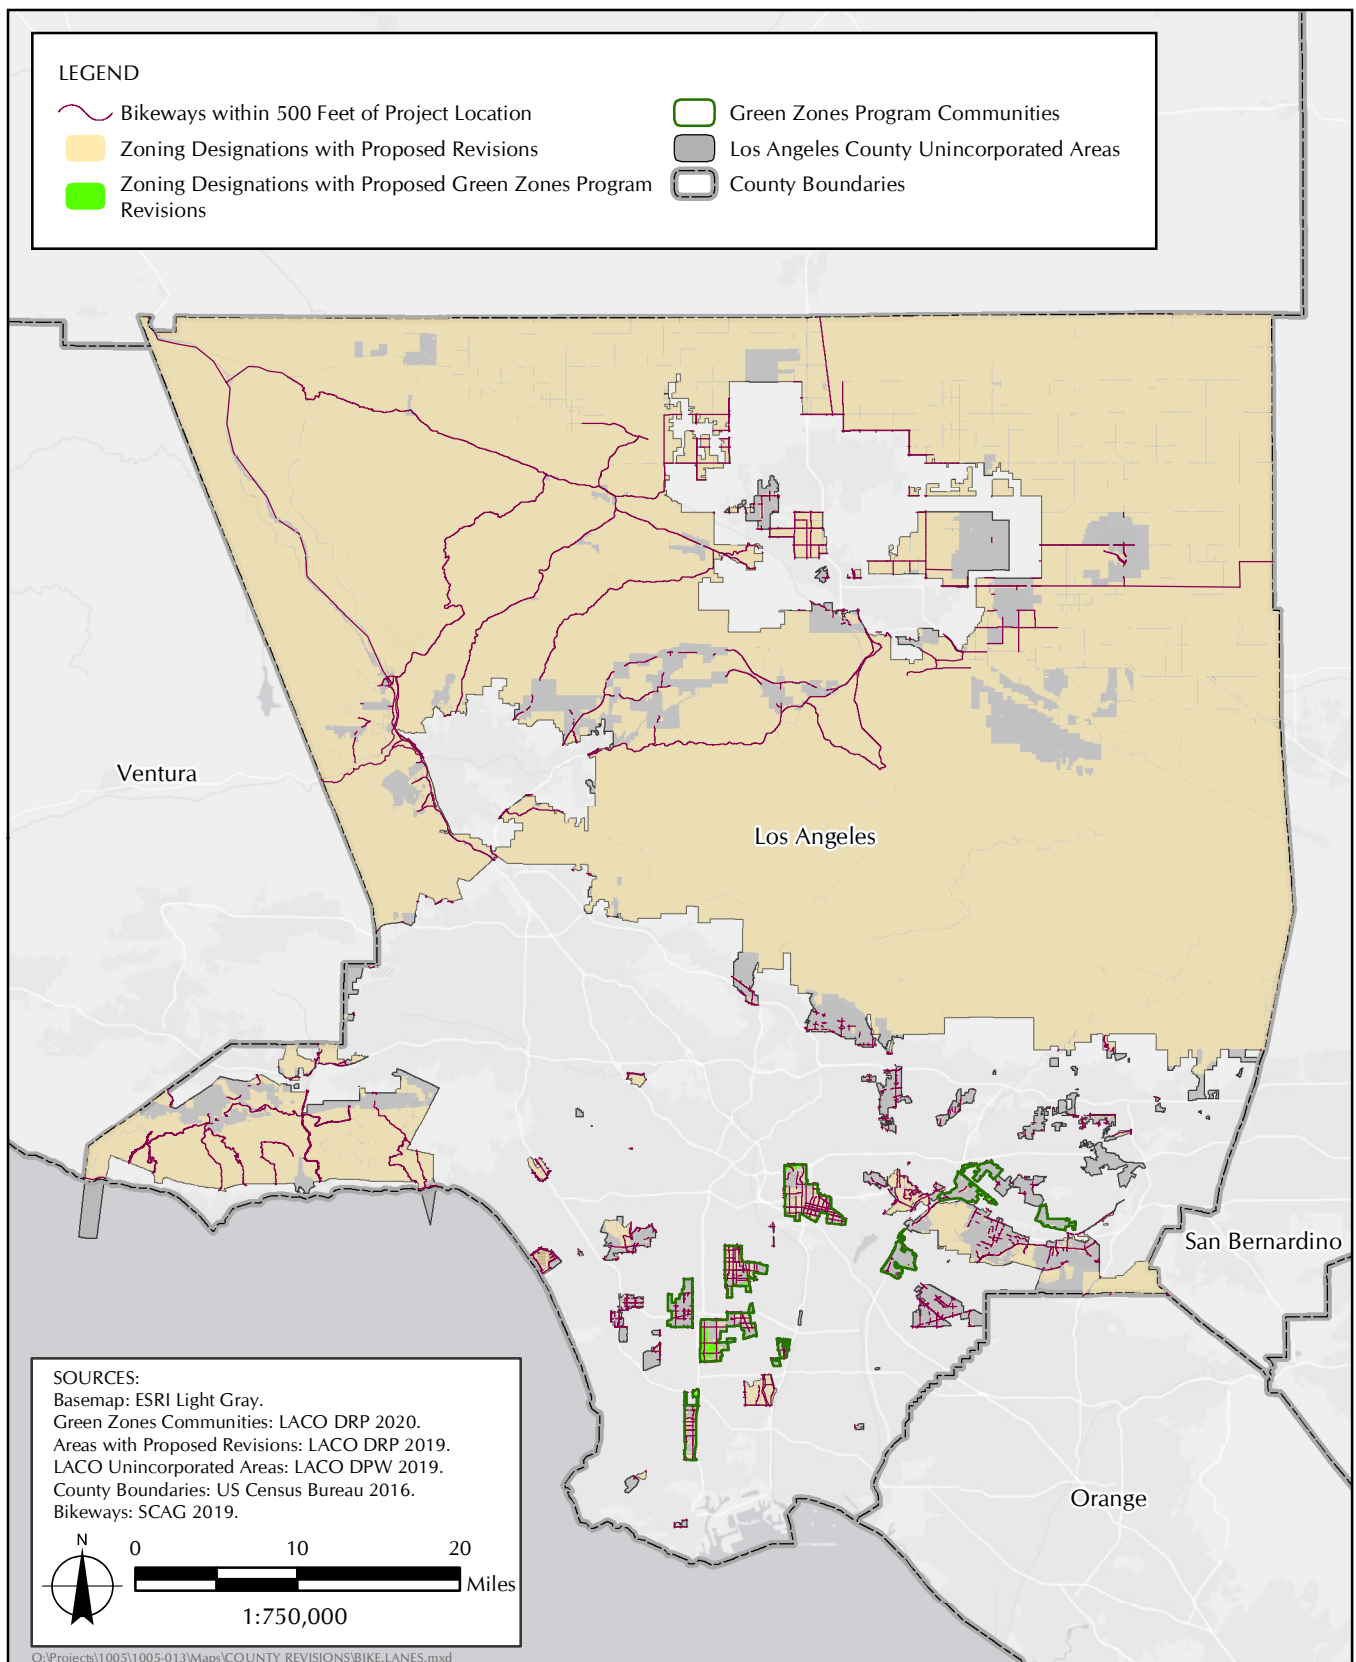

FIGURE 2.17-2
 Bikeways within 500 Feet of Project Location

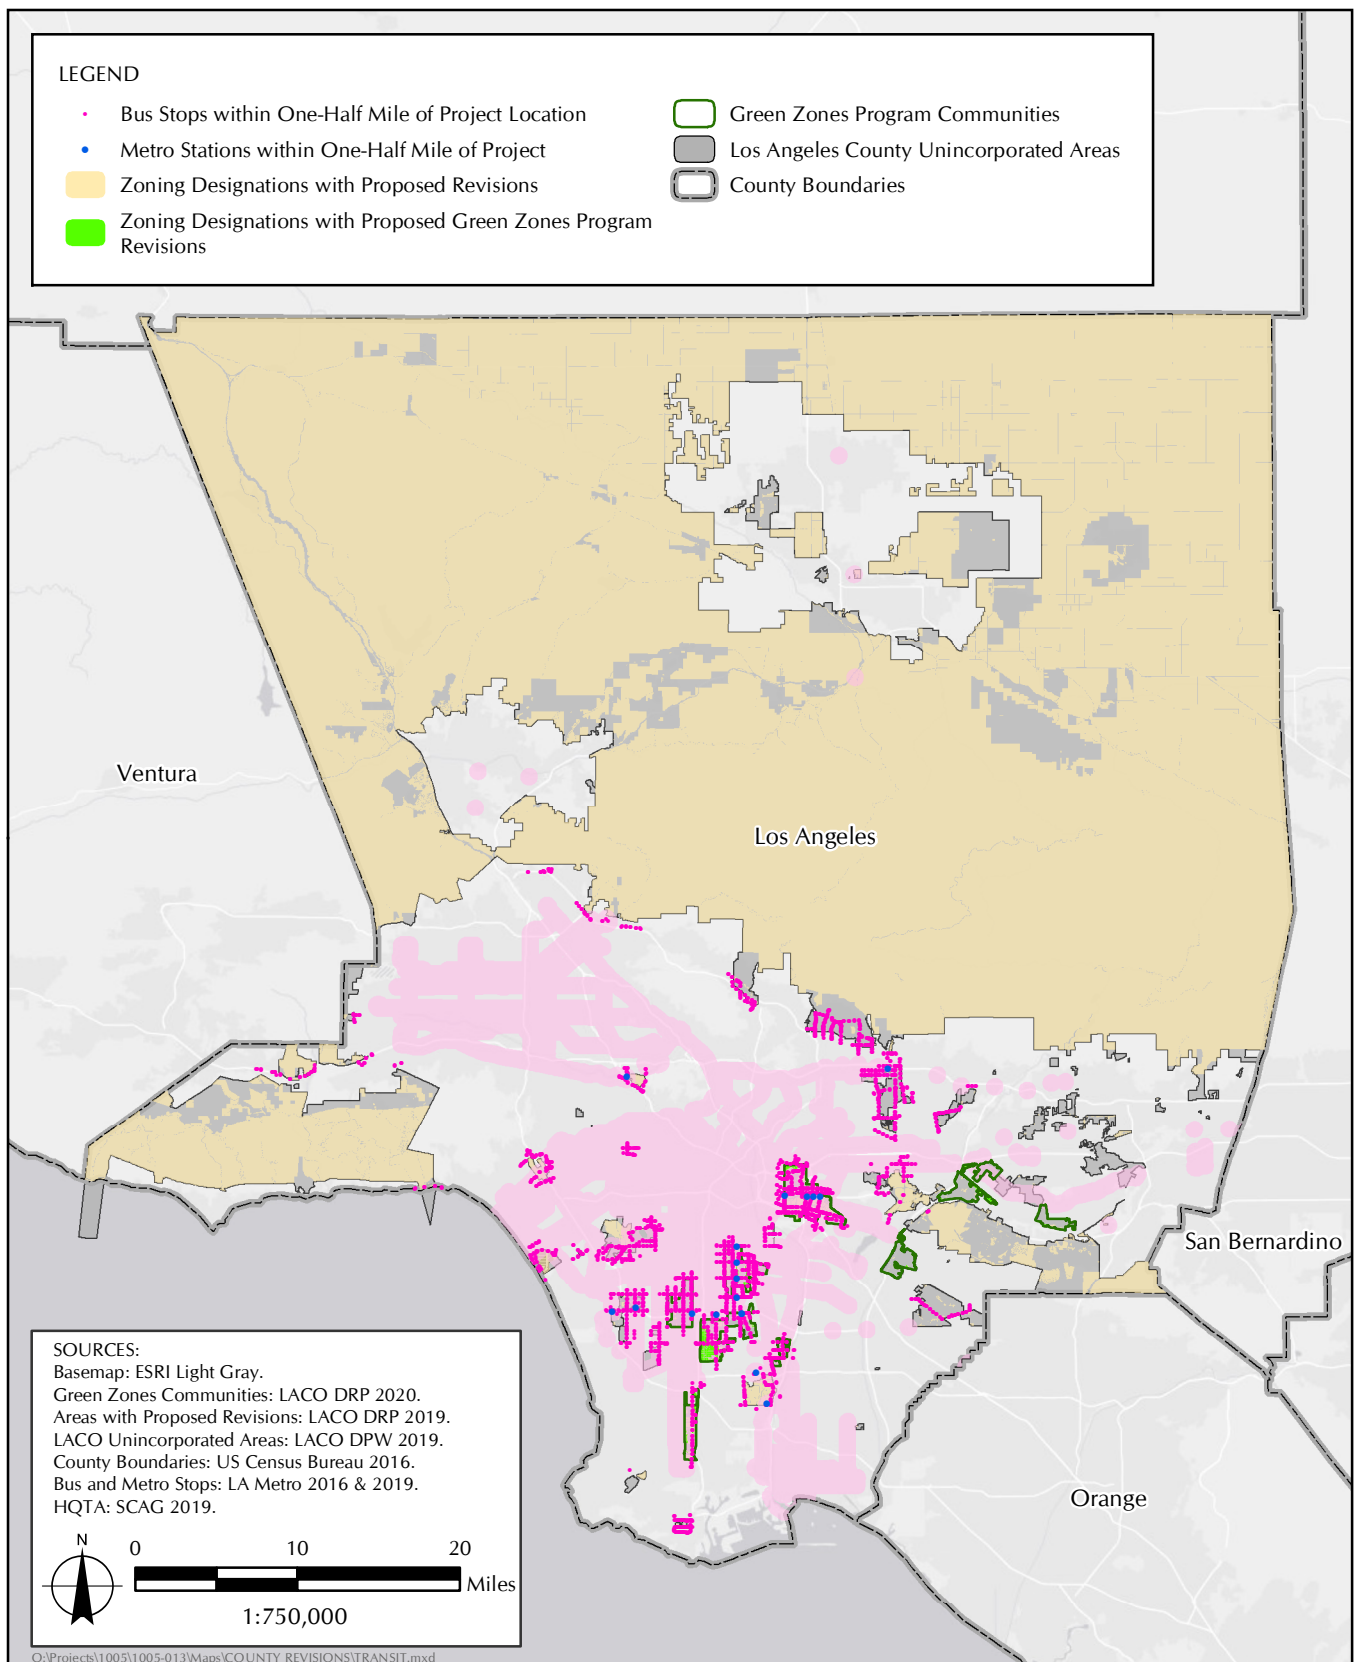

FIGURE 2.17-3
 Transit Stops within One-Half Mile of Project Location

Element 1 – Green Zone Districts

Green ~~Zones~~Zone Districts would result in no impacts to an applicable program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum floor area ratio (FAR) requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, ~~27~~ 28 parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, ~~14~~ 45 of the ~~27~~ 28 parcels proposed for a zone change within the Green ~~Zones~~Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green ~~Zones~~Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to 10 years of adoption of the Ordinance.

The proposed program would retain existing zoning designations for industrial uses and not impede upon State, regional, and County plans to increase multi-modal transportation access. The Green Zone Districts would apply with the applicable plans for circulation:

California Complete Streets Act (AB 1358). The Green Zones Program would not conflict with the intent of state, regional, and local goals addressing transit, bicycle, and pedestrian facilities in accordance with the 2008 state-mandated local program established by AB 1358 for cities and counties to incorporate a plan for a balanced, multimodal transportation network that meets the needs of all users of streets, roads, and highways into the circulation element of general plans, in a manner that is suitable to the rural, suburban, or urban context of the general plan.¹⁵ Properties subject to the Green Zone Districts would be in the manufacturing (M-1, M-1.5, M-2, and M-2.5) zoning designations (see Section 1).

The intent of the Green Zone Districts, as proposed for Chapter 22.84 of Title 22, is to provide regulations and procedures for new and existing land uses to ensure that such operations are in harmony with surrounding land uses as defined in Chapter 22.14, *Definitions*, of Title 22, and to minimize potential adverse impacts within these Green Zone Districts. The Green Zone Districts proposes additional standards that would be expected to improve circulation safety for vehicles, bicyclists, and pedestrians in Green Zone Districts. Within the Green Zone Districts, a CUP would be required with Site Plan Review for specified industrial or vehicle-related uses to verify that the proposed use would avoid adverse effects on neighboring property, protect public health and safety, and promote environmental sustainability. These specified land uses include assembly, manufacture, and storage of selected finished or prepared materials; bus storage; car barns for buses and street cars; moving van storage or operating yards; storage and rental of construction vehicles such as tractors and cement mixers; warehouses that generate more than 100 trucks per day; and vehicle-related uses such as car washes and automobile painting and upholstering shops. The Green Zone Districts would require locating driveway, on-site vehicular circulation, and loading and unloading in rear or side of structures or as furthest from nearby sensitive uses. The required parking for automobile and vehicle repair shops and garages would be a minimum of one space every 500 square feet of the building area, which would reduce potential parking overflow onto public streets in the Green Zone Districts. Furthermore, the Green Zone Districts would establish development standards with exceptions to preserve required existing parking spaces and associated maneuvering areas, maintain the required line of sight for safe pedestrian and vehicular movement, avoid damage to the sidewalk or other public

¹⁵ State of California. Approved September 30, 2008. Assembly Bill No. 1358: Chapter 657.
http://leginfo.ca.gov/faces/billTextClient.xhtml?bill_id=200720080AB1358

infrastructure, and not adversely impact Fire Department operations or response times near buildings or fire lanes. Improvements required by the Green Zones Program would be interior to the subject property parcels; therefore, there would be no impact to sidewalks, bike lanes, roads, or transit stops.

SCAG RTP/SCS. The Green Zones Program would not conflict with the SCAG RTP/SCS goal of providing adequate levels of accessibility and mobility for the efficient movement of people, goods, and services within the region and overall aim to improve transportation system safety through design, operations and maintenance, system improvements, support facilities, public information, and law enforcement efforts. The Green Zone Districts would establish additional standards to protect human health and safety, inclusive of multi-modal transportation system safety within the Green Zone Districts.

Los Angeles County General Plan. The Green Zones Program would not conflict with the Mobility Element of the County General Plan 2035, which identifies the safe and efficient movement of goods as an important issue that has been negatively impacted by inefficient transportation networks, especially with existing roadway and rail networks reaching capacity.¹⁶ As required by AB 1358, the Mobility Element includes policies and programs that consider all modes of travel, with the goal of making streets safer, accessible and more convenient to walk, ride a bicycle, or take transit. The Pedestrian Plan subelement of the Mobility Element, *Step by Step LA County: Pedestrian Plans for Unincorporated Communities*, provides a policy framework for how the County proposes to get more people walking, make walking safer and support healthy active lifestyles and includes Community Pedestrian Plans for the unincorporated communities of Lake Los Angeles, Walnut Park, Westmont/West Athens, Whittier-Los Nietos. Walnut Park, Westmont/West Athens, and Whittier-Los Nietos are 3 of the 11 Green Zones Districts communities.¹⁷ The Green Zones Program would be consistent with the goals of the Pedestrian Plan and Bicycle Master Plan because it proposes additional standards that would be expected to improve circulation safety for vehicles, bicyclists, and pedestrians in Green Zones Districts. Improvements required by the Green Zones Program would be interior to the subject property parcels; therefore, there would be no impact to sidewalks, bike lanes, roads, or transit stops.

Los Angeles County Congestion Management Plan. The Green Zones Program would not conflict with the 2010 County of Los Angeles CMP. The construction activities required to meet these updated standards for existing industrial uses during the next 3 to 10 years would not differ substantially from existing conditions, as they would be minor additions to existing industrial land uses. Improvements required by the Green Zone Districts would be interior to the subject property parcels. Therefore, there would be less than significant impacts to the CMP.

The Green Zone Districts pertain to development standards that would mitigate the potential incompatibilities between new sensitive uses (i.e., residences, schools, parks, playgrounds, daycare, etc.) that are developed adjacent to or adjoining an existing industrial, recycling, or vehicle-related use, except for vehicle sales and rentals (Chapter 22.130). These development standards would require new development projects for sensitive uses adjacent to existing industrial, recycling, or vehicle-related uses to include landscaped setbacks along adjoining property lines or street frontages that directly face any portion of existing industrial, recycling, or vehicle-related uses; solid walls along the property lines or along required landscaping adjoining the applicable non-sensitive uses; a buffer or landscaped buffer around common open space from adjacent buildings; double-glazed windows in any buildings. These measures would be required where the Ordinance implements new standards for new sensitive uses. As this element would be applied as additional standards for new development projects, the construction of these measures would not differ substantially from construction of the new sensitive uses, subject to discretionary CEQA review (or exempt, depending on the project) whether or not these development standards are required. Furthermore, the development standards would require additional measures that would increase public health and safety associated with potential incompatibilities between sensitive uses and industrial, recycling, or vehicle-related uses. As a result, the proposed program would retain existing zoning designations for industrial uses and not impede upon State, regional, and County plans to increase multimodal transportation access.

¹⁶ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035. Chapter 7: Mobility Element. http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch7.pdf

¹⁷ County of Los Angeles Department of Public Health. Effective October 3, 2019. Step by Step Los Angeles County: Pedestrian Plans for Unincorporated Communities. <http://www.publichealth.lacounty.gov/place/stepbystep/lacounty.htm>

Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to transportation in relation to conflicts with an applicable program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in no impacts to an applicable program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, in close proximity to existing industrial uses, permitted in the zones where they are located. The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130). These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses.

The proposed program would retain existing zoning designations allowing development of the defined sensitive uses and not impede upon State, regional, and County plans to increase multimodal transportation access. The development standards for New Sensitive Uses would apply with the applicable plans for circulation:

California Complete Streets Act (AB 1358). The Green Zones Program would not conflict with the intent of state, regional, and local goals addressing transit, bicycle, and pedestrian facilities in accordance with the 2008 state-mandated local program established by AB 1358 for cities and counties to incorporate a plan for a balanced, multimodal transportation network that meets the needs of all users of streets, roads, and highways into the circulation element of general plans, in a manner that is suitable to the rural, suburban, or urban context of the general plan.¹⁸ Properties subject to the Green Zone Districts and New Sensitive Uses Adjacent to Industrial, Recycling and Solid Waste, or Vehicle-Related Uses would be in the manufacturing (M-1, M-1.5, M-2, and M-2.5) zoning designations.

The intent of the New Sensitive Uses as proposed for Chapter 22.84 of Title 22, is to provide regulations and procedures for new and existing land uses to ensure that such operations are in harmony with surrounding land uses as defined in Chapter 22.14, *Definitions*, of Title 22, and to minimize potential adverse impacts within these Green Zone Districts. The New Sensitive Uses Adjacent to Industrial, Recycling and Solid Waste, or Vehicle-Related Uses proposes additional standards that would be expected to improve circulation safety for vehicles, bicyclists, and pedestrians in Green Zone Districts. Within the Green Zone Districts, a CUP would be required with Site Plan Review for specified industrial or vehicle-related uses to verify that the proposed use would avoid adverse effects on neighboring property, protect public health and safety, and promote environmental sustainability. These specified land uses include assembly, manufacture, and storage of selected finished or prepared materials; bus storage; car barns for buses and street cars; moving van storage or operating yards; storage and rental of construction vehicles such as tractors and cement mixers; warehouses that generate more than 100 trucks per day; and vehicle-related uses such as car washes and automobile painting and upholstery shops. The New Sensitive Uses would require locating driveway, on-site vehicular circulation, and loading

¹⁸ State of California. Approved September 30, 2008. Assembly Bill No. 1358: Chapter 657.
http://leginfo.ca.gov/faces/billTextClient.xhtml?bill_id=200720080AB1358

and unloading in rear or side of structures or as furthest from nearby sensitive uses. The required parking for automobile and vehicle repair shops and garages would be a minimum of one space every 500 square feet of the building area, which would reduce potential parking overflow onto public streets in the Green Zone Districts. Furthermore, the New Sensitive Uses would establish development standards with exceptions to preserve required existing parking spaces and associated maneuvering areas, maintain the required line of sight for safe pedestrian and vehicular movement, avoid damage to the sidewalk or other public infrastructure, and not adversely impact Fire Department operations or response times near buildings or fire lanes. Improvements required by the Green Zones Program would be interior to the subject property parcels; therefore, there would be no impact to sidewalks, bike lanes, roads, or transit stops.

SCAG RTP/SCS. The Green Zones Program would not conflict with the SCAG RTP/SCS goal of providing adequate levels of accessibility and mobility for the efficient movement of people, goods, and services within the region and overall aim to improve transportation system safety through design, operations and maintenance, system improvements, support facilities, public information, and law enforcement efforts. The New Sensitive Uses would establish additional standards to protect human health and safety, inclusive of multimodal transportation system safety.

Los Angeles County General Plan. The Green Zones Program would not conflict with the Mobility Element of the County General Plan 2035, which identifies the safe and efficient movement of goods as an important issue that has been negatively impacted by inefficient transportation networks, especially with existing roadway and rail networks reaching capacity.¹⁹ The Green Zones Program would be consistent with the goals of the Pedestrian Plan and Bicycle Master Plan because it proposes additional standards that would be expected to improve circulation safety for vehicles, bicyclists, and pedestrians for New Sensitive Uses adjacent to industrial, recycling and solid waste, or vehicle-related uses. Improvements required by the New Sensitive Uses development standards would be interior to the subject property parcels; therefore, there would be no impact to sidewalks, bike lanes, roads, or transit stops.

Los Angeles County Congestion Management Plan. The Green Zones Program would not conflict with the 2010 County of Los Angeles CMP. Improvements required by the New Sensitive Uses would be interior to the subject property parcels. The New Sensitive Uses pertain to development standards that would mitigate the potential incompatibilities between new sensitive uses (i.e., residences, schools, parks, playgrounds, daycare, etc.) that are developed adjacent to or adjoining an existing industrial, recycling, or vehicle-related use, except for vehicle sales and rentals (Chapter 22.130). These development standards would require new development projects for sensitive uses adjacent to existing industrial, recycling, or vehicle-related uses to include landscaped setbacks along adjoining property lines or street frontages that directly face any portion of existing industrial, recycling, or vehicle-related uses; solid walls along the property lines or along required landscaping adjoining the applicable non-sensitive uses; a buffer or landscaped buffer around common open space from adjacent buildings; double-glazed windows in any buildings; and air filtration systems in rooms intended for public occupancy. These measures would be required where the Ordinance implements new standards for new sensitive uses. As this element would be applied as additional standards for new development projects, the construction of these measures would not differ substantially from construction of the new sensitive uses, subject to discretionary CEQA review (or exempt, depending on the project) whether or not these development standards are required. Furthermore, the development standards would require additional measures that would increase public health and safety associated with potential incompatibilities between sensitive uses and industrial, recycling, or vehicle-related uses. As a result, the proposed program would retain existing zoning designations for industrial uses and not impede upon State, regional, and County plans to increase multi-modal transportation access.

Therefore, the new development standards for New Sensitive Uses would result in no impacts to transportation in relation to conflicts with an applicable program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in no impacts to an applicable program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. The County currently regulates recycling facilities as junk and salvage

¹⁹ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035. Chapter 7: Mobility Element. http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch7.pdf

and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards (Table 1.IV-1). The proposed revisions would prohibit automobile dismantling yards Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in-vessel organic waste facilities are prohibited in ARAs. would be prohibited from HMAs and SEAs. Additionally, pallet yards, chipping and grinding, and mulching facilities would be prohibited in HFHSZs and VHFHSZs, solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways, and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. Any construction resulting from compliance with development standards would be minimal and would not substantially alter the existing conditions for existing industrial uses such that multi-modal transportation access would be impacted. These revisions would not affect multimodal transportation access or traffic congestion given that they are not recycling or waste facilities.

The Recycling and Waste Management Revisions would not conflict with the intent of AB 1358 for inclusion of a balanced, multimodal transportation network that meets the needs of all users of streets, roads, and highways into the circulation elements of general plans the SCAG RTP/SCS overall aim to improve transportation system safety, the Mobility Element of the County General Plan 2035, and the 2010 CMP. Areas subject to the Recycling and Waste Management Revisions include the manufacturing (M-1, M-1.5, M-2, M-2.5) zones, the A-2 agricultural zone, and the IT institutional zone. Improvements required by the Recycling and Waste Management Revisions would establish standards associated with recycling and waste management uses in order for the area to be safely accessible by building occupants and waste and recycling haulers in compliance with Title 14, Division 7 (Natural Resources) of the California Code of Regulations. Any recycling or solid waste use that requires or maintains storage onsite must comply with development standards to be safely accessible by building occupants and waste and recycling haulers and be interior to the subject property parcels. The Recycling and Waste Management Revisions would not generate a substantial increase in traffic because they would not involve the expansion of recycling or waste facilities or operations. Therefore, there would be no impact to sidewalks, bike lanes, roads, or transit stops. Therefore, Recycling and Waste Management Revisions would result in no impacts to transportation in relation to conflicts with an applicable program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities.

The Supermarket Accessory Recycling Collection Centers revisions would result in no impacts to an applicable program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed Supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County’s waste

diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be ~~constructed~~ established on existing parking lots, and no new structures will be built.

The construction of a recycling collection center or compliance with development standards would not substantially alter the existing conditions, such that there would be a conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities. These revisions would not affect the multi-modal transportation network, given that the transportation networks are not recycling or supermarket facilities. Any construction resulting from compliance with development standards would be minimal and would not substantially alter the existing conditions for existing uses such that multi-modal transportation access would be impacted. Additionally, Title 22, Section 22.140.350 is proposed to be revised to prohibit Supermarket Accessory Recycling Collection Centers from the Mixed-Use Developments in Commercial Zones. and stations bus, railroad, and taxi. The Supermarket Accessory Recycling Collection Centers would not conflict with AB 1358 for inclusion of a balanced, multimodal transportation network in the circulation elements of general plans.²⁰ Areas subject to Supermarket Accessory Recycling Collection Centers include the C-1, C-2, C-3, C-M, C-MJ, C-R, C-RU, MXD, MXD-RU (County Commercial and Mixed Use Zones), and the M-1, M-1.5, M-2, M-2.5, and M3 (County Industrial Zones). Improvements required by the Supermarket Recycling Center Revisions would be interior to the subject property parcels and setback at least ten feet from public rights-of-way and driveways; therefore, there would be no impact to sidewalks, bike lanes, roads, or transit stops. Therefore, the Supermarket Accessory Recycling Collection Centers would result in no impacts to transportation in relation to conflicts with an applicable program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to an applicable program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. Any new development or expansion of existing development would be required to meet the current development standards of the zone in which they are permitted. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development.

The construction of storage enclosures for recycling and solid waste would not substantially alter the existing conditions such that there would be a conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. Any construction resulting from compliance with development standards would be minimal and would not substantially alter the existing conditions for existing uses such that multimodal transportation access would be impacted. The storage enclosures for recycling and solid waste would not conflict with AB 1358 for inclusion of a balanced, multimodal transportation network in the circulation elements of general plans.²¹ Improvements required by these revisions would be interior to the subject property parcels; therefore, there would be no impact to sidewalks, bike lanes, roads, or transit stops. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to transportation in relation to conflicts with an applicable program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities. No further analysis is warranted.

b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Existing Conditions

CEQA Guidelines Section 15064.3, subdivision (b), deals with a project's potential to result in significant impacts with respect to vehicle miles traveled (VMT), the number and distance of automobile travel attributable to a project. As

²⁰ State of California. Approved September 30, 2008. Assembly Bill No. 1358: Chapter 657.
http://leginfo.ca.gov/faces/billTextClient.xhtml?bill_id=200720080AB1358

²¹ State of California. Approved September 30, 2008. Assembly Bill No. 1358: Chapter 657.
http://leginfo.ca.gov/faces/billTextClient.xhtml?bill_id=200720080AB1358

stated in § 15064.3, subdivision (b) and clarified in the OPR Technical Advisory on Evaluating Transportation Impacts in CEQA, VMT refers to the amount and distance of automobile (on-road passenger vehicle) travel attributable to a project and heavy-duty truck VMT.²² OPR recommends that a per capita or per employee VMT that is 15 percent below that of existing development may be a reasonable threshold.

In 2013, Governor Brown signed SB 743, which creates a process to change the way that transportation impacts are analyzed under CEQA.²³ Specifically, SB 743 requires the OPR to amend the CEQA Guidelines to provide an alternative to Level of Service (LOS) for evaluating transportation impacts. Particularly within areas served by transit, those alternative criteria must “promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses.” (PRC Section 21099(b)(1)). Measurements of transportation impacts may include “vehicle miles traveled, vehicle miles traveled per capita, automobile trip generation rates, or automobile trips generated.” The County of Los Angeles and all cities have until July 1, 2020, to update their transportation analysis guidelines to reflect the OPR’s guidance. Transportation impacts related to air quality, noise and safety must still be analyzed under CEQA where appropriate.

As stated in the Mobility Element of the County General Plan 2035, the California Department of Transportation (Caltrans) estimates that on average there are more than 100 million vehicle miles traveled per day in Los Angeles County via the State Highway System.²⁴ According to the SCAG 2016 RTP/SCS factsheet for Los Angeles County, the current daily VMT per capita is 22.1 miles.²⁵

Threshold of Significance

A significant impact would occur if development of the project would increase per capita VMT during operations, such as through a change in land use that promotes additional vehicle trips or through extension of roads and parking infrastructure allowing for increased VMT.

Impact Analysis

The proposed program would result in less than significant impacts regarding consistency with SB 743 and CEQA Guidelines § 15064.3, subdivision (b). The potential for impacts to transportation has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated (please see Section 1, Table 1.IV-1, and Table 1.IV-2). The analysis considers the incremental changes to the physical environment as a result of new and/or revised development standards, in relation to the historic and anticipated permits for affected uses. The proposed revisions to the development standards that have the potential result in physical changes in the environment and transportation include the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

Although construction activities for implementation of the required improvements would result in a minor increase in heavy-duty truck VMT, VMT is not anticipated to change during operations. The proposed program is an amendment to Title 22 of the Los Angeles County Municipal Code that would require improvements pursuant to the Green Zones Program, Recycling and Waste Management Centers, and Supermarket Recycling Centers for existing and future

²² State of California Governor’s Office of Planning and Research. December 2018. Technical Advisory on Evaluating Transportation Impacts in CEQA. http://opr.ca.gov/docs/20190122-743_Technical_Advisory.pdf

²⁴ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035. Chapter 7: Mobility Element. http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch7.pdf

²⁵ Southern California Association of Governments. 2016. 2016 RTP/SCS Factsheet Booklet Los Angeles County. http://scagrtpscs.net/Documents/FSB0516_LosAngeles.pdf

industrial land uses in unincorporated Los Angeles County by regulating development of industrial land uses in proximity to sensitive land uses and identifying and regulating a set of recycling and solid waste facilities. The proposed program would not change the underlying land use of the subject properties. As stated in Section 2.14, *Population*, the proposed program would result in no impacts regarding population growth or displacement. The proposed program would require improvements to existing land uses or, where a new land use subject to the amendments is proposed, the new development project would be required to undergo CEQA evaluation of the specific project, including VMT analysis.

Element 1 – Green Zone Districts

Green ~~Zones~~Zone Districts would result in no impacts regarding consistency with SB 743 and CEQA Guidelines § 15064.3, subdivision (b). The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, ~~27~~ 28 parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, ~~14~~ 45 of the ~~27~~ 28 parcels proposed for a zone change within the Green ~~Zones~~Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green ~~Zones~~Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-1). The program requires the nonconforming uses to come into compliance within 3 to 10 years of adoption of the Ordinance. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, as they would be minor additions to existing industrial land uses. These industrial uses currently exist within the proposed area, and therefore, the proposed program would not introduce or propose new development that could increase VMT.

The Green Zone Districts development standards propose the construction of small structures, include landscaping barriers, enclosures, fencing, solid walls, signage, and lighting as measures to decrease impacts to surrounding sensitive uses. However, implementation of the proposed program would only require minor routine maintenance and would not involve an increase in VMT. As this element would be applied as additional standards for new development projects, the construction of these measures would not differ substantially from construction of the new sensitive uses, subject to discretionary CEQA review (or exempt, depending on the project) whether or not these development standards are required. As a result, these revisions to Title 22 would not affect VMT. Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts regarding consistency with SB 743 and CEQA Guidelines § 15064.3, subdivision (b). No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in no impacts regarding consistency with SB 743 and CEQA Guidelines § 15064.3, subdivision (b). Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, ~~in close proximity to existing industrial uses.~~ permitted in the zones where they are located. The existing zoning designations currently include

development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses. In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from existing conditions, as they would be minor additions to proposed new sensitive uses. The development standards would be minimal additions to the design of individual proposed new sensitive uses, and therefore, the proposed program would not introduce or propose new development that could increase VMT.

The development standards for New Sensitive Uses proposes the construction of small structures, include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures to decrease impacts of industrial uses to surrounding sensitive uses. However, implementation of the proposed program would only require minor routine maintenance and would not involve an increase in VMT. As this element would be applied as additional standards for new development projects, the construction of these measures would not differ substantially from construction of the new sensitive uses, subject to discretionary CEQA review (or exempt, depending on the project) whether or not these development standards are required. As a result, these revisions to Title 22 would not affect VMT. Therefore, the new development standards for New Sensitive Uses would result in no impacts regarding consistency with SB 743 and CEQA Guidelines § 15064.3, subdivision (b). No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in no impacts regarding consistency with SB 743 and CEQA Guidelines § 15064.3, subdivision (b). The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards (Table 1.IV-1). ~~The proposed revisions will prohibit automobile dismantling yards Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in vessel organic waste facilities are prohibited in ARAs.~~ would be prohibited from HMAs and SEAs. Additionally, pallet yards, chipping and grinding, and mulching facilities would be prohibited in HFHSZs and VHFHSZs, solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways, and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. Any construction resulting from compliance with development standards would be minimal and would not substantially alter the existing conditions for existing recycling and solid waste uses such that existing VMT would be impacted. These industrial uses currently exist within the proposed area, and therefore, the proposed program would not introduce or propose new development that could increase VMT. Further, the proposed program establishes greater stringency in conditions and development standards than those currently existing for proposed facilities and require conditions of approval as an additional permitting requirement. Based on the proposed *Standards for Specific Uses* (Chapter 22.140), recycling processing and organic waste facilities would be processed on a project by project basis and subject to environmental review under CEQA in relation to transportation. Therefore, there would be no substantial permanent increase in VMT. These measures would be required where the Ordinance implements new standards for new sensitive uses. Therefore,

Recycling and Waste Management Revisions would result in no impacts regarding consistency with SB 743 and CEQA Guidelines § 15064.3, subdivision (b).

The Supermarket Accessory Recycling Collection Centers revisions would result in no impacts regarding consistency with SB 743 and CEQA Guidelines § 15064.3, subdivision (b). The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed Supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County’s waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be ~~constructed~~ established on existing parking lots, and no new structures will be built.

The Supermarket Accessory Recycling Collection Centers revisions pertain to standards, conditions, and procedures that support and facilitate the development of recycling collection center as an accessory use to an existing supermarket (Chapter 22.140-~~660~~, 710). The construction of a recycling collection center or compliance with development standards would not substantially alter the existing conditions, such that there would be an increase in VMT. These uses currently exist within the proposed area, and therefore, the proposed program would not introduce or propose new development that could increase VMT. Therefore, the Supermarket Accessory Recycling Collection Centers would result in no impacts regarding consistency with SB 743 and CEQA Guidelines § 15064.3, subdivision (b). Therefore, the Recycling and Waste Management Revisions would result in no impacts regarding consistency with SB 743 and CEQA Guidelines § 15064.3, subdivision (b). No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts regarding consistency with SB 743 and CEQA Guidelines § 15064.3, subdivision (b). Any new development or expansion of existing development would be required to meet the current development standards of the zone in which they are permitted. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development.

The Storage Enclosures for Recycling and Solid Waste Revisions pertain to storage enclosures for recycling and solid waste (revisions to existing Chapter 22.128). The construction storage enclosures for recycling and solid waste or compliance with development standards would not substantially alter the existing conditions such that there would be an increase in VMT. These uses currently exist within the proposed area, and therefore, the proposed program would not introduce or propose new development that could increase VMT. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts regarding consistency with SB 743 and CEQA Guidelines § 15064.3, subdivision (b). No further analysis is warranted.

c) Substantially increase hazards due to a road design feature (e.g., sharp curves) or incompatible uses (e.g., farm equipment)?

Existing Conditions

Los Angeles County contains an extensive network of existing roads and streets. As stated in the Mobility Element of the County General Plan 2035, the County of Los Angeles Department of Public Works maintains over 3,100 miles of major roads and local streets in the unincorporated areas and over 1,700 miles in 22 cities within the County.²⁶ The County's traffic ordinance (Title 15, *Vehicles and Traffic*, of the County Municipal Code) establishes regulations and the authority of the Los Angeles County Traffic Commission (safety commission) to oversee development of traffic safety standards in cooperation with other jurisdictions in the County.²⁷

Threshold of Significance

A significant impact would occur if development of the project would create hazards in the road right-of-way or introduce nearby incompatible land uses that would create a traffic hazard.

Impact Analysis

The proposed program would result no impact to transportation in relation to substantially increasing hazards due to a design feature. The proposed program would not facilitate or cause changes to the design of existing roads. The proposed program would not change the underlying land use of the subject properties. The proposed program is intended to improve compatibility between land uses by increasing setbacks between industrial uses and sensitive uses; locating of storage, enclosure, buffers, signage, and maintenance to be safely accessible by building occupants and waste and recycling haulers; and establish standards for fences and walls, paving, landscaping, and screening.

The potential for impacts to transportation has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated (please see Section 1, Table 1.IV-1, and Table 1.IV-2). The analysis considers the incremental changes to the physical environment as a result of new and/or revised development standards, in relation to the historic and anticipated permits for affected uses. The proposed revisions to the development standards that have the potential result in physical changes in the environment and transportation include the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

Element 1 – Green Zone Districts

Green ~~Zones~~Zone Districts would result in no impact to transportation in relation to substantially increasing hazards due to a design feature. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, 27 28 parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, 14 45 of the 27 28 parcels proposed for a zone change within the Green ~~Zones~~Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The

²⁶ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035. Chapter 7: Mobility Element. http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch7.pdf

²⁷ County of Los Angeles. March 27, 2020 version. Los Angeles County, California – Code of Ordinances. Title 15 – Vehicles and Traffic. https://library.municode.com/ca/los_angeles_county/codes/code_of_ordinances?nodeId=TT15VETR

purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green ~~Zones~~Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The Program requires the nonconforming uses to come into compliance within 3 to 10 years of adoption of the Ordinance.

In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, as they would be minor additions to existing industrial land uses. The intent of the Green Zone Districts is to provide regulations and procedures for new and existing land uses to ensure that such operations are in harmony with surrounding land uses, and to minimize potential adverse impacts within these Green Zone Districts. The Green Zones Program proposes additional standards that would be expected to improve circulation safety for vehicles, bicyclists, and pedestrians in Green Zone Districts. Within the Green Zone Districts, a CUP would be required with Site Plan Review for specified industrial or vehicle-related uses to verify that the proposed use would avoid adverse effects on neighboring property, protect public health and safety, and promote environmental sustainability. These specified land uses include assembly, manufacture, and storage of selected finished or prepared materials; bus storage; car barns for buses and street cars; moving van storage or operating yards; storage and rental of construction vehicles such as tractors and cement mixers; warehouses that generate more than 100 trucks per day; and vehicle-related uses such as car washes and automobile painting and upholstering shops. The Green Zones Program would require locating driveway, on-site vehicular circulation, and loading and unloading in rear or side of structures or as furthest from nearby sensitive uses. The required parking for automobile and vehicle repair shops and garages would be a minimum of one space every 500 square feet of the building area, which would reduce potential parking overflow onto public streets in the Green Zone Districts. Furthermore, the Green Zones Program would establish development standards with exceptions to preserve required existing parking spaces and associated maneuvering areas, maintain the required line of sight for safe pedestrian and vehicular movement, avoid damage to the sidewalk or other public infrastructure, and not adversely impact Fire Department operations or response times near buildings or fire lanes. Improvements required by the Green Zones Program would be interior to the subject property parcels; therefore, there would be no impact to sidewalks, bike lanes, roads, or transit stops. The Green Zones Program would establish additional standards to protect human health and safety, inclusive of multi-modal transportation system safety within the Green ~~Zones~~Zone Districts. The proposed program would not facilitate or cause changes to the design of existing roads. As a result, the Green Zones Program would not introduce a geometric design feature or incompatible use. As this element would be applied as additional standards for new development projects, the construction of these measures would not differ substantially from construction of the new sensitive uses, subject to discretionary CEQA review (or exempt, depending on the project) whether or not these development standards are required. As a result, these revisions to Title 22 would be expected to decrease hazards due to a design feature.

Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impact to transportation in relation to substantially increasing hazards due to a design feature. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in no impact to transportation in relation to substantially increasing hazards due to a design feature. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, ~~in close proximity to existing industrial uses, permitted in the zones where they are located.~~ The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these

requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses.

In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from existing conditions, as they would be minor additions to the design of the proposed sensitive use. The intent of the New Sensitive Uses is to provide regulations and procedures for new and existing land uses to ensure that such operations are in harmony with surrounding land uses. The proposed program would not facilitate or cause changes to the design of existing roads. As a result, the development standards for New Sensitive Uses would not introduce a geometric design feature or incompatible use. As this element would be applied as additional standards for new development projects, the construction of these measures would not differ substantially from construction of the new sensitive uses, subject to discretionary CEQA review (or exempt, depending on the project) whether or not these development standards are required. As a result, these revisions to Title 22 would be expected to decrease hazards due to a design feature. Therefore, the new development standards for New Sensitive Uses would result in no impact to transportation in relation to substantially increasing hazards due to a design feature. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in no impact to transportation in relation to substantially increasing hazards due to a design feature. The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards (Table 1.IV-1). ~~The proposed revisions will prohibit automobile dismantling yards Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited from HMAs, SEAs, and VHFHSZs SEAs. Additionally, pallet yards, chipping and grinding, and mulching facilities would be prohibited in vessel HFHSZs and VHFHSZs, solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways, and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities are would be prohibited in ARAs.~~ The intent of the Recycling and Waste Management Revisions is to provide regulations and procedures for new and existing land uses to ensure that such operations are in harmony with surrounding land uses. The proposed program would not facilitate or cause changes to the design of existing roads. As a result, the development standards would not introduce a new geometric design feature or incompatible use. Any construction resulting from compliance with development standards would be minimal and would not substantially alter the existing conditions for existing industrial uses such that existing roadways would be impacted. Therefore, Recycling and Waste Management Revisions would result in no impact to transportation in relation to substantially increasing hazards due to a design feature.

The Supermarket Accessory Recycling Collection Centers revisions would result in no impact to transportation in relation to substantially increasing hazards due to a design feature. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of

the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County's waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be constructed on existing parking lots, and no new structures will be built. The Supermarket Accessory Recycling Collection Centers pertain to standards, conditions, and procedures that support and facilitate the development of recycling collection center as an accessory use to an existing supermarket (Chapter 22.140-660.710). The construction of a recycling collection center or compliance with development standards would not substantially alter the existing conditions, such that a design hazard or incompatible use would be introduced. The structures would be built on existing lots, setback at least 10 feet from public rights-of-way and driveways. These revisions would not adversely affect design hazards due to a geometric design feature. Therefore, the Supermarket Accessory Recycling Collection Centers would result in no impact to transportation in relation to substantially increasing hazards due to a design feature. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in no impact to transportation in relation to substantially increasing hazards due to a design feature. Any new development or expansion of existing development would be required to meet the current development standards of the zone in which they are permitted. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. The Storage Enclosures for Recycling and Solid Waste Revisions pertain to storage enclosures for recycling and solid waste (revisions to existing Chapter 22.128). The construction of a storage enclosures for recycling and solid waste or compliance with development standards would not substantially alter the existing conditions, such that a design hazard or incompatible use would be introduced. These revisions would not adversely affect design hazards due to a geometric design feature. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in no impact to transportation in relation to substantially increasing hazards due to a design feature. No further analysis is warranted.

d) Result in inadequate emergency access?

Existing Conditions

The Safety Element of the County General Plan 2035 establishes one goal and six policies for emergency response, including Policy S 4.3: "Coordinate with other County and public agencies, such as transportation agencies, and health care providers on emergency planning and response activities, and evacuation planning."²⁸ The County Office of Emergency Management (OEM), which is responsible for organizing and directing the emergency responders preparedness efforts, prepares the Operational Area Emergency Response Plan (OAERP) that identifies emergency

²⁸ Los Angeles County Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035. Safety Element. http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch12.pdf

response procedures and emergency management routes in Los Angeles County.²⁹ Los Angeles County Public Works (Public Works) maintains a list of disaster routes for pre-identified for use during times of crisis the entire County.^{30,31} Public Works also maintains a list of disaster routes in the Los Angeles County Operational Area by city that have been preidentified for use during times of crisis.³² An evacuation route is used to move an affected population out of an area in response to a specific condition under which an evacuation would be necessary, such as fires, floods, or earthquakes. The County's fire code (Title 32, *Fire Code*, of the County Municipal Code), which incorporates the 2016 California Fire Code and 2015 International Fire Code by reference, requires developed areas to maintain emergency vehicle access, fire lanes, and existing fire apparatus access roads.³³

Threshold of Significance

A significant impact would occur if development of the project would reduce the width of roadways, block lanes, or obstruct roadways such that vehicular access is blocked in the event of an emergency.

Impact Analysis

The proposed program would result in no impacts to transportation in relation to inadequate emergency access. As the proposed program would not result in changes to any existing roadways, there would be no effect on emergency access. Although the proposed program would require an increase in minor construction projects in Los Angeles County to meet the requirements, these measures would be too minor to require lane closures or partial lane closures that could obstruct emergency access routes. The proposed program is intended to improve compatibility between land uses by increasing setbacks between industrial uses and sensitive uses; locate storage, enclosure, buffers, signage, and maintenance to be safely accessible by building occupants and waste and recycling haulers; and establish standards for fences and walls, paving, landscaping, and screening.

The potential for impacts to transportation has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated (please see Section 1, Table 1.IV-1, and Table 1.IV-2). The analysis considers the incremental changes to the physical environment as a result of new and/or revised development standards, in relation to the historic and anticipated permits for affected uses. The proposed revisions to the development standards that have the potential result in physical changes in the environment and transportation include the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

Element 1 – Green Zone Districts

Green Zones Districts would result in no impacts to transportation in relation to inadequate emergency access. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited

³³ County of Los Angeles. March 27, 2020 version. Los Angeles County, California – Code of Ordinances. Title 32 – Fire Code. https://library.municode.com/ca/los_angeles_county/codes/code_of_ordinances?nodeId=TTT32FICO

parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, ~~27~~ ²⁸ parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, ~~14~~ ⁴⁵ of the ~~27~~ ²⁸ parcels proposed for a zone change within the Green ~~Zones~~Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green ~~Zones~~Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to 10 years of adoption of the Ordinance.

The Green Zone Districts pertain to development standards that would mitigate the potential incompatibilities between sensitive uses (i.e., residences, schools, parks, playgrounds, daycare, etc.) industrial, recycling, of vehicle-related uses, except for vehicle sales and rentals (Chapter 22.130). In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, as they would be minor additions to existing industrial land uses. As the Green Zone Districts would not result in changes to any existing roadways, there would be no effect on emergency access. Additionally, as stated in Section 2.20, *Wildfire*, the proposed program would have no impact on existing emergency evacuation plans and roads. Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to transportation in relation to inadequate emergency access. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in no impacts to transportation in relation to inadequate emergency access. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, ~~in close proximity to existing industrial uses, permitted in the zones where they are located.~~ The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, ~~in close proximity~~ adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses.

In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from existing conditions, as they would be minor additions to the design of proposed sensitive uses. The New Sensitive Uses element pertains to development standards that would mitigate the potential incompatibilities between new sensitive uses (i.e., residences, schools, parks, playgrounds, daycare, etc.) that are developed adjacent to or adjoining an existing industrial, recycling, of vehicle-related use, except for vehicle sales and rentals (Chapter 22.130). These measures would be required where the Ordinance implements new standards for new sensitive uses. As this element would be applied as additional standards for new development projects, the construction of these measures would not differ

substantially from construction of the new sensitive uses, subject to discretionary CEQA review (or exempt, depending on the project) whether or not these development standards are required. As a result, these revisions to Title 22 would not affect emergency access. As the ~~Green Zone Districts~~ New Sensitive Uses would not result in changes to any existing roadways, there would be no effect on emergency access. Additionally, as stated in Section 2.20, the proposed program would have no impact on existing emergency evacuation plans and roads. Therefore, the new development standards for New Sensitive Uses would result in no impacts to transportation in relation to inadequate emergency access. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in no impacts to transportation in relation to inadequate emergency access. The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards (Table 1.IV-1). ~~The proposed revisions will prohibit automobile dismantling yards Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited from HMAs, SEAs, and VHFHSZs SEAs. Additionally, pallet yards, chipping and grinding, and mulching facilities would be prohibited in vessel HFHSZs and VHFHSZs, solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways, and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities are would be prohibited in ARAs.~~ Any construction resulting from compliance with development standards would be minimal and would not substantially alter the existing conditions for existing recycling and solid waste uses such that emergency access would be impacted. These revisions would not affect emergency access and would be placed behind property lines. As the revisions would not result in changes to any existing roadways, there would be no effect on emergency access. Additionally, as stated in Section 2.20, the proposed program would have no impact on existing emergency evacuation plans and roads. No further analysis is warranted.

The Supermarket Accessory Recycling Collection Centers revisions would result in no impacts to transportation in relation to inadequate emergency access. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County’s waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be constructed on existing parking lots, and no new structures will be built. The Supermarket Accessory Recycling

Collection Centers pertain to standards, conditions, and procedures that support and facilitate the development of recycling collection center as an accessory use to an existing supermarket (Chapter 22.140-660.710). The construction of a recycling collection center or compliance with development standards would not substantially alter the existing conditions, such that existing roads would be changed. These revisions would not affect emergency access given that they would be placed on existing lots and setback at least 10 feet from public rights-of-way and driveways. As the revisions would not result in changes to any existing roadways, there would be no effect on emergency access. Additionally, as stated in Section 2.20, the proposed program would have no impact on existing emergency evacuation plans and roads. Therefore, the Supermarket Accessory Recycling Collection Centers would result in no impacts to transportation in relation to inadequate emergency access. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to transportation in relation to inadequate emergency access. Any new development or expansion of existing development would be required to meet the current development standards of the zone in which they are permitted. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. The Storage Enclosures for Recycling and Solid Waste Revisions pertain to storage enclosures for recycling and solid waste (revisions to existing Chapter 22.128). The construction of a storage enclosures for recycling and solid waste or compliance with development standards would not substantially alter the existing conditions, such that existing roads would be changed. As the revisions would not result in changes to any existing roadways, there would be no effect on emergency access. Additionally, as stated in Section 2.20, the proposed program would have no impact on existing emergency evacuation plans and roads. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to transportation in relation to inadequate emergency access. No further analysis is warranted.

2.18. TRIBAL CULTURAL RESOURCES

This analysis is undertaken to determine if the proposed program may have a significant impact to tribal cultural resources, thus requiring the consideration of mitigation measures or alternatives in accordance with Section 15063 of the State CEQA Guidelines.¹ The analysis covers all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated with regard to *Chapter 9, Conservation and Natural Resource Element (Part VII)* of the County of Los Angeles General Plan 2035;² the Los Angeles County *Historic Preservation Program*;³ previously published information regarding known tribal cultural resources located within the project site, including publicly disclosed tribal cultural resources listed in historic registers including the National Register of Historic Places (NRHP), National Historic Landmarks database, and the California Register of Historic Resources (CRHR); and a review of the Green Zones Program.

	<i>Potentially Significant Impact</i>	<i>Less than Significant Impact with Mitigation Incorporated</i>	<i>Less than Significant Impact</i>	<i>No Impact</i>
a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code §21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code § 5020.1(k), or	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code § 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code § 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Existing Conditions

The results of archival research and a review published literature were synthesized to provide a general overview of the existing conditions and assess the potential for encountering tribal cultural resources that may exist within the proposed program area.

Projects subject to CEQA review must consider impacts to tribal cultural resources independent of archaeological resources under Assembly Bill (AB) 52 (Chapter 532, Statutes 2014) of amended PRC Section 5097.94 and added Sections 21073, 21074, 21080.3.1, 21080.3.2, 21083.09, 21084.2, and 21084.3. AB 52 defines “tribal cultural resources”

¹ California Code of Regulations. Title 14, Division 6, Chapter 3, Sections 15000–15387, Appendix G.

² Conservation and Natural Resource Element (Part III), Chapter 2 - Open Space Resources, of the County of Los Angeles General plan 2035. Available at: http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch9.pdf

³ Title22 (Vol. I) Zoning Code Ordinance, Part 22.0124 Historic Preservation of the Los Angeles County Code.

as either (1) “sites, features, places cultural landscapes, sacred places and objects with cultural value to a California Native American tribe.” Tribal cultural resource designations require that such a resource be listed or eligible for listing in the state register of historical resources or a local register of historical resources; or determined to be significant based on the criteria for listing in the state register, as determined by a lead agency at its discretion. Initiating consultation with tribes early in the planning stages of a project is emphasized in AB 52 guidance. Senate Bill (SB) 18 requires cities and counties to consult with tribes before adoption of a general plan or specific plan and provides California Native American tribes an opportunity to participate in local land use decisions at an early stage in the planning process for the purpose of protecting, or mitigating, impacts to sites of cultural significance.

The Native American Heritage Commission (NAHC) was contacted on March 13, 2020, to request a Sacred Lands File (SLF) search and the current Native American contact list for the proposed program in order to initiate consultation with interested tribes in accordance with CEQA and AB 52 and SB 18. A response was received on March 23, 2020, which included the list of 14 Native American contacts for the proposed program area.⁴ The response indicates that tribal cultural resources are known to be present within the SLF search area, which is based on whole quadrangle maps within which a given project falls.⁵ Of the 89 topographic quadrangle maps that document the County, there are 75 USGS 7.5-minute series topographic quadrangle maps over which the project spans and thus included in the SLF search area.

Section 9, Conservation and Natural Resources Element, of the Los Angeles County General Plan acknowledges the history of occupation by indigenous people, of lands that now comprise the unincorporated territory of the County:

“The indigenous Chumash and Gabrieliño/Tongva peoples, two of the most populous and sophisticated native cultures, have occupied land within Los Angeles County since prehistoric times. Unfortunately, many of the known archaeological, paleontological and historic cultural sites in the region have been disturbed to some extent by both human activity, such as development, occupation, and use, and natural occurrences, such as erosion that results from earthquakes, fire, and flood. In some instances, historic and prehistoric artifacts such as stone tools, antique nails, and equipment parts have been picked up or even destroyed by visitors or residents.”⁶

The County General Plan acknowledges the potential for tribal cultural resources to be adversely affected, as a result of incompatible land uses and development of extant sites, or locations immediately adjacent to extant cultural resources, including tribal cultural resources. Officially recognized tribal cultural resources are considered to be integral parts of the built and natural environment that are addressed during the project planning and design process. The County has established three General Plan policies that are relevant to the consideration and evaluation of tribal cultural resources:

Policy C/NR 14.1: Mitigate all impacts from new development on or adjacent to historic, cultural, and paleontological resources to the greatest extent feasible.

Policy C/NR 14.4: Ensure proper notification procedures to Native American tribes in accordance with SB 18 (2004).

Policy C/NR 14.6: Ensure proper notification and recovery processes are carried out for development on or near historic, cultural, and paleontological resources.⁷

Industrial use areas are typically situated in highly urbanized areas and have been subject to heavy disturbance resulting from land development and other human activities. Exact depth of ground disturbance is unknown; however, ground disturbance resulting from the proposed development standards is anticipated to extend to approximately 3 feet below the surface.

⁷ Conservation and Natural Resource Element (Part III), Chapter 9 - Open Space Resources, of the County of Los Angeles General plan 2035. Available at: http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch9.pdf

Threshold of Significance

A significant impact would occur if the proposed program would result in potentially significant impacts to TCRs in relation to causing a substantial adverse change in the significance of a TCR, defined in Public Resources Code § 21074 regarding being listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k). Incorporation of mitigation measures would reduce impacts to below the level of significance.

Impact Analysis

The proposed program would result in potential impacts to tribal cultural resources as it relates to causing a substantial adverse change in the significance of a tribal cultural resource, as defined in Public Resources Code § 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe and that is listed or eligible for listing in the CRHR or in local registers of historical resources as defined in Public Resources Code section 5020.1(k). Impacts may result from the unanticipated discovery of tribal cultural resources during construction of improvements, such as walls, that require excavation of *in situ* native soils.

The potential for impacts to Tribal Cultural Resources has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated (please see Section 1, *Project Description*; Table 1.IV-1, *Planning and Permitting Requirements*, and Table 1.IV-2, *Development Standards*). The analysis considers the incremental changes to the physical environment as a result of new and/or revised development standards, in relation to the historic and anticipated permits for affected uses. The proposed revisions to the development standards that have the potential result in physical changes in the environment, as it relates to causing a substantial adverse change in the significance of a Tribal Cultural Resource, listed or eligible for listing in the California Register of Historical Resources or in a local register as defined in Public Resources Code § 5020.1(k), or determined an eligible resource by the lead agency, include the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

Element 1 - Green Zone Districts

Green ~~Zones~~Zone Districts would result in potentially significant impacts to Tribal Cultural Resources. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in potentially significant impacts to Tribal Cultural Resources. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum floor area ratio (FAR) requirements. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a Conditional Use Permit. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The Program requires the non-conforming uses to come into compliance within 3 to 740 years of adoption of the Ordinance. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that the proposed program has the potential to impact tribal cultural resources as it relates to causing a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code § 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with

cultural value to a California Native American tribe and that is listed or eligible for listing in the CRHR, or in local registers of historical resources as defined in Public Resources Code section 5020.1(k) or a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code § 5024.1. Impacts may result from the unanticipated discovery of tribal cultural resources during construction of improvements, such as walls, that require excavation of *in situ* native soils.

The new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in potentially significant impacts to Tribal Cultural Resources. Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in potentially significant impacts on Tribal Cultural Resources because it has the potential to impact tribal cultural resources in relation to causing a substantial adverse change in the significance of a tribal cultural resource that is either listed or eligible for listing in the CRHR or local registers of historical resources as defined in Public Resources Code section 5020.1(k); or determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code § 5024.1, requiring the consideration of mitigation measures and alternatives.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in potentially significant impacts to Tribal Cultural Resources. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, in close proximity to existing industrial uses; permitted in the zones where they are located. The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses. In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from existing conditions, such that they would have the potential to cause a substantial adverse change in the significance of a tribal cultural resource that is either listed or eligible for listing in the CRHR or local registers of historical resources as defined in Public Resources Code section 5020.1(k); or determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code § 5024.1, requiring the consideration of mitigation measures and alternatives.

The proposed program has the potential to impact tribal cultural resources as it relates to causing a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code § 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe and that is listed or eligible for listing in the CRHR, or in local registers of historical resources as defined in Public Resources Code section 5020.1(k) or a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code § 5024.1. Impacts may result from the unanticipated discovery of tribal cultural resources during construction of improvements, such as walls, that require excavation of *in situ* native soils.

~~The purpose of the New Sensitive Uses is to address incompatible land uses in proximity to sensitive uses by changing regulatory requirements for specific industrial land uses. As discussed in Section 1, *Project Description*, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures to decrease impacts to surrounding sensitive uses. These measures would be required where the Ordinance implements new standards for existing industrial uses, or in the case of new industrial uses, such as new recycling processing facilities and new organic waste facilities. Implementation of development standards for the Green Zone Districts require ground disturbance particularly with regard to the construction of barrier walls, and the planting of landscaping. Surficial resources are not likely to be encountered; however, there is a potential to encounter intact buried tribal cultural resource deposits interred at shallow depths at project locations where ground disturbance is required. Ground disturbance is expected to reach depths of approximately 3 feet, or greater, below the ground surface. Disruption of tribal cultural resources as a result of the unanticipated discovery during construction is a significant impact that warrants further analysis.~~

Therefore, the New Sensitive Uses has the potential to impact tribal cultural resources in relation to causing a substantial adverse change in the significance of a tribal cultural resource that is either listed or eligible for listing in the CRHR or local registers of historical resources as defined in Public Resources Code section 5020.1(k); or determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code § 5024.1, requiring the consideration of mitigation measures and alternatives.

Element 3 – Recycling and Waste Management Revisions

The waste management and recycling center revisions component of the proposed program would have the potential to result in no significant impacts to tribal cultural resources as it relates to causing a substantial adverse effect in the significance of a tribal cultural resource, defined in Public Resources Code § 21074; and that is either listed or eligible for listing in the CRHR, or in local registers of historical resources as defined in Public Resources Code section 5020.1(k); or determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code § 5024.1. The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards. Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited from HMAs and SEAs. Additionally, pallet yards, chipping and grinding, and mulching facilities would be prohibited in HFHSZs and VHFHSZs, solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways, and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. Implementation of development standards for the Recycling and Waste Management Revisions would likely result in ground disturbance particularly with regard to the construction of barrier walls, the construction of enclosure buildings, and the planting of landscaping. Therefore, impacts to Recycling and Waste Management Revisions may result in significant impacts to cultural resources as it relates to the significance of historical resources, requiring the consideration of mitigation measures and alternatives in an EIR.

~~The Recycling and Waste Management Revisions element of the Green Zones Program consists of the inclusion of permitting requirements and development standards for specific uses including pallet yards, recycling collection facilities, recycling processing facilities, organic waste facilities, and solid waste facilities. A CUP would be required for all of the above uses (Chapter 22.140). Development standards for Recycling and Waste Management Revisions include requirements for landscaping buffers, walls, enclosed buildings, surfacing of storage areas, air filtration, signage, and lighting. Additionally, the Recycling and Waste Management Revisions include prohibitions on areas where certain specific uses would be prohibited including HMAs, SEAs, VHFHSZs, and in some cases ARAs. These revisions affect the same Industrial Zones as the Green Zones Districts in addition to the Heavy Agricultural Zone and Institutional Zone. Any construction resulting from compliance with development standards would be minimal and would not~~

~~substantially alter the existing conditions for existing industrial uses and will likely not result in ground disturbance. Additionally, the existing facilities are expected to be previously disturbed as a result of initial facility development. Therefore, the proposed development standards for waste management and recycling center revisions would not impact tribal cultural resources, and no further analysis is required.~~

The Supermarket Accessory Recycling Collection Centers revisions would result in no impacts to tribal cultural resources. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed Supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County’s waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be ~~constructed~~ established on existing parking lots, and no new structures will be built. Therefore, the Supermarket Accessory Recycling Collection Centers would have no impact. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would have the potential to result in no significant impacts to tribal cultural resources. Any new development or expansion of existing development would be required to meet the current development standards of the zone in which they are permitted. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. However, ground disturbing activities in native undisturbed soils may result in a significant impact to tribal cultural resources. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions ~~would may result in no significant impacts. No further analysis is warranted~~ to tribal cultural resources, requiring the consideration of mitigation measures and alternatives in an EIR.

2.19. UTILITIES AND SERVICE SYSTEMS

This analysis is undertaken to determine if the project may have a significant impact to utilities and service systems, thus requiring the consideration of mitigation measures or alternatives in accordance with Section 15063 of the State CEQA Guidelines.¹ The analysis covers all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated with regard to the Federal Clean Water Act of 1972 (CWA),² the Los Angeles and Lahontan Regional Water Quality Control Board (RWQCB) Basin Plans,³ County of Los Angeles Countywide Integrated Waste Management Plan,⁴ the Waste Management Element of the adopted Los Angeles County General Plan,⁵ the Public Services and Facilities Element of the Los Angeles County General Plan 2035 Update,⁶ the 1986 Antelope Valley Areawide General Plan,⁷ the 2012 Santa Clarita Valley Area Plan,⁸ and the State Water Resources Control Board Onsite Wastewater Treatment System (OWTS) Policy.⁹

Definitions

Lahontan Regional Water Quality Control Board: The jurisdiction of the Lahontan Regional Water Quality Control Board (RWQCB) extends from the Oregon border to the northern Mojave Desert and includes all of California east of the Sierra Nevada crest. The name of the Region is derived from prehistoric Lake Lahontan, which once covered much of the State of Nevada. Most of the waters of the North Lahontan Basin drain into closed basins which were previously part of Lake Lahontan. Waters of the South Lahontan Basin also drain into closed basin remnants of prehistoric lakes. The Lahontan RWQCB is responsible for implementing the Water Quality Control Plan for the Lahontan Region.

Los Angeles Regional Water Quality Control Board: The Los Angeles RWQCB is one of nine statewide regional boards. The Los Angeles RWQCB protects ground and surface water quality in the Los Angeles Region, including the coastal watersheds of Los Angeles and Ventura Counties, along with very small portions of Kern and Santa Barbara Counties. The Los Angeles RWQCB is responsible for implementing the Water Quality Control Plan for the Los Angeles Region.

Non-hazardous Municipal Solid Waste: More commonly known as trash or garbage—consists of everyday items that are used and then thrown away, such as product packaging, grass clippings, furniture, clothing, bottles, food scraps, newspapers, appliances, paint, and batteries. This comes from homes, schools, hospitals, and businesses.¹⁰

Septic Tank: An underground vessel for treating wastewater from a single dwelling or building by a combination of settling and anaerobic digestion. Effluent is usually disposed of through a dispersal system which consists of one or a

combination of leach fields, seepage pits, and/or subsurface drip dispersal system. Settled solids in septic tank are pumped out periodically and hauled to a treatment facility for disposal.¹¹

Storm Water and Stormwater: In layman's terms, stormwater is defined as an abnormal amount of surface water due to a heavy rain or snowstorm. The term *storm water* is used when employed by the cited source of information. In all other instances, *stormwater* is used, consistent with the provision of Appendix G of the CEQA Guidelines and as defined by the EPA. Stormwater runoff is generated when precipitation from rain and snowmelt events flows over land or impervious surfaces and does not percolate into the ground. As the runoff flows over the land or impervious surfaces (paved streets, parking lots, and building rooftops), it accumulates debris, chemicals, sediment, or other pollutants that could adversely affect water quality if the runoff is discharged untreated.

Wastewater: The spent or used water of a community or industry that contains dissolved and suspended matter.¹²

Existing Conditions

Water/Wastewater. The unincorporated areas of Los Angeles County is located within three Integrated Regional Water Management (IRWM) regions and encompasses the land use zoning designations affected by the project: the Antelope Valley IRWM Region, the Upper Santa Clara River IRWM Region, and the Greater Los Angeles County (GLAC) IRWM Region. Each of the three IRWMs has adequate capacity to provide water.

The Antelope Valley IRWM Region spans 2,400 square miles in northern Los Angeles County and southeastern Kern County. The proportion of the urban water demand in the Antelope Valley IRWM Region within Los Angeles County is forecasted to remain stable at about 92 percent through the 2015–2035 planning period. Agricultural water demand, about half of the total water demand in the region, is forecasted for the region only and not for the two counties separately.

The Upper Santa Clara River IRWM Region consists of the portion of the Santa Clara River Watershed in Los Angeles County, which is a 654-square-mile area. The GLAC IRWM Region spans the remainder of Los Angeles County including the Los Angeles River, San Gabriel River, Santa Monica Bay, and Dominguez watersheds and encompasses approximately 2,058 square miles, and includes parts of southeastern Ventura County, northwest Orange County, and a small part of southwest San Bernardino County. The GLAC Region is divided into five subregions: the Upper Los Angeles River, the Upper San Gabriel River and Rio Hondo, the Lower San Gabriel and Lower Los Angeles River, the South Bay, and the North Santa Monica Bay.¹³ The project area is located within four of the five subareas.

- Upper Los Angeles River. Consisting of most of the Los Angeles River Watershed north of the I-10 freeway in central Los Angeles. Contains the San Fernando Valley Planning Area, part of the southwestern Antelope Valley Planning Area, much of the northern Metro Planning Area, the northwesternmost part of the West San Gabriel Planning Area, and a small part of the southeastern Santa Clarita Valley Planning Area.
- Upper San Gabriel and Rio Hondo Subregion. Consisting of the San Gabriel River Watershed north of Whittier Narrows Flood Control Basin, and part of the eastern Los Angeles River Watershed. This subregion consists of the East San Gabriel Valley Planning Area, almost all of the West San Gabriel Planning Area, and part of the southeastern Antelope Valley Planning Area.
- South Bay Subregion. Consisting of the southeast part of the Santa Monica Bay Watershed and the Dominguez Watershed. This subregion spans the Westside and South Bay Planning Areas; the southwest corner of the Gateway Planning Area; and part of the western Metro Planning Area.
- Lower San Gabriel and Los Angeles Rivers Subregion. Consisting of the part of the Los Angeles River Watershed south of I-10 in central Los Angeles, plus the part of the San Gabriel River Watershed south of Whittier Narrows Flood Control Basin. This region includes the almost all of the Gateway Planning Area, plus the southern part of the Metro Planning Area and the southeastern rim of the East San Gabriel Planning Valley Area. The region includes part of northwest Orange County and a small part of southwest Ventura County.

Water Treatment. The MWD operates five water treatment plants. Two are located within Los Angeles County: the Joseph Jensen Treatment Plant in the neighborhood of Granada Hills in the City of Los Angeles, with capacity of 750 million gallons per day (mgd); and the F.E. Weymouth Treatment Plant in the City of La Verne, with capacity of 520 mgd. The Robert Diemer Treatment Plant in the City of Yorba Linda in Orange County has 520 mgd capacity. The Henry Mills Treatment Plant in the City of Riverside in Riverside County has 326 mgd capacity, and the Robert Skinner Treatment Plant east of the City of Murietta in Riverside County has 520 mgd capacity. The five facilities' total capacity is approximately 2.64 billion gallons per day. The Central Basin Municipal Water District is a groundwater treatment facility, the Water Quality Protection project, treats groundwater for volatile organic compound (VOC) contamination in the City of Pico Rivera in the Central subbasin; the contamination is a plume originating from the San Gabriel Valley

¹³ County of Los Angeles. June 2014. General Plan Update Draft Environmental Impact Report, State Clearinghouse # 2011081042, Chapter 13: Public Services and Facilities Element. http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch13.pdf

to the north. The facility uses granular-activated carbon and has capacity of 2,000 gallons per minute.¹⁴ The West Basin Municipal Water District is a 2,400-acre-foot per year (afy; or 2.1 mgd) capacity desalination facility in the City of Torrance operated by the West Basin Municipal Water District removes chloride from groundwater impacted by seawater. The Three Valleys Municipal Water District (TVMWD) operates the Miramar Water Treatment Plant in the City of Claremont, with a 25 mgd capacity.

Wastewater Treatment. In the unincorporated areas, the Los Angeles County Sanitation Districts (LACSD), the Consolidated Sewer Maintenance District (CSMD), and municipal septic or wastewater systems make up the County's sanitary sewage system.¹⁵ The sanitary sewers and the stormwater/flood protection facilities in Los Angeles County are separate systems, with sanitary sewers conveying sewage from lavatories and other plumbing fixtures in buildings and factories to a wastewater treatment facility where treated before being discharged to the ocean or river.¹⁶ The LACSD is responsible for the construction operations and the maintenance of facilities that collect, treat, recycle and dispose of sewage and industrial wastes is the County. Local sewers connected to the LACSD's trunk sewer lines within the unincorporated areas of the County are the responsibility of the CSMD.

The LACSD is a collection of 24 independent special districts, the Santa Clarita Valley, and the Antelope Valley providing wastewater and solid waste management services to approximately 5.5 million people within the County. Seventeen of the Sanitation Districts that provide sewerage services in the metropolitan Los Angeles area are also signatory to a Joint Outfall Agreement that provides a regional, interconnected system of facilities known as the Joint Outfall System (JOS). The service area of the JOS encompasses 73 cities and unincorporated areas and includes some areas within the City of Los Angeles.¹⁷ Los Angeles County Public Works (Public Works), for CSMD, maintains 4,600 miles of main line sewers, 155 pumping stations, and 4 sewage treatment plants.¹⁸ The LACSD's service area covers approximately 824 square miles and encompasses 78 cities and the unincorporated County areas and encompassing approximately 9,500 miles of sewer owned and operated by various cities and the County. The LACSD owns, operates, and maintains approximately 1,400 miles of sewers, ranging from 8 to 144 inches in diameter, that convey approximately 500 million gallons per day of wastewater to 11 wastewater treatment plants.¹⁹ This includes a wastewater collection system with 48 active pumping plants located throughout the County.

This system provides sewage treatment, reuse, and disposal for residential, commercial, and industrial users.

Sanitary wastewater is treated in the following three phases:²⁰

- Primary Treatment: removal of solids using settling tanks
- Secondary Treatment: reduction of organic matter using bacteria and oxygen; followed by further removal of solids
- Tertiary Treatment: filtration of wastewater to remove any solids remaining after the first two phases of treatment Most wastewater that undergoes tertiary treatment is disinfected after tertiary treatment.

Disinfection methods include chlorine bleach and ultraviolet light. Tertiary-treated wastewater is often reused (i.e. recycled) for landscape and agricultural irrigation, groundwater recharge, and industrial uses.

Stormwater. The Los Angeles RWQCB, Lahontan RWQCB, and Central Valley RWQCB are responsible for implementing the federally-mandated NPDES program in Los Angeles County through the adoption of Orders, which are effectively the NPDES Permits for that region. An NPDES Permit defines the responsibilities of each permittee to control pollutants, including the adoption and enforcement of local ordinances and monitoring programs. Consequently, the County has a Stormwater Ordinance that requires that the discharge, deposit, or disposal of any stormwater and/or runoff to storm drains must be covered by an NPDES Stormwater Permit.²¹

As part of its NPDES Program, the Los Angeles RWQCB adopted a new Municipal Separate Storm Sewer Permit (MS4 Permit) in 2012 (MS4 Permits are also sometimes referred to as Stormwater Permits). The remainder of this section discusses the MS4 permit and some of the County's associated efforts. The Los Angeles RWQCB's MS4 Permit names 84 incorporated cities, the County, and the Los Angeles County Flood Control District as permittees. The MS4 Permit imposes a number of basic programs (Minimum Control Measures), on all permittees in order to maintain a level of acceptable runoff conditions through the implementation of practices, devices, or designs generally referred to as Best Management Practices (BMPs), that mitigate stormwater quality issues.²² The development construction program requires, for example, the implementation of temporary BMPs during a project's construction phase that include measures to protect water resources by preventing erosion, controlling runoff, protecting natural slopes and channels, storing fluids safely, managing spills quickly, and conserving natural areas. The Los Angeles RWQCB's MS4 Permit includes the Watershed Management Program (WMP), where permittees can collaborate to address water quality priorities on a watershed scale, customize BMPs, and develop multi-benefit projects containing water quality improvement, flood protection, water conservation, and/or beautification components. was amended.²³ The County has prepared the 2014 Low Impact Development Standards Manual (LID Standards Manual) to comply with the requirements of the NPDES Municipal Separate Storm Sewer System (MS4) Permit for stormwater and non-stormwater discharges from the MS4 within the coastal watersheds of Los Angeles County (CAS004001, Order No. R4- 2012-0175), henceforth referred to in this document as the 2012 MS4 Permit.

Electricity. Southern California Edison (SCE) provides electricity to Los Angeles County. Total electricity demands in SCE's service area were 82,069 gigawatt-hours (GWH) per year in 2012 and are forecast to increase to 96,516 GWH in 2024 (CEC 2013); one GWH is equivalent to one million kilowatt-hours. Per the County's General Plan Update, the total projected electricity demands for the SCE's is 96,516 GWH in 2024.²⁴ Projected development within the County is subject to Title 24, Part 6 of the California Administrative code, the Energy Efficiency Standards for Residential and Nonresidential Buildings, which requires local jurisdiction to use energy efficient appliances, weatherization techniques and efficient cooling and heating systems to reduce energy demand stemming from new development. SCE's sources of electricity generation in 2017 were 29 percent renewable, including 2 percent biomass and biowaste, 4 percent geothermal, 3 percent eligible hydroelectric, 10 percent solar, and 10 percent wind; 34 percent natural gas; 4 percent coal; 9 percent nuclear; 15 percent large hydroelectric; and 9 from unspecified sources.²⁵

Natural Gas. The Southern California Gas Company (SCGC) supplies natural gas to most of Los Angeles County except for a few cities, including the City of Vernon and City of Long Beach, which supply natural gas to their own residents and other customers. For the County, the estimated net increase in natural gas demand is about 192 million therms per year, or 51 million cubic feet of natural gas per day. Forecasted natural gas demands are within SCGC's estimated supplies for the County's 2035 buildout.

Telecommunications: Telephone, Mobile Phone, Cable, and Internet Service Cable. Cable operators serving Los Angeles County include: Time Warner Cable, Charter Communication, Cox Communications, AT&T U-verse, and Verizon Federal laws provide oversight of the cable industry. While the County serves as the local franchise authority and responds to all

community inquiries surrounding telecommunication, under federal law, the County does not have legal jurisdiction to control telecommunication charges for services.²⁶

Threshold of Significance

The project would have a significant impact if it results in the need to relocate or construct new or expanded water, wastewater treatment, storm water drainage, electric power, natural gas, or telecommunication facilities, the construction or relocation of which could cause significant environmental effects.

Impact Analysis

The project would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities or expansion of facilities, causing significant environmental effects. The proposed improvements required pursuant to the development standards implemented by the project apply to existing and proposed waste management and recycling centers. The unincorporated areas of the County, where the parcels with the applicable land use zoning designations are located are largely served by storm drains, electrical transmission and distribution lines, natural gas transmission and distribution pipelines, and telecommunications cable. The proposed improvements associated with the Green Zones Program consist primarily of non-energized structures such as walls, fencing, setbacks, awnings, and barriers. Some improvements, such as irrigation for landscaping and exhaust emission control systems would utilize electric power or natural gas; however, these improvements would be components of existing projects or future projects at locations served by utilities and would not require the construction or relocation of utilities that would cause significant environmental effects.

The potential for impacts to utilities and service systems has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts (please see Section 1, *Project Description*, Table 1.IV-1, *Planning and Permitting Requirements*, and Table 1.IV-2, *Development Standards*). The qualitative and geospatial analysis considers the incremental changes to the physical environment as a result of new and/or revised development standards, in relation to the historic and anticipated permits for affected uses. The proposed revisions to the development standards that have the potential result in physical changes in the environment include the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

Water

Element 1 – Green Zone Districts

~~Green Zones~~Zone Districts would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in less than significant impacts. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, ~~27 28~~ parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, ~~14 45~~ of the ~~27 28~~ parcels proposed for a zone change within the ~~Green Zones~~Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to

²⁶ County of Los Angeles. June 2014. General Plan Update Draft Environmental Impact Report, State Clearinghouse # 2011081042, Chapter 13: Public Services and Facilities Element. http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch13.pdf

the Light Industrial (II) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green Zones. Green Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to 7 years of adoption of the Ordinance.

Further, the project would not involve habitable structures or the development of restrooms requiring wastewater treatment services. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, as they would be minor additions to existing industrial land uses. The County land use zoning designations are located in areas currently served by water and wastewater treatment facilities. Statewide per capita water consumption for manufacturing ranges from 341 to 3,911 gallons per day.²⁷ With one of the densest areas for manufacturing, Los Angeles is below average for Statewide use of water per manufacturing employee, ranging from 594 to 921 gallons per employee per day). Construction of the proposed improvement required pursuant to the project would either be ancillary to an existing use or estimates as part of future proposed land use; thus using existing or proposed on- and off-site sewer pipe improvements and connections to adequately connect to the LACSD's sewer system. Construction relative to the wastewater system for the project would occur on properties with the land use zoning designations that are subject to the Green Zones Program. A majority of the improvements would not require the use of water during the construction or operational phases of the improvements. None of the improvements generate wastewater for offsite discharge. Water required for landscaping would be ancillary to the land use and all necessary improvements would be verified through the permit approval process of obtaining a sewer capacity and connection permit from the LACSD. Construction of the proposed improvements would involve minor alterations and modifications to existing industrial uses, and/or require more stringent standards of development for new sensitive uses proposed in vicinity of industrial, recycling and solid waste, or vehicle-related uses within areas of the unincorporated areas of the County or adjacent incorporated areas including sensitive uses. Construction would include installation of walls, fencing, setback, and landscaping in compliance with development standards during plan check including landscaping installation of plants from the LID drought tolerant plant list. A negligible amount of wastewater would be generated by construction workers. It is anticipated that portable toilets would be provided by the construction contractor(s) and the waste disposed of off-site. Wastewater generation from construction activities is not anticipated to cause a measurable increase in wastewater flows at a point where, and at a time when, a sewer's capacity is already constrained or that would cause a sewer's capacity to become constrained. In addition, construction and operation is not anticipated to generate wastewater flows that would substantially or incrementally exceed the future scheduled capacity of any one treatment plant by generating flows greater than those anticipated in the County's General Plan or other wastewater facilities planning documents.

In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would cause significant impacts to Utilities and Service Systems. The new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. No further analysis is warranted.

²⁷ Christina-Smith, J., Heberger, M., Allen, L. August 2012. Urban Water Demand in California to 2100: Incorporating Climate Change. <https://pacinst.org/wp-content/uploads/2014/04/2100-urban-water-efficiency.pdf>

Element 2 – New Sensitive Uses

The new development standards for the New Sensitive Uses element of the project apply adjoining or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. The County land use zoning designations are located in areas currently served by water and wastewater treatment facilities. Statewide per capita water consumption for manufacturing ranges from 341 to 3,911 gallons per day.²⁸ With one of the densest areas for manufacturing, Los Angeles is below average for Statewide use of water per manufacturing employee, ranging from 594 to 921 gallons per employee per day). Construction of the proposed improvement required pursuant to the project would either be ancillary to an existing use or estimates as part of future proposed land use; thus using existing or proposed on- and off-site sewer pipe improvements and connections to adequately connect to the LACSD's sewer system. Construction relative to the wastewater system for the project would occur on properties with the land use zoning designations that are subject to the Green Zones Program. A majority of the improvements would not require the use of water during the construction or operational phases of the improvements. None of the improvements generate wastewater for offsite discharge. Water required for landscaping would be ancillary to the land use and all necessary improvements would be verified through the permit approval process of obtaining a sewer capacity and connection permit from the LACSD. Construction of the proposed improvements would involve minor alterations and modifications to existing industrial uses, and/or require more stringent standards of development for new sensitive uses proposed in vicinity of industrial, recycling and solid waste, or vehicle-related uses within areas of the unincorporated areas of the County or adjacent incorporated areas including sensitive uses. Construction would include installation of walls, fencing, setback, and landscaping in compliance with development standards during plan check including landscaping installation of plants from the LID drought tolerant plant list. A negligible amount of wastewater would be generated by construction workers. It is anticipated that portable toilets would be provided by the construction contractor(s) and the waste disposed of off-site. Wastewater generation from construction activities is not anticipated to cause a measurable increase in wastewater flows at a point where, and at a time when, a sewer's capacity is already constrained or that would cause a sewer's capacity to become constrained. In addition, construction and operation is not anticipated to generate wastewater flows that would substantially or incrementally exceed the future scheduled capacity of any one treatment plant by generating flows greater than those anticipated in the County's General Plan or other wastewater facilities planning documents.

Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, ~~in close proximity to existing industrial uses, permitted in the zones where they are located.~~ The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies and air filtration (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the project would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, ~~in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses.~~ In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from existing conditions, such that they would cause significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. These measures to reduce the incompatibility of new sensitive uses with nearby existing industrial uses through development standards such as construction of landscaping and planting trees, buffering, and open space, would not cause the construction of new or

²⁸ Christina-Smith, J., Heberger, M., Allen, L. August 2012. Urban Water Demand in California to 2100: Incorporating Climate Change. <https://pacinst.org/wp-content/uploads/2014/04/2100-urban-water-efficiency.pdf>

expanded water treatment facilities or expansion of facilities, causing significant environmental effects. Therefore, the new development standards for New Sensitive Uses would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions element of the project, including supermarket accessory recycling collection centers, would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. Construction resulting from compliance with development standards would be minimal and would not substantially alter the existing conditions for existing recycling and waste management uses such that wastewater treatment facilities and capacity would be impacted. In addition, construction and operation is not anticipated to generate wastewater flows that would substantially or incrementally exceed the future scheduled capacity of any one treatment plant by generating flows greater than those anticipated in the County's General Plan or other wastewater facilities planning documents.

The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These development standards are ancillary to the land uses and would not require water supply or produce wastewater. These construction improvement requirements are already subject to current development standards as identified in the project description table (Table 1.4-2IV-1. The proposed revisions would prohibit automobile dismantling yards) Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in-vessel organic waste facilities are prohibited in ARAs; would be prohibited from HMAs and SEAs. Additionally, pallet yards, chipping and grinding, and mulching facilities would be prohibited in HFHSZs and VHFHSZs, solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways, and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. Therefore, Recycling and Waste Management Revisions would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. No further analysis is warranted.

The Supermarket Accessory Recycling Collection Centers revisions would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed Supermarket locations in urbanized locations in the County.

Supermarket Accessory Recycling Collection Centers is an accessory use within zones C-1, C-2, C-3, C-M. All industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash

enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials would be visible. The CalRecycle requirements are set forth to meet the County's waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be constructed on existing parking lots, and no new structures would be built. Construction and operation are not anticipated to generate wastewater flows that would substantially or incrementally exceed the future scheduled capacity of any one treatment plant by generating flows greater than those anticipated in the County's General Plan or other wastewater facilities planning documents. The construction of a recycling collection center or compliance with development standards would not substantially alter the existing conditions, such that the current wastewater treatment facilities or capacity would be changed and require the construction of new or expanded facilities. Therefore, the Supermarket Accessory Recycling Collection Centers would have less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. Any new development or expansion of existing development would be required to meet the current development standards of the zone they are permitted in. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. Construction and operation are not anticipated to generate wastewater flows that would substantially or incrementally exceed the future scheduled capacity of any one treatment plant by generating flows greater than those anticipated in the County's General Plan or other wastewater facilities planning documents. The construction of the Storage Enclosures for Recycling and Solid Waste Revisions or compliance with development standards would not substantially alter the existing conditions, such that the current wastewater treatment facilities or capacity would be changed and require the construction of new or expanded facilities. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. No further analysis is warranted.

Stormwater

Element 1 – Green Zone Districts

~~Green Zones~~Zone Districts would result in less than significant impacts to utilities and service systems in relation to the construction of new or stormwater facilities or expansion of facilities, causing significant environmental effects. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in less than significant impacts to utilities and service systems in relation to the construction of new or stormwater facilities or expansion of facilities, causing significant environmental effects. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, ~~27 28~~ parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, ~~14 15~~ of the ~~27 28~~ parcels proposed for a zone change within the ~~Green Zones~~Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, ~~Green Zones~~Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within

Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The Program requires the nonconforming uses to come into compliance within 3 to 7 years of adoption of the Ordinance.

The implementation of project would involve construction of new areas of impervious surfaces. However, implementation of the development standards required by the project would be subject to the County of Los Angeles LID Ordinance involving measures to reduce stormwater runoff. The LID Standards Manual provides guidance for the implementation of stormwater quality control measures in new development and redevelopment projects in unincorporated areas of the County with the intention of improving water quality and mitigating potential water quality impacts from stormwater and non-stormwater discharges.²⁹

The County's LID Standards Manual addresses the following objectives and goals:

- Lessen the adverse impacts of stormwater runoff from development and urban runoff on natural drainage systems, receiving waters, and other water bodies;
- Minimize pollutant loadings from impervious surfaces by requiring development projects to incorporate properly designed, technically appropriate Best Management Practices (BMPs) and other Low Impact Development (LID) strategies; and
- Minimize erosion and other hydrologic impacts on natural drainage systems by requiring development projects to incorporate properly designed, technically appropriate hydromodification control development principles and technologies.³⁰

In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would cause significant impacts to utilities and service systems in relation to the construction of new or stormwater facilities or expansion of facilities, causing significant environmental effects. The new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in less than significant impacts to utilities and service systems in relation to the construction of new or stormwater facilities or expansion of facilities, causing significant environmental effects. Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in less than significant impacts to utilities and service systems in relation to the construction of new or stormwater facilities or expansion of facilities, causing significant environmental effects. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in less than significant impacts to utilities and service systems in relation to the construction of new or stormwater facilities or expansion of facilities, causing significant environmental effects. The implementation of project would involve construction of new areas of impervious surfaces. However, implementation of the development standards required by the project would be subject to the County of Los Angeles LID Ordinance involving measures to reduce stormwater runoff. The LID Standards Manual provides guidance for the implementation of stormwater quality control measures in new development and redevelopment projects in unincorporated areas of the County with the intention of improving water quality and mitigating potential water quality impacts from stormwater and non-stormwater discharges.³¹

³¹ County of Los Angeles. February 2014. Low Impact Development Standards Manual.
<https://dpw.lacounty.gov/idd/lib/fp/Hydrology/Low%20Impact%20Development%20Standards%20Manual.pdf>

Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, ~~in close proximity to existing industrial uses, permitted in the zones where they are located.~~ The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the project would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, ~~in close proximity adjacent to or adjoining legally-established,~~ existing industrial, ~~recycling or solid waste, or vehicle-related~~ uses. In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from existing conditions, such that they would result in significant impacts to utilities and service systems in relation to the construction of new or stormwater facilities or expansion of facilities, causing significant environmental effects. These measures to reduce the incompatibility of new sensitive uses with nearby existing industrial uses through development standards such as construction of landscaping and planting trees, buffering, and open space, would not result in significant impacts to utilities and service systems in relation to the construction of new or stormwater facilities or expansion of facilities, causing significant environmental effects. Therefore, the new development standards for New Sensitive Uses would result in less than significant impacts to utilities and service systems in relation to the construction of new or stormwater facilities or expansion of facilities, causing significant environmental effects. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in less than significant impacts to utilities and service systems in relation to the construction of new or stormwater facilities or expansion of facilities, causing significant environmental effects. Requirements and features are designed to create barriers between industrial, recycling and solid waste, or vehicle-related uses and surrounding areas to sensitive uses. ~~In addition, construction and operation is not anticipated to generate wastewater flows that would substantially or incrementally exceed the future scheduled capacity of any one treatment plant by generating flows greater than those anticipated in the County's General Plan or other wastewater facilities planning documents. The construction of a recycling collection center or compliance with development standards would not substantially alter the existing conditions, such that the current wastewater treatment facilities or capacity would be changed and require the construction of new or expanded facilities. The implementation of project would involve construction of new areas of impervious surfaces. However, implementation of the development standards required by the project would be subject to the County of Los Angeles LID Ordinance involving measures to reduce stormwater runoff. The LID Standards Manual provides guidance for the implementation of stormwater quality control measures in new development and redevelopment projects in unincorporated areas of the County with the intention of improving water quality and mitigating potential water quality impacts from stormwater and non-stormwater discharges.³²~~

The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These

³² County of Los Angeles. February 2014. Low Impact Development Standards Manual. <https://dpw.lacounty.gov/ldd/lib/fp/Hydrology/Low%20Impact%20Development%20Standards%20Manual.pdf>

construction improvement requirements are already subject to current development standards (Table 1.IV-1). ~~The proposed revisions would prohibit automobile dismantling yards Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in-vessel organic waste facilities are prohibited in ARAs. would be prohibited from HMAs and SEAs. Additionally, pallet yards, chipping and grinding, and mulching facilities would be prohibited in HFHSZs and VHFHSZs, solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways, and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs.~~ Therefore, the Recycling and Waste Management Revisions would result in less than significant impacts to utilities and service systems in relation to the construction of new or stormwater facilities or expansion of facilities, causing significant environmental effects. No further analysis is warranted.

The Supermarket Accessory Recycling Collection Centers revisions would result in less than significant impacts to utilities and service systems in relation to the construction of new or stormwater facilities or expansion of facilities, causing significant environmental effects. would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Recycling collection center locations must be approved by the State of California as a Supermarket Site prior to application submittal. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials would be visible. The CalRecycle requirements are set forth to meet the County’s waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be ~~constructed~~ established on existing parking lots, and no new structures would be built construction and operation is not anticipated to generate wastewater flows that would substantially or incrementally exceed the future scheduled capacity of any one treatment plant by generating flows greater than those anticipated in the County’s General Plan or other wastewater facilities planning documents. Therefore, the Supermarket Accessory Recycling Collection Centers would result in less than significant impacts to utilities and service systems in relation to the construction of new or stormwater facilities or expansion of facilities, causing significant environmental effects. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts to utilities and service systems in relation to the construction of new or stormwater facilities or expansion of facilities, causing significant environmental effects. Any new development or expansion of existing development would be required to meet the current development standards of the zone they are permitted in. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. Construction and operation are not anticipated to generate wastewater flows that would substantially or incrementally exceed the future scheduled capacity of any one treatment plant by generating flows greater than those anticipated in the County’s General Plan or

other wastewater facilities planning documents. The construction of the Storage Enclosures for Recycling and Solid Waste Revisions or compliance with development standards would not substantially alter the existing conditions, such that the current wastewater treatment facilities or capacity would be changed and require the construction of new or expanded facilities. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts to utilities and service systems in relation to the construction of new or stormwater facilities or expansion of facilities, causing significant environmental effects. No further analysis is warranted.

Electricity

Element 1 – Green Zone Districts

The Green Zone Districts element of the project would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded electrical transmission and distribution lines. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in less than significant impacts. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, 27 28 parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, 14 15 of the 27 28 parcels proposed for a zone change within the Green ~~Zones~~Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green ~~Zones~~Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to 7~~40~~ years of adoption of the Ordinance. Other than installation of lighting, these systems would require negligible electricity usage for contrition and operation and all new construction would be developed and constructed in compliance with Title 12, Title 22, and Title 31, incorporating the 2019 California Green Building Standards Code. As a result, impacts to utilities and services systems in relation to electricity serving the project area would not occur. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would result in significant impacts to utilities and service systems in relation to the construction of new or expanded electrical transmission and distribution lines. The new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded electrical transmission and distribution lines. Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded electrical transmission and distribution lines. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded electrical transmission and distribution lines. Other than installation of the air filtration and lighting, these systems would require negligible electricity usage for contrition and operation and all new construction would be developed and constructed in compliance with Title 12, Title 22, and Title 31, incorporating the 2019 California Green Building Standards Code. As a result, impacts to utilities and services systems in relation to

electricity serving the project area would not occur. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, ~~in close proximity to existing industrial uses, permitted in the zones where they are located.~~ The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the project would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, ~~in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related~~ uses. In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from existing conditions, such that they would cause significant impacts to utilities and service systems in relation to the construction of new or expanded electrical transmission and distribution lines. These measures to reduce the incompatibility of new sensitive uses with existing industrial uses through development standards such as construction of landscaping and planting trees, buffering, and open space, would not cause significant impacts to utilities and service systems in relation to the construction of new or expanded electrical transmission and distribution lines. Therefore, the new development standards for New Sensitive Uses near Industrial, Recycling and Solid Waste, or Vehicle-Related Uses would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded electrical transmission and distribution lines. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions element of the project would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded electrical transmission and distribution lines. The Recycling and Waste Management Revisions element of the Green Zones Program consists of the inclusion of standards for Specific Uses (revisions to existing Chapter 22.140) and would modify one section of Chapter 22.140 and introduces six new sections to the chapter, in Division 7 (Standards for Specific Uses) of Title 22 in relation to primary recycling and spoiled waste uses. The construction resulting from compliance with development standards would be minimal and would not substantially alter the existing conditions for existing industrial uses such that electric power transmission serving the project area would be impacted. These revisions would not affect service and capacity of electricity transmission or facilities, given that they are not recycling or waste facilities. The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements.

The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards (Table 1.IV-1). ~~The proposed revisions would prohibit automobile dismantling yards Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in-vessel organic waste facilities are prohibited in ARAs.~~ would be prohibited from HMAs and SEAs. Additionally, pallet yards, chipping and grinding, and mulching facilities would be prohibited in HFHSZs and VHFHSZs, solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways, and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. Therefore, impacts to Recycling and Waste Management Revisions would be less than significant

impacts to utilities and service systems in relation to the construction of new or expanded electrical transmission and distribution lines. No further analysis is warranted.

The Supermarket Accessory Recycling Collection Centers revisions would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded electrical transmission and distribution lines. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Recycling collection center locations must be approved by the State of California as a supermarket site prior to application submittal. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones, would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials would be visible. The CalRecycle requirements are set forth to meet the County’s waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. On the national level, grocery stores use the largest portion of their electricity to run refrigeration and lighting systems. Space heating and cooking dominate natural gas use.³³ Lighting and miscellaneous uses (including recycling) account for less than 12 percent of energy use in a supermarket; thus, the proposed improvements can be accommodated or offset with energy efficiencies in refrigeration and lighting technologies. The construction of a recycling collection center or compliance with development standards would utilize the same electrical transmission and distribution lines required for the existing and proposed supermarkets. These revisions would not affect electric power transmission facilities, given that they are not recycling or supermarket facilities. These uses would be ~~constructed~~ established on existing parking lots, and no new structures would be built. Construction and operation are not anticipated to generate wastewater flows that would substantially or incrementally exceed the future scheduled capacity of any one treatment plant by generating flows greater than those anticipated in the County’s General Plan or other wastewater facilities planning documents. Therefore, the Supermarket Accessory Recycling Collection Centers would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded electrical transmission and distribution lines. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded electrical transmission and distribution lines. Any new development or expansion of existing development would be required to meet the current development standards of the zone they are permitted in. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. These revisions would not affect electric power transmission facilities, given that they are not storage enclosures. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded electrical transmission and distribution lines. No further analysis is warranted.

³³ Snohomish County Public Utility District No. 1. Average energy-use data. Accessed April 15, 2020. <https://snopud.bizenergyadvisor.com/article/grocery-stores>

Natural Gas

The project would result in no impacts to utilities and service systems in relation to the construction of new or expanded natural gas transmission and distribution pipelines. The proposed improvements required in conjunction with the new development standards required by the project would not involve construction or operation requiring the use of natural gas. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, as they would be minor additions to existing industrial land uses. As a result, impacts to utilities and services systems in relation to natural gas serving the project area would not occur.

Telecommunications: Telephone, Mobile Phone, Cable, and Internet Service Cable

The proposed improvements required in conjunction with the new development standards required by the project would result in no impacts to utilities and service systems in relation to the construction of new or expanded telecommunications facilities. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, as they would be minor additions to existing industrial land uses. As a result, impacts to utilities and services systems in relation to telecommunications would not occur.

b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Existing Conditions

Los Angeles County utilizes the following water supply sources³⁴ (Table 2.19-1, *Water Supplies by Source for Los Angeles County in Acre-Feet per Year*):

- **Water supply from the Northern California via the State Water Project (SWP):** The SWP has delivered water to 29 water agencies along the route, including the Antelope Valley-East Kern Water Agency, Castaic Lake Water Agency, Metropolitan Water District, and the San Gabriel Valley Municipal Water District. The Metropolitan Water District of Southern California (MWD) wholesales most of the water imported into Southern California by the State Water Project to the MWD's 26 member agencies.
- **Water supply from the Colorado River via the Colorado River Aqueduct:** The 242-mile-long Colorado River Aqueduct carries a billion gallons (2,778 acre-feet) of water daily to Southern California. California, along with several other states, shares water that is diverted from the Colorado River. Due to California's overutilization of water annually from the Colorado River, water agencies throughout California, including the Metropolitan Water District, have implemented programs to reduce water drawn from the Colorado River to the initial allocation agreement, through water banking, conservation, and recycling, and is sold by the MWD to its member agencies.
- **Groundwater:** Sourced from local groundwater basins that are recharged naturally through stormwater and rainfall, and artificially recharged in recharging basins with imported water, stormwater, and recycled water.
- **Water Banking:** In areas like the San Joaquin Valley, water agencies store water in groundwater basins outside the region.
- **Surface Water:** From local streams.
- **Recycled Water:** Treated and disinfected municipal wastewater. Uses in the County include landscape and agricultural irrigation, groundwater recharge, and industrial uses.
- **Desalination:** removal of salts and mineral components from ocean water.
- **Stormwater Capture and Direct Use:** The supply made available through the capture of local stormwater and runoff flows for local non-potable use prior to reaching rivers or other water bodies.

³⁴ County of Los Angeles General Plan 2035 Update.

**TABLE 2.19-1
WATER SUPPLIES BY SOURCE FOR LOS ANGELES COUNTY IN ACRE-FEET PER YEAR**

	2015	2020	2025	2030	2035
Groundwater	797,637	870,093	817,057	885,632	890,488
Imported Water	1,213,992	1,125,244	1,036,715	1,124,463	1,103,251
Surface Water	23,332	23,293	23,293	23,293	23,293
Recycled Water	108,190	138,536	144,956	160,522	168,904

Total	2,279,839	2,339,193	2,224,922	2,419,832	2,439,806

SOURCE: Los Angeles County General Plan Update EIR, County of Los Angeles (Table 5.17-15).

Water Agencies participate in delivering water from its source to households and other retail customers within the County.

- The California Department of Water Resources (DWR) operates and maintains the SWP.
- Water Wholesalers: The MWD purchases imported SWP water; import water from the Colorado River; and wholesales water to its member agencies. The Central Basin Municipal Water District, West Basin Municipal Water District, Upper San Gabriel Valley Municipal Water District, and the Three Valleys Municipal Water District, are member agencies of the MWD. Other water wholesalers in Los Angeles County such as the Central Basin Municipal Water District, West Basin Municipal Water District, Upper San Gabriel Valley Municipal Water District, Castaic Lake Water Agency, Las Virgenes Municipal Water District, Three Valleys Municipal Water District, and Antelope Valley-East Kern Water Agency.
- Water purveyors: Which provide water to retail customers; these includes agencies of cities and counties, private companies, and special districts.

Existing and projected water demands have been calculated for the unincorporated areas of the County (Table 2.19-2, *Water Demands by IRWM Region/Subregion in Acre-Feet per Year*).

**TABLE 2.19-2
WATER DEMANDS BY IRWM REGION/SUBREGION IN ACRE-FEET PER YEAR**

IRWM Region/Subregion	2015	2020	2025	2030	2035
Antelope Valley	187,000	195,000	200,000	205,000	210,000

Threshold of Significance

The project would have a significant impact if it were to result in insufficient waters supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years.

The project is expected to result in potentially significant impacts to utilities and service systems in relation to having sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years. The potential for impacts has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts (please see Section 1, Table 1.IV-1, and Table 1.IV-2). The qualitative and geospatial analysis considers the incremental changes to the physical environment as a result of new and/or revised development standards, in relation to the historic and anticipated permits for affected uses. The proposed revisions to the development standards that have the potential result in physical changes in the environment include the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices (pertaining to New Sensitive Uses and the Recycling and Waste Management Revisions), building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

Element 1 – Green Zone Districts

~~Green Zones~~Zone Districts would result in potentially significant impacts to utilities and service systems in relation to having sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, 27 28 parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, 14 15 of the 27 28 parcels proposed for a zone change within the Green ~~Zones~~Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green ~~Zones~~Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to 740 years of adoption of the Ordinance.

The County land use zoning designations are located in areas currently served by water facilities. Statewide per capita water consumption for manufacturing ranges from 341 to 3,911 gallons per day. With one of the densest areas for manufacturing, Los Angeles is below average for Statewide use of water per manufacturing employee, ranging from 594 to 592 gallons per employee per day. Construction of the proposed improvement required pursuant to the project would either be ancillary to an existing use or estimates as part of future proposed land use, thus using existing or proposed water pipe improvements and connections to adequately connect to the existing and planned infrastructure. No rezoning of uses would occur with implementation of the project. Construction relative to the waste system for the project would occur on properties with the land use zoning designations that are subject to the Green Zones Program. A majority of the improvements would not require the use of water during the construction or operational phases of the improvements. Water required for landscaping would be ancillary to the land use and all necessary improvements would be verified through the permit approval process of obtaining required connection permit for the applicable water purveyor within the designated areas. Construction of the proposed improvements would involve minor alterations and modifications to existing industrial uses, and/or require more stringent standards of development for new sensitive uses

proposed in the vicinity of industrial, recycling and solid waste, or vehicle-related within areas of the unincorporated areas of the County or adjacent incorporated areas including sensitive uses. Construction would include installation of walls, fencing, setback, and landscaping in compliance with development standards during plan check including landscaping installation of plants from the LID drought tolerant plant list.

Based on a review of available water supply for parcels with County land use zoning designations that would be subject to the Green Zones District element of project, there are sufficient water supply to support the anticipated incremental increase for construction of walls and operation and maintenance of irrigated landscaped (Table 2.19-1). The project includes elements that would require increased water usage through planting landscape barriers. All landscaping additions would be developed in compliance with the 2019 CALGreen nonresidential mandatory measures in order to implement water efficiency and water conservation measures.³⁵ These measures regulate both indoor and outdoor water use and include the use of the Model Water Efficient Landscape Ordinance (MWELO) to increase water efficiency standards for new and retrofitted landscapes through encouraging the use of more efficient irrigation systems, graywater usage, and onsite storm water capture, and by limiting the portion of landscapes that can be covered in turf. While proposed development of the landscaping and landscape barriers would be installed consistent with the County's LID Manual, the project would have the potential to cause a significant adverse impact from increased water usage within parcels that do not include existing landscape or require modifications to exiting landscape areas. Therefore, the Green Zones District would have the potential to result in significant impacts to utilities and service systems in relation to having sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years, requiring further analysis, including the consideration of mitigation measures and alternatives.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in potentially significant impacts to utilities and service systems in relation to having sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years. As previously discussed, the County land use zoning designations are located in areas currently served by water facilities. Statewide per capita water consumption for manufacturing ranges from 341 to 3,911 gallons per day. With one of the densest areas for manufacturing, Los Angeles is below average for Statewide use of water per manufacturing employee, ranging from 594 to 592 gallons per employee per day. Construction of the proposed improvement required pursuant to the project would either be ancillary to an existing use or part of future proposed land use, thus using existing or proposed water pipe improvements and connections to adequately connect to the existing and planned infrastructure. ~~Rezoning of uses would not occur with implementation of the project.~~ Construction relative to the waste system for the project would occur on properties with the land use zoning designations that are subject to the Green Zones Program. A majority of the improvements would not require the use of water during the construction or operational phases of the improvements. Water required for landscaping would be ancillary to the land use and all necessary improvements would be verified through the permit approval process of obtaining required connection permit for the applicable water purveyor within the designated areas. Based on a review of available water supply for parcels with County land use zoning designations that would be subject to the New Sensitive Uses element of project, there are sufficient water supply to support the anticipated incremental increase for construction of walls and operation and maintenance of irrigated landscaped (Table 2.19-1).

The project includes elements that would require increased water usage through planting landscape barriers. All landscaping additions would be developed in compliance with the 2019 CALGreen nonresidential mandatory measures in order to implement water efficiency and water conservation measures.³⁶ These measures regulate both indoor and outdoor water use and include the use of the MWELO to increase water efficiency standards for new and retrofitted landscapes through encouraging the use of more efficient irrigation systems, graywater usage, and onsite storm water

³⁶ State of California. August 2019. Chapter 5 Nonresidential Mandatory Measures, Division 5.3 Water Efficiency and Conservation. In the 2019 California Green Building Standards Code, California Code of Regulations, Title 24, Part 11. https://codes.iccsafe.org/content/CGBC2019P2/chapter-5-nonresidential-mandatory-measures#CGBC2019P2_Ch05_SubCh5.3

capture, and by limiting the portion of landscapes that can be covered in turf. While proposed development of the landscaping and landscape barriers would be installed consistent with the County's LID Manual, the project would have the potential to cause a significant adverse impact from increased water usage within parcels that do not include existing landscape or require modifications to exiting landscape areas.

Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, in close proximity to existing industrial uses, permitted in the zones where they are located. The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the project would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses. These measures to reduce the incompatibility of new sensitive uses with existing industrial uses through development standards such as construction of landscaping and planting trees, buffering, and open space, would not cause the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. Therefore, the new development standards for New Sensitive Uses would have the potential to result in significant impacts to utilities and service systems in relation to having sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years, requiring further analysis, including the consideration of mitigation measures and alternatives.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in less than significant impacts to utilities and service systems in relation to having sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years. Any construction would be in compliance with development standards and would not substantially alter the existing conditions for existing industrial uses in relation to water supply within the project area. While proposed development of the landscaping and landscape barriers would be installed consistent with the County's LID Manual, the project would have the potential to cause a significant adverse impact from increased water usage within parcels that do not include existing landscape or require modifications to exiting landscape areas.

The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards (Table 1.IV-1). ~~The proposed revisions would prohibit automobile dismantling yards Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in-vessel organic waste facilities are prohibited in ARAs.~~ would be prohibited from HMAs and SEAs. Additionally, pallet yards, chipping and grinding, and mulching facilities would be prohibited in HFHSZs and VHFHSZs, solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways, and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. Increased

water supply needed for recycling and solid waste facilities would be in compliance with County development standards. Therefore, Recycling and Waste Management Revisions would result in less than significant impacts to utilities and service systems in relation to having sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years. No further analysis is warranted.

The Supermarket Accessory Recycling Collection Centers revisions would result in less than significant impacts to utilities and service systems in relation to having sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Recycling collection center locations must be approved by the State of California as a supermarket site prior to application submittal. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones, would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials would be visible. The CalRecycle requirements are set forth to meet the County’s waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be ~~constructed~~ established on existing parking lots, and no new structures would be built. The Supermarket Accessory Recycling Collection revisions would not require additional areas for landscaping barrier or elements increasing water usage; thus, no additional consumptive use of water beyond that described for Green Zones District would occur. Therefore, the Supermarket Accessory Recycling Collection Centers would have less than significant impacts to utilities and service systems in relation to having sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. Any new development or expansion of existing development would be required to meet the current development standards of the zone they are permitted in. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. The Storage Enclosures for Recycling and Solid Waste Revisions would not require additional areas for landscaping barrier or elements increasing water usage; thus, no additional consumptive use of water beyond that described for Green Zones District would occur. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts to utilities and service systems in relation to having sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years. No further analysis is warranted.

- c) **Result in a determination by the wastewater treatment provider which serves or may serve the project that it has inadequate capacity to serve the project's projected demand in addition to the provider's existing commitments?**

Existing Conditions

In the unincorporated areas, the Los Angeles County Sanitation Districts (LACSD), the Consolidated Sewer Maintenance District (CSMD), and municipal septic or wastewater systems make up the County's sanitary sewage system.³⁷ The Public Works Environmental Programs Division also permits and inspects industrial waste discharge into local sewers. The County Code requires that every business that disposes industrial wastewater obtain a permit. The Sewer System Management Plan (SSMP) controls and mitigates sewer sanitary overflows.³⁸

The sanitary sewers and the stormwater/flood protection facilities in Los Angeles County are separate systems, with sanitary sewers conveying sewage from lavatories and other plumbing fixtures in buildings and factories to a wastewater treatment facility where treated before being discharged to the ocean or river.³⁹ The LACSD is responsible for the construction operations and the maintenance of facilities that collect, treat, recycle and dispose of sewage and industrial wastes is the County. Local sewers connected to the LACSD's trunk sewer lines within the unincorporated areas of the County are the responsibility of the CSMD.

The LACSD is a collection of 24 independent special districts, the Santa Clarita Valley, and the Antelope Valley providing wastewater and solid waste management services to approximately 5.5 million people within the County. Seventeen of the Sanitation Districts that provide sewerage services in the metropolitan Los Angeles area are also signatory to a Joint Outfall Agreement that provides a regional, interconnected system of facilities known as the JOS. The service area of the JOS encompasses 73 cities and unincorporated areas and includes some areas within the City of Los Angeles.⁴⁰ Public Works, for CSMD, maintains 4,600 miles of main line sewers, 155 pumping stations, and 4 sewage treatment plants.⁴¹

Impact Analysis

The project would result in no impacts to utilities and service systems in relation to resulting in a determination by the wastewater treatment provider which serves or may serve the project that it has inadequate capacity to serve the project's projected demand in addition to the provider's existing commitments. The potential for impacts has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts (please see Section 1, Table 1.IV-1, and Table 1.IV-2). The qualitative and geospatial analysis considers the incremental changes to the physical environment as a result of new and/or revised development standards, in relation to the historic and anticipated permits for affected uses. The proposed revisions to the development standards that have the potential result in physical changes in the environment include the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

Element 1 – Green Zone Districts

Green ~~Zones~~Zone Districts would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, 27 28 parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, 14 45 of the 27 28 parcels proposed for a zone change within the Green ~~Zones~~Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green ~~Zones~~Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to 7~~40~~ years of adoption of the Ordinance.

As previously discussed, the County land use zoning designations are located in areas currently served by wastewater treatment facilities. Construction of the proposed improvement required pursuant to the project would either be ancillary to an existing use or estimates as part of future proposed land use; thus using existing or proposed on- and off-site sewer pipe improvements and connections to adequately connect to the LACSDs' sewer system. Construction relative to the wastewater system for the project would occur on properties with the land use zoning designations that are subject to the Green Zones Program. None of the improvements generate wastewater for offsite discharge. All required improvements would be verified through the permit approval process of obtaining a sewer capacity and connection permit from the LACSDs. Construction of the proposed improvements would involve minor alterations and modifications to existing industrial uses, and/or require more stringent standards of development for new sensitive uses proposed in vicinity of industrial, recycling and solid waste, or vehicle-related uses within areas of the unincorporated areas of the County or adjacent incorporated areas including sensitive uses. Construction would include installation of walls, fencing, setback, and landscaping in compliance with development standards during plan check including landscaping installation of plants from the LID drought tolerant plant list. A negligible amount of wastewater would be generated by construction workers. It is anticipated that portable toilets would be provided by the construction contractor(s) and the waste disposed of off-site. Wastewater generation from construction activities is not anticipated to cause a measurable increase in wastewater flows at a point where, and at a time when, a sewer's capacity is already constrained or that would cause a sewer's capacity to become constrained. In addition, construction and operation is not anticipated to generate wastewater flows that would substantially or incrementally exceed the future scheduled capacity of any one treatment plant by generating flows greater than those anticipated in the County's General Plan or other wastewater facilities planning documents.

In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would result in significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. The new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects, the new development standards and/or more stringent entitlement processes for specific industrial, recycling,

or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. As previously discussed, the County land use zoning designations are located in areas currently served by wastewater treatment facilities. Construction of the proposed improvement required pursuant to the project would either be ancillary to an existing use or estimates as part of future proposed land use; thus using existing or proposed on- and off-site sewer pipe improvements and connections to adequately connect to the LACSDs' sewer system. Construction relative to the wastewater system for the project would occur on properties with the land use zoning designations that are subject to the Green Zones Program. None of the improvements generate wastewater for offsite discharge. All required improvements would be verified through the permit approval process of obtaining a sewer capacity and connection permit from the LACSDs. Construction of the proposed improvements would involve minor alterations and modifications to existing industrial uses, and/or require more stringent standards of development for new sensitive uses proposed in vicinity of industrial, recycling and solid waste, or vehicle-related uses within areas of the unincorporated areas of the County or adjacent incorporated areas including sensitive uses. Construction would include installation of walls, fencing, setback, and landscaping in compliance with development standards during plan check including landscaping installation of plants from the LID drought tolerant plant list. A negligible amount of wastewater would be generated by construction workers. It is anticipated that portable toilets would be provided by the construction contractor(s) and the waste disposed of off-site. Wastewater generation from construction activities is not anticipated to cause a measurable increase in wastewater flows at a point where, and at a time when, a sewer's capacity is already constrained or that would cause a sewer's capacity to become constrained. In addition, construction and operation is not anticipated to generate wastewater flows that would substantially or incrementally exceed the future scheduled capacity of any one treatment plant by generating flows greater than those anticipated in the County's General Plan or other wastewater facilities planning documents. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses.

The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, ~~in close proximity to existing industrial uses permitted in the zones where they are located.~~ The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the project would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, ~~in close proximity~~ adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses. In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from existing conditions, such that they would cause significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. These measures to reduce the incompatibility of new sensitive uses with existing industrial uses through development standards such as construction of landscaping and planting trees, buffering, and open space would not cause the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. Therefore, the new development standards for New Sensitive Uses would result in less than significant impacts to utilities and service systems in relation to the construction of new

or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. The Recycling and Waste Management Revisions element of the Green Zones Program consists of the inclusion of standards for Specific Uses (revisions to existing Chapter 22.140) and would modify one section of Chapter 22.140 and introduces six new sections to the chapter, in Division 7 (Standards for Specific Uses) of Title 22 in relation to primary recycling and spoiled waste uses. Construction resulting from compliance with development standards would be minimal and would not substantially alter the existing conditions for existing recycling and waste management uses such that wastewater treatment facilities and capacity would be impacted. Construction of the proposed improvements would involve minor alterations and modifications to existing uses, and/or require more stringent standards of development for new uses proposed within these areas zoned for recycling and waste management of the unincorporated areas of the County. Construction would include installation of walls and barrier, and landscaping in compliance with development standards during plan check including landscaping installation of plants from the LID drought tolerant plant List. Requirements and features are designed to create barriers between industrial, recycling and solid waste, or vehicle-related uses and surrounding areas to sensitive uses. In addition, construction and operation is not anticipated to generate wastewater flows that would substantially or incrementally exceed the future scheduled capacity of any one treatment plant by generating flows greater than those anticipated in the County's General Plan or other wastewater facilities planning documents.

The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These development standards are ancillary to the land uses and would not produce wastewater. These construction improvement requirements are already subject to current development standards (Table 1.IV-1). ~~The proposed revisions would prohibit automobile dismantling yards Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in vessel organic waste facilities are prohibited in ARAs. would be prohibited from HMAs and SEAs. Additionally, pallet yards, chipping and grinding, and mulching facilities would be prohibited in HFHSZs and VHFHSZs, solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways, and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs.~~ Therefore, impacts to Recycling and Waste Management Revisions would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. No further analysis is warranted.

The Supermarket Accessory Recycling Collection Centers revisions would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Recycling collection center locations must be approved by the State of California as a Supermarket Site prior to application submittal. Supermarket

Accessory Recycling Collection Centers would be permitted in currently developed Supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials would be visible. The CalRecycle requirements are set forth to meet the County's waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be ~~constructed~~ established on existing parking lots, and no new structures would be built. Construction resulting from compliance with development standards would be minimal and would not substantially alter the existing conditions for existing recycling and waste management uses such that wastewater treatment facilities and capacity would be impacted. Construction of the proposed improvements would involve minor alterations and modifications to existing uses, and/or require more stringent standards of development for new uses proposed within these areas zoned for recycling and waste management of the unincorporated areas of the County. Requirements and features are designed to create barriers between industrial, recycling and solid waste, or vehicle-related uses and surrounding areas to sensitive uses. In addition, construction and operation is not anticipated to generate wastewater flows that would substantially or incrementally exceed the future scheduled capacity of any one treatment plant by generating flows greater than those anticipated in the County's General Plan or other wastewater facilities planning documents. Therefore, the Supermarket Accessory Recycling Collection Centers would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. Any new development or expansion of existing development would be required to meet the current development standards of the zone they are permitted in. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. Construction resulting from compliance with development standards would be minimal and would not substantially alter the existing conditions for existing recycling and waste management uses such that wastewater treatment facilities and capacity would be impacted. Construction of the proposed improvements would involve minor alterations and modifications to existing uses, and/or require more stringent standards of development for new uses proposed within these areas zoned for recycling and waste management of the unincorporated areas of the County. Construction would include installation of walls and barrier, and landscaping in compliance with development standards during plan check including landscaping installation of plants from the LID drought tolerant plant list. Requirements and features are designed to create barriers between industrial, recycling and solid waste, or vehicle-related uses and surrounding areas to sensitive uses. In addition, construction and operation is not anticipated to generate wastewater flows that would substantially or incrementally exceed the future scheduled capacity of any one treatment plant by generating flows greater than those anticipated in the County's General Plan or other wastewater facilities planning documents. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts to utilities and service systems in relation to the construction of new or expanded water treatment facilities or expansion of facilities, causing significant environmental effects. No further analysis is warranted.

- d) **Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?**

Existing Conditions

There are 50 solid waste diversion programs serving unincorporated areas, including composting, material, recovery facilities, household hazardous-waste collection, public education, recycling, source reduction, special-waste materials (e.g. tires and concrete/asphalt/rubble), and waste-to-energy programs and nine landfills serving the unincorporated areas (Table 2.19-3, *Landfills Serving Unincorporated Areas*).⁴²

**TABLE 2.19-3
LANDFILLS SERVING UNINCORPORATED AREAS**

Landfill and Location	Current Remaining Capacity, Cubic Yards	Estimated Close Date (based on current SWFP)	Maximum Daily Load (tons)	Average Daily Disposal, 2012 (tons)	Residual Daily Disposal Capacity (tons)
Antelope Valley Public Landfill, City of Palmdale	19,952,000	2042	1,800	832	968
Calabasas Sanitary Landfill, Community of Agoura, unincorporated Los Angeles County	12,338,000	2028	3,500	604	2,896
Chiquita Canyon Sanitary Landfill Community of Castaic, unincorporated Los Angeles County	6,020,000	2019	6,000	2,970	3,030
El Sobrante Landfill, City of Corona, Riverside County	145,530,000	2045	16,054	6,179	9,875
Lancaster Landfill and Recycling Center, City of Lancaster	14,491,000	2044	3,000	690	2,310
Olinda Alpha Sanitary Landfill, City of Brea, Orange County	38,578,383	2021	8,000	7,633	367
Scholl Canyon Landfill, City of Glendale	7,011,000	2030	3,400	675	2,725
Simi Valley Landfill & Recycling Center City of Simi Valley, Ventura County	119,600,000	2052	6,000	2,124	3,876
Sunshine Canyon City/County Landfill Community of Sylmar, City of Los Angeles	96,393,000	2037	12,100	7,221	4,879
Total¹	419,913,383	n/a	59,854	28,928	30,926

NOTE: Each of the nine landfills is open six days per week, Monday through Saturday, except for certain holidays.

¹ Some of the landfills described above have statutory limits as to what areas they can accept waste from.

Therefore, the totals are for comparison/information only and do not indicate disposal capacity for any specific region.

SOURCE: Los Angeles County General Plan Update EIR, County of Los Angeles (Table 5.17-20)

Threshold of Significance

The project would result in a significant impact if it results in the generation of solid waste in excess of State or County standards, or in excess of the capacity of local infrastructure, or impairs the attainment of solid waste reduction goals.

Impact Analysis

The potential for impacts has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts (please see Section 1, Table 1.IV-1, and Table 1.IV-2). The qualitative and geospatial analysis considers the incremental

⁴² County of Los Angeles. June 2014. General Plan Update Draft Environmental Impact Report, State Clearinghouse # 2011081042, Chapter 13: Public Services and Facilities Element. http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch13.pdf

changes to the physical environment as a result of new and/or revised development standards in relation to the historic and anticipated permits for affected uses. The proposed revisions to the development standards that have the potential result in physical changes in the environment include the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

Element 1 – Green Zone Districts

Green ~~Zones~~Zone Districts would result in less than significant impacts to utilities and service systems in relation to generation of solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in less than significant impacts to utilities and service systems in relation to generation of solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, ~~27~~ 28 parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, ~~14~~ 45 of the ~~27~~ 28 parcels proposed for a zone change within the Green ~~Zones~~Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green ~~Zones~~Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

The program requires the nonconforming uses to come into compliance within 3 to ~~7~~ 40 years of adoption of the Ordinance. The project area is currently served by 50 solid waste diversion programs serving unincorporated areas, including composting, material, recovery facilities, household hazardous-waste collection, public education, recycling, source reduction, special-waste materials and waste-to-energy programs and nine landfills serving the unincorporated areas. Construction of the project would be minimal and would be handled in compliance with all applicable federal, state, and local management and reduction statutes and regulations related to solid waste.

The County land use zoning designations are located in areas currently served by solid waste facilities. Construction of the proposed improvement required pursuant to the project would either be ancillary to an existing use or part of future proposed land use, thus using existing or proposed solid waste facilities serving the project site. Construction of the proposed improvements would involve minor alterations and modifications to existing industrial uses or require more stringent standards of development for new sensitive uses proposed in vicinity of industrial, recycling and solid waste, or vehicle-related within areas of the unincorporated areas of the County or adjacent incorporated areas including sensitive uses. Construction would include installation of walls, fencing, setback, and landscaping in compliance with development standards during plan check including landscaping installation of plants from the LID drought tolerant plant list. Construction relative to the solid waste for the project would occur on properties with the land use zoning designations that are subject to the Green Zones Program. All solid waste produced as a result of the required improvements would be properly disposed of in accordance with applicable federal, state, and local regulations and requirements pertaining to solid waste disposal. Construction and operation of the project would not substantially or incrementally exceed the future scheduled capacity of any solid waste facilities beyond what is anticipated in the County's General Plan or other facilities planning documents.

In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would result in significant impacts to utilities and service systems in relation to generation of solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. The new development standards or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in less than significant impacts to utilities and service systems in relation to generation of solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in less than significant impacts to utilities and service systems in relation to generation of solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. Construction of the project would be minimal and would be handled in compliance with all applicable federal, state, and local management and reduction statutes and regulations related to solid waste.

The County land use zoning designations are located in areas currently served by solid waste facilities. Construction of the proposed improvement required pursuant to the project would either be ancillary to an existing use or part of future proposed land use, thus using existing or proposed solid waste facilities serving the project site. Construction of the proposed improvements would involve minor alterations and modifications to existing industrial uses or require more stringent standards of development for new sensitive uses proposed in vicinity of industrial, recycling and solid waste, or vehicle-related within areas of the unincorporated areas of the County or adjacent incorporated areas including sensitive uses. Construction would include installation of walls, fencing, setback, and landscaping in compliance with development standards during plan check including landscaping installation of plants from the LID drought tolerant plant list. Construction relative to the solid waste for the project would occur on properties with the land use zoning designations that are subject to the Green Zones Program. All solid waste produced as a result of the required improvements would be properly disposed of in accordance with applicable federal, state, and local regulations and requirements pertaining to solid waste disposal. Construction and operation of the project would not substantially or incrementally exceed the future scheduled capacity of any solid waste facilities beyond what is anticipated in the County's General Plan or other facilities planning documents.

Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, ~~in close proximity to existing industrial uses, permitted in the zones where they are located.~~ The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the project would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, ~~in close proximity adjacent to or adjoining~~ legally-established, existing industrial, recycling or solid waste, or vehicle-related uses. In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from existing conditions, such that they would result in significant impacts to utilities and service systems in relation to generation of solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. These measures to reduce the incompatibility of new sensitive uses with existing industrial

uses through development standards such as construction of landscaping and planting trees, buffering, and open space would result in less than significant impacts to utilities and service systems in relation to generation of solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. Therefore, the new development standards for New Sensitive Uses would result in less than significant impacts to utilities and service systems in relation to generation of solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in less than significant impacts to utilities and service systems in relation to generation of solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. Construction of the project would be minimal and would be handled in compliance with all applicable federal, state, and local management and reduction statutes and regulations related to solid waste.

The County land use zoning designations are located in areas currently served by solid waste facilities. Construction of the proposed improvement required pursuant to the project would either be ancillary to an existing use or estimates as part of future proposed land use; thus, using existing or proposed solid waste facilities serving the project site. Construction of the proposed improvements would involve minor alterations and modifications to existing industrial uses, and/or require more stringent standards of development for new sensitive uses proposed in vicinity of industrial, recycling and solid waste, or vehicle-related within areas of the unincorporated areas of the County or adjacent incorporated areas including sensitive uses. Construction would include installation of walls, fencing, setback, and landscaping in compliance with development standards during plan check including landscaping installation of plants from the LID drought tolerant plant list. Construction relative to the solid waste for the project would occur on properties with the land use zoning designations that are subject to the Green Zones Program. All solid waste produced as a result of the required improvements would be properly disposed of in accordance with applicable federal, state, and local regulations and requirements pertaining to solid waste disposal. Construction and operation of the project would not substantially or incrementally exceed the future scheduled capacity of any solid waste facilities than those anticipated in the County's General Plan or other facilities planning documents.

The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards (Table 1.IV-1). ~~The proposed revisions would prohibit automobile dismantling yards Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in-vessel organic waste facilities are prohibited in ARAs. would be prohibited from HMAs and SEAs. Additionally, pallet yards, chipping and grinding, and mulching facilities would be prohibited in HFHSZs and VHFHSZs, solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways, and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs.~~ Therefore, impacts to Recycling and Waste Management Revisions would result in less than significant impacts to utilities and service systems in relation to generation of solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. No further analysis is warranted.

The Supermarket Accessory Recycling Collection Centers revisions would result in less than significant impacts to utilities and service systems in relation to generation of solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service

store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Recycling collection center locations must be approved by the State of California as a supermarket site prior to application submittal. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones, would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials would be visible. The CalRecycle requirements are set forth to meet the County’s waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be constructed on existing parking lots, and no new structures would be built.

Construction of the project would be minimal and would be handled in compliance with all applicable federal, state, and local management and reduction statutes and regulations related to solid waste. The County land use zoning designations are located in areas currently served by solid waste facilities. Construction of the proposed improvement required pursuant to the project would either be ancillary to an existing use or part of a future proposed land use, thus using existing or proposed solid waste facilities serving the project site. Construction of the proposed improvements would involve minor alterations and modifications to existing industrial uses, and/or require more stringent standards of development for new sensitive uses proposed in vicinity of industrial, recycling and solid waste, or vehicle-related within areas of the unincorporated areas of the County or adjacent incorporated areas including sensitive uses. Construction would include installation of walls, fencing, setback, and landscaping in compliance with development standards during plan check including landscaping installation of plants from the LID drought tolerant plant list. Construction relative to the solid waste for the project would occur on properties with the land use zoning designations that are subject to the Green Zones Program. All solid waste produced as a result of the required improvements would be properly disposed of in accordance with applicable federal, state, and local regulations and requirements pertaining to solid waste disposal. Construction and operation of the project would not substantially or incrementally exceed the future scheduled capacity of any solid waste facilities beyond what is anticipated in the County’s General Plan or other facilities planning documents. Therefore, the Supermarket Accessory Recycling Collection Centers would result in less than significant impacts to utilities and service systems in relation to generation of solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts to utilities and service systems in relation to generation of solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. Any new development or expansion of existing development would be required to meet the current development standards of the zone they are permitted in. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development.

Construction of the project would be minimal and would be handled in compliance with all applicable federal, state, and local management and reduction statutes and regulations related to solid waste. The County land use zoning

designations are located in areas currently served by solid waste facilities. Construction of the proposed improvements required pursuant to the project would either be ancillary to an existing use or part of a future proposed land use, thus using existing or proposed solid waste facilities serving the project site. Construction of the proposed improvements would involve minor alterations and modifications to existing industrial uses, and/or require more stringent standards of development for new sensitive uses proposed in vicinity of industrial, recycling and solid waste, or vehicle-related within areas of the unincorporated areas of the County or adjacent incorporated areas including sensitive uses. Construction would include installation of walls, fencing, setback, and landscaping in compliance with development standards during plan check including landscaping installation of plants from the LID drought tolerant plant list. Construction relative to the solid waste for the project would occur on properties with the land use zoning designations that are subject to the Green Zones Program. All solid waste produced as a result of the required improvements would be properly disposed of in accordance with applicable federal, state, and local regulations and requirements pertaining to solid waste disposal. Construction and operation of the project would not substantially or incrementally exceed the future scheduled capacity of any solid waste facilities beyond what is anticipated in the County's General Plan or other facilities planning documents. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts to utilities and service systems in relation to generation of solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. No further analysis is warranted.

e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Existing Conditions

California Integrated Waste Management Act. Solid waste management in the state is primarily guided by the California Integrated Waste Management Act of 1989 (AB 939), which emphasizes resource conservation through reduction, recycling, and reuse of solid waste. AB 939 establishes an integrated waste management hierarchy consisting of (in order of priority): (1) source reduction, (2) recycling and composting, and (3) environmentally safe transformation and land disposal.

County of Los Angeles General Plan. On October 21, 2014, the Board approved the Roadmap to a Sustainable Waste Management Future Interdepartmental Sustainable Waste Management Future, The Roadmap creates measures to significantly reduce, and over the course of time, eliminate waste. The Roadmap includes materials previously characterized as waste to be reduced, reused, or recycled, decreasing volume of material would remain for disposal. The Roadmap focuses on the unincorporated areas, as well as regional/countywide and County-owned and/or operated facilities and offices, and County-sponsored events.⁴³

The County includes following four strategies in the Roadmap; (1) Programs and Services; (2) Measuring Results; (3) Facilities and Infrastructure; and (4) Outreach and Education. These four strategies establish a framework for the implementation of specific initiatives. Through the implementation of the Roadmap, the County's goal is to maximize the recovery of products, materials, and energy from waste that would otherwise be disposed of at landfills, and achieve the following:⁴⁴

- 80 percent diversion from landfills by 2025
- 90 percent diversion from landfills by 2035
- 95+ percent diversion from landfills by 2045

The County of Los Angeles General Plan includes Policies related to solid waste:

Policy PS/F 5.1: Maintain an efficient, safe and responsive waste management system that reduces waste while protecting the health and safety of the public.

⁴³ Los Angeles County Department of Regional Planning. January 2014. Los Angeles County General Plan Public Review Draft: Chapter 13: Public Services and Facilities Element. http://planning.lacounty.gov/assets/upl/project/gp_2035_Chapter13_2014.pdf

⁴⁴ Los Angeles County Department of Regional Planning. January 2014. Los Angeles County General Plan Public Review Draft: Chapter 13: Public Services and Facilities Element. http://planning.lacounty.gov/assets/upl/project/gp_2035_Chapter13_2014.pdf

Policy PS/F 5.2: Ensure adequate disposal capacity by providing for environmentally sound and technically feasible development of solid waste management facilities, such as landfills and transfer/processing facilities.

Policy PS/F 5.3: Discourage incompatible land uses near or adjacent to solid waste disposal facilities identified in the Countywide Integrated Waste Management Plan.⁴⁵

Threshold of Significance

The project would have a significant effect on the environment if it facilitates or exacerbates noncompliance with federal, state, and local statutes and regulations related to management or reduction of solid waste.

Impact Analysis

The project would result in no impacts to utilities and service systems in relation to compliance with federal, state, and local statutes and regulations related to solid waste. The purpose of the Green Zones Program is to address incompatible land uses in proximity to sensitive uses by changing regulatory requirements for specific industrial land uses. These measures would be required where the Ordinance implements new standards for existing industrial uses, or in the case of new industrial uses, such as new recycling processing facilities and new organic waste facilities. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, as they would be minor additions to existing industrial land uses. The Green Zone Districts Program has been developed in compliance with the County's policies that pertain to solid waste including, maintenance of an efficient, safe and responsive waste management system that reduces waste while protecting the health and safety of the public; ensuring adequate disposal capacity by providing for environmentally sound and technically feasible development of solid waste management facilities, such as landfills and transfer/processing facilities; and discourage incompatible land uses near or adjacent to solid waste disposal facilities identified in the Countywide Integrated Waste Management Plan and specifically addressed recycling and waste diversion facilities and requirements within the project area. Therefore, there would be no impacts to utilities and service systems related to compliance with federal, state, and local management and reduction statutes and regulations related to solid waste. No further analysis is warranted.

Element 1 – Green Zone Districts

Green ~~Zones~~Zone Districts would result in no impacts to utilities and services related to complying with federal, state, and local management and reduction statutes and regulations related to solid waste. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to Utilities and Services related to complying with federal, state, and local management and reduction statutes and regulations related to solid waste. Currently the zoning and land use designations for the eleven districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, 27 28 parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, 14 45 of the 27 28 parcels proposed for a zone change within the Green ~~Zones~~Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green ~~Zones~~Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards,

⁴⁵ Los Angeles County Department of Regional Planning. January 2014. Los Angeles County General Plan Public Review Draft: Chapter 13: Public Services and Facilities Element. http://planning.lacounty.gov/assets/upl/project/gp_2035_Chapter13_2014.pdf

access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to 740 years of adoption of the Ordinance.

The purpose of the Green Zones Program is to address incompatible land uses in proximity to sensitive uses by changing regulatory requirements for specific industrial land uses. These measures would be required where the Ordinance implements new standards for existing industrial uses, or in the case of new industrial uses, such as new recycling processing facilities and new organic waste facilities. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, as they would be minor additions to existing industrial land uses. The Green Zone Districts Program would be developed in compliance with the County's policies pertain to solid waste including, maintain an efficient, safe and responsive waste management system that reduces waste while protecting the health and safety of the public; ensuring adequate disposal capacity by providing for environmentally sound and technically feasible development of solid waste management facilities, such as landfills and transfer/processing facilities; and discourage incompatible land uses near or adjacent to solid waste disposal facilities identified in the Countywide Integrated Waste Management Plan and specifically addressed recycling and waste diversion facilities and requirements within the project area.

In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would cause a significant to utilities and service systems in relation to compliance with federal, state, and local statutes and regulations related to solid waste. The new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to utilities and service systems related to compliance with federal, state, and local management and reduction statutes and regulations related to solid waste. The Green Zone District would be developed in compliance with all Federal, States and Local policies pertaining to solid waste. Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to Utilities and Services related to complying with federal, state, and local management and reduction statutes and regulations related to solid waste. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in no impacts to Utilities and Services related to complying with federal, state, and local management and reduction statutes and regulations related to solid waste. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, in close proximity to existing industrial uses, permitted in the zones where they are located. The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). As discussed in Section 4, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130). These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses.

~~The purpose of the Green Zones Program is to address incompatible land uses in proximity to sensitive uses by changing regulatory requirements for specific industrial land uses. These measures would be required where the Ordinance implements new standards for existing industrial uses, or in the case of new industrial uses, such as new recycling processing facilities and new organic waste facilities. In the case of updated standards for existing industrial uses, the~~

~~construction of these measures would not differ substantially from existing conditions, as they would be minor additions to existing industrial land uses. The Green Zone Districts Program would be developed in compliance with the County's policies pertain to solid waste including, maintain an efficient, safe and responsive waste management system that reduces waste while protecting the health and safety of the public; ensuring adequate disposal capacity by providing for environmentally sound and technically feasible development of solid waste management facilities, such as landfills and transfer/processing facilities; and discourage incompatible land uses near or adjacent to solid waste disposal facilities identified in the Countywide Integrated Waste Management Plan and specifically addressed recycling and waste diversion facilities and requirements within the project area. These measures to reduce the incompatibility of new sensitive uses with existing industrial uses through development standards such as construction of landscaping and planting trees, buffering, and open space, would not cause significant impacts to Utilities and Services related to complying with federal, state, and local management and reduction statutes and regulations related to solid waste. Therefore, the new development standards for New Sensitive Uses would result in no impacts to utilities and services related to complying with federal, state, and local management and reduction statutes and regulations related to solid waste. No further analysis is warranted.~~

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in no impacts to Utilities and Services related to complying with federal, state, and local management and reduction statutes and regulations related to solid waste. The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards (Table 1.IV-1). ~~The proposed revisions will prohibit automobile dismantling yards~~ Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited from HMAs, SEAs, and VHFHSZs SEAs. Additionally, pallet yards, chipping and grinding, and mulching facilities would be prohibited in vessel HFHSZs and VHFHSZs, solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways, and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities ~~are~~ would be prohibited in ARAs.

~~The purpose of the Green Zones Program is to address incompatible land uses in proximity to sensitive uses by changing regulatory requirements for specific industrial land uses. These measures would be required where the Ordinance implements new standards for existing industrial uses, or in the case of new industrial uses, such as new recycling processing facilities and new organic waste facilities. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, as they would be minor additions to existing industrial land uses. The Green Zone Districts Program would be developed in compliance with the County's policies pertain to solid waste including, maintain an efficient, safe and responsive waste management system that reduces waste while protecting the health and safety of the public; ensuring adequate disposal capacity by providing for environmentally sound and technically feasible development of solid waste management facilities, such as landfills and transfer/processing facilities; and discourage incompatible land uses near or adjacent to solid waste disposal facilities identified in the Countywide Integrated Waste Management Plan and specifically addressed recycling and waste diversion facilities and requirements within the project area.~~

Therefore, ~~impacts to~~ Recycling and Waste Management Revisions would ~~have~~ behave no impacts to Utilities and Services related to complying with federal, state, and local management and reduction statutes and regulations related to solid waste. No further analysis is warranted.

The Supermarket Accessory Recycling Collection Centers revisions would result in no impacts to Utilities and Services related to complying with federal, state, and local management and reduction statutes and regulations related to solid waste. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains

a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Recycling collection center locations must be approved by the State of California as a Supermarket Site prior to application submittal. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed Supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an assessor use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County’s waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be ~~constructed~~ established on existing parking lots, and no new structures will be built.

The purpose of the Green Zones Program is to address incompatible land uses in proximity to sensitive uses by changing regulatory requirements for specific industrial land uses. These measures would be required where the Ordinance implements new standards for existing industrial uses, or in the case of new industrial uses, such as new recycling processing facilities and new organic waste facilities. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, as they would be minor additions to existing industrial land uses. The Green Zone Districts Program would be developed in compliance with the County’s policies pertain to solid waste including, maintain an efficient, safe and responsive waste management system that reduces waste while protecting the health and safety of the public; ensuring adequate disposal capacity by providing for environmentally sound and technically feasible development of solid waste management facilities, such as landfills and transfer/processing facilities; and discourage incompatible land uses near or adjacent to solid waste disposal facilities identified in the Countywide Integrated Waste Management Plan and specifically addressed recycling and waste diversion facilities and requirements within the project area. Therefore, the Supermarket Accessory Recycling Collection Centers would have no impacts to Utilities and Services related to complying with federal, state, and local management and reduction statutes and regulations related to solid waste. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to Utilities and Services related to complying with federal, state, and local management and reduction statutes and regulations related to solid waste. Any new development or expansion of existing development would be required to meet the current development standards of the zone they are permitted in. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development.

The purpose of the Green Zones Program is to address incompatible land uses in proximity to sensitive uses by changing regulatory requirements for specific industrial land uses. These measures would be required where the Ordinance implements new standards for existing industrial uses, or in the case of new industrial uses, such as new recycling processing facilities and new organic waste facilities. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, as they would be minor additions to existing industrial land uses. The Green Zone Districts Program would be developed in compliance with the County’s policies pertain to solid waste including, maintain an efficient, safe and responsive waste management system that reduces waste while protecting the health and safety of the public; ensuring adequate disposal capacity by providing for

environmentally sound and technically feasible development of solid waste management facilities, such as landfills and transfer/processing facilities; and discourage incompatible land uses near or adjacent to solid waste disposal facilities identified in the Countywide Integrated Waste Management Plan and specifically addressed recycling and waste diversion facilities and requirements within the project area. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in no impacts to Utilities and Services related to complying with federal, state, and local management and reduction statutes and regulations related to solid waste. No further analysis is warranted.

2.20. WILDFIRE

This analysis is undertaken to determine if the proposed program may have a significant impact related to wildfire, thus requiring the consideration of mitigation measures or alternatives in accordance with Section 15063 of the State CEQA Guidelines.¹ The analysis covers all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated with regard to the Safety Element of the Los Angeles County General Plan 2035,² data available on the County Fire Department³ and the California Department of Forestry and Fire Protection (CAL FIRE),⁴ Fire and Resource Assessment Program (FRAP) websites,⁵ Title 22 Ordinance,⁶ Hillside Management Area Ordinance,⁷ and Hillside Design Guidelines.⁸

Los Angeles County faces wildland fire threats due to its climate, topography, rainfall patterns, and fire adapted vegetation. Title 20 (Utilities), Title 21 (Subdivisions), Title 26 (Building Code), and Title 32 (Fire Code) of the Los Angeles County Code establish fire-related land use and building regulations in Los Angeles County.^{9,10}

Definitions

Fire Hazard Severity Zone (FHSZ): FHSZs are CAL FIRE mapped zones/areas of significant fire hazards (based on fuels, terrain, weather, and other relevant factors) that have been designated as FHSZs per Government Code Sections 51175–51189 and are subject to additional development and maintenance standards that influence how people construct buildings and protect property to reduce risk associated with wildland fires.¹¹ FHSZs in the unincorporated areas are classified as Very High, High, and Moderate in State Responsibility Areas (SRAs) and Very High in Local (LRAs) and Federal Responsibility Areas (FRAs). The Forestry Division of the Los Angeles County Fire Department (Fire Department) assists and supports the implementation of the CAL FIRE FHSZ model designation in Los Angeles County. In an effort to reduce the threats to lives and property, the Fire Department has instituted a variety of regulatory programs and standards, including vegetation management, pre-fire management and planning, the fuel modification Plan Review Program, fuel modification guidelines, and brush clearance inspection program.¹² In addition to these programs, the Fire Department and DPW enforce fire and building codes related to development in FHSZs. The Fire Department implements the Title 32 (Fire Code) requirements in FHSZs.

Fuel Modification Plans: Fuel modification plans are required for development projects within areas designated as a FHSZ within the SRAs or Very High Fire Hazard Severity Zone (VHFHSZ) within the LRAs, as described in Title 32,

Fire, Section 4908. The fuel modification plan identifies specific zones within a property that are subject to fuel modification. A fuel modification zone is a strip of land where combustible native or ornamental vegetation has been modified and/or partially or totally replaced with drought-tolerant, low-fuel-volume plants.

Operational Area Emergency Response Plan (OAERP): The OAERP, which is prepared by County's Chief Executive Office - Office of Emergency Management, strengthens short and long-term emergency response and recovery capability, and identifies emergency procedures and emergency management routes in Los Angeles County.¹³

Responsibility Areas:

Federal Responsibility Area (FRA): The 2018-2023 California Master Cooperative Wildland Fire Management and Stafford Act Response Agreement between the US Department of the Interior, US Department of Agriculture, and CAL FIRE states that FRAs are the areas where federal agencies are primarily responsible for wildland fire protection and suppression under various federal laws. Direct Protection Areas (DPAs) are areas where, regardless of jurisdiction, wildland fire protection responsibilities are negotiated created and agreed to by the administrative units of either the federal agencies or the State. The protection responsibility of SRAs and FRAs within DPA boundaries are developed, reviewed, and updated as a part of the annual operating plan, although federal resources are available to assist in wildland fire activities in SRAs and State resources are available to assist in wildland fire activities in the FRAs.¹⁴

State Responsibility Area (SRA): SRAs are areas where CAL FIRE has legal responsibility for wildland fire protection. SRAs are defined in Public Resources Code 4125-4137 as lands classified by the State Board of Forestry as areas where it is the primary financial responsibility of the State to prevent and suppress fires. Such lands are: (1) exclusive of incorporated cities and federal lands regardless of ownership, (2) covered wholly or in part by timber, brush, undergrowth or grass, whether of commercial value or not, which protect the soil from erosion, retard runoff of water, or accelerated percolation, and (3) used principally for range or forage purposes. SRAs do not exceed a housing density of 3 units per acre, contain wildland vegetation as opposed to agriculture or ornamentals, and have watershed value and/or has range/forage value, effectively eliminating most desert lands.¹⁵

Local Responsibility Area (LRA): LRAs are defined in Assembly Bill 337 (Bates, 1992), which amended Government Code 51175-51188 to require CAL FIRE, in cooperation with local fire authorities, to identify and map VHFHSZs within LRAs in California. Twenty-five counties contain VHFHSZs and thirty-three do not. Once CAL FIRE identifies the VHFHSZs, they are to notify the local authority, who then has the option of adopting the model ordinance developed by the State Fire Marshal, adding to or subtracting areas from the identified zone(s), indicating that they already "meet or exceed" the Bates minimums, or some combination of these. Subsequent amendments such as AB 3819, AB 1216, and SB 1369 provide additional regulatory requirements including roof requirements, clearances around structures, and other fire defense improvements in VHFHSZs in LRAs. Where the lands in the State are designated as LRAs, as within cities and other classified unincorporated areas, all fire protection responsibility rests with the established local government entity.¹⁶

Vegetation Management Program (VMP): The VMP is a cost-sharing program that focuses on the use of prescribed fire, hand crews, mechanical, biological and chemical means, for addressing wildland fire fuel hazards, habitat restoration and other resource management issues on SRA and LRA lands.¹⁷ VMP allows private landowners, state and conservancy

entities to enter into a contract with CAL FIRE to accomplish a combination of fire protection and resource management goals, including in open space areas. The Fire Department Forestry Division's Vegetation Management Unit and the Air and Wildland Division's Prescribed Fire Office implement VMP projects. Vegetation management, as it relates to wildland fire, refers to the total or partial removal of high fire hazard grasses, shrubs, or trees. This includes thinning to reduce the amount of fuel and modification of vegetation arrangement and distribution to disrupt fire progress. In addition to fire hazard reduction, vegetation management has other benefits. These include increased water yields, habitat restoration and improvement, reduction of invasive exotic plant species, and open access for recreational purposes.

Very High Fire Hazard Severity Zones (VHFHSZ): VHFHSZs are woodland and brush areas with high fire potential.¹⁸ Land development plan check review and approvals located within the VHFHSZ shall be performed in accordance with Section 4908 of Title 32. There are two policies in the County General Plan related to VHFHSZs:

- Policy LU 11.6: Ensure that subdivisions in VHFHSZs site open space to minimize fire risks, as feasible.
- Policy S 3.1: Discourage high density and intensity development in VHFHSZs.

Wildland-Urban Interface (WUI): The WUI is an area where human made structures and infrastructure are in or adjacent to areas prone to wildfire.¹⁹

	<i>Potentially Significant Impact</i>	<i>Less than Significant Impact with Mitigation Incorporated</i>	<i>Less than Significant Impact</i>	<i>No Impact</i>
If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Existing Conditions

The total project footprint area consists of 135,383 parcels, of which 30,510 parcels (22.5 percent) are subject to wildfires, based on 1,541 historical fires that intersect these parcels of the project footprint (Table 2.20-1, *Wildfire History*). As discussed in Section 2.9, *Hazards and Hazardous Materials*, approximately 29.1 percent of the total project footprint is located in areas within a FHSZ in an LRA, SRA, or FRA. ~~Zero~~None of these parcels are subject to the Green Zone Districts element (Table 2.9-4, *Fire Hazard Severity Zones*; Figure 2.9-4, *Los Angeles County Fire Hazard Severity Zones and Responsibility*).

**TABLE 2.20-1
WILDFIRE HISTORY**

Project Areas	Historical Wildfires in Parcels (1878–2018)
Project footprint	35,383
All areas subject to wildfires within the project footprint	30,510 (22.5%)

The Safety Element of the Los Angeles County General Plan 2035 designates at-risk areas as FHSZs per government code sections 51175–51189.²⁰ In the unincorporated areas of the County, SRAs have been classified as Very High, High and Moderate. However, Local and Federal Responsibility Areas are classified as Very High. The Forestry Division of the Los Angeles County Fire Department (Fire Department) assists, supports, and institutes a variety of regulatory programs and standards. These programs and standards include vegetation management, pre-fire management and planning, fuel modification plan review program, and brush clearance inspections.

Section V (Emergency Response) of the Safety Element of the Los Angeles County General Plan states the provision of disaster routes (Figure 2.20-1, *Los Angeles County Operational Area Disaster Routes*) through the OAERP.²¹ When emergency response or evacuation orders are issued, evacuation routes, temporary shelter facilities, public alerts and warnings plus procedures would be provided by County Sheriff and Fire personnel based on the disaster to facilitate the evacuation process.²² The County Department of Public Works (Public Works) maintains a list of disaster routes in the Los Angeles County Operational Area by city that have been preidentified for use during times of crisis.²³

The Fire Department provides fire, safety, and emergency medical services to the unincorporated areas. The County's Fire Department assist and supports the implementation of the CAL FIRE FHSZs model in Los Angeles County. In an effort to reduce the threats to lives and property, the Fire Department has instituted a variety of regulatory programs and standards. These include vegetation management, pre-fire management and planning, fuel modification Plan Review Program, and brush clearance inspection program. In addition to these programs, the Fire Department and Public Works enforce fire and building codes related to development in FHSZs. The Fire Department implements the Title 32 (Fire Code) requirements in FHSZs. In addition, the Fire Department, in conjunction with the Strategic Fire Plan as part of the Safety Element of the County General Plan,²⁴ identifies and prioritizes pre- and post-fire management strategies and tactics to reduce loss of life, property, and natural resources.^{25 26}

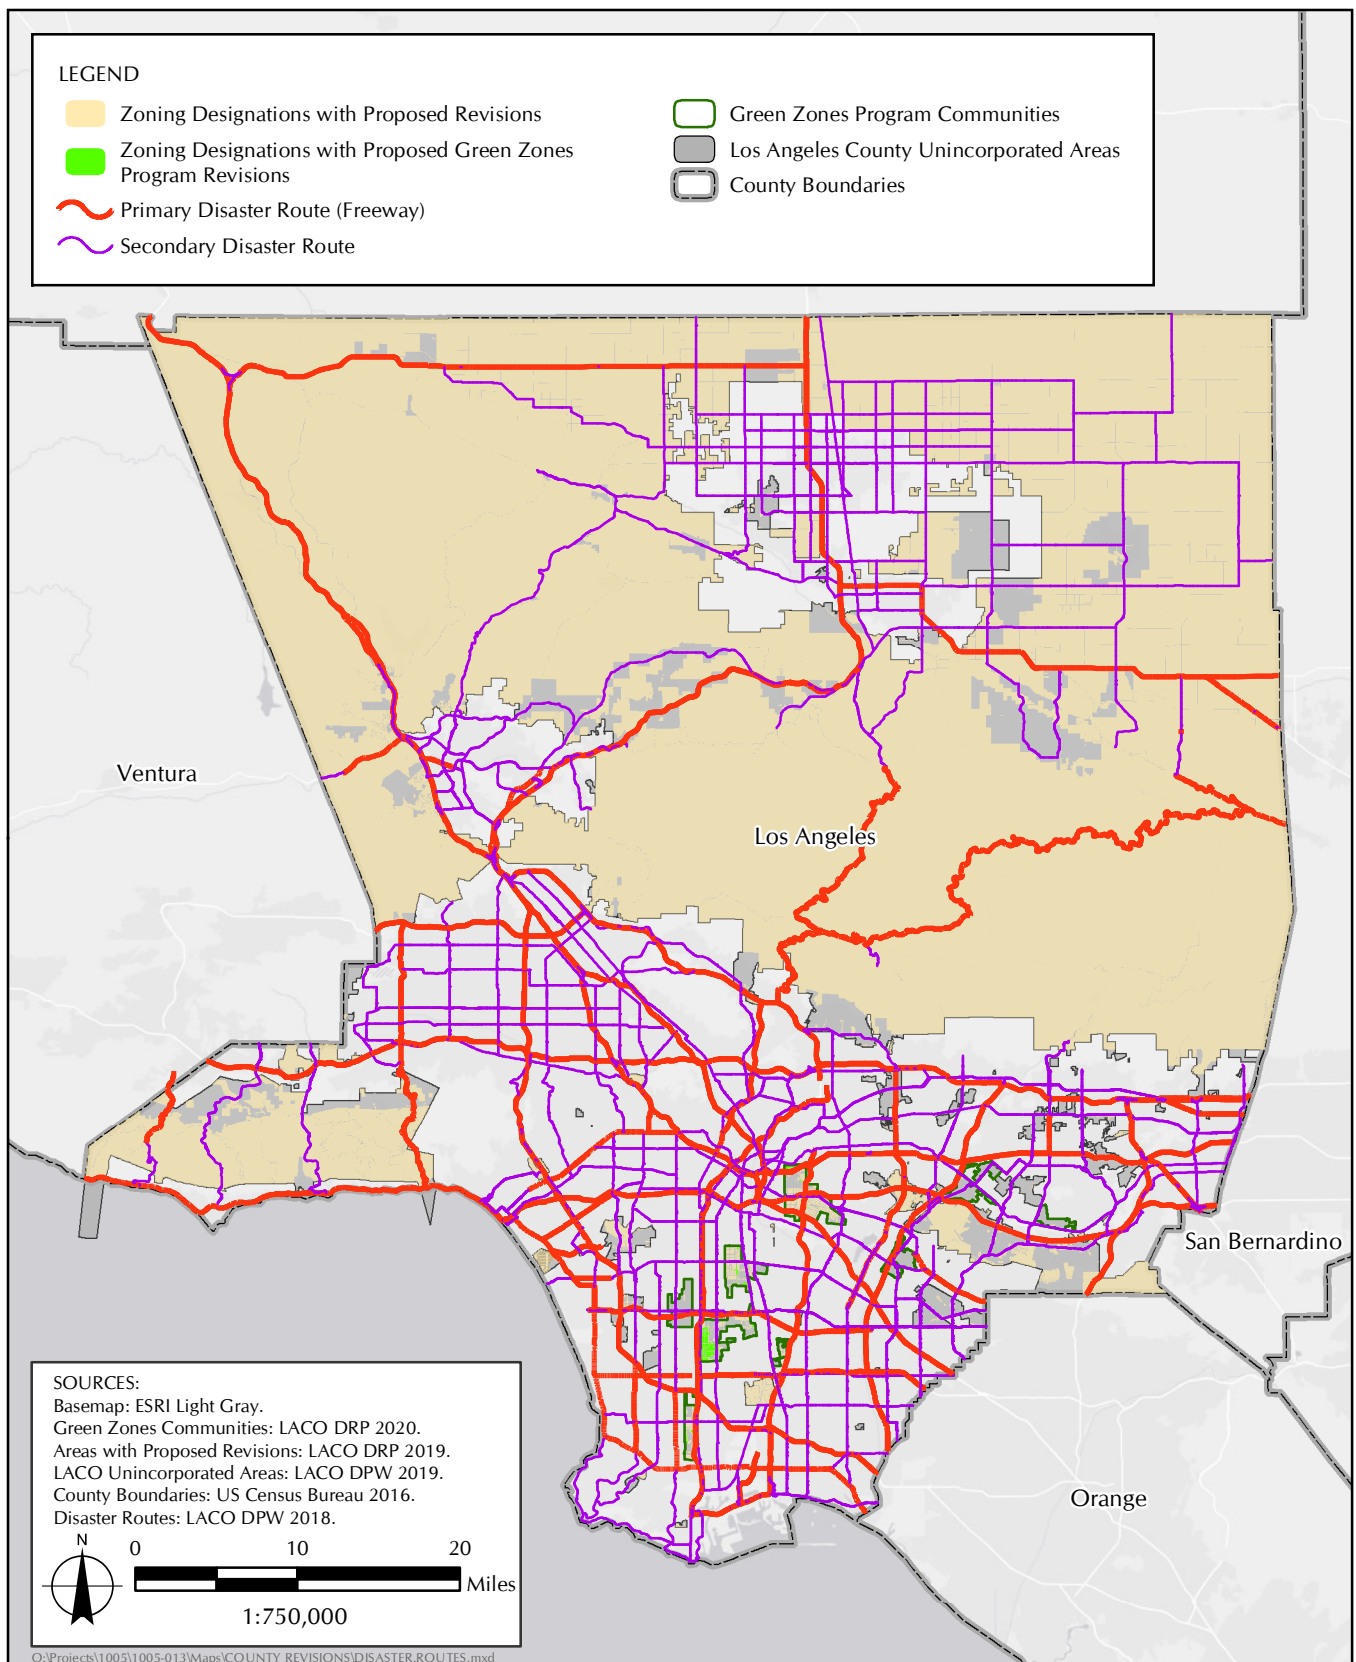

FIGURE 2.20-1
 Los Angeles County Operational Area Disaster Routes

Fire prevention, as it relates to FHSZs and as identified in the General Plan, per the County's fire code as well as land use and building regulations (Title 20, 21, 26, and 32) include fire access and clearance road standards for equipment and public evacuation, access and circulation standards, fire flow and fire hydrant standards, brush clearances around structures within hillsides that are fire prone, fuel modification, defensible spaces, utility easement access for fire protection, building standards within WUI, plan review and approval process for land development projects within VHFHSZs, and integrated VMP.²⁷

The Strategic Fire Plan includes the County of Los Angeles Fire Department Operations Bureau Map, which indicates that emergency services are available in all unincorporated areas of the County. Additionally, many cities within Los Angeles County utilize Fire Department services. There are three major geographic regions in the Fire Department service area, which are divided into nine divisions and 22 battalions.²⁸ The OAERP strengthens short and long-term emergency response and recovery capability and identifies emergency procedures and emergency management routes in Los Angeles County.

Upon review of the County's General Plan 2035 and the proposed program, the parcels that would be subject to the Green Zone Districts are located outside the HMA (Figure 2.1-2, *Slope*).²⁹ Based on the *Hillside Management Areas and Ridgeline Management Map* in the County General Plan 2035, no County designated significant ridgelines are located within the Green Zone Districts, but the project footprint is within HMAs of both 25–50 percent slope and 50 percent-plus slope (see Figure 2.1-2).³⁰

Threshold of Significance

The purpose of the Green Zones Program is to address incompatible land uses in proximity to sensitive uses by changing regulatory requirements for specific industrial land uses. A substantial adverse effect on wildfire risk would normally occur as a result of a physical change in the environment that would exacerbate or expose people to significant risk of loss, injury or death involving wildfires. More specifically, a significant impact would occur if roadways designated as evacuation routes on an adopted emergency response plan or emergency evacuation plan were obstructed.

Impact Analysis

The proposed program would result in less than significant impacts related to wildfire as a result of the impairment of adopted emergency response and emergency evacuation plans in or near SRAs or lands classified as VHFHSZ. The potential for impacts in relation to the impairment of emergency response plans or evacuation routes has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated (please see Section 1, *Project Description*, Table 1.IV-1, *Planning and Permitting Requirements*, and Table 1.IV-2, *Development Standards*). The analysis considers the incremental changes to the physical environment as a result of new and/or revised development standards, in relation to the historic and anticipated permits for affected uses. The proposed revisions to the development standards that have the potential result in physical changes in the environment that might have the potential to impair emergency response plans or evacuation routes include the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

³⁰ Los Angeles County Department of Regional Planning. May 2014. Figure 9.8: Hillside Management Areas and Ridgeline Management Map. In the Los Angeles County General Plan 2035. Available at <http://planning.lacounty.gov/generalplan/figures2015>

Element 1 – Green Zone Districts

Green ~~Zones~~Zone Districts would result no impacts related to wildfire as a result of the impairment of adopted emergency response and emergency evacuation plans in or near SRAs or lands classified as VHFHSZs. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to wildfire as a result of the impairment of adopted emergency response and emergency evacuation plans in or near SRAs or lands classified as VHFHSZs. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, 27 28 parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, 14 45 of the 27 28 parcels proposed for a zone change within the Green ~~Zones~~Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green ~~Zones~~Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a Conditional Use Permit. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to ~~740~~ years of adoption of the Ordinance. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would obstruct or impair access in regards to emergency response and evacuation plans because the proposed improvements are not located in or near SRAs or classified as VHFHSZs or classified as other levels of FHSZs (see Table 2.9-1; Figure 2.20-1). These measures such as construction of solid walls and planting trees would comply with enclosure standards including site setback, maintenance and operation standards, and access and vehicle circulation standards, that would avoid rather than obstruct or impair emergency response plans or evacuation routes. In addition, improvements would be accomplished within the properties and would not require lane closures or other temporary impairment of emergency response plans or evacuation routes.

The new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to impairment of emergency response plans or evacuation routes within HMAs. None of the Green Zone Districts are located within the areas designated as HMAs within the County General Plan 2035. The proposed program would have no impact on the integrity of these hillsides in relation to emergency response plans or evacuation routes, as the Green Zones Program would comply with the HMA Ordinance and Hillside Design Guidelines.³¹ Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to impairment of adopted emergency response plans and emergency evacuation routes in or near SRAs or lands classified as VHFHSZs. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in no impacts related to wildfire as a result of the impairment of adopted emergency response and emergency evacuation plans in or near SRAs or lands classified as VHFHSZs. Public Works maintains a list of disaster routes in the Los Angeles County Operational Area by city that have been preidentified for

³¹ Los Angeles County. Adopted 6 October 2015. Chapter 9: Conservation and Natural Resources Element. In the Los Angeles County General Plan 2035. Available at http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch9.pdf

use during times of crisis.³² When emergency response or evacuation orders are issued, evacuation routes, temporary shelter facilities, public alerts and warnings plus procedures would be provided by County Sheriff and Fire personnel based on the disaster to facilitate the evacuation process.³³ These new development standards would not impair or obstruct adopted emergency response plans and emergency evacuation routes in or near SRAs or lands classified as VHFHSZs. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, ~~in close proximity to existing industrial uses, permitted in the zones where they are located.~~ The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, ~~in close proximity adjacent to or adjoining legally-established,~~ existing industrial, recycling or solid waste, or vehicle-related uses. In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from existing conditions, such that they would obstruct or impair adopted emergency response plans and emergency evacuation routes because fire, safety and emergency medical services are provided to all the unincorporated areas of the county and some cities within the County that utilize Fire Department services.³⁴ The OAERP strengthens short and long-term emergency response and recovery capability, and identifies emergency procedures and emergency management routes in Los Angeles County. These measures to reduce the incompatibility of new sensitive uses with existing industrial uses through development standards such as construction of landscaping and planting trees, buffering, and open space, would not obstruct or impair adopted emergency response plans and emergency evacuation routes.

The proposed New Sensitive Uses would have no impact on the integrity of these hillsides in relation to emergency response plans or evacuation routes, as the development standards for New Sensitive Uses within the HMAs would be required to comply with the HMA Ordinance and Hillside Design Guidelines, in particular landscaping barriers, enclosures, fencing, solid walls, signage, and lighting.³⁵ In addition, the existing development standards for fire and existing building code would apply. The use of air filtration systems would not result in obstruction to clearances, as the County requirements, per Title 22 Ordinance, indicate that air filtration systems shall be placed inside a building, residential or other rooms, intended for human occupancy which makes them nonobstructive within circulation paths from the public right of way. Air filtration systems placed outdoors, require setbacks, screen walls, fencing and/or landscaping that provide screening of the systems from the public right of way.³⁶ Therefore, the new development standards for New Sensitive Uses would result in no impacts to the impairment of adopted emergency response and emergency evacuation plans. No further analysis is warranted.

³⁶ County of Los Angeles. Title 22 – Planning and Zoning, Division 7 – Standards for Specific Uses, Chapter 22.130.030 – Development Standards for Sensitive Uses. Accessed 31 March 2020.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in less than significant impacts related to wildfire as a result of the impairment of adopted emergency response and emergency evacuation plans in or near SRAs or lands classified as VHFHSZs. The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, MCUP, and/or SPRs, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards (Table 1.IV-1). ~~The proposed revisions will prohibit automobile dismantling yards Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in vessel organic waste facilities are prohibited in ARAs.~~ would be prohibited from HMAs and SEAs. Additionally, pallet yards, chipping and grinding, and mulching facilities would be prohibited in HFHSZs and VHFHSZs, solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways, and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs.

The Supermarket Accessory Recycling Collection Centers revisions would result in less than significant impacts related to wildfire as a result of the impairment of adopted emergency response and emergency evacuation plans in or near SRAs or lands classified as VHFHSZs. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County’s waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the CMJ, CR, CRU, MXD, MXDRU designated zones. These uses would be ~~constructed~~ established on existing parking lots, and no new structures will be built. Any construction resulting from compliance with development standards would be minimal and would not substantially alter the existing conditions for existing industrial uses such that emergency response and evacuation routes would be adversely affected. Construction and maintenance of the improvements would be accomplished within the properties and would not require lane closures or other temporary impairment of emergency response plans or evacuation routes. Therefore, Supermarket Accessory Recycling Collection Centers revisions would result in less than significant impacts to the impairment of adopted emergency response and emergency evacuation plans in or near SRAs or lands classified as VHFHSZs. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts related to wildfire as a result of the impairment of adopted emergency response and emergency evacuation plans in or near SRAs or lands classified as VHFHSZs. Any new development or expansion of existing development would be required to meet the current development standards of the zone in which they are permitted. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development.

The construction of an onsite storage enclosure would not substantially alter the existing conditions such that emergency response and evacuation plans would be impacted. The storage would be required to have view-obstructing fence or wall enclosures which the height of the stored items could not exceed and thereby would not intrude within circulation patterns and maintain clearances. The development standards for storage enclosures within a recycling and solid waste facility, located outside of a building, would be required to be at least 8 feet tall and placed in the rear portion of the lot or adjacent to an alley, where applicable, and not obstruct or encroach into parking spaces, landscape areas, pedestrian or vehicular circulation, or other areas per County Fire and Building codes. Municipal solid waste, recyclables, and compostable material containers would be required to be located in the same enclosure thereby eliminating the need for multiple enclosures, unless allowed per code under extraordinary circumstances. The recyclable materials would be deposited and stored in containers that have lids and are made of metal, and the containers would be maintained in good condition with no structural damage, holes, visible rust, or graffiti. The storage areas shall be accessible to residents, employees, and haulers at all times. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would not result in a substantial change, in addition to the development standards which require them to be kept in good condition and away from circulation clearances. Furthermore, construction and maintenance of the improvements can be accomplished within the properties and would not require lane closures or other temporary impairment of emergency response plans or evacuation routes. As such, the addition of Storage Enclosures for Recycling and Solid Waste Revisions would not result in an adverse impact such that emergency response and evacuation plans would be impacted in or near SRAs or lands classified as VHFHSZs. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts. No further analysis is warranted.

b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Existing Conditions

The topography, of the areas subject to the proposed program, ranges from flat desert plains to rolling hills to rugged mountains and canyons (see Section 3.7, *Geology and Soils*) with woodland and brush areas that have high fire potential in the VHFHSZs areas.³⁷ Fire threat is the probability or likelihood of fire occurrence or frequency in a given area based on fuel condition and fire potential (Figure 2.20-2, *Fire Threat Map*).³⁸ Such areas are predicted based on fire history within a 30-year interval (Figure 2.20-3, *Fire History Map*). The total project footprint area consists of 135,383 parcels, of which 30,510 parcels (22.5 percent) are subject to wildfires, based on 1,541 historical fires that intersect these parcels of the project footprint. Other factors include winds, fuel type or vegetation prone to burning such as chaparral, and topography with slopes greater than 25 percent. As discussed in Section 2.9, approximately 29.1 percent of the total project footprint is located in areas within an FHSZ in an LRA, SRA, or FRA. None of these parcels are subject to the Green Zone Districts element (Table 2.9-4, *Fire Hazard Severity Zones*; Figure 2.9-4, *Los Angeles County Fire Hazard Severity Zones and Responsibility*). Wildfire hazards are associated with areas related to exposure to periodic wind speeds regularly in excess of 40 mph or on or adjacent to slopes in excess of 25 percent (Table 2.20-1; Table 2.20-2, *Slopes Greater than 25 Percent by Planning Area*; and Table 2.20-3, *Wildfire Wind Types*; see also Figure 2.1-2, Figure 2.20-1, and Figure 2.20-2).

**TABLE 2.20-3
WILDFIRES WIND TYPES**

Wind Types	Wind Speeds	Characteristics
Santa Anas ³⁹	> 40 mph	Strong, hot, dust-bearing winds descend to the Pacific Coast around Los Angeles from inland desert regions
Mono ⁴⁰	40 – 60 mph	Warm, dry wind from the northeast descending a mountain slope from highest ranges to the lowest slopes
Diablo ⁴¹	> 60 mph	Develop due to high pressure over Nevada and low pressure along Central Coast of CA

The Fire Department assists, supports and institutes a variety of regulatory programs and standards. Among those programs and standards include vegetation management, pre-fire management and planning, fuel modification plan review program, and brush clearance inspections.⁴² Other efforts and in conjunction with the programs, by the County's Fire Department and Public Works, include enforcement of fire and building codes as well as Title 32 requirements of the fire code related to development in FHSZs.⁴³ Furthermore, the County's Hillside Management Area Ordinance and the Hillside Design Guidelines regulates, through the permitting process, development on hillsides that have natural slope gradients of 25 percent or steeper with potential hazards.

In addition, the County of Los Angeles 2019 All-Hazards Mitigation Plan's (AHMP) goal includes mitigation actions and projects that were developed based on risk assessment from previous and recent disasters as well as information from FEMA best management practices, job aids, reports, input from subject matter experts and local and regional plans aimed towards a disaster resilient community. The AHMP mitigation actions and projects include topics such as education, awareness, local plans, and regulations that consist of the Red Flag Warning Public Outreach; Vegetation Management Program; fireproofing critical facilities; critical auxiliary power facilities; Earthquake-Resistant Ductile Iron Pipes Replacement (structural and infrastructure projects); Watershed Ecosystem Restoration and Green Streets Master

⁴² County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁴³ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

Plan for stormwater management; Coordinated (real time) Data Collection & Database Systems; Brush Clearance Program; Wildland-Urban Interface Ordinance; Urban Forest Management Plan; and Community Wildfire Protection Plan (CWPP).⁴⁴ The improvements required pursuant to the Ordinance specify the land use zoning designation that are appropriate for waste management and recycling facilities and specify the appropriate perimeter treatment to protect adjacent land uses. The Ordinance requires compliance with the County's programs, standards, and regulatory programs for fuel management and fire protection. Although approximately 22.5 percent of the subject parcels are located within or adjacent to SRAs, VHFHSZs, and other levels of FHSZs, the improvements required pursuant to the Ordinance would not generate pollutants that would expose workers or nearby residents to excessive pollutant levels. To the extent that the Ordinance facilitates perimeter control of properties, it would facilitate the management of wildfire, rather than exacerbate the spread of wildfire.

Threshold of Significance

A substantial adverse effect that would occur as a result of a physical change in the environment in relation to exposing project occupants to pollutants from exacerbated wildfire risk due to slope, prevailing winds, and other factors from a wildfire or the uncontrolled spread of a wildfire in or near SRAs or lands classified as VHFHSZs. Adverse effects normally occur when new buildings are constructed that may have the potential to expose project occupants to pollutants from exacerbated wildfire risk. Adverse effects from exposure to pollutants normally occur when pollutants from a wildfire or uncontrolled spread of a wildfire spills over into adjacent land uses.

Impact Analysis

The proposed program would have less than significant impacts to wildfire in relation to exacerbated wildfire risk due to slope, prevailing winds, and other factors and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire in or near SRAs or lands classified as VHFHSZs. The potential for impacts to exacerbated wildfire risk due to slope, prevailing winds, and other factors in or near SRAs or lands classified as VHFHSZs has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated (please see Section 1, Table 1.IV-1, and Table 1.IV-2). The analysis considers the incremental changes to the physical environment as a result of new and/or revised development standards, in relation to the historic and anticipated permits for affected uses. The proposed revisions to the development standards that have the potential result in physical changes in the environment that might have the potential to exacerbated wildfire risk due to slope, prevailing winds, and other factors include the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

Element 1 – Green Zone Districts

Green Zone Districts would result no impacts to wildfire in relation to exacerbated wildfire risk due to slope, prevailing winds, and other factors and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire in or near SRAs or lands classified as VHFHSZs. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to exacerbated wildfire risk due to slope, prevailing winds, and other factors and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire in or near SRAs or lands classified as VHFHSZs. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, 27 ~~28~~ parcels are proposed for a zone

⁴⁴ County of Los Angeles Chief Executive Office: Office of Emergency Management. Accessed April 26, 2021. 2019 County of Los Angeles: All-Hazard Mitigation Plan. Available at: https://file.lacounty.gov/SDSInter/lac/1062614_AHMPPublicDraft_Oct1.pdf

change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, ~~14 45~~ of the ~~27 28~~ parcels proposed for a zone change within the Green ~~Zones~~Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green ~~Zones~~Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to ~~740~~ years of adoption of the Ordinance. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would expose project occupants to exacerbate wildfire risk because the proposed improvements that are not located in or near SRAs or classified as VHFHSZs or classified as other levels of FHSZs (see Table 2.9-1; Figure 2.20-1). These measures such as construction of solid walls and planting trees would comply with enclosure standards including site setback, maintenance and operation standards, access and vehicle circulation standards, plus Fire Codes and standards for fire prevention that would avoid rather than expose people to pollutants.

The new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in less than significant impacts to wildfire in relation to exacerbated wildfire risk and exposing project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire in or near SRAs or lands classified as VHFHSZs within HMAs. None of the Green Zone Districts are located within the areas designated as HMAs within the County General Plan 2035. The proposed program would have no impact on the integrity of these hillsides in relation to emergency response plans or evacuation routes, as the Green Zones Program would comply with the HMA Ordinance and Hillside Design Guidelines.⁴⁵ In addition, The County Fire Department along with Public Works assists, supports and institutes a variety of regulatory programs and standards that includes vegetation management, pre-fire management and planning, fuel modification plan review program, and brush clearance inspections, enforcement of fire and building codes as well as Title 32 requirements of the fire code related to development in FHSZs.^{46, 47} Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to wildfire in relation to exacerbated wildfire risk due to slope, prevailing winds, and other factors and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire in or near SRAs or lands classified as VHFHSZs. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in no impacts related to wildfire in relation to exacerbated wildfire risk due to slope, prevailing winds, and other factors and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire in or near SRAs or lands classified as VHFHSZs. The County Fire Department along with Public Works assists, supports and institutes a variety of regulatory programs and standards that includes vegetation management, pre-fire management and planning, fuel modification plan review program, and brush clearance inspections, enforcement of fire and building codes as well as Title 32 requirements of the fire code related to

⁴⁵ Los Angeles County. Adopted 6 October 2015. Chapter 9: Conservation and Natural Resources Element. In the Los Angeles County General Plan 2035. Available at http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch9.pdf

⁴⁶ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁴⁷ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

development in FHSZs.^{48,49} Public Works maintains a list of disaster routes in the Los Angeles County Operational Area by city that have been preidentified for use during times of crisis.⁵⁰ When emergency response or evacuation orders are issued, evacuation routes, temporary shelter facilities, public alerts and warnings plus procedures would be provided by County Sheriff and Fire personnel based on the disaster to facilitate the evacuation process.⁵¹ The project element would not expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire in or near SRAs or lands classified as VHFHSZs. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, ~~in close proximity to existing industrial uses, permitted in the zones where they are located.~~ The existing zoning designations currently include development standards applicable to the above listed sensitive uses. In addition, the County Fire Department along with Public Works assists, supports and institutes a variety of regulatory programs and standards that includes vegetation management, pre-fire management and planning, fuel modification plan review program, and brush clearance inspections, enforcement of fire and building codes as well as Title 32 requirements of the fire code related to development.^{52,53} The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 4, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses. In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from existing conditions, such that they would obstruct or impair adopted emergency response plans and emergency evacuation routes. Public Works maintains a list of disaster routes in the Los Angeles County Operational Area by city that have been preidentified for use during times of crisis.⁵⁴ Emergency response and evacuation routes are already in place throughout the county where current Fire Department services are already being provides such as fire, safety and emergency medical services to all the unincorporated areas as well as contracted cities within the County.⁵⁵ The OAERP strengthens short and long-term emergency response and recovery capability, and identifies emergency procedures and emergency management routes in Los Angeles County. Furthermore, the Ordinance is expanding development standards for requiring screening, buffers, or placement of features between incompatible uses of non-conforming and new construction projects. These measures to reduce the incompatibility of new sensitive uses with existing industrial uses through development standards such as construction of landscaping and planting trees, buffering, and open space, would not exacerbated wildfire risk and thereby expose project occupants to pollutant concentrations from a wildfires.

The proposed New Sensitive Uses would have no impact on the integrity of these hillsides in relation to wildfire risk and expose project occupants to pollutants, as the development standards for New Sensitive Uses within the HMAs

⁴⁸ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁴⁹ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁵¹ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch12.pdf

⁵² County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁵³ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁵⁴ County of Los Angeles Department of Public Works. Accessed November 6, 2019. Disaster Routes by City. <https://dpw.lacounty.gov/dsg/DisasterRoutes/>

⁵⁵ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch12.pdf

would be required to comply with the HMA Ordinance, Hillside Design Guidelines, Title 22 ordinance, as well as fire prevention requirements, in particular to landscaping barriers, enclosures, fencing, solid walls, signage, and lighting.⁵⁶ In addition to the County General Plan, fire prevention regulations per the County Fire Department, Public Works, and Building and Safety would also apply, consisting of vegetation management, pre-fire management and planning, fuel modification program, brush clearance inspections, enforcement of fire and building codes per Title 20, 21, 26, and 32 requirements of the fire code for development in FHSZs.⁵⁷ Other fire prevention and building regulations under Title 20, 21, and 26, include access and circulation standards, fire access and road clearances, fire flow and fire hydrant standards, brush clearances around structures within hillsides areas considered primary wildland fire risk areas, defensible spaces, utility easement access for fire protection, building standards within WUI, plan review and approval process for land development projects within VHFHSZs, and integrated VMP.⁵⁸ The use of air filtration systems would not result in obstruction to clearances, as the County requirements, per Title 22 Ordinance, indicated that air filtration systems shall be placed inside a building, residential or other rooms, intended for human occupancy which makes them non-obstructive within circulation paths from the public right of way. Air filtration systems placed outdoors, require setbacks, screen walls, fencing and/or landscaping that provide screening of the systems from the public right of way.⁵⁹ In addition, the County Fire Department along with Public Works assists, supports and institutes a variety of regulatory programs and standards that includes vegetation management, pre-fire management and planning, fuel modification plan review program, and brush clearance inspections, enforcement of fire and building codes as well as Title 32 requirements of the fire code related to development in FHSZs.^{60, 61} Therefore, the new development standards for New Sensitive Uses would result in no impacts to exacerbated wildfire risk and thereby expose project occupants to pollutant concentrations from a wildfire. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in less than significant impacts to exacerbated wildfire risk due to slope, prevailing winds, and other factors and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire in or near SRAs or lands classified as VHFHSZs. These revisions affect parcels located within HMAs of both 25–50 percent slope and 50 percent-plus slope in areas such as Puente Hills, Castaic, the Santa Monica Mountains, and the Angeles National Forest. The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards (Table 1.IV-1).

~~The proposed revisions would prohibit automobile dismantling yards Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in-vessel organic waste facilities are prohibited in ARAs. would be prohibited from HMAs and SEAs. Additionally, pallet yards, chipping and grinding, and mulching facilities would be prohibited in HFHSZs and~~

⁵⁶ Los Angeles County. Adopted 6 October 2015. Chapter 9: Conservation and Natural Resources Element. In the Los Angeles County General Plan 2035. Available at http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch9.pdf

⁵⁷ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁵⁸ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁵⁹ County of Los Angeles. Title 22 – Planning and Zoning, Division 7 – Standards for Specific Uses, Chapter 22.130.030 – Development Standards for Sensitive Uses. Accessed 31 March 2020.

⁶⁰ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁶¹ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

VHFHSZs, solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways, and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. In addition, the County Fire Department, along with Public Works, assists, supports and institutes a variety of applicable regulatory programs and standards that includes vegetation management, pre-fire management and planning, fuel modification plan review program, brush clearance inspections, enforcement of fire and building codes as they relate to Title 32 requirements of the fire code for development in FHSZs.^{62,63}

The Supermarket Accessory Recycling Collection Centers revisions would result in less than significant impacts to exacerbated wildfire risk and thereby exposure of project occupants to pollutant concentrations from wildfire or uncontrolled wildfire in or near SRAs or lands classified as VHFHSZs. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County’s waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the C-MJ, C-R, C-RU, MXD, MXD-RU designated zones. These uses would be ~~constructed~~established on existing parking lots, and no new structures will be built. Any construction resulting from compliance with development standards would be minimal and would not substantially alter the existing conditions for existing industrial uses such that exposing project occupants to pollutant concentrations from wildfires would be adversely affected. Construction and maintenance of the improvements would be accomplished within the properties and would not require lane closures or other temporary impairment of emergency response plans or evacuation routes. Therefore, the Supermarket Accessory Recycling Collection Centers would result in less than significant impacts related to the impairment of adopted emergency response and emergency evacuation plans. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts to wildfire in relation to exacerbated wildfire risk due to slope, prevailing winds, and other factors and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire in or near SRAs or lands classified as VHFHSZs. Any new development or expansion of existing development would be required to meet the current development standards of the zone in which they are permitted. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development.

⁶² County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁶³ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

Any new development would be subject to development requirement of HMAs. These revisions contain HMAs of both 25–50 percent slope and 50 percent-plus slope, as well as significant ridgelines in areas such as Castaic.⁶⁴ The proposed program would have less than significant impact on the integrity of these hillsides in relation to exacerbated wildfire risk, as the Green Zones Program would comply with the HMA Ordinance and Hillside Design Guidelines that help preserve and enhance the physical integrity of hillsides. The County General Plan along with fire prevention regulations from the County Fire Department, Public Works, and Department of Building and Safety (Building and Safety), that would also apply includes a variety of applicable regulatory programs and standards that consist of vegetation management, pre-fire management and planning, fuel modification plan review program, brush clearance inspections, enforcement of fire and building codes as they relate to Title 32 requirements of the fire code for development in FHSZs.^{65,66} Other County fire prevention and building regulations applicable to FHSZs consist of Title 20, 21, and 26, which pertain to fire access and road widths and clearances, access and circulation standards, fire flow and fire hydrant standards, brush clearances around structures within hillsides that are fire prone, defensible spaces, utility easement access for fire protection, building standards within WUI, plan review and approval process for land development projects within VHFHSZs, and integrated VMP.⁶⁷

The construction of an onsite storage enclosure would not substantially alter the existing conditions such that slope stability would be impacted. The storage would be required to have view-obstructing fence or wall enclosures which the height of the stored items could not exceed and thereby would not intrude within circulation patterns and maintain clearances. The development standards for storage enclosures within a recycling and solid waste facility, located outside of a building, would be required to be at least 8 feet tall and placed in the rear portion of the lot or adjacent to an alley, where applicable, and not obstruct or encroach into parking spaces, landscape areas, pedestrian or vehicular circulation, or other areas per County Fire and Building codes. Municipal solid waste, recyclables, and compostable material containers would be required to be located in the same enclosure thereby eliminating the need for multiple enclosures, unless allowed per code under extraordinary circumstances. The recyclable materials would be deposited and stored in containers that have lids and are made of metal, and the containers would be maintained in good condition with no structural damage, holes, visible rust, or graffiti. The storage areas shall be accessible to residents, employees, and haulers at all times. The Storage Enclosures for Recycling and Solid Waste Revisions would not result in a substantial change, as the development standards for storage enclosures require them to be kept in good condition and away from circulation clearances. Construction and maintenance of the improvements can be accomplished within the properties and would not utilize materials that would contribute to fuel load or become a source of pollutants during a wildfire that would expose workers or nearby residents to excessive pollutant concentrations during a wildfire. Regulations and programs such as building codes, vegetation management, and fire inspections would reduce fuel load or source of pollutants during a wildfire. As such, the addition of Storage Enclosures for Recycling and Solid Waste Revisions would not result in an adverse impact such that slope, wind or other factors in relation to exposure to pollutants from wildfires or uncontrolled wildfires would be impacted in or near SRAs or lands classified as VHFHSZs. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts to wildfire in relation to exacerbated wildfire risk due to slope, prevailing winds, and other factors and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire in or near SRAs or lands classified as VHFHSZs. No further analysis is warranted.

⁶⁴ Los Angeles County Department of Regional Planning. May 2014. Figure 9.8: Hillside Management Areas and Ridgeline Management Map. In the Los Angeles County General Plan 2035. Available at <http://planning.lacounty.gov/generalplan/figures2015>

⁶⁷ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

- c) **Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?**

Existing Conditions

The Safety Element of the Los Angeles County General Plan 2035 designates at-risk areas as FHSZs per government code sections 51175–51189.⁶⁸ In the unincorporated areas of the Los Angeles County, SRAs have been classified as Very High, High and Moderate. However, Local and Federal Responsibility Areas are classified as Very High. The Forestry Division of the Fire Department assists, supports, and institutes a variety of regulatory programs and standards. Among those programs and standards include vegetation management, pre-fire management and planning, fuel modification plan review program, and brush clearance inspections. In addition, the County Fire Department's Strategic Fire Plan includes a map of existing Fire Department helispot fuel reduction projects, water resources, motorway maintenance maps, and a description of the road and fuel maintenance functions of the Fire Department.⁶⁹ Furthermore, Section 503 of Title 32 provides additional specifications for fire access roads in developed areas, including dimensions and markings. In addition, addressed in the County Fire Code include provision of fire apparatus access roads, adequate road widths, requirements for all-weather access and fire flow, fire hydrant spacing, and clearance of brush around structures located in hillside areas that are considered primary wildland fire risk areas as well as fire-related land use and building regulations, including fuel modification.⁷⁰ In addition, the AHMP goal includes mitigation actions and projects that were developed based on risk assessment from previous and recent disasters as well as information from FEMA's best management practices, job aids, reports, input from subject matter experts, and local and regional plans aimed towards a disaster resilient community. The AHMP mitigation actions and projects include topics such as education, awareness, local plans, and regulations that consist of the Red Flag Warning Public Outreach; Vegetation Management Program; fireproofing critical facilities; critical auxiliary power facilities; Earthquake-Resistant Ductile Iron Pipes Replacement (structural and infrastructure projects); Watershed Ecosystem Restoration and Green Streets Master Plan for stormwater management; Coordinated (real time) Data Collection & Database Systems; Brush Clearance Program; Wildland-Urban Interface Ordinance; Urban Forest Management Plan; and CWPP.⁷¹

Threshold of Significance

A substantial adverse effect on wildfire risk that would occur as a result of a physical change in the environment would require the installation or maintenance of associated infrastructure that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment in or near SRAs or lands classified as VHFHSZs. Adverse effects normally occur when new infrastructure such as roads, fuel breaks, emergency water sources, power lines or other utilities are constructed that may have the potential to increase the risk of the wildfire in the area in which they are constructed.

Impact Analysis

The proposed program would result in less than significant impacts to wildfire in relation to the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in the temporary or ongoing impacts to the environment in or near SRAs or lands classified as VHFHSZs. The potential for impacts to wildfire risk in relation to the installation or maintenance of associated infrastructure has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within

⁶⁸ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁶⁹ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁷⁰ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁷¹ County of Los Angeles Chief Executive Office: Office of Emergency Management. Accessed April 26, 2021. 2019 County of Los Angeles: All-Hazard Mitigation Plan. Available at: https://file.lacounty.gov/SDSInter/lac/1062614_AHMPPublicDraft_Oct1.pdf

the Green Zone Districts are evaluated (please see Section 1, Table 1.IV-1, and Table 1.IV-2). The analysis considers the incremental changes to the physical environment as a result of new and/or revised development standards, in relation to the historic and anticipated permits for affected uses. The proposed revisions to the development standards that have the potential result in physical changes in the environment that might have the potential for wildfire risk in relation to the installation or maintenance of associated infrastructure include the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

Element 1 – Green Zone Districts

~~Green Zones~~Zone Districts would result no impacts to wildfire in relation to the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in the temporary or ongoing impacts to the environment in or near SRAs or lands classified as VHFHSZs. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in ~~no~~ impacts to wildfire in relation to the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in the temporary or ongoing impacts to the environment in or near SRAs or lands classified as VHFHSZs in the proposed program area or vicinity. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, ~~27~~ 28 parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, ~~14~~ 45 of the ~~27~~ 28 parcels proposed for a zone change within the Green ~~Zones~~Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green ~~Zones~~Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a Conditional Use Permit. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to ~~7~~ 10 years of adoption of the Ordinance. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would not require the installation or maintenance of infrastructure such as roads, fuel breaks, water sources, power lines or utilities because the proposed improvements are not located in or near SRAs or classified as VHFHSZs or classified as other levels of FHSZs (see Table 2.9-1; Figure 2.20-1). These measures such as construction of solid walls and planting trees would comply with enclosure standards including site setback, maintenance and operation standards, and access and vehicle circulation standards, would avoid rather than exacerbate wildfire risk to loss of life or property. In addition, improvements would be accomplished within the properties in the urbanized areas of the County and would not require the installation or maintenance of associated infrastructure such as roads, fuel breaks, emergency water sources, power lines, or other utilities.

The new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in the temporary or ongoing impacts to the environment within HMAs. None of the Green Zone Districts are located within the areas designated as HMAs within the County General Plan 2035. The proposed program would have no impact on the integrity of these hillsides in relation to emergency response plans or evacuation routes, as the Green Zones Program

would comply with the HMA Ordinance and Hillside Design Guidelines.⁷² The proposed program area would not exacerbate wildfire risk due to the relatively flat terrain, water and roadway accessibility due to the county's wildfire programs and regulation. The County's wildfire programs and regulation plus this element's uses are not located in or near SRAs or VHFHSZs. Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to wildfire in relation to the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in the temporary or ongoing impacts to the environment in or near SRAs or lands classified as VHFHSZs. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in no impacts related to wildfire in relation to the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in the temporary or ongoing impacts to the environment in or near SRAs or lands classified as VHFHSZs. The County Fire Department's Strategic Fire Plan includes a map of existing Fire Department helispot fuel reduction projects, water resources, motorway maintenance maps, and a description of the road and fuel maintenance functions of the Department.⁷³ Section 503 of Title 32 provides specifications for fire access roads in developed areas, including dimensions and markings and the County Fire Code include provision of fire apparatus access roads, adequate road widths, requirements for all-weather access and fire flow, fire hydrant spacing, and clearance of brush around structures located in hillside areas that are considered primary wildland fire risk areas as well as fire-related land use and building regulations, including fuel modification.⁷⁴ Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, ~~in close proximity to existing industrial uses, permitted in the zones where they are located.~~ The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses. In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from existing conditions, such that they would not exacerbate wildfire hazards related to infrastructure such as roads, water sources or utilities because construction and maintenance can be accomplished with the properties and would not require lane closures or other temporary impairment to access roads, water sources or utilities.⁷⁵ Excess water supply and emergency water sources, per the County's Strategic Fire Plan, would accommodate the area subject to the new development standard for New Sensitive Uses and any future expansion

⁷² Los Angeles County. Adopted 6 October 2015. Chapter 9: Conservation and Natural Resources Element. In the Los Angeles County General Plan 2035. Available at http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch9.pdf

⁷³ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁷⁴ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁷⁵ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch12.pdf

for combating wildfire events (see Section 3.19, *Utilities and Service Systems*).⁷⁶ Public Works maintains a list of disaster routes in the Los Angeles County Operational Area by city that have been preidentified for use during times of crisis.⁷⁷ When emergency response or evacuation orders are issued, evacuation routes, temporary shelter facilities, public alerts and warnings plus procedures would be provided by County Sheriff and Fire Department personnel based on the disaster to facilitate the evacuation process.⁷⁸ The new development standards would not require the installation or maintenance of infrastructure such as roads, fuel breaks, water source, power lines or other utilities that may exacerbate fire risk in or near SRAs or lands classified as VHFHSZs. These measures to reduce the incompatibility of new sensitive uses with existing industrial uses through development standards such as construction of landscaping and planting trees, buffering, and open space, would not exacerbate wildfire hazards related to infrastructure such as roads, water sources or utilities.

The proposed New Sensitive Uses would have no impact on the integrity of these hillsides in relation to emergency response plans or evacuation routes, as the development standards for New Sensitive Uses within the HMAs would be required to comply with the HMA Ordinance, the Hillside Design Guidelines, Title 22 Ordinance, as well as fire prevention requirements, in particular to landscaping barriers, enclosures, fencing, solid walls, signage, and lighting.⁷⁹ In addition to the County General Plan, fire prevention regulations per the County Fire Department, Public Works, and Building and Safety would also apply, consisting of vegetation management, pre-fire management and planning, fuel modification program, brush clearance inspections, enforcement of fire and building codes per Title 20, 21, 26, and 32 requirements of the fire code for development in FHSZs.⁸⁰ Other fire prevention and building regulations under Title 20, 21, and 26, include access and circulation standards, fire access and road clearances, fire flow and fire hydrant standards, brush clearances around structures within hillsides areas considered primary wildland fire risk areas, defensible spaces, utility easement access for fire protection, building standards within Wildland-Urban Interface (WUI), plan review and approval process for land development projects within VHFHSZs, and integrated Vegetation Management Program (VMP).⁸¹ The use of air filtration systems would not result in obstruction to clearances, as the County requirements, per Title 22 Ordinance, indicated that air filtration systems shall be placed inside a building, residential or other rooms, intended for human occupancy which makes them non-obstructive within circulation paths from the public right of way. Air filtration systems placed outdoors, require setbacks, screen walls, fencing and/or landscaping that provide screening of the systems from the public right of way.⁸² Therefore, the new development standards for New Sensitive Uses would result in no impacts to exacerbate wildfire risk related to infrastructure such as roads, water sources or utilities. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in less than significant impacts to wildfire in relation to the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in the temporary or ongoing impacts to the environment in or near SRAs or lands classified as VHFHSZs. The There are a variety of regulatory programs and standards that help in the reduction of fuel and help in the preparation for future wildfire events. As part of this element, the County's programs and standards such as building fire code standards, Section 503 of Title 32 regarding developed neighborhood access, HMA Ordinance, AHMP, and

⁷⁶ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁷⁹ Los Angeles County. Adopted 6 October 2015. Chapter 9: Conservation and Natural Resources Element. In the Los Angeles County General Plan 2035. Available at http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch9.pdf

⁸⁰ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁸¹ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁸² County of Los Angeles. Title 22 – Planning and Zoning, Division 7 – Standards for Specific Uses, Chapter 22.130.030 – Development Standards for Sensitive Uses. Accessed 31 March 2020.

water resources to name a few are currently an on-going effort. The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards as identified in the project description (Table 1.IV-1).

~~The proposed revisions would prohibit automobile dismantling yards~~Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited from HMAs, SEAs, and VHFHSZs SEAs. Additionally, pallet yards, chipping and grinding, and mulching facilities would be prohibited in-vessel HFHSZs and VHFHSZs, solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways, and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities ~~are~~ would be prohibited in ARAs. In addition, the County Fire Department along with Public Works, assists, supports and institutes a variety of applicable regulatory programs and standards that ~~includes~~ include vegetation management, pre-fire management and planning, fuel modification plan review program, brush clearance inspections, enforcement of fire and building codes as they relate to Title 32 requirements of the fire code for development in FHSZs.^{83, 84}

The Supermarket Accessory Recycling Collection Centers revisions would result in less than significant impacts to exacerbated wildfire risk related to infrastructure such as roads, water sources, and utilities in or near SRAs or lands classified as VHFHSZs. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County’s waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the C-MJ, C-R, C-RU, MXD, MXD-RU designated zones. These uses would be ~~constructed~~ established on existing parking lots, and no new structures will be built. Any construction resulting from compliance with development standards would be minimal and would not substantially alter the existing conditions for existing industrial uses such that it would not exacerbate wildfire risk in relation to infrastructure would be adversely affected. Construction and maintenance of the improvements would be accomplished within the properties and would not exacerbate wildfire hazards related to infrastructure such as roads, water sources or utilities and would not require

⁸³ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁸⁴ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

lane closures or other temporary impairment to access roads, water sources or utilities.⁸⁵ In addition, materials and construction methods would adhere to Title 26 of the Los Angeles County Building Code and Title 32 of the County's Fire Code requirements. Therefore, Supermarket Accessory Recycling Collection Centers revisions would result in less than significant impacts to wildfire in relation to the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in the temporary or ongoing impacts to the environment in or near SRAs or lands classified as VHFHSZs. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result less than significant impacts to wildfire in relation to the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in the temporary or ongoing impacts to the environment in or near SRAs or lands classified as VHFHSZs. Any new development or expansion of existing development would be required to meet the current development standards of the zone they are permitted in. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. Any new development would be subject to development requirement of HMAs. These revisions contain HMAs of both 25–50 percent slope and 50 percent-plus slope.⁸⁶ The proposed program would have less than significant impact on the integrity of these hillsides in relation to exacerbated wildfire risk in relation to infrastructure, as the Green Zones Program would comply with the HMA Ordinance and Hillside Design Guidelines that help preserve and enhance the physical integrity of hillsides. The County General Plan along with fire prevention regulations from the County Fire Department, Public Works and Building and Safety, that would also apply includes a variety of applicable regulatory programs and standards that consist of vegetation management, pre-fire management and planning, fuel modification plan review program, brush clearance inspections, enforcement of fire and building codes as they relate to Title 32 requirements of the fire code for development in FHSZs.^{87,88} Other County fire prevention and building regulations applicable to FHSZs consist of Title 20, 21, and 26 that pertain to fire access and road widths and clearances, access and circulation standards, fire flow and fire hydrant standards, brush clearances around structures within hillsides that are fire prone, defensible spaces, utility easement access for fire protection, Building standards within WUI, plan review and approval process for land development projects within VHFHSZs, and integrated VMP.⁸⁹

The construction of an onsite storage enclosure would not substantially alter the existing conditions such that existing infrastructure would be impacted. The storage would be required to have fence or wall enclosures which the height of the stored items could not exceed and thereby would not intrude within circulation patterns and maintain clearances. The development standards for storage enclosures within a recycling and solid waste facility, located outside of a building, would be required to be at least 8 feet tall and placed in the rear portion of the lot or adjacent to an alley, where applicable, and not obstruct or encroach into parking spaces, landscape areas, pedestrian or vehicular circulation, or other areas per County fire and building codes. Municipal solid waste, recyclables, and compostable material containers would be required to be located in the same enclosure thereby eliminating the need for multiple enclosures, unless allowed per code under extraordinary circumstances. The recyclable materials would be deposited and stored in containers that have lids and are made of metal, and the containers would be maintained in good condition with no structural damage, holes, visible rust, or graffiti. The storage areas shall be accessible to residents, employees, and haulers at all times. The Storage Enclosures for Recycling and Solid Waste Revisions would not result in a substantial change,

⁸⁵ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch12.pdf

⁸⁶ Los Angeles County Department of Regional Planning. May 2014. Figure 9.8: Hillside Management Areas and Ridgeline Management Map. In the Los Angeles County General Plan 2035. Available at <http://planning.lacounty.gov/generalplan/figures2015>

⁸⁷ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁸⁸ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁸⁹ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

in addition to the development standards which require them to be kept in good condition and away from circulation clearances. Construction and maintenance of the improvements can be accomplished within the properties and would not exacerbate wildfire hazard related to infrastructure such as roads, water sources, and utilities. Regulations and programs such as building codes, vegetation management, and inspections would reduce possibilities for potential damage to existing infrastructure. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts to wildfire risk in relation to the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in the temporary or ongoing impacts to the environment in or near SRAs or lands classified as VHFHSZs. No further analysis is warranted.

d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Existing Conditions

The Safety Element of the Los Angeles County General Plan 2035 designates at-risk areas as FHSZs per government code sections 51175–51189. In the unincorporated areas of the Los Angeles County, State Responsibility Area have been classified as Very High, High and Moderate. However, Local and Federal Responsibility Areas are classified as Very High. The Forestry Division of the Fire Department assists, supports, and institutes a variety of regulatory programs and standards. Among those programs and standards include fire-related land use and building regulations, hillside ordinances, fire standards, vegetation management, pre-fire management and planning, fuel modification plan review program, and brush clearance inspections to name a few. Furthermore, the county's Fire Department is one of six contract counties that maintain a contractual relationship with CAL FIRE and implements the California Fire Plan within Los Angeles County through the Strategic Fire Plan. The County Fire Department's Strategic Fire Plan also includes a map of existing Fire Department helispot fuel reduction projects, water resources, motorway maintenance maps, and a description of the road and fuel maintenance functions of the Fire Department.⁹⁰ ~~Furthermore, Section 503 of Title 32 provides additional specifications for fire access roads in developed areas, including dimensions and markings. In addition, Section 503 of Title 32 provides additional specifications for fire access roads in developed areas, including dimensions and markings. Furthermore, the AHMP goal includes mitigation actions and projects that were developed based on risk assessment from previous and recent disasters as well as information from FEMA's best management practices, job aids, reports, input from subject matter experts and local and regional plans aimed towards a disaster resilient community. The AHMP mitigation actions and projects include topics such as education, awareness, local plans, and regulations that consist of the Red Flag Warning Public Outreach; Vegetation Management Program; fireproofing critical facilities; critical auxiliary power facilities; Earthquake-Resistant Ductile Iron Pipes Replacement (structural and infrastructure projects); Watershed Ecosystem Restoration and Green Streets Master Plan for stormwater management; Coordinated (real time) Data Collection & Database Systems; Brush Clearance Program; Wildland-Urban Interface Ordinance; Urban Forest Management Plan; and CWPP.⁹¹~~

The U.S Army Corps of Engineers (Corps of Engineers) and the Federal Emergency Management Agency (FEMA) share and coordinate flood protection responsibilities in Los Angeles County.⁹² In addition, Public Works and the Los Angeles County Flood Control District (Flood Control District) work together to reduce flood risk in Los Angeles through the development of the Sediment Management Plan.⁹³ Furthermore, the County has been a voluntary participant in the FEMA National Flood Insurance Program (NFIP) and is responsible for regulating development in Flood Hazards Zones and planning for floodplain management activities. As a compliance requirement of the NFIP, the County enforces regulations ensuring the buildings are constructed at safe elevations to prevent potential property damage. The goal and policies for flood and inundation hazards consist of the following:

⁹⁰ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁹¹ County of Los Angeles Chief Executive Office: Office of Emergency Management. Accessed April 26, 2021. 2019 County of Los Angeles: All-Hazard Mitigation Plan. Available at: https://file.lacounty.gov/SDSInter/lac/1062614_AHMPPublicDraft_Oct1.pdf

⁹² County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁹³ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

Goal S 2: An effective regulatory system that prevents or minimizes personal injury, loss of life, and property damage due to flood and inundation hazards

Topic: Flood Hazard

- Policy S2.1: Discourage development in the County's Flood Hazard Zones
- Policy S 2.2: Discourage development from locating downslope from aqueducts
- Policy S 2.3: Consider climate change adaptation strategies in flood and inundation hazard planning
- Policy S 2.4: Ensure that developments located within the County's Flood Hazard Zones are sited and designed to avoid isolation from essential services and facilities in the event of flooding
- Policy S 2.5: Ensure that the mitigation of flood related property damage and loss limits impacts to biological and other resources
- Policy S 2.6: Work cooperatively with public agencies with responsibility for flood protection, and with stakeholders in planning for flood and inundation hazards
- Policy S 2.7: Locate essential public facilities, such as hospitals and fire stations, outside of Flood Hazard Zones, where feasible

Threshold of Significance

A substantial adverse effect that would occur as a result of a physical change in the environment would expose people or structures to significant wildfire risks. Adverse effects normally occur due to downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes.

Impact Analysis

The proposed program would result in less than significant impacts to wildfire risk related to exposure of people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes in or near SRAs or lands classified as VHFHSZs in the proposed program area or vicinity. The potential for impacts to wildfire risk relevant to exposure of people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes in or near SRAs or lands classified as VHFHSZs has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated (please see Section 1, Table 1.IV-1, and Table 1.IV-2). The analysis considers the incremental changes to the physical environment as a result of new and/or revised development standards, in relation to the historic and anticipated permits for affected uses. The proposed revisions to the development standards that have the potential result in physical changes in the environment that might have the potential to expose people or structures to significant risk associated with post-fire slope instability, flooding, landslides, and drainage include the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

Element 1 – Green Zone Districts

~~Green Zones~~Zone Districts would result no impacts related to wildfire in relation to exposure of people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes in or near SRAs or lands classified as VHFHSZs in the proposed program area or vicinity. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to wildfire in relation to exposure of people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes in

or near SRAs or lands classified as VHFHSZs in the proposed program area or vicinity. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, ~~27 28~~ parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, ~~14 45~~ of the ~~27 28~~ parcels proposed for a zone change within the Green ~~Zones~~Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green ~~Zones~~Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The Program requires the nonconforming uses to come into compliance within 3 to ~~740~~ years of adoption of the Ordinance. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would obstruct or impair access in regards to emergency response and evacuation plans because the proposed improvements are not located in or near SRAs or classified as VHFHSZs or classified as other levels of FHSZs (see Table 2.9-1; Figure 2.20-1). These measures such as construction of solid walls and planting trees would comply with enclosure standards including site setback, maintenance and operation standards, and access and vehicle circulation standards, would avoid rather than exacerbate wildfire risk to loss of life or property. In addition, improvements would be accomplished within the properties and would not require lane closures or other temporary impairment of circulation access or clearances.

The new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to the exposure of people and structures, directly or indirectly, to significant wildfire risk in loss, injury or death within HMAs. None of the Green Zone Districts are located within the areas designated as HMAs within the County General Plan 2035. The proposed program would have no impact on the integrity of these hillsides in relation to emergency response plans or evacuation routes, as the Green Zones Program would comply with the HMA Ordinance and Hillside Design Guidelines.⁹⁴ New development standards within Green Zone Districts would not exacerbate wildfire risk due to the relatively flat terrain, water and roadway accessibility due to the county's wildfire programs and regulation. In addition, this element's uses are not located in or near SRAs or VHFHSZs. Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to wildfire in relation to exposure of people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes in or near SRAs or lands classified as VHFHSZs. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in no related to wildfire in relation to exposure of people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes in or near SRAs or lands classified as VHFHSZs. The County Fire Department along with Public Works assists, supports and institutes a variety of regulatory programs and standards that includes vegetation management, pre-fire management and planning, fuel modification plan review program, and brush clearance inspections, enforcement of fire and building codes as well as Title 32 requirements of the fire code related to

⁹⁴ Los Angeles County. Adopted 6 October 2015. Chapter 9: Conservation and Natural Resources Element. In the Los Angeles County General Plan 2035. Available at http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch9.pdf

development in FHSZs.^{95, 96} These new development standards would not expose people or structure to significant risk associated with post-fire slope instability, flooding, landslides, and drainage in or near SRAs or lands classified as VHFHSZs. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, in close proximity to existing industrial uses, permitted in the zones where they are located. The existing zoning designations currently include development standards applicable to the above listed sensitive uses. In addition, the County Fire Department along with Public Works assists, supports and institutes a variety of regulatory programs and standards that includes vegetation management, pre-fire management and planning, fuel modification plan review program, and brush clearance inspections, enforcement of fire and building codes as well as Title 32 requirements of the fire code related to development.^{97, 98} The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, vehicle-related uses. In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from existing conditions, such that they would expose people or structures to significant risk associated with post-fire slope instability, flooding, landslides, and drainage. These measures to reduce the incompatibility of new sensitive uses with existing industrial uses through development standards such as construction of landscaping and planting trees, buffering, and open space, would not expose people or structures to significant risk associated with post-fire slope instability, flooding, landslides, and drainage.

The proposed New Sensitive Uses would have less than significant impact on the integrity of these hillsides in relation to exposure of people or structures to post-fire significant risk, as the development standards for New Sensitive Uses within the HMAs would be required to comply with the HMA, Hillside Design Guidelines, Title 22 Ordinance, as well as fire prevention requirements, in particular to landscaping barriers, enclosures, fencing, solid walls, signage, and lighting.⁹⁹ In addition to the County General Plan, fire prevention regulations per the County Fire Department, Public Works, and Building and Safety would also apply, consisting of vegetation management, pre-fire management and planning, fuel modification program, brush clearance inspections, enforcement of fire and building codes per Title 20, 21, 26, and 32 requirements of the fire code for development in FHSZs.¹⁰⁰ Other fire prevention and building regulations under Title 20, 21, and 26, include access and circulation standards, fire access and road clearances, fire flow and fire hydrant standards, brush clearances around structures within hillsides areas considered primary wildland fire risk areas, defensible spaces, utility easement access for fire protection, building standards within WUI, plan review and approval process for land development projects within VHFHSZs, and integrated VMP.¹⁰¹ Therefore, the new development standards for New Sensitive Uses would result in less than significant impact to the exposure of people or structures to

⁹⁵ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

⁹⁹ Los Angeles County. Adopted 6 October 2015. Chapter 9: Conservation and Natural Resources Element. In the Los Angeles County General Plan 2035. Available at http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch9.pdf

¹⁰⁰ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

¹⁰¹ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

significant risk associated with post-fire slope instability, flooding, landslides, and drainage. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in less than significant impacts to wildfire in relation to exposure of people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes in or near SRAs or lands classified as VHFHSZs. As part of this element, the county's programs and standards such as fire-related land use and building regulations, hillside ordinances, fire standards, Flood Hazard Zones regulations, vegetation, management, pre-fire management and planning, fuel modification plan review program, brush clearance inspections and evacuation plans and annexes are currently an ongoing effort.^{102,103} The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards (Table 1.IV-1).

~~The proposed revisions would prohibit automobile dismantling yards Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in vessel organic waste facilities are would be prohibited from HMAs and SEAs. Additionally, pallet yards, chipping and grinding, and mulching facilities would be prohibited in HFHSZs and VHFHSZs, solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways, and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. County-wide FHSZs standards and regulations for HMAs are coordinated by the County Fire Department, Public Works, Building and Safety, Flood Control District, Corps of Engineers and FEMA. The standards and regulations pertaining to development in FHSZs include HMA ordinance, Hillside Design Guidelines, AHMP, building codes, and fire codes including vegetation management, pre-fire management and planning, fuel modification plan review program, brush clearance inspections, fire and building codes (Title 20, 21, 26, and 32), access and circulation standards, fire access and road clearances, fire flow and fire hydrant standards, brush clearances around structures within hillsides areas considered primary wildland fire risk areas, defensible spaces, utility easement access for fire protection, building standards within WUI, plan review and approval process for land development projects within VHFHSZs, integrated VMPs, and flood hazard and inundation zones regulations.¹⁰⁴~~

The Supermarket Accessory Recycling Collection Centers revisions would result in less than significant impacts in relation to exposure of people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes in or near SRAs or lands classified as VHFHSZs. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP

¹⁰² County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

¹⁰³ Chief Executive Office of Los Angeles County. Accessed 4/10/20. Emergency Management. <https://ceo.lacounty.gov/emergencydisaster-plans-and-annexes/>

¹⁰⁴ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County's waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the C-MJ, C-R, C-RU, MXD, MXD-RU designated zones. These uses would be ~~constructed~~established on existing parking lots, and no new structures will be built. Any construction resulting from compliance with development standards would be minimal and would not substantially alter the existing conditions for existing industrial uses such that exposing people of structures to significant risk related to runoff, postfire slope instability, or drainage changes from wildfires would be adversely affected. Construction and maintenance of the improvements would be accomplished within the properties and would not utilize materials that would contribute to fuel load or the potential for flooding, landslides, slope instability or drainage changes. In addition, materials and construction methods would adhere to Title 26 of the Los Angeles County Building Code and Title 32 of the County's Fire Code requirements. Therefore, the Supermarket Accessory Recycling Collection Centers would result in less than significant impacts in relation to exposure of people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes in or near SRAs or lands classified as VHFHSZs. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result less than significant impacts in relation to exposure of people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes in or near SRAs or lands classified as VHFHSZs. Any new development or expansion of existing development would be required to meet the current development standards of the zone they are permitted in. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. Any new development would be subject to development requirement of HMAs. These revisions contain HMAs of both 25–50 percent slope and 50 percent-plus slope.¹⁰⁵ The proposed program would have less than significant impact on the integrity of these hillsides in relation to exposure of people or structures to significant risks in relation to flooding, landslides, slope instability or drainage changes, as the Green Zones Program would comply with the HMA Ordinance and Hillside Design Guidelines that help preserve and enhance the physical integrity of hillsides. County-wide FHSZs standards and regulations for fire prevention within HMAs are coordinated by the County Fire Department, Public Works, Building and Safety, Flood Control District, Corps of Engineers and FEMA. The standards and regulations pertaining to development in FHSZs include HMA ordinance, Hillside Design Guidelines, vegetation management, pre-fire management and planning, fuel modification plan review program, brush clearance inspections, fire and building codes (Title 20, 21, 26, and 32), access and circulation standards, fire access and road clearances, fire flow and fire hydrant standards, brush clearances around structures within hillsides areas considered primary wildland fire risk areas, defensible spaces, utility easement access for fire protection, building standards within WUI, plan review and approval process for land development projects within VHFHSZs, integrated VMP, and flood hazard and inundation zones regulations.¹⁰⁶

¹⁰⁵ Los Angeles County Department of Regional Planning. May 2014. Figure 9.8: Hillside Management Areas and Ridgeline Management Map. In the Los Angeles County General Plan 2035. Available at <http://planning.lacounty.gov/generalplan/figures2015>

¹⁰⁶ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

The construction of an onsite storage enclosure would not substantially alter the existing conditions such that existing structures and slopes would be impacted. The storage would be required to have fence or wall enclosures which the height of the stored items could not exceed and thereby would not intrude within circulation patterns and maintain clearances. The development standards for storage enclosures within a recycling and solid waste facility, located outside of a building, would be required to be at least 8 feet tall and placed in the rear portion of the lot or adjacent to an alley, where applicable, and not obstruct or encroach into parking spaces, landscape areas, pedestrian or vehicular circulation, or other areas per County fire and building codes. Municipal solid waste, recyclables, and compostable material containers would be required to be located in the same enclosure thereby eliminating the need for multiple enclosures, unless allowed per code under extraordinary circumstances. The recyclable materials would be deposited and stored in containers that have lids and are made of metal, and the containers would be maintained in good condition with no structural damage, holes, visible rust, or graffiti. The storage areas shall be accessible to residents, employees, and haulers at all times. The Storage Enclosures for Recycling and Solid Waste Revisions would not result in a substantial change, in addition to the development standards which require them to be kept in good condition and away from circulation clearances. Construction and maintenance of the improvements can be accomplished within the properties and would not utilize materials that would contribute to fuel load or the potential for flooding, landslides, slope instability or drainage changes. Regulations and programs such as building codes, vegetation management, and inspections would reduce possibilities for potential damage to existing infrastructure. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts in relation to exposure of people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes in or near SRAs or lands classified as VHFHSZs. No further analysis is warranted.

e) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Existing Conditions

The purpose of the Safety Element of the Los Angeles County General Plan 2035 is to reduce the potential risk of death injury and economic damage resulting from natural and man-made hazards.¹⁰⁷ In addition, the General Plan Safety Element designates at-risk areas as FHSZs per government code sections 51175–51189. In the unincorporated areas of the Los Angeles County, SRAs have been classified as Very High, High and Moderate. However, Local and Federal Responsibility Areas are classified as Very High. The Forestry Division of the Fire Department assists, supports, and institutes a variety of regulatory programs and standards. Among those programs and standards include fire-related land use and building regulations, hillside ordinances, fire standards, vegetation management, pre-fire management and planning, fuel modification plan review program, and brush clearance inspections to name a few. Furthermore, the County's Fire Department is one of six contract counties that maintain a contractual relationship with CAL FIRE who implements the California Fire Plan. The California Fire Plan guides the Los Angeles County Strategic Fire Plan developed by the Fire Department.¹⁰⁸ The County Fire Department's Strategic Fire Plan also includes a map of existing Fire Department helispot fuel reduction projects, water resources, motorway maintenance maps, and a description of the road and fuel maintenance functions of the Fire Department.¹⁰⁹ Furthermore, Section 503 of Title 32 provides additional specifications for fire access roads in developed areas, including dimensions and markings.

Section V (Emergency Response) of the Safety Element of the Los Angeles County General Plan states the provision of disaster routes (Figure 2.20-1) through the OAERP.¹¹⁰ When emergency response or evacuation orders are issued, evacuation routes, temporary shelter facilities, public alerts and warnings plus procedures would be provided by County

¹⁰⁷ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

¹⁰⁸ Los Angeles County Fire Department. May 2018. 2017-2021 Strategic Plan: Act. Action. Accomplish. Available at: <https://www.fire.lacounty.gov/wp-content/uploads/2018/10/LACoFD-Strategic-Plan-2017-2021.pdf>

¹⁰⁹ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

¹¹⁰ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

Sheriff and Fire personnel based on the disaster to facilitate the evacuation process.¹¹¹ Public Works maintains a list of disaster routes in the Los Angeles County Operational Area by city that have been preidentified for use during times of crisis.¹¹²

The Fire Department provides fire, safety, and emergency medical services to the unincorporated areas. The Strategic Fire Plan includes the County of Los Angeles Fire Department Operations Bureau Map, which indicates that emergency services are available in all unincorporated areas of the County. Additionally, many cities within Los Angeles County utilize Fire Department services. There are three major geographic regions in the Fire Department service area, which are divided into nine divisions and 22 battalions.¹¹³ The OAERP strengthens short and long-term emergency response and recovery capability and identifies emergency procedures and emergency management routes in Los Angeles County.

Upon review of the County's General Plan 2035 and the proposed program, the parcels that would be subject to the Green Zone Districts and Storage Enclosures for Recycling and Solid Waste Revisions are located outside the HMA (Figure 2.1-2).¹¹⁴ Based on the *Hillside Management Areas and Ridgeline Management Map* in the County General Plan 2035, no County designated significant ridgelines are located within the Green Zone Districts, but the Green Zone Districts are within HMAs of both 25–50 percent slope and 50 percent-plus slope (Figure 2.1-2).¹¹⁵

Threshold of Significance

The purpose of the Green Zones Program is to address incompatible land uses in proximity to sensitive uses by changing regulatory requirements for specific industrial land uses. A substantial adverse effect on wildfire risk would normally occur as a result of a physical change in the environment that would exacerbate or expose people to significant wildfire risk involving loss, injury or death. The County's General Plan per the government code sections 51175–51189 define at-risk areas as FHSZs and SRAs being classified as Very High, High and Moderate within the County.^{116, 117}

The County's Fire Department assist and supports the implementation of the CAL FIRE FHSZs model in Los Angeles County. In an effort to reduce the threats to lives and property, the Fire Department has instituted a variety of regulatory programs and standards. These include vegetation management, pre-fire management and planning, fuel modification plan review program, and brush clearance inspection program. In addition to these programs, the Fire Department, Public Works, and Building and Safety enforce fire and building codes related to development in FHSZs such as Title 20, 21, 26, and 32 (Fire Code). Furthermore, the General Plan Safety Element and the Strategic Fire Plan identifies and prioritizes pre- and post-fire management strategies and tactics to reduce loss of life, property, and natural resources.^{118,119,120} Fire prevention as it relates to FHSZs, and per the General Plan, the County's fire code and building regulations (Title 20, 21, 26, and 32), includes fire access and clearance road standards for equipment and public

¹¹¹ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch12.pdf

evacuation, access and circulation standards, fire flow and fire hydrant standards, brush clearances around structures within hillsides that are fire prone, fuel modification, defensible spaces, utility easement access for fire protection, Building standards within WUI, plan review and approval process for land development projects within VHFHSZs, and integrated VMP.¹²¹

Impact Analysis

The proposed program would result in less than significant impacts to exposure of people or structures to significant wildfire risks, directly or indirectly, resulting in loss, injury or death within or near SRAs or lands classified as VHFHSZs in the proposed program area or vicinity. The potential for impacts to wildfire in relation to the exposure of people and structures, directly or indirectly to significant risk of loss, injury or death has been evaluated in relation to all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program, and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated (please see Section 1, Table 1.IV-1, and Table 1.IV-2). The analysis considers the incremental changes to the physical environment as a result of new and/or revised development standards, in relation to the historic and anticipated permits for affected uses. The proposed revisions to the development standards that have the potential result in physical changes in the environment that might have the potential to expose people and structures, directly or indirectly to significant risk of loss, injury or death include the allowed use of alternative fencing materials, required solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, air filtration devices, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2).

Element 1 – Green Zone Districts

~~Green Zones~~Zone Districts would result in no impacts related to wildfire as a result of the exposure of people and structures, directly or indirectly to significant risk of loss, injury, or death in or near SRAs or lands classified as VHFHSZs. The new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to the exposure of people and structures to significant risk of loss, injury or death in or near SRAs or lands classified as VHFHSZs. Currently the zoning and land use designations for the 11 districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum FAR requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, ~~27 28~~ parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, ~~14 45~~ of the ~~27 28~~ parcels proposed for a zone change within the Green ~~Zones~~Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green ~~Zones~~Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a CUP. The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties (see Table 1.IV-2). The program requires the nonconforming uses to come into compliance within 3 to ~~740~~ years of adoption of the Ordinance. In the case of updated standards for existing industrial uses, the construction of these measures would not differ substantially from existing conditions, such that they would expose people or structures to significant wildfire risks, directly or indirectly, resulting in loss, injury, or death. These measures such as construction of solid walls and planting trees would comply with enclosure standards including site setback, maintenance and

¹²¹ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

operation standards, and access and vehicle circulation standards, would avoid rather than exacerbate wildfire risk to loss of life or property. In addition, improvements would be accomplished within the properties and would not require lane closures or other temporary impairment of circulation access or clearances.

The new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to the exposure of people and structures, directly or indirectly, to significant wildfire risk in loss, injury or death within Hillside Management Areas. None of the Green Zone Districts are located within the areas designated as HMAs within the County General Plan 2035. The proposed program would have no impact on the integrity of these hillsides in relation to emergency response plans or evacuation routes, as the Green Zones Program would comply with the HMA Ordinance and Hillside Design Guidelines.¹²² Therefore, the new development standards and/or more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties would result in no impacts to wildfire as it relates to the exposure of people and structures, directly or indirectly to significant risk of loss, injury or death in or near SRAs or lands classified as VHFHSZs. No further analysis is warranted.

Element 2 – New Sensitive Uses

The new development standards for New Sensitive Uses adjacent to or adjoining existing industrial, recycling and solid waste, or vehicle-related uses would result in less than significant impact to wildfire in relation to exposure of people or structures to significant wildfire risks, directly or indirectly, resulting in loss, injury or death within or near SRAs or lands classified as VHFHSZs. The County Fire Department along with Public Works assists, supports and institutes a variety of regulatory programs and standards that includes vegetation management, pre-fire management and planning, fuel modification plan review program, and brush clearance inspections, enforcement of fire and building codes as well as Title 20, 21, 26, and 32 requirements of the fire code related to development in FHSZs.^{123,124} Furthermore, Public Works maintains a list of disaster routes in the Los Angeles County Operational Area by city that have been preidentified for use during times of crisis.¹²⁵ When emergency response or evacuation orders are issued, evacuation routes, temporary shelter facilities, public alerts and warnings plus procedures would be provided by County Sheriff and Fire personnel based on the disaster to facilitate the evacuation process.¹²⁶ The new development standards would not expose people or structures to significant wildfire risk nor impair or obstruct emergency response or evacuation routes, directly or indirectly, resulting in loss, injury or death in or near SRAs or lands classified as VHFHSZs. The improvements required pursuant to the Ordinance would not exacerbate wildfire risk that would expose workers or nearby residents to excessive risk thereby resulting in loss, injury, or death. To the extent that the Ordinance facilitates perimeter control of properties, it would facilitate the management of wildfire, rather than exacerbate the spread of a wildfire. Construction and maintenance of the improvements can be accomplished within the properties and would not utilize materials that would contribute to fuel load or become a source of pollutants during a wildfire that would expose workers or nearby residents to excessive risk thereby resulting in loss, injury or death during a wildfire. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, in close proximity to existing industrial uses, permitted in the zones where they are located. The existing zoning designations currently include development standards applicable to the above listed sensitive uses. In addition, the County Fire Department along with Public Works assists, supports, and institutes a variety of regulatory programs and standards that includes vegetation management, pre-fire management and planning, fuel modification

¹²² Los Angeles County. Adopted 6 October 2015. Chapter 9: Conservation and Natural Resources Element. In the Los Angeles County General Plan 2035. Available at http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch9.pdf

¹²³ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

¹²⁴ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

¹²⁵ County of Los Angeles Department of Public Works. Accessed November 6, 2019. Disaster Routes by City. <https://dpw.lacounty.gov/dsg/DisasterRoutes/>

¹²⁶ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch12.pdf

plan review program, and brush clearance inspections, enforcement of fire and building codes as well as Title 32 requirements of the fire code related to development.^{127, 128}

The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices (see Table 1.IV-2). ~~As discussed in Section 1, construction activities for the proposed program would include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130).~~ These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place of worship, in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses. In the case of updated standards for new sensitive uses, the construction of these measures would not differ substantially from existing conditions, such that they would expose people or structures to significant wildfire risk or impair or obstruct emergency response or evacuation routes thereby resulting in loss, injury, or death, directly or indirectly. Emergency response and evacuation routes are already in place throughout the county where current Fire Department services are already being provides such as fire, safety and emergency medical services to all the unincorporated areas as well as contracted cities within the County.¹²⁹ The OAERP's short and long-term emergency response and recovery capability, emergency procedures, and emergency management routes in Los Angeles County which would facilitate the evacuation process during a wildfire. Furthermore, the Ordinance is expanding development standards for requiring screening, buffers, or placement of features between incompatible uses of nonconforming and new construction projects. These measures to reduce the incompatibility of new sensitive uses with existing industrial uses through development standards such as construction of landscaping and planting trees, buffering, and open space, would not exacerbate wildfire risk and thereby expose project occupants or structures to significant wildfire risks, directly or indirectly, resulting in loss, injury or death within or near SRAs or lands classified as VHFHSZs.

The proposed New Sensitive Uses would have less than significant on the integrity of these hillsides in relation to wildfire risk and exposure to pollutants, as the development standards for New Sensitive Uses within the HMAs would be required to comply with the HMA Ordinance, Hillside Design Guidelines, Title 22 Ordinance, as well as fire prevention requirements, in particular to landscaping barriers, enclosures, fencing, solid walls, signage, and lighting.¹³⁰ In addition to the County General Plan, fire prevention regulations per the County Fire Department, Public Works, and Building and Safety would also apply, consisting of vegetation management, pre-fire management and planning, fuel modification program, brush clearance inspections, enforcement of fire and building codes per Title 20, 21, 26, and 32 requirements of the fire code for development in FHSZs.¹³¹ Other fire prevention and building regulations under Title 20, 21, and 26, include access and circulation standards, fire access and road clearances, fire flow and fire hydrant standards, brush clearances around structures within hillsides areas considered primary wildland fire risk areas, defensible spaces, utility easement access for fire protection, building standards within WUI, plan review and approval process for land development projects within VHFHSZs, and integrated VMP.¹³² The use of air filtration systems would not result in obstruction to clearances, as the County requirements, per Title 22 Ordinance, indicate that air filtration systems shall be placed inside a building, residential or other rooms, intended for human occupancy which makes them non-obstructive within circulation paths from the public right of way. Air filtration systems placed outdoors, require

¹²⁷ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

¹²⁸ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

¹²⁹ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch12.pdf

¹³⁰ Los Angeles County. Adopted 6 October 2015. Chapter 9: Conservation and Natural Resources Element. In the Los Angeles County General Plan 2035. Available at http://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch9.pdf

¹³¹ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

¹³² County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

setbacks, screen walls, fencing and/or landscaping that provide screening of the systems from the public right of way.¹³³ In addition, the County Fire Department along with Public Works assists, supports, and institutes a variety of regulatory programs and standards that includes vegetation management, pre-fire management and planning, fuel modification plan review program, and brush clearance inspections, enforcement of fire and building codes as well as Title 20, 21, 26, and 32 requirements of the fire and building code related to development in FHSZs.^{134,135} Therefore, the new development standards for New Sensitive Uses near Industrial, Recycling and Solid Waste, or Vehicle-Related Uses would result in less than significant impact in relation to exposure of people or structures to significant wildfire risks, directly or indirectly, resulting in loss, injury or death within or near SRAs or lands classified as VHFHSZs. No further analysis is warranted.

Element 3 – Recycling and Waste Management Revisions

The Recycling and Waste Management Revisions, including supermarket accessory recycling collection centers, would result in less than significant impacts in relation to exposure of people or structures to significant wildfire risks, directly or indirectly, resulting in loss, injury or death within or near SRAs or lands classified as VHFHSZs. ~~The~~ There are a variety of regulatory programs and standards that help in the reduction of fuel and in preparation help to prepare for future wildfire events. As part of this element, the County's programs and standards such as building fire code standards, Section 503 of Title 32 regarding developed neighborhood access, HMA Ordinance, ~~AHMP~~, and water resources to name a few are currently an on-going effort. The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards as identified in the project description (Table 1.IV-1).

~~The proposed revisions would prohibit automobile dismantling yards Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in vessel organic waste facilities are prohibited in ARAs. would be prohibited from HMAs and SEAs. Additionally, pallet yards, chipping and grinding, and mulching facilities would be prohibited in HFHSZs and VHFHSZs, solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways, and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs.~~ The County Fire Department and Public Works assist, support, and institute a variety of applicable regulatory programs and standards including vegetation management, pre-fire management and planning, fuel modification plan review program, brush clearance inspections, enforcement of fire and building codes as they relate to Title 20, 21, 26, and 32 for development in FHSZs.^{136, 137}

The Supermarket Accessory Recycling Collection Centers revisions would result in less than significant impacts in relation to exposure of people or structures to significant wildfire risks, directly or indirectly, resulting in loss, injury or death within or near SRAs or lands classified as VHFHSZs. The proposed Ordinance defines a Supermarket Accessory Recycling Collection Center as a store that “contains a full-line, self-service store that sells dry grocery, canned goods,

¹³³County of Los Angeles. Title 22 – Planning and Zoning, Division 7 – Standards for Specific Uses, Chapter 22.130.030 – Development Standards for Sensitive Uses. Accessed 31 March 2020.

¹³⁵ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

¹³⁶ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

¹³⁷ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code” (for definitions, please see pages 10–11 of the public draft ordinance, Appendix A to the Initial Study). The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Collection centers do not involve the processing of the recyclable materials, which is only allowed with a CUP in applicable designated zones. Supermarket Accessory Recycling Collection Centers would be permitted in currently developed supermarket locations in urbanized locations in the County. Supermarket Accessory Recycling Collection Centers proposed as an accessory use within zones C-1, C-2, C-3, C-M, as well as all industrial zones would be required to comply with CalRecycle requirements for the development of recycling collection centers. These uses would also be required to comply with existing development standards including setbacks from property lines; minimum distance from residential uses; avoidance of obstruction of pedestrian or vehicular circulation such that it is located on any parking spaces, driveway, aisles, vehicular back-up space, walkways, loading areas, fire lanes, trash enclosure areas, and landscape areas; and avoidance of the reduction of existing parking when accommodating square footage to be used for recycling collection facility. Additional requirements include that containers shall not be vertical stacked and be clearly labeled identifying materials stored, and materials for storage shall not exceed the total vertical height of the recycling collection facilities where materials will be visible. The CalRecycle requirements are set forth to meet the County’s waste diversion goals. The proposed revisions would allow Supermarket Accessory Recycling Collection Centers in the C-MJ, C-R, C-RU, MXD, MXD-RU designated zones. These uses would be ~~constructed~~established on existing parking lots, and no new structures will be built. Any construction resulting from compliance with development standards would be minimal and would not substantially alter the existing conditions for existing industrial uses such that exposing people or structures to significant wildfire risk, directly or indirectly, would result in loss, injury or death from wildfires would be adversely affected. Construction and maintenance of the improvements would be accomplished within the properties and would not exacerbate wildfire hazards or require lane closures or other temporary impairment of emergency response or evacuation route access that would result in direct or indirect injury or loss from wildfires. Therefore, the Supermarket Accessory Recycling Collection Centers would result in less than significant impacts in relation to exposure of people or structures to significant wildfire risks, directly or indirectly, resulting in loss, injury, or death within or near SRAs or lands classified as VHFHSZs. No further analysis is warranted.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The Storage Enclosures for Recycling and Solid Waste Revisions would result less than significant impacts to wildfire in relation to exposure of people or structures to significant wildfire risks, directly or indirectly, resulting in loss, injury or death within or near SRAs or lands classified as VHFHSZs. Any new development or expansion of existing development would be required to meet the current development standards of the zone in which they are permitted. The revisions would add additional requirements to current development requirements including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. Additionally, the Ordinance would only apply to new development and expansion of existing development. Any new development would be subject to development requirement of HMAs. These revisions contain HMAs of both 25–50 percent slope and 50 percent-plus slope.¹³⁸ The proposed program would have less than significant impact on the integrity of these hillsides in relation to exacerbated wildfire risk in relation to injury, loss or death, as the Green Zones Program would comply with the HMA Ordinance and Hillside Design Guidelines that help preserve and enhance the physical integrity of hillsides. The County General Plan along with fire prevention regulations from the County Fire Department, Public Works and Department of Building and Safety, would also apply, includes vegetation management, pre-fire management and planning, fuel modification plan review program, brush clearance inspections, enforcement of fire and building codes regulations as they relate to fire prevention (Title 20, 21, 26, and 32) for development in FHSZs.^{139, 140} The fire prevention consist of fire access and road widths and clearances, access and circulation standards, fire flow and fire hydrant standards, brush clearances around structures within hillsides that are fire prone, defensible

¹³⁸ Los Angeles County Department of Regional Planning. May 2014. Figure 9.8: Hillside Management Areas and Ridgeline Management Map. In the Los Angeles County General Plan 2035. Available at <http://planning.lacounty.gov/generalplan/figures2015>

¹³⁹ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

¹⁴⁰ County of Los Angeles Department of Regional Planning. Adopted October 6, 2015. Los Angeles County General Plan 2035: Safety Element. <http://planning.lacounty.gov/generalplan/generalplan>

spaces, utility easement access for fire protection, Building standards within WUI, plan review and approval process for land development projects within VHFHSZs, and integrated VMP.¹⁴¹

The construction of an onsite storage enclosure would not substantially alter the existing conditions such that existing structures would be impacted. The storage would be required to have fence or wall enclosures which the height of the stored items could not exceed and thereby would not intrude within circulation patterns and maintain clearances. The development standards for storage enclosures within a recycling and solid waste facility, located outside of a building, would be required to be at least 8 feet tall and placed in the rear portion of the lot or adjacent to an alley, where applicable, and not obstruct or encroach into parking spaces, landscape areas, pedestrian or vehicular circulation, or other areas per County fire and building codes. Municipal solid waste, recyclables, and compostable material containers would be required to be located in the same enclosure thereby eliminating the need for multiple enclosures, unless allowed per code under extraordinary circumstances. The recyclable materials would be deposited and stored in containers that have lids and are made of metal, and the containers would be maintained in good condition with no structural damage, holes, visible rust, or graffiti. The storage areas shall be accessible to residents, employees, and haulers at all times. The Storage Enclosures for Recycling and Solid Waste Revisions would not result in a substantial change, in addition to the development standards which require them to be kept in good condition and away from circulation clearances. Construction and maintenance of the improvements would be accomplished within the properties and would not expose people or structures to significant wildfire risks, directly or indirectly, resulting in loss, injury or death.¹⁴² Regulations and programs such as building codes, vegetation management, and inspections would reduce possibilities for potential damage to existing structures. Therefore, the Storage Enclosures for Recycling and Solid Waste Revisions would result in less than significant impacts to wildfire in relation to exposure of people or structures to significant wildfire risks, directly or indirectly, resulting in loss, injury or death within or near SRAs or lands classified as VHFHSZs. No further analysis is warranted.

2.21. MANDATORY FINDINGS OF SIGNIFICANCE

This analysis is undertaken to determine if the proposed program has the potential to result in significant impact, thus requiring the consideration of mitigation measures or alternatives in accordance with Section 15063 of the State CEQA Guidelines.¹ The analysis covers all program components that could result in a physical change to the environment. Specifically, potential impacts associated with the first four elements of the proposed program and the proposed change to the General Plan land use designations for select parcels located within the Green Zone Districts are evaluated with regard to the following:

	<i>Potentially Significant Impact</i>	<i>Less than Significant Impact with Mitigation Incorporated</i>	<i>Less than Significant Impact</i>	<i>No Impact</i>
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?				

While the proposed program would result in an overall improvement to the environment, it has the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory.

The Green Zones Program is proposed for unincorporated areas of the County. The County proposes to adopt the County Green Zones Program to promote environmental justice by providing zoning requirements for industrial uses, vehicle-related uses, and recycling and solid waste uses that may disproportionately affect communities surrounding these land uses. The Green Zones Program would not involve any new construction or physical development and would not result in increased density. The Recycling and Waste Management revisions element of the Green Zones Program would result in providing a more streamlined and simplified process to permit new types of recycling processing facilities

¹⁴ <https://ecos.fws.gov/ecp/>

¹⁵ <https://egis3.lacounty.gov/dataportal/>

using newer technologies in order to meet State requirements, and to further define and provide specific regulations for automobile dismantling yards, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities. Additionally, the revisions to Title 22 would result in more restricted locations where recycling and waste management facilities could be permitted ~~by restricting automobile dismantling yards. Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited from Hillside Management Areas (HMAs), Significant Ecological Areas (and SEAs). Additionally, pallet yards, chipping and grinding, and mulching facilities would be prohibited in HFHSZs and Very High Fire Hazard Severity Zones (VHFHSZs). Additionally, in vessel), solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways, and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities are~~ would be prohibited in Agricultural Resource Areas (ARAs). The Green Zones Program consists of the following five elements and the associated amendments to the County Zoning Code and General Plan:

Element 1 – Green Zone Districts

Element No. 1 consists of new development standards would result in a more stringent entitlement processes for specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses on other properties. Currently the zoning and land use designations for the eleven districts under consideration for proposed revision, allow some industrial uses in these communities by-right and others with a CUP and include standards for limited parking, signage, tree planting, and maximum floor area ratio (FAR) requirements. In order to retain consistency with the General Plan and Title 22 zoning code, as part of the General Plan Amendment Revisions, 27 ~~28~~ parcels are proposed for a zone change from M-2, to M-1. Similarly, as part of the General Plan Amendment Revisions, 14 ~~45~~ of the 27 ~~28~~ parcels proposed for a zone change within the Green Zone Districts area are proposed to be changed from the land-use designation of Heavy Industrial (IH) to the Light Industrial (IL) General Plan designation. The purpose of the general plan amendment and zone change is to ensure that the current general plan and zoning designations are consistent with the revisions proposed with Title 22, Green Zone Districts with regard to intensity of permitted industrial land uses. The new development standards and/or more stringent entitlement process would be retroactive to the 11 districts, and to future entitlements subject to a Conditional Use Permit (CUP). The new development standards would apply to specific industrial, recycling, or vehicle-related uses within Green Zone Districts within a 500-foot radius of existing sensitive uses, requiring the use of alternative fencing materials, solid wall screening where certain facilities are not enclosed, expanded landscaping buffers between incompatible uses, required paving, lighting standards, signage standards, maintenance and operations standards, building height and screening standards, storage enclosure standards, access and vehicle circulation standards, and open space standards within subject properties. The program requires the nonconforming uses to come into compliance within 3 to 7 ~~40~~ years of adoption of the Ordinance.

Element 2 – New Sensitive Uses

Element No. 2 consists of new development standards for New Sensitive Uses adjoining or adjacent to existing industrial, recycling, and solid waste, or vehicle-related uses. Currently the zoning and land use designations that permit sensitive uses do not have requirements for remediating the effects of incompatible adjacent uses. The Ordinance establishes the definition of sensitive uses to include dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory to a place of worship, ~~in close proximity to existing industrial uses, permitted in the zones where they are located.~~ The existing zoning designations currently include development standards applicable to the above listed sensitive uses. However, the Ordinance expands these requirements to include development of new sensitive uses where these uses are adjacent to, or adjoining industrial, recycling or solid waste, or vehicle-related uses. The Ordinance includes standards for requiring the use of solid wall screening; expanded landscaping buffers between incompatible uses; standards for windows; placement of balconies; and air filtration devices. Construction activities for the proposed program would include landscaping barriers, ~~enclosures, fencing open space,~~ solid walls, ~~signage, lighting,~~ and air filtration as measures that would decrease impacts to new sensitive uses near or adjacent to existing industrial, recycling and solid waste, or vehicle-related uses (Chapter 22.130). These measures would be required where the Title 22 Ordinance implements new development standards for new sensitive uses, such as dwelling units, schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, shelters, and daycares, or preschools as accessory use to a place

of worship, in close proximity adjacent to or adjoining legally-established, existing industrial, recycling or solid waste, or vehicle-related uses.

Element 3 – Recycling and Waste Management Revisions

Element No. 3 includes revisions to Recycling and Waste Management standards and regulations, including supermarket accessory recycling collection centers. The County currently regulates recycling facilities as junk and salvage and solid waste facilities, which are allowable in M-2 and M-2.5 designated zones. The Ordinance would allow for permitting of new types of facilities including organic waste that would aid in the reduction of greenhouse gases and comply with State requirements. The new development standards and/or more stringent entitlement process for future recycling and solid waste facilities would be subject to a CUP, an MCUP, and/or an SPR, and would include requirements for construction of improvements consisting of landscaping barriers, enclosures, fencing, solid walls, paving, signage, and lighting, air filtration, building height restrictions, vehicle circulation, and storage of materials, as well as cleaning and maintenance standards. These construction improvement requirements are already subject to current development standards. ~~The proposed revisions would prohibit automobile dismantling yards Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities from HMAs, SEAs, and VHFHSZs. Additionally, in-vessel organic waste facilities would be prohibited in ARAs.~~ would be prohibited from HMAs and SEAs. Additionally, pallet yards, chipping and grinding, and mulching facilities would be prohibited in HFHSZs and VHFHSZs, solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways, and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. The Recycling and Waste Management Revisions, except for Supermarket Accessory Recycling Collection Centers, would require an applicant to obtain a CUP for primary uses, which is subject to discretionary approval by the County. Additionally, Supermarket Accessory Recycling Collection Centers would be permitted in currently developed supermarket locations in urbanized locations in the County.

Element 4 – Storage Enclosures for Recycling and Solid Waste Revisions

Element No. 4 would add additional requirements to current development requirements for solid waste and recycling storage enclosures including increased enclosure wall height, a roof, paving, cleaning and maintenance, requirements for distance from adjoining doorway, and enhanced circulation. These revisions to the Ordinance would only apply to new development and expansion of existing development.

In addition to the revisions to Title 22, the project would also include a General Plan Amendment to ensure consistency with the proposed revisions to Title 22. The project's General Plan Amendment component consists of text changes to policies in Chapter 3 (Guiding Principles), Chapter 6 (Land Use Element), Chapter 13 (Public Services and Facilities Element), and Appendix C (Land Use Element Resources). The edits and additions to policies in these chapters support the incorporation of the Green Zones Program framework into the General Plan as well as the implementation of the goals of SB 1000 and existing environmental justice language in the General Plan.

The new policies under the additional chapters include language around promoting environmental justice in areas that bear disproportionate impacts from stationary polluting sources, additional development standards including appropriate technology and building enclosure to address land use incompatibility, and encouraging land use patterns that protect the health of sensitive receptors.

Additional changes include Zone changes and corresponding changes in the Land Use Designation for a subset of those parcels for consistency and in support of the goals of addressing incompatible land uses.

Element 5 – Addition of New Uses and Re-defining/Categorizing Uses Title 22

Element No. 5 includes the addition of specific recycling and solid waste uses into Title 22 definitions to be regulated countywide. This includes new organic waste facilities such as anaerobic digestion, chipping and grinding, mulching, and composting. This also includes recategorizing junk and salvage and auto-dismantling yards under recycling facilities to allow for improved regulation with new development standards for these types of uses. Includes changes to various sections of Chapter 22.172 (Nonconforming Uses, Buildings, and Structures) to be consistent with new standards and

Schedule for Compliance related to Green Zone Districts (Chapter 22.84). Also makes changes to various sections in Division 10 (Community Standards Districts), including language in Application of Community Standards Districts to Property (22.300.030) and Community Standards Districts for the following communities: Avocado Heights (22.308), East LA (22.316), and Florence-Firestone (22.324), to be consistent with new development standards in the overlapping Green Zone Districts (Chapter 22.84). Also makes changes to various chapters in Division 3 to update land use regulation summary tables by zones for consistency with new use and development standards in the ordinance.

Green Zones Element No. 5 was determined to not have the potential to result in a physical change to the environment. As a result, this element of the Green Zones Program is not included in the environmental document. Element No. 5 consists of revisions that would redefine and recategorize recycling and waste management uses only. No changes to development standards, permitting requirements, or changes to where these uses would be permitted is being proposed in this element of the Ordinance. As a result, this element of the Green Zones Program was not included in the environmental analysis in this document.

The potential implementation of additional permitting and development standards that would apply to most industrial commercial, and residential zoning designations in the County, and may include landscaping barriers, enclosures, fencing, solid walls, signage, lighting, and air filtration as measures to decrease impacts to surrounding sensitive uses. The revisions to the County Zoning Code (Title 22) would result in providing a more streamlined and simplified process to permit new types of recycling processing facilities using newer technologies in order to meet State requirements, and would further define and provide specific regulations for automobile dismantling yards, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities. Additionally, the proposed program would provide additional standards for storage enclosures for recycling and waste management facilities.

These development standards would potentially have no-substantially adverse impact impacts to biological resources that would reduce habitat or drop species population levels. However, in threaten a species' continued existence. In the absence of mitigation measures or conditions of approval, the Green Zones Program would result in potentially have the potential for significant impacts in relation to conflict with local policies and ordinances protecting biological resources, specifically adverse effects on species identified as candidate, sensitive, or special status species, and migratory birds; sensitive natural communities, federal, state or federally protected wetlands; oak trees, and migratory birds and woodlands; or conflicts with local policies and ordinances protecting biological resources (Section 2.4, *Biological Resources*).

Similarly, implementation of the development standards required as a result of the proposed program would have the potential for significant direct impacts to archaeological and Tribal cultural resources. As documented in the Conservation and Natural Resources Element of the County General Plan 2035, the unincorporated territory of the County has an extensive known period of occupation by indigenous people and subsequent occupation by diverse non-indigenous cultures. The potential exists for remnants of these pre-historic and historic period occupations to remain buried in *in situ* soils that underly existing and future waste management facilities, and dedicated recycling facilities. Improvements required in conjunction with the proposed program that require excavation or grading of soils, such as walls, enclosures, and landscaping planting have the potential to result in the discovery of currently unknown archeological and Tribal cultural resources. The development of the Green Zones Program would result in ground disturbance, particularly with regard to the construction of barrier walls, the construction of enclosure buildings, and the planting of landscaping. Ground disturbance is expected to reach a depth of approximately 3 feet; therefore, excavation associated with the program developments may reach native undisturbed soils that contained buried archaeological deposits. Fourteen tribes have been identified as having traditional, cultural, or ancestral ties to the land affected by the proposed development standards (Section 2.5, *Cultural Resources*; Section 2.18, *Tribal Cultural Resources*). Since precise locations are unknown, the potential would exist to adversely affect significant archeological and Tribal cultural resources that constitute examples of the major periods of California history or prehistory that may not be able to be reduced to below the level of significance through the incorporation of mitigation measures, requiring the consideration of alternatives in an EIR.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

The proposed program would result in an overall improvement to the environment. Other than the potential for impacts to air quality, biological resources, cultural resources, hazards and hazardous materials, hydrology and water quality, land use and planning, noise, utilities and services systems, and Tribal cultural resources, there would be only short-term construction impacts.

To avoid impacts to air quality during construction, best management practices (BMPs) to avoid impacts would be implemented, including fugitive dust abatement. Although significant impacts to air quality are not anticipated, and it is also anticipated that the long-term impact of the proposed program would result in an improvement to air quality, this issue area is being carried forward for further analysis to ensure that the findings will be consistent and in alignment with the findings of the Health Impact Assessment.

Potential impacts to biological resources (candidate, sensitive, or special status species; sensitive natural communities; federal wetlands; migratory birds; and oak trees) could occur. Candidate, sensitive, or special status species; sensitive natural communities; federal wetlands; and Oak trees are not located at all sites affected by the Green Zones, and individual projects may not require removal of oak trees. However, there is the potential for cumulative impacts.

The location of archaeological and Tribal cultural resources is generally unknown, and unanticipated discoveries may result in a significant impact to these resources.

Transport of hazardous materials was identified to potentially result in significant impacts at select locations within the project area. However, hazardous materials would be transported in full compliance with federal, state, and local rules and regulations.

Implementation of the development standards required as a result of the proposed program would have the potential for significant direct impacts to hazards and hazardous materials. A review of the CalEPA EnviroStor database indicates that there are 168 hazardous waste sites in the Green Zones Program area. A review of GeoTracker sites indicates 585 hazardous sites in the Green Zones Program Area, and Geo Tracker UST identifies 238 hazardous sites in the Green Zones Program area. BMPs would be used during construction. Additionally, at locations of known deposits of hazardous materials, a Phase I Environmental Site Assessment (ESA) would be prepared to ensure the safety of construction workers, sensitive receptors, and schools. However, due to the high number of identified contaminated sites, and the industrial uses of potentially affected parcels, this issue area has been carried forward for additional analysis.

Implementation of the development standards required as a result of the proposed program would have the potential for significant direct impacts to hydrology and water quality. Although the proposed program would result in long-term environmental benefits, implementation of the development standards required as a result of the proposed program would in the potential for increased stormwater runoff and potential contaminated runoff due to an increase in impermeable surfaces as a result of the requirement in the ordinance for paving of currently unpaved surfaces.

Implementation of the development standards required as a result of the proposed program would have the potential for significant direct impacts to land use and planning. The proposed program includes a zoning change for 27 ~~28~~ parcels and a general plan amendment for 14 ~~45~~ parcels. This may result in potential for impacts related to a conflict with any County land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. As a result, this issue area has been carried forward for further analysis.

Implementation of the development standards required as a result of the proposed program would have the potential for significant direct impacts to noise during construction in relation to generation of a substantial temporary increase in noise levels in the vicinity of the project in excess of standards established by the County, and with generation of excessive groundborne vibration and groundborne noise levels. Although BMPs including noise barriers will be implemented during project construction, there is the potential for exceedance of County noise thresholds.

Implementation of the development standards required as a result of the proposed program would have the potential for significant direct impacts to utilities and services systems relating to sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years. Although landscaping will be installed that is drought tolerant, the use of water for landscaping installation and maintenance will need to be further analyzed.

Therefore, the proposed program would have the potential to result in impacts that are individually limited but cumulatively considerable, requiring the consideration of mitigation measures and alternatives in an EIR.

c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

The proposed program would result in an overall improvement to the environment, and the proposed program is expected to result in less than significant impacts in relation to effects on human beings ~~by air quality and human remains~~, either directly or indirectly.

To avoid impacts to air quality during construction, BMPs to avoid impacts would be implemented, including fugitive dust abatement. Although significant impacts to air quality are not anticipated, and it is also anticipated that the long-term impact of the proposed program would result in an improvement to air quality, this issue area is being carried forward for further analysis to ensure that the findings will be consistent and in alignment with the findings of the Health Impact Assessment.

A review of the CalEPA EnviroStor database indicates that there are 168 hazardous waste sites in the Green Zones Program area. A review of GeoTracker sites indicates 585 hazardous sites in the Green Zones Program Area, and Geo Tracker UST identifies 238 hazardous sites in the Green Zones Program area. BMPs would be used during construction. Additionally, at locations of known deposits of hazardous materials, a Phase I Environmental Site Assessment (ESA) would be prepared to ensure the safety of construction workers, sensitive receptors, and schools. However, due to the high number of identified contaminated sites, and the industrial uses of potentially affected parcels, this issue area has been carried forward for additional analysis.

Implementation of the development standards required as a result of the proposed program would have the potential for significant direct impacts to hydrology and water quality. Although the proposed program would result in long-term environmental benefits, implementation of the development standards required as a result of the proposed program would in the potential for increased stormwater runoff and potential contaminated runoff due to an increase in impermeable surfaces as a result of the requirement in the ordinance for paving of currently unpaved surfaces.

Implementation of the development standards required as a result of the proposed program would have the potential for significant direct impacts to noise during construction in relation to generation of a substantial temporary increase in noise levels in the vicinity of the project in excess of standards established by the County, and with generation of excessive groundborne vibration and groundborne noise levels. Although BMPs including noise barriers will be implemented during project construction, there is the potential for exceedance of County noise thresholds.

No observed geotechnical abnormalities would pose a risk to health or human life that is not reasonably overcome through adherence to building codes. The proposed program would not interfere with emergency access of evacuation routes and no work would occur within airport safety zones in regard to the transport of hazardous materials. The proposed program would not construct habitable structures in a FEMA floodplain and would not result in the redirection of floods. The proposed program would result in no impacts to land use and planning through the physical division of an established community.

Potential impacts have been identified to hazards and hazardous materials, hydrology and water quality, and noise that could cause substantial adverse effects on human beings, either directly or indirectly. In addition, although significant impacts to air quality are not anticipated, and it is also anticipated that the long-term impact of the proposed program would result in an improvement to air quality, this issue area is being carried forward for further analysis to ensure that the findings will be consistent and in alignment with the findings of the Health Impact Assessment. Therefore, the consideration of mitigation measures and alternatives in an EIR is required.

SECTION III

RESPONSES TO COMMENTS

A. INTRODUCTION

The Draft Program Environmental Impact Report (PEIR) for the Los Angeles County Green Zones Program (Green Zones Program, or program) was circulated on December 17, 2020, for a formal 45-day public review period ending on February 1, 2021. During the review period, the County received a total of five comment letters on the Draft PEIR, which are listed in Table III.A-1, *List of Commenters on the Draft PEIR*.

Pursuant to California Environmental Quality Act (CEQA) Guidelines Section 15088(a), “[t]he lead agency shall evaluate comments on environmental issues received from persons who reviewed the draft EIR and shall prepare a written response. The lead agency shall respond to comments raising significant environmental issues received during the noticed comment period and any extensions and may respond to late comments.” In accordance with these requirements, this section of the Final PEIR provides responses to each of the written comments received regarding the Draft PEIR during the public review period. The responses are provided below in Section III.B, *Comments and Responses*, of this Final PEIR.

Section III.B, *Comments and Responses*, presents the comment letters, which are organized chronologically by the following type of commenting agency or entity: (1) federal, (2) sovereign nations, (3) state agencies, (4) local agencies, (5) organizations, and (6) individuals. Each letter has been assigned a number followed by a letter (Table III.A-1), and each comment within each letter has also been numbered and annotated in the right margin (for example, the first comment from CalRecycle is labeled **Comment 3A-1**).

TABLE III.A-1

Subject: SCH No. 2020060242 – Green Zones Program Draft Environmental Impact Report – Los Angeles County

Dear Ms. Farris:

Thank you for allowing the Department of Resources Recycling and Recovery (CalRecycle) staff to provide comments on the proposed project and for your agency's consideration of these comments as part of the California Environmental Quality Act (CEQA) process.

PROJECT DESCRIPTION

The Los Angeles County Department of Regional Planning, acting as Lead Agency, has prepared and circulated a Notice of Completion (NOC) of a Draft Environmental Impact Report (EIR) in order to comply with CEQA and to provide information to, and solicit consultation with, Responsible Agencies in the approval of the proposed project. The Green Zones Program aims to provide environmental justice by providing zoning requirements for industrial uses, vehicle related uses and recycling and solid waste uses that may disproportionately affect communities surrounding these land uses in alignment with state environmental justice initiatives, including the Planning for Healthy Communities Act (SB 1000). The proposed program will also regulate recycling and solid waste facilities in support of Senate Bill 1383 that focuses on waste diversion and the California Global Warming Solutions Act of 2006 (SB 32 and SB 535).

COMMENTS

The Los Angeles County Department of Public Health is the solid waste Local Enforcement Agency (LEA) for Los Angeles County and responsible for providing regulatory oversight of solid waste handling activities, including permitting and inspections. Solid waste handling and disposal activity project applicants should reach out to their LEA early in the process to discuss permitting and regulatory requirements. Please contact Dorcas Hanson-Lugo at 626.430.5540 to discuss the regulatory requirements for site specific solid waste handling and disposal activities.

3A-1

CalRecycle has developed guidance regarding the CEQA process as it relates to solid waste handling and disposal activities -

<https://www.calrecycle.ca.gov/SWFacilities/Permitting/CEQA/Toolbox/>.

CONCLUSION

CalRecycle staff thanks the Lead Agency for the opportunity to review and comment on the environmental document and hopes that this comment letter will be useful to the Lead Agency in carrying out their responsibilities in the CEQA process.

CalRecycle staff requests copies of any subsequent environmental documents, copies of public notices and any Notices of Determination for this proposed project.

3A-2

If the environmental document is adopted during a public hearing, CalRecycle staff requests 10 days advance notice of this hearing. If the document is adopted without a public hearing, CalRecycle staff requests 10 days advance notification of the date of the adoption and proposed project approval by the decision-making body.

3A-3

If you have any questions regarding these comments, please contact me at 916.341.6413 or by e-mail at jeff.hackett@calrecycle.ca.gov.

Sincerely,

Jeff Hackett, Manager
Permits & Assistance South Section
Permitting & Assistance Branch

Dorcas Hanson-Lugo, LEA, dlugo@ph.lacounty.gov

Benjamin Escotto, CalRecycle, Benjamin.escotto@calrecycle.ca.gov

State Clearinghouse - state.clearinghouse@opr.ca.gov

Response to Comment No. 3A-1:

CalRecycle stated that future solid waste handling and disposal projects proposed under the Green Zones Program should contact the Local Enforcement Agency, which is Los Angeles County Department of Public Health, for early permitting and regulatory requirements. The County will continue to coordinate with CalRecycle as future discretionary projects are proposed under the Green Zones Program. This comment is noted for the record and will be forwarded to the decision-makers for review and consideration.

Response to Comment No. 3A-2:

As requested in this comment, the County will provide CalRecycle with copies of any subsequent environmental documents, public notices, and the Notice of Determination for the Green Zones Program. This comment is noted for the record and will be forwarded to the decision-makers for review and consideration.

Response to Comment No. 3A-3:

As requested in this comment, the County will provide CalRecycle with 10 days' notice prior to public hearings, which are expected to occur in the summer of 2021. This comment is noted for the record and will be forwarded to the decision-makers for review and consideration.

Letter No. 4A

OFFICE OF THE SHERIFF

COUNTY OF LOS ANGELES

HALL OF JUSTICE

ALEX VILLANUEVA, SHERIFF

January 29, 2021

Ms. Tahirah Farris, Regional Planner
Los Angeles County
Department of Regional Planning
320 West Temple Street, 13th Floor
Los Angeles, California 910012

Dear Ms. Farris:

**REVIEW COMMENTS
NOTICE OF COMPLETION AND AVAILABILITY
OF DRAFT PROGRAM ENVIRONMENTAL IMPACT REPORT
GREEN ZONES PROGRAM
[PROJECT NO. 2018-003209-(1-5)]**

Thank you for inviting the Los Angeles County Sheriff's Department (Department) to review and comment on the December 2020 Notice of Completion and Availability of a Draft Program Environmental Impact Report (Draft PEIR) for the Green Zones Program (Program). The proposed Program would be implemented throughout the unincorporated areas of the Los Angeles County (County) that contain applicable zoning designations and associated land use designations as indicated in the Draft PEIR, dated December 10, 2020. The County is providing zoning requirements for industrial uses, vehicle-related uses, and recycling and solid wastes use including regulation of recycling and solid waste facilities. In addition, the proposed Program would also include a General Plan Amendment and a Zone Change for 28 parcels and proposed land use category designated for 15 of those parcels located in the communities of Florence-Firestone, West Rancho Dominguez-Victoria, West Carson, and Willowbrook.

Although these changes do not reflect on a specific project at this time, the proposed amendments may affect the level of service required by our

4A-1

211 WEST TEMPLE STREET, LOS ANGELES, CALIFORNIA 90012

A Tradition of Service
— Since 1850 —

Department when a proposed project is contemplated. The increase in recycling and solid waste facilities and auto salvage yards may potentially attract vandalism and theft, which may contribute to an increase in law enforcement services needed. In addition, under Section V, Project Alternatives, Section 8. Public Services, it indicates that sheriff stations will be subjected to Element 4 - Storage Enclosures for Recycling and Solid Waste Revisions requiring specific development and maintenance standards to be implemented at existing and future sites. While this may not be a significant environmental impact, it will be an economic impact to the County and individual Department budgets.

4A-1,
cntd

4A-2

In addition, the Department recommends that the County considers whether the proposed amendments for development on properties meet the general principles of Crime Prevention through Environmental Design.

4A-3

Also, for future reference, the Department provides the following updated address and contact information for all requests for reviews comments, law documents, and other related correspondence:

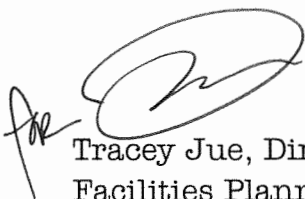

Tracey Jue, Director
Facilities Planning Bureau
Los Angeles County Sheriff's Department
211 West Temple Street
Los Angeles, California 90012

Attention: Planning Section

Should you have any questions regarding this matter, please contact me at (323) 526-5667, or your staff may contact Ms. Rochelle Campomanes of my staff, at (323) 526-5614.

Sincerely,

ALEX VILLANUEVA, SHERIFF

Tracey Jue, Director
Facilities Planning Bureau

Response to Comment No. 4A-1:

The Green Zones Program further restricts land use designations where recycling and solid waste facilities are a permissible use. Countywide, pallet yards, recycling collection facilities, recycling processing facilities, organic waste, and solid waste facilities would be prohibited from HMAs and SEAs. Additionally, pallet yards, chipping and grinding, and mulching facilities would be prohibited in HFHSZs and VHFHSZs, solid waste landfills and inert debris landfills would be prohibited in FEMA Flood Zones and Los Angeles County Floodways, and anaerobic digestion, construction and demolition, inert debris processing, recycling conversion technology, and combustion and non-combustion biomass conversion organic waste facilities would be prohibited in ARAs. Therefore, any new facilities will be consistently regulated and permitted through a discretionary process. The Green Zones Program would create an avenue for permitting where it is currently lacking and not in line with state laws. Additionally, the Green Zones Program would allow the County to better regulate these facilities when they are proposed.

Response to Comment No. 4A-2:

The letter raises concerns about new facilities affecting the Sheriff Department's level of service, an increase in recycling and solid waste facilities, and auto salvage yards that may potentially attract vandalism and theft, which may increase the need for Sheriff services and cause potential economic impacts to County and individual Department budgets.

The Green Zones Program would not establish any new recycling and solid waste facilities, and any new facilities would be consistently regulated and permitted through a discretionary process. The Green Zones Program would create an avenue for permitting certain types of facilities, such as organic waste and recycling processing, where it is currently lacking and not in line with state laws. Additionally, the Green Zones Program would allow the County to better regulate these facilities when they are proposed.

The comment raises questions about the economic impacts of the Green Zones Program on other County Departments but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment has been noted for the record and will be forwarded to the decision makers for their review and consideration.

Response to Comment No. 4A-3:

The revisions to Title 22 as part of the Green Zones Program include standards that meet the general principles of Crime Prevention through Environmental Design (CPTED). CPTED is a multi-disciplinary approach of crime prevention that uses urban and architectural design and the management of built and natural environments. CPTED strategies aim to reduce victimization, deter offender decisions that precede criminal acts, and build a sense of community among inhabitants so they can gain territorial control of areas, reduce crime, and minimize fear of crime. CPTED is based on the principle that proper design and effective use of buildings and public spaces in neighborhoods can lead to a reduction in the fear and incidence of crime, and an improvement in the quality of life. The January 2021 International Organization for Standardization (ISO) published standard ISO 22341:2021 promotes best practices and voluntary compliance with the principles and available approaches, strategies, and processes for implementing CPTED.^{1,2} The four main principles of CPTED are as follows:³

- 1. Natural Surveillance:** Providing opportunities for surveillance can reduce the attractiveness of crime targets. Also known as “eyes on the street”, this principle can be achieved by providing clear sightlines between public and private places; avoiding blind corners in pathways, stairwells, hallways, and parking lots; locating

³ City of Penrith, Australia. 2014. Penrith Development Control Plan 2014. Section 1.2.5, Safety and Security (Principles of Crime Prevention Through Environmental Design). Available at: https://www.penrithcity.nsw.gov.au/images/documents/services/health-safety/Crime_Prevention_Through_Environmental_Design_Control_Plan.pdf (accessed February 24, 2021).

entries that are clearly visible from the street; designing fences that maximize natural surveillance from the street to the building and from the building to the street and minimize opportunities for intruders to hide; installing security grilles, shutters, and doors that allow natural observation of the street; installing effective lighting in public places that does not produce glare or dark shadows; and ensuring that landscaping does not obstruct natural surveillance or provide a place to hide or entrap victims.

2. **Access Control:** Physical and symbolic barriers can be used to attract, channel, or restrict the movement of people, minimizing opportunities for crime. Effective access control can be achieved by ensuring building are clearly identified by street number; providing clear entry points; creating landscapes and physical locations that channel and group pedestrians into target areas; using vegetation as barriers to deter unauthorized access; using building materials/security that reduces the opportunity for intruder access; restricting access to internal areas or high-risk areas such as loading or service areas; ensuring there are appropriate security measures in place commensurate for the range of land uses within a building/development; and ensuring that parking areas are clearly identifies by signage to prevent unintended access to and assist persons trying to find their car.
3. **Territorial Reinforcement:** Users of spaces or areas who feel that they have some ownership of public space are more likely to gather and enjoy that space. This principle that the ownership of space increases the likelihood that people who witness crime in or adjacent to that space will respond by quickly reporting it or by attempting to prevent it can be achieved by having distinct transitions/boundaries between the public and private areas and by clearly defining spaces to express a sense of ownership and reduce illegitimate use/entry.
4. **Space Management:** Public space that is attractive and well maintained is inviting to users and becomes a well-used space. This principle that an appropriately utilized and well-cared-for space will increase the likelihood that people who witness crime in or adjacent to that space will respond by quickly reporting it or by attempting to prevent it can be achieved by creating a “cared for” image through proper maintenance regimes; rapidly repairing vandalism and graffiti, replacing burned out lighting, and removing or refurbishing decayed physical elements; using materials that reduce the opportunity for vandalism; and encouraging design that promotes pride and a sense of place for the community.

As described in Table III.E-2, *Development Standards*, in Section III, *Project Description*, of the Draft PEIR, the revisions to Title 22 require installation of walls, incorporation of landscaping setbacks, minimum landscaping requirements with drought-tolerant trees, enclosed buildings for operations and storage areas near sensitive uses, minimum office and restroom requirements for recycling collection facilities, view-obstructing fences or walls around outdoor recycling and solid waste storage areas, air filtration systems, on-site vehicular circulation (including ingress/egress) designed in such a way that it does not impede with any other permitted activities and avoids impacts on the public right-of-way and nearby sensitive uses, a gap of at least 10 feet between pallet storage and surrounding walls, perimeter identification signs for pallet yards and recycling collection facilities as well as organic waste facilities, use of impervious surfacing and well-maintained operations and storage areas for pallet yards, adequate lighting at pallet yard sites and recycling processing facilities as well as solid waste facilities, daily maintenance of pallet yards, secure storage of recycling and organic waste materials, regular maintenance of recycling collection facilities and recycling processing facilities, informational signage at recycling processing facilities that meet County Code requirements, dust prevention measures, and so forth.

These standards require security walls, landscaping, setbacks, lighting, signage, and trash and recycling enclosures that are consistent with the four principles of CPTED:

1. **Natural Surveillance:** installing effective lighting in public places that does not produce glare or dark shadows.
2. **Access Control:** ensuring facilities are clearly identified by informational signage; using vegetation as barriers to deter unauthorized access; restricting access to internal areas or high-risk areas such as loading or service areas; and ensuring there are appropriate security measures in place.
3. **Territorial Reinforcement:** having distinct transitions/boundaries between the public and private areas and by clearly defining spaces to express a sense of ownership and reduce illegitimate use/entry.

4. **Space Management:** creating a “cared for” image through proper maintenance regimes and encouraging design that promotes pride and a sense of place for the community.

The cumulative effects of the improvements, which will enhance security lighting and create a buffer between sensitive uses and industrial uses, is a benefit to aesthetics from public viewpoints. Additionally, the program will provide overall enhancements for environmental health through reduction in noise, visual blight, and odors and other hazardous air emissions.

RE: Comments on L.A. County Revised Draft Green Zones Ordinance, Draft Program
Environmental Impact Report, and Draft Health Impact Assessment

To the Los Angeles Department of Regional Planning:

We, the members of Communities for a Better Environment and our allies, appreciate the opportunity to comment on the revised draft Green Zones ordinance amending Title 22 of the Los Angeles County Code, promulgated along with a Draft Program Environmental Impact Report and a Draft Health Impact Assessment.

As stated in our previous letter commenting on the initial public draft Green Zones ordinance, which is attached to this letter, we remain concerned about the opportunity for meaningful public participation after the comment period for the revised ordinance is closed. The continuing Covid-19 pandemic has especially hit the residents of Southeast Los Angeles, making public outreach a huge challenge. Presently, many affected community members are unable to access the crucial agency documents on which we comment in this letter due to a lack of access to necessary technological devices. While 45 days were given for public comment, a 60-day comment period¹ is more appropriate given the release date around the holidays and the importance of such an ordinance, particularly for environmental justice communities that may have not had adequate access to review the released documents. Although we have strived to capture the primary sentiments of affected communities in this letter, our comments in this letter are certainly not exhaustive of all community members' concerns about the deficiencies in the revised draft ordinance, and we continue to engage with these communities to ensure that their voices may be heard during this public, regulatory process.

5A-1

We note that the revised draft Green Zones ordinance made numerous revisions to the previous draft that further aim to improve the environmental conditions in environmental justice communities, and we commend DRP for listening to community members in this regard.

5A-2

¹ 14 C.C.R. § 15105(a) (allowing public review of a draft EIR for up to 60 days).

Northern California Office

However, given CBE’s involvement in the groundtruthing efforts in Walnut Park, we had hoped that DRP would have created much more robust protections for disadvantaged communities exposed to increased public health burdens. Communities of color and low-income communities have historically been forced to live with discriminatory land use policies that have meant living with soil, air, and water that are sources of toxic exposure. As such, the revised Green Zones ordinance simply does not go far enough to achieve its stated public health purpose—and, in fact, does not even clearly state a regulatory purpose or make specific findings to this effect. DRP should add a definitive statement of purpose of the Green Zones ordinance, setting forth the public health goals of the Green Zone communities and explaining how the ordinance fits into the bigger picture of environmental and human health policies throughout the County.

5A-2,
cntd

Furthermore, despite DRP’s representation that it “seeks to develop ways to improve coordination among various regulatory agencies” through the Green Zones ordinance,² the ordinance still fails to incorporate specific measures addressing agency oversight and enforcement of violations against noncompliant industrial facilities. Community members have always believed that the lack of transparency and accountability when regulating industrial uses is a significant contributor to disproportionate health impacts for nearby residents. The revised Green Zones ordinance fails to incorporate simple measures to clarify the role of DRP and the South Coast Air Quality Monitoring District in monitoring and enforcing violations of the ordinance. DRP also should commit to meaningful coordination with other agencies such as the Los Angeles County Department of Public Health when siting new industrial facilities affected by the Green Zones ordinance, to ensure that human health impacts are mitigated to the maximum extent.

5A-3

Finally, the changes from the prior version of the Green Zones ordinance are minimal, lack substantial explanation or reasoning to support the sufficiency of those measures to improve public health conditions, and do not clearly advance the overarching goal to address health concerns in environmental justice communities. Although DRP made some changes in the revised ordinance to address our past comments, the revised ordinance still contains the same issues we previously raised. In essence, the revised ordinance, on its face, fails to achieve the degree of protection necessary to shield the County’s most vulnerable citizens, as DRP says it is committed to doing.

5A-4

California courts and the U.S. Supreme Court have long recognized the authority of local governments to use their police and zoning powers to enact local prohibitions and restrictions, provided that they are not in conflict with general laws.³ DRP has been working to implement these zoning updates since 2015. It is crucial for DRP to include durable and effective measures to reduce exposure to public health risks in Green Zone communities, because the zoning

5A-5

² Draft PEIR, at III-3.

³ Cal. Const. art. XI §§ 5, 7 (“A county or city may make and enforce within its limits all local, police, sanitary, and other ordinances and regulations not in conflict with general laws.”); Cal. Pub. Res. Code § 3690; *Richeson v. Helal*, 158 Cal. App. 4th 268, 277 (2007).

amendments will shape the future of development in the County and will have long-lasting impacts on affected communities. The current Covid-19 pandemic has continued to expose the disproportionate public health burdens imposed on environmental justice communities,⁴ creating an even greater need to take meaningful action through the Green Zones ordinance to mitigate these health risks. We respectfully request that the County revisit its proposed Green Zones ordinance again to strengthen the protections for residents of disadvantaged communities, supported by sound scientific judgment and guided by the community members themselves, to guarantee both short-term and long-term improvements in public health conditions within the communities that DRP recognizes to be the most vulnerable.

5A-5,
cntd

I. Include definitive statements of regulatory purpose and findings to clarify how the Green Zones ordinance fits into the County’s broader policy framework.

If the purpose of the Green Zones ordinance is to protect residents of environmental justice communities from adverse health impacts, the ordinance should say as much in clear declarations of purpose and findings, codified in the Los Angeles County Code.

Currently, there is no robust declaration of purpose or other findings in the revised ordinance, aside from a vague statement in the preamble that the ordinance seeks “to promote environmental justice by providing zoning requirements for industrial uses, vehicle-related uses, and recycling and solid waste uses that may disproportionately affect the health of residents living in communities surrounding these land uses.”⁵ Proposed Section 22.84.010 also states vaguely that the Green Zones “are established to promote environmental justice in communities that are disproportionately affected by toxic pollutants and contaminants generated from various land uses over time,” with the intent for the new land use regulations in the ordinance to “minimiz[e] potential adverse health and safety impacts.”⁶ These barebones statements are insufficient to establish that DRP’s purpose for the ordinance is to advance the interests of environmental justice communities in ways that fulfill the County’s other obligations under state and county law, and in ways that actually improve the health conditions of affected communities.

5A-6

DRP referenced several applicable state laws relevant to environmental justice in the notice accompanying the new proposed ordinance and draft Program Environmental Impact Report—specifically, SB 1000, SB 1383, AB 32, and SB 535.⁷ Furthermore, the PEIR lists DRP’s explicit objectives for the Green Zones Program, including to “improve the health and quality of life” for residents living in Green Zone Districts and near incompatible land uses, in ways that are aligned

⁶ *Id.* at 35.

⁷ Notice of Completion and Availability of Draft Program Environmental Impact Report for Green Zones Program, at 1.

with SB 1000 and the California Global Warming Solutions Act of 2006.⁸ However, the ordinance does not include any findings or declarations of purpose explaining how the new restrictions on industrial uses within the Green Zones is consistent with those laws. Adding declarations of purpose similar to those contained in the PEIR would show that DRP is committed to these goals as part of the statutory revisions to the Los Angeles County Code, rather than revealing these purported regulatory goals in non-binding regulatory documents.

5A-7,
cntd

In particular, SB 1000 requires counties to include an environmental justice element in the general plan, identifying objectives and policies to (A) reduce pollution in disadvantaged communities, (B) create opportunities for community participation in the decision-making process, and (C) advance programs that address communities' needs.⁹ The draft ordinance should incorporate language and findings showing how the measures in the ordinance help to meet these enumerated goals of environmental justice elements required by SB 1000, beyond stating vaguely that the proposed restrictions will "promote environmental justice" and "minimize" health impacts. It is vital that DRP place legislative purposes referencing these mandates and policies at the forefront of the Green Zones ordinance, in clear and strong terms, to avoid any confusion about how the restrictions in the ordinance should be interpreted in the future.

5A-8

Moreover, DRP has the opportunity to promote greater harmony between the Green Zones ordinance and the County's Sustainability Plan, released in August 2019.¹⁰ The Sustainability Plan seeks to decrease rates of childhood asthma, decrease diesel particulate matter significantly, and achieve attainment of federal and state ambient air quality standards for particulate matter and ozone. The Sustainability Plan also aims to reduce toxicity-weighted concentrations of emissions in disadvantaged communities by 40% by 2035, and by 80% by 2045.¹¹

5A-9

Based on our review of the PEIR and the Health Impact Assessment, the revised Green Zones ordinance does not attempt to estimate any emissions reductions that will result from the new mitigation measures imposed on the regulated industrial facilities. The absence of any findings about the effect of the Green Zones program on emissions of harmful air pollutants calls into question whether the measures taken under the ordinance will actually advance public health interests, in line with DRP's purported purpose of the Green Zones program and consistent with the County's Sustainability Plan. DRP should revise the ordinance and the PEIR to include findings about estimated overall emissions reductions from the Green Zones program, which will assist the public and members of the affected community to understand the true impacts of the proposed ordinance on human health conditions. If DRP determines that the current draft ordinance does not advance the goals of the Sustainability Plan by reducing emissions of air

¹¹ *Id.* at 26.

pollutants, that determination would be a clear signal that the ordinance must impose meaningful restrictions on industrial uses to a much greater extent than in the current proposal.

5A-10,
cntd

II. Adopt more stringent measures to restrict industrial activities within the Green Zones to the degree necessary to address adverse public health impacts.

Despite DRP's purported public health purposes behind the Green Zones program, the revised ordinance still does not go far enough to regulate the affected incompatible industrial uses in a manner that actually reduces the public health burdens imposed on neighboring communities. In our prior letter, we raised several areas of concern regarding measures that the Green Zones ordinance can and should take, but the revised ordinance does not address these concerns to a meaningful degree. DRP should incorporate additional features into the revised ordinance that would minimize the types of permitted industrial uses within the necessary health and safety buffer zone from sensitive uses, reduce the timeframe for facilities to comply with new requirements in Conditional Use Permits, offer more guidance to facilities about those best practices, and create a stronger role for DRP and community members to monitor and enforce violations. In addition, DRP should revise the PEIR to consider project alternatives with more protective measures than the revised ordinance, to provide transparency to the community regarding the potential health benefits that could result from even less industrial activity in Green Zone communities. These changes are necessary to harmonize the ordinance with DRP's objectives to protect environmental justice communities, and to address the concerns of community members in the Green Zones suffering from adverse impacts from nearby industrial facilities.

5A-11

A. Rezone industrial uses.

The draft ordinance still provides no mechanism to rezone certain industrial uses that impose significant pollution burdens on surrounding neighborhoods, like scrap metal facilities such as the Central Metal Inc. facility in Huntington Park identified in our previous letter. The proposed changes in the revised ordinance do not sufficiently mitigate the harmful health impacts from these existing nonconforming pollution sources, which produce significant amounts of pollution that will still cause health problems across a wider radius, even after implementing the required mitigation measures in the ordinance. Allowing some existing facilities not listed in Proposed Section 22.84.020(A)(3) to continue to operate within 500 feet of sensitive receptors¹² will continue to plague nearby residents with harmful air pollution, noise, and other adverse environmental conditions, leading to avoidable and irreversible health consequences. The ordinance also exempts existing facilities operating pursuant to a discretionary land use permit from terminating their activities until the permit expires,¹³ calling into question whether any existing facilities enumerated in Section 22.84.020(A)(3) will be affected by the ordinance in the short term, or even within the generous compliance timeframe envisioned in the revised

5A-12

¹² Revised Public Draft Green Zones Ordinance, at 36.

¹³ *Id.* at 38.

ordinance. DRP should provide a framework to require additional types of facilities to be phased out and relocated, instead of merely adopting new development standards and CUP requirements for those facilities.

5A-12,
cntd

Furthermore, the 500-foot compliance zone for covered industrial uses, recycling and solid waste facilities, and vehicle-related uses¹⁴ is simply not sufficient to protect communities from adverse impacts from those facilities. These types of land uses have been shown to cause greater human health harms within a larger radius than 500 feet.¹⁵ Separating hazardous and sensitive land uses has been shown to be a very effective means of reducing these health risks, raising recent calls for a 2,500-foot buffer zone around oil and gas operations from sensitive uses to protect residents from significant exposure to harmful air pollution.¹⁶ In the Clean Up Green Up ordinance, the City of Los Angeles approved a buffer zone of 1,000 feet from freeways, requiring all residential units within the buffer zone to install mandatory air filters to protect residents from respiratory health issues resulting from vehicle emissions.¹⁷ The same public health justifications exist for residents living close to industrial facilities regulated under the Green Zones ordinance, which expose communities to similar amounts of harmful air pollution and accompanying public health risks compared to oil and gas operations and freeways. Therefore, in order to ensure the protection of nearby residents, DRP should extend the buffer zone for compliance with the new development standards and mitigation requirements within Green Zones to 2,500 feet from a sensitive receptor.

5A-12,
cntd

B. Reduce compliance timeframe for existing industrial uses.

Proposed § 22.84.040 of the revised ordinance reduces the time period for compliance with the new requirements in Conditional Use Permits from 10 years to 7 years, decreases the time period for compliance with enclosure requirements from 10 years to 7 years, and decreases amortization periods for nonconforming uses to 7 years.¹⁸ DRP provided little to no explanation of these changes, but as we explained in the previous comment letter, DRP should tighten compliance timeframes even further.

5A-13

First, there is no justification to grant any industrial uses more than 5 years to come into compliance with new CUP requirements. Zoning codes throughout the state often require legal but nonconforming uses to comply with new requirements in much less time than the seven years contemplated in the revised ordinance.¹⁹ We acknowledge that in order to implement best practices for environmental protection and mitigation of human health risks contemplated under

¹⁴ *Id.* at 36.

¹⁹ Fillmore, California Code of Ordinances § 6.04.3015; Mission Viejo, California Code of Ordinances § 9.28.020; Whittier, California Code of Ordinances § 18.62.070(A)(4)(a).

the revised ordinance, businesses surely will be responsible to make significant investments in their planning processes and implementation procedures. However, the seven-year period under the revised ordinance still allows businesses to delay their efforts to meet these obligations for several years before taking any steps. It does not serve community residents to enable businesses to operate according to current practices, without any requirements to implement mitigation measures or begin the process to undertake necessary planning studies, for such a long period of time. We believe that a shorter timeline of five years gives businesses more than enough time to complete the necessary planning processes to comply with new development standards and mitigation measures, while simultaneously making it difficult for businesses to wait to take action.

5A-14

We also still believe that requiring businesses to submit compliance plans to DRP, updated annually, will allow the County to assist facilities to comply with the new requirements in the ordinance in the most efficient and effective manner to protect the health of community residents. DRP's ability to enforce development standards through CUPs does not necessarily translate to facilities actually implementing best practices that produce the most effective results, and DRP has sufficient resources to respond to facilities' yearly plans where needed and engage with facilities directly throughout the implementation process.

5A-15

Second, DRP should also reduce the timeframe to phase out the prohibited nonconforming uses in Green Zones identified in Proposed Section 22.84.020(A)(3) to five years.²⁰ DRP has not explained why these businesses require a period of seven years to fully amortize their existing operations; as we noted in our last letter, the City of Culver City recently determined that oil and gas operations—a similar type of industrial use to the enumerated prohibited industrial uses in the revised ordinance, but with higher capital costs than the prohibited uses—only need a five-year amortization period.²¹ DRP should expedite the timeline for these nonconforming uses to terminate operations, which DRP acknowledges is necessary to protect the health and safety of residents in the Green Zone communities.

5A-16

Third, as we commented in our last letter, signage requirements included in the revised ordinance should be implemented within one year of the ordinance. Unlike new best practices to be included in CUPs, creating these signs requires affected businesses to incur very little cost, and installing signs at the facilities takes little time or effort. There is no reason that businesses need three years to complete their signage obligations, and DRP should hold businesses accountable to the community on a faster timeframe.

5A-17

²⁰ Revised Public Draft Green Zones Ordinance, at 37.

²¹ See William D. Cheek *et al.*, Capital Investment Amortization Study for the City of Culver City Portion of the Inglewood Oil Field (May 29, 2020), available at <https://www.culvercity.org/files/assets/public/documents/city-manager/inglewood-oil-field/bakerobrienreportandexhibi.pdf>.

Fourth, a faster transition to cleaner and safer industrial operations will also allow for a faster transition to stable job opportunities in the Green Zone communities. The ordinance does not address the need for these communities to have expanded employment opportunities within their neighborhoods, and we believe there will be significant opportunities for additional labor and expertise for facilities to comply with the Green Zones ordinance, by implementing best practices or terminating operations to allow for more appropriate land uses. Expediting the compliance timeframe will serve Green Zone communities not only by relieving their existing health burdens, but also by revitalizing their economic and employment prospects.

5A-17,
cntd

C. Reduce operating hours for industrial uses and incorporate cleanup obligations within development standards.

The new ordinance amends operating hours for affected industrial uses, prohibiting any operations after 6:00 pm during the workweek. Some operations are still allowed starting at 8:00 am, such as pallet yards and other outdoor operation activities such as truck loading and unloading.²² These operation hours should be limited to a time period between 8:00 am and 5:00 pm to protect communities from excessive activity throughout the day and ensure sufficient time for quiet enjoyment. Such a limitation is particularly important in light of the ongoing pandemic, where many residents in Green Zone communities are required to undertake childcare duties at home due to schools being closed for in-person instruction, exposing residents and their children to prolonged noise, odors, and dust from nearby facilities. Ensuring that industry operations are required to cease at 5:00 p.m. will create stronger, lasting protections for community members from exposure to harmful air pollutants throughout the day.

5A-18

Furthermore, the changes to the ordinance did not include development standards for cleanup activities at industrial facilities, as we previously requested. Generic statements that facilities “shall be maintained in a clean, safe and sanitary condition at all times”²³ are insufficient to hold facility operators accountable for past contamination of air, soil, and water resources. The ordinance merely requires “Phase 1” studies for contamination on certain sites located near the boundary of Superfund Sites.²⁴ While future mitigation measures to reduce possible future contamination is beneficial to disadvantaged communities in the long term, DRP should include more substantial requirements to remediate existing and known contamination on these nonconforming sites and other publicly accessible spaces near polluting facilities, which would ensure that existing disproportionate public health impacts are addressed in a meaningful way.

5A-19

²² Revised Public Draft Green Zones Ordinance, at 53 (Proposed § 22.84.030(E)(1)); *id.* at 87 (Proposed § 22.140.650(D)(13)).

²³ For example, see Revised Public Draft Green Zones Ordinance, at 87 (requiring pallet yards to “be kept in a clean, safe, and sanitary condition at all times”).

²⁴ See *id.* at 42, 50.

D. Improve inspections, monitoring, and enforcement requirements for all industrial facilities.

One of the primary concerns of environmental justice communities living among incompatible industrial land uses is the extent of agency oversight and enforcement of land use restrictions on those industrial facilities. New restrictions and mitigation measures that insulate neighboring residents from externalities associated with industrial activities are only as effective as far as they are implemented, and as long as sufficient enforcement measures exist to impose repercussions on bad actors and deter future violations. In the County Sustainability Plan, one of the highlighted goals is to create a “more inclusive and accountable governance structure in order to build stronger communities and better informed policy and programs.”²⁵ Despite this aspiration in other County plans, there does not appear to be a clear path to achieving this sentiment in the Green Zones ordinance.

5A-20

The revised ordinance offers little comfort that DRP or other agencies will ensure that regulated industrial facilities abide by the requirements of Conditional Use Permits. Under the ordinance, violations will be reported to DRP, but the ordinance does not specify what the agency can or must do with a violation report.²⁶ The only new requirements are for industrial uses to post signs identifying the agencies to which community members may report violations—DRP and South Coast Air Quality Management District—along with contact information for each and the hours of operation.²⁷ It is within the County’s authority to include in the ordinance procedural or substantive requirements for DRP when receiving and processing violation reports, including through the measures identified in our previous letter. DRP can dedicate necessary resources to enhanced enforcement by creating an ombudsperson position within the agency, with the responsibility to respond to complaints from community members and enforce those complaints against the noncompliant facilities. As we noted in our last letter, the Los Angeles Sanitation Department created an ombudsperson position for these purposes as part of the LA City Clean Up Green Up initiative,²⁸ which can serve as a useful model for DRP to enforce the Green Zones ordinance. These additional agency enforcement measures are crucial for accountability, transparency, and adequate enforcement of the new zoning requirements prior to issuing notices of violations to facilities out of compliance.

5A-21

Additionally, DRP again represents, as it did in the previous draft ordinance, that its revised ordinance “seeks to develop ways to improve coordination among various regulatory

5A-22

²⁵ Sustainability Plan, at 9; <https://ourcountyla.lacounty.gov/goals/goal-11>.

²⁶ For example, see Revised Public Draft Green Zones Ordinance, at 49.

²⁷ *Id.*

²⁸ LA City Clean Up Green Up, <https://calgreenzones.org/los-angeles-clean-up-green-up/>. See also Fresno Southwest Specific Plan, at 8-11, <https://www.fresno.gov/darm/wp-content/uploads/sites/10/2016/10/SouthwestFresnoBookPublicReviewDraft051017red.pdf> (creating a similar local ombudsman position).

agencies.”²⁹ However, the ordinance does not provide any clarification about how DRP seeks to achieve this objective with respect to enforcement, despite requiring facilities to post signs allowing for violations to be reported to SCAQMD. As we noted in our last letter, DRP must explain how it intends to coordinate with other agencies when implementing and enforcing the Green Zones ordinance, which is necessary for DRP and other relevant agencies to be accountable to community members.³⁰

5A-22,
cntd

The lack of robust transparency and accountability in the revised ordinance shows that the ordinance does not address the goals of the County’s Sustainability Plan, despite a clear opportunity to do so. Specifically, one of the medium-term goals identified in the Sustainability Plan is to expand the role of the Department of Public Health in enforcing regulations at industrial facilities.³¹ The revised ordinance fails to expand the role of DPH to monitor and enforce the new restrictions applicable to industrial uses within the Green Zones districts, and the County can and should include such measures as part of the Green Zones ordinance. These measures are necessary to hold the County accountable for responding to violations, and to ensure that violators face necessary repercussions to remediate the public health impacts and deter future violations.

5A-23

Furthermore, DRP should increase community involvement in the enforcement process as part of the Green Zones Program. Another identified goal of the Sustainability Plan is to include and utilize air monitoring data from the fencelines of industrial facilities, as well as throughout disadvantaged communities, in order to strengthen regulations and achieve greater enforcement of those regulations.³² The revised ordinance does not include any reference to community monitoring data and does not include measures to increase the support for community monitoring or the role of community members in reporting violations, beyond merely calling the identified agency phone numbers in the required signage. In the end, the County should take the opportunity to revise the ordinance to include robust measures that harmonize the Green Zones program with these goals and objectives of the Sustainability Plan, including through greater community involvement through monitoring and enforcement, rather than seeking to implement those goals through fractured and piecemeal initiatives.

5A-24

E. Include guidance for best practices in Conditional Use Permits alongside the Green Zones ordinance.

The revised ordinance includes requirements to be included in CUPs that facilities incorporate “best practices” for operation and site maintenance,³³ and require new findings to be made before

5A-25

²⁹ Draft PEIR, at III-3.

³⁰ See also Draft PEIR Appendix C, Letter from East Yard Communities for Environmental Justice, at 5 (calling for the creation of a Green Zones Interagency Task Force to be included in the Green Zones ordinance).

³¹ Sustainability Plan, at 28.

³² *Id.* at 28, 32.

³³ For example, see Revised Public Draft Green Zones Ordinance, at 87.

approving new CUPs.³⁴ These general findings, in the absence of additional clarity, are not enough to guide the regulated facilities to implement the most effective measures to mitigate health impacts in surrounding neighborhoods.

Although it may be impracticable to include a detailed description of the various best practices in the ordinance itself, at the very least, the County should require DRP to issue binding guidance to implement the new requirements of the CUPs that describe those best practices in detail and technical specificity. As we previously noted, other agencies commonly issue guidance on environmental and sustainability best practices in the context of environmental justice policy, such as the 2017 Independent Review Panel Report from the Department of Toxic Substances Control.³⁵ DRP can and should incorporate these same best practices and reference materials into the “best practices” referenced in the Green Zones ordinance, whether by explicitly referencing those practices in the ordinance itself (for instance, in Proposed Section 22.84.030(B)) or by issuing a guidance document alongside the ordinance.

5A-25,
cntd

DRP’s guidance would provide another opportunity for the County to establish additional discretionary factors that facilities must consider when implementing the new CUP requirements, including those specific to disadvantaged communities that adequately ensure that facilities are responsive to the needs of surrounding neighborhoods. As more justification to add a section of legislative purpose and findings, the County could restrict DRP’s discretion to identify such factors by noting that the purpose of the ordinance, and the best practices contemplated under the ordinance, is to carry out the function of SB 1000, guaranteeing that DRP’s oversight is done with the protection of the health of Green Zone communities at the forefront of its determinations.

The County also failed to cross-reference other existing tools in the ordinance, such as CalEnviroScreen (CES), that aid DRP and industrial facilities in assessing the environmental impacts associated with new CUPs for particular facilities. As we explained in our previous letter, DRP can use CES in various ways to improve the effectiveness of best practices, to tailor CUPs to particular environmental conditions in the immediate vicinity of the facility, and to prioritize enforcement of facilities in particularly burdened neighborhoods.³⁶ The County should add findings or binding requirements in the revised ordinance to confirm the utility of CES in the planning, implementation, and enforcement processes for new CUP requirements.

5A-26

³⁴ *Id.* at 43-44. Additional findings are required for other types of facilities elsewhere in the ordinance.

³⁵ Department of Toxic Substances Control, Process Improvements Summary, <https://dtsc.ca.gov/wp-content/uploads/sites/31/2018/04/DTSC-Process-Improvements-Summary-November-9-2017.pdf>.

³⁶ See Attachment, at 7-8.

F. Expand the categories of industrial facilities covered by the Green Zones ordinance.

The revised ordinance addressed some of our previous concerns, including by adding a definition of “gas manufacture” to clarify the types of gas manufacture facilities that are prohibited within 500 feet of sensitive receptors.³⁷ Nevertheless, the ordinance still leaves some categories of polluting industrial facilities outside the scope of the list of prohibited nonconforming uses, such as scrap metal facilities which remain listed under the umbrella of “recycling processing facilities” and are subjected only to new CUP requirements.³⁸ Scrap metal facilities constitute a type of industrial use with significant externalities and human health impacts, and many community residents living nearby these facilities commonly identify them as a nuisance. DRP should include scrap metal facilities as a prohibited use within 500 feet of sensitive uses in Green Zone districts, and DRP can designate defined zones for these scrap metal facilities and other related industrial uses similar to how San Diego County has established the Green Industrial Auto Park for all auto repair businesses.³⁹

5A-27

G. Require interagency coordination when siting new industrial facilities.

As part of the Green Zones ordinance, the County should require DRP to coordinate directly with DPH, Sustainability Plan planners, and other health-based agencies when siting new facilities covered by the ordinance, with the goal to minimize adverse public health effects in the planning stage. The most effective means by which the harmful effects of incompatible land use can be mitigated or eliminated is through communication and collaboration between all agencies involved. This includes consulting local air districts as well as regulatory agencies at the regional, state, and federal level, for planning purposes as well as monitoring and enforcement of zoning requirements for industrial facilities. Although the ordinance strives to respond to existing public health concerns in disadvantaged communities resulting from these industrial-use facilities, the ordinance fails to address planning considerations for siting new facilities in a sufficient manner to ensure that environmental justice communities will not continue to be harmed by incompatible land uses.

5A-28

Currently, the only requirement under the ordinance is for new facilities sited within 500 feet of defined sensitive uses to comply with the setback requirements of Proposed Sections 22.84.030, 22.84.040, and 22.84.050.⁴⁰ Allowing new facilities to be built anywhere in environmental justice communities, subject only to the 500-foot setback and the new CUP requirements, will continue to perpetuate the disproportionate environmental and health burdens imposed on Green Zone communities. The PEIR projects that 903 new industrial parcels covered by the ordinance

5A-29

³⁷ Revised Public Draft Green Zones Ordinance, at 2.

³⁸ *Id.* at 104, 114-15.

³⁹ National City: The Environmental Health Coalition, <https://calgreenzones.org/national-city-the-environmental-health-coalition-ehc/>.

⁴⁰ Revised Public Draft Green Zones Ordinance, at 36-37.

could be developed over the next 21 years,⁴¹ so it is crucial that these forecasted new industrial facilities are sited in optimal locations to protect public health to the maximum extent possible.

5A-29,
cntd

DRP should not make siting decisions in its planning process on its own, without direct coordination with health or environmental agencies. Those other agencies can offer technical and scientific expertise that can enable DRP to understand the repercussions of locating a new facility in a particular community, especially when using CES as an overlay to identify the existing communities with the most severe health burdens. As noted above, the PEIR asserts that the Green Zones Program as a whole “seeks to develop ways to improve coordination among various regulatory agencies,” with the purpose to prevent future environmental harms in disadvantaged communities,⁴² but the proposed ordinance fails to require agency coordination in siting new facilities for public health purposes. The County should add agency coordination requirements in the ordinance to clarify DRP’s role to prioritize public health protection for Green Zone communities when siting new facilities.

5A-30

H. Revise the EIR to consider additional alternatives that are more stringent than the revised Green Zones ordinance.

The analyzed project alternatives in the PEIR are all less protective than what the proposed ordinance does, but the County did not include any alternatives that go further—such as completely banning all new or existing covered industrial uses within 500 feet of sensitive receptors.⁴³ The failure to consider more protective alternatives skews the County’s analysis, and the County has not articulated any explanation or justification for rejecting more stringent alternatives that would be significantly more protective of public health in Green Zone communities.

5A-31

The PEIR notes ten areas of controversy, with some proposing more restrictive prohibitions against the use of industrial facilities adjacent to residential uses.⁴⁴ However, the only alternatives considered in the PEIR are (1) a no-action alternative, (2) an alternative to reduce the number of Green Zone communities identified in the ordinance, and (3) an alternative to remove retroactive compliance requirements for existing facilities within Green Zones.⁴⁵ The County should expand the types of alternatives considered in the PEIR to include more restrictive options consistent with the areas of controversy identified in the PEIR itself, which would provide the public—and community members within Green Zones—with the opportunity to assess the viability and effects that would result if the County pursued those more restrictive measures.

⁴¹ Draft PEIR, at IV-5.

⁴² *Id.* at III-3.

⁴³ *Id.* at I-8.

⁴⁴ *Id.* at I-5–I-6.

⁴⁵ *Id.* at I-8–I-9.

I. Include closed industrial facilities within the scope of the ordinance and incorporate groundtruthing data and feedback into the Health Impact Assessment.

As DRP is aware, CBE and other environmental justice organizations participated in DRP's extensive groundtruthing process prior to the release of the first draft Green Zones ordinance. As noted above and in our previous letter, CBE and our partners were particularly concerned about a metal recycling facility in Walnut Park called Central Metal Inc., which many community members considered to be a nuisance and a key source of harmful air pollution. Although the facility has since ceased operations, the facility has not been removed or rezoned, and the significant groundwater contamination resulting from the facility's prior operations has not been remedied or addressed in any meaningful way. Many residents in the area rely on the contaminated groundwater as a source of drinking water, directly exposing those residents to unnecessary and severe health risks.

The current draft of the Green Zones ordinance does not include any measures addressing what happens to nonconforming land uses once their operations cease, as required under the Green Zones ordinance, and the ordinance also fails to address existing sites with closed facilities that may require substantial remediation efforts to improve conditions in the affected communities. DRP can and should explain in the ordinance how current facility operators will be responsible to shut down their facilities as required under the ordinance, as well as prescribing the operators' responsibility to conduct necessary remediation at the facility site to clean up any contamination resulting from the facility's operations. These remediation measures are vital for the long-term health and safety of communities that are already overburdened by public health risks from operating facilities.

That this category of facilities goes unregulated in the Green Zones ordinance is further supported by the absence of groundtruthing data in the draft Health Impact Assessment. Rather than analyzing actual data from industrial facilities (such as the Walnut Park metal recycling facility) collected in the Green Zone communities prior to the release of a draft ordinance, the HIA simply forecasts the potential pollution burdens and ensuing health impacts from a hypothetical case study of a facility that conducts all of the affected industrial land uses at the same site, a scenario which the HIA acknowledges is unrealistic.⁴⁶ This hypothetical assessment in the HIA fails to address existing pollution burdens and health risks within the Green Zone communities, which DRP represents is the purpose of producing the HIA in the first place. DRP should revise the HIA to include tangible assessments of existing conditions in Green Zone communities to show how the proposed measures of the ordinance will actually serve to improve those documented conditions, which we understand was a driving purpose for DRP to conduct the groundtruthing process with CBE and other organizations in the first place.

RE: Comments on L.A. County Draft Green Zones Ordinance

To the Los Angeles Department of Regional Planning:

We, the members of Communities for a Better Environment and our allies, appreciate the opportunity to comment on the draft Green Zones ordinance amending Title 22 of the Los Angeles County Code.

The passage of a Green Zones ordinance is important and while we understand the urgency of creating an ordinance we would like to comment on the difficulty of having meaningful public participation from the Southeast Los Angeles community as the pandemic rages through it. As early as May, CBE raised concerns about whether the pandemic would hamper public participation. We see public participation as crucial to the democratic process and we believe that all residents should be given the opportunity to have their voices be heard. The last months have been challenging in that there are many residents who are limited in engaging because they do not have the access to necessary technological devices, and as noted in previous letter the lack of resources in the community is something that existed pre-pandemic. Despite these setbacks, we are presenting comments that we have gathered through the last few months, but please recognize these comments are not exhaustive as many people in the community were unable to participate due to the lack of resources to engage in this public process.

As a key community partner during the groundtruthing and public outreach processes informing this ordinance, we have first-hand experience of the health and environmental impacts poor planning and lack of regulation of industrial uses in L.A. County has had on environmental justice communities. These comments will recommend how the ordinance can better improve these practices through the planning and zoning code.

What we found during the groundtruthing process only documented what our community has always known—that a lack of oversight from the County over industrial uses and lack of investment in green and community spaces damage the health and wellbeing of the communities who live there. To the surprise of many members in our community, the Green Zones ordinance does not work to remedy past planning practices by investing in new green spaces or providing for their development. While such an endeavor may require coordination between County agencies outside the scope of the planning

department, this ordinance can make key changes that would help better empower healthy communities now, as well as facilitate greater interagency coordination necessary for future efforts.

I. Rezone industrial uses.

The industrial uses that have the greatest health impacts on the community should be rezoned rather than merely setting new performance and development standards. There are several facilities in our community, such as Central Metals, Inc. at 8201 Santa Fe Ave in Huntington Park that have operated in violation of their Conditional Use Permit in the past and continue to be a nuisance in our communities. Applying new development standards to these facilities, many of which will not occur for several years, is insufficient to remedy the damage these facilities have caused to our community members. These facilities should be rezoned through the ordinance and phased out of our communities due to the ongoing environmental and health impacts the facilities pose.

The draft Green Zones Ordinance does little meaningful rezoning that would help revitalize areas that have been impacted by the worst polluters such as Central Metals. While the ordinance creates new Green Zone districts that would prohibit certain industrial uses located within 500 feet of a sensitive use,¹ this would not cover scrap metal recycling facilities and automobile dismantling yards that are the worst offenders in the communities we organize. As a result, we suggest various zoning changes that would help address facilities such as Central Metals as well as facilitate the development of more green spaces in Green Zones districts.

There are several green zones initiatives throughout California that have helped remedy past land use practices specifically through rezoning. In particular, CBE recommends that Los Angeles County look to the zoning changes contained in Fresno's Southwest Specific Plan as an example for zoning changes that attempt to remedy incompatible land uses while supporting environmental justice communities and the development of new green spaces.² Some of these zoning changes can provide examples to the Los Angeles Green Zones Ordinance.

The Fresno Southwest Specific Plan identified "incompatible land uses and zoning with nearby residential land uses," and made "recommendations for rezoning and facilities which should be phased out or relocated."³ Based on the specific character of different districts, Fresno revised its zoning code to include specific plan zoning to permit or prohibit various uses. A goal of the rezoning was to transform long-overlooked areas by both "preserv[ing] the community's assets as well as enhance[ing] the community's

¹ Draft Green Zones Ordinance, p. 35.

² Fresno Southwest Specific Plan, at 4-4, <https://www.fresno.gov/darm/wp-content/uploads/sites/10/2016/10/SouthwestFresnoBookPublicReviewDraft051017red.pdf>.

³ Id. at 1-9.

image and quality.”⁴ Fresno had to balance residential and industrial considerations. Several parts of Fresno’s plan do more to revitalize mixed use areas for the benefit of residents than the current draft of LA County’s Green Zones ordinance. For example, the City designated certain industrial areas nearby residential areas to be “employment districts” with the purpose of supporting businesses that provided walkable services to the community. In these office-restricted districts, the zoning code was modified to prohibit auto repair and auto dismantling services, while permitting businesses such as veterinary, health, and food services.⁵ We recommend that similar designations be made within Green Zones districts to allow the phase-out of auto repair services, auto dismantling yards, and scrap metal processing facilities. These facilities greatly contribute to the pollution in our communities without providing a public benefit and should be relocated elsewhere in the county.

An additional goal of any green zones policy should also include the revitalization of once neglected spaces. While the Green Zones Ordinance provides certain landscaping development standards that would impact individual properties, the ordinance does little to designate new green spaces or attract new investment to open spaces or vacant lots. The Fresno Southwest Specific Plan goes further than the draft Green Zones Ordinance through public and semi-public districts that are meant to increase community access to parks and other outdoor spaces.⁶ While the City is working to build and revitalize open spaces through the coordination of several citywide initiatives, changes in the zoning code can help incentivize the creation of new green spaces. This includes the dual land use designation of new parks, open space, and public facilities, so that alternative public development can occur if those facilities are not needed, or so that public open spaces can be developed alongside existing residential areas.⁷

II. Reduce compliance schedule timeframe for existing industrial uses to adapt to new requirements.

The Green Zones Ordinance proposes that existing facilities have up to 10 years to comply with the changes this ordinance makes to the current zoning code. We feel that 10 years is too long, and facilities must be asked to comply with the new zoning code in a shorter timeframe. Facilities that require a Site Plan review have 3 years to comply with signage requirements, 5 years to comply with landscaping, surfacing, and other development standards, and 10 years to enclose the facility.⁸ Facilities that require a Conditional Use Permit (“CUP”) have 5 years to comply with signage and other development standards, and 10 years to comply with other CUP requirements, such as employing environmental “best practices” and reducing air, soil, and noise contamination.⁹ Signage requirements, that impose little cost on businesses, should occur

⁴ Id. at 1-1.

⁵ Id. at 4-4.

⁶ Id. at 6-11.

⁷ Id. at 3-2–3-6.

⁸ Draft Green Zones Ordinance, pp. 50-51.

⁹ Id.

within a year of implementation of the ordinance, while certain development standards may occur on a 2-3 year timeframe. We believe, however, that changes to business operations meant to promote environmental best practices as required by the CUP have the greatest potential to transform our communities, and business should be required to meet these requirements prior to the 10 years after passage of this ordinance.

Implementation of environmental best practices can require significant investment as well as time for businesses to build their compliance plans and gain necessary expertise to implement best practices. If businesses can wait until a year before this 10-year deadline, it is unlikely that they will achieve these changes on the proposed timeframe. Therefore, we recommend a shortened compliance schedule of 5 years for existing facilities to comply with new CUP requirements. Additionally, facilities should be required to submit updated plans for the eventual implementation of environmental best practices to the county on an annual basis so that the county can help facilities achieve compliance on the shortest possible timeframe and utilizing the most robust environmental protections.

Several zoning codes in California require legally existing but nonconforming industrial uses to comply with new zoning requirements in a period of less than 10 years. For example, the cities of Fillmore and Mission Viejo give properties a n amortization schedule of one year to three years to comply with zoning requirements.¹⁰ In the zoning code in Whittier, nonconforming uses have different abatement periods ranging from one year to twenty years depending on the use. For outside storage, the abatement period is one year.¹¹ Abandoned structures must be abated immediately.¹² We recommend a similar timeline for new requirements, such as the paving of impermeable surfaces for storage of outdoor material, to apply to the facilities regulated by this ordinance.

We appreciate that the County plans to apply new requirements to legally existing uses, however, the County has the authority to impose these requirements on a similar timeframe to the abatement periods for nonconforming uses cited above. The limit to the County's authority to phase-out nonconforming uses is the amortization period for the impacted business. However, new CUP requirements would provide impacted businesses with the opportunity to continue to operate and would not require a full amortization period, so the County has the authority to impose these new requirements on a shorter timeline. Regardless, the City of Culver City recently found that the amortization period for oil and gas wells is less than 5 years.¹³ Given that most legally-existing uses in Green Zones districts have lower capital costs than the average oil and gas well, this amortization period is likely shorter and would justify a maximum of 5 years to comply with the new Green Zones requirements.

¹³ Capital Investment Amortization Study for the City of Culver City Portion of the Inglewood Oil Field,
<file:///Users/jonbogda/Downloads/BakerOBrienReportandExhibi.pdf>.

III. Reduce operating hours for industrial uses within Green Zones and expand development standards to include cleanup.

The ordinance's proposed operating hours from 7 am to 8 pm are excessive when they operate so close to sensitive uses.¹⁴ This 13-hour workday is in excess of some of the most permissive restrictions on hours of operation near sensitive or residential areas and should be reduced. For example, California's public resources code restricts the operation of power equipment within 300 feet of any occupied dwelling to between the hours of 7:00 a.m. and 7:00 p.m., a 12-hour workday.¹⁵ We urge the County to limit the operating schedule from 8 am to 5 pm. Many of our members have lived alongside operating facilities and have had to endure non-stop activity from some very busy facilities. This has often amounted to noise pollution or even idling of trucks.

In addition, the development standards such as landscaping standards for individual properties and building requirements are not sufficient to help our communities.¹⁶ Many industrial facilities have already contributed to pollution throughout our communities and the development standards in the ordinance do not address who is responsible for this cleanup. At a minimum, we urge the County to develop standards for cleaning already contaminated facilities as well as open public spaces.

IV. Improve inspections and identify a compliance officer to ensure better compliance among all industrial facilities.

Many facilities in our community already operate in violation of their CUP. This ordinance will not have its desired impact if the County does not improve its system for inspecting facilities in violation of the zoning code and coordinate better with other responsible agencies in the County. This includes creating a process for inspecting recycling centers newly regulated by the ordinance.

LA County DRP claims that the GZ Ordinance will also, "[i]mprove coordination among County, regional, State, and federal environmental regulators and agencies."¹⁷ There is no explicit language in the draft ordinance explaining how this will occur.

In contrast, the LA City CUGU ordinance specifically provides for enhanced enforcement activities through the creation of an ombudsperson position within the Los Angeles Sanitation Department (LASAN). The ordinance established an ombudsperson position within LASAN to, among other responsibilities, respond to community

¹⁴ Draft Green Zones Ordinance, p. 48.

¹⁵ California Public Resources Code Sec. 4516.5.

¹⁶ Draft Green Zones Ordinance, pp. 42-48.

¹⁷ LA County Department of Regional Planning Green Zones Presentation, July 2020, Slide 30.

complaints about nuisance businesses and coordinate with city departments and regulators to enforce any violations.¹⁸

In the first year and a half of the CUGU ordinance's existence, the ombudsperson, "conducted visits with more than 100 businesses in the three communities, and worked closely with council offices, community organizations, and neighborhood councils to make local establishments aware of programs that can clean up and green up their operations."¹⁹ In addition, members of the Los Angeles Collaborative for Environmental Health and Justice participated in the Los Angeles Department of Water & Power's (LADWP's) Community Partnership Grant Program. They conducted affirmative outreach efforts to "local mom-and-pop businesses" with the intention of promoting cost-saving LADWP sustainability programs.

Additionally, the Fresno Southwest Specific Plan provides for a local ombudsman, which "provide[s] a single point of contact to help businesses comply with business licensing, health department permits, zoning and code enforcement compliance and other regulations administered at the municipal and county level."²⁰ We recommend a similar effort be taken to help businesses comply with the Green Zones Ordinance.

Given that the draft Green Zones ordinance does not provide for any enhanced enforcement procedures related to industrial uses in the Green Zones communities, it would be useful to include comments suggesting similar efforts that were included in the City of LA CUGU ordinance. These include:

- 1) Designate a point person to handle zoning complaints within the Green Zones communities, like the LASAN ombudsperson in the City of LA.
- 2) Conduct affirmative outreach to existing industrial uses in the Green Zones communities to inform them of their obligations related to the ordinance and connect them to resources related to sustainable upgrades.
- 3) Clarify the County's intention to "improve coordination among County, regional, State, and federal environmental regulators and agencies," and determine whether there is another agency that should be included in the zoning enforcement process.

V. Improve guidance for required best practices in Conditional Use Permits.

A key component of the Green Zones ordinance is new requirements for facilities needing a Conditional Use permit. The “findings” that apply to a facilities’ CUP, such as application of development standards to prevent adverse health effects, employing appropriate environmental impact mitigation strategies, and promoting environmental sustainability, are commendable, but shallow in their guidance.²¹ There are several California agencies that provide greater guidance on environmental and sustainability best practices related to environmental justice that can help inform this ordinance. We recommend the best practices required in the County CUP require the specific best practices found for business management identified in their 2017 Independent Review Panel Report of the Department of Toxic Substances Control.²² This includes best practices for evaluating air, soil, and groundwater impacts.²³ We recommend the County adopt these best practices through cross-reference in the “findings” of the Green Zones ordinance. We also recommend the County review industry-specific best practices as identified by other agencies in California to provide clearer guidance and create greater consistency for granting and complying with Conditional Use Permits.

Additionally, the County should revise Title 22 of the zoning code to include or cross reference already-existing best practices and tools that should be used to inform the granting of any CUP or other permit subject to the ordinance’s “findings” section. This includes utilizing the CalEnviroScreen as a cumulative impact tool when assessing the environmental impacts of any CUP application. The County should utilize the CalEnviroScreen tool subject to the following best practices:

- 1) Utilize CalEnviroScreen to inform environmental permits, laws, policies, and programs. In particular, include CES in environmental decisions that can:
 - a. Reduce pollution in DACs;
 - b. Prioritize enforcement actions in longtime overburdened neighborhoods.
- 2) Integrate CES into land use decisions such as General Plans or community plans, siting and permitting decisions, and zoning and land use changes.
- 3) Use CES to continue directing important investments and improvements (such as renewable energy, energy efficiency, affordable housing near multimodal transit options, clean and efficient transit systems, and active transportation infrastructure, etc.) into highly impacted areas
- 4) Carefully match use of CES to the policy application, and, depending on the desired outcomes, tailor CES and/or combine it with other tools to best suit the policy context.
- 5) Understand the science and methodology behind CalEnviroScreen, and utilize CalEPA’s public process to explore any needed changes to the tool.

²¹ Green Zones Draft Ordinance, pp. 41, 83.

²² Department of Toxic Substances Control, Process Improvements Summary, <https://dtsc.ca.gov/wp-content/uploads/sites/31/2018/04/DTSC-Process-Improvements-Summary-November-9-2017.pdf>.

²³ Id. at 38.

- 6) Carefully define how programs and policies using CES will meet the expressed needs of disadvantaged communities, provide tangible and meaningful benefits, and avoid increasing harms.
- 7) Strengthen and inform local grassroots EJ advocacy efforts through use of CalEnviroScreen maps, scores, and data to “make the case” for environmental justice interventions.²⁴

As discussed in part IV. of these comments, helping businesses achieve these best practices will only be possible through clear guidance. Two compliance working groups can help provide examples of how the planning department at LA County can help better define best practices and guide businesses in their implementation of the Green Zones ordinance. This includes both the Los Angeles initiative²⁵ as well as the Fresno initiative.²⁶

VI. Expand the industrial facilities included in the list of prohibited uses within Green Zones.

We believe that the prohibited uses within Green Zones districts should be expanded to include facilities that most impact our community members. While we support recycling facilities within our community, scrap metal processing yards provide some of the greatest nuisances and health impacts in Green Zones districts. In addition to regulating these facilities as recycling processing facilities in Title 22 and applying the appropriate development standards outlined by the ordinance,²⁷ these activities should be prohibited within a 500-foot radius of a sensitive use within Green Zones districts.²⁸ One example for addressing the health impacts of auto facilities while maintaining the ability for these facilities to operate is the Green Industrial Auto Park in San Diego County, which provides a viable destination for auto repair businesses phasing out of residential and mixed use areas, allowing the auto body industry to maintain business while protecting residential health.²⁹

Finally, several uses prohibited within Green Zones districts are not yet defined in Title 22 of the county code. Terms such as “gas manufacture” must be defined in Title 22 in order to clarify what facilities are prohibited within Green Zones districts. Gas

manufacture could include various stages of gas exploration, refining, manufacture, and distribution, and we would urge the county to prohibit all of these activities within Green Zones districts. We would recommend the County look at the prohibitions on oil and gas manufacture in Kern County as an example for definitions on gas manufacture.³⁰ We also recommend looking at these regulations as guidance to how the County can regulate gas manufacturing both within and outside of Green Zones districts in the county.

The members at Communities for a Better Environment and our allies appreciate the opportunity to submit these comments and hope to continue to work with the County to help build healthier and more just communities.

Signed,

Darryl Molina-Sarmiento,
Executive Director

Additional Member Comments and Questions:

Me preocupa que la ordenanza es muy debil. Quiero que sea mas fuerte. El nivel de contaminacion es muy a lot en nuestra area. En mi cuadra, Cass Place, 3 personas an muerto de cancer y otras personas se estan recuperando. Yo progongo que companies de alto riesgo en contaminacion que no se instalen cerca de escuelas y residencias. Que no se les permita aplicar por permisos. Las companies que ya estan operando, que se cierren inmediatamente. Que los inspectors sean mas Fuertes en aplicar codigos y multas, si las companies no cumplen con la ordenanza.

Jose Luis & Alicia Silva
Walnut Park

Yo soy parte de la comunidad de Walnut Park & lider activo de CBE. Vivo en 2720 ½ California St. y mi pregunta: Por que la compañía de Central Metal se queda siempre fuera de la ordenanza? Ya que este negoció por años a sido motive de contaminación al aire y algunos residents tienen enfermedades. Y analizando bien este Proyecto no tiene mucho que ver con zonas verdes. Tambien quiero que se considere respetar el horario de 8 a 5 PM ya que estan en zona residencial.

Veronica Lopez
Walnut Park

Somos residentes de Walnut Park. Vivimos en 2722 Hill St. por varios años. Por medio de las Zonas Verdes, esperamos se de prioridad a la salud de la gente, que se tengamos un Equipo responsable y diligente para mantener y monitonear cada 4 meses y trabajar para que se pongan extractores para limpiar el aire. Y se tengan no 500 pies si no que sean 2,000 pies.

Norma & Salvador Diaz
Walnut Park

Yo estoy de acuerdo con nuestros comentarios como grupo sobre las Zonas Verdes. Quiero añadir que cuando llegue el momento se tenga seguimiento a cualquier problema relacionado con cualquier negocio, fábrica o cosas que perturbe la calidad de aire de nuestras Ciudades! Gracias!

Martha Escobedo
Florence Firestone

En mi opion, yo creo que debe ver un equipo compuesto por residents, negocios y gobierno parar que tengan a la vista las reglas que deben seguir. Revisar que los negocios sigan el capítulo 22. Se mantenga un horario de 8am-5pm diario. Y urio que se notifique a la comunidad atraves de un boletín o volante sobre los companies que esten en violacion a las reglas o sean un peligro a los residents.

Gudalupe Lopez
Florence Firestone

Yo quiero mucha vigilancia para que los negocios cumplan con la ordenanza.

Response to Comment No. 5A-1:

The Green Zones Program involved extensive community outreach undertaken by the County over the 5-year development of the proposed Green Zones Program and Ordinance. Outreach began with convening of local, regional and statewide environmental justice agencies and stakeholders, community organizations, and residents. The County of Los Angeles Department of Regional Planning (DRP) established partnerships with community-based organizations (CBOs) in two unincorporated communities that have historically been burdened by pollution impacts. The collaboration enabled DRP to gather firsthand knowledge and experience from community members through “groundtruthing,” or community surveying, that would inform policy and land uses changes. Groundtruthing with community partners and residents in pilot communities occurred in 2018, and DRP held follow-up public convenings to showcase results of information gathered with Supervisor Solis and for Supervisor Ridley-Thomas and community members. Information gathered from the various community surveying events, coupled with DRP’s historical knowledge of polluting sources and community complaints to Zoning Enforcement related to air quality, odor, and noise, led to the proposed new regulations of the Green Zones Program. The outreach and coordination with stakeholders led to the release of a Draft Ordinance on May 22, 2020, for a 90-day public review period closing on August 24, 2020. The County hosted seven public, online community meetings between the release date and the comment period closing date to review the contents of the Draft Ordinance, receive comments, and answer questions. After the determination that a PEIR would need to be prepared, the County prepared and circulated a Notice of Preparation (NOP) for a 70-day review period, which exceeded the 30 days required under Section 15082(b) of the State CEQA Guidelines. The review period began on June 16, 2020, and closed on August 24, 2020. The NOP and Initial Study were sent to the State Clearinghouse of the California Office of Planning and Research (OPR) and County Clerk for filing on June 11, 2020, and distributed to various federal, state, regional, and local government agencies. The NOP was provided on the County’s website at

<http://planning.lacounty.gov/greenzones/documents> and

http://planning.lacounty.gov/view/public_notice_ceqa,

and email notifications were sent to the project’s interested parties list as well as other email lists identified for Countywide projects. The NOP and Notice of Scoping Meetings was also placed in the following newspapers: *Antelope Valley Press*, *Daily Breeze*, *East L.A. Tribune* and *Belvedere Citizen*, *Gardena Valley News*, *Malibu Times*, *Our Weekly*, *Pasadena Star News*, *San Gabriel Valley Tribune*, *Santa Clarita Valley Signal*, *The Argonaut*, and *Whittier Daily News*. The NOP invited public comments regarding environmental issues including the baseline conditions, the scope of the environmental analysis, the impact determinations in the Initial Study, and any alternatives or mitigation measures that the County should consider in the Draft PEIR.

The County hosted two scoping meetings to provide project information and solicit public comments. Out of respect for public health and safety requirements necessitated by the COVID-19 pandemic, the scoping meetings were held via Zoom and Facebook Live teleconference. The first meeting was held on Monday, July 13, 2020, from 4:00 to 5:04 p.m. The first meeting was attended by approximately 50 people over the course of the meeting (including the presenters), with 81 registrants for the Zoom Meeting and Facebook Live views. A total of 21 comments were received at the meeting (see Appendix C to the Draft PEIR, *Notice of Preparation and NOP Comment Letters*). The second meeting was held on July 22, 2020, from 5:00 to 6:22 p.m. The second meeting was attended by approximately 23 people over the course of the meeting (including the presenters), with a total of 34 registrants for the Zoom Meeting and additional Facebook Live views. The 34 total registrants included 12 County registrants and 2 Sapphos Environmental, Inc. registrants. A total of 21 comments were received at the meeting (Appendix C to the Draft PEIR).

This Draft PEIR was circulated for the required 45-day public review period in conformance with CEQA and the State CEQA Guidelines, including all applicable requirements with regard to the filing, posting, publication, and distribution of all public notices. The Draft PEIR was made available for public review on the County website:

http://planning.lacounty.gov/view/public_notice_ceqa

Response to Comment No. 5A-2:

The comment regarding adding a statement of purpose to the Green Zones Ordinance is applicable to revisions to the Ordinance and does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is acknowledged for the record and will be forwarded to the decision-makers for their review and consideration. The Draft PEIR was circulated for the required 45-day public review period in conformance with CEQA and the State CEQA Guidelines, including all applicable requirements with regard to the filing, posting, publication, and distribution of all public notices. A 60-day public review period for the Draft PEIR is not required by CEQA.

Response to Comment No. 5A-3:

The comment regarding revisions to the Ordinance to incorporate specific measures addressing agency oversight and enforcement of violations against noncompliant industrial facilities is outside of the scope of the PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is acknowledged for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-4:

The comment regarding the changes to the Green Zones Ordinance being minimal, lacking substantial explanation or reasoning to support the sufficiency of those measures to improve public health conditions, and not clearly advancing the overarching goal to address health concerns in environmental justice communities is outside of the scope of the PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is acknowledged for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-5:

The comment recommends strengthening the protections for residents of disadvantaged communities, supported by sound scientific judgment and guided by the community members themselves, to guarantee both short-term and long-term improvements in public health conditions within the communities that DRP recognizes to be the most vulnerable, but it does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-6:

The comment regarding the lack of a robust declaration of purpose or other findings in the revised Ordinance is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-7:

The comment regarding including findings or declarations of purpose to the Ordinance explaining how the new restrictions on industrial uses within the Green Zone Districts is consistent with State regulations is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-8:

The comment regarding the incorporation of language and findings showing how the measures in the Ordinance help to meet the enumerated goals of environmental justice elements required by Senate Bill (SB) 1000 is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft

PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-9:

The Green Zones Program has been designed to be in accordance with the County's Sustainability Plan adopted on August 6, 2019. The Green Zones Program is one component of the County's implementation of the recommendations of the Sustainability Plan. The Green Zones Program requires reductions in respirable particulate matter (PM₁₀) emissions and odors where new sensitive uses adjacent to parcels where existing, legally established manufacturing and industrial uses with potential for such emissions are located. The Green Zones Program requires development of new sensitive uses to include air filtration systems where such uses are allowable but located adjacent to manufacturing and industrial uses. Additionally, the Green Zones Program improvements adhere to Title 24 standards that require energy conservation features in new construction (e.g., high-efficiency lighting; high efficiency heating, ventilating, and air-conditioning [HVAC] systems; thermal insulation; double-glazed windows; water conserving plumbing fixtures; etc.) and indirectly regulate and reduce greenhouse gas (GHG) emissions. Furthermore, the encouragement of the development of organic waste facilities to divert organic waste from landfills and repurposing those materials to feed food-insecure people, make carbon sequestering fertilizers and soil amendments, and generate clean, low-carbon renewable energy is consistent with the Southern California Association of Governments (SCAG) Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), the California Climate Action Plan (CCAP), and Statewide legislations for target reductions in GHGs.

Response to Comment No. 5A-10:

The County appreciates the importance placed by CBE on the benefits of educating the public and affected communities of benefits of the proposed Ordinance on human health conditions. As summarized on the County's website (please see <https://planning.lacounty.gov/greenzones/meetings>), there were extensive meetings undertaken to solicit information regarding the concerns of the public and affected community and to share information regarding the elements of the Green Zones Program and social and environmental health benefits. There were eight public meetings conducted by the County in addition to the two EIR scoping meetings:

Community Outreach Meetings

- July 6, 2020: East LA Community Meeting
- July 13, 2020: EIR Scoping Meeting
- July 16, 2020: East LA Community
- July 22, 2020: EIR Scoping Meeting
- July 27, 2020: Ordinance Outreach Meeting
- 30 de julio de 2020: Reunión en español para hablar sobre la ordenanza
- August 12, 2020: Ordinance Outreach Meeting (Business Community)
- September 24, 2020: Presentation to Board of Supervisors Planning Deputies
- February 11, 2021: Presentation to Board of Supervisors Planning Deputies
- February 17, 2021: Ordinance Outreach Meeting (Business Community)

Regional Planning Commission

- May 27, 2020: Regional Planning Commission Presentation (Español)
- Staff Memo to RPC dated May 21, 2020
- June 16, 2021: Regional Planning Commission Meeting Presentation
- Staff Memo to RPC dated June 3, 2021
- Supplemental Staff Memo to RPC dated June 15, 2021
- July 21, 2021: Regional Planning Commission Meeting Presentation
- Staff Memo to RPC dated July 8, 2021

Stakeholder Meeting

- June 22, 2016 (Meeting Notes / Presentation)
- September 12, 2016 (Meeting Notes / Presentation)
- December 7, 2016 (Meeting Notes / Presentation)
- April 4, 2017 (Meeting Notes)

Agency Coordinating Committee Meeting

- July 5, 2016
- August 11, 2016
- October 5, 2016
- April 5, 2017
- November 15, 2017

The purpose of the PEIR is to inform the public, and the County, in its role as a Lead Agency under CEQA, of the potential for the Green Zones Program to result in significant impact on the environment that require the consideration of mitigation measures or alternatives. Therefore, the focus of the PEIR analysis is correctly placed on of impacts on the environment that would result from the adoption of the Green Zones Program, and the construction and operation of improvements that would be required to comply with the program. The analysis was prepared consistent with Section 15126, Consideration and Discussion of Environmental Impacts, of the State CEQA Guidelines. As specified in Section 15126.2 of the State CEQA Guidelines, “An EIR shall identify and focus on the significant effects of the proposed project on the environment.”

A representative project case study has been included in the PEIR (Appendix D to the Draft PEIR, *Programmatic Health Impact Assessment*) to represent the maximum projected emissions that the public and members of the affected community could expect as a result of project implementation of a fully built-out facility. The case study serves to inform interested parties of the absolute maximum health impacts a proposed project could have on the surrounding community. However, since project sites would be configured to be compatible with the needs of the surrounding areas, it would be unlikely that any particular project site would feature all the equipment and activities assessed in the case study scenario. Furthermore, the program does not propose construction of all potential project sites at the same time, thus avoiding cumulative construction impacts in the region.

Response to Comment No. 5A-11:

The comment regarding the Ordinance not going far enough to regulate the affected incompatible industrial uses in a manner that reduces the public health burdens imposed on neighboring communities is outside of the scope of the PEIR. Alternatives were analyzed based on their ability to reduce potential impacts from the implementation of the Green Zones Program and meet most of the basic objectives of the proposed program. The PEIR and alternatives analyzed address the potential environmental impacts of the implementation of the program. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration prior to taking action on the program.

Response to Comment No. 5A-12:

The comment regarding the Ordinance not sufficiently mitigating the harmful health impacts from existing nonconforming pollution sources is outside of the scope of the PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is acknowledged for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-13:

The comment regarding the compliance timelines required by the Ordinance is outside of the scope of the PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is acknowledged for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-14:

The comment regarding the revision of the Ordinance to include the submittal of compliance plans is outside of the scope of the PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is acknowledged for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-15:

The comment regarding the reduction of the timeframe to phase out the prohibited nonconforming uses in the Ordinance is outside of the scope of the PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is acknowledged for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-16:

The comment regarding implementing signage requirements within one year of Ordinance adoption is outside of the scope of the PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is acknowledged for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-17:

The comment regarding the Ordinance not addressing the need for Green Zone communities to have expanded employment opportunities within their neighborhoods is outside of the scope of the PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is acknowledged for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-18:

The comment regarding revising the Ordinance to limit operation hours is outside of the scope of the PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is acknowledged for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-19:

Implementing the requirements of the Green Zones Program may create hazardous emissions or require construction activities that may result in ground disturbance that has the potential to expose people to hazardous materials from previous industrial activities. However, the program includes language requiring that property owners will need to provide evidence that the property has received clearance from the appropriate State agency in order to begin construction on the site. The requirement for a Phase I Environmental Site Assessment is sufficient to trigger applicable State and County regulations that would require worker protection, cleanup, remediation, or proper disposal of any hazardous materials found on an industrial site applicable to the Green Zones Program. Additionally, the Green Zones Program does not exempt any property owner from the provisions of OSHA; the Hazardous Materials Transportation Act; the Resource Conservation and Recovery Act; the Comprehensive Environmental Response, Compensation and Liability Act; the Emergency Planning and Community Right-To-Know Act; the Federal Emergency Management Act, or Los Angeles County Code, Title 11 – Health and Safety that regulate the transport, storage, production, use, or disposal of hazardous materials in the County.

Response to Comment No. 5A-20:

The comment regarding the County's Sustainability Plan goals and how they relate to the Ordinance is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-21:

The comment regarding the adequacy of the Ordinance requirements regarding regulated industrial facilities conforming with the requirements of Conditional Use Permits is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-22:

The comment regarding the enforcement requirements of the Ordinance with regard to signage and reporting of violations to the SCAQMD is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-23:

The comment regarding the Ordinance not expanding the role of the Department of Public Health (DPH) to monitor and enforce the new restrictions applicable to industrial uses within the Green Zones districts is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-24:

The comment regarding the Ordinance not including any reference to community monitoring data, and not including measures to increase the support for community monitoring or the role of community members in reporting violations is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-25:

The comment regarding the Ordinance requiring binding guidance to implement the new requirements of the Conditional Use Permit (CUP) that describes best practices in detail and technical specificity is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-26:

The comment regarding the inclusion of findings or binding requirements in the revised Ordinance to confirm the utility of CalEnviroScreen (CES) in the planning, implementation, and enforcement processes for new CUP requirements is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-27:

The comment regarding the Ordinance leaving out some categories of polluting industrial facilities is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-28:

The comment requesting that the County require DRP to coordinate directly with DPH, Sustainability Plan planners, and other health-based agencies when siting new facilities covered by the Ordinance, with the goal to minimize adverse public health effects in the planning stage, is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-29:

The comment regarding the adequacy of the 500-foot buffer required by the Ordinance is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-30:

The comment requesting that the County add agency coordination requirements in the Ordinance to clarify DRP's role to prioritize public health protection for Green Zone communities when siting new facilities is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5A-31:

Alternatives were analyzed based on their ability to reduce potential impacts from the implementation of the Green Zones Program and meet most of the basic objectives of the program. The PEIR and alternatives analyzed address the potential environmental impacts of the implementation of the program.

An alternative was considered to increase the number of communities for which the Green Zone Districts would apply to include communities located in the Antelope Valley outside of the unincorporated communities of Avocado Heights, East Los Angeles, East Rancho Dominguez, Florence-Firestone, South San Jose Hills, Walnut Park, West Athens-Westmont, West Carson, West Whittier-Los Nietos, West Rancho Dominguez-Victoria, and Willowbrook (see Figure III.E-1, *Planning Areas*, in Section III, *Project Description*, of the Draft PEIR). However, after review of the Environmental Justice Screening Method (EJSM) map, it was determined that areas outside of the communities listed above in unincorporated areas did not meet the criteria for consideration of implementation of the Green Zone Districts. Specifically, unincorporated areas containing industrial uses in the Antelope Valley and Santa Clarita area did not meet the criteria as these areas had low or very low EJSM scores outside of the incorporated Cities of Lancaster, Palmdale, and Santa Clarita (Figure III.C-1, *Environmental Justice Screening Method Score*, in Section III, *Project Description*, of the Draft PEIR). The 11 communities that would be subject to the provisions of the Green Zone Districts development standards are those areas where sensitive receptors are currently most impacted by adjacent industrial uses. As these additional communities did not meet the EJSM criteria, consideration of this alternative was eliminated. Additionally, banning all new or existing covered industrial uses within 500 feet of sensitive receptors was deemed infeasible as an alternative due to concerns regarding private property rights, and incompatibility with existing zoning and land use regulations. Also, a blanket ban of all industrial uses would not be appropriate as different uses have varying levels of impacts or in some cases, no impact on nearby uses.

Response to Comment No. 5A-32:

The comment that the Ordinance does not include any measures addressing what happens to nonconforming land uses once their operations cease, and that the Ordinance fails to address existing sites with closed facilities that may require substantial remediation efforts to improve conditions, is outside of the scope of the PEIR. The comment has been noted and will be taken into consideration by the decision-makers prior to taking action on the program.

Implementing the requirements of the Green Zones Program may create hazardous emissions or require construction activities that may result in ground disturbance that has the potential to expose people to hazardous materials from previous industrial activities. However, the program includes language requiring that property owners will need to provide evidence that the property has received clearance from the appropriate State agency in order to begin construction on the site. The requirement for a Phase I Environmental Site Assessment is sufficient to trigger applicable State and County regulations that would require worker protection, cleanup, remediation, or proper disposal of any hazardous materials found on an industrial site applicable to the Green Zones Program. Additionally, the Green Zones Program does not exempt any property owner from the provisions of OSHA; the Hazardous Materials Transportation Act; the Resource Conservation and Recovery Act; the Comprehensive Environmental Response, Compensation and Liability Act; the Emergency Planning and Community Right-To-Know Act; the Federal Emergency Management Act, or Los Angeles County Code, Title 11 – Health and Safety that regulate the transport, storage, production, use, or disposal of hazardous materials in the County. However, since project sites would be configured to be compatible with the needs of the surrounding areas, it would be unlikely that any particular project site would feature all the equipment and activities assessed in the case study scenario. Furthermore, the program does not propose construction of all potential project sites at the same time, thus avoiding cumulative construction impacts in the region. Additionally, potential project sites would be distributed over wide geographic areas, thus avoiding impacts from concentrated, simultaneous construction activities.

Letter No. 5B

February 1, 2021

Los Angeles County Department of Regional Planning
GreenZones@planning.lacounty.gov

RE: Comments on Los Angeles County Revised Draft Green Zones Ordinance

Dear Department of Regional Planning,

Thank you for your efforts to develop a Green Zones policy for Los Angeles County to protect the health and well-being of residents living in close proximity to industrial facilities that commonly emit toxic chemicals and produce other impacts that can be harmful to all residents, especially children, the elderly and others considered sensitive receptors. We now know from sophisticated data analysis and many years of experience that there is a preponderance of these facilities in low-income communities of color in Los Angeles.

Liberty Hill Foundation is concerned by the issues that have been identified in the detailed and thoughtful letter that has been researched and prepared by Communities for a Better Environment, with the support of the UCLA Emmett Institute on Climate Change and the Environment, and endorsed by many environmental justice and public health organizations in our region. Most of these organizations have been grantees and partners of Liberty Hill as we have sought to address the disproportionate impacts of polluting facilities and transportation routes upon vulnerable people, and design policies and practices that can be protective of human health and safety, as well as our natural environment. Liberty Hill served as a key partner in the development of LA City's "Clean Up Green Up" policy adopted in April of 2016 and also assisted with stakeholder engagement in the development of the "OurCounty" Sustainability Plan. We know that the issue of proximity to industrial pollution is an urgent and significant problem raised by community-based organizations for many years now, and one which continues to need focused action by government agencies.

The CBE letter raises concerns that are both numerous and sufficiently serious to suggest that the Draft Ordinance needs ongoing public input and revisions to strengthen its provisions. These concerns range from a lack of clear purpose and definition in the Ordinance; to the need for narrowing the types of industrial permits to be issued inside buffer zones; to expanded buffer zone distances; to accelerated timetables for CUP compliance and shorter amortization periods

5B-1

(from 7 years to 5 years) for phasing out non-conforming uses; to strengthened operating standards; and expanded education for businesses about best practices in environmental health and safety. There are also compelling arguments about the need to strengthen inter-agency coordination, including an expanded role for the LA County Department of Health, and more accountability with the South Coast Air Quality Management District.

5B-1,
cntd

Liberty Hill urges the Department of Regional Planning to reconsider the issues raised by Communities for a Better Environment and the other signers, and to review the options and alternative proposals put forth in their letter. We think that an extended public comment period would help to enable more dialogue, and hope that the County will continue to work collaboratively with the environmental justice community to identify ways to strengthen the Draft Ordinance and find solutions that will truly advance the public health interests of residents living in close proximity to polluting industrial land uses.

5B-2

Thank you for your efforts to develop a Green Zones Ordinance for Los Angeles County.

Please let us know if there is any way in which the Liberty Hill Foundation can assist.

Sincerely,

A handwritten signature in black ink, reading "Michele Prichard". The signature is fluid and cursive, with a long horizontal stroke at the end.

Michele Prichard
Senior Director for Strategic Initiatives
Liberty Hill Foundation

Response to Comment No. 5B-1:

The County acknowledges the support of the CBE letter by the Liberty Hill Foundation. However, the comment regarding the Ordinance needing ongoing public input and revisions to strengthen its provisions regarding narrowing the types of industrial permits to be issued inside buffer zones; expanded buffer zone distances; accelerated timetables for CUP compliance and shorter amortization periods (from 7 years to 5 years) for phasing out nonconforming uses; strengthened operating standards; and expanded education for businesses about best practices in environmental health and safety; and the need to strengthen interagency coordination, including an expanded role for DPH and more accountability with the SCAQMD, is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5B-2:

The County acknowledges the support of the CBE letter by the Liberty Hill Foundation. However, the request that the County provide an extended public comment period to enable more dialogue and continue to work collaboratively with the environmental justice community is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Letter No. 5C

East Yard Communities for Environmental Justice – 2317 Atlantic Blvd. Commerce, CA. 90040

**Submitted via electronic mail,
February 1, 2021**

Tahirah Farris, Regional Planner
Department of Regional Planning
320 West Temple Street, 13th Floor
Los Angeles, California 90012
greenzones@planning.lacounty.gov

Dear Ms. Farris,

East Yard Communities for Environmental Justice (“EYCEJ”) submits these comments on the Draft Program Impact Report (EIR) for the Green Zones Ordinance. We are community members who, for many years and generations, have lived next to incompatible land uses in the unincorporated areas of East Los Angeles. These comments are submitted to assist the Department of Regional Planning (“DRP”) in preparation, review, and approval of these environmental documents and process of developing an ordinance that is community-centered and responsive to our long overdue plead to place our right to environmental justice before the profits of business.

EYCEJ is a non-profit, community-based organization dedicated to building community power through community organizing, policy, and environmental law. EYCEJ has hundreds of members living in East and Southeast Los Angeles, West Long Beach and Carson. EYCEJ has worked for many years as a key partner with DRP to implement the Groundtruthing project, which serves as the basis of this ordinance, and has provided vital guidance on the Green Zones Ordinance through ongoing consultations and during DRP’s two community meetings on July 6, 2020 and July 16, 2020.

We provided comments on the previously circulated draft Green Zones Ordinance (“Ordinance”) and the Initial Study of a California Environmental Quality Act (“CEQA”) Environmental Impact Report for the Green Zones Ordinance. We appreciate the responsiveness to our comments and submit additional comments to the revised documents here.

Additionally, we have previously discussed the potential for a pilot Green Zones Interagency Task Force (GZITF) to be organized along with the implementation of the

East Yard Communities for Environmental Justice – 2317 Atlantic Blvd. Commerce, CA. 90040

Green Zones Ordinance, and in essence to serve as a body for a smooth implementation. Along with the DRP and EYCEJ as an anchor community partner, other core agencies including the Department of Public Health, Department of Public Works, South Coast Air Quality Management District (SCAQMD), Department of Toxic Substances Control (DTSC), California Air Resources Board (CARB), the Regional Water Quality Control Board, and others can come together regularly to build bridges and fill gaps when it comes to permitting and enforcement at facilities. We have begun conversations with several agencies and there is great interest. Some areas for the GZITF to focus on are lifted up in the following sections.

A. Air

1. Regarding building permits, the EIR estimates 43 industrial building permits per year. This was the maximum estimated on the highest single year total industrial building permits issued in the previous 20 years. Though the average was 16 a year, and this seems like a more reasonable amount of permits, what is concerning is the lack of analysis regarding cumulative impacts. There is no weighted analysis on what the impacts of each industrial building permit will bring to our communities, thus rendering the number of permits total largely inconsequential. This seems like the perfect place for the Green Zones Interagency Task Force to participate. Beyond whether the land is available and suitable for a particular type of use, the GZITF allows for interagency assessment of the real and perceived impacts to sensitive receptors, thus informing a more robust understanding of each proposal.
2. In the past, we have seen local land use jurisdictions point to the air agencies and say “the air agencies permitted this so we did too”, and then when we turn to the air agencies they say “the land use jurisdictions permitted this so we did too.” This happens with largely zero communication between agencies. With an interagency vehicle for sharing information, the most vulnerable communities will be afforded a greater opportunity for protection from harm. Through this, Los Angeles County is provided a greater opportunity to inform the air agencies, who for decades have allowed for the regional air standards to not be achieved. This also doesn’t solely

5C-1

5C-2

rest on one agency within the County, but can provide space for the Department of Public Health and others to engage.	5C-2, cntd
3. The impacts from diesel emissions during construction and operation of facilities are mentioned in the EIR, but hardly addressed. There is ample opportunity to include a requirement for using zero emission trucks once ZE construction equipment and transportation is available. As technology becomes available, any future industrial use with its own fleet should be regulated to operate on ZE and any industrial use with truck operations (not its own fleet) should have a minimum percentage of ZE or have a reduced number of allowable daily truck trips to the industrial use site in order to protect sensitive receptors.	5C-3
4. Regarding nuisances (noise or emissions), a regular report on all nuisances documented by the SQAQMD and CARB should be requested by the County of Los Angeles, posted, and distributed to impacted communities. This can serve as a tool for community engagement and spur vigilance and enforcement of appropriate rules and regulations.	5C-4
5. The state is not currently cleaning up industrial sites contaminated by Exide, and has no plan to do so. This poses a high risk for workers and sensitive receptors near industrial sites where construction or demolition are taking place. In 2017-2018, in response to a fugitive dust violation from a demolition site in the heart of the Exide impacted area, the City of Los Angeles approved an ordinance requiring industrial properties in the 1.7 mile radius of Exide be flagged for permit issuance staff, flagged to the property developer, and insure proper practices are in place given the threat. More information can be found here: https://cityclerk.lacity.org/lacityclerkconnect/index.cfm?fa=ccfi.viewrecord&cfnumber=17-0540 . In addition to this, residents and other sensitive receptors within 2,500 feet of the construction and demolition should be notified of the activities and potential threat to support vigilance and enforcement of fugitive dust restrictions.	5C-5
	5C-6
B. Hazardous Materials	
1. Along with proximity to facilities who use, treat, or store hazardous materials, our communitie are threatened by the transport of	5C-7

hazardous materials. This is mostly seen through vehicular road traffic, but rail transport also poses a risk. Restricted routes to and from facilities with hazardous materials should keep these vehicles away from streets with sensitive receptors, and the routes should be publicly available. Coupled with increased community capacity to understand placards on vehicles, enforcement can be supplemented with community vigilance.

5C-7,
cntd

2. Areas immediately adjacent to railroad tracks are heavily contaminated for various reasons. Because of this fact, a 2,500 foot buffer should exist between rail facilities and sensitive receptors.

5C-8

C. Biological Resources

1. We strongly recommend the DRP to push for the restoration efforts of native plants, wildlife, wetlands, and habitats in endangered areas or where they have gone extinct. We want to ensure species that have been disturbed or removed actually have the opportunity to be reintroduced. We did not come across a consideration like this in the biological resources section and believe it is an important point to raise. This is one way to improve how we utilize land in our community. Perhaps a minimum percentage of a lot can be dedicated to restoration for sites that are over half an acre, or all sites.

5C-9

2. Because Green Zones is a plan directed to improve land use in our communities, we strongly recommend the incorporation of widespread green spaces/areas (including planting native plants and species) around new and existing land use sites, on unused land use sites, and near sensitive use sites that are in close proximity to industrial, vehicular, recycling, and waste land use sites. This can target issues such as air and noise pollution, pollution in stormwater runoff and bare soil, urban heat, and even stress. When we think about how land use can improve our community's (physical and mental) health, this all comes to mind.

5C-10

D. Noise

1. We request a health impact report for this section. Within the noise EIR report (p. 353), it references an HIA report which was said to be used to estimate noise and vibration levels for the proposed program. However, when looking at the HIA there was almost no

5C-11

mention of noise and no clear response to the case study mentioned. When reaching out to the DRP for answers, we did receive some explanation regarding why a noise HIA was not included. This email mentioned “in contrast to air pollutants that can be transported off-site by prevailing winds to impact sensitive receptors such as residences...noise does not persist or accumulate in the environment or in the human body, attenuates rapidly with distance from the source, and can be readily mitigated with noise controls, such as high-mass acoustic walls that introduce an ‘insertion loss’ that attenuates sound propagation.” This answer was further followed by some more analysis on noise, and while some of this may be true, our community still has some concerns, brought up in our first comment letter. Noise may not enter the body as air pollution does, however it may still cause negative health effects. Therefore we recommend a more explicit and clear explanation about the noise and vibrational health impacts in the HIA.

5C-11,
cntd

2. It was noted that “based on a worst-case scenario construction noise levels could periodically reach 77 to 89 dBA at a distance of 50 feet from the construction site (Table 2.13-6). According to the Los Angeles County Noise Ordinance, daily construction noise is limited to 75 dBA at single family residences, 80 dBA at Multifamily Residential, and 85 dBA at Semiresidential/Commercial (see Table 2.13-4) and therefore, construction of residential properties has the potential to exceed the County noise restrictions by approximately 14 dBA during the loudest phases of construction when measured at a distance of 50 feet.” [Researchers](#) have found that people who are exposed over long periods of time to noise levels at 85 dBA or higher are at a much greater risk for hearing loss. Therefore it is important to provide an HIA on different noise and vibration scenarios.
3. We recommend the EIR explicitly state and share the research and case studies related to noise and vibration during operations and due to “rough roads” (noise and vibration caused by traffic).
4. Table IV.G.-13 is missing and needs to be incorporated in the EIR.

5C-12

5C-13

5C-14

- | | |
|--|-------|
| 5. We recommend using research to frame the EIR that is within 10-15 years old or from recent times. Many studies we came across are based from the 1970s. | 5C-15 |
| 6. Warehouses are located near some sensitive use sites in Green Zones communities and raise noise and vibration concerns (such as truck traffic) in community members who live nearby. There is no mention of warehouses, therefore we would appreciate receiving insight on noise and vibration impacts tied to warehouse construction and operations (which induces and thus should include truck traffic). | 5C-16 |

E. Hydrology and Water Quality

- | | |
|--|-------|
| 1. Multiple hydrology and water quality rules, ordinances, plans and agencies are mentioned in the document. The Lower LA River Revitalization Plan (2018) and the LA River Master Plan (2021 draft currently in circulation for comment) should be added to the list and considered. Given that both of these plans intend to generate projects and programs that will bring even more residents to the LA River, the threat of exposure from industrial runoff is greater. The total maximum daily load for contaminants should be reduced significantly, if not zeroed out completely for certain materials. Every attempt should be made to coordinate with Los Angeles County Public Works on this front. The Green Zones Interagency Task Force is exactly the space for this. | 5C-17 |
|--|-------|

F. Land Use

- | | |
|---|-------|
| 1. We are requesting that more parcels be downgraded to increase the amount of parcels with more restricted standards where designation changes will result in lower environmental impacts to the green zones communities. Of the 2,778 project parcels we are suggesting half of all the parcels be downgraded to ensure the health and safety of sensitive land uses. | 5C-18 |
| 2. We found the years given to adopt the program requirement should not exceed 3 years. We are suggesting 6 months 1year and 3 years. This would be more than enough time for a business/company to comply, thus ensuring there will not be a significant rise in environmental impacts of the surrounding communities. | 5C-19 |

1. We are suggesting extending the definition of **sensitive land uses** to include high pedestrian areas such as sidewalks and medians that are used for exercise and leisure. 5C-20
2. In reading the report we found that the county has no plans on working with neighboring green zones communities. We are suggesting The county establish a city partnership for zoning buffers. This may include, but not limited to: round table discussions, intercity/community talks that engage with community members and grassroots organizations to ensure that all needs are met with neighboring communities. 5C-21

G. Project Alternatives

1. The DEIR should be revised to include a wide range of project alternatives, including alternatives that are more health-protective than those currently studied in the DEIR. The DEIR studies three main alternatives: (1) a no project alternative, (2) an alternative with fewer Green Zones areas than the 11 areas currently proposed, and (3) an alternative that studies the 5, 7,10 year timeline existing facilities are given to comply. These alternatives mislead the public on the full extent and power that the Green Zones ordinance can provide by creating the illusion that the revised ordinance proposed in its current form is the most environmentally-feasible alternative. 5C-22

The DEIR should be revised to include an alternative that increases the number of Green Zones areas in unincorporated Los Angeles County from 11 to 15 areas. The DEIR should also study an alternative that reduces the timeline from 3, 5, and 7 years to 2, 3, and 5 years. These additional alternatives would allow the public to understand the wide range of outcomes that the Green Zones ordinance can provide.

H. Health Impacts Assessment

1. Given that the report estimates 77% of the risk posed to our communities comes from mobile sources, this should be a primary discussion for the Green Zones Inter Agency Task Force. With SQAQMD and CARB participation, Los Angeles County can play a greater role in promoting indirect source rules to address issues of mobile sources at industrial sites. 5C-23

I. Other Environmental Considerations

1. Although the Green Zones Program is not a residential program the DRP should conduct a survey of the areas within 2,500 ft of elements that require the implementation of development standards on existing and proposed properties for encampments/mobile homes/people experiencing homelessness in the area. Many of the proposed measures although not altering residential zones fail to think about unpermitted dwellings that may hold space around the proposed elements.
2. Our recommendation would be for the county to create a process where they first inform people experiencing homelessness in the affected area, then offer them relocation support. Said relocation support can be granted as businesses apply for conditional use permits (CUPs). A fee or some sort of percentage of revenue share should be used as a revenue stream for existing programs that help with the relocation of community members.

5C-24

East Yard Communities for Environmental Justice (EYCEJ) is fully in support of a Green Zones policy that will improve the health and quality of life for both the communities and businesses in the Green Zones areas. It is with this goal that we submit comments to create a more robust ordinance and a vehicle for continued partnership, the Green Zones Inter Agency Task Force.

Please contact mark! Lopez at East Yard Communities for Environmental Justice at markL.eycej@gmail.com if you have questions regarding this letter.

Sincerely,

Eastside Members of East Yard Communities for Environmental Justice

Response to Comment No. 5C-1:

It is important to note that the PEIR analyzes the potential cumulative impacts of the implementation of the Green Zones Program. The PEIR determined that all of the potential impacts of the program would occur during construction of individual projects. However, the program is anticipated to result in long-term benefits to aesthetics, air quality, noise, and GHG emissions. The CEQA Guidelines (Section 15130 [b][1]) allow the County to use a summary of projections contained in an adopted general plan or related planning document, or in a prior environmental document, which has been adopted or certified, that described or evaluated regional or area wide conditions contributing to the cumulative impact. Using historical building permit data over the last 20 years, the cumulative impacts analysis estimated that a maximum of 43 building permits could be issued and developed per year, this being the maximum number of permits that were submitted for a single year over that period. It is unlikely that 43 industrial development projects will be developed at the same time, still less in close proximity to each other, such that their impacts would overlap and be collectively significant. The projects anticipated to be developed, subject to the Green Zones Program, are expected to be distributed widely throughout the geographic area of the County. The cumulative analysis for the Green Zones Program utilized a prototype industrial project to represent each of the potential 43 industrial projects. This prototype project was the basis for analysis of the Health Impact Analysis (HIA) as well. While the Green Zones Program is expected to contribute to short-term impacts related to increasing criteria pollutants during construction, including short-term impacts to sensitive receptors during construction, implementation measures are anticipated to be widely distributed, such that cumulative impacts would be less than significant. Additionally, the Green Zones Program is intended to result in long-term improvements in environmental impacts to sensitive use near or adjacent to industrial uses.

Response to Comment No. 5C-2:

The comment regarding the creation of an interagency vehicle for sharing information is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5C-3:

The Health Risk Assessment (HRA), which is a component of the HIA, evaluates the health impacts of diesel particulate matter (DPM) in diesel engine exhaust from mobile equipment used on-site and vehicular sources (trucks) accessing a project site. In accordance with California Air Resources Board (CARB) regulations for In-Use Off-Road Diesel-Fueled Fleets, construction equipment and vehicles will have to either meet fleet average emissions targets or meet Best Available Control Technology (BACT) requirements to satisfy annual emissions performance requirements. In general, if a fleet does not meet the fleet average emissions targets, then it must meet BACT requirements until it meets the fleet average targets.

In order to meet BACT requirements, fleets can either

- (1) Turn over to newer, cleaner engines or vehicles, meaning retiring (selling) a vehicle (older, high-emitting ones must be retired first), designating a vehicle as permanent low-use (limited operating hours), repowering a vehicle with a higher Tier (lower emission) engine, or rebuilding the engine to a more stringent emissions configuration; or
- (2) Install CARB-certified exhaust add-on control retrofits (aka Verified Diesel Emission Control Strategy or VDECS).

Under CEQA, each project that requires a discretionary land use decision would be required to complete an analysis of criteria air pollutants and TACs, using CalEEMod, and mitigation required where impacts exceed the significance thresholds established by the South Coast Air Quality Management District CEQA Handbook. If zero emissions construction equipment becomes readily available during the life of the project, it is possible that it may be considered for use to meet BACT requirements or as further mitigation, should the need for such measures occur. However, the newest Tier 4 engines or VDECS retrofits emit substantially less DPM than older engines, thus substantially reducing health risks. As indicated in Title 14, Guidelines for the Implementation of the California Environmental Quality Act,

Section 15126.4 (a)(3), mitigation measures are not required for effects that are not found to be significant. Based on the analysis detailed in the PEIR, the majority of improvements required by the Green Zones Program will not generally result in significant impacts requiring mitigation.

Response to Comment No. 5C-4:

The comment regarding the request for a regular report on all nuisances documented by the SQAQMD and CARB to be requested by the County of Los Angeles, posted, and distributed to impacted communities is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5C-5:

Fugitive dust that originates from the Exide Site are outside the scope of the improvements proposed under the Green Zones Program because the site is located in the City of Los Angeles, which is beyond the regulatory authority of the County. On December 5, 2014, the SCAQMD adopted the Final Mitigated Negative Declaration dated December 2014, and approved the Title V Permit Revisions, as well as the Final Risk Reduction Plan dated August 2014 for Exide Technologies. These SCAQMD actions authorized the installation of new, and modification of existing, air pollution control equipment as BACT or Best Available Retrofit Control Technology (BARCT) at Exide. The new and modified air pollution control equipment implements the Revised Final Risk Reduction Plan submitted by Exide that proposed the measures to be taken at the facility to reduce toxic emissions and lower health risk to the neighboring communities.

Response to Comment No. 5C-6:

The analysis of air quality was prepared consistent with Section 15126, Consideration and Discussion of Environmental Impacts, of the State CEQA Guidelines. As specified in Section 15126.2 of the State CEQA Guidelines, "An EIR shall identify and focus on the significant effects of the proposed project on the environment." The analysis of the effects of the Green Zones Program on ambient air quality is limited to those impacts that would result, directly, indirectly, or cumulatively as a result of the related land use restrictions or improvements that are required to protect sensitive uses, such as existing and future residential land uses that are permissible under the adopted Land Use Element of the County General Plan and County Zoning Ordinance. The Green Zones Program does not change the pattern or density of residential dwelling units, or other sensitive uses, from those that are allowable by the County General Plan and Zoning Ordinance. SCAQMD's HRA CEQA guidance for diesel idling establishes a 1,000-foot (300-meter) buffer zone between sensitive receptor locations and sources of truck traffic emissions as a mitigation measure.

SCAQMD's approach to mitigating fugitive dust impacts is to require implementation of effective and comprehensive dust control measures. PM₁₀ emitted during construction can vary greatly depending on the level of activity, the specific operations taking place, the equipment being operated, local soils, weather conditions, and other factors. Despite these variabilities, experience has shown that there are several feasible control measures that can be reasonably implemented to substantially reduce fugitive dust emissions from construction. For larger projects, the SCAQMD has determined that compliance with an approved Dust Control Plan (DCP) comprising BMPs, primarily through frequent water application, constitutes sufficient mitigation to reduce PM₁₀ impacts to safe levels.

As each construction site, the responsible party will post a notice that includes the following information: job site address, permit number, name and telephone number of the contractor and owner or owner's agent, hours of construction allowed by code or any discretionary approval for the site, and City or County telephone numbers where complaints or violations can be reported. The notice will be posted and maintained at the construction site prior to the start of construction and displayed in a location that is readily visible to the public and in plain sight.

Response to Comment No. 5C-7:

The Green Zones Program will not regulate or increase the locations where transport, storage, production, use, or disposal of hazardous materials is allowed in the County. All routine transport, use, and disposal of hazardous material at these facilities are required to comply with all applicable existing local, state, and federal regulations in relation to hazardous waste and transport. Additionally, the Green Zones Program does not exempt any property owner from the provisions of OSHA; the Hazardous Materials Transportation Act; the Resource Conservation and Recovery Act; the Comprehensive Environmental Response, Compensation and Liability Act; the Emergency Planning and Community Right-to-Know Act; the Federal Emergency Management Act, or Los Angeles County Code, Title 11 – Health and Safety that regulate the transport, storage, production, use, or disposal of hazardous materials in the County.

Response to Comment No. 5C-8:

The analysis of air quality was prepared consistent with Section 15126, Consideration and Discussion of Environmental Impacts, of the State CEQA Guidelines. As specified in Section 15126.2 of the State CEQA Guidelines, “An EIR shall identify and focus on the significant effects of the proposed project on the environment.” The analysis of the effects of the Green Zones Program on ambient air quality is limited to those impacts that would result, directly, indirectly, or cumulatively, as a result of the related land use restrictions or improvements that are required to protect sensitive uses, such as existing and future residential land uses that are permissible under the adopted Land Use Element of the County General Plan and County Zoning Ordinance. The Green Zones Program does not change the pattern or density of residential dwelling units, or other sensitive uses, from those that are allowable by the County General Plan and Zoning Ordinance.

As described in Section IV.A, *Air Quality*, of the Draft PEIR, the scope of the impacts on ambient air quality are those associated with the construction of improvements, such as walls and enclosures intended to provide long-term reduction in emission of criteria pollutants and TACs where sensitive uses, such as residential dwelling units are located adjacent to incompatible manufacturing, industrial, and commercial uses. The construction of such improvements are expected to be limited in duration. The Green Zones Program does not exempt property owners, or future developers, from compliance with the permitting requirements of the SCAQMD. Ministerial projects are exempt from CUP requirements and, thus, do not require project-level CEQA evaluation prior to plan check and permit approval, such that the use of diesel reduction and avoidance measures for these types of developments is not feasible. Conversely, the development of discretionary projects requires project-level evaluation under CEQA prior to plan check and permit approval, and thus, the use of diesel avoidance and reduction measures or avoidance and minimization measures for these types of developments is feasible.

Evaluating the effects of separation distance between existing rail facilities and existing sensitive receptors is outside the scope of the improvements proposed under the Green Zones Program. SCAQMD’s HRA CEQA guidance for diesel idling establishes a 1,000-foot (300-meter) buffer zone between sensitive receptor locations and sources of truck traffic emissions as a mitigation measure. CARB’s Air Quality and Land Use Handbook recommends 500 feet (150 meters) of separation between busy roadways and sensitive receptor locations, 1,000 feet (300 meters) from busy distribution centers (heavy-duty truck traffic) and rail yards, and generally avoid siting sensitive receptors immediately downwind of busy port facilities.

Response to Comment No. 5C-9:

Restoration efforts for State and federally protected native plants, wildlife, wetlands, and habitats are subject to existing regulations. The Green Zones Program is not anticipated to impact these types of areas as the majority of improvements are expected to occur in highly urbanized and disturbed areas.

Response to Comment No. 5C-10:

The comment regarding the recommendation for the Ordinance to include the incorporation of widespread green spaces/areas (including planting native plants and species) around new and existing land use sites, on unused land use sites, and near sensitive use sites that are in close proximity to industrial, vehicular, recycling, and waste land uses is

outside of the scope of the PEIR. The comment has been noted and will be taken into consideration by the decision-makers prior to taking action on the program.

Response to Comment No. 5C-11:

The HIA was prepared to support the evaluation of impacts on the environment that would result from the adoption of the Green Zones Program and the construction and operation of improvements that would be required to comply with the program. The analysis was prepared consistent with Section 15126, Consideration and Discussion of Environmental Impacts, of the State CEQA Guidelines. As specified in Section 15126.2 of the State CEQA Guidelines, “An EIR shall identify and focus on the significant effects of the proposed project on the environment.” As such, the scope of the HIA was directed toward air quality and how the Green Zones Program and related land use zoning restrictions and improvements intended to reduce effects on sensitive uses located adjacent to manufacturing, industrial, and commercial uses would affect emissions of TACs. Changes in emissions of criteria pollutants and TACs will be sustained over the duration of the affected land use; while the impacts on ambient noise levels associated with the proposed improvements required by the Green Zones Program, including walls, landscaping, fencing, lighting, signs, and enclosures, will be largely restricted to the construction or installation of the improvements.

The main distinction between noise and air pollutants is that TACs exhibit cumulative health effects over long-term exposure periods. This is the case with pollutants such as PM₁₀ in diesel engine exhaust, which is referred to as DPM and has been identified by the California Office of Environmental Health Hazard Assessment (OEHHA) as a carcinogen. This pollutant was one of the focus areas of the Green Zones Program, and therefore the HIA, because it can be transported off-site by prevailing winds to impact sensitive receptors such as residences. In contrast, noise does not persist or accumulate in the environment or in the human body, attenuates rapidly with distance from the source, and can be readily mitigated with noise controls such as high-mass acoustic walls that introduce an “insertion loss” that attenuates sound propagation. These types of sound walls are common along southern California freeways.

Temporary construction noise at facilities subject to the Green Zones Program will be limited to daytime hours on weekdays or Saturdays and permanently cease upon completion of construction. For most building projects, average daytime construction noise (cumulative) typically does not exceed 75 dBA at nearby receptors, which is below the unacceptable range (significance threshold) in many cities. For the construction emissions analysis, a Green Zones facility was defined as having a 10-foot- (3-meter-) high perimeter screening wall for visual effect and noise control. Thus, on-site daytime operational noise from mobile or stationary equipment will be attenuated down to acceptable levels by the sound wall along the perimeter of the facility, and vehicles entering and exiting the facility are expected to emit no more noise than typical daytime street traffic.

Noise is typically described as any dissonant, unwanted, or objectionable sound. Sound is technically described in terms of the loudness (amplitude) and frequency (pitch) of the sound. The standard unit of measurement of the loudness of sound is the decibel (dB). Because the human ear is not equally sensitive to sound at all frequencies, a special frequency-dependent rating scale has been devised to relate noise to human sensitivity, the A-weighted decibel scale (dBA). Table III.B-1 lists common sources of sound and their intensities in dBA.

**TABLE III.B-1
TYPICAL SOUND LEVEL CHARACTERISTICS**

Pressure (N/m ²)	Level (dBA)	Sound Level Characteristic
2,000	160	Rocket launch
600	150	Military jet plane takeoff
200	140	Threshold of pain
60	130	Commercial jet plane takeoff
20	120	Industrial chipper or punch press
6	110	Loud automobile horn
2	100	Passing diesel truck – curb line
0.6	90	Factory - heavy manufacturing
0.2	80	Factory - light manufacturing
0.06	70	Open floor office - cubicles
0.02	60	Conversational speech
0.006	50	Private office - walled
0.002	40	Residence in daytime
0.0006	30	Bedroom at night
0.0002	20	Recording or broadcasting studio
0.00006	10	Threshold of good hearing - adult
0.00002	0	Threshold of excellent hearing - child

SOURCE: Broch 1971, Plog 1988.

NOTE: Reference Level $P_0 = 0.00002 \text{ N/m}^2 = 0.0002 \text{ } \mu\text{bar}$. N/m^2 = Newtons per square meter (the Newton is the unit of force derived in the metric system); it is equal to the amount of net force required to accelerate one kilogram of mass at a rate of one meter per second squared ($1 \text{ kg} \cdot 1 \text{ m/s}^2$) in the direction of the applied force.

In most situations, a 3-dBA change in sound pressure is considered a “just-detectable” difference. A 5-dBA change (either louder or quieter) is readily noticeable, and 10-dBA change is a doubling (if louder) or halving (if quieter) of the subjective loudness. Sound from a small, localized source (a “point” source) radiates uniformly outward as it travels away from the source in a spherical pattern. The sound level attenuates (drops off) at a rate of 6 dBA for each doubling of the distance.

The duration of noise and the time period at which it occurs are important factors in determining the impact of noise on sensitive receptors. A single number called the equivalent continuous noise level (L_{eq}) may be used to describe sound that is changing in level. It is also used to describe the acoustic range of the noise source being measured, which is accomplished through the maximum L_{eq} (L_{max}) and minimum L_{eq} (L_{min}) indicators.

In determining the daily measure of community noise, it is important to account for the difference in human response to daytime and nighttime noise. Noise is more disturbing at night than during the day, and noise indices have been developed to account for the varying duration of noise events over time, as well as community response to them. The Community Noise Equivalent Level (CNEL) adds a 5-dB penalty to the “nighttime” hourly noise levels (HNLs) (i.e., 7:00 p.m. to 10:00 p.m.) and the day-night average level (L_{dn}) adds a 10-dB penalty to the evening HNLs.

Response to Comment No. 5C-12:

The analysis of noise was prepared consistent with Section 15126, Consideration and Discussion of Environmental Impacts, of the State CEQA Guidelines. As specified in Section 15126.2 of the State CEQA Guidelines, “An EIR shall identify and focus on the significant effects of the proposed project on the environment.” The analysis of the effects of the Green Zones Program on ambient noise levels is limited to those impacts that would result, directly, indirectly, or cumulatively as a result of the related land use restrictions or improvements that are required to protect sensitive uses, such as existing and future residential land uses that are permissible under the adopted Land Use Element of the County General Plan and County Zoning Ordinance. The Green Zones Program does not change the pattern or density of residential dwelling units from that allowable by the County General Plan and Zoning Ordinance. The future construction of residential properties would be subject to review by the County. The County

Noise Ordinance sets standards for ambient noise levels. Initial violations of ambient noise levels are subject to written notice of violation by the County Health Officer. If not corrected, continued violations are punishable by fine and/or imprisonment.

As described in Section IV.G, *Noise*, of the Draft PEIR, the program will result in significant and unavoidable impacts to noise in relation to the generation of a substantial temporary increase in ambient noise levels in the vicinity of the project in excess of standards established in the County General Plan or Noise Ordinance. However, the scope of the impacts on ambient noise levels are those associated with the construction of improvements, such as walls and enclosures intended to provide long-term reduction in ambient noise levels where sensitive uses, such as residential dwelling units are located adjacent to incompatible manufacturing, industrial, and commercial uses. The construction of such improvements are expected to be limited in duration and will vary based on type of enclosure and associated structures and anticipated to be no more than 2 to 3 months in duration over the course of the Schedule for Compliance (3, 5, or 7 years) (see Section III, *Project Description*, of the Draft PEIR). The Green Zones Program does not exempt property owners, or future developers, from compliance with the County Noise Ordinance. Ministerial projects would be exempt from CUP requirements and, thus, would not require project-level CEQA evaluation prior to plan check and permit approval, such that the use of noise reduction and avoidance measures for these types of developments would not be feasible. Therefore, temporary construction could result in significant and unavoidable impacts to noise at sensitive receptors. Conversely, the development of discretionary projects requires project-level evaluation under CEQA prior to plan check and permit approval, and thus, the use of noise reduction measures, avoidance and minimization measures for these types of developments would be feasible. However, development of the proposed program within 50 feet of a sensitive use would be anticipated to result in noise exceedances at sensitive uses over standards established by the County Noise Ordinance during construction, even with the implementation of noise reduction measures. Thus, temporary construction impacts were found to be significant and unavoidable in relation to noise.

Response to Comment No. 5C-13:

With regard to noise generated during operations, impacts related to road truck trips and road conditions were analyzed using the Transportation Research Board National Research Council, *National Cooperative Highway Research Report*. As described in Section IV.G, *Noise*, in relation to roadway noise, for every doubling of distance from the source, the noise level drops off by about 3 dB at acoustically “hard” locations (i.e., the area between the noise source and the receptor is nearly complete asphalt, concrete, hard-packed soil, or other solid materials) and 4.5 dB at acoustically “soft” locations (i.e., the area between the source and receptor is earth or has vegetation, including grass). Noise from stationary or point sources drops off by about 6 dB for every doubling of distance at acoustically hard locations and 7.5 dB at acoustically soft locations. Noise levels may also be reduced by intervening structures. Generally, a single row of buildings between the receptor and the noise source reduces the noise level by about 5 dBA, while a solid wall or berm reduces noise levels by 5 to 10 dBA. The normal noise attenuation within residential structures with open windows is about 17 dB, while the noise attenuation with closed windows is about 25 dB.⁴ Furthermore, operational noise related to truck traffic was found to be less than significant, as no truck hauling routes will be changed with implementation of the proposed program. No additional impacts related to truck traffic, truck routes, or changes in operations of allowable uses, including industrial uses, will occur from the program (see Section 2.17, *Transportation*, of the Initial Study, which is Appendix B to the Draft PEIR). The program will create more stringent requirements for development of industrial uses and require development of new sensitive uses adjacent to industrial to install buffers and other appurtenant structures to minimize and reduce potential impacts. In addition, existing uses will be required to install barriers for the reduction and minimization of impacts, including noise from industrial uses, within the Green Zones Program.

Response to Comment No. 5C-14:

Citations to Table IV.G-13 occurred on pages IV.G-20, 21, and 22 of the Draft PEIR. These citations were made in error and should have been to Table IV.G-12, *Vibration Source Levels for Construction Equipment*. A clarification and revision has been made correcting the citations (Section II, *Corrections, Clarifications, and Additions to the Draft PEIR*).

Response to Comment No. 5C-15:

The analysis in the PEIR was prepared using the most recent available data mostly within the last 3 to 5 years.

Response to Comment No. 5C-16:

Please see Response to Comment No. 5C-13.

Response to Comment No. 5C-17:

A summary of the LA River Master Plan, adopted by the Los Angeles County Board of Supervisions in 1996, has been added to Section IV.E, *Hydrology and Water Quality* (see Section II, *Corrections, Clarifications, and Additions to the Draft PEIR*).

Response to Comment No. 5C-18:

The comment regarding increasing the number of parcels in the Green Zones Districts that would be subject to a General Plan and Zone Change to a more restrictive industrial designation and zoning is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5C-19:

The comment regarding reducing the adoption time period of program requirements for existing industrial use is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5C-20:

The comment regarding the extension of the definition of sensitive land uses to include high-pedestrian areas such as sidewalks and medians that are used for exercise and leisure is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5C-21:

The comment regarding the suggestion that the County establish a city partnership for zoning buffers is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5C-22:

Alternatives were analyzed based on their ability to reduce potential impacts from the implementation of the Green Zones Program and meet most of the basic objectives of the proposed program. The PEIR and alternatives analyzed address the potential environmental impacts of the implementation of the program.

An alternative was considered to increase the number of communities for which the Green Zone Districts would apply to include communities located in the Antelope Valley outside of the unincorporated communities of Avocado Heights, East Los Angeles, East Rancho Dominguez, Florence-Firestone, South San Jose Hills, Walnut Park, West Athens-Westmont, West Carson, West Whittier-Los Nietos, West Rancho Dominguez-Victoria, and Willowbrook (see Figure III.E-1, *Planning Areas*, in Section III, *Project Description*, of the Draft PEIR). However, after review of the EJSM map, it was determined that areas outside of the communities listed above in unincorporated areas did not meet the criteria for consideration of implementation of the Green Zones Program. Specifically, unincorporated areas containing industrial uses in the Antelope Valley and Santa Clarita area did not meet the criteria as these areas had low or very low EJSM scores outside of the incorporated Cities of Lancaster, Palmdale, and Santa Clarita (Figure III.C-1, *Environmental Justice Screening Method Score*, in Section III, *Project Description*, of the Draft PEIR). The 11 communities that would be subject to the provisions of the Green Zone Districts development standards are those areas where sensitive receptors are currently most impacted by adjacent industrial uses. As these additional communities did not meet the EJSM criteria, consideration of this alternative was eliminated.

Response to Comment No. 5C-23:

The comment regarding mobile source emissions being a primary discussion for the Green Zones Inter Agency Task Force is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Response to Comment No. 5C-24:

The comment regarding the recommendation to a survey of the areas within 2,500 feet of elements that require the implementation of development standards on existing and proposed properties for encampments/mobile homes/people experiencing homelessness in the area is recognized by DRP but does not state a specific concern or question regarding the adequacy of the analysis contained in the Draft PEIR. Therefore, a response is not required pursuant to CEQA. However, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Appendix A

Ordinance No. Draft 08/19/2021

ORDINANCE NO. DRAFT 08/19/2021

Purpose

An ordinance amending Title 22 – Planning and Zoning of the Los Angeles County Code to promote environmental justice by providing zoning requirements for industrial uses, vehicle-related uses, and recycling and solid waste uses that may disproportionately affect the health of residents living in communities surrounding these land uses. Amendments to Title 22 also address industry changes and broader regulation in recycling and solid waste uses to support waste diversion and promote recycling and organic waste management.

Definitions

The Board of Supervisors of the County of Los Angeles ordains as follows:

SECTION 1. Section 22.14.010 in Division 2 is hereby amended to read as follows:

22.14.010 - A

...

Automobile dismantling yard. See recycling processing facility. ~~Any premises used for the dismantling or wrecking of motor vehicles and trailers required to be registered under the California Vehicle Code, including the buying, selling or dealing in such vehicles or vehicle parts or component materials. It also includes the storage, sale, or dumping of dismantled, partially dismantled or wrecked inoperative vehicles and trailers. Automobile dismantling shall not include the incidental storage of inoperative or disabled vehicles in connection with the legal operation of an automobile repair garage or automobile body and fender repair shop.~~

...

SECTION 2. Section 22.14.030 in Division 2 is hereby amended to read as follows:

22.14.030 - C

...

Compressed natural gas (CNG). A fuel produced by compressing natural gas to less than 1% of its volume at standard atmospheric pressure.

Compressed natural gas (CNG) fueling station. A vehicle service station that dispenses compressed natural gas.

...

SECTION 3. Section 22.14.060 in Division 2 is hereby amended to read as follows:

22.14.060 - F

...

Fertilizer manufacture. The process of producing, selling, or distributing any fertilizing material including commercial fertilizer, agricultural mineral, auxiliary soil and plant substance, organic input material, or packaged soil amendment as defined by Article 2, Section 14533 of the California Department of Food and Agricultural Code.

...

SECTION 4. Section 22.14.070 in Division 2 is hereby amended to read as follows:

22.14.070 - G

Gas manufacture. The process of extracting natural gas, producing biogas, or producing a combustible gaseous mixture (as carbureted water gas or producer gas) made from coal, coke, or petroleum products for use as fuel, illuminant, or raw materials for synthesis.

...

SECTION 5. Section 22.14.100 in Division 2 is hereby amended to read as follows:

22.14.100 - J

...

Junk and salvage. Any old, secondhand, or scrap ferrous and nonferrous metals, paper and paper products (including roofing and tar paper), cloth and clothing, wood and wood products, manufactured rubber products, rope, manufactured plastic products, paint, manufactured clay and porcelain products, furniture including mattresses, trash, and similar materials, trash, and similar materials, and shall include dismantled machinery, equipment, and parts. This term includes the bailing of cardboard boxes, paper, and paper cartons. Junk and salvage shall be regulated under "Recycling processing facilities."

~~Junk and salvage yard. Any premises, establishment or place of business which is maintained, operated, or used for storing, keeping, buying, selling, or dismantling of junk and salvage.~~

...

SECTION 6. Section 22.14.120 in Division 2 is hereby amended to read as follows:

22.14.120 - L

...

~~Land reclamation project. Activities associated with project established to restore restoring otherwise unsuitable land to useful purposes through the use of fill materials such as rubbish, waste, soil, or other unwanted materials. This term includes "dump" or "waste disposal facility."~~

...

SECTION 7. Section 22.14.150 in Division 2 is hereby amended to read as follows:

22.14.150 - O

...

Organic waste recycling facility. A facility that receives, sorts and processes solid wastes containing material originated from living organisms and their metabolic waste products, including but not limited to food, green material, landscape and pruning waste, organic textiles and carpets, lumber, wood waste, paper products, printing and writing paper, manure, biosolids, digestate, and sludges, as defined in California Code of Regulations Section 18982, including the following:

Anaerobic digestion facility. An in-vessel facility that uses the controlled biological decomposition of organic material in the absence of oxygen or in an oxygen-starved environment to produce biogas and a residual digestate as defined in California Code of Regulations Section 17896.2.

Combustion biomass conversion facility. A facility that produces heat, fuels, or electricity by the controlled combustion of the following materials that are source-separated: agricultural crop residues; green waste such as bark, lawn, leaves, tree and brush pruning; wood, wood chips, and wood waste; nonrecyclable pulp or nonrecyclable paper materials; and dried digestate, dried food waste, and dried sludge. Feedstock should not include animal fats.

Non-combustion biomass conversion facility. A facility that produces heat, fuels, or electricity by the use of non-combustion biomass conversion technologies on the following materials that are source-separated: agricultural crop residues; green waste

such as bark, lawn, leaves, tree and brush pruning; wood, wood chips, and wood waste; nonrecyclable pulp or nonrecyclable paper materials; and dried digestate, dried food waste, and dried sludge. Feedstock should not include animal fats.

Chipping and grinding or mulching facility. A facility that mechanically reduces the size of, or creates a product from source-separated compostable materials, including tree debris, yard trimmings, and suitable woody material, which is intended for use on soil surfaces to prevent the growth of weeds and minimize erosion, for commercial purposes. This operation does not produce compost.

Composting facility. A facility that processes, transfers, or stores compostable materials as defined in California Code of Regulations, Title 14, Section 17852(a)(11). Processing and handling of compostable materials results in controlled biological decomposition. Processing and handling includes composting, screening, chipping and grinding, and storage activities related to the production of compost, compost feedstocks, and chipped and ground materials. This may also include vermiculture; the process of decomposition of compostable materials using various species of worms. A composting facility may also be an in-vessel facility.

In-vessel facility. A facility in which organic wastes are processed through the controlled biological decomposition with or without the presence of oxygen as defined in California Code of Regulations Section 17896.2.

...

SECTION 8. Section 22.14.160 in Division 2 is hereby amended to read as follows:

22.14.160 - P

...

Pallet yards. A premise that is primarily used for repair, construction, deconstruction, reconstruction, recycling, or storage of new or used pallets, typically made of wood, that are used in handling and storage of materials.

...

SECTION 9. Section 22.14.180 in Division 2 is hereby amended to read as follows:

22.14.180 - R

...

Recycling and solid waste. The following terms are defined solely for Section 22.140.720 (Recycling Collection Facilities, Accessory), 22.140.730 (Recycling Collection Facilities, Principal), 22.140.740 (Organic Waste Facilities), and 22.140.750 (Solid Waste Facilities).

Biosolids. Solid, semi-solid, sludge, or liquid residue generated during the sewage or wastewater treatment process, as defined in Section 17852 of the California Public Resources Code.

Compost. The product resulting from controlled aerobic or anaerobic biological decomposition of organic wastes from the solid waste stream, as defined in Section 17852 of the California Public Resources Code. This may include vermiculture; the product of decomposition using various species of worms.

Construction and demolition (C&D) debris. C&D debris is all waste generated or by resulting from construction, renovation, repair, or demolition operations on buildings, structures, landscapes, and pavements including but not limited to houses, large building structures, roads, bridges, piers, dams, excavation projects, and

landscaping projects. C & D debris includes but is not limited to building materials, soil, dirt, fully cured asphalt, tools, packaging materials, and other material that is generally similar to C&D debris and that is source separated, that is not hazardous, contains no putrescible wastes, and that can be processed without generating any residual, provided that the material is generated by an activity that is similar to construction work.

Digestate. Solid and/or liquid residual material remaining after organic material has been processed in an in-vessel digester, which may be composted, as defined in Section 17852 of the California Public Resources Code.

Disposal. The final disposition of solid waste onto land into the atmosphere, or into the waters of the State of California. Disposal includes the management of solid waste through the landfill process.

Disposal Site. Disposal site means the place, location, tract of land, area, or premises used, intended to be used, or which has been used, for the disposal of solid wastes, inert waste/debris, organic waste, construction and demolition (C&D) debris, and household waste, not including household hazardous waste.

Hazardous waste. Hazardous waste, as defined in Section 40141 of the California Public Resources Code, means waste or combination of wastes, which, because of its quantity, concentration, or physical, chemical, or infectious characteristics, may do either of the following: (A) cause, or significantly contribute to, an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness; or (B) pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of or otherwise managed. Hazardous waste includes, but is not limited to, spent fuel, waste solvent, spent acid, waste caustic

rinse water, metal polishing dust, spent plating solution, used oil, waste anti-freeze, and waste paint.

Household hazardous waste. Any hazardous waste generated incidental to owning and/or maintaining a place of residence. Household hazardous waste includes, but is not limited to, motor oil, oil filters, paint, turpentine, cleaners with acid or lye, pesticides, herbicides, batteries, light bulbs, pool chemicals, old computers, and miscellaneous electronics.

Household waste. Household waste means any solid waste material derived from households. Including garbage, trash and refuse such as bottles, cans, clothing, compost, disposables, food packing, food waste, paper goods, newspapers, magazines, discarded furniture, and discarded mattresses. Household waste does not include household hazardous waste.

Inert waste/inert debris. Non-liquid solid waste and recyclable materials that do not contain hazardous waste or soluble pollutants and has not been treated in order to reduce pollutants, as defined in Section 17381 of the California Public Resources Code. Inert debris/inert waste includes materials such as crushed glass, brick, ceramics, clay and clay products, fiberglass roofing shingles, slag, plaster, soil, dirt, concrete, asphalt, stones and rocks of varying sizes, and other inert construction and demolition debris.

Non-ferrous metals. Metals such as aluminum, brass, copper, nickel, tin, lead, and zinc, which do not contain iron and are more resistant to corrosion compared to metals containing iron or steel.

Organic waste. Organic waste means solid wastes containing material originated from living organisms and their metabolic waste products, including but not limited to, food, green material, landscape and pruning waste, organic textiles and carpets, lumber, wood waste, paper products, printing and writing paper, manure, biosolids, digestate, and sludges.

a. Compostable material. Any organic material that when accumulated will become active compost, as defined in Section 17852 of the California Public Resources Code. This term also includes the following: food material and green material.

b. Food material. Any material that was acquired for animal or human consumption and is separated from the mixed solid waste, as defined in Section 17852 of the California Public Resources Code. Food material may include commercial food waste from grocery stores, restaurants, businesses, institutional cafeterias (such as, prisons, schools and hospitals) or residential food scrap collection. It does not include agricultural food materials, such as manures, plant pruning, and crop residues.

c. Green material. Any plant material that is separated at the time of generation and contains no greater than one percent of physical contaminants by weight, as defined in Section 17852 of the California Public Resources Code. Green material includes but is not limited to yard trimmings, untreated wood wastes, natural fiber products, and construction and demolition wood waste. Green material does not include food material, biosolids, mixed solid waste, material processed from mixed waste, wood containing lead-based paint or wood preservative, mixed construction, or mixed demolition debris.

d. Mixed organic material. Any combination of compostable materials, food materials, and green materials.

Recycle (or Recycling). The process of collecting, sorting, cleansing, treating and reconstituting materials that would otherwise become solid waste, and returning them to the economic mainstream in the form of raw materials for new, reused, or reconstituted products which meet the quality standards necessary to be used in the marketplace.

Recycling processing. The controlled separation, recovery, volume reduction, conversion, or recycling of material including, but not limited to organized, manual, automated, or mechanical sorting, the use of vehicles for spreading of waste for the purpose of recovery, and/or includes the use of conveyor belts, sorting lines or volume reduction equipment.

a. Bailing. The process of compressing and binding of recycled materials and solid waste.

b. Reverse vending machine. An automated mechanical device which accepts one or more types of empty beverage containers including, but not limited to aluminum cans, glass, and plastic bottles, and issues a cash refund or a redeemable credit slip with a value not less than the container's redemption value as determined by the State. A reverse vending machine may sort and process containers mechanically, provided that the entire process is enclosed within the machine.

Source separated materials. Materials, including commingled recyclables, which have been separated or kept separate from the solid waste stream at the point of generation.

Supermarket accessory recycling collection center. See definition under “S.”

Temporary storage area. An area where materials intended for beneficial use, salvage, recycling, or reuse may be placed for storage on a temporary basis, as approved by Public Works for up to 180 calendar days, unless a longer period is approved by Public Works, so long as such temporary storage does not constitute disposal. Putrescible materials, except construction and demolition debris or other inert debris not containing significant quantities of decomposable materials and more than one percent (by visual inspection) putrescible waste, shall not be placed in a temporary storage area for more than 48 hours under any circumstances. A temporary storage area may also be referred to as a “stockpile area.”

a. Stockpile. Stockpile shall mean temporarily stored materials. See “temporary storage area” under “Recycling and Solid Waste.”

b. Stockpile area. Shall have the same meaning as “Temporary storage area.”

Recycling collection facility, primary. A facility, as a primary use, which is used for the deposit, drop-off, or buy-back of specific recyclable materials, such as paper,

cardboard, glass, non-ferrous metal, or plastic, for the purpose of temporary storing, sorting and transferring.

Recycling processing facility. A facility that is used for the processing of recyclable materials for shipment, or to an end-user's specifications, by such means as sorting, baling, briquetting, cleaning, compacting, crushing, flattening, grinding, converting, re-manufacturing or shredding. Processing facilities include other similar businesses handling storage, processing of recyclable or reusable materials, as defined in this Chapter, including the following terms:

Automobile dismantling yard. Any premise used for the dismantling or wrecking of motor vehicles and trailers required to be registered under the California Vehicle Code, including the buying, selling, or dealing in such vehicles or vehicle parts or component materials. It also includes the storage, sale, or dumping of dismantled, partially dismantled, or wrecked inoperative vehicles and trailers. Automobile dismantling shall not include the incidental storage of inoperative or disabled vehicles in connection with the legal operation of an automobile repair garage or automobile body and fender repair shop.

Construction and demolition (C&D) processing facility. A site that receives any combination of construction and demolition debris for the purposes of storage, handling, transfer, or processing (including crushing, breaking, and grinding). C& D must be source separated or separated for reuse solid waste and recyclable materials specifically resulting from construction, renovation, repair or demolition operations on buildings, structures, and pavements, as defined in Section 17381 of the California Public Resources Code. For the purpose of this Title 22, such facility shall be classified as a

recycling processing facility.

Conversion technology facility (recycling). A facility that converts material other than solid waste by employing an array of biological, chemical, thermal and/or mechanical technologies to create products such as renewable electricity, renewable fuels, soil amendments, and more. Processes may include but are not limited to gasification, pyrolysis, acid hydrolysis, and/or distillation. This term includes anaerobic digestion facility and non-combustion biomass conversion facility, but does not include waste incineration facility or landfill gas-to-energy facilities. See organic waste recycling facility.

Anaerobic digestion facility. See organic waste recycling facility.

Non-combustion biomass conversion facility. See organic waste recycling facility.

Inert waste/inert debris processing facility. A facility or a site that receives, stores, handles, processes, (including crushing, breaking, and grinding), and transfers inert waste/inert debris. Inert waste/inert debris must be source separated or separated for reuse, and do not contain hazardous waste or soluble pollutants, as defined in Section 17381 of the California Public Resources Code. This does not include an inert debris landfill.

Materials recovery facility (MRF). A facility where solid wastes or recyclable materials are sorted or separated, by hand or by use of machinery, for the purposes of recovery of recyclable materials, and may include transfer stations that accompany floor sorting.

Scrap metal processing yard. An establishment or place of business which

is maintained, used, or operated solely for the processing and preparing of scrap metals for re-melting and/or reuse.

Transfer Station. A facility designated or used to accept recyclable or waste material for transfer to another location for further processing or disposal.

...

SECTION 10. Section 22.14.190 in Division 2 is hereby amended to read as follows:

22.14.190 - S

...

Scrap metal processing yard. See recycling processing facility. ~~An establishment or place of business which is maintained, used, or operated solely for the processing and preparing of scrap metals for re-melting by steel mills and foundries.~~

Sensitive use. A land use where individuals are most likely to reside or spend time, including dwelling units, schools and school yards – including trade schools, public and private schools, faith-based and secular schools, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, licensed care facilities, shelters, and daycares or preschools as accessory to a place of worship, that are permitted in the zones where they are located. A sensitive use shall not include a caretaker residence.

Solid fill. Any noncombustible materials that are insoluble in water, such as soil, rock, sand, dirt or gravel that can be used for grading land or filling depressions. This term shall not include solid waste or recyclable materials.

Solid fill project. An operation on a site where more than 1,000 cubic yards of solid fill materials are deposited ~~for any purpose, including grading or reclaiming of land.~~ This

term shall not be classified as a solid waste landfill.

Solid waste. All putrescible and non-putrescible solid, semisolid and liquid wastes, including garbage, trash, refuse, paper, containers, packaging, rubbish, ashes, industrial wastes, abandoned vehicles and parts thereof, discarded home and industrial appliances, discarded home and industrial furniture, discarded mattresses, manure, vegetable or animal solid and semisolid wastes, and other discarded solid and semisolid wastes and recyclable materials. This term includes inert waste/inert debris, any garbage or refuse; sludge from a wastewater treatment plant, water supply treatment plant, or air pollution control facility; and other discarded materials, resulting from industrial, commercial, mining, and agricultural operations, and from community activities. This term shall not include hazardous waste, as defined in Section 66714.8 of the California Government Code or Section 25117 of the California Health and Safety Code. This term includes garbage, rubbish, and waste.

Solid waste facility. This term includes the following:

Conversion technology facility (solid waste). A facility that receives and processes solid waste and converts waste by employing an array of biological, chemical, thermal, and/or mechanical technologies to create products such as renewable electricity, renewable fuels, soil amendments, and more. Processes may include but are not limited to gasification, pyrolysis, acid hydrolysis, and/or distillation. This term does not include waste incineration facilities or landfill gas-to-energy facilities.

Inert waste landfill/inert debris landfill. A disposal site that accepts only inert waste as defined in CCR, Title 14, Section 18720 (32), and in which inert debris is discharged in or on land for disposal.

Landfill gas-to-energy. Refers to a gas generated by the natural aerobic and/or anaerobic decomposition of municipal solid waste in sanitary landfills that is recovered for energy production.

Solid waste landfill. A disposal site that accepts solid waste for land disposal, but does not include a facility which receives only wastes generated by the facility owner or operator in the extraction, beneficiation, or processing of ores and minerals, a cemetery which disposes onsite only the grass clippings, floral wastes, or soil resulting from activities on the grounds of that cemetery. Solid waste landfill also includes Class III landfills and inert waste landfills as defined in Public Resources Code, Section 40195.1.

Class III landfill. Landfills that are only permitted to accept nonhazardous solid waste materials where site characteristics and containment structures isolate the solid waste from the waters of the State. The land disposal site must meet the requirements of the Federal Resource Conservation and Recovery Act (RCRA), Subtitle D; CC, Title 14, Sections 17000 et seq.; and other regional and local rules and regulations.

Municipal solid waste landfill or municipal solid waste landfill unit. Any landfill that is subject to the federal regulations of 40 CFR 258, including any portion of a disposal site that is subject to those regulations as defined in CCR, Title 27, Section 20164. The term includes any landfill, other than a Class 1 landfill, that received municipal solid waste at any time and that has received any solid waste since October 9, 1991; therefore, the term does not include any landfill that stopped receiving waste prior to that date.

Transformation facility. Refers to a facility where the principal function is to convert, combust, or otherwise process solid waste by incineration, pyrolysis, distillation, or biological conversion for the purpose of volume reduction, synthetic fuel production, or energy recovery. Transformation facility does not include a composting, gasification, engineered municipal solid waste (EMSW) conversion, or biomass conversion facility.

Waste-to-energy facility. Refers to a transformation facility that engages in the cogeneration of electricity through the incineration of residual solid waste.

...

Supermarket. Contains a full-line, self-service retail store that sells dry grocery, canned goods, perishable items, or nonfood items, and also is certified by the California Department of Resources Recycling and Recovery per Section 14526.5 of the California Public Resources Code.

Supermarket accessory recycling collection center. Recycling collection containers that are installed outdoors on an existing, lawfully established supermarket site as an accessory use only. Supermarket accessory recycling collection centers are to be operated with certification from the California Department of Resources, Recycling and Recovery (CalRecycle) under the California Beverage Container Recycling and Litter Reduction Act of 1986. Such facility may only accept beverage containers, as defined in Sections 14504 and 14505 of the California Public Resources Code. It may include any combination of the following: a mobile recycling unit, bulk reverse vending machines, or a grouping of reverse vending machines occupying more than 50 square feet; kiosk units that may include permanent structures; or unattended containers placed for the donation of recyclable materials.

SECTION 11. Section 22.14.230 in Division 2 is hereby amended to read as follows:

22.14.230 - W

...

~~Waste disposal facility. A landfill, transfer station, land reclamation project, or other similar site or facility, which is used or intended to be used for the transfer, salvage, or disposal of rubbish, garbage, or industrial waste.~~

...

Land Use Regulations including Types of Permits and Development Standards Required in Agricultural, Open Space, Resort and Recreation, and Watershed Zones

SECTION 12. Section 22.16.030 is hereby amended to read as follows:

22.16.030 Land Use Regulations for Zones A-1, A-2, O-S, R-R, and W.

...

C. Use Regulations.

1. Principal Uses. Table 22.16.030-B, below, identifies the permit or review required to establish each principal use.

DRAFT

Land Use Regulations including Types of Permits and Development Standards Required in New Green Zone Districts

SECTION 23. Chapter 22.84 is hereby added to read as follows:

Chapter 22.84 Green Zone Districts

Sections:

22.84.010 Purpose

22.84.020 Applicability

22.84.030 Standards and Requirements for Specific Uses

22.84.040 Schedule for Compliance

22.84.050 District Map

22.84.010 Purpose.

The Green Zone Districts are established to promote environmental justice in communities that are disproportionately affected by toxic pollutants and contaminants generated from various land uses over time. This Chapter provides regulations and procedures for new and existing land uses to ensure that such land uses will be operated in consideration of the surrounding sensitive uses as defined in Chapter 22.14 (Definitions), minimizing potential adverse health and safety impacts, and promoting

clean industrial uses. The Green Zone Districts are identified as the unincorporated communities of Avocado Heights, East Los Angeles, East Rancho Dominguez, Florence-Firestone, South San Jose Hills, West Whittier-Los Nietos, Walnut Park, West Athens-Westmont, Willowbrook, West Carson, and West Rancho Dominguez-Victoria.

22.84.020 Applicability.

A. General Applicability. This Chapter applies to uses that are located in permitted zones within the Green Zone Districts, as depicted on Figure 22.84.050-A, and meet all criteria described below:

1. Type of uses

a. New and legally established, existing uses listed under the Industrial Uses category, except for Airport-Related sub-category, in Table 22.22.030-B (Principal Use Regulations for Industrial Zones), including airports, heliports, helistops, and landing strips.

b. New and legally established, existing uses listed under Recycling and Solid Waste Uses category in Table 22.22.030-B (Principal Use Regulations for Industrial Zones).

c. New and legally established, existing uses listed under the Vehicle-Related Uses, in Table 22.22.030-B (Principal Use Regulations for Industrial Zones), except for Vehicle sales and rentals sub-category. Supply stores under Vehicle services sub-category that are within fully enclosed buildings are also not subject to this Chapter.

d. New automobile service stations and new drive-through establishments, listed in Table 22.20.030-B (Principal Use Regulations for Commercial Zones) or Table 22.26.030-B (Principal Use Regulations for Zone MXD).

2. Location of uses.

a. Any lots, or portion thereof, that contain the uses described in Subsection A.1.a., A.1.b, A.1.c, or A.1.d, above, and are located within a 500-foot radius of a lot that contains a sensitive use as defined in Chapter 22.14 (Definitions) as of [EFFECTIVE DATE OF ORDINANCE] shall comply with the requirements in Subsections 22.84.030, 22.84.040, and 22.84.050, below.

b. New automobile service stations and drive-through establishments in any zones where they are permitted and located within a 500-foot radius of a lot that contains a sensitive use as defined in Chapter 22.14 (Definitions) as of [EFFECTIVE DATE OF ORDINANCE] shall comply with the requirements in Subsection 22.84.030.

c. For the purpose of this Chapter, all requirements shall also apply to such lots, or portions thereof, if the sensitive use within a 500-foot radius is located within an incorporated area and is also a residential use.

3. Prohibited uses. The following uses are prohibited within a 500-foot radius of a lot containing a sensitive use in Green Zone Districts, except where noted:

a. Acid manufacture.

b. Anaerobic digestion facility, except as an accessory to a legally-established use that processes waste generated on-site only.

c. Auto dismantling (outdoor operation).

- d. Cement, lime, gypsum, or plaster of paris manufacture.
- e. Chipping and grinding.
- f. Combustion or non-combustion biomass conversion facility, except for a non-combustion biomass conversion facility that processes waste generated on-site only.
- g. Composting facility, except for green waste composting only.
- h. Compressed natural gas manufacture.
- i. Construction and demolition facility, recycling.
- j. Conversion technology facility, recycling or solid waste.
- k. Distillation of bones.
- l. Drop hammers.
- m. Explosives.
- n. Forging works.
- o. Fertilizer manufacture, except accessory composting of on-site generated waste associated with a legally, established commercial or agricultural use.
- p. Gas manufacture, except accessory anaerobic digestion of on-site generated waste associated with a legally, established commercial or agricultural use.
- q. Glue manufacture.
- r. Inert Debris landfills
- s. Inert Debris processing facilities, recycling
- t. Materials recovery facilities, new
- u. Metal plating (prohibited within a 1,000-foot radius of a lot containing a sensitive use in Green Zone Districts).

- v. Polymer plastics and foam manufacture.
- w. Scrap metal yards (outdoor operation).
- x. Smelting of tin, copper, zinc or iron ores.
- y. Solid waste landfills
- z. Tannery or the curing or storage of raw hides.
- aa. Transfer stations

4. Schedule for compliance. Existing structures or development for the uses subject to this Chapter shall comply with the applicable provisions of this Chapter pursuant to Subsection 22.84.040 (Schedule for Compliance for Existing, Legally-Established Uses), below.

5. Exemption. Notwithstanding Subsection A.1.a, above, this Chapter shall not apply to the following:

- a. Any legally established, existing uses that have been operating with an approved discretionary land use permit as provided by this Title 22, until the expiration date of such permit or until a new discretionary permit is required.
- b. Any lawfully established automobile service station, for which a valid building permit has been issued prior to [EFFECTIVE DATE].

B. Exceptions.

- 1. When in conflict with other provisions of Title 22, the more restrictive requirements shall apply.
- 2. Improvements made pursuant to this Chapter shall not be subject to Chapter 22.172 (Nonconforming Uses, Buildings and Structures).

22.84.030 Standards and Requirements for Specific Uses.

A. Application Requirements.

1. The following uses shall require a Conditional Use Permit (CUP) (Chapter 22.158) within a 500-foot radius of a lot containing a sensitive use in the Green Zone Districts as measured from any lot line.

a. Industrial Uses.

i. Assembly, manufacture, packaging, and storage of finished or prepared materials, including on-site manufacture of raw, natural, or synthesized flammable or toxic chemicals:

(a) Earthen products, including ceramics, sand, and stone, but excluding brick, terra cotta, and tile manufacture.

(b) Precious and semi-precious metal products, including jewelry and lapidary.

ii. Assembly, manufacture, packaging, and storage of finished or prepared materials, provided that no manufacturing of raw natural or synthesized materials, including flammable or toxic chemicals, are conducted on-site. Metal products and parts; including the fabricating, engraving, spinning, storing, plating, and finishing of, where the use prohibits snap riveting and any process used in bending or shaping, which produces any audible nuisance or disagreeable noise, is prohibited. Use of perchloric acid is prohibited. Use excludes foundries and forging works.

iii. Food processing:

(a) Breweries.

(b) Dairy products depots.

(c) Slaughtering, dressing, processing, packing, and sale of poultry, fowl, rabbits, and other similar animals of comparable nature, form, and size.

(d) Starch mixing and bottling.

iv. Laundries and cleaning services, such as rug and carpet cleaning plants.

v. Manufacturing:

(a) Blacksmith shops.

(b) Boat building.

(c) Concrete batching plants, mixers of one cubic yard capacity or smaller.

(d) Engraving, machine metal engraving.

(e) Fabricating.

(f) Ice manufacturing, distribution and storage.

(g) Lubricating oil canning and packaging, limited to 100 barrels stored aboveground at a time.

(h) Lumberyard.

(i) Machine shops.

(j) Paint mixing, excluding lacquers and synthetic enamels.

(k) Presses, hydraulic presses for the molding of plastics.

(l) Refrigeration plants.

(m) Sand, the washing of sand to be used in sandblasting.

(n) Sheet metal shops.

(o) Stone, marble and granite; including grinding, dressing, and cutting.

vi. Recycling and Solid Waste uses, including auto dismantling/recycling (indoor operation), scrap metal (indoor operation, and junk and salvage yards.

vii. Storage:

(a) Acetylene and oxygen storage in tanks. Oxygen shall be stored in a room separate from acetylene and such rooms are separated by a not less than one-hour fire-resistant wall.

(b) Boat storage.

(c) Building materials.

(d) Bus storage.

(e) Car barns for buses and streetcars.

(f) Cold storage plants.

(g) Contractor's equipment yards, including farm and building trade equipment.

(h) Distributing plants.

(i) Draying yards or terminals.

(j) Fuel yards.

(k) Machinery storage yards.

(l) Moving van storage or operating yards.

(m) Plaster storage.

(n) Produce yards and terminals.

(o) Storage and rental of plows, tractors, buses, contractor's equipment, and cement mixers.

(p) Truck and RV storage.

(q) Warehouses, including storage warehouses, which generate more than 100 truck trips per day.

(r) Waste hauler vehicle or waste hauler container storage

(s) Wood yards.

viii. Tire retreading or recapping.

ix. Valves, storage and repair of; including oil well valves.

x. Welding.

b. Vehicle-Related Uses:

i. Automobile washing, automatic car wash.

ii. Automobile washing, coin-operated or hand wash.

iii. Vehicle services, automobile body and fender repair, and paint shops.

iv. Vehicle services, automobile impound and tow yards.

v. Vehicle services, automobile painting and upholstering shops.

vi. Vehicle services, any automobile repair garages that have accessory uses.

vii. Vehicle services, new automobile service stations, including compressed natural gas filling stations.

viii. Vehicle services, automobile supply stores, outdoor.

c. New development, change of use, or major improvements proposed on a site that is partially or entirely located within a half-mile radius of the boundaries of Superfund Sites [as identified in the Environmental Protection

Agency (EPA) National Priorities List]. For these uses, an environmental site assessment (Phase 1 Study) shall be submitted.

2. Projects that propose grading. Where grading is proposed for a project subject to a Conditional Use Permit, such projects must comply with all federal, state, and local laws with regard to protection of Tribal Cultural Resources.

3. All other types of industrial or vehicle-related uses subject to this Chapter shall require a Ministerial Site Plan Review (Chapter 22.186) or Minor Conditional Use Permit (Chapter 22.160) application in compliance with this Subsection 22.84.030.

4. All uses subject to a Conditional Use Permit may be required to submit a noise evaluation report and control plans for odor, dust, and vibration prepared by a licensed professional at the request of Public Health. Mitigation measures, if required, shall be approved by the Department of Public Health prior to the permit being finalized.

B. Additional Findings. When a Conditional Use Permit (Chapter 22.158) is required by Subsection 22.84.030, above, or a Minor Conditional Use Permit (Chapter 22.160) is required by Title 22, the following additional findings shall apply in addition to the CUP findings required in Section 22.158.050.B (Findings and Decision) or Minor CUP findings in Section 22.160.050 (Findings and Decision):

1. The proposed use, development of land, and application of development standards are arranged to prevent adverse effects related to odor, noise, aesthetic, soil contamination, and air quality on neighboring property;

2. The proposed use and development of land employ appropriate environmental impact mitigation strategies, such as physical design characteristics, mechanical safeguards, or best practice strategies, including placement of construction equipment as far away from sensitive uses as possible, use of construction equipment that has properly operating and maintained mufflers, use of Zero Emissions construction equipment where feasible, orienting public address systems onsite away from nearby sensitive uses and setting system volume at a level not readily audible past the property line as feasible, and minimizes impacts on nearby sensitive uses; and

3. The proposed use and development of land protects public health and safety and promotes environmental sustainability.

C. Development Standards.

1. Development Standards for All Uses Subject to this Chapter.

a. Solid walls.

i. The following uses shall provide solid walls along the street frontage and any other lot lines adjoining a lot containing sensitive uses:

(a) Boat storage.

(b) Bus storage.

(c) Organic waste facilities.

(d) Pallet yards.

(e) Recycling collection facilities.

(f) Recycling processing facilities.

(g) Truck and RV storage.

(h) Uses that have accessory uses or secondary, related activities other than parking occurring outdoors.

ii. Required solid walls shall meet the following standards:

(a) Be of a uniform height between eight and 12 feet;

(b) Be of a minimum thickness of six inches;

(c) Be a neutral color; and

(d) Be constructed in workmanlike manner and consist of materials such as concrete masonry unit (CMU) or masonry, brick, or the like, etc.

iii. Any type of fencing or wire is prohibited, except that metal gates may be permitted for the purpose of vehicular access.

b. Landscaping on street frontage. Required solid walls along street frontages shall be setback by landscaping of a minimum of five feet in depth, as described below, unless the landscaping encroaches into the required existing parking spaces and associated maneuvering areas, or existing building or structures. The landscaping shall be verified on a landscaping plan submitted to the Department and consist of the following:

i. One 15-gallon tree for every 100 square feet of landscaped area shall be planted and spaced ten feet apart. The remaining area shall also be landscaped with grass, shrubs, or bushes, etc. All plants provided for required landscaping shall be drought-tolerant and include only non-invasive plant species.

ii. The landscaping shall be maintained in a healthy condition with appropriate watering, pruning, weeding, fertilizing, and litter removal. Trees shall be planted in locations that maintain the required lines of sight for safe pedestrian and vehicular movement and shall not cause root damage to the sidewalk or other public infrastructure, to the satisfaction of Public Works.

iii. Trees planted near buildings or fire lanes shall be placed in locations that do not adversely impact Fire Department operations or response times, to the satisfaction of the Fire Department.

iv. Trees shall be selected from the Tree Species List maintained by the Director.

v. Landscaping equipment used for maintenance, such as lawn mowers and leaf blowers shall be electric and non-combustion powered.

vi. Notwithstanding Chapter 12.84 (Low Impact Development Standards) of the County Code, parcels subject to this Chapter 22.84 (Green Zone Districts) and less than 1 acre in size shall not be exempt from Low Impact Development requirements.

c. Storage of Materials, Vehicles, or Equipment.

i. Any materials, vehicles, or equipment that are stored outdoors shall not exceed the height of the surrounding wall, shall be fully contained within the property boundaries, and shall not spillover onto public right-of-ways.

ii. The height of stored materials outdoors shall not exceed the height of the required wall(s). Stored materials shall be set back at least 10 feet from the wall or the length equal to the wall height, whichever is greater.

iii. The area between the stored materials and the wall may be landscaped.

d. Enclosure. A completely enclosed building shall be provided for the following unless another regulatory agency requires natural ventilation:

i. Any area used for storage or handling of hazardous materials;

ii. Any area where manufacturing or repair work occurs, such as assembly or disassembly of parts, repairs, processing of materials, or operation of equipment that emits or generates dust, smoke, gas, fumes, cinder or waste; or

iii. Recycling processing facilities, including auto dismantling activity.

(1) Auto dismantling activity shall be placed furthest away from nearby sensitive uses as possible and be fully enclosed within a building.

(2) The garage door or opening of the enclosed building for dismantling activity shall face the opposite direction of the nearest sensitive use and may be kept open during operation for ventilation.

(3) Ancillary operations, storage, parking aside from dismantling activity may be conducted outdoors, provided that it is fully contained within the property boundaries and no storage or operation occurs on adjacent public rights-of-way or neighboring properties.

e. Surfacing. Areas designated for vehicle parking, vehicle circulation, or storage of materials or equipment shall be paved with impervious materials such as an asphalt or an oil and aggregate mixture, use light color pavement, and be maintained to the satisfaction of the Director. Paved areas shall be clustered to maximize pervious area. Alternative paving materials may be permitted to the satisfaction of the Director and Public Works.

i. All areas of broken concrete or asphalt, including but not limited to divots, cracks, potholes, and spalling of concrete or asphalt in the raw material receiving area of a recycling processing facility, or any portion of the facility where waste materials are unloaded and touch the ground outside of an enclosure shall be patched, repaired, or repaved as necessary to prevent standing water or puddles with a surface area greater than one square foot from accumulating.

f. Recycling and Solid Waste Storage. Any trash receptacles or storage areas for recycling and solid waste shall meet the requirements set forth in Chapter 22.128 (Storage Enclosure Requirements for Recycling and Solid Waste).

g. Vehicular access and on-site circulation for cars and trucks. For new uses, driveway entrances and exits shall be located as far away from sensitive uses as feasible, and on-site vehicular circulation and truck loading and unloading areas, including truck loading docks, shall be located in rear or on the side of structures, or as far away from the nearest sensitive use as feasible, to the satisfaction of the Director. Queuing and check-in points for trucks must be located on-site and furthest away from any property lines that are closest to any nearby sensitive use, when feasible. In cases

of infeasibility for uses subject to a Conditional Use Permit, an additional finding must be made to justify why this may not be possible.

h. “No Idling” Sign Required. Where loading spaces are provided, the loading area shall include at least one sign stating that vehicle idling shall be limited to five minutes. Graphics related to the vehicle idle limitation are permitted on said sign. Said sign shall be a minimum size of 12 inches wide by 18 inches in height and shall be prominently displayed and visible from the loading spaces/area. Said sign may contain language such as “5-minute idle limit,” “spare the air,” “please turn off engine when stopped,” or similar language.

i. Accessory Structures and Utilities. A site that contains an outdoor operation with an office shall permanently affix the building to the ground and provide one toilet that is served by public water and sewer, or otherwise approved by the Director as well as by the Departments of Public Health and Public Works.

j. Perimeter Identification Signs. In addition to the signs permitted by Chapter 22.114 (Signs), and notwithstanding any contrary provisions in Division 10 (Community Standards Districts) in Title 22, each facility or site shall provide a perimeter identification sign that complies with the following:

i. A perimeter identification sign shall be permanently affixed on a building or wall that is visible and with text that is legible from the public right-of-way and for pedestrians, and no higher than eight feet from the ground measured vertically from the base of the sign.

ii. A perimeter identification sign shall have a minimum sign area of four square feet and a maximum of nine square feet. The area for a perimeter identification sign shall not be accounted for the area permitted for business signs specified in Chapter 22.114 (Signs).

iii. The perimeter identification sign shall permanently display hours of operation, telephone number of the facility representative, and emergency contact information for reporting any problems which may occur related to the operation of the facility 24 hours a day, seven days a week. The sign shall also include the business name unless the property also contains a separate business sign that is clearly visible from the public right-of-way. The sign shall also include instructions for reporting violations to Regional Planning and AQMD, where a use is also regulated by AQMD. Information for reporting violations shall include the following text, or as updated by Regional Planning or SCAQMD:

(a). “To report a violation to the Los Angeles County Department of Regional Planning, call 213-974-6453 Monday – Thursday, 7am – 6pm, dial 2-1-1 at any time or email zoningenforcement@planning.lacounty.gov,” and

(b). “To report a violation to South Coast Air Quality Management District (SCAQMD), call 1-800-CUTSMOG visit www.aqmd.gov.”

iv. Multi-tenant buildings or sites may provide one such sign containing the information for all tenants listed in Subsection C.1.i.iii, above, provided that each tenant has its own business identification sign that is clearly visible from the public right-of-way.

k. Hazardous sites. Any proposed project on a parcel known to be a hazardous property or listed on the Cortese List maintained by the California Environmental Protection Agency shall provide appropriate federal, state, or local agency clearance letter for the site. In addition, any parcel known to have a previous use that potentially generated hazardous materials shall demonstrate that the site is clear of contamination with a Phase 1 study.

2. New Development or Proposed Expansions to Existing, Legally-Established Uses Adjacent to Sensitive Uses.

a. Building setback. A minimum of a 10-foot setback shall be provided along the property lines adjacent to sensitive uses. Any proposed additions above the ground floor of existing, legally-established uses adjacent to sensitive uses shall also be set back 10 feet from the nearest property line.

b. Building height. Any new building or structures, or any portion proposed for additions, excluding chimneys, rooftop antennas, roof-mounted solar panels, or other rooftop equipment including HVAC units, air purifiers, etc., shall set back the portion of the building or structure one additional foot for every foot above 35 feet in height, up to a maximum height of 45 feet.

3. Standards for Specific Uses. In addition to C.1 and C.2 above, the following standards shall apply to the uses listed below on the Effective Date of Ordinance unless otherwise specified.

a. Automobile and vehicle repair shops.

i. No open vehicle hood is permitted outside the building.

b. Automobile service stations, new, including compressed natural gas filling stations.

i. All new automobile service stations, including compressed natural gas filling stations, shall comply with the requirements set forth in Subsection C.2, above.

ii. All new automobile service stations, including compressed natural gas filling stations, shall locate the gasoline or fuel dispensing areas at least 50 feet from the nearest sensitive uses.

c. Warehouses. The following standards, except vii, below, shall apply to new warehouses and for existing warehouses, shall be met within 5 years of the Effective Date of Ordinance for legally-established existing uses, unless additional required improvements allow for 7 years, in which case 7 years shall be granted.

i. Utilize electric or alternatively fueled sweepers with HEPA filters.

ii. Utilize Energy Star heating, cooling, and lighting devices, and appliances.

iii. Off-road equipment. All off-road equipment (non-street legal), such as forklifts and other machinery, used onsite for warehouse operations shall be powered by alternative fuels, electrical batteries, or other alternative/non-diesel fuels (e.g., propane) that do not emit diesel particulate matter, and that are zero or low-emission.

iv. Landscaping equipment. All landscaping equipment, such as lawn mowers and leaf blowers used onsite shall be electrically powered.

v. Zero-emission or near-zero emission trucks. Require no less than 15% of total trucks used in warehouse operations to be zero-emission (ZE) or near-zero emission (NZE) on-road haul trucks (e.g., material delivery trucks and soil import/export) such as heavy-duty trucks with natural gas engines that meet the California Air Resources Board (CARB)'s adopted optional NOx emission standard at 0.02 grams per brake horsepower-hour (g/bhp-hr). If zero-emission or near-zero emission trucks are not feasible, at least 15% of trucks used in warehouse operations shall be 2010 model year Emissions Equivalent Engine and meet the California Air Resource Board's (CARB) 2010 engine emissions standards at 0.01 g/bhp-hr of particulate matter (PM) and 0.20 g/bhp-hr of NOx emissions or newer, cleaner trucks. Operators shall maintain records of all trucks associated with the operation, and make those records available to the Department upon request.

vi. Provide electric vehicle (EV) charging stations in the number of spaces equal to a minimum of 5% of all provided parking, but no less than the total number of zero-emission or near-zero emission trucks associated with the warehouse operations, including appropriately sized electrical infrastructure and electrical panels. Electrical hookups should be provided for truckers to plug in any onboard auxiliary equipment.

vii. New warehouses shall have a minimum 100-foot buffer consisting of office space, employee parking, and/or landscaping between primary operation and lot lines that are closest to nearby sensitive uses.

d. New drive-through establishments. The following standards shall apply to new drive-through establishments only.

i. Comply with the requirements set forth in Subsection C.2.a, above.

ii. A maintenance plan shall be submitted as part of the CUP application, to the satisfaction of the Director of Regional Planning, and the drive-through facility shall comply with the maintenance plan.

iii. The location of the drive-through area, including cashier microphone, speakers, and drive-through lane, shall be located at least 20 feet from the property line of any adjoining residentially-zoned lot, and speakers and lighted menus shall be oriented away from such lots.

iv. Hours of operation for the drive-through area shall be no earlier than 6:00a.m. and no later than 12:00a.m.

v. A buffer, which may include a six-foot solid wall, as depicted on the site plan, shall be provided to reduce noise trespass from the drive-through area to any adjoining residentially-zoned lot.

vi. The required trash bin shall be enclosed by a decorative wall measuring at least five feet tall, but not more than six feet tall, and shall have solid doors.

D. Modification.

1. A modification may be requested through a Minor Conditional Use Permit (Chapter 22.160) application if the use is subject to a Minor CUP or Site Plan Review (Chapter 22.186, or through a Conditional Use Permit (Chapter 22.158) application if the use requires a CUP, for the development standards listed below:

- a. Solid wall (Subsection C.1.a.ii).
- b. Landscaping (Subsection C.1.b.i).
- c. Accessory Structures and Utilities (Subsection C.1.i).
- d. Signs (Subsection C.1.j.ii).
- e. Warehouses. (Subsection C.3.c.iii, iv, v, vi, and vii).

2. When a modification is requested for any development standards listed in Subsection D.1, above, the following findings shall apply in addition to the findings required in Subsection B (Additional Findings), above:

a. Due to topographic or physical features of the site, strict compliance with all the required development standards would substantially and unreasonably interfere with the establishment of the proposed project or continuation of the existing operation on the subject property;

b. The requested modification provides alternative means to prevent adverse effects on environment and public health of the community; and

c. Granting the requested modification is consistent with the findings in Subsection D.2., above in addition to the findings required in Subsection B (Additional Findings), above.

E. Performance Standards for All Uses.

1. Hours of outdoor operation. No outdoor operation or activities, including truck loading and unloading, shall be conducted between 6:00 p.m. and 8:00 a.m., daily, with the exception of loading and unloading into an enclosed building only.

2. Storage of Materials and Waste. All materials or waste shall be stored in designated receptacles, bins, or pallets, and located on a paved impermeable surface on site, or within an enclosed building.

3. Site Maintenance. Other than for the collection or receipt of items related to the principal use, exterior areas of the premises shall be maintained free of garbage, trash, debris, or junk and salvage except as stored in designated trash collection containers and enclosures.

F. Fees. In the case when a Conditional Use Permit (Chapter 22.158) is required, fees may be assessed to offset the costs associated with the project mitigation, enforcement activities, operational impact mitigation studies, community benefit programs, and other costs related to the Project's impacts on the surrounding communities.

Explanation of Schedule of Compliance for Existing Uses to Comply with New Land Use Regulations Development Standards, and Permitting Process Required in

Green Zone Districts

22.84.040 Schedule for Compliance for Existing, Legally- Established Uses

A. Existing, legally-established uses that are subject to this Chapter shall be brought into compliance with all applicable requirements of this Chapter according to the schedule identified in Table 22.84.040-A, below, as follows, provided that the number of years to comply is accounted from [EFFECTIVE DATE OF THE ORDINANCE]:

TABLE 22.84.040-A: Schedule for Compliance for Existing, Legally-Established Uses Up to 500 Feet from a Sensitive Use¹			
Permit Required	3 Years	5 Years	7 Years
Site Plan Review (SPR) for uses up to 100 feet from a Sensitive Use	Installation of any one or both of the following combined and no other improvements: signage, landscaping	Installation of walls, surfacing, or specific standards for warehouses, along with or without any other improvements combined, if new building enclosure is not required	Installation of building enclosure and any other improvements for SPR
Site Plan Review for uses between 101 – 500 feet from a Sensitive Use	N/A	Installation of any one or all improvements, including specific standards for warehouses, if new building enclosure is not required	Installation of building enclosure and any other improvements for SPR

Conditional Use Permit (CUP) or Minor Conditional Use Permit (MCUP) for uses up to 100 feet from a Sensitive Use	N/A	CUP or MCUP attainment and installation of any one or all improvements, including specific standards for warehouses, if new building enclosure is not required	Installation of building enclosure and any other improvements for CUPs or MCUPs
CUP or MCUP for uses between 101 - 500 feet from a Sensitive Use	N/A	CUP or MCUP attainment and specific standards for warehouses, if new building enclosure is not required	Installation of all improvements for CUPs or MCUPs
<u>1. Section 24.84.030.E (Performance Standards for all Uses), shall apply to existing, legally-established uses at the time of the compliance schedule deadline for the established use.</u>			

1. Existing uses that are entirely or partially within a 100-foot radius of a lot containing a sensitive use in a permitted zone and:

a. Subject to a Ministerial Site Plan (Chapter 22.186) pursuant to this Chapter for the requirements specified in Subsection C.1.b (Landscaping) or C.1.j (Perimeter Identification Signs) of Section 22.84.030, only and no other improvements required, three years;

b. Subject to a Ministerial Site Plan (Chapter 22.186) pursuant to this Chapter for any one or combination of the requirements specified in Subsection C.1.a through C.1.j, beyond C.1.b (Landscaping), and C.1.j (Perimeter Identification Signs), except for C.1.d (Building Enclosure) of Section 22.84.030, or subject to C.3.c

(Standards for Specific Uses, Warehouses), five years; if building enclosure is required in addition to any improvements, seven years;

c. Subject to a Ministerial Site Plan (Chapter 22.186) pursuant to this Chapter for the requirements specified in Subsection C.1.d (Building Enclosure) only, or C.1.d. along with any other requirements of Section 22.84.030, seven years;

d. Subject to a Conditional Use Permit (Chapter 22.158) pursuant to this Chapter for the requirements specified in Subsection C.1.a (Solid walls), C.1.b (Landscaping on street frontage), C.1.j (Perimeter Identification Signs), or C.3.c (Standards for Specific Uses, Warehouses) only, of Section 22.84.030, five years;
or

e. Subject to a Conditional Use Permit (Chapter 22.158) pursuant to this Chapter for all other requirements, seven years.

2. Existing uses that are entirely or partially located between a 101-foot radius and a 500-foot radius of any lot containing a sensitive use and:

a. Subject to a Ministerial Site Plan (Chapter 22.186) pursuant to this Chapter for the requirements specified in Subsection C.1.a through C.1.j, except for C.1.d (Building Enclosure) or subject to C.3.c (Standards for Specific Uses, Warehouses) of Section 22.84.030, five years;

b. Subject to a Ministerial Site Plan (Chapter 22.186) pursuant to this Chapter for the requirements specified in Subsection C.1.d. (Building Enclosure) along with or without any other requirements of Section 22.84.030, seven years; or

c. Subject to a Conditional Use Permit (Chapter 22.158)
pursuant to this Chapter, seven years. Uses that are subject to a Conditional Use
Permit pursuant to this Chapter shall be brought into full compliance with all applicable
requirements of this Chapter, no later than [Seven years from effective date of
Ordinance] or cease operations.

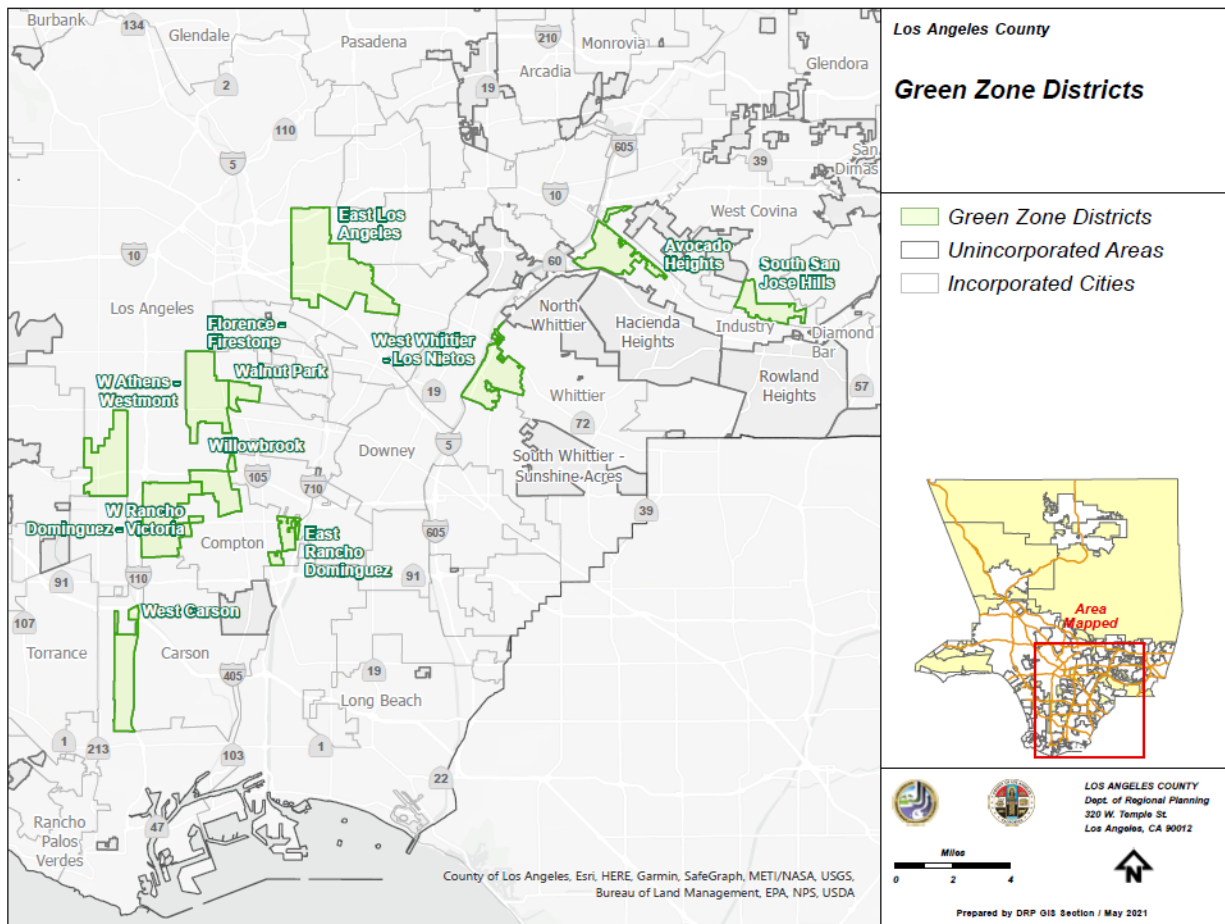

3. All existing uses that have been operating with an approved
discretionary land use permit prior to [Effective date of Ordinance] as provided by this
Title 22 shall be brought into full compliance with all applicable requirements of this
Chapter upon a renewal of such permits or requirement for a new discretionary permit.

4. Compliance shall be defined solely for this Chapter as the
implementation and or construction of all required development standards for uses
subject to Chapter 22.84 within the timeframe identified in Table 22.84.040-A. For
properties requiring improvements that fall into multiple compliance years, the longer
timeline shall apply to all improvements.

22.84.050 Green Zone Districts Map.

The boundaries of the Green Zone District communities are shown on
Figure 22.84.050-A: Green Zone Districts Boundaries, below.

Figure 22.84-A: Green Zone Districts Boundaries

Update to Existing Required Parking Spaces for Specific Industrial Uses

SECTION 24. Section 22.112.070 is hereby amended to read as follows:

22.112.070 Required Parking Spaces.

A. Required Parking Spaces. Table 22.112.070-A, below, identifies the minimum number of parking spaces required to establish each use.

TABLE 22.112.070-A: MINIMUM REQUIRED PARKING SPACES	
Use	Number of Spaces
...	
Industrial uses – in any zone, excluding Zone SR-D	

	Industrial/manufacturing uses, excluding <u>recycling and solid waste facilities</u> scrap metal processing, automobile dismantling, junk and salvage yards, and warehouses	1 space per 500 square feet and 1 space per vehicle <u>directly used for operation of the business.</u>
	<u>Recycling collection facilities, recycling processing facilities, organic waste facilities, and solid waste facilities except for landfills.</u> Scrap metal processing, automobile dismantling, and junk and salvage yards ³	1 space per vehicle <u>directly used for operation of the business</u> , and 1 space per 7,000 square feet or fraction thereof of yard area up to 42,000 square feet and 1 space per 20,000 square feet or fraction thereof of yard area in excess of 42,000 square feet. A minimum of 403 spaces is required for each use.
	Warehouses, as defined in Division 2 (Definitions)	1 space per 1,000 square feet used for warehousing and 1 space per 400 square feet used for office.
...		
<u>Vehicle-related uses</u>		
	<u>Auto services, excluding automobile impound yards, automobile service stations, automobile supply stores, and boat repair.</u>	<u>1 space per 500 square feet of building or structure area used for repair work.</u>
<p>...</p> <p>3. The parking spaces required herein shall not be used for the parking of vehicles used directly in the <u>operation conducting of such use</u> scrap metal processing yards or automobile dismantling yards, or of renovated, repaired, or reassembled vehicles which are owned, operated, or in the possession of the proprietor of the yard. The addition of automobile parking spaces on an adjacent lot for purposes of complying with the parking requirements of this Section shall not be considered an expansion of the use.</p>		

Proposed New Regulations for Required Recycling and Solid Waste Storage Enclosures

SECTION 25. Chapter 22.132 is hereby added to read as follows:

**Chapter 22.132 Storage Enclosure Requirements for Recycling and
Solid Waste.**

Sections:

22.132.010 Purpose.

22.132.020 Applicability.

22.132.030 Development Standards.

22.132.010 Purpose.

This Chapter ensures that enclosed rooms or storage areas are provided to store, collect, and load waste, recyclable materials, and organic materials generated by commercial, industrial, and residential land uses with four or more units, and that the area may be safely accessed by building occupants and waste and recycling haulers in compliance with Title 14, Division 7 (Natural Resources) of the California Code of Regulations.

22.132.020 Applicability.

This Chapter applies to recycling and solid waste storage associated with the following:

- A. New non-residential development;
- B. New residential development with four or more units; and
- C. Expansion by 50 percent or more of the existing floor area for existing non-residential or residential developments with four or more units.

22.132.030 Development Standards.

A. Receptacles. All waste, compost, and recyclables shall be stored in closed receptacles at all times.

B. Location. The following location standards apply to recycling and solid waste storage areas.

1. All municipal solid waste, recyclable, and compostable material receptacles shall be located within the same enclosure, unless the Director determines that extraordinary circumstances prevent co-locating containers within one enclosure, thereby necessitating multiple enclosures.

2. The storage area shall be accessible to residents, employees, and refuse and recycling haulers at all times.

3. When the storage area is located outside of a building, it shall be located in the rear portion of the lot wherever feasible, or adjacent to an alley if the lot is bordered by an alley.

C. Distance Requirements.

1. Where an outdoor recycling and solid waste storage area is separated from an adjoining building, it shall be no closer than 10 feet from any building or 20 feet from any door or window in linear distance

D. Vertical dimensions. Recycling and solid waste storage areas shall have a vertical dimension of at least eight feet.

E. Clearance and Circulation. Outdoor recycling and solid waste storage areas shall not be located in any required yard, parking space, landscaped areas, or other areas required to remain clear of obstructions to comply with Title 26 (Building Code) and Title

32 (Fire Code) of the County Code, and shall not obstruct vehicular or pedestrian circulation.

F. Enclosure.

1. All outdoor recycling and solid waste storage areas are required to have a view-obstructing fence or wall in compliance with Section 22.140.430 (Outdoor Storage). Chain-link fences are not sufficient for view-obstructing requirements unless combined with inserts that obstruct view to the satisfaction of the Director.

2. The height of stored items shall not exceed the enclosure surrounding it.

3. A roof shall be required to screen the storage area from views down from upper-story windows in adjacent residential or mixed-use buildings.

G. Paving. The ground or floor where the storage area is located shall be paved pursuant to Section 22.112.080.E (Paving). The paving shall extend beyond the walls of the enclosure by at least two feet to the satisfaction of Public Works.

H. Signage.

1. At least one sign, not to exceed four square feet in area, shall be provided for recycling and waste storage areas.

2. The sign shall be posted adjacent to the entrance to the storage area.

3. The sign shall list the type of material that may be deposited in each receptacle.

I. Cleaning and Maintenance. Recycling and solid waste storage areas shall be maintained in a clean, litter-free condition, in such a way that vermin, rodents, or other pests are prevented from entering the area.

Proposed New Regulations for Sensitive Uses that Choose to Locate Next to Existing, Legally-Permitted Industrial, Recycling or Solid Waste or Vehicle-Related Uses

SECTION 26. Chapter 22.134 is hereby added to read as follows:

22.134 Sensitive Uses Adjacent to Industrial, Recycling or Solid Waste, or Vehicle-Related Uses.

22.134.010 Applicability.

22.134.020 Application Review Procedures.

22.134.030 Development Standards.

22.134.010 Applicability.

A. The standards and requirements in this Chapter shall apply to any new sensitive use, including dwelling units (except for accessory dwelling units), schools and school yards, parks, playgrounds, daycare centers, preschools, nursing homes, hospitals, and daycares or preschools as accessory to a place of worship, developed on a lot that is adjacent to or adjoins any legally-established industrial uses, recycling or solid waste uses, or vehicle-related uses listed in Table 22.20.030-B (Principal Use), except for vehicle sales and rentals sub-category.

B. In a Green Zone Districts, approval of a new sensitive use shall not subject existing industrial, recycling or solid waste, or vehicle-related uses to the requirements of Chapter 22.84 (Green Zone Districts).

22.134.020 Application and Review Procedures.

A. Applications to establish a new sensitive use adjacent to or adjoining an existing, legally-established industrial use, recycling or solid waste use, or vehicle-related use listed in Table 22.20.030-B (Principal Use), except for vehicle sales and rentals sub-category shall submit a Land-Use Map, including a land-use legend with symbols identifying existing land uses that are within a 500-foot radius of the property lines of the proposed site.

22.134.030. Development Standards for Sensitive Uses.

A. Setbacks and Landscaping.

1. In addition to the requirements of Chapter 22.126 (Tree Planting Requirements) a landscaped setback of a minimum 15 feet in depth and a minimum 3 feet in height, and shall be provided along the adjoining property lines or street frontage that directly faces any portion of an existing industrial, recycling or solid waste uses, or vehicle-related use.

2. All landscaping shall be drought-tolerant, include only non-invasive plant species, and include a mix of shrubs, turf, trees, or vertical landscaping.

3. The landscaping shall be maintained in a healthy condition, with regular watering, pruning, weeding, fertilizing, litter removal, and replacement of plants when necessary.

B. Solid Walls. Solid walls shall be provided along the property lines or along required landscaping adjoining the applicable non-sensitive uses (industrial, recycling or solid waste uses, or vehicle-related uses, except for sales and rental) and shall have a uniform height of at least eight feet.

C. Open Space. Any common open space shall be buffered from the adjacent facilities by a building, structure(s), or landscaping of a minimum of three feet in height. The landscaped buffer shall be a minimum of three feet in depth on the premise.

D. Additional requirements.

1. All windows in any buildings shall be double-glazed (double-paned).
2. Balconies shall be prohibited on the side of a building that faces an adjoining lot containing an existing industrial uses, recycling or solid waste uses, or vehicle-related uses, except for vehicle sales and rentals.
3. Air filtration systems shall be provided in residential units and other rooms that are intended for human occupancy, as recommended by Public Works Building and Safety Division and the California Air Resources Board.

Proposal to Remove Automobile Dismantling Yards and Junk and Salvage Yards from Current Section and Regulate them under Recycling Collection and Recycling Processing Facilities

SECTION 27. Chapter 22.140 is hereby amended to read as follows:

Chapter 22.140 Standards for Specific Uses.

...

**22.140.120 ~~Automobile Dismantling Yards, Automobile Impound Yards,~~
and Junk and Salvage Yards.**

A. Applicability. This Section applies to ~~automobile dismantling yards,~~ automobile impound yards, ~~and junk and salvage yards~~ in all zones where permitted.

B. Enclosure. All operations and storage, including all equipment used in conducting such business, other than parking, shall be conducted within an enclosed building or within an area enclosed by a solid wall or solid fence.

C. Fences and Walls. Where fences or walls are provided, they shall be developed as provided below.

1. All fences and walls shall be of a uniform height in relation to the ground upon which they stand, and shall be a minimum of eight feet in height. Where fences or walls exceed a height of 10 feet and are located on street or highway frontages, they shall be set back at least three feet from the lot line. The area between the fence and the lot line shall be fully landscaped according to the specifications described in Subsection E, below.

2. All fences and walls open to view from any public street or highway or any area in a Residential, Agricultural, or Commercial Zone shall be constructed of the following materials:

- a. Metallic panels, at least 0.024 inches thick, painted with a "baked on" enamel or similar permanent finish;
- b. Masonry; or
- c. Other materials comparable to the foregoing, if approved by the Director.

2. Other required fences may be constructed of material other than specified in Subsection C.2, above.

3. All fences and walls shall be constructed in a workmanlike manner and shall consist solely of new materials unless the Director approves the substitution of used materials where, in the Director's opinion, such used materials will provide the equivalent in service, appearance, and useful life.

4. All fences and walls shall be painted a uniform neutral color, excluding black, which blends with the surrounding terrain and improvements, and shall be maintained in a neat, orderly condition at all times. Such fence or wall shall contain no painted signs or posters except as approved by the Director.

5. Any structures which are used as part of the yard boundaries or are exposed to view from the street frontage shall be painted to conform with the color of the fencing. The Director may approve other appropriate architectural treatment.

D. Pavement. The entire yard shall be paved with an asphalt surfacing or an oil and aggregate mixture to prevent emission of dust or tracking of mud onto public rights-of-way; provided, however, the Director may:

1. Approve other paving materials which provide, in the Director's opinion, the equivalent in service and useful life; or

2. Modify such requirements within existing yards in those areas where material is stored and the Director finds no dust or mud problem would result.

E. Landscaping. At least one square foot of landscaping shall be

provided for each linear foot of street frontage, and said landscaping shall be developed in accordance with a site plan which complies with the following criteria:

1. Landscaping shall be distributed along said frontage and visible from the right of way in accordance with the site plan approved by the Director.

2. No planting area shall have a horizontal dimension of less than three feet.

3. A permanent watering system or hose bibs shall be provided which satisfactorily irrigates all planted areas. When hose bibs are utilized, they shall be so located as to permit the watering of all planted areas with a 50-foot hose.

4. All landscaped areas shall be continuously and properly maintained in good condition.

F. Storage.

1. No impounded, ~~wrecked, or dismantled~~ vehicles, ~~salvage, or junk~~ shall be placed or allowed to remain outside of the enclosed yard area.

2. No impounded, ~~wrecked, or dismantled~~ vehicles, ~~salvage, or junk~~ shall be stored at a height greater than that of the surrounding fence or wall unless the land upon which the yard is located is in Zone M-3 and such storage above said fence or wall is not within 500 feet of any other zone.

G. Additional Regulations. The standards of development for ~~automobile dismantling yards, automobile impound yards, or junk and salvage yards~~ as set forth in this Section shall not relieve the proprietors of such ~~automobile dismantling yards,~~

automobile impound yards, ~~or junk and salvage yards~~ from complying with all regulations, laws, and ordinances of the County and the State of California.

H. Schedule for Compliance

1. All ~~automobile dismantling yards, automobile impound yards, and junk and salvage yards~~ are hereby required to comply with the requirements set forth in Subsections B through G, above, in accordance with the following schedule:

a. All storage of ~~dismantled, impounded, or wrecked vehicles and salvage and junk~~ shall cease to be carried on in any area outside the confines of the fenced or walled area of the yard and above the height of the fence or wall, in compliance with Subsection B, above, within six months from January 26, 1980, the effective date of this Section.

b. All other requirements in Subsections C through G, above, shall be complied with within two years from January 26, 1980, the effective date of this Section.

c. Upon a showing of substantial compliance with the provisions of in Subsections B through G, above, the Commission may extend the time for compliance with the requirements set forth in Subsection H.1.a, above, for a period not to exceed six additional months, and may extend the time for compliance with Subsection H.1.b, above, for a period not to exceed one additional year.

2. Failure to comply with the requirements of Subsections B through G, above, shall be deemed to automatically terminate any existing nonconforming use or Conditional Use Permit (Chapter 22.158) authorizing the establishment of an ~~automobile dismantling yard, automobile impound yard, or junk and salvage yard~~.

Compliance with said requirements shall not in and of itself constitute sufficient grounds for the granting of a Conditional Use Permit (Chapter 22.158) or the extension thereof.

I. Modification. The requirements in Subsections B through G, above, may be modified upon approval of a Variance (Chapter 22.194) application.

**Land Use Regulations including Types of Permits and Development Standards
Required for Mixed-Use Developments in Commercial Zones.**

Section 28. Section 22.140.350 is hereby amended to read as follows:

22.140.350 Mixed Use Developments in Commercial Zones.

...

A. Mixed Use Development in Zones C-H, C-1, C-2, C-3, and C-M.

...

54. Prohibited Uses. Notwithstanding the uses otherwise permitted in the zone, the following uses are prohibited in the commercial component of a mixed use development, as listed in Table 22.140.350-A, below.

TABLE 22.140.350-A: PROHIBITED USES	
...	
Retail/Commercial Uses	
...	...
Service Uses	
Ambulance emergency service facilities	<u>Mortuaries</u> Hospital equipment and supply rentals
Ambulance service facilities	Mortuaries <u>Party equipment rentals</u>
Bakery shops	Party equipment rentals <u>Pet grooming</u>
Beauty shops	Pet groom <u>Supermarket accessory recycling collection center</u>
Dry cleaning establishments	<u>Taxidermists</u>
Furniture and appliance rentals	Tool rentals, including rototillers, power mowers, sanders and saws, cement mixers, and other similar equipment, excluding heavy machinery or trucks
<u>Hospital equipment and supply rentals</u>	

**Land Use Regulations including Types of Permits and Development Standards
Required for Mixed-Use Developments in Mixed Use Rural Zones.**

Section 29. Section 22.140.360 is hereby amended to read as follows:

22.140.360 Mixed Use Developments in MXD-RU.

...

C. Prohibited Uses. For any commercial component of a mixed use development in Zone MXD-RU, in addition to prohibited uses for commercial components of mixed use developments in 22.140.350.A.5 (Prohibited Uses), the uses listed in Table 22.140.360-A shall be prohibited:

TABLE 22.140.360-A: PROHIBITED USES	
...	Stations-bus, railroad and taxi
...	<u>Supermarket accessory recycling collection center</u>
...	...

Changes to Existing Land Use Regulations for Outdoor Storage

SECTION 30. Section 22.140.430 is hereby amended to read as follows:

22.140.430 Outdoor Storage.

...

C. Industrial Zones. This Subsection C applies to outdoor storage in Zones M-1, M-1.5, M-2, M-2.5, and M-3.

1. Exemptions. The following uses are exempt from this Subsection C:

a. Outdoor display, per Section 22.140.420 (Outdoor Display).

~~b. Automobile dismantling and junk and salvage yards, which shall instead be subject to the standards in Section 22.140.120 (Automobile Dismantling Yards and Junk and Salvage Yards).~~

~~c. Scrap metal processing yards, which shall instead be subject to the standards in Section 22.140.530 (Scrap Metal Processing Yards).~~

b. Outdoor storage that is subject to the standards in Chapter 22.84 (Green Zone Districts).

2. Fences and walls. Where a fence or wall is required pursuant to this Subsection C, it shall be developed as provided herein:

...

b. All fences and walls open to view from any street or highway or any area in a Residential, Agricultural, or Commercial Zone shall be constructed of the following materials:

i. ~~Metallic panels at least .024 inches thick, painted with a "baked-on" enamel or similar permanent finish;~~ coated with permanent metal finish;

ii. Masonry, brick, or concrete block; or

iii. Other materials comparable to the foregoing, if approved by the Director.

...

c. Required fences which are not open to view from any street or highway or any area in a Residential, Agricultural, ~~or Commercial~~, or Mixed Use Zone may be constructed of material other than as specified in Subsection C.2.c, above if constructed and maintained in accordance with the provisions of this Subsection C.

...

e. All fences and walls, excluding masonry, brick, concrete block, and approved permanent metal-finish panels, shall be ~~be painted a uniform~~ neutral color, excluding black, which blends with the surrounding terrain, and improvements shall be maintained in a neat, orderly condition at all times.

...

g. Any structures which are used as part of the yard boundaries or are exposed to view from a street or highway frontage shall be subject to ~~painting, materials, finish, color,~~ maintenance and sign requirements for fences and walls as provided in Subsections C.2.e and C.2.f, above.

...

Proposed Deletion of Section Regulating Scrap Metal Yards with Proposal to Regulate these uses under Recycling Processing Facilities.

SECTION 31 Section 22.140.530 is hereby deleted in its entirety:

Land Use Regulations including Permitted Zones, Types of Permits and Development Standards Required for Pallet Yards.

SECTION 32. Section 22.140.700 is hereby added to read as follows:

22.140.700 Pallet Yards.

A. Purpose. This Section establishes standards, conditions, and procedures that support and facilitate the development of pallet yards as a principal use in a manner that protects public health, safety, and welfare and minimizes significant impacts to the environment.

B. Applicability. This Section applies to pallet yards in Zones M-1, M-1.5, M-2, M- and 2.5.

C. Application Requirements.

1. A pallet yard as a primary use located in Zones M-1 and M-1.5 shall require a Minor Conditional Use Permit (Chapter 22.160).

2. A pallet yard as a primary use located in Zones M-2, and M-2.5 shall require a Ministerial Site Plan Review (Chapter 22.186) application.

3. Additional Application Materials. An operations plan that addresses all requirements specified in this Section shall be submitted with the application pursuant to Subsections C.1 and C.2, above.

4. Applicability of Supplemental District Regulations. For pallet yards subject to Chapter 22.84 (Green Zone Districts) and a provision of Chapter 22.84 regulates the same matter as this Section, the more restrictive provision shall apply.

5. Prohibition. Pallet yards are prohibited within the following areas as designated by the General Plan:

a. Agricultural Resource Areas.

b. High Fire Hazard Severity Zones.

c. Hillside Management Areas.

d. Significant Ecological Areas.

e. Very High Fire Hazard Severity Zones.

D. Development Standards.

1. Materials Accepted. Pallet yards may accept new or used pallets that are made of wood, as well as raw material (lumber) that will be used in constructing new pallets or repairing used pallets.

2. Permitted Activity and Equipment. Pallet yards may maintain activities associated with repair, deconstruction, reconstruction, recycling, or storage of pallets made of wood. Chipping and grinding or composting activities are subject to additional requirements specified in Section 22.140.740 (Organic Waste Facilities).

3. Building Enclosures and Walls.

a. All storage, including storage of all equipment used in conducting such business, other than parking, shall be enclosed by a building or a solid wall.

b. When a pallet yard is adjacent to a sensitive use, the following shall apply:

i. The entire operations and storage areas shall be conducted within an enclosed building; and

ii. An air filtration system shall be installed in the building to protect indoor air quality in accordance with California Division of Occupational Safety and Health and California Air Resources Board requirements, and for outdoor air quality in accordance with Air Quality Management District requirement. The Department of Public Health may be consulted on additional air quality recommendations.

4. Building Setbacks and Height. Any buildings or structures, or any portion proposed for additions, excluding chimneys, rooftop antennas, or roof solar panels, shall

be set back within an encroachment plane sloping upward and inward starting at 35 feet for the new building or structure at the setback, or at the top of the existing roof for additions. For every foot above 35 feet, one additional foot setback is required, up to 45 feet.

5. Landscaping.

a. At least one square foot of landscaping shall be provided for each linear foot of street or highway frontage verified by a landscaping plan submitted to the Department, and shall meet the following standards:

i. Such landscaping area shall be planted with one 15-gallon tree for every 100 square feet.

ii. Landscaping shall be distributed along said frontage and visible from the right of way in accordance with the site plan approved by the Commission or Hearing Officer.

iii. No planting area shall have a horizontal dimension of less than three feet.

iv. A permanent watering system that satisfactorily irrigates all planted areas shall be provided. When hose bibs are utilized, they shall be located not more than 50 feet apart within the required landscaped area.

v. All landscaped areas shall be continuously and properly maintained in good condition.

vi. Landscaping shall include only non-invasive plant species.

vii. Landscaping equipment used for maintenance, such as lawn mowers and leaf blowers shall be electric and non-combustion powered.

6. Solid Walls.

a. For any pallet yard that consists of outdoor operations or storage other than customer parking, a solid wall such as a masonry wall or a concrete block wall shall be provided along the street frontage or any other lot lines adjoining a lot that contains a non-industrial use. All walls shall meet the following standards:

i. Be of a uniform height between eight feet and 15 feet;
ii. Be a minimum thickness of six inches;
iii. Be of a neutral color; and
iv. Be constructed in workmanlike manner and consist of materials such as concrete masonry unit (CMU) or masonry, brick, etc.

b. Where walls exceed a height of 10 feet and are located on street or highway frontages, they shall be set back at least three feet from the lot line. The area between the walls and the lot line shall be fully landscaped according to the specifications described in Subsection D.5, above.

c. Any structures that are used as part of the yard or are exposed to view from a street or highway frontage shall be subject to color, maintenance, and sign requirements for walls as provided in Subsection D.6.a, above.

d. All fences that are intended to substitute or serve as solid walls are prohibited.

7. Storage of Materials.

a. Pallets shall be stored at least 10 feet away from the surrounding walls, or the length equal to the wall height, whichever is greater.

b. The height of pallets stored in an outdoor pallet yard shall not exceed the walls erected along the property lines.

8. Drop-off and Loading. Areas for and access to drop-off and loading shall be clearly designated by signage, shall not impede the on-site vehicular circulation, and shall comply with the following:

a. Drop-off and loading areas shall be located on site and furthest away from lot lines that are closest to any nearby sensitive uses.

b. "No Idling" Sign Required. Where loading spaces or area are provided, the loading area shall include at least one sign stating that vehicle idling shall be limited to five minutes. Graphics related to the vehicle idle limitation are permitted on said sign. Said sign shall be a minimum size of 12 inches wide by 18 inches in height and shall be prominently displayed and visible from the loading spaces/area. Said sign may contain language such as "5-minute idle limit," "spare the air," "please turn off engine when stopped," or similar language.

9. Vehicle Circulation. On-site vehicular circulation, turnaround, queuing areas, and ingress and egress shall be designated in such a way that they do not impede any other permitted activities and avoid any impact on the public right-of-way as well as nearby sensitive uses, as approved by the Director and the Department of Public Works.

10. Perimeter Identification Sign. In addition to the signs that are permitted by Chapter 22.114 (Signs), and notwithstanding any contrary provisions in Division 10 (Community Standards Districts) in Title 22, each pallet yard shall provide a perimeter identification sign that complies with the following:

a. A perimeter identification sign shall be permanently affixed on a building or wall that is visible and with text that is legible from the public right-of-way and by pedestrians, no higher than eight feet from the ground measured vertically from the base of the sign. Freestanding signs or portable signs are prohibited as a perimeter identification sign.

b. A perimeter identification sign shall have a minimum sign area of four square feet and a maximum of nine square feet. The area for perimeter identification sign shall not be accounted for the areas for business signs specific in Chapter 22.114 (Signs).

c. The perimeter identification sign shall permanently display hours of operation, schedule of charges, type of material that may be deposited, telephone number of the facility operator or a representative of the facility operator, emergency contact information for reporting any problems which may occur related to the operation of the facility 24 hours a day, seven days a week. The perimeter identification sign shall also include the business name unless the property also contains a separate business sign that is clearly visible from the public right-of-way. The sign shall also include instructions for reporting violations to Regional Planning with the following text, or as updated by Regional Planning:

i. “To report a violation to the Los Angeles County Department of Regional Planning, call 213-974-6453 Monday – Thursday, 7am – 6pm, dial 2-1-1 at any time or email zoningenforcement@planning.lacounty.gov,” an”

ii. “No loitering or littering is permitted on the premises. No materials shall be left outside of enclosures.”

d. Additional signs and/or measures may be required by the Director in order to protect personnel and public health and safety.

11. Lighting. The facility, yard, and equipment shall be equipped with adequate lighting. All outdoor lighting shall be shielded in such a way that lighting is directed inward to the facility and away from any lots containing residential or agricultural uses.

12. Cleaning and Maintenance. Facility shall be kept in a clean, safe, and sanitary condition at all times, and maintain a source of running water on site.

13. Hours of operation. Pallet yards may operate no earlier than 8:00 a.m. and no later than 6:00 p.m., Monday through Saturday. Pallet yards shall not operate on Sundays and national holidays, and comply with other restrictions regarding the hours of operations as approved by the Director.

E. Additional Findings. In addition to the findings required in Section 22.158.050.B (Findings and Decision), all projects subject to this Section shall meet the following findings:

1. The project is sited and designed in such a way to minimize and prevent impacts to the persons residing or working in the surrounding area or within the project

site by incorporating appropriate operation measures, equipment, and other best practices.

2. The requested use will operate in such a way that it promotes the responsible use of resources and protection of the environment by providing adequate measures to control the handling of materials, air emissions of dust or toxins, nuisance, and migration of residues offsite, and by incorporating best practices for operation as well as site maintenance. The operator has demonstrated through operation and maintenance plans that the facility will incorporate best practices for operation and site maintenance, including that the facility will be managed in a way that will not be a nuisance to surrounding properties and specifically sensitive uses.

F. Modification. When a modification is requested for development standards listed in Subsections D.3, D.4, and D.6, above, the following findings shall apply in addition to the findings required in Section 22.158.050.B (Findings and Decision):

1. The existing adjoining property is located in an Industrial Zone and is developed with a similar use, and/or existing structures serve as an enclosure as well or better than the wall required herein; and

2. The requested modification provides alternative means to prevent adverse effects on environment and health of the residents or occupants in surrounding areas.

G. Schedule for Compliance.

1. Notwithstanding Chapter 22.172 (Nonconforming Uses, Buildings and Structures), all existing pallet yards that have been legally established shall comply with the schedule of compliance as following:

a. All pallet yards that have an approved Conditional Use Permit (Chapter 22.158) or an approved Ministerial Site Plan (Chapter 22.186) and are subject to Chapter 22.84 (Green Zone Districts) shall comply with the schedule for compliance as specified in Section 22.84.040 (Schedule for Compliance for Existing, Legally-Established Uses).

b. Other pallet yards that have an approved Conditional Use Permit (Chapter 22.158) shall be subject to all requirements of this Section upon a renewal of such permit.

c. Other pallet yards that have an approved Ministerial Site Plan (Chapter 22.186) shall submit a Conditional Use Permit (Chapter 22.158) application in compliance with all requirements of this Section within five years from [DATE], the effective date of this Section.

H. Revocation of Permit. Notwithstanding Chapter 22.238 (Modifications and Revocations), failure to comply with all requirements in this Section and all conditions of approval for the subject property shall result in an immediate citation of a Notice of Violation. Upon the issuance of a Notice of Violation, the facility may be subject to permit revocation proceedings pursuant to Section 22.238 (Modifications and Revocations).

1. If a permit granted for a facility is denied or revoked, the site shall be vacated within 30 days of the permit denial or revocation.

2. Upon closure of the facility, the operator shall provide written notice of the intent to perform site restoration, at least 30 days prior to beginning site restoration. The site restoration procedures and scope shall ensure that the entire premises, structures, grounds, ponds, and drainage are clean of any residues and all machinery is removed.

Land Use Regulations including Permitted Zones, Types of Permits and Development Standards Required for Supermarket Accessory Recycling Collection Centers.

SECTION 33. Section 22.140.710 is hereby added to read as follows:

22.140.710 Supermarket Accessory Recycling Collection Center

A. Purpose. This Section establishes standards, conditions, and procedures that support and facilitate the development of recycling collection centers as an outdoor accessory use to existing supermarkets in a manner that protects public health, safety, and welfare and minimizes impacts to the environment.

B. Definition. Specific terms used in this Section are defined in Section 22.14.180 (R) in Division 2 (Definitions), under “Recycling and Solid Waste”.

C. Applicability. This Section applies to recycling collection centers that only accept beverage containers that are established on an existing supermarket site as an accessory use in Zones C-1, C-2, C-3, C-M, C-MJ, C-R, C-RU, MXD, MXD-RU, M-1, M-1.5, M-2, and M-2.5. Any other types of recycling collection centers or bins are prohibited as an accessory use.

D. Prohibited. A recycling collection center as an outdoor accessory use to an existing supermarket as defined in Section 22.14.180 (R) in Division 2 (Definitions), under “Recycling and Solid Waste” is prohibited within a mixed-use development containing residential uses.

E. Application Requirement. A Ministerial Site Plan (Chapter 22.186) application is required for each supermarket accessory recycling collection center provided that the property and the existing principal use comply with all currently applicable development standards and are free of any zoning violations.

F. Additional Application Materials. In addition to the application materials required for a Ministerial Site Plan (Chapter 22.186), the application shall contain the following information:

1. Letters of authorization from the supermarket operator and property owner authorizing the applicant to operate a supermarket accessory recycling collection center;
2. A copy of the State certification allowing a supermarket accessory recycling collection center on the site; and
3. A copy of the current and valid County business license issued for the supermarket.

G. Development Standards. Supermarket accessory recycling collection centers as an accessory use shall comply with the following standards:

1. Materials accepted. Supermarket accessory recycling collection center may only accept beverage containers in which a beverage is sold, and which is constructed of metal, glass, plastic, or any combination of these materials, such as bottles, cans, jars, or cartons.

2. Permitted Activity. A supermarket accessory recycling collection center shall only receive material that has been separated for reuse prior to receipt. The center may not process materials except for sorting, bundling, or bailing.

3. Distance. The supermarket accessory recycling collection center shall be located a minimum of 100 feet from Residential Zones, Commercial Zones, and Agricultural zoned parcels containing a residential use, or a mixed-use development containing residential uses.

4. Size. The total area occupied for a supermarket accessory recycling collection center shall not exceed 500 square feet.

5. Setback. The supermarket accessory recycling collection center shall be placed a minimum of 10 feet from all property lines, structures, a public right-of-way, or driveways.

6. Equipment. Power-driven processing equipment, except for reverse vending machines, is prohibited.

7. Storage of Collected Materials.
- a. The recyclable materials shall be deposited and stored in containers that have lids or closed containers. The containers shall be maintained in good condition and appearance with no structural damage, holes or visible rust, and be free of graffiti.
 - b. When the container is placed near a public or private sidewalk, a minimum of five-foot clearance shall be provided between the container and the sidewalk.
 - c. Vertical stacking of containers or receptacles is prohibited.
 - d. The containers shall be placed on a paved surface.
8. Drop-off and Loading Areas.

a. Areas for and access to drop-off and loading shall be clearly designated and shall not impede the on-site traffic circulation.

b. “No Idling” Sign Required. Where loading spaces or areas are provided, the loading area shall include at least one sign stating that vehicle idling shall be limited to five minutes. Graphics related to the vehicle idle limitation are permitted on said sign. Said sign shall be a minimum size of 12 inches wide by 18 inches in height and shall be prominently displayed and visible from the loading spaces/area. Said sign may contain language such as “5-minute idle limit,” “spare the air,” “please turn off engine when stopped,” or similar language.

c. A minimum of two containers shall be provided for customers to dispose of non-recyclable items. At least one of the containers shall have no perforations, mesh, or holes and be provided for customers to dispose any residual liquids from beverage containers prior to depositing them at the supermarket accessory recycling collection center.

9. Site Identification Sign. One sign with a minimum dimension of two feet in width and two feet in length and maximum dimension of three feet in width and three feet in length shall be permanently fixed on the supermarket accessory recycling collection center in a location visible and with text that is legible to customers and from the front of the nearest street. No freestanding signs, portable signs, or banners shall be allowed. The sign shall include the hours of operation, type of materials that may be deposited, telephone number of facility operator or a representative of the facility operator, phone number of the Zoning Enforcement Section of the Department, and emergency contact information for reporting any problems which may occur related to the operation of the

facility 24 hours a day, seven days a week. The sign shall also say the following: “No loitering or littering is permitted on the premises. No materials shall be left outside of enclosures.”

10.Required Parking. No additional parking is required for a supermarket accessory recycling collection center. However, supermarket accessory recycling collection centers shall not reduce the amount of parking for the existing uses on the property below the minimum required by Chapter 22.112 (Parking), unless a Minor Parking Deviation (Chapter 22.176) application is approved for the subject property.

11.Lighting. The supermarket accessory recycling collection center shall be equipped with adequate lighting. All outdoor lighting shall be directed away from any lots containing residential or agricultural uses.

12.Hours of Operation. Hours of operation are limited to 9:00 am to 6:00 pm, Monday through Saturday, and 12:00 pm to 5:00 pm on Sunday.

13.The supermarket accessory recycling collection center must be removed within 60 days of the day the supermarket ceases to operate.

Land Use Regulations including Permitted Zones, Types of Permits and Development Standards Required for Recycling Collection Facilities.

SECTION 34. Section 22.140.720 is hereby added to read as follows:

22.140.720 Recycling Collection Facilities

A. This Section establishes standards, conditions, and procedures that support and facilitate the development of recycling collection facilities as a principal use in a manner that protects public health, safety, and welfare, and minimizes significant impacts to the environment.

B. Definition. Specific terms used in this Section are defined in Section 22.14.180 (R) in Division 2 (Definitions), under “Recycling and Solid Waste”.

C. Applicability

1. This Section applies to recycling collection facilities as a principal use in Zones M-1, M-1.5, M-2, and M-2.5 for the deposit, drop-off, or buy-back of specific recyclable materials that may not involve processing, other than those specified in this Section.

2. Exception. This Section does not apply to legally established facilities that were approved with a Conditional Use Permit (Chapter 22.158) prior to [effective date of ordinance]. However, all requirements set forth in this Section shall apply to such facilities upon the expiration of the permit.

3. Applicability of Supplemental District Regulations. For recycling collection facilities where a provision of the supplemental district regulates the same matter as this Section, the more restrictive provision shall apply.

4. Emergency Situations. Where the Director has determined that an emergency exists, the Director has discretion to allow limited-term (not to exceed 12 months) recycling and solid waste collection and processing activities necessary to prevent or mitigate loss or damage to life, health, property, or essential public services through a Ministerial Site Plan Review (Chapter 22.186) application.

D. Application Requirement. A recycling collection facility requires a Conditional Use Permit (Chapter 22.158) application and shall meet the following requirements:

1. The parcel shall contain a minimum of 5,000 square feet of lot area, and,
2. If any portion of the lot containing the recycling collection facility is within a 500-foot radius of a lot containing a sensitive use, the entire facility shall be completely enclosed in a building.

E. Co-location. A recycling collection facility that co-locates as a primary use on a parcel with an existing solid or recycling waste facility may be permitted to apply for a modification of an existing Conditional Use Permit pursuant to Chapter 22.236 (Minor Modification or Elimination of Conditional Use Permit Conditions), provided that the following requirements are met:

1. The existing use is established with an approved Conditional Use Permit;
2. The approved Conditional Use Permit being modified is active and not expired; and
3. The existing use is in compliance with all existing Conditional Use Permit conditions.

F. Additional Application Materials. In addition to Subsection D, above, an operations plan that addresses all requirements specified in this Section shall be submitted.

G. Development Standards.

1. Materials Accepted. Recycling collection facilities may accept paper, cardboard, glass, non-ferrous metal, plastic, or other items deemed appropriate by the Commission or Hearing Officer. Liquid waste, organic waste, and mixed solid waste are

prohibited. Collection of any hazardous waste is prohibited unless an appropriate permit from the Fire Department and/or California Department of Toxic Substances Control has been provided to the Director.

2. Permitted Activity. A recycling collection facility shall only receive materials that have been previously separated off-site for reuse. The facility may not process materials, including briquetting, cleaning, compacting, crushing, flattening, grinding, re-manufacturing and shredding, except for sorting, bundling, or bailing.

3. Building Height. When a recycling collection facility is located on a site that is within a 500-foot radius of a lot containing a sensitive use, the building or structures or any portion proposed for additions, excluding chimneys, rooftop antennas, or roof solar panels, shall be within an encroachment plane sloping upward and inward, starting at 35 feet for new building or structure at the setback, or at the top of the existing roof for additions. For every foot above 35 feet, one additional foot setback is required, up to 45 feet. In such cases, the maximum building height permitted shall be 45 feet.

4. Walls, Fences, and Landscaping.

a. If a recycling facility site is located within a 500-foot radius of a lot containing sensitive uses, walls and landscaping shall be provided according to the requirements set forth in Chapter 22.84 (Green Zone Districts).

b. Any outdoor recycling collection facilities that are not subject to the requirements in Subsection F.4.a, above, shall provide walls or fences according to the requirements set forth in Section 22.140.430 (Outdoor Storage).

5. Storage of Collected Materials. All recyclable materials on site shall be stored in a secured manner in designated receptacles, bins, or pallets, and located on a

paved impermeable surface or stored within an enclosed building. Vertical stacking or storage of materials shall not exceed the height of the walls erected along the property lines.

6. Accessory Structures and Utilities. Any recycling collection facilities that conduct outdoor operations shall provide at least one office building that is permanently affixed to the ground, and one toilet that is served by public water and sewer, or otherwise approved by the Director, as well as the Departments of Public Health and Public Works.

7. Drop-Off and Loading for Facilities Open to General Public. Areas for and access to drop-off and loading shall be clearly designated and shall not impede on-site vehicular circulation. Drop-off and loading areas shall be located on site furthest away from lot lines that are closest to a nearby sensitive use, and shall comply with the following:

a. "No Idling" Sign Required. Where loading spaces are provided or the loading area shall include at least one sign stating that vehicle idling shall be limited to five minutes. Graphics related to the vehicle idle limitation are permitted on said sign. Said sign shall be a minimum size of 12 inches wide by 18 inches in height and shall be prominently displayed and visible from the loading spaces/area. Said sign may contain language such as "5-minute idle limit," "spare the air," "please turn off engine when stopped," or similar language.

b. A minimum of two receptacles shall be provided within a designated area near unloading areas for customer use, with a sign that identifies the type of materials to be deposited:

i. A trash receptacle for non-liquid waste.

ii. At least one leak-proof receptacle to place any residual liquids prior to depositing liquid containers at the recycling collection facility.

8. Vehicle Circulation. On-site vehicular circulation, turnaround, queuing areas, and ingress and egress shall be designated in such a way that they do not impede any other permitted activities and they avoid impacts on the public right-of-way as well as nearby sensitive uses, as approved by the Director and the Department of Public Works.

9. Perimeter Identification Sign. In addition to the sign that is permitted by Chapter 22.114 (Signs), and notwithstanding any contrary provisions in Division 10 (Community Standards Districts) in Title 22, each recycling collection facility shall provide a perimeter identification sign that complies with the following:

a. A perimeter identification sign shall be permanently affixed on a building or wall that is visible from the public right of way and legible for pedestrians, no higher than eight feet from the ground measured vertically from the base of the sign. No freestanding signs or portable signs are permitted as the perimeter identification sign.

b. A perimeter identification sign shall have a minimum sign area of four square feet and a maximum of nine square feet. The area for the perimeter identification sign shall not be accounted for the areas for business signs specified in Chapter 22.114 (Signs).

c. The perimeter identification sign shall permanently display hours of operation, schedule of charges, type of material that may be deposited, telephone number of the facility operator or a representative of the facility operator, emergency contact information for reporting any problems which may occur related to the operation of the facility 24 hours a day, seven days a week. The perimeter identification sign shall also

include the business name unless the property also contains a separate business sign that is clearly visible from the public right-of-way. The sign shall also include instructions or reporting violations to Regional Planning and AQMD, where a use is also regulated by AQMD. Information for reporting violations shall include the following text, or as updated by Regional Planning or AQMD:

i. "To report a violation to the Los Angeles County Department of Regional Planning, call 213-974-6453 Monday – Thursday, 7am – 6pm, dial 2-1-1 at any time or email zoningenforcement@planning.lacounty.gov;" and

ii. "To report a violation to South Coast Air Quality Management District (SCAQMD), call 1-800-CUTSMOG visit www.aqmd.gov."

c. The sign shall also indicate the following: "No loitering," "No littering," and "No materials left outside of the recycling collection enclosure or containers."

d. Additional signs and/or measures may be required in order to protect personnel and public health and safety.

10. Surfacing Requirements. All areas designated for operations and storage of recyclable materials shall be paved and maintained to the satisfaction of the Director and Public Works.

11. Lighting. The facility, yard, and equipment shall be equipped with adequate lighting. All outdoor lighting shall be directed away from any lots containing residential or agricultural uses.

12. Grading. Where grading is proposed for a project subject to a Conditional Use Permit, such projects must comply with all federal, state, and local laws with regard to protection of Tribal Cultural Resources.

13. Cleaning and Maintenance. The facility shall be kept in a clean, safe, and sanitary condition at all times, and maintain a source of running water on site.

H. Additional Findings. In addition to the findings required in Section 22.158.050.B (Findings and Decision), all projects subject to this Section shall meet the following findings:

1. The project is sited and designed in such a way to minimize and prevent impacts to the persons residing or working in the surrounding area or within the project site by incorporating appropriate operation strategies, mitigation measures, equipment, and other best practices.

2. The requested use will operate in such a way that it promotes the responsible use of resources and protection of the environment by providing adequate measures to control the handling of materials, air emissions of dust or toxins, nuisances, and migration of residues offsite, and by incorporating best practices for operation as well as site maintenance. The operator has demonstrated through an operation and maintenance plans that it will incorporate best practices for operation and site maintenance, including that the facility will be managed in a way that will not be a nuisance to surrounding properties and specifically sensitive uses.

I. Modification. When a modification is requested for development standards listed in Subsection F.4, above, the following findings shall apply in addition to the findings required in Section 22.158.050.B (Findings and Decision):

1. The existing adjoining property is located in an Industrial Zone and is developed with a similar use, and/or existing structures serve as an enclosure as well or better than the wall required herein; and

2. The requested modification provides alternative means to prevent adverse effects on environment and health of the residents and occupants in surrounding areas.

J. Revocation of Permit. Notwithstanding Chapter 22.238 (Modifications and Revocations), failure to comply with all requirements in this Section and all conditions of approval for the subject property shall result in an immediate citation of a Notice of Violation. Upon the second Notice of Violation issued within a year from the first Notice of Violation, the project will immediately be scheduled for permit revocation proceedings pursuant to Section 22.238 (Modifications and Revocations).

1. If a permit granted for a recycling collection facility is denied or revoked, the site shall be vacated within 30 days of the permit denial or revocation.

2. Upon closure of the recycling collection facility, the operator shall provide written notice of the intent to perform site restoration, at least 30 days prior to beginning site restoration. The site restoration procedures and scope shall ensure that the entire premises, structures, grounds, ponds, and drainage are clean of any residues and all machinery is removed.

K. Fees. In the case when a Conditional Use Permit (Chapter 22.158) is required, fees may be assessed to offset the costs associated with project mitigation, enforcement activities, operational impact mitigation studies, community benefit programs, and other costs related to the Project's impacts on the surrounding communities.

Land Use Regulations including Permitted Zones, Types of Permits and Development Standards Required for Recycling Processing Facilities.

SECTION 35. Section 22.140.730 is hereby added to read as follows:

22.140.730 Recycling Processing Facilities

A. This Section establishes standards, conditions, and procedures that support and facilitate the development of recycling processing facilities in a manner that protects public health, safety, and welfare and minimizes significant impacts to the environment.

B. Definitions. Specific terms used in this Section are defined in Section 22.14.180 (R) in Division 2 (Definitions), under "Recycling and Solid Waste."

C. Applicability

1. This Chapter applies to recycling processing facilities, including transfer stations, materials recovery facilities (MRFs), construction and demolition debris (C&D) recycling facilities, automobile dismantling and recycling yards, scrap metal yards, junk and salvage yards, inert debris processing facilities, conversion technology facilities (recycling), and other businesses processing used materials for recycling purposes. Incidental storage or sales may be permitted.

2. Exception. This Section does not apply to legally established facilities that were approved with a Conditional Use Permit (Chapter 22.158) prior to [effective date of ordinance]. However, all requirements set forth in this Section shall apply upon the expiration of such permits.

3. Applicability of Supplemental District Regulations.

a. Recycling processing facilities that are subject to the requirements in Chapter 22.84 (Green Zone Districts) shall comply with the applicable requirements in the Chapter 22.84 (Green Zone Districts).

b. For recycling processing facilities in which a provision of the supplemental district regulates the same matter as this Section, the more restrictive provision shall apply.

4. Similar Uses.

a. The Director may determine that a proposed type of recycling processing facility that is not listed in this Section, or in Division 2 (Definitions) may be allowed in compliance with requirements in this Section as deemed appropriate.

b. For a similar use, a Conditional Use Permit (Chapter 22.158) application is required.

c. Emergency Situations. Where the Director has determined that an emergency exists through an official Emergency Ordinance, the Director has discretion to allow limited-term (not to exceed 12 months) recycling and solid waste collection and processing activities necessary to prevent or mitigate loss or damage to life, health, property, or essential public services through a Ministerial Site Plan Review (Chapter 22.186) application.

D. Application Requirement. Recycling processing facilities that meet the requirements specified in Table 22.140.730-A, below, shall require a Conditional Use Permit (Chapter 22.158) application:

<u>TABLE 22.140.730-A: APPLICATION REQUIREMENTS FOR RECYCLING PROCESSING FACILITIES</u>				
<u>Requirements</u>	<u>MRF and Transfer Station</u>	<u>Auto Dismantling or Scrap Metal Facilities</u>	<u>C&D or Inert Debris Processing Facilities</u>	<u>Conversion Technology (Recycling) Facilities that process materials other than solid waste</u>
<u>Permitted Zones</u>	<u>M-2 and M-2.5</u>	<u>M-2 and M-2.5</u>	<u>M-1, M-1.5, M-2, M-2.5, and A-2 (Except C&D prohibited in A-2)</u>	<u>M-1, M-1.5, M-2, M-2.5, and A-2</u>

<u>Prohibition</u>	<u>Significant Ecological Areas, and Hillside Management Areas</u>	<u>Significant Ecological Areas, and Hillside Management Areas</u>	<u>Significant Ecological Areas, Agricultural Resource Areas, Hillside Management Areas</u>	<u>Significant Ecological Areas, Agricultural Resource Areas, and Hillside Management Areas</u>
<u>Minimum distance to the nearest sensitive uses</u>	<u>500'¹</u>	<u>500' for outdoor operation</u>	<u>500'</u>	<u>500'</u>
<u>Enclosure</u>	<u>Fully enclosed</u>	<u>Fully enclosed if within 500' of the lot line of the nearest sensitive uses²</u>	<u>Fully enclosed if within 1000' of the lot line of the nearest sensitive uses</u>	<u>Fully enclosed</u>
1. See Subsection H.1., Specific Standards for Materials Recovery Facilities and Transfer Stations.				

2. For auto dismantlers, the dismantling activity shall be enclosed within a structure. Ancillary operations, parking, and storage, including storage of equipment used in conducting such business, may be maintained outdoors, but shall be fully contained within the property boundaries and shall not extend onto adjacent public rights-of-way, or neighboring properties. The garage door or opening of the enclosed building shall face the opposite direction of the nearest sensitive use and may be kept open during operation for ventilation.

E. Co-location. A recycling processing facility that co-locates as a primary use on a parcel with an existing solid or recycling waste facility may be permitted to apply for a modification of an existing Conditional Use Permit pursuant to Chapter 22.236 (Minor Modification or Elimination of Conditional Use Permit Conditions), provided that the following conditions are met:

1. The existing use is established with an approved Conditional Use Permit;
2. The approved Conditional Use Permit is active (and not expired); and
3. The existing use is in compliance with all exiting Conditional Use Permit conditions.

F. Additional Application Materials. The applicant shall provide the following additional application materials:

1. A detailed description of all aspects of proposed operations, including but not limited to requirements provided in this Subsection F;

2. A noise evaluation report and control plans for odor, dust, and vibration prepared by a licensed professional. These materials shall be approved by the Department of Public Health prior to finalization of the permit;

3. When storage and/or processing is conducted outdoor, control plans for other hazards shall be required;

4. A statement demonstrating consistency with the adopted County Solid Waste Management Plan and/or the County Hazardous Waste Management Program as approved by Public Works; and

5. Construction and demolition debris facilities shall have diversion rates certified by Public Works or by a third party and approved by Public Works.

G. Development Standards

1. Materials Accepted for Processing.

a. Recycling processing facilities may accept materials such as paper, cardboard, glass, metal, plastic, construction and demolition debris, inert debris, tires and rubber, automobiles or automobile parts, pallets, or other items deemed appropriate by the Director.

b. Collection of any hazardous waste are prohibited unless the recycling processing facility site is located in Zone M-2 outside a 500-foot radius of a lot containing a sensitive use, and an appropriate permit has been obtained from the Fire Department and/or California Department of Toxic Substances Control.

2. Permitted Activity and Equipment. A recycling processing facility may use automated machinery for sorting, separating, baling, briquetting, crushing, compacting, grinding, shredding, and sorting of source-separated recyclable materials, subject to

additional dust mitigation measures as required by Air Quality Management Districts and/or noise mitigation measures as required by Department of Public Health.

3. Building Height. For any recycling processing facilities that adjoin or are adjacent to sensitive uses, any buildings or structures or any portion proposed for additions, excluding chimneys, rooftop antennas, or roof solar panels, shall be within an encroachment plane sloping upward and inward starting at 35 feet for new building or structure at the setback, or at the top of the existing roof for additions. For every foot above 35 feet, an additional one foot setback is required, up to 45 feet. For other sites within a 500-foot radius of a lot containing a sensitive use, the maximum building height shall be 45 feet.

4. Fences, Walls, and Landscaping.

a. If a recycling processing facility site is located within a 500-foot radius of a lot containing a sensitive use, walls and landscaping shall be provided according to the requirements set forth in Chapter 22.84 (Green Zone Districts).

b. Outdoor recycling processing facilities that are not subject to Subsection F.4.a, above, shall provide walls or fences and landscaping according to the requirements set forth in Section 22.140.430 (Outdoor Storage).

5. Drop-Off and Loading for facilities open to general public. Areas for and access to drop-off and loading shall be clearly designated and shall not impede the on-site vehicular circulation. Drop-off and loading zones shall be located on site furthest away from lot lines that are closest to a nearby sensitive uses and shall comply with the following:

a. “No Idling” Sign Required. Where loading spaces are provided or the loading area shall include at least one sign stating that vehicle idling shall be limited to five minutes. Graphics related to the vehicle idle limitation are permitted on said sign. Said sign shall be a minimum size of 12 inches wide by 18 inches in height and shall be prominently displayed and visible from the loading spaces/area. Said sign may contain language such as “5-minute idle limit,” “spare the air,” “please turn off engine when stopped,” or similar language.

b. A minimum of two receptacles shall be provided within a designated area near unloading areas for customer use, with a sign that identifies the type of materials to be deposited:

- i. A trash receptacle for non-liquid waste; and
- ii. At least one leak-proof receptacle to place any residual liquids prior to depositing liquid containers at recycling processing facility.

6. Vehicle Circulation. On-site vehicular circulation, turnaround, queuing areas, and ingress and egress shall be designated in such a way that they do not impede any other permitted activities and they avoid impacts on the public right-of-way as well as nearby sensitive uses, as approved by the Director and the Department of Public Works.

7. Storage of Collected Materials. All recyclable materials shall be stored on site in designated receptacles, bins, pallets, or areas.

8. Perimeter Identification Signs. In addition to the signs permitted by Chapter 22.114 (Signs), and notwithstanding any contrary provisions in Division 10 (Community Standards Districts) in Title 22, each recycling processing facility shall provide a perimeter identification sign that complies with the following:

a. A perimeter identification sign shall be permanently affixed on a building or wall that is visible and with text that is legible from the public-right-of-way for pedestrians, no higher than eight feet from the ground measured vertically from the base of the sign. No freestanding signs or portable signs are permitted as a perimeter identification sign.

b. A perimeter identification sign shall have a minimum area of four square feet and maximum area of nine square feet. The area for the perimeter identification sign shall not be accounted for the areas for business signs specified in Chapter 22.114 (Signs).

c. The perimeter identification sign shall permanently display hours of operation, schedule of charges, type of material that may be deposited, telephone number of the facility operator or a representative of the facility operator, and emergency contact information for reporting any problems which may occur related to the operation of the facility 24 hours a day, seven days a week. The sign shall also include the business name unless the property also contains a separate business sign that is clearly visible from the public right-of-way. The sign shall also include instructions or reporting violations to Regional Planning and AQMD, where a use is also regulated by AQMD. Information for reporting violations shall include the following text, or as updated by Regional Planning or AQMD:

i. "To report a violation to the Los Angeles County Department of Regional Planning, call 213-974-6453 Monday – Thursday, 7am – 6pm, dial 2-1-1 at any time or email zoningenforcement@planning.lacounty.gov;" and

ii. "To report a violation to South Coast Air Quality Management District (SCAQMD), call 1-800-CUTSMOG visit www.aqmd.gov."

d. The sign shall also indicate the following: "No loitering," "No littering," and "No materials left outside of the recycling enclosures or containers."

e. Additional signs and/or measures may be required in order to protect personnel and public health and safety.

9. Access. Any roads or highways that are used for vehicular access to a recycling processing facility site as well as other areas on-site used for vehicular maneuvering shall be improved and maintained to the satisfaction of Public Works and Fire Department.

10. Lighting. The facility, yard, and equipment shall be equipped with lighting. All outdoor lighting shall be directed away from any lots containing residential or agricultural uses.

11. Grading. Where grading is proposed for a project subject to a Conditional Use Permit, such projects must comply with all federal, state, and local laws with regard to protection of Tribal Cultural Resources.

12. Cleaning and Maintenance. The facility shall be kept in a clean, safe and sanitary condition at all times, and maintain a source of running water on site.

H. Specific Requirements for Materials Recovery Facilities and Transfer Stations.

1. Any new materials recovery facility or transfer station sites shall be located outside a 500-foot buffer of a lot that contains a sensitive use.

2. All operations and storage, including equipment used in conducting such business, other than parking, shall be conducted within completely enclosed buildings.

3. Surfacing. All areas designated for operations and storage of recyclable materials shall be paved with impermeable surfacing, subject to approval by the Director and the Department of Public Works, to prevent offsite water leak or contamination, or tracking of dust or mud.

a. All areas of broken concrete or asphalt, including but not limited to divots, cracks, potholes, and spalling of concrete or asphalt in the raw material receiving area of a recycling processing facility, or any portion of the facility where waste materials are unloaded and touch the ground outside of an enclosure shall be patched, repaired, or repaved as necessary to prevent standing water or puddles with a surface area greater than one square foot from accumulating.

4. Exceptions.

a. Notwithstanding Chapter 22.172 (Nonconforming Uses, Building and Structures), existing recycling processing facilities that operate within completely enclosed buildings and are located within a 500-foot radius of a lot containing a sensitive use may continue operation provided that they have an approved Conditional Use Permit (Chapter 22.158) or obtain an approval for a Conditional Use Permit within 7 years of [Effective Date of this Ordinance].

b. Notwithstanding Chapter 22.172 (Nonconforming Uses, Building and Structures), existing outdoor recycling processing facilities that are subject to the requirements in Chapter 22.84 (Green Zone Districts) may continue operation provided

that the facilities are in compliance with all applicable requirements in the Chapter 22. 84 (Green Zone Districts), including Section 22.84.040 (Schedule for Compliance for Existing, Legally-Established Uses).

I. Specific Requirements for Auto Dismantling Facilities and Scrap Metal Facilities.

1. For auto dismantling or scrap metal facility sites located within a 500-foot radius of the lot containing a sensitive use, all dismantling activity and scrap metal operations shall be conducted in an enclosed building. Ancillary operations, parking, and storage, including storage of equipment used in conducting such business, may be maintained outdoors, but shall be fully contained within the property boundaries and shall not extend onto adjacent public rights-of-way, or neighboring properties. The garage door or opening of the enclosed building for dismantling activity shall face the opposite direction of the nearest sensitive use and may be kept open during operation for ventilation.

2. Storage of Materials.

a. All materials shall be stored in a secured manner within designated areas on a paved impermeable surface, or within an enclosed building.

b. Any materials stored outdoors shall be located at least 10 feet away from the surrounding walls, or the length equal to the wall height, whichever is greater.

c. The height of the materials stored outdoor shall not exceed the walls or fences erected along the property lines.

3. Accessory Structures and Utilities. Auto dismantling facilities and scrap metal facilities that conduct outdoor operations shall provide at least one office building that is permanently affixed to the ground and one toilet that is served by public water and sewer, or otherwise approved by the Director and the Department of Public Health.

J. Specific Requirements for Construction and Demolition Debris and Inert Debris Processing Facilities.

1. Materials Accepted. Construction and demolition debris or inert debris processing facilities shall receive materials that have been separated for reuse prior to receipt.

2. Any construction and demolition debris or inert debris processing facility sites shall be located outside a 500-foot buffer of a lot that contains a sensitive use.

3. Any construction and demolition debris processing facility or inert debris processing facility located between a 501-1,000-foot buffer of a lot that contains a sensitive use shall conduct all operations, including storage and equipment use, within completely enclosed buildings.

4. Storage of Materials.

a. All materials shall be stored in a secured manner within designated areas.

b. Any materials stored outdoors shall be located at least 10 feet away from the surrounding walls, or the length equal to the wall height, whichever is greater.

c. For any materials located within 50 feet of the property line or visible from the right of way, the height of the materials stored outdoors shall not exceed the walls or fences erected along the property lines.

5. Accessory Structures and Utilities. Construction demolition debris or inert debris processing facilities that conduct outdoor operations shall provide at least one office building that is permanently affixed on the ground and one toilet that is served by public water and sewer, or otherwise approved by the Director and the Department of Public Health.

K. Additional Findings. In addition to the findings required in Section 22.158.050.B (Findings and Decision), the following additional findings shall apply:

1. The project is sited and designed in such a way that the operation minimizes impacts, such as noise, dust, traffic, and odor, to the environment and persons residing or working in the surrounding area or within the project site. Such impacts include, but are not limited to, noise, dust, traffic, and odor.

2. The requested use shall operate in such a way that it promotes the responsible use of resources and protection of the environment by providing adequate measures to control the handling of materials, air emissions, dust, noise, nuisance, and migration of residues offsite.

3. The operator has demonstrated through an operation and maintenance plans that the facility shall incorporate best practices for operation and site maintenance, including evidence that the facility shall be managed in a way that will not be a nuisance to surrounding properties and specifically sensitive uses.

L. Additional Findings for a Modification to Development Standards.

1. A modification may be requested for the following development standards:

a. Subsection G.4 (Fences, Walls, and Landscaping);

b. Subsections H.3 (Surfacing);

c. Subsection I.3 (Accessory Structures and Utilities for Auto Dismantling Facilities and Scrap Metal Facilities);

d. Subsection J.4.C (Storage of Materials for Construction Demolition Debris and Inert Debris Processing Facilities); and

e. Subsection J.5 (Accessory Structures and Utilities for Construction Demolition Debris and Inert Debris Processing Facilities), provided that the facility site is located within the Rural Outdoor Lighting District (Chapter 22.80).

f. Minimum distance requirements as specified in Subsection J.2 (Specific Requirements for Construction Demolition Debris and Inert Debris Processing Facilities), provided that the facility site is at least seven acres in size and the entire operation area is located outside a 500-foot radius of the nearest lot containing a sensitive use.

g. Minimum distance requirements as specified in Subsection J.3 (Specific Requirements for Construction Demolition Debris and Inert Debris Processing Facilities), provided that the facility site is at least 25 acres in size and the entire operation area may be located outside a 1,000-foot radius of the nearest lot containing a sensitive use.

2. In addition to the applicable findings required by Subsection K, above, a modification request shall meet the following findings to be approved, as applicable:

a. Due to topographic or physical features of the site, strict compliance with all the required development standards would substantially and unreasonably interfere with the establishment of the proposed project or continuation of the existing operation on the subject property;

b. The requested modification provides alternative means to prevent adverse effects on environment and public health of the surrounding communities; and

c. Granting the requested modification is consistent with the goals of this Section.

M. Revocation of Permit. Notwithstanding Chapter 22.238 (Modifications and Revocations), any recycling processing facilities that fail to comply with all requirements in this Section and all conditions of approval for the subject property shall result in an immediate issuance of a Notice of Violation. Upon the issuance of the Notice of Violation, the project may be subject to permit revocation proceedings pursuant to Section 22.238 (Modifications and Revocations).

1. If a permit granted for a facility is denied or revoked, the site shall be vacated.

2. Upon closure of the facility, the operator shall provide written notice of the intent to perform site restoration, at least 30 days prior to beginning site restoration. The

site restoration procedures and scope shall ensure that the entire premises, structures, grounds, ponds, and drainage are clean of any residues and all machinery is removed.

N. Fees. In the case when a Conditional Use Permit (Chapter 22.158) is required, fees may be assessed to offset the costs associated with project mitigation, enforcement activities, operational impact mitigation studies, community benefit programs, and other costs related to the Project's impacts on the surrounding communities.

Land Use Regulations including Permitted Zones, Types of Permits and Development Standards Required for Organic Waste Facilities.

SECTION 36. Section 22.140.740 is hereby added to read as follows:

22.140.740 Organic Waste Facilities

A. This Section establishes standards, conditions, and procedures that support and facilitate the development of organic waste facilities in a manner that protects public health, safety, and welfare, and minimizes significant impacts to the environment.

B. Definitions. Specific terms used in this Section are defined in Section 22.14.180 (R) (Definitions), under "Recycling and Solid Waste."

C. Applicability.

1. This Section applies to facilities that handle organic waste, including mulching facilities, chipping and grinding facilities, composting facilities, and in-vessel

organic waste conversion facilities as a principal use or as a co-located use with other recycling or solid waste facilities.

2. Exception. This Section does not apply to existing, legally established facilities that were approved with the appropriate land use entitlements and are not subject to the requirements in Chapter 22.84 (Green Zone Districts). For such facilities that are subject to the requirements in Chapter 22.84 (Green Zone Districts), this Section does not apply until the expiration of such entitlements. Facilities with an approved Ministerial Site Plan (Chapter 22.186) shall comply with the applicable provisions of this Section pursuant to Section 22.84.040 (Schedule for Compliance for Existing, Legally-Established Uses).

a. Co-location in Zones M-1 and M-1.5. An organic waste use that proposes co-location with an existing, legally established solid-waste facility in Zones M-1 or M-1.5 that was approved with a Conditional Use Permit prior to [Effective date of this ordinance], and not subject to the requirements in Chapter 22.84 (Green Zone Districts), may be permitted to apply for a modification of an existing Conditional Use Permit pursuant to Chapter 22.236 (Minor Modification or Elimination of Conditional Use Permit Conditions), given the following are met:

i. The existing use is established with an approved Conditional Use Permit;

ii. The approved Conditional Use Permit is active (and not expired);
and

iii. The existing use is in compliance with all existing Conditional Use Permit standards.

3. Applicability of Supplemental District Regulations.

a. Organic waste facilities that are subject to the requirements in Chapter 22.84 (Green Zone Districts) shall comply with the applicable requirements in that Chapter.

b. For recycling processing facilities where a provision of the supplemental district regulates the same matter as this Section, the more restrictive requirements shall apply.

4. Similar Uses.

a. The Director may determine that a proposed organic waste facility not listed in this Section, or in Division 2 (Definitions) may be allowed in compliance with requirements in this Section as deemed appropriate.

b. For a similar use, a Conditional Use Permit (Chapter 22.158) application is required.

c. Emergency Situations. Where the Director has determined that an emergency exists, the Director has discretion to allow limited-term (not to exceed 12 months) recycling and solid waste collection and processing activities necessary to prevent or mitigate loss or damage to life, health, property, or essential public services through a Ministerial Site Plan Review (Chapter 22.186) application.

D. Application Requirement. Organic waste facilities that meet the criteria specified in Table 22.140.740-A, below, shall require a Conditional Use Permit (Chapter 22.158) application:

TABLE 22.140.740-A: REQUIREMENTS FOR ORGANIC WASTE FACILITIES

	<u>Chipping and Grinding or Mulching Facilities</u>	<u>Composting Facilities, including In-vessel Composting</u>	<u>Anaerobic Digestion Facilities, Non-combustion Biomass Conversion Facilities⁴</u>	<u>Combustion Biomass Conversion Facilities</u>
<u>Permitted Zones</u>	<u>M-1, M-1.5, M-2, M-2.5 and A-2</u>	<u>M-1², M-1.5², M-2, M-2.5, and A-2</u>	<u>M-2, M-2.5, and A-2</u>	<u>M-2, M-2.5, and A-2</u>
<u>Prohibition¹</u>	<u>SEA, High Fire Hazard Severity Zone, or Very High Fire Hazard Severity Zone</u>	<u>SEA</u>	<u>SEA, ARA</u>	<u>SEA, ARA</u>
<u>Distance to the nearest sensitive uses</u>	<u>1500' from the lot line of the nearest sensitive use.</u>	<u>500'³ or 1500' from the lot line of the nearest sensitive use</u>	<u>500' or 1500'⁵ from the lot line of the nearest sensitive use</u>	<u>1500' from the lot line of the nearest sensitive</u>

	<u>unless entirely enclosed</u>			<u>use, unless entirely enclosed</u>
<u>Minimum Lot Size</u>	<u>1.5 acres</u>	<u>3 acres</u>	<u>3 acres</u>	<u>3 acres</u>
<p><u>1. Any portion of the facility and operation areas are prohibited in specified areas.</u></p> <p><u>2. A composting facility that accepts green materials only may be permitted in zones M-1 and M-1.5.</u></p> <p><u>3. A composting facility that accepts green materials only or is fully enclosed within a building and accessory to a legally, established use, and processes waste generated on-site only, may be located within 500 feet of a lot containing a sensitive use. Otherwise a composting facility shall be located at least 1,500 feet from a lot containing a sensitive use.</u></p> <p><u>4. Anaerobic digestion facilities and non-combustion biomass conversion facilities that are co-located with an existing landfill are exempt from the zoning requirements.</u></p> <p><u>5. An anaerobic digestion or non-combustion biomass conversion facility that is fully enclosed within a building, processes waste produced on-site only, and is accessory to a legally, established use may be located within 500 feet from a lot containing a sensitive use. Otherwise an anaerobic digestion or non-combustion biomass</u></p>				

conversion facility shall be located at least 1,500 feet from a lot containing a sensitive use.

E. Co-location. An organic waste facility that co-locates as a primary use on a parcel with an existing solid or recycling waste facility may be permitted to apply for a modification of an existing Conditional Use Permit pursuant to Chapter 22.236 (Minor Modification or Elimination of Conditional Use Permit Conditions), given the following are met:

1. The existing use is established with an approved Conditional Use Permit;
2. The approved Conditional Use Permit is active (and not expired); and
3. The existing use is in compliance with all existing Conditional Use Permit standards.

F. Organic Waste Accessory Uses. An organic waste use, including vermicomposting, in-vessel composting, anaerobic digestion, or biomass conversion facility may be permitted through a Ministerial Site Plan Review or in conjunction with a required Conditional Use Permit application as an accessory organic waste processing or composting when operated in conjunction with a commercial or institutional use permitted in the zone, but not as a separate primary use, where large amounts of food or other organic waste are generated (including schools, hospitals, restaurants, supermarkets, plant nurseries, etc.), so long as the accessory use does not exceed processing of 100 tons per day, is limited to processing only organic waste generated on-site, and is conducted completely in an enclosed structure that meets the requirements specified in Chapter 22.130 (Storage Enclosure for Recycling and Solid Waste). The

organic waste accessory use may be located within the primary structure or an accessory structure attached or detached from the primary structure. If the organic waste accessory use is located within a detached accessory structure, the accessory structure must have a 10-foot separation from any building and 20-foot separation from any door or window. The organic waste accessory use shall be required to obtain a building permit from Public Works and must comply with additional restrictions, requirements, monitoring, and inspections pertaining to odor, noise, emissions, traffic, and other potential impacts as determined by Public Works.

G. Additional Application Materials. The applicant shall submit additional materials as follows:

1. A detailed description of all aspects of proposed operations and facility maintenance plans, including but not limited to all requirements provided in this Section, types and volumes of feedstocks, conversion technology process to be employed, proposed use of energy products, the types and volumes of any waste produced and ways to dispose of them, as applicable;

2. A noise evaluation report and control plans for odor, dust, and vibration prepared by a licensed professional. These materials shall be approved by the Department of Public Health prior to the permit being finalized;

3. A litter and vector control plan and maintenance plan approved by the Department of Public Health;

4. A statement demonstrating consistency with the adopted County Solid Waste Management Plan and/or the County Hazardous Waste Management Program as approved by Public Works.

H. Development Standards.

1. Materials Accepted. Facilities may accept organic materials including, but not limited to, compostable materials, yard trimmings, untreated wood wastes, natural fiber productions, food waste, manure, biosolids, digestate, and other materials as approved by California Department of Resources Recycling and Recovery (CalRecycle) and the Director. Treated or untreated medical waste or hazardous waste are prohibited.

2. Permitted Activity and Equipment.

a. Transfer, pre-processing, mixing, composting, screening, chipping and grinding, storage, in-vessel processing, and other processing necessary to production of compost, compost feedstocks, chipped and ground materials, and other byproducts as approved by the Director.

b. In-vessel digestion process may also involve additional type of operation, including thermal and mechanical process and biogas utilization, as approved by the Director.

3. Enclosure. When a building enclosure is provided for facility operation, an appropriate air filtration system shall be required for indoor air quality in accordance with California Division of Occupation Safety and Health and California Air Resources Board requirements, and for outdoor air quality in accordance with Air Quality Management District requirements. The Department of Public Health may be consulted on additional air quality recommendations.

4. Fences, Walls, and Landscaping.

a. If an entirely enclosed chipping and grinding or mulching facility site is located within a 500-foot radius of a lot containing a sensitive use, walls and landscaping

shall be included on a landscaping plan submitted to the Department and meet the following requirements:

i. Walls. Walls should be constructed in a workmanlike manner using:

(1) A uniform height between eight and 12 feet;

(2) A minimum thickness of six inches;

(3) A neutral color, except black; and

(4) Materials such as concrete masonry unit (CMU) or masonry,

brick, etc.

ii. Any type of fence or wire is prohibited, except that metal gates may be permitted for vehicular access only.

iii. Landscaping on street frontage.

(1) Required solid walls along the street frontage shall be set back by landscaping of minimum five feet in depth.

(2) Such landscaping area shall be planted with one 15-gallon tree for every 100 square feet. The remaining area shall also be landscaped. All plants provided for required landscaping shall be drought-tolerant.

(3) The landscaping shall be maintained with appropriate watering, pruning, weeding, fertilizing, and litter removal. Plants shall be replaced when necessary.

(4) Trees shall be planted in locations that maintain the required lines of sight for safe pedestrian and vehicular movement and will not cause root damage to the sidewalk or other public infrastructure, to the satisfaction of Public Works.

(5) Trees planted near buildings or fire lanes shall be placed in locations that do not adversely impact Fire Department operations or response times, to the satisfaction of the Fire Department.

iv. Landscaping along the adjoining property lines.

(1) When the facility adjoins a lot containing a sensitive use, a minimum of 10 feet of landscaped setback shall be provided along the adjoining property lines.

v. All landscaping shall include only non-invasive plant species.

vi. Landscaping equipment used for maintenance, such as lawn mowers and leaf blowers shall be electric and non-combustion powered.

b. All other outdoor organic waste facilities that are not subject to Subsection H. 4.a, above, and are located on a parcel of one acre or less shall provide walls or fences and landscaping according to the requirements set forth in Section 22.140.430 (Outdoor Storage).

5. Drop-Off and Loading. Areas for and access to drop-off, loading, and weighing shall be clearly designated and shall not impede the on-site vehicular circulation. Drop-off and loading areas shall be located on site furthest away from lot lines closest to a nearby sensitive use, and shall comply with the following:

a. "No Idling" Sign Required. Where loading spaces are provided or the loading area shall include at least one sign stating that vehicle idling shall be limited to five minutes. Graphics related to the vehicle idle limitation are permitted on said sign. Said sign shall be a minimum size of 12 inches wide by 18 inches in height and shall be

prominently displayed and visible from the loading spaces/area. Said sign may contain language such as “5-minute idle limit,” “spare the air,” “please turn off engine when stopped,” or similar language.

6. Vehicle Circulation. On-site vehicular circulation, turnaround, queuing areas, and ingress and egress shall be designated in such a way that they do not impede any other permitted activities and they avoid impacts on the public right-of-way as well as nearby sensitive uses, as approved by the Director and the Department of Public Works.

7. Storage of Collected Materials.

a. Physical contaminants and refuse removed from feedstock or final products shall be isolated and stored in a solid container and transported to an appropriate off-site waste management facility once per week, or as otherwise approved by the Director.

b. All recyclable materials stored on site shall be in designated areas or in receptacles, bins, or pallets in a secured manner, or within an enclosed building.

c. At outdoor facilities, vertical stacking or storage of materials shall not exceed the height of the walls erected along the perimeter.

8. Perimeter Identification Signs. In addition to the signs permitted by Chapter 22.114 (Signs), and notwithstanding any contrary provisions in Division 10 (Community Standards Districts) in Title 22, each organic waste facility shall provide a perimeter identification sign that complies with the following:

a. A perimeter identification sign shall be permanently affixed on a building or wall that is visible and with text that is legible from the public right-of-way and for pedestrians.

b. A perimeter identification sign shall have a minimum area of four square feet and maximum area of nine square feet. The area for the perimeter identification sign shall not be accounted for the areas for business signs specified in Chapter 22.114 (Signs).

c. The perimeter identification sign shall permanently display hours of operation, schedule of charges, type of material that may be deposited, telephone number of the facility operator or a representative of the facility operator, emergency contact information for reporting any problems which may occur related to the operation of the facility 24 hours a day, seven days a week. The perimeter identification sign shall also include the business name unless the property also contains a separate business sign that is clearly visible from the public right-of-way. The sign shall also include instructions for reporting violations to Regional Planning and AQMD, where a use is also regulated by AQMD. Information for reporting violations shall include the following text, or as updated by Regional Planning or AQMD:

i. "To report a violation to the Los Angeles County Department of Regional Planning, call 213-974-6453 Monday – Thursday, 7am – 6pm, dial 2-1-1 at any time or email zoningenforcement@planning.lacounty.gov;" and

ii. "To report a violation to South Coast Air Quality Management District (SCAQMD), call 1-800-CUTSMOG visit www.aqmd.gov."

d. The sign shall also indicate the following: "No loitering," No littering," and "No material shall be left outside of the organic waste enclosure or containers."

e. Additional signs and/or measures may be required in order to protect personnel and public health and safety.

9. Surfacing. All areas designated for operations, storage of materials, and vehicular access shall be maintained and controlled so as to prevent excessive dust generated from operation, offsite water leak or contamination, or tracking of dust or mud, to the satisfaction of the Director and Public Works.

a. All areas of broken concrete or asphalt, including but not limited to divots, cracks, potholes, and spalling of concrete or asphalt in the raw material receiving area of a recycling processing facility, or any portion of the facility where waste materials are unloaded and touch the ground outside of an enclosure shall be patched, repaired, or repaved as necessary to prevent standing water or puddles with a surface area greater than one square foot from accumulating.

10. Access. Any roads or highways that are used for vehicular access to a facility site shall be improved and maintained to the satisfaction of Public Works and the Fire Department.

11. Lighting. The facility, yard, and equipment shall have adequate lighting. All outdoor lighting shall be directed away from any lots containing residential or agricultural uses.

12. Projects that propose grading. Where grading is proposed for a project subject to a Conditional Use Permit, such projects must comply with all federal, state, and local laws with regard to protection of Tribal Cultural Resources.

13. Cleaning and Maintenance. Facility shall be maintained in a clean, safe and sanitary condition at all times, and maintain a source of running water on site.

14. Accessory Structures and Utilities. Any facility that conducts an outdoor operation shall provide at least one office building and one toilet that is served by public water and sewer, or otherwise approved by the Director and the Department of Public Health.

15. Dust, Odors, and Vibration. All operations shall be conducted in a manner that minimizes odor, dust, noise, vibration, and vectors. The operation shall be controlled so that human contact with dust, particulates, and pathogenic organisms through inhalation, ingestion, and transportation are minimized. Noise evaluation report and control plans for odor, dust, vibration, and vectors prepared by a licensed professional shall be approved by the Department of Public Health.

16. Fire Prevention. Once the facility is operational, the operator shall provide measures for fire prevention, protection, and control as required, approved, and regulated by the Fire Department.

I. Specific Requirements for Chipping and Grinding, Mulching, or Composting Facilities.

1. Setback.

a. In A-2 Zone only, chipping and grinding and mulching facilities shall be setback a minimum of 30 feet from the public right-of-way.

2. Storage of Materials in Outdoor Facilities.

a. The maximum pile height of all feedstock and actively decomposing compost shall be 12 feet.

b. Any contaminants or residuals removed from the feedstock shall be collected separately and shall not be stored onsite more than seven days.

3. Fire Prevention.

a. The areas within 100 feet of all windrows and piles shall be maintained free of any flammable vegetation and combustible materials.

b. A fire lane of 20 feet in width shall be provided along the perimeter of the area where piles and windrows are located.

c. A distance of 20 feet shall be maintained between any piles or windrows.

J. Additional Findings. In addition to the findings required in Section 22.158.050.B (Findings and Decision), the following findings shall be made:

1. The project is sited and designed in such a way that the operation minimizes impacts, such as noise, dust, traffic, and odor to the environment and to persons residing or working in the surrounding area or at the facility.

2. The requested use will operate in such a way that it promotes the responsible use of resources and protection of the environment by providing adequate measures to control the handling of materials, air emissions, dust, noise, nuisance, and migration of residues offsite, and also by incorporating best practices for operation as well as site maintenance. The operator has demonstrated through an operation and maintenance plans that it will incorporate best practices for operation and site maintenance, including that the facility will be managed in a way that will not be a nuisance to surrounding properties and specifically sensitive uses.

K. Additional Findings for a Modification of Development Standards.

1. A modification can be requested for the following development standards:

a. If the facility site is located within a Rural Outdoor Lighting District (Chapter 22.80), the following standards: Subsection H.4 (Fences, Walls and Landscaping).

b. If the facility site is located within a Rural Outdoor Lighting District (Chapter 22.80), the following standards: Subsection H.7.b and c (Storage of Collected Materials).

c. Subsection H.14 (Accessory Structures and Utilities), provided that the facility site is located within the Rural Outdoor Lighting District (Chapter 22.80).

d. Minimum distance requirements as specified in Table 22.140.740-A, above, provided that the entire operation area is located outside the required minimum distance for a specific type of facility from the nearest lot containing a sensitive use.

2. In addition to the applicable findings required by Subsection J, above, a modification request shall meet the following additional findings, as applicable:

a. Due to topographic or physical features of the site, strict compliance with all the required development standards would substantially and unreasonably interfere with the establishment of the proposed project or continuation of the existing operation on the subject property;

b. The requested modification provides alternative means to prevent adverse effects on environment and public health of the surrounding communities; and

c. Granting the requested modification is consistent with the goals of this Section.

L. Revocation of Permit. Notwithstanding Chapter 22.238 (Modifications and Revocations), failure to comply with all requirements in this Section and all conditions of approval for the subject property shall result in an immediate citation of a Notice of Violation. Upon the issuance of a Notice of Violation, the project may be subject to permit revocation proceedings pursuant to Section 22.238 (Modifications and Revocations).

1. If a permit granted for a facility is denied or revoked, the site shall be vacated within 90 days of the permit denial or revocation.

2. Upon closure of the facility, the operator shall provide written notice of the intent to perform site restoration, at least 30 days prior to beginning site restoration. The site restoration procedures and scope shall ensure that the entire premises, structures, grounds, ponds, and drainage are clean of any residues and all machinery is removed.

M. Fees. In the case when a Conditional Use Permit (Chapter 22.158) is required, fees may be assessed to offset the costs associated with project mitigation, enforcement activities, operational impact mitigation studies, community benefit programs, and other costs related to the Project's impacts on the surrounding communities.

Land Use Regulations including Permitted Zones, Types of Permits and Development Standards Required for Solid Waste Facilities.

SECTION 37. Section 22.140.750 is hereby added to read as follows:

22.140.750 Solid Waste Facilities.

A. This Section establishes standards, conditions, and procedures that support and promote sustainable ways of handling of solid waste facilities while protecting the environment and public health.

B. Definitions. Specific terms used in this Section are defined in Section 22.114.190 (S) in Division 2 (Definitions), under “Solid Waste Facilities”.

C. Applicability. This Section applies to solid waste landfills, inert debris landfills, or facilities that convert solid waste to gas or energy in Zones A-2, M-2, and M-2.5.

1. An expansion of an existing, legally established solid waste landfill, inert debris landfill, or facility that converts solid waste to gas or energy may be permitted, provided it does not encroach into prohibited zones. This Section applies only to the expanded portion of the existing use.

2. Exceptions. This Section shall not apply to the existing portion of solid waste landfills, inert debris landfills, or facilities that convert solid waste to gas or energy as of the effective date of this Section and any portions thereof that have been operating with an approved Conditional Use Permit (Chapter 22.158). The requirements in Chapter 22.172 (Nonconforming Uses, Buildings, and Structures) shall not apply to the aforementioned facilities.

a. Existing Facilities in Zones M-1 and M-1.5. For existing, legally established facilities that were approved with a Conditional Use Permit prior to [Effective date of this ordinance] in Zones M-1 or M-1.5, and not subject to the requirements in Chapter 22.84 (Green Zone Districts), the use shall continue to be allowed with a new Conditional Use Permit upon expiration as determined by the Department.

b. Co-location in Zones M-1 and M-1.5. A use that proposes co-location with an existing, legally established solid-waste or recycling waste facility in Zones M-1 or M-1.5 that was approved with a Conditional Use Permit prior to [Effective date of this ordinance], and not subject to the requirements in Chapter 22.84 (Green Zone Districts), may apply for a modification of an existing Conditional Use Permit pursuant to Chapter 22.236 (Minor Modification or Elimination of Conditional Use Permit Conditions), given provided the following requirements are met:

i. The existing use is established with an approved Conditional Use Permit;

ii. The approved Conditional Use Permit is active (and not expired);
and

iii. The existing use is in compliance with all existing Conditional Use Permit standards.

3. Prohibition.

a. Conversion technology (solid waste) facilities or facilities that convert solid waste to gas or energy are prohibited within:

i. A 1,500-foot radius of lots containing sensitive uses or agricultural uses when measured from the lot lines.

ii. Agricultural Resource Areas

iii. Significant Ecological Areas.

b. Solid waste landfills and inert debris landfills are prohibited within:

i. A 1,500-foot radius of lots containing sensitive uses or agricultural uses when measured from the lot lines.

ii. Agricultural Resource Areas.

iii. FEMA 100 year flood zones.

iv. LA County Floodways.

v. Significant Ecological Areas.

4. Modification to Existing Facility

a. Any modification to an existing, legally established facility as of the effective date of this Section that would encroach into the prohibited areas specified in Subsection C.3, above, requires approval of a Variance (Chapter 22.195) application and shall meet additional findings pursuant to Subsections H.1 and H.2, below.

b. Any modification to an existing, legally established facility as of the effective date of this Section that would not encroach into the prohibited areas may be permitted with a modification of an existing Conditional Use Permit pursuant to Chapter 22.236 (Minor Modification or Elimination of Conditional Use Permit Conditions) and is subject to all development standards listed in this Section, provided that the following conditions are met:

i. The existing use is established with an approved Conditional Use Permit;

ii. The approved Conditional Use Permit being modified is active and not expired; and

iii. The existing use is in compliance with all existing Conditional Use Permit conditions.

5. Similar Uses.

a. The Director may determine that a proposed solid waste facility not listed in this Section, or in Section 22.114.190 (S) in Division 2 (Definitions) may be allowed in compliance with requirements in this Section as deemed appropriate.

b. For a similar use, a Conditional Use Permit (Chapter 22.158) application is required.

c. Emergency Situations. Where the Director has determined that an emergency exists, the Director has discretion to allow limited-term (not to exceed 12 months) recycling and solid waste collection and processing activities necessary to prevent or mitigate loss or damage to life, health, property, or essential public services through a Ministerial Site Plan Review (Chapter 22.186) application.

D. Application Requirements. Solid waste landfills, inert debris landfills, and facilities that convert solid waste to gas or energy that meet the requirements specified below shall require a Conditional Use Permit (Chapter 22.158) application:

1. Conversion technology facilities (solid waste).

a. Conversion technology facilities (solid waste) may be established as a primary use or co-located with other types of recycling or solid waste facilities.

b. Conversion technology facilities (solid waste) shall be located on a lot that has a minimum area of two and a half acres.

c. A conversion technology facility (solid waste) shall not be located within a 1,500-foot radius of the exterior boundaries of a lot that contains a sensitive use or an agricultural use.

2. Solid waste landfill. A solid waste landfill shall not be located within a 1,500-foot radius of the exterior boundaries of a lot that contains a sensitive use or an agricultural use.

3. Landfill gas-to-energy. A landfill gas-to-energy facility shall not be located within a 1,500-foot radius of the exterior boundaries of a lot that contains a sensitive use or an agricultural use.

4. Transformation facility. A transformation facility shall not be located within a 1,500-foot radius of the exterior boundaries of a lot that contains a sensitive use or an agricultural use.

E. Additional Application Materials Requirement.

1. Operation plan including:

a. The types and volumes of acceptable feedstocks;

b. The manner in which feedstocks will be accepted and stored;

c. The conversion technology process to be used to produce energy products;

d. The manner in which the energy products will be stored and transported;

e. The proposed uses of energy products;

f. The types, volumes of any wastes and residuals produced, and the manner in which those wastes will be disposed;

g. Operating hours, including operating capacity such as daily, weekly, and annually;

h. Groundwater protection;

i. Traffic related mitigations;

j. Community outreach efforts and information;

k. Allowable activities;

l. Prohibited materials;

m. Measure to control and account for all solid waste, beneficial use material, and composting material entering into, and recycled material or diverted material leaving the facility;

n. Programs intended to maximize the utilization of available landfill capacity;

o. Recycling program in accordance with application County waste management plans; and

p. Any specific biological or archaeological requirements.

2. Noise evaluation report and control plans for drainage and spill, biogas, odor, dust, noise and vibration prepared by a licensed professional.

3. Litter and vector control plan and maintenance plan.

4. Air quality mitigation measures.

5. Any other evaluations, studies, or plans as required by appropriate review and permitting body.

6. Additional permits required. Prior to issuance of grading or building permits issuance, applicants shall obtain permits, licenses, certificates, or other approvals from all applicable regulatory agencies, in addition to applicable County departments:

a. South Coast or Antelope Valley Air Quality Management District;

b. Los Angeles or Lahontan Regional Water Quality Control Board;

c. California Department of Resources Recycling and Recovery (CalRecycle);

d. California Department of Fish and Wildlife;

e. California Department of Health Care Services; and/or

f. The U.S. Army Corps of Engineers.

F. Development Standards.

1. Prohibited Materials. Solid waste landfills shall not accept hazardous or special wastes, including hazardous waste, household hazardous waste, radioactive materials as defined in Title 22, Section 66261.3 (Definition of Hazardous Waste) of the

California Code of Regulations, auto shredder waste, biosolids, sludge, sewer sludge, incinerator ash, electronic waste, universal waste, and medical waste as defined in Section 117690 of the California Health and Safety Code, liquid waste, waste that contains soluble pollutants in concentrations that exceed applicable water quality objectives, and waste that can cause degradation of waters in the State, as determined by the Regional Water Quality Control Board without an appropriate approval from California Department of Toxic Substances Control prior to obtaining building permits.

2. Storage of Materials. Physical contaminants and refuse removed from feedstock or final products shall be isolated and stored in a solid container and transported to an appropriate off-site waste management facility within seven days.

3. Fire Prevention. Once the facility is operational, the operator shall provide fire prevention, protection, and control measures as required, approved, and regulated by Fire Department.

4. Waste Load Checking Program. The permittee shall implement a comprehensive Waste Load Checking Program approved by the Department of Public Health. The program shall comply with other requirements of the Department of Public Health, the California Department of Health Services, California Department of Toxic Substances, and the Regional Water Quality Control Board.

5. Surfacing. All areas designated for operations, storage of materials, and vehicular access shall be maintained and controlled so as to prevent excessive dust generated from operation, offsite water leak or contamination, or tracking of dust or mud, to the satisfaction of the Director and Public Works.

a. All areas of broken concrete or asphalt, including but not limited to divots, cracks, potholes, and spalling of concrete or asphalt in the raw material receiving area of a recycling processing facility, or any portion of the facility where waste materials are unloaded and touch the ground outside of an enclosure shall be patched, repaired, or repaved as necessary to prevent standing water or puddles with a surface area greater than one square foot from accumulating.

6. Grading. Where grading is proposed for a project subject to a Conditional Use Permit, such projects must comply with all federal, state, and local laws with regard to protection of Tribal Cultural Resources.

G. Specific Requirements for Conversion Technology Facilities (Solid waste).

1. Permitted Activity and Equipment. Transfer, preprocessing, mixing, and biogas utilization may be permitted as approved by the Director.

2. Enclosure. Conversion technology facilities (solid waste) shall provide completely enclosed buildings for all facility operations, including material storage, loading and unloading, and processing of materials. Conversion technology facilities (solid waste) shall employ an appropriate air filtration system for indoor air quality, in accordance with California Division of Occupational Safety and Health and California Air Resources Board requirements, and for outdoor air quality, in accordance with Air Quality Management Districts. The Department of Public Health may be consulted on additional air quality recommendations.

3. Walls, Fencing, and Landscaping.

a. Walls. Walls should be constructed in a workmanlike manner using:

i. A uniform height between eight and twelve feet;

ii. A minimum thickness of six inches;

iii. A neutral color, except black; and

iv. Materials such as concrete masonry unit (CMU) or masonry, brick, etc.

b. Fencing. Any type of fence or wire is prohibited, except that metal gates may be permitted for vehicular access only.

c. Landscaping on street frontage. A landscaping plan shall be submitted to the Department and meeting the following requirements:

i. Required solid walls along the street frontage shall be set back by landscaping of a minimum of five feet in depth;

ii. Such landscaping area shall be planted with one 15-gallon tree for every 100 square feet. The remaining area shall also be landscaped. All plants provided for required landscaping shall be drought-tolerant and include only non-invasive plant species;

iii. The landscaping shall be maintained with appropriate watering, pruning, weeding, fertilizing, and litter removal. Plants shall be replaced when necessary;

iv. Trees shall be planted in locations that maintain the required lines of sight for safe pedestrian and vehicular movement and will not cause root damage to the sidewalk or other public infrastructure, to the satisfaction of Public Works;

v. Trees planted near buildings or fire lanes shall be placed in locations that do not adversely impact Fire Department operations or response times, to the satisfaction of the Fire Department; and

vi. Landscaping equipment used for maintenance, such as lawn mowers and leaf blowers shall be electric and non-combustion powered.

4. Vehicle Circulation. On-site vehicular circulation, turnaround, queuing areas, and ingress and egress shall be designated in such a way that they do not impede any other permitted activities and they avoid impacts on the public right-of-way as well as nearby sensitive uses, as approved by the Director and the Department of Public Works.

5. Perimeter Identification Signs. In addition to the signs permitted by Chapter 22.114 (Signs), and notwithstanding any contrary provisions in Division 10 (Community Standards Districts) in Title 22, each solid waste facility or site shall provide a perimeter identification sign that complies with the following:

a. A perimeter identification sign shall be permanently affixed on a building or wall that is visible and with text that is legible from the public right-of-way for pedestrians, no higher than eight feet from the ground measured vertically from the base of the sign. No freestanding signs or portable signs are permitted as a perimeter identification sign.

b. A perimeter identification sign shall have a minimum sign area of four square feet and a maximum area of nine square feet. The area for the perimeter identification sign shall not be accounted for the areas for business signs specified in Chapter 22.114 (Signs).

c. Facilities not open to the public shall provide a perimeter identification sign that permanently displays the operator's name, address, and telephone number, as well as the location of the nearest facility open to the public.

d. Facilities open to the public shall provide a perimeter identification sign that a perimeter identification sign that permanently displays hours of operation, schedule of charges, type of material that may be deposited, telephone number of the facility operator or a representative of the facility operator, emergency contact information for reporting any problems which may occur related to the operation of the facility 24 hours a day, seven days a week. The perimeter identification sign shall also include the business name unless the property also contains a separate business sign that is clearly visible from the public right-of-way. The sign shall also include instructions for reporting violations to Regional Planning and AQMD, where a use is also regulated by AQMD. Information for reporting violations shall include the following text, or as updated by Regional Planning or AQMD:

i. "To report a violation to the Los Angeles County Department of Regional Planning, call 213-974-6453 Monday – Thursday, 7am – 6pm, dial 2-1-1 at any time or email zoningenforcement@planning.lacounty.gov;" and

ii. "To report a violation to South Coast Air Quality Management District (SCAQMD), call 1-800-CUTSMOG visit www.aqmd.gov."

e. The sign shall also indicate the following: "No loitering," "No littering," and "No material shall be left outside of the solid waste enclosure or containers."

f. Additional signs and/or measures may be required in order to protect personnel and public health and safety.

6. Access. Any roads or highways that are used for vehicular access to a facility site as well as other areas on-site used for vehicular maneuvering shall be improved and maintained to the satisfaction of Public Works and Fire Department.

7. Lighting. The facility, yard, and equipment shall be equipped with adequate lighting to ensure monitoring and operations. All outdoor lighting shall be directed away from any lots containing residential or agricultural uses.

8. Fire Prevention. Once the facility is operational, the operator shall provide measures for fire prevention, protection, and control as required, approved, and regulated by the Fire Department.

H. Additional Findings. In addition to the findings required in Section 22.158.050.B (Findings and Decision), the following additional findings shall apply:

1. The project is sited and designed in such a way that the operation minimizes impacts, such as noise, dust, traffic, and odor, to the environment and persons residing or working in the surrounding area or within the facility; and

2. The requested use will operate in such a way that it promotes the responsible use of resources and protection of the environment by providing adequate measures to control the handling of materials, air emissions, dust, noise, nuisance, and migration of residues offsite, and also by incorporating best practices for operation as well as site maintenance. The operator has demonstrated through an operation and

maintenance plans that it will incorporate best practices for operation and site maintenance, including that the facility will be managed in a way that will not be a nuisance to surrounding properties and specifically sensitive uses.

I. Revocation of Permit. Notwithstanding Chapter 22.238 (Modifications and Revocations), failure to comply with all requirements in this Section and all conditions of approval for the subject property shall result in an immediate citation of a Notice of Violation. Upon the second Notice of Violation issued within a year from the first Notice of Violation, the project will immediately be scheduled for permit revocation proceedings pursuant to Section 22.238 (Modifications and Revocations).

1. If a permit granted for a facility is denied or revoked, the previously approved land use shall cease within 30 days of the permit denial or revocation.

2. Upon closure of the facility, the operator shall provide written notice of the intent to perform site restoration, at least 30 days prior to beginning site restoration. The site restoration procedures and scope shall ensure that the entire premises, structures, grounds, ponds, and drainage are clean of any residues and all machinery is removed.

J. Fees. In the case when a Conditional Use Permit (Chapter 22.158) is required, fees may be assessed to offset the costs associated with project mitigation, enforcement activities, operational impact mitigation studies, community benefit programs, and other costs related to the Project's impacts on the surrounding communities.

...

Proposed Changes to Existing Section Regulating the Continuance of Nonconforming Uses, Buildings, and Structures.

SECTION 38. Chapter 22.172 is hereby amended to read as follows:

Chapter 22.172 Nonconforming Uses, Buildings and Structures.

...

22.172.050 Termination Conditions and Time Limits.

...

B. Termination by Operation of Law. Nonconforming uses and buildings or structures nonconforming due to use, and those buildings or structures nonconforming due to standards enumerated in this Section, shall be discontinued and removed from their sites within the time specified in this Section, except when extended or revoked as otherwise provided in this Title 22:

...

3. In the case of nonconforming due to use or buildings or structures nonconforming due to standards pursuant to Chapter 22.84 (Green Zone Districts):

a. Buildings or structures nonconforming due to standards, the time limit specified in Section 22.84.040 (Schedule for Compliance for Existing, Legally-Established Uses) shall apply, except that no request for extension of the time to maintain such buildings or structures shall be accepted or approved.

b. Nonconforming due to use pursuant to Section 22.84.020.B (Exceptions), 7 years from [EFFECTIVE DATE OF GREEN ZONE ORDINANCE],

provided that no request to further extend the time to continue such a use shall be accepted or approved, unless a grant term of an existing permit is applicable, in which case the expiration date of the grant term shall apply. For existing, nonconforming uses with no grant term specified, the use shall expire 20 years from [EFFECTIVE DATE OF GREEN ZONES ORDINANCE].

...

22.172.060 Review of Amortization Schedule or Substitution of Uses.

A. Applicability.

...

3. Exception. Nonconforming buildings or structures due to use or standards pursuant to Chapter 22.84 (Green Zone Districts) must be discontinued and removed from the site as specified in Section 22.84.040 (Schedule for Compliance for Existing, Legally-Established Uses) and Section 22.172.050.B.3 (Termination by Operation of Law). No request for extension of the time to maintain such buildings or structures on site shall be accepted or approved.

...

Proposed Changes to Land Use Regulations including Permitted Zones, Types of Permits and Development Standards Required in Existing, Specific Community Standards Districts.

SECTION 39. Section 22.300.020 is hereby amended to read as follows:

...

22.300.020 Application of Community Standards Districts to Property.

...

B. Additional Regulations: Exceptions.

1. Notwithstanding any contrary provisions in Division 10, any CSD regulations specified in Subsection A, above, may be waived or modified through a Housing Permit (Chapter 22.166), pursuant to Chapter 22.120 (Density Bonus).

2. Accessory Dwelling Units. CSD regulations shall apply to accessory dwelling units as follows:

a. CSD regulations shall only apply to accessory dwelling units not described in Section 22.140.640.G.3.a.(i) and 22.140.640.G.3.a.(ii); and

b. Where the regulations in Section 22.140.640 (Accessory Dwelling Units) are contrary to the provisions in a CSD regulating the same matter, the provisions in Section 22.140.640 shall prevail, except for Section 22.140.640.G.2 (Floor Area) and Section 22.140.640.G.3 (Height).

3. Green Zone Districts. Where the regulations in Chapter 22.84 (Green Zone Districts) are contrary to the provisions in this Division 10, the more restrictive provisions shall prevail, except for Section 22.84.C.1.i (Perimeter Identification Sign).

SECTION 40. Chapter 22.308 is hereby amended to read as follows:

Chapter 22.308 Avocado Heights Community Standards District.

...

22.308.040 Applicability.

(Reserved)

A. General Applicability. The regulations of this CSD shall apply to any new use or structure for which a complete application has been filed on or after the effective date of this CSD, except as otherwise required in this Section.

B. Where the application is for a parcel that is subject to the requirements in Chapter 22.84 (Green Zone Districts) and the provisions in Chapter 22.84 are contrary to the provisions in this Chapter, the more restrictive provisions shall prevail.

...

22.308.080 Area Specific Development Standards.

...

B. Area 2 – Valley Boulevard Area.

...

4. Zone Specific Use Standards.

...

b. Zone M-1.5.

...

iii. Materials Recovery Facilities. A "materials recovery facility" shall require a Conditional Use Permit (Chapter 22.158) application in Zone M-1.5. ~~For purposes of this Subsection B.4.b.iii, a materials recovery facility is a solid waste facility, permitted by the California Integrated Waste Management Board, where solid waste, as defined in Section 40191 of the California Public Resources Code, or recyclable materials, are sorted or separated for the purpose of recycling or creating compost~~

22.308.090 Modification of Development Standards.

A. Modifications Authorized.

1. Minor variations to the standards specified in Sections 22.308.070.A.2 through A.4 (for Zones R-1, R-A, and A-1), Sections 22.308.070.B.2.c and B.2.d (for Zones C-H and C-1), Section 22.308.070.C (regarding setbacks in Zone C-2), and Sections 22.308.070.E.1, E.2, E.3, E.5, E.6, and E.9 (for Zones M-1 and M-1.5) shall be subject to the provisions of Subsection B, below.

2. Modification of applications subject to the requirements of Chapter 22.84 (Green Zone Districts) shall be solely subject to the provisions of Subsection B. 4., below.

...

SECTION 41. Section 22.316.040 is hereby amended to read as follows:

Chapter 22.316 East Los Angeles Community Standards District.

22.316.040 Applicability.

...

E. Where the application is for a parcel that is subject to the requirements of Chapter 22.84 (Green Zone Districts) and the provisions in Chapter 22.84 are contrary to the provisions in this Chapter, the more restrictive provisions shall prevail.

...

22.316.080 Area Specific Development Standards.

...

C. Union Pacific Area.

...

4. Zone Specific Development Standards

...

b. Zone M-1.

...

ii. Uses Subject to Permits. In addition to the uses specified in Section 22.22.030 (Land Use Regulations for Zones M-1, M-1.5, M-2, and M-2.5) as subject to approval of a Conditional Use Permit (Chapter 22.158) application in Zone M-1, the following uses shall require a Conditional Use Permit (Chapter 22.158) application in Zone M-1:

~~Acetylene, the storage of oxygen and acetylene in tanks if oxygen is stored in a room separate from acetylene, and such rooms are separated by a not less than one-hour fire-resistant wall.~~

Agricultural contractor equipment, sale or rental or both.

Animal experimental research institute.

~~Automobile body and paint shops, if all operations are conducted inside of a building.~~

~~Automobile upholstery.~~

Baseball park.

Billboards, the manufacture of.

Bottling plant.

~~Building materials, the storage of.~~

Carnivals, commercial or otherwise.

Cellophane products, the manufacture of.

Circuses and wild animal exhibitions, including the temporary keeping or maintenance of wild animals in conjunction therewith for a period not to exceed 14 days, provided said animals are kept or maintained pursuant to and in compliance with all regulations of the Department of Animal Care and Control.

~~Cold-storage plants.~~

~~Concrete batching, provided that the mixer is limited to one cubic yard capacity.~~

~~Contractor's equipment yards, including farm equipment and all equipment used in building trades.~~

Dairy products depots and manufacture of dairy products.

~~Distributing plants.~~

Electrical transformer substations.

~~Engraving, machine metal engraving.~~

Ferris wheels.

Fruit packing plants.

Heating equipment, the manufacture of.

Ink, the manufacture of.

Iron, ornamental iron works, but not including a foundry.

Laboratories for testing experimental motion picture film.

~~except the storage of boxes or crates.~~

~~Machine shops.~~

~~Machinery storage yards.~~

Metals:

- (1) Manufacture of products of precious metals;
- (2) Manufacture of metal, steel, and brass stamps, including hand and machine engraving;

~~(3) Metal fabricating;~~

~~(4) Metal spinning;~~

~~(5) Metal storage;~~

(6) Metal working shops;

~~(7) Plating and finishing of metals, provided no perchloric acid is used.~~

Motors, the manufacture of electric motors.

Oil wells and appurtenances, to the same extent and under all of the same conditions as permitted in Zone A-2.

Outdoor skating rinks and outdoor dance pavilions, if such rinks and pavilions are, as a condition of use, not within 500 feet of any Residential Zone, Zone A-1, or any zone of similar restriction in any city or adjacent county.

~~Outside storage.~~

~~Paint, the manufacture and mixing of.~~

~~Pallets, the storage and manufacture of.~~

Plaster, the storage of.

~~Poultry and rabbits, the wholesale and retail sale of poultry and rabbits, including slaughtering and dressing within a building.~~

Riding academies.

Rubber, the processing of raw rubber if the rubber is not melted and, where a banbury mixer is used, the dust resulting therefrom is washed.

Rug cleaning plant.

~~Sheet metal shops.~~

Shell products; the manufacture of.

Shooting gallery.

Soft drinks, the manufacture and bottling of.

Stables, private, for the raising and training of racehorses.

Starch, the mixing and bottling of.

~~Stone, marble and granite, and the grinding, dressing, and cutting of.~~

~~Storage and rental of plows, tractors, contractor's equipment, and cement mixers, not within a building.~~

Stove polish, the manufacture of.

Tire yards and

Trucks, the parking, rental, and repair of.

Ventilating ducts, the manufacture of.

Wallboard, the manufacture of.

~~Welding.~~

Wineries.

...

DRAFT

SECTION 42. Chapter 22.324 is hereby amended to read as follows:

Chapter 22.324 Florence–Firestone Community Standards District.

...

22.324.020 Definitions.

...

~~D. Sensitive Use. Sensitive use means a school; park; playground; child care center; foster family home; small family or group home for children; senior citizen center; or church, temple, or other place used exclusively for religious worship.~~

...

22.324.040 Applicability.

~~D. Nonconforming Uses, Buildings, or Structures. Nonconforming residential uses in Zones C-M and M-1 shall be exempt from the following:~~

- ~~1. The termination periods set forth in Section 22.172.050 (Termination Conditions and Time Limits) as long as the residential use continues; and~~
- ~~2. The provisions in Section 22.172.020.G (Repair of Damaged or Partially Destroyed Buildings or Structures Nonconforming Due to Use and/or Standards).~~

...

Appendix B

GIS Methodology for Determining the Number of Affected Parcels in the Green Zones Program

GIS Methodology for Determining the Number of Affected Parcels in the Green Zones Program, Including All Elements and Commercially Zoned Parcels in the Green Zone Districts (as Shown in Table III.B-1 of the Draft PEIR)

Element No. 1 – Green Zones Districts

Based on public outreach efforts and Environmental Justice Screening Method (EJSM) scores, the County determined that the following unincorporated communities would be included in Element No. 1, Green Zone Districts:

- Metro Planning Area
 - East Los Angeles
 - W Athens - Westmont
 - Florence - Firestone
 - Walnut Park
 - Willowbrook
 - W Rancho Dominguez - Victoria
 - East Rancho Dominguez
- South Bay Metro Planning Area
 - West Carson
- Gateway Metro Planning Area
 - West Whittier – Los Nietos
- East San Gabriel Valley Metro Planning Area
 - South San Jose Hills
 - Avocado Heights

Within these communities, M-1, M-1.5, M-2, and M-2.5 industrial zones were selected. A 500-foot buffer was then created around these industrial zones. If any sensitive receptors were visually identified using up-to-date high-resolution aerial imagery within this 500-foot buffer, the industrial parcel was included in the Green Zone Districts. Sensitive uses include single-family residences; senior housing; hospitals; libraries; early childhood centers; private and charter schools; public elementary, public middle, and public high schools; and parks (local and regional parks, not including regional open space).

Toward the end of the environmental approval process, the County Planning Commission requested that County staff revise the Draft Ordinance to include a requirement that drive-in fast food and gas station uses be required to obtain a Conditional Use Permit (CUP). The Planning Commission then requested that the County staff determine the number of parcels in the Green Zone Districts that this change would affect.

A similar process was used for this request, whereby the most up-to-date County zoning and Assessor Parcel data was obtained and C-1, C-2, C-3, C-H, and C-M commercial zones were selected. MXD mixed use zones were excluded per County Department of Regional Planning request. These selected commercially zoned parcels were then combined, and a new 500-foot buffer was created around the combined parcels. Areas within these buffers were visually inspected to determine if there were any sensitive receptors within the buffer that would be affected by the commercial parcels. It was determined that all but one of the commercial parcels would affect a sensitive use within the 500-foot buffer. The results of this analysis were verified by County GIS staff.

In order to determine the number of parcels affected by Elements 2, 3, and 4 of the Green Zones Program, a similar process was used to that utilized for the Green Zone Districts. However, due to the unknown nature of future development and uncertainty of the location of new development, sensitive receptors were not identified within a 500-foot buffer. Instead, the zoning designation affected by each element was selected and totaled.

Element No. 2 – New Sensitive Uses

The following zones were selected from County zoning data to determine the number of parcels affected by Element No. 2 – New Sensitive Uses:

- A-1, A-2, O-S, R-R, W, R-A, R-1, R-2, R-3, R-4, RPD, C-H, C-1, C-2, C-3, C-M, C-MJ, C-R, CPD, M-1, M-1.5, M-2, M-2.5, MPD, C-RU, MXD-RU, IT, MXD, and SP

Element No. 2 would be applicable to all zones (only within, adjacent to, or adjoining an existing, legally established industrial, recycling or solid waste, or vehicle-related use in zones M-1, M-1.5, M-2, or M2.5). Given the specific requirements for uses being adjacent to or adjoining a sensitive use in the case of Element No. 2, the estimate of affected parcels can be considered very conservative.

Element No. 3 – Recycling and Waste Management Revisions

The following zones were selected from County zoning data to determine the number of parcels affected by Element No. 3 – Recycling and Waste Management Revisions:

- C-1, C-2, C-3, C-M, C-MJ, C-R, C-RU, MXD, MXD-RU, M-1, M-1.5, M-2, M-2.5, A-2, IT

Element No. 4 – Storage Enclosures for Recycling and Solid Waste Revisions

The following zones were selected from County zoning data to determine the number of parcels affected by Element No. 4 – Storage Enclosures for Recycling and Solid Waste Revisions:

- All zones except R-1, R-2, R-A, A-1
