<p>CUL-6: The project applicant shall retain a qualified paleontologist (in accordance with the Society of Vertebrate Paleontologists) to monitor all ground-disturbing activities in native soils or sediments beginning at five feet below ground surface and deeper. If the paleontologist, upon observing initial earthwork, determines there is low potential for discovery, no further action shall be required and the paleontologist shall submit a memo to the County confirming findings of low potential.</p> <p>If the qualified paleontologist, upon observing initial earthwork, determines there is a moderate to high potential for discovery, a qualified paleontologist or paleontological monitor (retained by the County) shall monitor all mass grading and excavation activities. Monitoring will be conducted in areas of grading or excavation in undisturbed formation sediments, as well as where over-excavation of surficial alluvial sediments will encounter these formations in the subsurface. Paleontological monitors shall be equipped to salvage fossils as they are unearthed to avoid construction delays and to remove samples of sediment that are likely to contain the remains of small fossil invertebrates and vertebrates. The monitor must be empowered to temporarily halt or divert equipment to allow removal of abundant or large specimens in a timely manner. Monitoring may be reduced if the potentially fossiliferous units are not present in the subsurface, or if present, are determined on exposure and examination by qualified paleontological personnel to have low potential to contain fossil resources.</p> <p>Should any paleontological resources (i.e., fossils) be uncovered during project construction activities, all work within a 100-foot radius of the discovery site shall be halted or diverted to other areas on the site and the</p>	Submit Monitoring Plan	Prior to construction	Applicant/ Qualified Paleontologist	LACDRP
	Submit data recovery and associated documentation, as applicable	Prior to issuance of certificate of occupancy	Applicant/ Qualified Paleontologist	LACDRP
	Submit final report, as applicable	Prior to issuance of certificate of occupancy	Applicant/ Qualified Paleontologist	LACDRP

Mitigation Measures	Action Required	Mitigation Timing	Responsible Party	Monitoring Agency or Party
<p>County shall be immediately notified. The qualified paleontologist shall evaluate the finds and recommend appropriate next steps to ensure that the resource is not substantially adversely impacted, including but not limited to avoidance, preservation in place, excavation, documentation, curation, data recovery, or other appropriate measures. Further, ground disturbance shall not resume within a 100-foot radius of the discovery site until an agreement has been reached between the project applicant, the qualified paleontologist, and the County as to the appropriate preservation or mitigation measures to ensure that the resource is not substantially adversely impacted.</p> <p>Any recovered paleontological specimens shall be identified to the lowest taxonomic level possible and prepared for permanent preservation. Screen-washing of sediments to recover small invertebrates and vertebrates shall occur if necessary.</p> <p>Identification and curation of specimens into a professional, accredited public museum repository with a commitment to archival conservation and permanent retrievable storage shall occur at an institutional repository approved by the County. The paleontological program shall include a written repository agreement prior to the initiation of mitigation activities.</p> <p>A final monitoring and mitigation report of findings and significance shall be prepared, including lists of all fossils recovered and necessary maps and graphics to accurately record their original location. The report, when submitted to an accepted by the County, shall signify satisfactory completion of the project program to mitigation impacts to any potential nonrenewable paleontological resources (i.e., fossils) that might have been lost or otherwise adversely affected without such a program in place.</p>				
<p>CUL-7: If human remains are encountered, the County or its contractor shall halt work in the vicinity (within 100 feet) of the find and contact the Los Angeles County Coroner in accordance with PRC Section 5097.98 and Health and Safety Code Section 7050.5. If the County Coroner determines that the remains are Native American, the NAHC will be notified in accordance with Health and Safety Code Section 7050.5, subdivision (c), and PRC Section 5097.98. The NAHC will designate an MLD for the remains per PRC Section 5097.98. Until the landowner has conferred with the MLD, County shall ensure that the immediate vicinity where the discovery occurred is not disturbed by further activity, is adequately protected according to generally accepted cultural or archaeological standards or practices, and that further activities take into account the possibility of multiple burials.</p>	Submit documentation	Prior to issuance of certificate of occupancy	Applicant/ Qualified Archaeologist	LACDRP
Noise and Vibration				
<p>NOI-1: Prior to the issuance of building permits, exterior areas of proposed single family and multiple family residential uses that are projected to be exposed to existing with project roadway noise levels and cumulative with project roadway noise levels exceeding the County's exterior noise standards (i.e., 60 dBA CNEL for single family residential and 65 dBA CNEL for multiple family residential) shall include noise attenuation features including, but not limited to, setbacks, soundwalls, glass noise barriers, and landscaping so that exterior areas meet the County's exterior noise standards. To ensure that the County's exterior noise standards are met, the project applicant shall demonstrate compliance through the preparation of an acoustical evaluation.</p>	Submit acoustical evaluation report for review and approval	Prior to issuance of building permit	Applicant	LACDRP
	Submit site plan review application	Prior to issuance of building permit	Applicant	LACDRP
<p>NOI-2: Prior to the issuance of building permits, proposed residential developments adjacent to the Blue line and Union Pacific rail line that are exposed to rail noise of greater than 60 dBA CNEL for single family residential uses and 65 dBA CNEL for exterior areas of multiple family residential uses shall include noise attenuation features including, but not limited to, setbacks, soundwalls, glass noise barriers, and landscaping</p>	Submit acoustical evaluation report for review and approval	Prior to issuance of building permit	Applicant	LACDRP

Mitigation Measures	Action Required	Mitigation Timing	Responsible Party	Monitoring Agency or Party
so that exterior areas meet the County's exterior noise standards. To ensure that the County's exterior noise standards are met, the project applicant shall demonstrate compliance through the preparation of an acoustical evaluation.	Submit site plan review application	Prior to issuance of building permit	Applicant	LACDRP
NOI-3: Prior to approval of a grading permit or building permit, construction equipment shall be prohibited within 50 feet of occupied residential structures. If construction equipment is required to be within 50 feet of occupied residential structures, the project applicant shall demonstrate that the human annoyance threshold of 78 VdB (0.032 in/sec PPV) and structural damage thresholds of 0.2 in/sec PPV for non-engineered timber and masonry buildings and 0.12 in/sec PPV for historic-age buildings that are extremely susceptible to vibration damage is achieved. Demonstration of compliance shall be provided through the preparation of a vibration analysis.	Submit vibration analysis report for review and approval	Prior to issuance of grading or building permit	Applicant	LACDRP
NOI-4: Prior to the issuance of a building permit for a residential development within 100 feet of the rail tracks, the project applicant shall demonstrate that nighttime vibration level at the proposed residential uses shall not exceed the 72 VdB (0.016 in/sec PPV) threshold for human annoyance.	Submit vibration analysis report for review and approval	Prior to issuance of building permit	Applicant	LACDRP
Transportation and Traffic				
TRAF-1 Avalon Blvd & El Segundo Blvd (#3): Prior to the issuance of a building permit, the County of Los Angeles shall ensure the restriping of the northbound approach to add a right turn lane prior to an individual project exceeding the County's significance criteria. The timing of this improvement shall be determined through the preparation of a traffic evaluation by the individual project applicant and reviewed by the County. This improvement would modify the approach from one left turn lane, one through lane, and one through-right turn lane to one left turn lane, two through lanes and a separate right turn lane. This can be accomplished by narrowing the median to 3 feet. This would need to occur all the way to an alley located approximately 100 feet south of the intersection. The bus stop at this approach would continue to be located at the same location; however, buses would be allowed to go straight through the intersection. This was a mitigation measure in the Martin Luther King Jr. Medical Campus EIR. In addition, the County of Los Angeles shall ensure the restriping of the southbound approach to provide a separate right turn lane by narrowing the median to 2 feet prior to an individual project exceeding the County's significance criteria. The timing of this improvement shall be determined through the preparation of a traffic evaluation by the individual project applicant and reviewed by the County. This improvement would modify the approach from one left turn lane, one through lane, and one through-right turn lane to one left turn lane, two through lanes and a separate right turn lane.	Submit traffic evaluation for review and approval	Prior to issuance of building permit	Applicant	LACDRP
	Submit funding or complete improvements	Prior to issuance of building permit	Applicant	LACDRP
TRAF-2 Central Ave & El Segundo Blvd (#10): Prior to the issuance of a building permit, the County of Los Angeles shall ensure the restriping of the southbound approach to provide a separate right-turn lane and restriping the northbound approach by reducing the median to 2 feet before an individual project exceeds the County's significance criteria. The timing of this improvement shall be determined through the preparation of a traffic evaluation by the individual project applicant and reviewed by the County. This improvement would modify both approaches from one left turn lane, one through lane, and one through-right turn lane to one left turn lane, two through lanes and a separate right turn lane. Buses would be allowed to go through the intersection from the right-turn lane. This was a mitigation measure in the Martin Luther King Jr. Medical Campus EIR. In addition, the County of Los Angeles shall ensure the restriping of the westbound approach to provide a separate right turn lane by narrowing the median to 2 feet prior to an individual project exceeding the County's significance criteria. The timing of this improvement shall be determined through the preparation of a traffic evaluation by the individual project applicant and reviewed by the County. This improvement would	Submit traffic evaluation for review and approval	Prior to issuance of building permit	Applicant	LACDRP
	Submit funding or complete improvements	Prior to issuance of building permit	Applicant	LACDRP

Mitigation Measures	Action Required	Mitigation Timing	Responsible Party	Monitoring Agency or Party
modify the approach from one left turn lane, one through lane, and one through-right turn lane to one left turn lane, two through lanes and a separate right turn lane.				
TRAF-3 Central Ave & Rosecrans Ave (#11): Prior to the issuance of a building permit, the County of Los Angeles shall ensure the restriping of the westbound approach to provide a separate right-turn lane by narrowing the median to 2 feet before an individual project exceeds the County's significance criteria. The timing of this improvement shall be determined through the preparation of a traffic evaluation by the individual project applicant and reviewed by the County. This improvement would modify the approach from one left turn lane, one through lane, and one through-right turn lane to one left turn lane, two through lanes and a separate right turn lane. Buses would be allowed to go through the intersection from the right-turn lane. This was a mitigation measure in the Martin Luther King Jr. Medical Campus EIR.	Submit traffic evaluation for review and approval	Prior to issuance of building permit	Applicant	LACDRP
	Submit funding or complete improvements	Prior to issuance of an occupancy permit	Applicant	LACDRP
TRAF-4 Compton Ave & Imperial Hwy (#17): Prior to the issuance of a building permit, the County of Los Angeles shall ensure the restriping of the westbound approach to provide a separate right-turn lane before an individual project exceeds the County's significance criteria. The timing of this improvement shall be determined through the preparation of a traffic evaluation by the individual project applicant and reviewed by the County. This improvement would modify the approach from one left turn lane, one through lane, and one through-right turn lane to one left turn lane, two through lanes and a separate right turn lane. This was a mitigation measure in the Martin Luther King Jr. Medical Campus EIR.	Submit traffic evaluation for review and approval	Prior to issuance of building permit	Applicant	LACDRP
	Submit funding or complete improvements	Prior to issuance of an occupancy permit	Applicant	LACDRP
TRAF-5 Wilmington Ave & I-105 e/b Ramps (#27): Prior to the issuance of a building permit, the County of Los Angeles shall ensure that an additional eastbound lane will be installed by widening (reducing the raised median on the ramp) the off-ramp before an individual project exceeds the County's significance criteria. The timing of this improvement shall be determined through the preparation of a traffic evaluation by the individual project applicant and reviewed by the County. This improvement would modify the approach from a left-turn lane and a right-turn lane to a left-turn lane, shared left-right turn lane and a separate right-turn lane. In addition, the County of Los Angeles shall ensure that an additional northbound left-turn lane is provided by reducing the median width. This improvement would modify the approach from a left-turn lane and three through lanes to dual left-turn lanes and three through lanes. These were mitigation measures in the Martin Luther King Jr. Medical Campus EIR.	Submit traffic evaluation for review and approval	Prior to issuance of building permit	Applicant	LACDRP/ Caltrans
	Submit funding or complete improvements	Prior to issuance of an occupancy permit	Applicant	LACDRP
TRAF-6 Wilmington Ave & 118th St (#28): Prior to the issuance of a building permit, the County of Los Angeles shall ensure the restriping of the eastbound approach of 118th Street to provide a separate right-turn lane before an individual project exceeds the County's significance criteria. The timing of this improvement shall be determined through the preparation of a traffic evaluation by the individual project applicant and reviewed by the County. This improvement would modify the eastbound approach from a shared left-through-right lane to a shared left-through lane and a right turn lane. This was a mitigation measure in the Martin Luther King Jr. Medical Campus EIR.	Submit traffic evaluation for review and approval	Prior to issuance of building permit	Applicant	LACDRP
	Submit funding or complete improvements	Prior to issuance of an occupancy permit	Applicant	LACDRP
TRAF-7 Wilmington Ave & 120th St (East) (#30): Prior to the issuance of a building permit, the County of Los Angeles shall ensure that 120th Street west of Wilmington Avenue (the driveway to the Martin Luther King Jr. Medical Campus) is widened for 250 feet, on the south side by 2 feet and the eastbound approach is restriped to provide dual left-turn lanes before an individual project exceeds the County's significance criteria. The timing	Submit traffic evaluation for review and approval	Prior to issuance of building permit	Applicant	LACDRP

Mitigation Measures	Action Required	Mitigation Timing	Responsible Party	Monitoring Agency or Party
of this improvement shall be determined through the preparation of a traffic evaluation by the individual project applicant and reviewed by the County. This improvement would modify the approach from a left-through lane and a right-turn lane to dual left-turn lanes, a through lane, and a right-turn lane. This was a mitigation measure in the Martin Luther King Jr. Medical Campus EIR.	Submit funding or complete improvements	Prior to issuance of an occupancy permit	Applicant	LACDRP
TRAF-8 Wilmington Ave & El Segundo Blvd (#32): Prior to the issuance of a building permit, the County of Los Angeles shall ensure the restriping of the eastbound and westbound approaches to add separate right-turn lanes before an individual project exceeds the County's significance criteria. The timing of this improvement shall be determined through the preparation of a traffic evaluation by the individual project applicant and reviewed by the County. This improvement would allow buses to go through the intersection from the right-turn lanes. This improvement would modify both approaches from a left-turn lane, a through lane, and a through-right lane to a left-turn lane, two through lanes, and a right-turn lane. This was a mitigation measure in the Martin Luther King Jr. Medical Campus EIR.	Submit traffic evaluation for review and approval	Prior to issuance of building permit	Applicant	LACDRP
	Submit funding or complete improvements	Prior to issuance of an occupancy permit	Applicant	LACDRP
TRAF-9 Imperial Hwy & I-105 w/b Ramps (#36): Prior to the issuance of a building permit, the County of Los Angeles shall ensure that a third northbound left-turn lane is provided by widening the off-ramp by 10 feet for approximately 150 feet to 200 feet before an individual project exceeds the County's significance criteria. The timing of this improvement shall be determined through the preparation of a traffic evaluation by the individual project applicant and reviewed by the County. This improvement would modify the approach from a left-turn lane, a left-through lane, and a right-turn lane to dual left-turn lanes, a left-through lane, and a right-turn lane. This was a mitigation measure in the Martin Luther King Jr. Medical Campus EIR.	Submit traffic evaluation for review and approval	Prior to issuance of building permit	Applicant	LACDRP/Caltrans
	Submit funding or complete improvements	Prior to issuance of an occupancy permit	Applicant	LACDRP/Caltrans
TRAF-10 Alameda St & 103rd St (#43): Prior to the issuance of a building permit, the County of Los Angeles shall ensure the restriping of the eastbound approach for a separate left-turn lane before an individual project exceeds the County's significance criteria. The timing of this improvement shall be determined through the preparation of a traffic evaluation by the individual project applicant and reviewed by the County. This improvement would modify the approach from a shared left/right lane to a left-turn lane and a shared left/right lane. This was a mitigation measure in the Martin Luther King Jr. Medical Campus EIR.	Submit traffic evaluation for review and approval	Prior to issuance of building permit	Applicant	LACDRP

	Submit funding or complete improvements	Prior to issuance of building permit	Applicant	LACDRP/ City of Compton
TRAF-28 Central Ave & Compton Blvd (#57): Prior to the issuance of a grading permit for each individual project, the project applicant shall determine their project's proportionate share funding of restriping the northbound approach to provide a separate right-turn lane by narrowing the median to 2 feet. This would modify the approach from a left-turn lane, a through lane, and a through-right lane to a left-turn lane, two through lanes, and a right-turn lane. This improvement requires removal of five on-street parking spots on the northbound approach. The proportionate share funding shall be determined through the preparation of a traffic evaluation to be reviewed by the County of Los Angeles and City of Compton. The proportionate share funding shall be provided by the project applicant if the City of Compton has established a proportionate share funding mechanism for the improvement at this intersection.	Submit traffic evaluation for review and approval	Prior to issuance of building permit	Applicant	LACDRP/ City of Compton
	Submit funding or complete improvements	Prior to issuance of building permit	Applicant	LACDRP/ City of Compton
TRAF-29 Central Ave & Alondra Blvd (#60): Prior to the issuance of a grading permit for each individual project, the project applicant shall determine their project's proportionate share funding of restriping the northbound and southbound approaches to provide a separate right-turn lane by narrowing the median to 2 feet. This would modify both approaches from a left-turn lane, a through lane, and a through-right lane to a left-	Submit traffic evaluation for review and approval	Prior to issuance of building permit	Applicant	LACDRP/ City of Compton

Notice of Preparation, Initial Study, and Scoping Comments

A-1 Notice of Preparation (NOP)

Los Angeles County
Department of Regional Planning

Planning for the Challenges Ahead

Richard J. Bruckner
Director

NOTICE OF PREPARATION

DATE: October 30, 2015

PROJECT TITLE: Willowbrook Transit Oriented District Specific Plan
County Project Number: R2015-02007
Environmental Review Number: RENV201500136

PROJECT LOCATION: The Specific Plan area is located in the unincorporated community of Willowbrook within Los Angeles County. It is located along the I-105 Freeway and includes the junction of the Metro Blue and Green lines. The project area is approximately 10 miles south of Downtown Los Angeles and is bordered by the City of Los Angeles to the north and the City of Lynwood and the City of Compton to the east.

The County of Los Angeles is the lead agency and, after conducting an Initial Study for the Project, has determined that it will prepare an Environmental Impact Report (EIR). In compliance with Section 15082 of the California Environmental Quality Act (CEQA) Guidelines, the County of Los Angeles is sending this Notice of Preparation (NOP) to responsible agencies, interested parties, and trustee agencies responsible for natural resources that may be affected by the Project.

PROJECT LOCATION AND ENVIRONMENTAL SETTING

The Specific Plan area generally encompasses a half mile radius south of the Willowbrook/Rosa Parks Metro station, which is a major transfer point between the Metro Blue Line and Green Line. At the station, the Green Line is located in the median of the I-105 Freeway (Glenn Anderson). The Specific Plan area totals 312 acres. Major activity centers within the Specific Plan area are the Martin Luther King Jr. Medical Center, Charles R. Drew University of Medicine and Science, Kenneth Hahn Plaza, Willowbrook Library, and Martin Luther King Jr. Center for Public Health. See attached project boundary map.

North of the Specific Plan area is predominantly residential with some commercial uses. The City of Lynwood is directly adjacent to the Specific Plan's eastern border and land uses are manufacturing, public uses and commercial. South and west of the Specific Plan area is predominantly residential.

PROJECT SUMMARY

The Specific Plan has been prepared to introduce a transit oriented development (TOD) pattern to the area, which would promote active transportation and improve quality of life for residents by reducing vehicles miles traveled, improving the public realm, improving economic vitality and employment opportunities, and streamlining the environmental review process for future projects.

The Specific Plan would facilitate development by rezoning and amending General Plan land uses to include mixed uses, increased residential densities, and additional neighborhood-serving retail uses. A key part of the Specific Plan is also to preserve existing residential uses in certain areas. The proposed zoning includes: Mixed Use 1 (MU-1); Mixed Use 2 (MU-2); MLK Medical; Drew Educational; Imperial Commercial; Willowbrook Residential 1; Willowbrook Residential 2; Willowbrook Residential 3; and Open Space (O-S). Overall, the Specific Plan would accommodate an additional 1,734 dwelling units and 2,630,306 square feet of non-residential land use.

The Specific Plan would largely maintain the existing street system in its current configuration, with some improvements designed to improve access, circulation, and walkability. Road diets would also be used to aid the circulation system.

The Specific Plan would improve pedestrian circulation by connecting all major activity areas through sidewalk and intersection improvements. In addition, a combination of Class I, Class II, Class III and potentially Class IV facilities would provide a connected and integrated bicycle network throughout the Specific Plan area that connects activity centers and neighborhoods to the Willowbrook/Rosa Parks Station and adjacent communities. Bicycle amenities would be provided at appropriate locations such as bicycle stations.

In 2012, Los Angeles County prepared the *MLK Medical Center Campus Master Plan & the Willowbrook MLK Wellness Community Vision* to guide the development of the campus. It is the County's intent that the Specific Plan serve as the regulatory document for the buildout of the campus. Future development within the campus will be required to comply with the provisions of the Specific Plan; all subsequent development within the campus will be subject to the mitigation requirements of the EIR being prepared for the Specific Plan.

The draft Specific Plan is available for viewing at <http://planning.lacounty.gov/willowbrook/tod>.

POTENTIAL PROJECT IMPACTS: Based on the Initial Study determination, an EIR is necessary for the proposed Project. Based on a preliminary assessment of potential environmental impacts that may occur as a result of the Project, the areas of potential environmental impact to be addressed in the Programmatic EIR will include at least the following:

Potential Hazards

- Geology/Soils
- Noise
- Hazards/Hazardous Materials

Potential Impacts to Resources

- Aesthetics
- Air Quality
- Cultural Resources
- Energy
- Greenhouse Gas Emissions
- Hydrology and Water Quality
- Land Use/Planning

Potential Impacts to Services

- Transportation/Traffic

- Public Services
- Recreation
- Utilities/Services
- Population/Housing

The only environmental factors that were not found to be potentially affected are Agriculture/Forest Resources, Biological Resources, and Mineral Resources. There are multiple mandatory findings of significance. In addition, environmental issues that do not rise to the level of significant impacts will be addressed in the EIR in a separate section entitled "Impacts Found to Be Less Than Significant."

NOTICE OF PREPARATION REVIEW AND COMMENTS

The NOP is being distributed to solicit written comments regarding the scope and content of the environmental analysis to be included in the EIR. The County has prepared this NOP in accordance with the State CEQA Guidelines.

The review period for this NOP is from **October 30, 2015 to November 30, 2015**. Due to the time limits mandated by State law, your response must be sent at the earliest possible date, but not later than **November 30, 2015**. Please direct all written comments to the following address:

Connie Chung, AICP
County of Los Angeles
Department of Regional Planning

Los Angeles, California 90012
Telephone: (213) 974-6417
Fax: (213) 626-0434
Email: cchung@planning.lacounty.gov

SCOPING MEETING

To assist in local participation, a Scoping Meeting will be held to present the proposed project and to solicit suggestions from the public and responsible agencies on the content of the Draft EIR. The Scoping Meeting will be held at the MLK H. Claude Hudson Auditorium, Martin Luther King, Jr. Medical Center, 12021 S. Wilmington Avenue, Los Angeles, CA, 90059, on **November 21, 2015, from 10:00 am to 12:00 pm**.

REVIEW MATERIALS

Additional copies of this NOP are available for public review on the Department of Regional Planning website: <http://planning.lacounty.gov/willowbrook/TOD> as well as at the following libraries:

A-2 Initial Study

Environmental Checklist Form (Initial Study)

County of Los Angeles, Department of Regional Planning

Project title: Willowbrook Transit Oriented District (TOD) Specific Plan/ Project No. R2015-02007/ Case Nos. RADV T201500004, RENV T201500136, RPA T201500005, RSP T201500001, RZC T201500006

Lead agency name and address: Los Angeles County, 320 West Temple Street, Los Angeles, CA 90012

Contact Person and phone number: Connie Chung, AICP, (213) 974-6417

Project sponsor's name and address: Los Angeles County, 320 West Temple Street, Los Angeles, CA 90012

Project location: The Specific Plan area is located in the Willowbrook community, which is an unincorporated community within Los Angeles County. It is located along the I-105 Freeway at the Wilmington Avenue interchange, and at the junction of the Metro Blue and Green lines. The project area is approximately 10 miles south of Downtown Los Angeles and is bordered by the City of Los Angeles to the north and the City of Lynwood and City of Compton to the east (Figure 1, Regional Location).

The proposed Specific Plan area is focused on lands around the Willowbrook/Rosa Parks Station. The Willowbrook/Rosa Parks Station is a major transfer point between the Metro Blue Line and Green Line. At the station, the Green Line is located in the median of the I-105 Freeway (Glenn Anderson), which is an above grade freeway location; and access to the Blue Line is at grade, below the Green Line. The Specific Plan generally encompasses a half mile radius south of the station (Figure 2, Project Location).

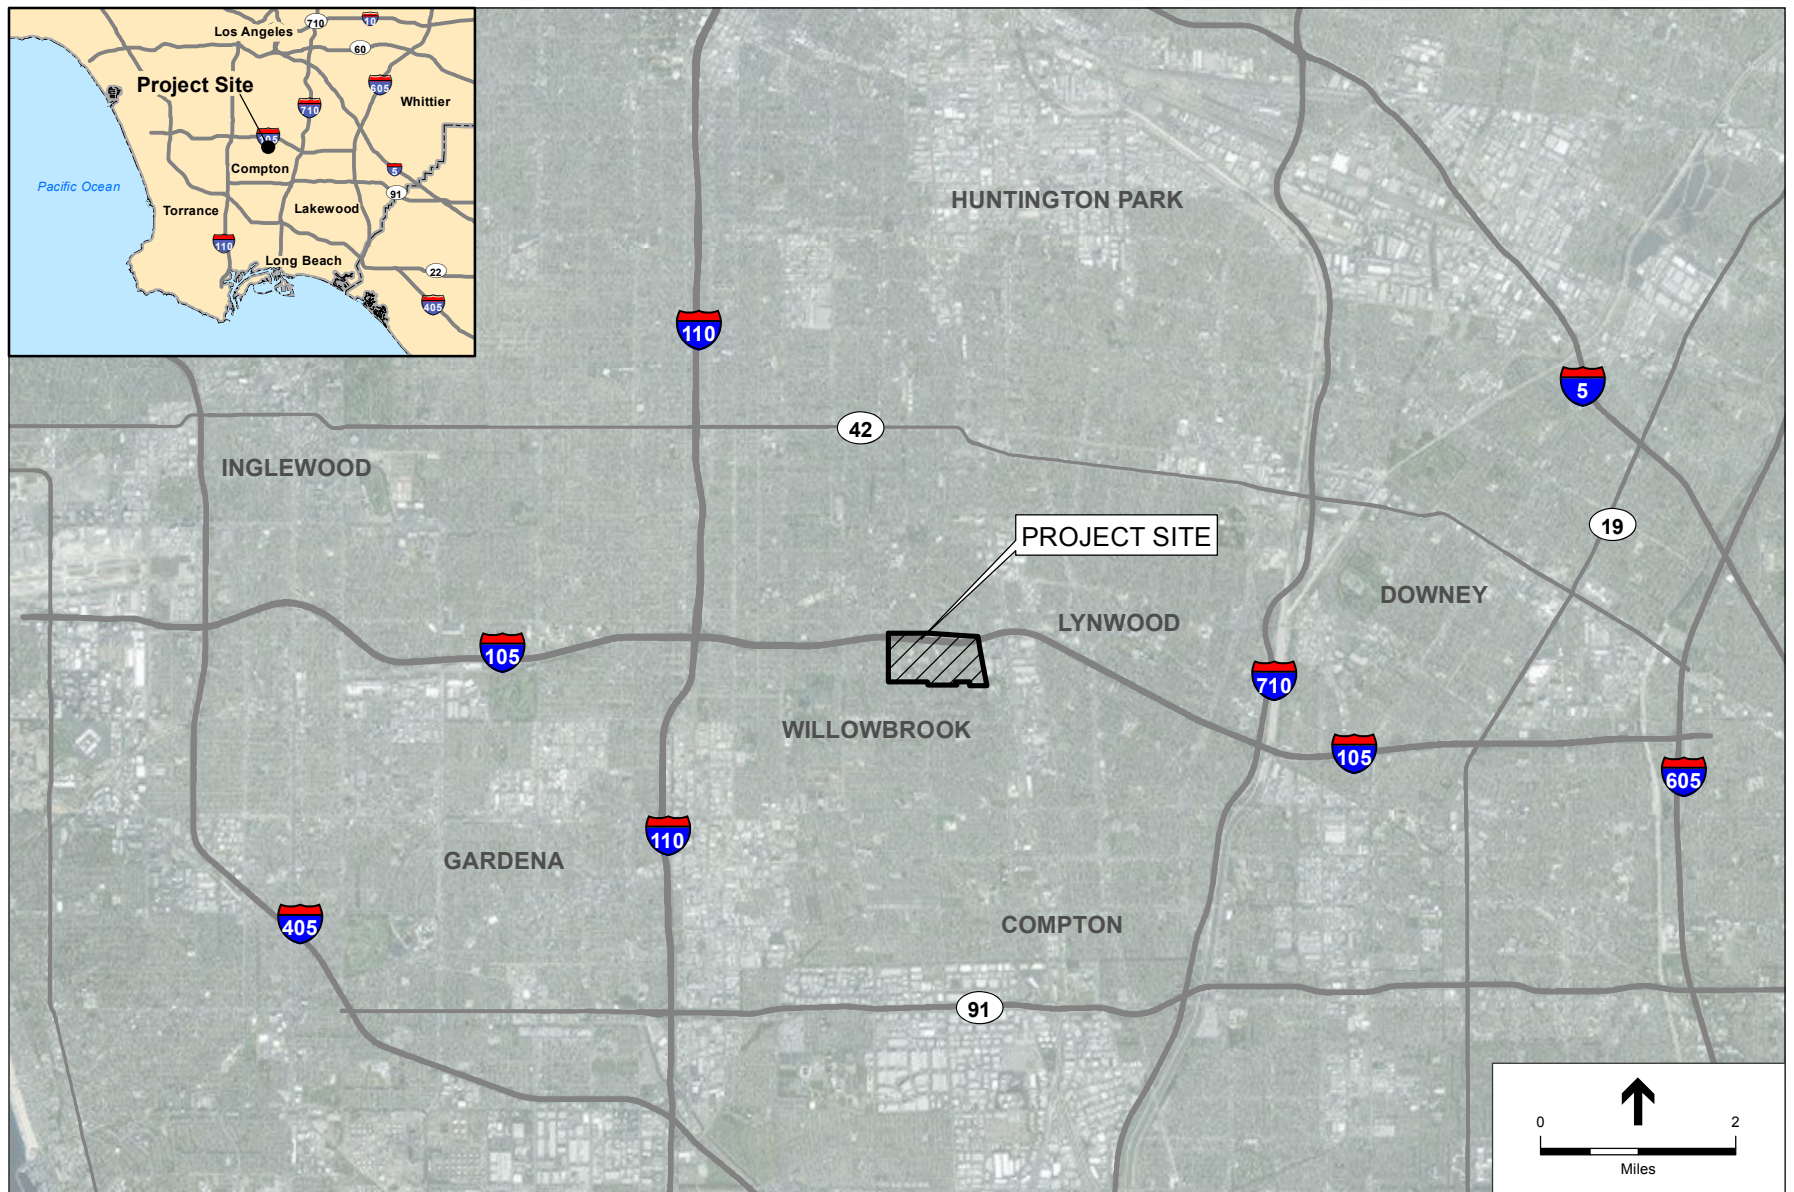

APN: Various USGS Quad: Southgate

Gross Acreage: The Specific Plan area totals 312 acres.

General plan designations: Major Commercial, Residential (low, low/medium, medium and high density), Open Space, Public and Semi-Public Facilities and Transportation (Figure 3, Existing General Plan Designations)

Community/Area wide Plan designation: Willowbrook/Los Angeles County General Plan Metro Planning Area

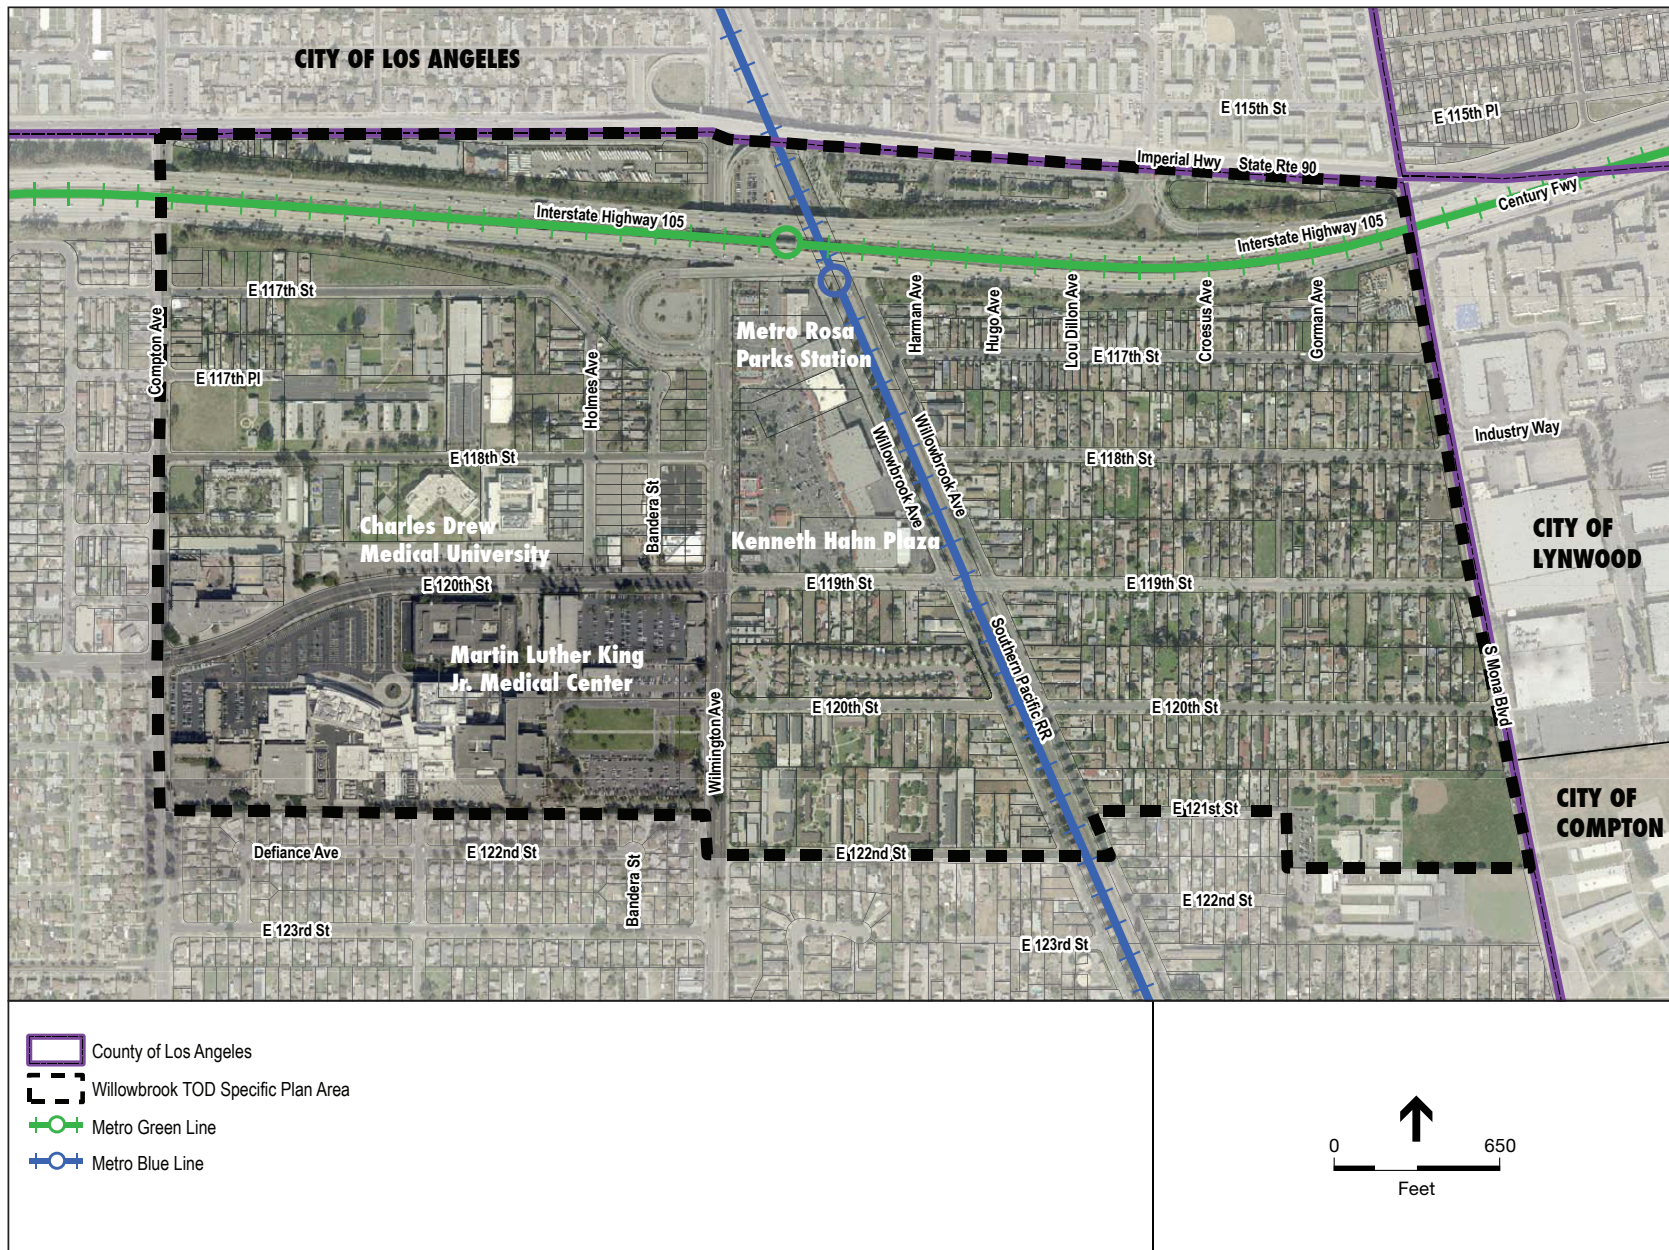

Zoning: C-2 (neighborhood commercial), C-3 (unlimited commercial), M-1 (light manufacturing), MXD (mixed use development), R-1 (Single-family residence), R-2 (two-family residence), and R-3 (limited multiple residence) (Figure 4, Existing Zoning)

Willowbrook TOD Specific Plan . 130631

Figure 4
Existing Zoning

Description of project: The proposed Specific Plan is a County-initiated, Los Angeles County Metropolitan Transit Authority (Metro) grant-funded planning document that has been prepared to introduce a transit oriented development pattern to the area, which would promote active transportation and improve quality of life for residents by reducing vehicle miles traveled, improving the public realm, improving economic vitality and employment opportunities, and streamlining the environmental review process for future projects.

The proposed Specific Plan would facilitate development by rezoning and amending the General Plan land uses of parcels within a half mile radius south of the Willowbrook/Rosa Parks Station to include mixed uses, increased housing densities, and additional neighborhood-serving retail uses. The proposed zoning as shown on **Figure 5** includes: Mixed Use 1 (MU-1); Mixed Use 2 (MU-2); MLK Medical; Drew Educational; Imperial Commercial; Willowbrook Residential 1; Willowbrook Residential 2; Willowbrook Residential 3; and Open Space (O-S). **Table 1** shows the increase in development that would result from build out of the proposed Specific Plan. **Table 2** shows the existing acreage, zoning and land uses that would be revised by implementation of the proposed Specific Plan.

Specific Plan Subareas - Existing Uses

The existing land uses within the Specific Plan area include the Martin Luther King, Jr. (MLK) Medical Center Campus, Charles R. Drew University of Medicine and Science (CDU), Kenneth Hahn Plaza, Willowbrook Library, and the MLK Center for Public Health. The Specific Plan area is divided into seven distinct subareas that support a range of land uses, as described below and shown in **Figure 6**.

MLK Medical Center and Associated Facilities: The medical center campus is bound by Wilmington Avenue to the east, E. 120th Street to the north, Compton Avenue to the west, and a residential neighborhood to the south. The approximately 38-acre campus includes the MLK Community Hospital, which serves approximately 1.2 million residents throughout South Los Angeles including Compton, Inglewood, Watts, Willowbrook and Lynwood. In addition, the MLK Center for Public Health is adjacent to the hospital and is operated by the County of Los Angeles.

In 2011, Los Angeles County certified an environmental impact report for the MLK Medical Center Campus Redevelopment Project, Tiers I and II. Tier I development consisted of the MLK Multi-Service Ambulatory Care Center which has been developed, and is now part of the Specific Plan area's existing setting. Tier II programmatically considered mixed-use development including: medical office, commercial, retail, office space, recreation, and multi-family residential uses.

**TABLE 2
SUMMARY OF SPECIFIC PLAN ZONING AND GENERAL PLAN LAND USE AMENDMENTS**

Subarea	Group	Existing Zoning and Land Use	Existing Residential Units	Existing Non-Residential (SF)	Proposed Zoning and Land Use	Capacity for Residential Units	Capacity for Non-Residential (SF)

In 2012, Los Angeles County prepared a MLK Medical Center Campus Master Plan & the Willowbrook MLK Wellness Community Vision to guide Tier II development of the campus. The master plan and community vision were not formally adopted by the Los Angeles County Board of Supervisors, and it is the County's intent that the Willowbrook TOD Specific Plan serve as the regulatory document for buildout of the campus. Thus, while the master plan and community vision provides a guiding framework for buildout of the medical campus, future development within the campus will be required to comply with the provisions of the Willowbrook TOD Specific Plan. While the construction of the MLK Community Hospital was subject to the mitigation measures of the 2011 EIR, all subsequent development within the campus will be subject to the mitigation requirements of the EIR being prepared for the Willowbrook TOD Specific Plan.

CDU: Immediately north of the MLK Medical Center campus are CDU and the King/Drew Magnet High School. The high school is a four story building on the northeast corner of Compton Avenue and 120th Street and is a part of the Los Angeles Unified School District system. These institutions are bounded by Holmes Avenue to the east, Compton Avenue to the west, 120th Street to the south and 118th Street to the north.

Northwest: The northwest subarea encompasses a variety of uses, including educational, retail, residential and institutional. Several vacant lots, owned by the Los Angeles County Community Development Commission (CDC), are located along E. 117th Street. A large vacant site on the northeast corner of E. 118th Street and Compton Avenue is owned by the Compton Unified School District. The educational uses include Lincoln-Drew Elementary School, a part of the Compton Unified School District (CUSD), and the Barack Obama Charter School (an Ingenium Charter School), which are both located north of E. 118th Street. CDU also owns and operates a two-story parking garage and parking lot in this subarea. Other uses in this subarea include a mini-mart, municipal water well and storage and a mix of single family homes, duplexes and multifamily structures. A mixed-use affordable housing and County public library project will break ground at the corner of Wilmington Avenue and 118th street in 2016.

Kenneth Hahn Plaza: Kenneth Hahn Plaza is a privately owned shopping center with approximately 189,287 square feet of retail/commercial space that is located on County-owned land immediately south of the Willowbrook/Rosa Parks Station, and bound by Wilmington Avenue to the west, 119th Street to the south and Willowbrook Avenue to the east. The anchor tenant is a Food 4 Less grocery store; and other tenants include Rite-Aid, General Discount, DaVita Dialysis Center, McDonalds, Taco Bell, Pizza Hut, and Denny's. The Plaza also includes the Willowbrook Library (soon to be relocated) and a Los Angeles County Sheriff's Department substation.

Metro is acquiring approximately 1.5 acres of land on the northern end of the Plaza for expansion of the Willowbrook/Rosa Parks Station. The rest of the Plaza site is being purchased by the shopping center operator, Kimco.

Metro Station: The Willowbrook/Rosa Parks station is adjacent to Kenneth Hahn Plaza, but is blocked off by a fence. Access to the residential neighborhoods to the east of the rail line is limited. Metro is currently implementing the Willowbrook/Rosa Parks Station Improvement Project, which would improve the existing physical conditions of the station. Specific improvements include lighting, signage, and pedestrian access to and from the surrounding neighborhood.

Imperial Highway Corridor: The uses along Imperial Highway Corridor are generally a mix of auto repair, retail, residential, Metro facilities, and underutilized and vacant lots. A school bus

SOURCE: Willowbrook TOD Specific Plan

Willowbrook TOD Specific Plan . 130631

Figure 6
Proposed Land Use Subareas

parking lot and a Metro maintenance yard are located to the west of Wilmington Avenue, and a Metro parking lot is located to the east of Wilmington Avenue. A barber shop and auto shop (towing) are located further west, near Compton Avenue. In addition, a few new homes have been built recently, and a vacant site owned by the Housing Authority for the City of Los Angeles is located within this corridor. On the north side of Imperial Highway (and not within the Specific Plan area) is Imperial Courts, a public housing project.

Residential Neighborhoods: Residential areas within the Specific Plan area include a mix of single family homes, duplexes, apartments, and condominiums and townhouses, which comprise just over 30 percent of the total Specific Plan area. The residential area south of Kenneth Hahn Plaza, east of Wilmington Avenue and west of Willowbrook Avenue is primarily multi-family, with a mix of apartments and detached town homes.

The residential area bounded by Mona Boulevard, 105 Freeway, Willowbrook Avenue and 121st Street contains mostly single-family uses, with the exception of the Willowbrook Avenue East frontage along the Metro Blue Line tracks, which is primarily multi-family use.

Specific Plan Subareas - Proposed Zoning

The Specific Plan area proposes new zoning designations, as described below and shown in Figure 5.

Mixed Use 1 (MU-1) (Kenneth Hahn Plaza Subarea): The Mixed Use 1 (MU-1) zone is intended to provide commercial and residential development with an emphasis on neighborhood serving retail, restaurant and service uses. The Specific Plan envisions a large retail or mixed use center, with a neighborhood plaza or community gathering space as a focal point and strong pedestrian connections to the Willowbrook/Rosa Parks Station, as well as the educational and medical campuses to the west. The proposed density for Mixed Use 1 (MU-1) zone is 1.5 floor area ratio (FAR) and 30 dwelling units per acre.

Mixed Use 2 (MU-2) (Northwest Subarea): The Mixed Use 2 (MU-2) zone is intended to provide commercial and residential development with an emphasis on employment generating uses and residential infill development. The area is appropriate for office, business park, or mixed use developments, with a significant open space component and strong pedestrian connections to the Willowbrook/Rosa Parks Station, and the educational and medical campuses to the south.

The Specific Plan would implement a mixed use district with employment generating uses and high-density residential infill within the Northwest Subarea. The employment generating uses are intended for medical back office, laboratory facilities, hospital equipment facility; medical or university support businesses that provide job opportunities. The high-density residential infill would provide housing for current and future workers, students, and residents in the area. The proposed density for Mixed Use 2 (MU-2) zone is 3.0 FAR and 60 dwelling units per acre.

MLK Medical (MLK Medical Center and Associated Facilities Subarea): The MLK Medical zone is established to maintain and promote medical, clinic, medical office, and associated uses such as incidental retail, supportive residential and parking. This subarea includes the MLK Medical Center campus, which includes the Los Angeles County Multi-Service Ambulatory Care Center (MACC) that opened in 2014 and provides outpatient services including general medicine, cardiology, dermatology, dentistry, geriatrics, HIV and AIDS care, neurology, orthopedics and physical therapy. In addition, the campus includes the new MLK Community Hospital, which opened on July 7, 2015 and has a total of 131 beds, including 93 medical/surgical beds, 20 intensive

care beds and 18 obstetrical beds. In addition, the hospital has a 21-bed emergency department. A 50,000 square foot medical office building and a 1,400 car parking garage are also in the planning and design stages within the MLK campus.

The Specific Plan would provide for pedestrian connection improvements between the MLK Medical Center campus and other activity areas. The proposed density for the MLK Medical zone is 1.65 FAR.

Drew Educational (CDU Subarea): The Drew Educational zone is established to meet the existing and future needs of the CDU and King Drew Magnet High School, while ensuring compatibility with adjacent land uses. The CDU master plan includes a pedestrian, bicycle and shuttle circulation network that connects with the major activity centers in the Specific Plan area. The CDU master plan also includes housing opportunities. The proposed housing types include residences for undergraduate students in a dorm-suite setting, shared graduate student housing, and family housing for visiting faculty. The proposed density for Drew Educational zone is 1.5 FAR.

Imperial Commercial (Imperial Highway Corridor Subarea/ Metro Rosa Parks Station Subarea): The Imperial Commercial zone is established to meet the commerce and service needs of community while ensuring compatibility with adjacent land uses. The intent is to maintain and promote commercial uses between Imperial Highway and I-105 Freeway. The Imperial Commercial zone provides for development of a broad range of retail and service uses, as well as freeway-oriented, regional-serving retail, office complexes, and light manufacturing businesses.

This corridor is suited for less intensive, non-residential uses, such as maintenance yards and parking facilities, self-service public storage facilities, and communications equipment buildings. The proposed density for Imperial Commercial zone is 1.0 FAR.

Willowbrook Residential 1 (Residential Neighborhoods Subarea): The Willowbrook Residential 1 zone provides for primarily detached, single-family residences to preserve existing residential uses in certain areas. The proposed density for Residential 1 zone is 9 dwelling units per acre.

Willowbrook Residential 2 (Residential Neighborhoods Subarea): The Willowbrook Residential 2 zone provides for single family residential, while also providing for two-family residences. The intent is to promote the desirable characteristics of low to medium density neighborhoods. The proposed density for Residential 2 zone is 18 dwelling units per acre.

Willowbrook Residential 3 (Residential Neighborhoods Subarea): The Willowbrook Residential 3 zone is established to provide opportunities for developments containing multiple units, such as apartments or condominiums with common open space and other shared amenities. The proposed density for Residential 3 zone is 30 dwelling units per acre.

Parking Reduction Overlay Zone: The Specific Plan establishes a Parking Reduction Overlay zone within which minimum parking requirements are reduced and maximum parking standards are established to provide appropriate parking for each individual development project, and consistent with the projected increased transit use and less need for parking. The parking overlay zone is primarily located within the CDU, Northwest, Kenneth Hahn Plaza and Metro Station Subareas.

Proposed Mobility and Parking

Roadway Network: The roadway system provides the backbone circulation system for all modes of transportation. The existing street system would be largely maintained in its current configuration, with some improvements designed to improve access, circulation, and walkability (**Figure 7, Existing Street Network and Proposed Road Diets**). The major roadways are Wilmington Avenue and Imperial Highway. Secondary roadways are Compton Avenue, Willowbrook Avenue and Mona Boulevard in the north-south direction, and 120th Street/119th Street in the east-west direction. The number of traffic lanes and roadway lane configurations would generally remain the same, except where road diets would be implemented. Road diets reduce the number of car lanes and add bicycle/pedestrian lanes. The following street enhancements, shown in Figure 8, are intended to improve circulation for bicycles and pedestrians in the Specific Plan area.

Road Diet and Bicycle Lanes on 120th Street: As part of the Willowbrook Area Access Improvements Project, a portion of 120th Street between Compton Avenue and Wilmington Avenue would be reduced from four lanes to three lanes, with a bicycle lane in each direction.

Road Diet and Bicycle/Pedestrian Trail on Mona Boulevard: Mona Boulevard from the I-105 Freeway to 124th Street would be converted from a four lane street to a three lane street, and a pedestrian/bicycle trail installed on the west side of the street.

Willowbrook Avenue: The section of Willowbrook Avenue West between the Willowbrook/Rosa Parks Station and 119th Street, would be reduced from two lanes southbound to one lane southbound, and a bicycle path installed on the west side of the street.

Existing Pedestrian Circulation: The key pedestrian routes in the Specific Plan area are shown in **Figure 8, Existing Pedestrian Routes and Proposed Pedestrian Improvements**. The backbone of the pedestrian system is formed by Wilmington Avenue in the north-south direction and 120th/119th Street in the east-west direction. These two backbone corridors connect the major activity areas of the Willowbrook/Rosa Parks Station, the Kenneth Hahn Plaza, and the MLK Medical Center campus. They also cross at the intersection of Wilmington Avenue and 120/119th Street, which is the pedestrian hub of the Specific Plan area. Additional key elements of the pedestrian system are 118th Street between Compton Avenue and Wilmington Avenue, which connects the CDU campus to the rest of the Specific Plan area, Willowbrook Avenue West between 119th Street and the Willowbrook/Rosa Parks Station, providing access from residential areas to the station, and 119th Street between Willowbrook Avenue and Mona Boulevard, which provides access from the residential areas to the activity centers of the Specific Plan area. Mona Boulevard also provides north-south pedestrian access on the east side of the Specific Plan area including access to Mona Park, the MLK Elementary School and the Dr. Ralph Bunche Middle School.

Pedestrian Sidewalk Improvements: Sidewalks currently exist on most streets in the Specific Plan area, although some are narrow or substandard in quality. The Specific Plan would implement improvements to sidewalks as new development occurs in the following locations: the currently unpaved west side of Willowbrook Avenue West between the Metro Station and 119th Street; the sidewalks on Wilmington Avenue between the 1-105 Freeway off-ramps and Imperial Highway would be improved by widening and adding streetscape improvements including better street lighting.

Pedestrian Oriented Intersection Improvements: To enhance the pedestrian environment and to calm traffic, the proposed Specific Plan would implement a number of

pedestrian oriented intersection improvements, as shown in Figure 9. These include adding high visibility crosswalks at intersections; adding passive pedestrian detection and pedestrian push buttons for crosswalks at traffic signals at intersections; adding countdown pedestrian signals and audio signals to crosswalks at intersections; adding advance stop bars to intersection approaches; adding sidewalk bulb-outs and extensions, or reducing curb returns, on intersection corners where feasible; adding median nose/crossing islands where advantageous and feasible. These measures would facilitate pedestrian circulation, by reducing the width of roadway for pedestrians to cross, providing additional sidewalk space, and making pedestrian crossings more visible to both pedestrians and motorists. The locations for proposed improvements are: Wilmington Avenue and Imperial Highway; Wilmington Avenue and I-105 Eastbound Ramps; Wilmington Avenue and 118th Street; Wilmington Avenue and 120/119th Streets; Wilmington Avenue and 120 Street; Wilmington Avenue and 122nd Street; Willowbrook Avenue West and 119th Street; Willowbrook Avenue East and 119th Street; Mona Avenue and Imperial Highway; Mona Avenue and 119th Street; Mona Avenue and 120th Street; Compton Avenue and Imperial Highway; Compton Avenue and 118th Street; and Compton Avenue and 120th Street.

The type of improvements (Figure 9) would follow the concepts identified in the “Los Angeles County Transit Oriented Districts Access Study”. The improvements at Wilmington Avenue and I-105 eastbound ramp would add a crosswalk across Wilmington Avenue to facilitate access to the Willowbrook/Rosa Parks Station. Other specific improvements include new traffic signals at Wilmington Avenue and 122nd Street, and at Mona Avenue and 119th Street, to facilitate pedestrian crossings on long stretches of both streets currently without signalized crosswalks and a signalized pedestrian crosswalk at Mona Avenue and 120th Street, to facilitate pedestrians crossing to the Dr. Ralph Bunche Middle School.

Bicycle Circulation: The Specific Plan Bicycle Network, shown in Figure 9, Bicycle Network and Key Transit Streets, includes a combination of Class I, Class II, Class III and Class IV facilities to provide a connected and integrated bicycle network throughout the Specific Plan area that connects activity centers and neighborhoods to the Willowbrook/Rosa Parks station, and provides a network for bicyclists to use safely and efficiently.

Bicycle Facilities: Class I bicycle paths would be implemented on Willowbrook Avenue West between 119th Street and Imperial Highway to provide access to the rail station, and on Mona Avenue (west side) between Imperial Highway and 119th Street. Class II bicycle lanes would be implemented on 120th Street between Compton Avenue and Wilmington Avenue, on Wilmington Avenue between 124th Street and 120th Street, and on Imperial Highway between Compton Avenue and Mona Avenue.

Not all streets can support bicycle lanes. In these instances, a connected bicycle network is achieved through implementation of Class III bicycle routes. Class III bicycle routes would be implemented on Compton Avenue, Willowbrook Avenue West south of 119th Street, 119th Street between Wilmington Avenue and Mona Avenue, and on 124th Street throughout the Specific Plan area.

Willowbrook TOD Specific Plan . 130631

Figure 9
Bicycle Network and Key Transit Streets

Bicycle Parking and Stations: Bicycle parking would be provided according to the Los Angeles County Code for all new developments. In addition, bicycle parking would be provided at the Kenneth Hahn Plaza and the Willowbrook/Rosa Parks Station. Bicycle stations include repair facilities and small bicycle shops, bicycle share program facilities and, secure bicycle parking. Bicycle Stations would be provided within the MLK Medical Center campus and the CDU campus, and in the Northwest Subarea of office uses. A Bicycle Share Program would be implemented in the Specific Plan area to encourage the use of bicycling and reduce vehicle trips. Bicycle share programs provide bicycles that can be rented for a period of time and can be picked up or dropped off at any bicycle share facility in an area.

Shuttle Routes: Existing shuttle routes that are operated by the County to serve the MLK Medical Center and CDU campus would continue, and additional shuttle routes would be added to serve new development in the Northwest Subarea and connect the land uses to the Metro Station.

Surrounding land uses and setting: The area surrounding the proposed Specific Plan area is heavily urbanized with residential, commercial and institutional land uses. North of the Specific Plan area is predominately residential with some commercial uses. The City of Lynwood is directly adjacent to the Specific Plan's eastern border and land uses are manufacturing, public uses and commercial. South and west of the Specific Plan area is predominately residential.

Project Requirements

CEQA: The proposed Project will require certification of a CEQA document.

- *County of Los Angeles Board of Supervisors*
- *Certification of an Environmental Impact Report. General Plan Amendment, and Zoning Amendment*

Other public agencies whose approval may be required (e.g., permits, financing approval, or participation agreement): None for the proposed Specific Plan. Future specific development and redevelopment projects pursuant to the proposed Specific Plan would be subject to approvals by various trustee and regulating agencies, including, but not limited to the CDC, Metro, Caltrans, South Coast Air Quality Management District, and the Los Angeles Regional Water Quality Control Board.

Major projects in the area:

Metro Willowbrook/Rosa Parks Station Improvement Project: Metro's Willowbrook/Rosa Parks Station Improvement Project would provide improvements to this station. In addition to the two rail lines, the Station is served by six Metro bus lines as well as several municipal bus lines and community shuttles. Improvements part of the Metro's Willowbrook/Rosa Parks Station Improvement Project include platform extensions and enhancements, upgraded entrances and pedestrian crossings, improved lighting, landscaping and signage throughout the site, and upgrades to the bus, bicycle and park-and-ride facilities. The Final Initial Study/Negative Declaration was prepared May 8, 2015.

Wilmington & 118th Street Senior Housing and Los Angeles County Public Library: A five-story mixed-use building that includes an 8,939-square-foot first-floor space for a County library and public meeting room is planned for 11737-11753 Wilmington Avenue and 11732-11756 Bandera Street. The four upper floors contain 105 apartments for lower-income seniors. The project contains 104 ground-level and underground parking spaces; and the structure has a total floor area of 92,358 square feet on 1.7 gross (1.0 net) acres. Most of the structure is proposed to have a maximum height of 65 feet

above grade, although an architectural feature may extend to a height of 70 feet above grade. This project is scheduled to break ground in 2016. The Mitigated Negative Declaration prepared for this project was adopted by the Regional Planning Commission on February 11, 2015.

DPW Willowbrook Area Access Improvements: The Department of Public Works (DPW) is planning for improvements to the public right-of-way in the vicinity of the MLK Community Hospital. The primary objective of this project is to improve mobility of pedestrians and bicyclists in the area. The project limits are: Wilmington Avenue from Imperial Highway to 480 feet south of 120th Street, 120th Street from Compton Avenue to Wilmington Avenue, 119th Street from Wilmington Avenue to Willowbrook Avenue. The project includes the following improvements: landscape and irrigation throughout the project limits; sidewalk enhancements such as colored concrete unit pavers and curb ramp upgrades; pavement repair and crosswalk enhancements; construction of new raised medians with landscaping; renovation of existing landscaped median; refurbishing existing and providing new site furnishings such as bus shelters, trash receptacles, benches, and bicycle racks; pedestrian lighting; bicycle routes/lanes; wayfinding and monument signage; and traffic signal upgrades. Construction is set to begin the summer of 2016. The Willowbrook Area Access Improvements project was categorically exempt from the provisions of the California Environmental Quality Act. The CEQA exemption was adopted by the Board of Supervisors on April 2, 2013.

Reviewing Agencies:

Responsible Agencies

- ☐ None
 Regional Water Quality Control Board:
☒ Los Angeles Region
☐ Lahontan Region
☐ Coastal Commission
☐ Army Corps of Engineers

Special Reviewing Agencies

- ☒ None
☐ Santa Monica Mountains Conservancy
☐ National Parks
☐ National Forest
☐ Edwards Air Force Base
☐ Resource Conservation District of Santa Monica Mountains Area
☐ City of Los Angeles Bureau of Sanitation and City of Los Angeles Department of Planning

Regional Significance

- ☐ None

| <input checked="" type="checkbox"/> Geology/Soils | | |

DETERMINATION: (To be completed by the Lead Department.)

On the basis of this initial evaluation:

- ☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- ☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
- ☒ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- ☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- ☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Signature (Prepared by)

Signature (Approved by)

Date

EVALUATION OF ENVIRONMENTAL IMPACTS:

- 1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources the Lead Department cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- 2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- 3) Once the Lead Department has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.
- 4) "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level. (Mitigation measures from Section XVII, "Earlier Analyses," may be cross-referenced.)
- 5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA processes, an effect has been adequately analyzed in an earlier EIR or negative declaration. (State CEQA Guidelines § 15063(c)(3)(D).) In this case, a brief discussion should identify the following:
 - a) Earlier Analysis Used. Identify and state where they are available for review.
 - b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of, and adequately analyzed in, an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - c) Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
- 6) Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
- 7) The explanation of each issue should identify: the significance threshold, if any, used to evaluate each question, and; mitigation measures identified, if any, to reduce the impact to less than significance. Sources of thresholds include the County General Plan, other County planning documents, and County ordinances. Some thresholds are unique to geographical locations.
- 8) Climate Change Impacts: When determining whether a project's impacts are significant, the analysis should consider, when relevant, the effects of future climate change on : 1) worsening hazardous conditions that pose risks to the project's inhabitants and structures (e.g., floods and wildfires), and 2) worsening the project's impacts on the environment (e.g., impacts on special status species and public health).

1. AESTHETICS

	<i>Potentially Significant Impact</i>	<i>Less Than Significant Impact with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
--	---	--	---	----------------------

Would the project:

a) Have a substantial adverse effect on a scenic vista? ☐ ☐ ☒ ☐

Less Than Significant Impact. Typically, a scenic vista is defined as a view of an area that is visually or aesthetically pleasing. Aesthetic components of a scenic vista include (1) scenic quality, (2) sensitivity level, and (3) view access. The Specific Plan area is a flat, level area with no hills and there are no large areas of natural open space. Willowbrook is an urbanized community and, as a result, views in all directions are generally adjacent to urban development and associated roadways and landscaping. The Specific Plan area is not considered to have a high level of sensitivity for scenic vista impacts. Therefore, impacts to scenic vistas would not occur and further discussion of this will not be included in the EIR.

b) Be visible from or obstruct views from a regional riding or hiking trail? ☐ ☐ ☐ ☒

No Impact. The Specific Plan area is located within a fully developed urban area, and is not located in the vicinity of a County regional riding or hiking trail (LA County, 2012). However, the Los Angeles River Trail (a 7 mile bike path from the north side of Griffith Park at Riverside Drive along the Los Angeles River to Barclay Street, north of Downtown LA) is 3 miles to the east of the Specific Plan area. The Los Angeles River Trail is not located in the vicinity of the Specific Plan area and does not have direct or indirect views of the Specific Plan area; thus, the EIR will not include an evaluation of potential impacts related to regional riding or hiking trails and scenic views.

c) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway? ☐ ☐ ☐ ☒

No impact. The Specific Plan area is not located within or near a designated scenic highway corridor and is not located within view of a state or federal scenic highway. Interstate Highway 105 runs east to west along the northern portion of the project area but is not designated as a scenic highway. The nearest Caltrans-designated Scenic Highway is a portion of Highway 210 (Caltrans, 2015) located approximately 20 miles north of the Specific Plan area. Thus, the Specific Plan area is not visible from this highway, and the project would not result in impacts to scenic resources within view of a state scenic highway. This criterion will not require further analysis in the EIR.

d) Substantially degrade the existing visual character or quality of the site and its surroundings because of height, bulk, pattern, scale, character, or other features? ☒ ☐ ☐ ☐

Potentially Significant Impact. The proposed Specific Plan would allow for redevelopment at an increased intensity; taller buildings, expanded sidewalks, bicycle lanes and bicycle parking facilities, and alterations to the existing street intersections in order to implement a TOD development pattern to the Specific Plan area. New development would be located within walking distance of the existing

Willowbrook/Rosa Parks Station and would include a mix of residential, mixed-use, commercial, and complementing public uses designed for pedestrians while also accommodating vehicular traffic. The proposed Specific Plan is intended to be consistent with the Los Angeles County General Plan goal to strengthen aesthetic character within the area, and would include landscaping and beautification elements. However, these improvements would alter the existing visual character of the area. The EIR will evaluate the planned changes to determine if they would degrade the existing visual character or quality of the Specific Plan area.

e) Create a new source of substantial shadows, light, or glare which would adversely affect day or nighttime views in the area?

Potentially significant impact. The proposed infill development and redevelopment, as well as the new pedestrian-friendly light signals and walkway lighting could potentially increase ambient or “spillover” light in the Specific Plan area. In addition, the proposed Specific Plan provides architectural, residential, commercial and mixed-use, parking, landscaping, and street lighting standards. These standards include a prohibition against light fixtures that cause glare or reflect into upper stories of buildings. Chapter 2 of the proposed Specific Plan states that pedestrian-scaled lighting should be provided along all streets in the project area. Light fixtures would adhere to guidelines set forth by the Dark Sky Association to protect the area’s view of stars. Light fixtures in the public right-of-way would also follow the Southern California Edison (SCE) standards for maintenance. However, potentially significant impacts related to an increase in ambient and spillover light could occur; thus, potential impacts related to light and glare will be further evaluated in the EIR.

2. AGRICULTURE / FOREST

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board.

	<i>Potentially Significant Impact</i>	<i>Less Than Significant Impact with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
--	---	--	---	----------------------

Would the project:

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	--------------------------	--------------------------	-------------------------------------

No impact. The Willowbrook area does not contain any Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (CDOC, 2015). The proposed Specific Plan area consists of a developed urban area that does not contain any farmland uses. Therefore, the proposed Specific Plan would not convert Prime Farmland, Unique Farmland, or Farmland of Statewide importance to nonagricultural uses. No impacts related to the conversion of farmland to non-agricultural uses would occur; this issue will not be analyzed further in the EIR.

b) Conflict with existing zoning for agricultural use, with a designated Agricultural Opportunity Area, or with a Williamson Act contract?

<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	--------------------------	--------------------------	-------------------------------------

No impact. The project area does not contain an agricultural zoning classification or land use designation and is not regulated by a Williamson Act Contract (CDOC, 2013). No impact would occur as a result of the proposed Specific Plan and this issue will not be analyzed further in the EIR.

c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code § 12220 (g)), timberland (as defined in Public Resources Code § 4526), or timberland zoned Timberland Production (as defined in Government Code § 51104(g))?

<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	--------------------------	--------------------------	-------------------------------------

No impact. Willowbrook is not zoned for forest land or zoned as an area designated for Timberland Protection. No impact would occur as a result of the proposed Specific Plan and this issue will not be analyzed further in the EIR.

d) Result in the loss of forest land or conversion of forest land to non-forest use?

<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	--------------------------	--------------------------	-------------------------------------

No impact. See explanation 2c above.

e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

☐☐☐☒

No impact. See explanation 2c above.

3. AIR QUALITY

Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations.

	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				

a) Conflict with or obstruct implementation of applicable air quality plans of either the South Coast AQMD (SCAQMD) or the Antelope Valley AQMD (AVAQMD)?

☒ ☐ ☐ ☐

Potentially Significant Impact. Willowbrook is located within the South Coast Air Basin, which consists of the urbanized areas of Los Angeles, Riverside, San Bernardino, and Orange Counties. The SCAQMD monitors the Basin for pollutants and is responsible for regulating and controlling emissions, primarily from stationary sources. The Basin is currently under both federal and state non-attainment status for ozone and particulate matter smaller than 10 and 2.5 microns (PM10 and PM2.5, respectively). SCAQMD and the Southern California Association of Governments (SCAG) are responsible for preparing the air quality management plan (AQMP) to address federal and state Clean Air Act requirements. The AQMP details goals, policies, and programs for improving air quality in the Basin and to bring it into attainment with the national and state ambient air quality standards. The most recent AQMP was adopted by the SCAQMD Governing Board on December 12, 2012. On February 19, 2015, the Air Resources Board conducted a public meeting to consider the minor revision to the South Coast 2012 PM2.5 SIP (CARB, 2015).

Implementation of the proposed Specific Plan would generate pollutant emissions during both construction and operation of new developments in the Specific Plan area. During construction, sources of pollutant emissions include heavy off-road equipment as well as on-road motor vehicles and workers' commutes to and from development sites. Construction activities would result in emissions of particulate matter, as well as nitrous oxides (NOx) and volatile organic compounds (VOCs), which are precursors to ozone formation. Additionally, because build out of the proposed Specific Plan project would involve changes in land use intensity and traffic patterns, an increase of air pollutant emissions could occur that may conflict with applicable air quality plans of the SCAQMD. Furthermore, operation of new or altered buildings could increase emissions from new area sources. Overall, the pollutant emissions associated with the proposed Specific Plan project could potentially conflict with SCAQMD's AQMP. Thus, the potential for implementation of the proposed Specific Plan to conflict with or obstruct implementation of the AQMP will be evaluated in the EIR.

b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?

☒ ☐ ☐ ☐

Potentially Significant Impact. The Basin is currently under both federal and state non-attainment status in ozone and particulate matter smaller than 10 and 2.5 microns (PM10 and PM2.5, respectively). Implementation of the proposed Specific Plan would result in pollutant emissions generated from the construction and operation of new land uses within the Specific Plan area. Construction of new developments and roadway improvements would generally involve activities such as demolition, site preparation, grading, and building construction, which would result in fugitive dust and equipment exhaust

emissions. Construction worker and delivery vehicle trips would also generate temporary pollutant emissions. These construction-related emissions could adversely affect the regional ambient air quality in the Basin and locally within Willowbrook. Additionally, operation of the new land uses in the proposed Specific Plan area may result in increased emissions of air pollutants from new stationary sources and from vehicle trips accessing the Specific Plan area. Thus, the pollutant emissions generated from implementation of the proposed Specific Plan may violate an air quality standard or contribute to an existing or projected air quality violation. Therefore, this impact is considered to be potentially significant and will be analyzed in the EIR. Mitigation measures will be identified if necessary.

c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?

Potentially Significant Impact. As indicated under 3b, short-term construction activities and long-term operation of future developments associated with the proposed Specific Plan may generate emissions that could result in either a violation of an ambient air quality standard or contribute to an existing air quality violation. Due to the elevated concentrations of air pollutants that currently occur in the Basin, when combined with other past, present, or reasonably foreseeable future projects in the area, the net increase of criteria pollutants could cumulatively contribute to the nonattainment designations of pollutants in the Basin. Thus, the EIR will evaluate the potential for the proposed Specific Plan to generate a cumulatively considerable net increase of any criteria pollutant for which the project region is in nonattainment.

d) Expose sensitive receptors to substantial pollutant concentrations?

Potentially Significant Impact. Sensitive receptors are locations where uses or activities result in increased exposure of persons more sensitive to the unhealthful effects of emissions (such as children and the elderly). Examples of land uses that can be classified as sensitive receptors include residences, schools, daycare centers, parks, recreational areas, medical facilities, rest homes, and convalescent care facilities. Sensitive receptors within the Specific Plan area include residential areas, medical facilities, and schools such as King-Drew Magnet High School, CDU, Barack Obama Charter School, and MLK Elementary. Future development pursuant to implementation of the proposed Specific Plan project may expose these existing and/or new sensitive receptors to substantial pollutant concentrations. The EIR will evaluate the potential for construction and operation of the future developments in the Specific Plan area to expose sensitive receptors to substantial pollutant concentrations.

e) Create objectionable odors affecting a substantial number of people?

☐☐☒☐

Less Than Significant Impact. The SCAQMD Air Quality Handbook identifies the following uses as having potential odor issues; wastewater treatment plants, food processing plants, agricultural uses, chemical plants, composting, refineries, landfills, dairies, and fiberglass moldings, none of which are proposed within the Specific Plan. The Specific Plan proposes mixed use commercial and residential development within the project area, which do not involve the types of uses that would emit objectionable odors affecting a substantial number of people. In addition, odors generated by new and existing non-residential land uses in the Specific Plan area are required to be in compliance with SCAQMD Rule 402 to prevent odor nuisances on sensitive land uses.

During construction of future projects allowed under the proposed Specific Plan, emissions from construction equipment, such as diesel exhaust, and volatile organic compounds from architectural coatings and paving activities may generate odors. However, these odors would be limited and temporary; and thus, are not expected to affect a substantial number of people. Therefore, impacts relating to both operational and construction activity odors would be less than significant, and odors will not be evaluated in the EIR.

4. BIOLOGICAL RESOURCES

	<i>Potentially Significant Impact</i>	<i>Less Than Significant Impact with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife (CDFW) or U.S. Fish and Wildlife Service (USFWS)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. No candidate, sensitive, or special-status species have been identified within or in the vicinity of the Specific Plan area by the California Natural Diversity Database (CNDDDB) (CNDDDB, 2015). The proposed Specific Plan provides for infill development within an already highly disturbed urban environment. This development would not result in any direct impacts to special-status species or result in any habitat modifications that could indirectly result in a substantial adverse effect on any special-status species. Therefore, the proposed Specific Plan project would not result in impacts on species identified as candidate, sensitive, or special-status, and further analysis of this issue is not required in the EIR.

b) Have a substantial adverse effect on any sensitive natural communities (e.g., riparian habitat, coastal sage scrub, oak woodlands, non-jurisdictional wetlands) identified in local or regional plans, policies, regulations or by CDFW or USFWS?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
--	--------------------------	--------------------------	--------------------------	-------------------------------------

No Impact. Riparian habitat is lowland habitat associated with the bed and banks of a river, stream, or wash. The nearest river is the Los Angeles River 4 miles east of the eastern most boundary of the Specific Plan area. Compton Creek is located 2 miles west of the western most boundary of the Specific Plan area. Both rivers are concrete-lined and channelized and, therefore, do not have any riparian habitat along its banks. The Specific Plan area is located in an upland area that contains an appreciable amount of impervious surfaces (i.e., asphalt and cemented streets and parking lots and buildings) and nonnative ornamental trees, shrubs, and ground cover and, therefore, riparian habitat is not present. The proposed Specific Plan would involve infill development within an already highly disturbed urban environment and would not involve any changes or alterations to any riparian habitat or other sensitive natural community. Therefore, the proposed Specific Plan project would not result in impacts on riparian habitats and this criterion does not require further analysis in the EIR.

c) Have a substantial adverse effect on federally or state protected wetlands (including, but not limited to, marshes, vernal pools, coastal wetlands, and drainages) or waters of the United States, as defined by § 404 of the federal Clean Water Act or California Fish & Game code § 1600, et seq. through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
---	--------------------------	--------------------------	--------------------------	-------------------------------------

No Impact. As discussed above, the Specific Plan area is a highly disturbed urban environment and no portion of the area contains the proper vegetation (i.e., a preponderance of hydrophytes or “water-loving” plants), soils (i.e., hydric or waterlogged soils), and hydrologic conditions (i.e., inundated either permanently or periodically or saturated during the growing season of the prevalent vegetation) to be defined a wetland according to the U.S. Army Corps of Engineers’ (USACE) *Wetlands Delineation Manual* (USACE, 1987). Compton Creek (located approximately 2 miles west of the Specific Plan area) is a concrete-lined and channelized wash. Overall, because the Specific Plan area does not contain nor is located in proximity to a wetland, the proposed Specific Plan project would not have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (CWA) (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means. Impacts would not occur and this criterion requires no further analysis in the EIR.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

☐ ☐ ☐ ☒

No Impact. The Specific Plan area is within a fully developed urban area. It is sufficiently removed from habitat areas such that it could not provide for the movement of any native resident or migratory fish or wildlife species, nor could it provide an established native resident or migratory wildlife corridor or contain native wildlife nursery sites. Therefore, no impacts would result from implementation of the proposed Specific Plan and no further analysis of this issue is required in the EIR.

e) Convert oak woodlands (as defined by the state, oak woodlands are oak stands with greater than 10% canopy cover with oaks at least 5 inch in diameter measured at 4.5 feet above mean natural grade) or otherwise contain oak or other unique native trees (junipers, Joshuas, southern California black walnut, etc.)?

☐ ☐ ☐ ☒

No Impact. No oak woodlands or other unique native trees exist within the Specific Plan area. As a result, impacts to oak woodlands or unique native trees would not occur with implementation of the proposed Specific Plan.

f) Conflict with any local policies or ordinances protecting biological resources, including Wildflower Reserve Areas (L.A. County Code, Title 12, Ch. 12.36), the Los Angeles County Oak Tree Ordinance (L.A. County Code, Title 22, Ch. 22.56, Part 16), the Significant Ecological Areas (SEAs) (L.A. County Code, Title 22, § 22.56.215), and Sensitive Environmental Resource Areas (SERAs) (L.A. County Code, Title 22, Ch. 22.44, Part 6)?

☐ ☐ ☐ ☒

No Impact. The only local policy or ordinance related to the protection of biological resources that would be applicable to the Specific Plan area is the Oak Tree Ordinance; which establishes that a person shall not cut, destroy, remove, relocate, inflict damage, or encroach into the protected zone of any tree of the oak tree

genus without first obtaining a permit. The proposed Specific Plan would not affect any oak trees located in the project area. Furthermore, implementation of the proposed Specific Plan would adhere to all County ordinances applicable to the Specific Plan area, including the Los Angeles County Oak Tree Ordinance if applicable. The Specific Plan proposes new street tree designations as the project area has an inconsistent palette and pattern of street trees; none of those designations include Oak Trees. As a result, the proposed Specific Plan would not conflict with any local plans or policies protecting biological resources and no impacts are anticipated as a result of the proposed Specific Plan. No further analysis of this issue is required in the EIR.

g) Conflict with the provisions of an adopted state, regional, or local habitat conservation plan?

☐☐☐☒

No Impact. The Specific Plan area is not located within or near a Habitat Conservation Plan, Natural Community Conservation Plan or any other approved local, regional, or state habitat conservation plan. No impact would occur, and this issue will not be discussed further in the EIR.

5. CULTURAL RESOURCES

	<i>Potentially Significant Impact</i>	<i>Less Than Significant Impact with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines § 15064.5?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Potentially Significant Impact. The Specific Plan area includes buildings that have the potential to be considered important historic resources; therefore, the project may cause a substantial adverse change in the significance of a historical resource. The EIR will identify any properties within the Specific Plan area that have been listed as a California Point of Historical Interest, a California Historical Landmark, California Register of Historic Places, or the National Register of Historic Places. In addition, the EIR will evaluate any other properties within the Specific Plan that have the potential to be historic and potential impacts that could occur to these properties by implementation of the proposed Specific Plan.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines § 15064.5?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
--	-------------------------------------	--------------------------	--------------------------	--------------------------

Potentially Significant Impact. The Specific Plan area is urbanized and ground surfaces have been heavily disturbed due to previous development. Therefore, the likelihood of the discovery of surficial archaeological resources is minimal. However, the Specific Plan would result in infill and redevelopment of parcels, where construction could that could disturb native soils and result in inadvertent damage to unknown buried archaeological deposits, resulting in a significant impact. Therefore, potential impacts related to archeological resources will be evaluated in the EIR.

c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature, or contain rock formations indicating potential paleontological resources?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
--	-------------------------------------	--------------------------	--------------------------	--------------------------

Potentially Significant Impact. The Specific Plan area is underlain by younger Quaternary Alluvium, which consists predominately of loose to dense sands, silty sands, and silts. Clay units are locally present, but become much more dominant adjacent to the Rosecrans Hills nearby (CDOC, 1998). Alluvium is unlikely to contain significant fossils. However, older Quaternary deposits or deposits of the Pleistocene Inglewood Formation (Qi) may lie below the Quaternary Alluvium; both are known to contain vertebrate fossils. Although no paleontological resources are known to exist within the Specific Plan area, there is a possibility that unknown resources may be uncovered during construction activities. It is possible that site demolition and grading activities would involve native soil layers that have not previously been disturbed; as such, there is potential for the proposed Specific Plan to result in impacts to paleontological resources, therefore impacts to paleontological resources will be evaluated in the EIR.

d) Disturb any human remains, including those interred outside of formal cemeteries?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
--	-------------------------------------	--------------------------	--------------------------	--------------------------

Potentially Significant Impact. There is no known site within the Specific Plan area that has been used for human burial purposes. Therefore, it is unlikely that human remains would be encountered during construction activities related to the proposed Specific Plan. However, previously unknown buried human remains could be inadvertently disturbed during construction activities, which would result in a significant impact. Thus, potential impacts related to human remains will be discussed in the EIR.

e) Cause a substantial adverse change in the significance of a tribal cultural resource as defined in Public Resources Code 21074?

Potentially Significant Impact. Tribal cultural resources can be sites, features, places, cultural landscapes, sacred places, or objects with cultural value to any California Native American Tribe (Public Resources Code 21074). There is no known site within the Specific Plan area that is a tribal cultural resource. Therefore, it is unlikely that any adverse change to a tribal cultural resource would occur due to redevelopment or new development in the Willowbrook Community. However, previously unknown tribal cultural resources could lose significance once redevelopment or development occurs due to the implementation of the proposed Specific Plan, which would result in a significant impact. Thus, potential impacts related to tribal cultural resources will be discussed in the EIR.

6. ENERGY

	<i>Potentially Significant Impact</i>	<i>Less Than Significant Impact with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
Would the project:				
a) Conflict with Los Angeles County Green Building Ordinance (L.A. County Code Title 22, Ch. 22.52, Part 20 and Title 21, § 21.24.440) or Drought Tolerant Landscaping Ordinance (L.A. County Code, Title 21, § 21.24.430 and Title 22, Ch. 22.52, Part 21)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The project includes redevelopment of existing uses and is subject to the requirements of the Los Angeles County Green Building and Drought Tolerant Landscaping Ordinance. The project would comply with these ordinances, which are intended to conserve energy, water, natural resources, and promote a healthier environment (Municipal Code Section 22.52.2100). The Specific Plan incorporates sustainable design guidelines that would not conflict with the Los Angeles County Green Building Ordinance or the Drought Tolerant Landscaping Ordinance. No further discussion of this issue will be included in the EIR.

b) Involve the inefficient use of energy resources (see Appendix F of the CEQA Guidelines)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
---	--------------------------	--------------------------	--------------------------	-------------------------------------

No Impact. The Specific Plan is proposed to guide future development and redevelopment in the area and implement TOD land uses. Development projects that are implemented by the proposed Specific Plan would comply with State and County regulations related to energy usage and efficient energy design. Therefore, implementation of the proposed Specific Plan would not result in an inefficient use of energy resources, and no further discussion of this issue will be included in the EIR.

7. GEOLOGY AND SOILS

<i>Potential y Significan t Impact</i>	<i>Less Than Significant Impact with Mitigation Incorporate d</i>	<i>Less Than Significant Impact</i>	<i>No Impac t</i>
--	---	---	---------------------------

Would the project:

a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:

- i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known active fault trace? Refer to Division of Mines and Geology Special Publication 42. ☐ ☐ ☐ ☒

No Impact. Seismically-induced ground rupture is defined as the physical displacement of surface deposits in response to an earthquake's seismic waves. The magnitude, sense, and nature of fault rupture can vary for different faults or even along different strands of the same fault. Ground rupture is considered more likely along active faults. The Los Angeles Basin contains both active and potentially active faults, and is considered a region of high seismic activity. The Specific Plan area is not located with or adjacent to an Alquist-Priolo Fault Rupture Hazard Zone faults and is therefore unlikely to experience surface fault rupture (CDOC, 2010; DRP, 2014). The closest active fault to the Specific Plan area is the Newport-Inglewood-Rose Canyon Fault, Strike 334, located approximately 3 miles southwest of the Specific Plan area (USGS, 2015). Due to the distance between the Specific Plan area and the active fault, implementation of the proposed Specific Plan would not result in impacts related to the rupture of a known earthquake fault.

- ii) Strong seismic ground shaking? ☐ ☐ ☒ ☐

Less Than Significant Impact. As described above, the Los Angeles basin is considered a region of high seismic activity due to the numerous faults that transect the area, including the Hollywood, Newport, and Inglewood Faults (CDOC, 2010). The proposed Specific Plan would include development of new structures and redevelopment of existing structures. Therefore, implementation of the proposed Specific Plan has the potential to expose additional people and structures to strong seismic ground shaking. Ground movement during an earthquake varies depending on the overall magnitude, distance to the fault, focus of earthquake energy, and type of geologic material.

Los Angeles County's standard approval requirements ensure that all construction complies with the California Building Code and the County's Building Regulations established in the County's Municipal Code. Continued adherence to applicable building codes through the County's building permit process would reduce impacts related to seismic ground shaking to a less than significant level, and this issue requires no further analysis in the EIR.

iii) Seismic-related ground failure, including liquefaction and lateral spreading?

Potentially Significant Impact. Liquefaction can occur as a secondary effect of seismic shaking in areas of saturated, loose, fine-to-medium grained soils where the water table is 40 feet or less below the ground surface. Seismic shaking temporarily eliminates the grain-to-grain support normally provided by the sediment grains. The waters between the grains assume the weight of the overlying material and the sudden increase in pore water pressure results in the soil losing its friction properties. The saturated material (with the frictionless properties of a liquid) will fail to support overlying structures. Liquefaction-related effects include loss of bearing strength, ground oscillations, lateral spreading, and slumping. Liquefaction may occur in water-saturated sediment during moderate to great earthquakes in the project area because the depth of groundwater is approximately 34 feet below the ground surface. Furthermore, a certain depth at an individual site is not necessarily an indicator to the area-wide or regional depth to groundwater, and levels are variable (SWRCB, 2005).

Liquefaction susceptibility reflects the relative resistance of a soil to loss of strength when subjected to ground shaking. Physical properties of soil such as sediment grainsize distribution, compaction, cementation, saturation, and depth govern the degree of resistance to liquefaction. Younger alluvial fan deposits within the South Gate Quadrangle consist largely of sand, silt, and gravel, and lesser occurrences of clay. Most test boreholes drilled in these units report the presence of loose to medium dense sand and silt. Some deposits consist of very loose sand. Where historical groundwater levels are within 40 feet of the surface, as in Willowbrook, these deposits are judged to be susceptible to liquefaction. Historic liquefaction has also been confirmed in the South Gate Quadrangle (CDOC, 1998). Therefore, the potential for liquefaction and lateral spreading is high and further discussion will be included in the EIR.

iv) Landslides?

No Impact. The Specific Plan area is a flat, level area with no hills or cliffs, where the risk of landslides is very low. As a result, impacts related to landslide hazards would not result from implementation of the Specific Plan (CDOC, 1998).

b) Result in substantial soil erosion or the loss of topsoil?

Potentially Significant Impact. The proposed Specific Plan is located within a developed urban area, and development projects implemented by the Specific plan would be developed within areas that are largely covered with impervious surfaces. However, construction activities associated with the Specific Plan, such as roadway, sidewalk, bicycle path, and building development components may include excavation, grading, and other soil-disturbing activities, which have the potential to result in erosion and/or topsoil loss. Therefore, this issue will be analyzed along with potential hydrology and water quality impacts in the EIR.

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

☒ ☐ ☐ ☐

Potentially Significant Impact. As described above, Willowbrook is located on a gently sloping alluvial plain, and the Specific Plan area is a flat, level area with groundwater levels that are approximately 34 feet deep. The Specific Plan area is located in a liquefaction or earthquake-induced landslide area, but due to the flat topography and variable groundwater table, the potential for lateral spreading is also considered very low. In the South Gate Quadrangle, damage attributed to liquefaction was noted in the vicinity of the project area following the 1933 Long Beach Earthquake; it was speculated that the considerable damage in Willowbrook was probably due to the communities' location on formerly marshy ground, particularly in areas along Compton Creek and the former courses of the Los Angeles River (CDOC, 1998). The proposed Specific Plan would implement redevelopment of existing uses and the addition of structures on soils that have historically been known as areas of liquefaction, therefore further impacts associated with unstable soil will be further evaluated in the EIR.

d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

☐ ☐ ☒ ☐

Less Than Significant Impact. The Specific Plan area is underlain by young Quaternary Alluvium, which are dominated by loose to moderately dense sandy sediments (CDOC, 1998), which are not typically expansive. Non-engineered artificial fills have not been delineated or mapped in the South Gate Quadrangle. Consequently, no areas are zoned for potential liquefaction relative to artificial fill (CDOC, 1998). The County's building permit process requires submittal of soil investigation reports and structural observation programs (ALPC, 2015) and permits would not be issued unless soil suitability and appropriate construction practices for the proposed structures is confirmed. Therefore, the proposed Specific Plan would result in less than significant impacts related to expansive soils and this issue requires no further analysis in the EIR.

e) Have soils incapable of adequately supporting the use of onsite wastewater treatment systems where sewers are not available for the disposal of wastewater?

☐ ☐ ☐ ☒

No Impact. The Specific Plan area is served by a sewer system; septic tanks would not be utilized by the proposed Specific Plan. All development associated with the proposed Specific Plan project would connect to and be served by the existing public sewer system for wastewater discharge and treatment. No impacts would occur as a result of the proposed Specific Plan and this issue requires no further analysis in the EIR.

f) Conflict with the Hillside Management Area Ordinance (L.A. County Code, Title 22, § 22.56.215) or hillside design standards in the County General Plan Conservation and Open Space Element?

☐ ☐ ☐ ☒

No Impact. The Specific Plan area is not located within a Hillside Management Area or within an area that is subject to hillside design standards. The Specific Plan area is flat land that is not in the vicinity of

a hillside. As a result, the Specific Plan would not conflict with the Hillside Management Area Ordinance or any hillside standards, and will not be discussed further in the EIR.

8. GREENHOUSE GAS EMISSIONS

<i>Potentially Significant Impact</i>	<i>Less Than Significant Impact with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
---	--	---	----------------------

Would the project:

a) Generate greenhouse gas (GHGs) emissions, either directly or indirectly, that may have a significant impact on the environment?

<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-------------------------------------	--------------------------	--------------------------	--------------------------

Potentially Significant Impact. Gases that trap heat in the atmosphere are called greenhouse gases (GHGs). The major concern with GHGs is that increases in their concentrations are causing global climate change. The principal GHGs are carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), sulfur hexafluoride (SF₆), perfluorocarbons (PFCs), and hydrofluorocarbons (HFCs). Construction and operation of development permitted by the proposed Specific Plan would generate GHG emissions, both directly and indirectly. Construction activities are short-term and cease to emit GHGs upon completion. Operation emissions associated with the future developments in the Specific Plan area would include GHG emissions from mobile sources (transportation), energy, water use and treatment, and waste disposal. GHG emissions generated by electricity and natural gas use by future developments are indirect GHG emissions from the energy that is produced off-site. These sources would have the potential to generate GHGs and result in a significant impact on the environment. Therefore, impacts associated with GHG emissions are potentially significant and will be evaluated in the EIR.

b) Conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-------------------------------------	--------------------------	--------------------------	--------------------------

Potentially Significant Impact. Assembly Bill (AB) 32, signed by Governor Arnold Schwarzenegger in 2006, directs the State of California to reduce statewide GHG emissions to 1990 levels by the year 2020. In accordance with AB 32, ARB developed the Climate Change Scoping Plan (Scoping Plan), which outlines how the state would achieve the necessary GHG emission reductions to achieve this goal (ARB, 2008). On October 6, 2015, the County adopted the Community Climate Action Plan (CCAP) a component of the Air Quality Element in the new General Plan. The CCAP will reduce greenhouse gas emissions generated by community activities and works in conjunction with other sustainability initiatives in the County to reduce carbon emissions by 2020. The CCAP establishes a recent baseline inventory of emissions and identifies a target reduction needed to achieve the State goals. By implementing mandatory actions identified in the CCAP, projects can streamline their quantitative greenhouse gas analysis requirements in CEQA. However, the CCAP analysis is based on the land use densities and intensities specified in the new General Plan. Because the proposed Specific Plan proposes a plan amendment and would likely increase densities, it does not qualify for streamlining. The EIR will need to include both a quantitative and qualitative analysis of greenhouse gas emissions.

9. HAZARDS AND HAZARDOUS MATERIALS

Would the project:	<i>Potentially Significant Impact</i>	<i>Less Than Significant Impact with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
a) Create a significant hazard to the public or the environment through the routine transport, storage, production, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less Than Significant Impact. A hazardous material is defined as any material that, due to its quantity, concentration, or physical or chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment if released into the workplace or environment. Hazardous materials include, but are not limited to, hazardous substances, hazardous wastes, and any material that a business or the local implementing agency has a reasonable basis for believing would be injurious to the health and safety of persons or harmful to the environment if released into the environment.

There are multiple state and local laws that regulate the storage, use, and disposal of hazardous materials. The Los Angeles County Health and Hazardous Materials Division was designated by the State Secretary for Environmental Protection 1997 as the Certified Unified Program Agency (“CUPA”) for the County. The CUPA is the local administrative agency that coordinates the following programs regulating hazardous materials and hazardous wastes: the Hazardous Waste Generator Program, the Hazardous Materials Release Response Plans and Inventory Program, the California Accidental Release Prevention Program (“Cal-ARP”), the Aboveground Storage Tank Program and the Underground Storage Tank Program (LA County, 2011).

Operation of the proposed project provides for increased intensity of residential and non-residential uses on the site. Hazardous materials associated with residential and commercial uses include solvents, cleaning agents, paints, pesticides, batteries, and aerosol cans. The medical facilities and hospital is also a small- and large-quantity generator of hazardous materials such as small medical wastes such as needles to waste oil and mixed oil; oxygenated solvents including acetone, butanol, and ethyl acetate; spent halogenated solvents; and other hazardous materials including batteries, lamps, pesticides, thermostats, mercury, silver and polychlorinated biphenyls. All of the hazardous materials that would be used by the project are subject to existing applicable federal, state, and local regulations. Because the proposed project uses would largely remain the same as under current conditions, substantial changes to the operational characteristics and types of potentially hazardous materials are not anticipated. Normal routine use of these products under project conditions would not result in a significant hazard to residents or workers.

Construction of the new development within the Specific Plan area would involve the routine use, handling, storage, transport, and disposal of hazardous materials such as fuels, paints, and solvents, consistent with applicable federal, state, and local regulations. In compliance with existing federal, state, and local regulations, the amounts of these materials present during construction would be limited and would not pose a significant adverse hazard to workers or the environment. The construction contractor would be required to implement standard BMPs regarding hazardous materials storage, handling, and disposal during construction in compliance with the State General Permit.

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
--	-------------------------------------	--------------------------	--------------------------	--------------------------

and accident conditions involving the release of hazardous materials or waste into the environment?

Potentially Significant Impact. The Specific Plan area has long been developed with a variety of urban uses. Roadway improvements and development projects that would occur by implementation of the proposed Specific Plan could unearth unknown contaminants that may be present in soil and/or groundwater from current and/or historic site usage. The potential for the proposed Specific Plan to produce significant impacts to the public during the transportation of hazards or involving the potential release of hazards will be evaluated in the EIR.

c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of sensitive land uses?

☒☐☐☐

Potentially Significant Impact. The Specific Plan area contains existing schools, including King-Drew Magnet High School, Charles R. Drew University of Medicine and Science, Barack Obama Charter School, and Martin Luther King, Jr. Elementary. Other sensitive land uses include residential areas and medical facilities. As described above, the proposed Specific Plan could result in excavation and handling of hazardous materials if unknown contaminants are found during excavation activities. Therefore, the EIR will include an identification of the schools, residential areas, and medical facilities near the Specific Plan area and evaluation of impacts related to the potential release of hazardous materials.

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code § 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

☒☐☐☐

Potentially Significant Impact. As described above, the Specific Plan area has long been developed for urban uses that could have a history of hazardous material usage or contamination. As described above, the proposed Specific Plan could result in excavation and handling of hazardous materials if unknown contaminants are found during excavation activities, which could create a significant hazard to the public or the environment. Thus, the EIR will include a database search of federal, state, and local governmental databases to identify any hazardous material sites within the Specific Plan area and potential related impacts from implementing the proposed Specific Plan.

e) For a project located within an airport land use plan, or where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?

☐☐☐☒

No Impact. The proposed Specific Plan area is not located within an airport land use plan or airport approach zone (ALUC, 2015). The nearest public airport is approximately 2 miles south of the Specific Plan area (Compton/Woodley Airport); the Hawthorn Municipal Airport is approximately 5 miles west of the Specific Plan area and Los Angeles International Airport is approximately 10 miles west of the Specific Plan area. Therefore, the potential for the proposed project to result in a safety hazard for people residing or working in the vicinity of an airport will not require further analysis in the EIR.

f) For a project within the vicinity of a private airstrip,

☐☐☐☒

would the project result in a safety hazard for people residing or working in the project area?

No Impact. The proposed Specific Plan area is not located within the vicinity of a private airstrip. Therefore, the potential for the proposed project to result in a safety hazard for people residing or working in the vicinity of an airport will not require further analysis in the EIR.

g) Impair implementation of, or physically interfere with, an adopted emergency response plan or emergency evacuation plan?

☐☐☒☐

Less Than Significant Impact. Existing County development standards would require new development within the Specific Plan to be designed so as not to interfere with an adopted emergency response plan or emergency evacuation plan. Impacts would be less than significant as a result of the proposed Specific Plan and no further analysis of this criterion is required in the EIR.

h) Expose people or structures to a significant risk of loss, injury or death involving fires, because the project is located:

i) within a Very High Fire Hazard Severity Zone (Zone 4)?

☐☐☐☒

No Impact. The Specific Plan area is located within an urban area that does not contain wildlands, and is not located in an area classified as a Very High Fire Hazard Severity Zone (Cal Fire, 2012). Therefore, impacts related to wildland fires would not occur, and this issue requires no further analysis in the EIR.

ii) within a high fire hazard area with inadequate access?

☐☐☐☒

No Impact. As described above, the Specific Plan area is located within an urban developed area and is not located within an identified wildland fire hazard area. Furthermore, the Specific Plan area currently has adequate access, which would be continued with further development. As a result, impacts related to high fire hazards and inadequate access would not occur, and no further discussion will be included in the EIR.

iii) within an area with inadequate water and pressure to meet fire flow standards?

☐☐☐☒

No Impact. The availability of sufficient water pressure is a basic requirement of the Fire Department (Los Angeles, 2010). Existing fire flows within and near the Specific Plan area are at or above the minimum requirements and impacts related to fire flow would not occur, and no further discussion will be included in the EIR.

iv) within proximity to land uses that have the potential for dangerous fire hazard?

☐☐☐☒

No Impact. The Specific Plan area is not within proximity to land uses that have the potential for a dangerous fire hazard. The Specific Plan area is developed and is not in an area with light fuels or

unpredictable weather conditions. Land uses consist of residential, commercial, industrial, open space, and public uses. These land uses would not generate potential impacts related to a dangerous fire hazard, and no further discussion will be included in the EIR.

- i) Does the proposed use constitute a potentially dangerous fire hazard? ☐ ☐ ☐ ☒

No Impact. The proposed Specific Plan would develop and redevelop residential and commercial land uses. None of the uses related to the proposed Specific Plan would constitute a potentially dangerous fire hazard, impacts would not occur, and no further discussion will be included in the EIR.

10. HYDROLOGY AND WATER QUALITY

<i>Potentially Significant Impact</i>	<i>Less Than Significant Impact with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
---	--	---	----------------------

Would the project:

a) Violate any water quality standards or waste discharge requirements?

<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-------------------------------------	--------------------------	--------------------------	--------------------------

Potentially Significant Impact. Infill and redevelopment that would occur as proposed in the Specific Plan would disturb soils and would utilize equipment and hazardous substances that, if not properly contained, could degrade surrounding water quality. Future development within the Specific Plan area would expand residential, commercial and public uses that would increase the number of residents and the concentration of persons within the area that could increase pollutants such as pesticides, vehicle fuels and oils, and litter; all of which, if not properly contained, could degrade existing water quality. Potential impacts related to water quality standards and waste discharge requirements will be addressed in the EIR.

b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?

<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-------------------------------------	--------------------------	--------------------------	--------------------------

Potentially Significant Impact. The Specific Plan area receives water from Park Water Company and Golden State Water Company. Infill and redevelopment that would occur with implementation of the Specific Plan would result in population growth; thereby increasing demand on water supplies. The proposed project would add approximately 1,734 residential dwelling units and 2,630,306 square feet of commercial space to the Specific Plan area, and is, therefore required to develop a water supply assessment in accordance with State Senate Bill 610 to demonstrate that an assured water supply is available to support development of the uses proposed in the Specific Plan. The EIR will include a quantification of the water supplies needed for the proposed Specific Plan and an analysis of potential local groundwater impacts that could result.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?

<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-------------------------------------	--------------------------	--------------------------	--------------------------

Potentially Significant Impact. According to Federal Emergency Management Agency's Flood Insurance Rate Map No. 06037C1815F, the Specific Plan area is not located in a flood zone (FEMA, 2008), and no existing surface drainages or rivers are located in the Specific Plan area. The proposed Specific Plan would implement redevelopment and infill development within an already developed and mostly paved urban area. After implementation of the project development, runoff would continue to flow over either paved or

landscaped areas that would eventually be directed toward storm drains. Therefore, the potential for erosion to occur from implementation of the proposed Specific Plan would be extremely low. However, construction of certain project components would expose bare soil that could be subject to erosion, potentially resulting in a significant impact. This issue will be further discussed in the EIR.

d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?

☐☐☒☐

Less Than Significant Impact. As stated previously, the proposed Specific Plan area is not located in a flood zone and does not contain any streams or rivers. The Specific Plan components include an expansion or reconfiguration of existing urban development in mostly paved areas; therefore, the proposed components would maintain existing drainage patterns, and would not contribute to an increase in impervious surfaces in the Specific Plan area such that increased runoff and flooding on or offsite would result. Impacts related to flooding would be less than significant, and flooding will not be further discussed in the EIR.

e) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

☒☐☐☐

Potentially Significant Impact. As stated previously, the Specific Plan components include an expansion or reconfiguration of existing urban development in mostly paved areas; therefore, the proposed components would maintain existing drainage patterns, and would likely not contribute to an increase in impervious surfaces in the Specific Plan area such that increased runoff would exceed the capacity of drainage systems. During construction, existing drainage patterns may be altered temporarily and new sources of runoff could occur. Likewise, the proposed residential and commercial development may alter the amount of runoff that drains from concrete and other building materials, and this may contribute to an excess in stormwater runoff. Impacts related to an increase in runoff and the capacity of drainage systems are potentially significant and will be further discussed in the EIR.

f) Generate construction or post-construction runoff that would violate applicable stormwater NPDES permits or otherwise significantly affect surface water or groundwater quality?

Potentially Significant Impact. Development implemented by the proposed project would be required to comply with the NPDES Construction General Permit (NPDES Order No. 2009-0009-DWQ). The Construction General Permit requires the development and implementation of a SWPPP, which identifies erosion, sediment, and non-structural BMPs that would be implemented to reduce construction impacts on storm water quality. During operation, the development projects implemented by the Specific Plan would be required to maintain water quality through development and implementation of Water Quality Management Plans (WQMPs). During operation the development projects implemented by the Specific Plan would be required to comply with the NPDES MS4 Permit (NPDES Order No. R4-2012-0175). The EIR will evaluate potential types and amounts of construction and operation related pollutant sources and the reduction of impacts that would occur through compliance with the required permits. Mitigation measures will be provided, if necessary, to reduce impacts related to water quality.

g) Conflict with the Los Angeles County Low Impact Development Ordinance (L.A. County Code, Title 12, Ch. 12.84 and Title 22, Ch. 22.52)?

No Impact. The LA County LID ordinance was designed to manage rainfall and stormwater runoff in urban areas through the distribution of small, cost-effective landscape features throughout project sites. Such features include bio-retention/filtration landscape areas, reduced impervious surfaces, and functional landscaping and grading (DPW, 2014). The development projects implemented by the Specific Plan would develop and implement a WQMP as required by the NPDES MS4 Permit that would incorporate structural and non-structural BMPs designed to reduce volume, velocity and pollutant loading of storm water and limit dry weather flows discharging from the site. The NPDES MS4 Permit also requires implementation of LID practices to prevent non-storm water discharges and encourage proper filtration of runoff to reduce the degradation of water quality. Development within the Specific Plan area would comply with Los Angeles County's LID and would incorporate BMPs that are consistent with LID. Impacts regarding conflict with the LID ordinance would not occur, and no further discussion will be included in the EIR.

h) Result in point or nonpoint source pollutant discharges into State Water Resources Control Board-designated Areas of Special Biological Significance?

No Impact. There are no Areas of Special Biological Significance ("ASBS") on-site or within close proximity to the Specific Plan area. The closest ASBS is the Laguna Point to Latigo Point which is approximately 30 miles northwest of the Specific Plan area. This ASBS is the largest of the mainland ASBS in Southern California, with 24 miles of coastline and 11,842 acres of marine habitat (SWRCB, 2014). Thus, impacts associated with discharges into an ASBS would not occur and will not be evaluated further in the EIR.

i) Use onsite wastewater treatment systems in areas with known geological limitations (e.g. high groundwater) or in close proximity to surface water (including, but not limited to, streams, lakes, and drainage course)?

No Impact. Wastewater produced in the project area is currently transported by sewer lines to the City of Los Angeles sewer system (Los Angeles City, 2015). No wastewater treatment systems are proposed within the Specific Plan area. The proposed Specific Plan would not include an on-site wastewater treatment system and impacts would not occur and will not be discussed further in the EIR.

j) Otherwise substantially degrade water quality? ☒ ☐ ☐ ☐

Potentially Significant Impact. The potential water quality impacts from construction and operation of the proposed Specific Plan components will be analyzed in the EIR, as described in threshold “a” above.

k) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map, or within a floodway or floodplain? ☐ ☐ ☐ ☒

No Impact. The Specific Plan area is not within a 100-year flood hazard area. According to Federal Emergency Management Agency’s Flood Insurance Rate Map No. 06037C1815F, the Specific Plan area is not located in a flood zone (FEMA, 2008), and no existing surface drainages or rivers are located in the Specific Plan area. As a result, no adverse impacts related to flooding are expected as a result of the development of the proposed Specific Plan and this issue warrants no further discussion in the EIR (DWR, 2015).

l) Place structures, which would impede or redirect flood flows, within a 100-year flood hazard area, floodway, or floodplain? ☐ ☐ ☐ ☒

No Impact. See explanation 10k above.

m) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam? ☐ ☐ ☒ ☐

Less Than Significant Impact. The Specific Plan area is not near a levee or dam that may fail and expose people or structures to risk (County of Los Angeles, 2015). Impacts would be less than significant and no further discussion is necessary in the EIR.

n) Place structures in areas subject to inundation by seiche, tsunami, or mudflow? ☐ ☐ ☐ ☒

No Impact. The Specific Plan area is not subject to inundation by tsunami as it is located approximately 10.5 miles east of the Pacific Ocean. Seiches occur in semi- or fully enclosed bodies of water when strong winds and/or rapid changes in atmospheric pressure push water from one end of the body of water to the other, resulting in an oscillation back and forth of waves (NOAA, 2015). The dry, Mediterranean climate in the Specific Plan area is not prevalent to dramatic changes in pressure or strong winds such that a seiche would occur, bypassing holding walls and inundating the Specific Plan area. Mudflows are flowing masses of fine-grained earth material with a high degree of fluidity (USGS, 2015), and happen on slopes. The Specific Plan area is developed, relatively flat and does not have enough exposed soils or topography to be a risk of mudflow. Impacts would not occur; these issues will not be evaluated further in the EIR.

11. LAND USE AND PLANNING

<i>Potentially Significant Impact</i>	<i>Less Than Significant Impact with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
---	--	---	----------------------

Would the project:

a) Physically divide an established community?

<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	--------------------------	--------------------------	-------------------------------------

No Impact. The proposed Specific Plan is located in an urban developed area, and the proposed project would provide for infill and redevelopment of parcels within the Willowbrook community. This would not physically divide an established community. The Specific Plan would connect activity centers and different parts of Willowbrook so that the community is more connected; not physically divided. The proposed roadway and pedestrian improvements that would be implemented by the Specific Plan are intended to provide improved circulation and cohesion, and do not include any components that would displace existing residences or otherwise physically divide the Willowbrook community. No impacts are anticipated as a result of the proposed Specific Plan.

b) Be inconsistent with the applicable County plans for the subject property including, but not limited to, the General Plan, specific plans, local coastal plans, area plans, and community/neighborhood plans?

<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-------------------------------------	--------------------------	--------------------------	--------------------------

Potentially Significant Impact. The proposed project is a Specific Plan that would result in changes to the land use plan and zoning designations. The proposed Specific Plan identifies sites that have the potential for redevelopment or infill development and proposes to rezone land uses of specific parcels within the area to provide for the TOD envisioned by the Specific Plan. The proposed Specific Plan would result in increases in development intensity and changes in land uses that could conflict with an applicable land use plan, policy, or regulation that was adopted for the purpose of avoiding or mitigating an environmental effect. The proposed Specific Plan's compatibility with applicable plans, policies, and regulations will be assessed in the EIR.

c) Be inconsistent with the County zoning ordinance as applicable to the subject property?

<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
-------------------------------------	--------------------------	--------------------------	--------------------------

Potentially Significant Impact. The proposed project is in the Los Angeles County General Plan Metro Planning Area, the geographic center of Los Angeles County in the unincorporated Willowbrook neighborhood. The proposed project is a Specific Plan that would result in changes to the land use plan and zoning designations. The Specific Plan area's existing zoning includes: C-2 (neighborhood commercial), C-3 (unlimited commercial), M-1 (light manufacturing), MXD (mixed use development), R-1 (Single-family residence), R-2 (two-family residence), and R-3 (limited multiple residence). The Willowbrook TOD Specific Plan establishes zoning for parcels within the Specific Plan boundary as identified in Figure 5, Proposed Zoning. The zones for the Specific Plan area include: Mixed Use 1 (MU-1); Mixed Use 2 (MU-2); MLK Medical; Drew Educational; Imperial Commercial; Willowbrook Residential 1; Willowbrook Residential 2; Willowbrook Residential 3; and Open Space (O-S). Table 1 in the project description shows the additional development that would occur from build out of the proposed Specific Plan. Table 2 in the project description shows the existing acreage, zoning and land uses that would be revised by implementation of the proposed Specific Plan. The proposed Specific Plan's impacts related to consistency with the County zoning ordinance will be assessed in the EIR.

d) Conflict with Hillside Management criteria,
Significant Ecological Areas conformance criteria, or
other applicable land use criteria?

☐☐☐☒

No Impact. The Specific Plan area is within the urban and developed community of Willowbrook. The Specific Plan area is not located within any habitat conservation plan or natural community conservation plan. Therefore, no impact would occur. This issue will not be addressed further in the EIR.

12. MINERAL RESOURCES

	<i>Potentially Significant Impact</i>	<i>Less Than Significant Impact with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. No significant mineral deposits have been identified within the Specific Plan area (USGS, 2014). As a result, the proposed Specific Plan would not cause a loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. No impacts to mineral resources are expected to occur.

b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
---	--------------------------	--------------------------	--------------------------	-------------------------------------

No Impact. See explanation 12a above.

13. NOISE

	<i>Potentially Significant Impact</i>	<i>Less Than Significant Impact with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
Would the project result in:				
a) Exposure of persons to, or generation of, noise levels in excess of standards established in the County General Plan or noise ordinance (Los Angeles County Code, Title 12, Chapter 12.08), or applicable standards of other agencies?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Potentially Significant Impact. Noise levels generated by construction and operation of future development within the Specific Plan area could result in the exposure of persons to or generation of noise levels in excess of standards established in the County of Los Angeles General Plan Noise Element and Noise ordinance. During construction of future development in the Specific Plan area, sensitive receptors that are located nearby a construction site would be exposed to temporary increases in ambient noise levels. Once developed, operational noise levels generated by new developments would include stationary sources (e.g., heating, ventilation, and air conditioning equipment) as well as mobile sources (e.g., traffic noise) within the Specific Plan area. As construction and operational noise levels associated with the Specific Plan area could potentially exceed or violate County noise standards and/or regulations, these potential impacts will be assessed in the EIR.

b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
---	-------------------------------------	--------------------------	--------------------------	--------------------------

Potentially Significant Impact. During construction activities within the Specific Plan area, people may be exposed to excessive groundborne vibration or groundborne noise levels from the operation of heavy equipment. These impacts would generally only occur for a short duration. However, because existing land uses may be subject to disturbance and/or annoyance by groundborne noise or vibration, potential impacts could occur and this issue will be evaluated in the EIR.

The proposed Specific Plan would implement mixed use commercial and residential development within the project area. These land uses that would be allowed by the proposed Specific Plan do not involve the types of uses that would involve any major sources (mobile or stationary) of vibration, which are more typical of large industrial facilities. Thus, once developed, the operation of the new land uses in the Specific Plan area is not anticipated to generate vibration levels that would adversely affect existing or future sensitive receptors. As a result, operational vibration impacts associated with the proposed Specific Plan would be less than significant and would not require further analysis in the EIR.

c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project, including noise from parking areas?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
--	-------------------------------------	--------------------------	--------------------------	--------------------------

Potentially Significant Impact. The proposed Specific Plan would allow for redevelopment at an increased intensity; taller buildings, expanded sidewalks, bicycle lanes and bicycle parking facilities, and alterations to the existing street intersections in order to provide a TOD land use pattern to the Specific

Plan area. Most new development would be located within walking distance of the existing Metro station and would include a mix of residential, mixed-use, commercial, and public uses designed for pedestrians while also accommodating vehicular traffic. Development within the Specific Plan area may result in a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project primarily from potential increases in traffic noise and operation of the development. Although the Specific Plan's proximity to the Metro Station encourages transit use, development pursuant to the proposed Specific Plan may generate an increase in vehicle trips. As a result, the total net increase in traffic noise levels over existing conditions will be quantified and analyzed in the EIR.

d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project, including noise from amplified sound systems?

☒ ☐ ☐ ☐

Potentially Significant Impact. Development within the Specific Plan area may result in a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project during construction of new land use developments. The operation of construction equipment at development sites within the Specific Plan area would result in increased noise levels, which could adversely affect off-site sensitive receptors located nearby. In addition, construction traffic associated with new developments may also result in a temporary or periodic increase in noise levels on the local roadways in the Specific Plan area. As such, potential noise impacts on existing and future sensitive receptors (e.g., hospital and residential uses) from exposure to temporary construction noise levels will be evaluated in the EIR.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

☐ ☐ ☐ ☒

No Impact. The Specific Plan area is not located in the jurisdiction of an airport land use compatibility plan, nor is it in an airport approach zone (ALUC, 2015). The nearest public airport is approximately 2 miles south of the Specific Plan area (Compton/Woodley Airport); the Hawthorn Municipal Airport is approximately 5 miles west of the Specific Plan area and Los Angeles International Airport is approximately 10 miles west of the Specific Plan area. Therefore, the proposed Specific Plan would not expose people to excessive noise from an airport, and therefore, this issue area would not be further analyzed in the EIR.

f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?

☐ ☐ ☐ ☒

No Impact. See explanation 13e above.

14. POPULATION AND HOUSING

	<i>Potentially Significant Impact</i>	<i>Less Than Significant Impact with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
Would the project:				
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Potentially Significant Impact. The proposed Specific Plan would allow for new development and redevelopment at an increased intensity; and would provide taller buildings, expanded sidewalks, bicycle lanes and bicycle facilities, and alterations to the existing street intersections in order to implement a TOD land use pattern to the Specific Plan area. Implementation of the proposed Specific Plan would induce population growth in the area by planning for 1,734 additional residential units and 2,630,306 additional square feet of non-residential space within the Specific Plan area. Therefore, this issue will be discussed further in the EIR.

b) Displace substantial numbers of existing housing, especially affordable housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
--	--------------------------	--------------------------	--------------------------	-------------------------------------

No Impact. The proposed Specific Plan would not result in the permanent displacement of substantial number of existing housing, nor would it result in the displacement of substantial numbers of people. The proposed Specific Plan provides for infill development and redevelopment would include a mix of residential, commercial, industrial, and public uses. Build out of the Specific Plan would provide 1,734 additional residential units within the Specific Plan area. Development projects implemented by the proposed Specific Plan may result in temporary displacement of residents during construction activities. However, development projects would occur sporadically at a parcel by parcel project level, the potential displacement of persons residing on an infill or redevelopment parcel would be short-term, and the project would result in a greater number of residential units to house residents of the area. Therefore, impacts related to displacement of housing or persons that would require replacement housing elsewhere would not occur, and this issue will not be further evaluated in the EIR.

c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
---	--------------------------	--------------------------	--------------------------	-------------------------------------

No Impact. See explanation for 14b above.

d) Cumulatively exceed official regional or local population projections?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
---	-------------------------------------	--------------------------	--------------------------	--------------------------

Potentially Significant Impact. The Specific Plan would increase the number of residential units with the Specific Plan area. Thus, the maximum number of residents would increase with the proposed project; and the project could result in an exceedance of population projections. From 2013 to 2018, population growth

will average 0.8 percent per year in Los Angeles County and the employment growth rate is expected to average 1.6 percent per year (Caltrans, 2013). However, the development pursuant to the proposed Specific Plan would provide additional housing and employment opportunities, which could induce population growth that may cumulatively exceed official population projections. Therefore, impacts related to population projections may occur from implementation of the proposed Specific Plan and analysis will be included in the EIR.

15. PUBLIC SERVICES

	<i>Potentially Significant Impact</i>	<i>Less Than Significant Impact with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
a) Would the project create capacity or service level problems, or result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				

Fire protection?

☒
☐
☐
☐

Potentially Significant impact. The proposed Specific Plan would result in redevelopment and infill development that would increase the residential and employee populations in the Specific Plan area that would result in incrementally increased demands for public services and facilities and could, therefore, have the potential to result in a significant impact on the need for new or altered fire, police, recreation or other public facilities. As a result, the proposed Specific Plan's impact on public services will be analyzed in the EIR.

Sheriff protection?

☒
☐
☐
☐

Potentially Significant impact. See explanation 15a above.

Schools?

☒
☐
☐
☐

Potentially Significant impact. See explanation 15a above.

Parks?

☒
☐
☐
☐

Potentially Significant impact. See explanation 15a above.

Libraries?

☒
☐
☐
☐

Potentially Significant impact. See explanation 15a above.

Other public facilities?

☒
☐
☐
☐

Potentially Significant impact. See explanation 15a above.

16. RECREATION

	<i>Potentially Significant Impact</i>	<i>Less Than Significant Impact with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Potentially Significant Impact. Mona Park is located within the southeast Specific Plan area. An increase in population and population density from new proposed residential and commercial uses would increase the use of existing neighborhood and regional parks or other recreation facilities like Mona Park, which could require the construction or expansion of recreation facilities as compared to existing conditions. In addition, the proposed Specific Plan includes pedestrian and bicycle facilities that would be constructed, and as described throughout this Initial Study, could have an adverse effect on the environment. Construction and operation of the new recreational facilities that would be implemented by the proposed Specific Plan will be evaluated in the EIR.

b) Does the project include neighborhood and regional parks or other recreational facilities or require the construction or expansion of such facilities which might have an adverse physical effect on the environment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
--	-------------------------------------	--------------------------	--------------------------	--------------------------

Potentially Significant Impact. No new parks or recreational facilities are proposed as part of the Specific Plan project; however, due to the increase in population and population density from the proposed residential and commercial uses, Mona Park may be impacted. The open space strategy of the Specific Plan would improve the park/open space network by using streets and pedestrian connections, bringing these amenities within a reasonable walking and biking distance for the Specific Plan area residents. In addition, the Specific Plan includes generation of new open space and providing varied open spaces that would further improve open space in the Specific Plan area. These components of the Specific Plan may have an adverse physical effect on the environment; and therefore, will be analyzed in the EIR.

c) Would the project interfere with regional open space connectivity?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
---	--------------------------	--------------------------	--------------------------	-------------------------------------

No Impact. The proposed Specific Plan would not interfere with regional open space connectivity. There is very little open space in the Specific Plan area and the project would enhance open space connectivity by encouraging new development to provide public open space. Open space connectivity would occur by the Specific Plan from implementation of pedestrian connections, common open space areas, plazas and courtyards, and public sidewalks. The open space provided by the Specific Plan would not interfere with any regional open space connectivity. Therefore, project impacts related to open space connectivity would not occur, and further discussion will not be included in the EIR.

17. TRANSPORTATION/TRAFFIC

	<i>Potentially Significant Impact</i>	<i>Less Than Significant Impact with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
Would the project:				
a) Conflict with an applicable plan, ordinance, or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Potentially Significant Impact. The proposed Specific Plan would implement bicycle lanes and pedestrian improvements, reduced parking requirements, increased development, and road diets, which has the potential to impact traffic patterns. Pedestrian improvements measures would facilitate pedestrian circulation, by reducing the width of roadway for pedestrians to cross, providing additional sidewalk space, and making pedestrian crossings more visible to both pedestrians and motorists. In addition, traffic generated by new uses and increased intensity of existing uses associated with the proposed Specific Plan could potentially have a significant impact on area roadways, including the potential for conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system. Therefore, potential impacts related to performance of the roadway system in relation to applicable policies and ordinances will be evaluated in the EIR.

b) Conflict with an applicable congestion management program (CMP), including, but not limited to, level of service standards and travel demand measures, or other standards established by the CMP for designated roads or highways?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
---	-------------------------------------	--------------------------	--------------------------	--------------------------

Potentially Significant Impact. See explanation 17a above.

c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
---	--------------------------	--------------------------	--------------------------	-------------------------------------

No Impact. The Specific Plan area is not located in the jurisdiction of an airport land use compatibility plan, nor is it in an airport approach zone (ALUC, 2015). The nearest public airport is approximately 2 miles south of the project area (Compton/Woodley Airport); the Hawthorn Municipal Airport is approximately 5 miles west of the project area and Los Angeles International Airport is approximately 10 miles west of the project area. The proposed Specific Plan components would not result in changes to air traffic patterns or a change in air traffic locations. Therefore, there would be no impact, and further discussion will not be included in the EIR.

d) Substantially increase hazards due to a design	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
---	--------------------------	--------------------------	-------------------------------------	--------------------------

feature (e.g., sharp curves or dangerous intersections)
or incompatible uses (e.g., farm equipment)?

Less Than Significant Impact. The Specific Plan proposes to redesign some intersections and implement road diets that would generally result in lane reduction to add a bicycle lane. A Road Diet involves converting an existing four-lane undivided roadway segment to a three-lane segment consisting of two through lanes and a center two-way left-turn lane. The reduction of lanes allows the roadway cross section to be reallocated for other uses such as bike lanes, pedestrian refuge islands, transit stops, or parking (Department of Transportation, 2015). All development within the Specific Plan would be required meet LA County design standards in relation to protection of pedestrian and bicycle traffic. In addition, the proposed uses within the Specific Plan would be compatible with the surrounding mixed uses in the urban environment. As a result, less than significant impacts would occur from implementation of the proposed Specific Plan, and further discussion will not be included in the EIR.

e) Result in inadequate emergency access?

☐☐☒☐

Less Than Significant Impact. The Specific Plan proposes to redesign some intersections and implement road diets. The number of traffic lanes and roadway lane configurations would generally remain the same, except where road diets would be implemented. Roadway diets, described above in 17d, would generally result in lane reduction to add a bicycle lane. The proposed Specific Plan would involve the reconfiguration of roadways and driveways to residential and commercial properties, and would require the presence of construction equipment and materials adjacent to roadways. The Specific Plan requires that the design of newly configured roadways and development sites to provide adequate emergency access. The changes to roadway patterns and driveways within the Specific Plan area would require construction permits from the County's Public Works Department, which would not allow development activities to result in potential impacts related to emergency access. As a result, impacts would be less than significant.

f) Conflict with adopted policies, plans, or programs
regarding public transit, bicycle, or pedestrian
facilities, or otherwise decrease the performance or
safety of such facilities?

☐☐☐☒

No Impact. The proposed Specific Plan itself is based on the encouragement of TOD. Therefore, the development of the proposed components within the would support alternative transportation, and would be consistent with and further adopted policies, plans, and programs supporting alternative transportation (e.g., taking the Metro, bus turnouts, bicycle racks). A number of pedestrian oriented intersection improvements would be implemented throughout the Specific Plan area. These would be based on a menu of improvements that includes adding high visibility crosswalks at intersections; adding passive pedestrian detection and pedestrian push buttons for crosswalks at traffic signals at intersections; adding countdown pedestrian signals and audio signals to crosswalks at intersections; adding advance stop bars to intersection approaches; adding sidewalk bulb-outs and extensions, or reducing curb returns, on intersection corners where feasible; adding median nose/crossing islands where advantageous and feasible. These measures would facilitate pedestrian circulation, by reducing the width of roadway for pedestrians to cross, providing additional sidewalk space, and making pedestrian crossings more visible to both pedestrians and motorists. Impacts would be less than significant, and this issue requires no further analysis in the EIR

18. UTILITIES AND SERVICE SYSTEMS

	<i>Potentially Significant Impact</i>	<i>Less Than Significant Impact with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
Would the project:				
a) Exceed wastewater treatment requirements of either the Los Angeles or Lahontan Regional Water Quality Control Boards?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Potentially Significant Impact. The proposed Specific Plan would provide for redevelopment and infill development that would increase demand for utilities. This increase in demand has the potential to exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board, may require the expansion of water or wastewater treatment facilities, may require the construction of new storm water drainage facilities, and may impact water supplies from existing entitlements and resources. Any deficiencies in the Specific Plan area of utilities and service systems may result in significant impacts on the environment. As a result, impacts related to utilities and service systems will be evaluated in the EIR.

b) Create water or wastewater system capacity problems, or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
---	-------------------------------------	--------------------------	--------------------------	--------------------------

Potentially Significant Impact. See explanation 18a above.

c) Create drainage system capacity problems, or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
---	-------------------------------------	--------------------------	--------------------------	--------------------------

Potentially Significant Impact. See explanation 18a above.

d) Have sufficient reliable water supplies available to serve the project demands from existing entitlements and resources, considering existing and projected water demands from other land uses?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
--	-------------------------------------	--------------------------	--------------------------	--------------------------

Potentially Significant Impact. See explanation 18a above.

e) Create energy utility (electricity, natural gas, propane) system capacity problems, or result in the construction of new energy facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
---	-------------------------------------	--------------------------	--------------------------	--------------------------

Potentially Significant Impact. See explanation 18a above.

f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?

Potentially Significant Impact. See explanation 18a above.

g) Comply with federal, state, and local statutes and regulations related to solid waste?

Potentially Significant Impact. See explanation 18a above.

19. MANDATORY FINDINGS OF SIGNIFICANCE

	<i>Potentially Significant Impact</i>	<i>Less Than Significant Impact with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Potentially Significant Impact. Based on evaluations and discussions contained in this Initial Study, the proposed Specific Plan may have a significant potential to degrade the quality of the environment, including potential impacts to air quality, land use, population and housing, and traffic. Additional information is required to determine whether the proposed Specific Plan would result in significant impact on the environment.

b) Does the project have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
--	--------------------------	--------------------------	-------------------------------------	--------------------------

Less Than Significant Impact. The Specific Plan is designed to achieve both short-term and long-term environmental goals by implementing sustainable design guidelines. For example, green buildings are structures that are designed, constructed, renovated, operated and demolished with minimal environmental impacts. The buildings would be sited and designed to maximize the use of sunlight and shade for energy savings, and respect the solar access of adjacent buildings. Buildings would be clustered for shade, and incorporate protective courtyards, recessed windows and doors, and insulated walls. To reduce energy use, the east and west walls of the buildings would be shaded with evergreen trees to reduce summer heat gain. South walls would be shaded with deciduous trees. Walkways and plazas would be designed to collect stormwater where feasible.

To reduce water use and maintenance costs, the majority of the plant materials would be drought tolerant and require relatively low maintenance. Arcades, covered walkways, trellises and passages would be incorporated to provide sheltered areas for pedestrian circulation as well as shade the buildings to reduce energy usage. In addition, the Specific Plan would comply with County regulations that are provided to protect both short and long-term environmental goals. Therefore, the Specific Plan would not result in a disadvantage to long-term environmental goals.

c) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects,	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
--	-------------------------------------	--------------------------	--------------------------	--------------------------

the effects of other current projects, and the effects of probable future projects)?

Potentially Significant Impact. The proposed Specific Plan may have a significant potential to degrade the quality of the environment due to multiple potential environmental impacts. In combination with effects of past projects, current projects, and probable future projects, effects of the Specific Plan may be cumulatively considerable. Therefore, cumulative potential impacts will be evaluated for each environmental topic analyzed in the EIR.

d) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Potentially Significant Impact. See explanation 19a above.

**Notice of Preparation of a CEQA Document for the
Willowbrook Transit Oriented District Specific Plan**

The South Coast Air Quality Management District (SCAQMD) staff appreciates the opportunity to comment on the above-mentioned document. The SCAQMD staff's comments are recommendations regarding the analysis of potential air quality impacts from the proposed project that should be included in the draft CEQA document. Please send the SCAQMD a copy of the CEQA document upon its completion. Note that copies of the Draft EIR that are submitted to the State Clearinghouse are not forwarded to the SCAQMD. Please forward a copy of the Draft EIR directly to SCAQMD at the address in our letterhead. **In addition, please send with the draft EIR all appendices or technical documents related to the air quality and greenhouse gas analyses and electronic versions of all air quality modeling and health risk assessment files. These include original emission calculation spreadsheets and modeling files (not Adobe PDF files). Without all files and supporting air quality documentation, the SCAQMD will be unable to complete its review of the air quality analysis in a timely manner. Any delays in providing all supporting air quality documentation will require additional time for review beyond the end of the comment period.**

Air Quality Analysis

The SCAQMD adopted its California Environmental Quality Act (CEQA) Air Quality Handbook in 1993 to assist other public agencies with the preparation of air quality analyses. The SCAQMD recommends that the Lead Agency use this Handbook as guidance when preparing its air quality analysis. Copies of the Handbook are available from the SCAQMD's Subscription Services Department by calling (909) 396-3720. More recent guidance developed since this Handbook was published is also available on SCAQMD's website here: [http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/ceqa-air-quality-handbook-\(1993\)](http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/ceqa-air-quality-handbook-(1993)). SCAQMD staff also recommends that the lead agency use the CalEEMod land use emissions software. This software has recently been updated to incorporate up-to-date state and locally approved emission factors and methodologies for estimating pollutant emissions from typical land use development. CalEEMod is the only software model maintained by the California Air Pollution Control Officers Association (CAPCOA) and replaces the now outdated URBEMIS. This model is available free of charge at: www.caleemod.com.

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the project and all air pollutant sources related to the project. Air quality impacts from both construction (including demolition, if any) and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, that is, sources that generate or attract vehicular trips should be included in the analysis.

The SCAQMD has also developed both regional and localized significance thresholds. The SCAQMD staff requests that the lead agency quantify criteria pollutant emissions and compare the results to the recommended regional significance thresholds found here: <http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf?sfvrsn=2>. In addition to analyzing regional air quality impacts, the SCAQMD staff recommends calculating localized air quality impacts and comparing the results to localized significance thresholds (LSTs). LSTs can be used in addition to the recommended regional significance thresholds as a second indication of air quality impacts

when preparing a CEQA document. Therefore, when preparing the air quality analysis for the proposed project, it is recommended that the lead agency perform a localized analysis by either using the LSTs developed by the SCAQMD or performing dispersion modeling as necessary. Guidance for performing a localized air quality analysis can be found at: <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds>.

In the event that the proposed project generates or attracts vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the lead agency perform a mobile source health risk assessment. Guidance for performing a mobile source health risk assessment (“*Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis*”) can be found at: <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mobile-source-toxics-analysis>. An analysis of all toxic air contaminant impacts due to the use of equipment potentially generating such air pollutants should also be included.

In addition, guidance on siting incompatible land uses (such as placing homes near freeways) can be found in the California Air Resources Board’s *Air Quality and Land Use Handbook: A Community Perspective*, which can be found at the following internet address: <http://www.arb.ca.gov/ch/handbook.pdf>. CARB’s Land Use Handbook is a general reference guide for evaluating and reducing air pollution impacts associated with new projects that go through the land use decision-making process.

Mitigation Measures

In the event that the project generates significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized during project construction and operation to minimize or eliminate these impacts. Pursuant to CEQA Guidelines §15126.4 (a)(1)(D), any impacts resulting from mitigation measures must also be discussed. Several resources are available to assist the Lead Agency with identifying possible mitigation measures for the project, including:

- Chapter 11 of the SCAQMD *CEQA Air Quality Handbook*
- SCAQMD’s CEQA web pages at: <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mitigation-measures-and-control-efficiencies>.
- CAPCOA’s *Quantifying Greenhouse Gas Mitigation Measures* available here: <http://www.capcoa.org/wp-content/uploads/2010/11/CAPCOA-Quantification-Report-9-14-Final.pdf>.
- SCAQMD’s Rule 403 – Fugitive Dust, and the Implementation Handbook for controlling construction-related emissions
- Other measures to reduce air quality impacts from land use projects can be found in the SCAQMD’s Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning. This document can be found at the following internet address: <http://www.aqmd.gov/docs/default-source/planning/air-quality-guidance/complete-guidance-document.pdf?sfvrsn=4>.

Data Sources

SCAQMD rules and relevant air quality reports and data are available by calling the SCAQMD’s Public Information Center at (909) 396-2039. Much of the information available through the Public Information Center is also available via the SCAQMD’s webpage (<http://www.aqmd.gov>).

The SCAQMD staff is available to work with the Lead Agency to ensure that project emissions are accurately evaluated and mitigated where feasible. If you have any questions regarding this letter, please contact me at Jwong1@aqmd.gov or call me at (909) 396-3176.

Sincerely,

Jillian Wong

RE: Willowbrook TOD Specific Plan
Vic. LA-10 PM R8.899 to R10.296
SCH # 2015101106
IGR/CEQA No. 151108AL-NOP

Dear Ms. Chung:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the above referenced project. The Willowbrook TOD Specific Plan would encourage transit oriented development; promote active transportation and improve quality of life for residents; reduce vehicles miles traveled; create community benefits with improvements to the public realm; improve economic vitality and employment opportunities; and streamline the environmental review process for future projects.

The Specific Plan would facilitate development by rezoning and amending General Plan land uses to include mixed uses, increased residential densities, and additional neighborhood serving retail uses. Overall, the Specific Plan would accommodate an additional 1,734 dwelling units and 2,630,306 square feet of non-residential land use. Any net traffic trips from the Specific Plan would contribute traffic impact to the State facilities.

This letter is a follow up to a phone conversation on November 24, 2015 between yourself and Mr. Alan Lin, Caltrans Project Coordinator. Both agencies agree that a Formal Scoping Meeting to discuss the preparation of the traffic analysis, potential traffic impacts, and proposed mitigation on the State facilities is necessary.

Caltrans understands that the current General Plan and new transportation performance measures and CEQA thresholds have not being updated to VMT (Vehicle Miles Traveled) at the time. Caltrans is concerned that when traffic generated by the project, along with cumulative traffic is expected to use an off-ramp that is operating at or near capacity, the additional traffic may potentially exceed the off-ramps capacity and back up onto the mainline freeway.

To assist in evaluating the impacts of this project on State transportation facilities, a traffic study should be prepared prior to preparing the Draft Environmental Impact Report (DEIR). Please refer the project's traffic consultant to Caltrans' traffic study guide Website:

http://www.dot.ca.gov/hq/tpp/offices/ocp/igr_ceqa_files/tisguide.pdf

Listed below are some elements of what is generally expected in the traffic study:

1. Presentations of assumptions and methods used to develop trip generation, trip distribution, choice of travel mode, and assignments of trips to I-105 and all off ramps within the project vicinity including but not limit to westbound (WB) I-105 on/off ramps to/from Imperial Highway, eastbound (EB) I-105 to/from Wilmington Ave., and EB/WB I-105 to/from S Central Ave. The traffic consultant should work with Caltrans to identify and confirm off-ramp study locations and freeway segments prior to the preparation of the traffic study. The traffic study should also analyze the storage for left-turn pocket at on-ramps.
2. An off-ramp queuing analysis should be conducted utilizing the Highway Capacity Manual (HCM). The capacity of the off-ramp should be calculated by the actual length of the off-ramp between the terminuses to the gore point (30 feet per car preferred) with some safety factor or referenced to Highway Design Manual at 23' point (Figure 504.2A Single Lane Freeway Entrance) or any other justified methods approved in advance by Caltrans. The existing queue length should be calculated from the traffic counts and the percent of truck assignments (data from Caltrans) to the ramp with a passenger car equivalent factor of 3.0 (worst case scenario). The analyzed result may need to be calibrated with actual signal timing when necessary. It is also recommended that the Lead Agency determine whether the existing, existing plus project, and project-related plus cumulative traffic are expected to cause long queues on the on and off-ramps. Please include mitigation measures if forecasted vehicle queues are expected to exceed available storage capacity with some safety factor.
3. Project travel modeling should be consistent with other regional and local modeling forecasts and travel data. Caltrans uses the indices to verify the results and any differences or inconsistencies must be thoroughly explained. Please submit modeling assumptions for Caltrans review and comment.
4. Trip generation rates for the project should be based on the nationally recognized recommendations contained in "Trip Generation" manual, 9th edition, published by the Institute of Transportation Engineers (ITE).
5. Analysis of ADT, AM and PM peak-hour volumes for both the existing and future conditions in the affected area with and without project. Utilization of transit lines and vehicles, and of all facilities, should be realistically estimated. Future conditions should include build-out of all projects and any plan-horizon years.
6. The analysis should include existing traffic, traffic generated by the project, cumulative traffic generated from all specific approved developments in the area, and traffic growth other than from the project and developments.
7. A discussion of mitigation measures appropriate to alleviate anticipated traffic impacts should also be included. Any mitigation involving transit or Transportation Demand Management (TDM) should be justified and the results conservatively estimated.

8. A fair share contribution toward pre-established or future improvements on the State Highway System is considered acceptable mitigation. (Please see Appendix "B" of the Guide for more information). Please note that for purposes of determining project share of costs, the number of trips from the project on each traveling segment or element is estimated in the context of forecasted traffic volumes, which include build-out of all approved and not yet approved projects and other sources of growth.

Caltrans encourages the Lead Agency to work with neighboring developing cities such as, the City of Los Angeles, City of Lynwood, and the City of Compton, to resolve cumulative significant traffic impacts on the State facilities. A plan to work with the neighboring cities should be discussed in the Specific Plan or a new Resolution/Policy should be passed such as but not limit to the following suggested policy languages:

- The Lead Agency will work with neighboring cities to address cumulative significant traffic impact on freeway I-105, I-110, and I-710, and on/off ramps as a result of build out of the Specific Plan.
- The Lead Agency will continue to work with Caltrans to identify potential cumulative traffic impact and mitigation measures.
- The Lead Agency will form a fair share fee program working with neighboring cities to improve the State facilities.
- The Lead Agency's existing traffic impact fees will include any State facility improvement as part of the cumulative traffic impact. Procuring funds toward freeway segments, freeway interchanges, freeway on/off-ramps, as well as for bus and rail transit facilities will be in the goals of the Lead Agency.

Although we expect to receive the DEIR from the State Clearinghouse, if you would like to expedite the review process or receive early feedback, please feel free to send a copy of the DEIR directly to our office.

If you have any questions, please feel free to contact Mr. Alan Lin the project coordinator at (213) 897-8391 and refer to IGR/CEQA No. 151108AL.

Sincerely,

DIANNA WATSON

IGR/CEQA Branch Chief

November 30, 2015

Connie Chung
County of Los Angeles
Department of Regional Planning
320 W. Temple Street
Los Angeles, CA 90012

Dear Ms. Chung:

COMMENTS TO THE WILLOWBROOK TOD SPECIFIC PLAN

The City of Lynwood Public Works Department appreciates the opportunity to comment on the scope and content of the environmental analysis to be included in the Environmental Impact Report (EIR). The City of Lynwood, whose westernmost border is less than 1 mile from the planned Willowbrook Transit Oriented District Specific Plan, submits the following comments on impacts that we hope will be addressed in the EIR:

- City's Feeder Line to the Willowbrook Blue Line Station – Currently one of the City's bus routes is a feeder line to the Willowbrook Blue Line Station. The City has operated this bus route for over fifteen years to transport Lynwood residents to the Willowbrook Blue Line station along Imperial Highway. The City would like to continue operating this line without interruption or amending its current route.
- Traffic Congestion - The City is concerned with increased traffic volume on Imperial Highway, Mona Boulevard, Industry Way, Lynwood Road, Alameda Street, and State Street. The increased traffic volume could significantly impact vehicular and pedestrian traffic operations. In addition to any other intersections that may be studied, impacts to these intersections should be studied and mitigated: Imperial Highway and State Street; Fernwood Avenue and State Street; and Lynwood Road and State Street.
- Air Quality - The Willowbrook TOD should address the impacts of increased emissions to the City.
- Public Safety Services – The Willowbrook TOD will result in an increase of visitors, residents and employees to the project site and surrounding areas, thereby resulting in an increase in demand for police services. The Willowbrook TOD

should address adequate level of police services to avoid impacts to surrounding areas.

We look forward to reviewing the EIR document and your responses to our comments. Should you have any questions regarding this letter, please call Lorry Hempe of my staff at 310-603-0220, ext. 500 or email her at lhemp@lynwood.ca.us.

Sincerely,

A handwritten signature in blue ink, appearing to read "Raul Godinez II". The signature is stylized with a large, sweeping "R" and a long, horizontal stroke extending to the right.

NOTICE OF PREPARATION

DATE:

October 29, 2015

PROJECT TITLE:

Willowbrook Transit Oriented District Specific Plan
County Project Number: R2015-02007
Environmental Review Number: RENV201500136

PROJECT LOCATION:

The Specific Plan area is located in the unincorporated community of Willowbrook within Los Angeles County. It is located along the I-105 Freeway and includes the junction of the Metro Blue and Green lines. The project area is approximately 10 miles south of Downtown Los Angeles and is bordered by the City of Los Angeles to the north and the City of Lynwood and the City of Compton to the east.

The County of Los Angeles is the lead agency and, after conducting an Initial Study for the Project, has determined that it will prepare an Environmental Impact Report (EIR). In compliance with Section 15082 of the California Environmental Quality Act (CEQA) Guidelines, the County of Los Angeles is sending this Notice of Preparation (NOP) to responsible agencies, interested parties, and trustee agencies responsible for natural resources that may be affected by the Project.

PROJECT LOCATION AND ENVIRONMENTAL SETTING

The Specific Plan area generally encompasses a half mile radius south of the Willowbrook/Rosa Parks Metro station, which is a major transfer point between the Metro Blue Line and Green Line. At the station, the Green Line is located in the median of the I-105 Freeway (Glenn Anderson). The Specific Plan area totals 312 acres. Major activity centers within the Specific Plan area are the Martin Luther King Jr. Medical Center, Charles R. Drew University of Medicine and Science, Kenneth Hahn Plaza, Willowbrook Library, and Martin Luther King Jr. Center for Public Health. See attached project boundary map.

North of the Specific Plan area is predominantly residential with some commercial uses. The City of Lynwood is directly adjacent to the Specific Plan's eastern border and land uses are manufacturing, public uses and commercial. South and west of the Specific Plan area is predominantly residential.

PROJECT SUMMARY

The Specific Plan has been prepared to introduce a transit oriented development (TOD) pattern to the area, which would promote active transportation and improve quality of life for residents by reducing vehicles miles traveled, improving the public realm, improving economic vitality and employment opportunities, and streamlining the environmental review process for future projects.

The Specific Plan would facilitate development by rezoning and amending General Plan land uses to include mixed uses, increased residential densities, and additional neighborhood-serving retail uses. A key part of the Specific Plan is also to preserve existing residential uses and densities in certain areas. The proposed zoning includes: Mixed Use 1 (MU-1); Mixed Use 2 (MU-2); MLK Medical; Drew Educational; Imperial Commercial; Willowbrook Residential 1; Willowbrook Residential 2; Willowbrook Residential 3; and Open Space (O-S). Overall, the Specific Plan would accommodate an additional 1,734 dwelling units and 2,630,306 square feet of non-residential land use.

The Specific Plan would largely maintain the existing street system in its current configuration, with some improvements designed to improve access, circulation, and walkability. Road diets would also be used to aid the circulation system.

The Specific Plan would improve pedestrian circulation by connecting all major activity areas through sidewalk and intersection improvements. In addition, a combination of Class I, Class II, Class III and potentially Class IV facilities would provide a connected and integrated bicycle network throughout the Specific Plan area that connects activity centers and neighborhoods to the Willowbrook/Rosa Parks Station and adjacent communities. Bicycle amenities, such as bicycle stations, would be provided at appropriate locations.

In 2012, Los Angeles County prepared the *MLK Medical Center Campus Master Plan & the Willowbrook MLK Wellness Community Vision* to guide the development of the campus. It is the County's intent that the Specific Plan serve as the regulatory document for the buildout of the campus. Future development within the campus will be required to comply with the provisions of the Specific Plan; all subsequent development within the campus will be subject to the mitigation requirements of the EIR being prepared for the Specific Plan.

The draft Specific Plan is available for viewing at <http://planning.lacounty.gov/willowbrook/tod>.

POTENTIAL PROJECT IMPACTS: Based on the Initial Study determination, an EIR is necessary for the proposed Project. Based on a preliminary assessment of potential environmental impacts that may occur as a result of the Project, the areas of potential environmental impact to be addressed in the Programmatic EIR will include at least the following:

Potential Hazards

- Geology/Soils
- Noise
- Hazards/Hazardous Materials

Potential Impacts to Resources

- Aesthetics
- Air Quality
- Cultural Resources
- Energy
- Greenhouse Gas Emissions
- Hydrology and Water Quality
- Land Use/Planning

Potential Impacts to Services

- Transportation/Traffic

- Public Services
- Recreation
- Utilities/Services
- Population/Housing

The only environmental factors that were not found to be potentially affected are Agriculture/Forest Resources, Biological Resources, and Mineral Resources. There are multiple mandatory findings of significance. In addition, environmental issues that do not rise to the level of significant impacts will be addressed in the EIR in a separate section entitled "Impacts Found to Be Less Than Significant."

NOTICE OF PREPARATION REVIEW AND COMMENTS

The NOP is being distributed to solicit written comments regarding the scope and content of the environmental analysis to be included in the EIR. The County has prepared this NOP in accordance with the State CEQA Guidelines.

The review period for this NOP is from **November 2, 2015 to December 1, 2015**. Due to the time limits mandated by State law, your response must be sent at the earliest possible date, but not later than **December 1, 2015**. Please direct all written comments to the following address:

Connie Chung, AICP
 County of Los Angeles
 Department of Regional Planning
 320 W. Temple Street
 Los Angeles, California 90012
 Telephone: (213) 974-6417
 Fax: (213) 626-0434
 Email: cchung@planning.lacounty.gov

SCOPING MEETING

To assist in local participation, a Scoping Meeting will be held to present the proposed project and to solicit suggestions from the public and responsible agencies on the content of the Draft EIR. The Scoping Meeting will be held at the MLK H. Claude Hudson Auditorium, Martin Luther King, Jr. Medical Center, 12021 S. Wilmington Avenue, Los Angeles, CA, 90059, on **November 21, 2015, from 10:00 am to 12:00 pm**.

REVIEW MATERIALS

Additional copies of this NOP are available for public review on the Department of Regional Planning website: <http://planning.lacounty.gov/willowbrook/tod> as well as at the following library:

Willowbrook Library
 11838 Wilmington Ave
 Los Angeles, CA 90059

RE: Willowbrook Transit Oriented District Specific Plan- Unincorporated Community of Willowbrook/County of Los Angeles-Notice of Preparation of Draft Environmental Impact Report

Dear Ms. Chung:

Thank you for the opportunity to comment on the Notice of Preparation of a Draft Environmental Impact Report for the proposed Willowbrook Transit Oriented District Specific Plan (Specific Plan) located in the unincorporated community of Willowbrook within Los Angeles County. The proposed project consists of a Specific Plan that will introduce Transit Oriented Development patterns to the area. The Specific Plan would facilitate development by rezoning and amending General Plan land uses to include mixed uses, increased residential densities, and additional neighborhood-serving retail uses. This letter conveys recommendations from the Los Angeles County Metropolitan Transportation Authority (Metro) concerning issues that are germane to our agency's statutory responsibility in relation to our facilities and services that may be affected by the proposed project.

Several Metro bus lines operate within the Specific Plan area (120, 202, 205, 612, 55/202/355) Metro has standard language that relates to construction activity adjacent to bus transit facilities. Metro recommends that the Specific Plan include language that informs future development activity within the Specific Plan area of Metro's notification procedures and considerations for projects located in close proximity to a Metro facility that may impact Metro bus operations.

The Metro Blue and Green light rail currently operate weekday peak service as often as every five minutes in both directions and that trains may operate, in and out of revenue service, 24 hours a day, seven days a week, in the ROW proximate to the proposed project. Metro has development guidelines that describe the Metro's development project review process and considerations for project siting as it relates to Metro facilities. Metro suggests that the project sponsor include policy language or guidance in the Specific Plan that clearly denotes that development occurring within 100 feet of a Metro facility will require Metro review and approval and compliance with Metro's Development Guidelines. In particular, because of the proximity to the Metro Blue Line, increased traffic at railroad grade crossings must be considered specifically in the Specific Plan. Provisions for transit priority treatments should be considered to make the development welcoming to transit access.

In addition, the Specific Plan has various policies in place that support active transportation and multi-modalism. Metro looks forward to continuing to collaborate with the County to effectuate policies and implementation activities that promote transit supportive communities and reduce pedestrian/bike and bus conflicts. Please continue to collaborate with Metro as such plans are effectuated, including the proposed Willowbrook Avenue West bike path.

In addition, Metro would like to take this opportunity to provide the following specific comments and additional information about improvements planned for the Willowbrook/Rosa Parks station:

- Page 24: Please remove the reference to the cost of the Metro Willowbrook/Rosa Parks Improvement Project. The cost is not accurate and because of ongoing activity related to advancing design and the overall project, the cost should not be memorialized in the Specific Plan.
- Page 24: the renderings included in the plan for the station area are not accurate and do not reflect Metro's current design. Please use images provided below.

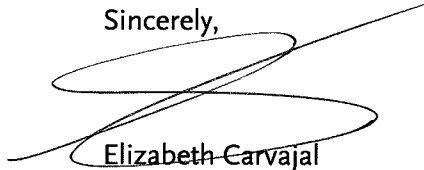

- Page 24: The addition of a southern at-grade crossing to the Blue Line is currently being evaluated. Please revise the second paragraph under Specific Plan Strategy as follows: ~~“Another at-grade crossing is planned at the south end of the Blue Line platform, but only across the western tracks. If this crossing could extend eastward across the tracks, it would further enhance connectivity for residents to the east.”~~
- Page 87: Please revise reference of the Metro bike station to a Metro Bike Mobility Hub. Additionally, if bike stations are referenced in other contexts in the Plan, consider defining “bike station” to clarify what it entails (storage, valet, rental)
- Page 87: Please note that a shuttle stop may not be provided due to feedback from shuttle operators and a crosswalk to Willowbrook East will not be provided. Please consider replacing the second sentence under “4.6 Transit Circulation” to “These are expected to include expansion of station facilities and the Blue Line platform, a bicycle mobility hub, and improvements to station access.”

Thank you for the opportunity to comment on the NOP of the DEIR for the Willowbrook Transit Oriented District Specific Plan. If you have any questions regarding this response, please contact Elizabeth Carvajal at 213-922-3084 or by email at DevReview@metro.net. Metro looks forward to reviewing the Draft EIR. Please send it to the following address:

RE: SCAG Comments on the Notice of Preparation of a Draft Environmental Impact Report for the Willowbrook Transit Oriented District Specific Plan [SCAG NO. IGR8658]

Dear Ms. Chung,

Thank you for submitting the Notice of Preparation of a Draft Environmental Impact Report for the Willowbrook Transit Oriented District Specific Plan ("proposed project") to the Southern California Association of Governments (SCAG) for review and comment. SCAG is the authorized regional agency for Inter-Governmental Review (IGR) of programs proposed for federal financial assistance and direct development activities, pursuant to Presidential Executive Order 12372. Additionally, SCAG reviews the Environmental Impact Reports of projects of regional significance for consistency with regional plans pursuant to the California Environmental Quality Act (CEQA) and CEQA Guidelines.

SCAG is also the designated Regional Transportation Planning Agency under state law, and is responsible for preparation of the Regional Transportation Plan (RTP) including its Sustainable Communities Strategy (SCS) component pursuant to SB 375. As the clearinghouse for regionally significant projects per Executive Order 12372, SCAG reviews the consistency of local plans, projects, and programs with regional plans.¹ Guidance provided by these reviews is intended to assist local agencies and project sponsors to take actions that contribute to the attainment of the regional goals and policies in the RTP/SCS.

SCAG staff has reviewed the Notice of Preparation of a Draft Environmental Impact Report for the Willowbrook Transit Oriented District Specific Plan in Los Angeles County. The proposed project is a Specific Plan that introduces a transit oriented development (TOD) pattern into the area. The Specific Plan accommodates an additional 1,734 dwelling units and 2,630,306 square feet of non-residential land use on 312 acres.

When available, please send environmental documentation to SCAG's office in Los Angeles or by email to sunl@scag.ca.gov providing, at a minimum, the full public comment period for review. If you have any questions regarding the attached comments, please contact the Inter-Governmental Review (IGR) Program, attn.: Lijin Sun, Esq., Senior Regional Planner, at (213) 236-1882 or sunl@scag.ca.gov. Thank you.

Sincerely,

A handwritten signature in cursive script that reads 'Ping Chang'.

Ping Chang
Program Manager II, Land Use and Environmental Planning

¹ SB 375 amends CEQA to add Chapter 4.2 Implementation of the Sustainable Communities Strategy, which allows for certain CEQA streamlining for projects consistent with the RTP/SCS. Lead agencies (including local jurisdictions) maintain the discretion and will be solely responsible for determining "consistency" of any future project with the SCS. Any "consistency" finding by SCAG pursuant to the IGR process should not be construed as a finding of consistency under SB 375 for purposes of CEQA streamlining.

**COMMENTS ON THE NOTICE OF PREPARATION OF A
DRAFT ENVIRONMENTAL IMPACT REPORT FOR
THE WILLOWBROOK TRANSIT ORIENTED DISTRICT SPECIFIC PLAN [SCAG NO. IGR8658]**

CONSISTENCY WITH RTP/SCS

SCAG reviews environmental documents for regionally significant projects for their consistency with the adopted RTP/SCS.

2012 RTP/SCS GOALS

The SCAG Regional Council adopted the 2012 RTP/SCS in April 2012. The 2012 RTP/SCS links the goal of sustaining mobility with the goals of fostering economic development, enhancing the environment, reducing energy consumption, promoting transportation-friendly development patterns, and encouraging fair and equitable access to residents affected by socio-economic, geographic and commercial limitations (see <http://rtpscs.scag.ca.gov>). The goals included in the 2012 RTP/SCS may be pertinent to the proposed project. These goals are meant to provide guidance for considering the proposed project within the context of regional goals and policies. Among the relevant goals of the 2012 RTP/SCS are the following:

SCAG 2012 RTP/SCS GOALS	
RTP/SCS G1:	<i>Align the plan investments and policies with improving regional economic development and competitiveness</i>
RTP/SCS G2:	<i>Maximize mobility and accessibility for all people and goods in the region</i>
RTP/SCS G3:	<i>Ensure travel safety and reliability for all people and goods in the region</i>
RTP/SCS G4:	<i>Preserve and ensure a sustainable regional transportation system</i>
RTP/SCS G5:	<i>Maximize the productivity of our transportation system</i>
RTP/SCS G6:	<i>Protect the environment and health for our residents by improving air quality and encouraging active transportation (non-motorized transportation, such as bicycling and walking)</i>
RTP/SCS G7:	<i>Actively encourage and create incentives for energy efficiency, where possible</i>
RTP/SCS G8:	<i>Encourage land use and growth patterns that facilitate transit and non-motorized transportation</i>
RTP/SCS G9:	<i>Maximize the security of the regional transportation system through improved system monitoring, rapid recovery planning, and coordination with other security agencies</i>

For ease of review, we encourage the use of a side-by-side comparison of SCAG goals with discussions of the consistency, non-consistency or non-applicability of the policy and supportive analysis in a table format. Suggested format is as follows:

SCAG 2012 RTP/SCS GOALS	
Goal	Analysis
RTP/SCS G1: <i>Align the plan investments and policies with improving regional economic development and competitiveness</i>	Consistent: Statement as to why; Not-Consistent: Statement as to why; Or Not Applicable: Statement as to why; DEIR page number reference
RTP/SCS G2: <i>Maximize mobility and accessibility for all people and goods in the region</i>	Consistent: Statement as to why; Not-Consistent: Statement as to why; Or Not Applicable: Statement as to why; DEIR page number reference
etc.	etc.

RTP/SCS STRATEGIES

To achieve the goals of the 2012 RTP/SCS, a wide range of strategies are included in SCS Chapter (starting on page 152) of the RTP/SCS focusing on four key areas: 1) Land Use Actions and Strategies; 2) Transportation Network Actions and Strategies; 3) Transportation Demand Management (TDM) Actions and Strategies and; 4) Transportation System Management (TSM) Actions and Strategies. If applicable to the proposed project, please refer to these strategies as guidance for considering the proposed project within the context of regional goals and policies. To access a listing of the strategies, please visit <http://rtpscs.scag.ca.gov/Documents/2012/final/f2012RTPSCS.pdf> (Tables 4.3 – 4.7, beginning on page 152).

REGIONAL GROWTH FORECASTS

At the time of this letter, the most recently adopted SCAG forecasts, at the jurisdictional level, consists of the 2020 and 2035 RTP/SCS population, household and employment forecasts. To view them, please visit <http://scag.ca.gov/Documents/2012AdoptedGrowthForecastPDF.pdf>. The forecasts for the region and applicable jurisdictions are below.

	Adopted SCAG Region Wide Forecasts		Adopted County of Los Angeles Forecasts	
	Year 2020	Year 2035	Year 2020	Year 2035
Population	19,663,000	22,091,000	10,404,000	11,353,000
Households	6,458,000	7,325,000	3,513,000	3,852,000
Employment	8,414,000	9,441,000	4,558,000	4,827,000

MITIGATION

SCAG staff recommends that you review the SCAG 2012 RTP/SCS Final Program EIR Mitigation Measures for guidance, as appropriate. See Chapter 6 (beginning on page 143) at: <http://rtpscs.scag.ca.gov/Documents/peir/2012/final/Final2012PEIR.pdf>

As referenced in Chapter 6, a comprehensive list of example mitigation measures that may be considered as appropriate is included in Appendix G: *Examples of Measures that Could Reduce Impacts from Planning, Development and Transportation Projects*. Appendix G can be accessed at: http://rtpscs.scag.ca.gov/Documents/peir/2012/final/2012fPEIR_AppendixG_ExampleMeasures.pdf

Transcribed by L. Freeman 12-7-15

Need to fix streets, bus stop, etc. first. Would like to see short-term community improvements.

Homeless issue – [need a] homeless shelter [and] more affordable housing locally [with] short-term strategies for elderly.

What types of shops will come in to the plaza? A dollar store? [Specific] Plan sets the policy for future community [development].

[Regarding] trailers parked on streets, can we designate an area [within the TOD] for trailer [/RV] parking? Answer: Homelessness is a countywide issue and the county is working on the issue from many directions [through many different initiatives]. For the specific plan, areas are identified for new housing.

Railroad tracks [can the plan address the poor condition of railroad crossings]

Need more local jobs, a job training center and more job training.

[Prevent the] displacement of current residents.

Use of renewable energy?

Level of affordability [of new housing] / [Are] Income level restrictions [proposed] (\$1500-\$2000 per month [would be] too high [for most current residents])

Any community benefits (equity) included?

Have information (maps, etc) available in hard copy.

Comments: *To whom it may concern i live in Compton for many yrs i notice alot of homeless people living on bus stop & laying on grounds and stuff. it sadden me. We need a place for the community thats homeless i see it everywhere even laying on compton court grounds tents and stuff. that matters i think personally they should make little houses. for the homeless i seen on CB where they put little house in locations somethings needs to be done. find a location that allows you to help those that less fortunate or thought i share my thought*

Comments: Hello,
My name is Lucinda Ryder I live at 12023 S.
Willowbrook Ave. Burbank House. I worked at Rite Aid
in our Shopping Center for almost 15 years or longer
and have just found out I am very sick
with Cancer of Bladder & Colon and cannot
work any longer, I go to the hospital & doctor
more than I am at home & I find myself
with no income at this time so I don't have
food a lot of the time, and I go to the church to

receive free food and I find myself not eating
because I can't walk down the street to receive
it, Because I don't have a car or family to get
so like now I don't eat and keep losing
weight I have one son who works here at this
hospital his name is Wayne Fathence and I
was wondering if there is some way for me
to obtain this food other than coming down because
I hurt so very bad at times and I'm down to
56 pounds now and Doctors are still trying to
find out the reasons for this. I don't mean
to be a problem but I just need a bit of help
I'm ~~also~~ trying to get my S.S. But it takes
time for this to happen so I'm just asking for
a little bit of help till then or maybe I'll get well
enough to go back to work. Thank you

Love very much.
Lucinda Ryder

An angel bless you
for all your help.

RE: Proposed Willowbrook Transit Oriented District Specific Plan Project, Community of Willowbrook;
South Gate USGS Quadrangle, Los Angeles County, California

Dear Mr. Freeman:

Government Code §65352.3 requires local governments to consult with California Native American tribes identified by the Native American Heritage Commission (NAHC) for the purpose of avoiding, protecting, and/or mitigating impacts to cultural places in creating or amending general plans, including specific plans. Attached is a consultation list of tribes traditionally and culturally affiliated with the area that may have cultural places located within the boundaries of the project referenced above.

As a part of consultation, the NAHC recommends that local governments conduct record searches through the NAHC and California Historic Resources Information System (CHRIS) to determine if any cultural places are located within the area(s) affected by the proposed action. A record search of the Native American Heritage Commission (NAHC) *Sacred Lands File* was completed for the area of potential project effect (APE) referenced above with negative results. Please note that the absence of specific site information in the *Sacred Lands File* does not indicate the absence of Native American cultural resources in any APE. Records maintained by the NAHC and CHRIS are not exhaustive, and a negative response to these searches does not preclude the existence of a cultural place. A tribe may be the only source of information regarding the existence of tribal cultural resources.

The list should provide a starting place to locate areas of potential adverse impact within the APE. I suggest you contact all of those listed, if they cannot supply information, they might recommend others with specific knowledge. By contacting all those on the list, your organization will be better able to respond to claims of failure to consult. If a response has not been received within two weeks of notification, the NAHC requests that you follow-up with a telephone call to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes on the attached list, please notify me. With your assistance we are able to assure that our consultation list contains current information.

If you have any questions, please contact me at my email address: gayle.totton@nahc.ca.gov.

Sincerely,

A handwritten signature in blue ink that reads "Gayle Totton".

**SUBJECT: SENATE BILL (SB) 18 CONSULTATION (GOVERNMENT CODE §65352.3)
WILLOWBROOK TRANSIT ORIENTED DISTRICT SPECIFIC PLAN**

PROJECT NO. R2015-02007-(2)

RSPT201500001 RZCT201500006
RADVT201500004 RENV201500136
RPAT201500005

The Native American Heritage Commission (NAHC) has identified your tribe as one with traditional lands or cultural places located within the proposed boundary of the above-referenced project. Because this project requires the amendment of the General Plan and adoption of a Specific Plan, it is subject to the SB 18 Tribal Consultation requirements (Government Code Section 65352.3). This letter serves as a formal notification and invitation to consult with the County of Los Angeles on the proposed project identified above.

The project area is located in the Willowbrook community, which is an unincorporated community within Los Angeles County. It is located along the I-105 Freeway at the Wilmington Avenue interchange, and at the junction of the Metro Blue and Green lines. The project area is approximately 10 miles south of Downtown Los Angeles and is bordered by the City of Los Angeles to the north and the City of Lynwood and City of Compton to the east. The project area is bounded by Compton Avenue, Imperial Highway, Mona Boulevard and 121st/122nd Streets. A map depicting the project site location is enclosed for your reference.

Project Description: The proposed Specific Plan is a planning document that has been prepared to introduce a transit oriented development pattern to the area, which would promote active transportation and improve quality of life for residents by reducing vehicle miles traveled, improving the public realm, improving economic vitality and employment opportunities, and streamlining the environmental review process for future projects. The proposed Specific Plan would facilitate development by rezoning and amending the General Plan land uses of parcels within a half mile radius south of the Willowbrook/Rosa Parks Station to include mixed uses, increased housing densities, and additional neighborhood-serving retail uses.

A Sacred Lands File Search conducted by the NAHC did not find the presence of Native American cultural resources sites within the area of potential effect (APE) of the project area. In addition, Native American resources are not recorded in close proximity to the project site. The NAHC has also provided the Los Angeles County Department of Regional Planning with a list of Native

CC.103116

American Tribes with traditional lands or cultural places located within the proposed project site. This letter was sent to each of the listed tribes.

Your participation in this local planning process is important. Pursuant to Government Code Section 65352.3(a)(2), you have 90 days from the receipt of this letter to request consultation with the County of Los Angeles. Please submit your request to the contact information listed below.

NOTICE OF PREPARATION

DATE: October 29, 2015

PROJECT TITLE: Willowbrook Transit Oriented District Specific Plan
County Project Number: R2015-02007
Environmental Review Number: RENV201500136

PROJECT LOCATION: The Specific Plan area is located in the unincorporated community of Willowbrook within Los Angeles County. It is located along the I-105 Freeway and includes the junction of the Metro Blue and Green lines. The project area is approximately 10 miles south of Downtown Los Angeles and is bordered by the City of Los Angeles to the north and the City of Lynwood and the City of Compton to the east.

The County of Los Angeles is the lead agency and, after conducting an Initial Study for the Project, has determined that it will prepare an Environmental Impact Report (EIR). In compliance with Section 15082 of the California Environmental Quality Act (CEQA) Guidelines, the County of Los Angeles is sending this Notice of Preparation (NOP) to responsible agencies, interested parties, and trustee agencies responsible for natural resources that may be affected by the Project.

PROJECT LOCATION AND ENVIRONMENTAL SETTING

The Specific Plan area generally encompasses a half mile radius south of the Willowbrook/Rosa Parks Metro station, which is a major transfer point between the Metro Blue Line and Green Line. At the station, the Green Line is located in the median of the I-105 Freeway (Glenn Anderson). The Specific Plan area totals 312 acres. Major activity centers within the Specific Plan area are the Martin Luther King Jr. Medical Center, Charles R. Drew University of Medicine and Science, Kenneth Hahn Plaza, Willowbrook Library, and Martin Luther King Jr. Center for Public Health. See attached project boundary map.

North of the Specific Plan area is predominantly residential with some commercial uses. The City of Lynwood is directly adjacent to the Specific Plan's eastern border and land uses are manufacturing, public uses and commercial. South and west of the Specific Plan area is predominantly residential.

PROJECT SUMMARY

The Specific Plan has been prepared to introduce a transit oriented development (TOD) pattern to the area, which would promote active transportation and improve quality of life for residents by reducing vehicles miles traveled, improving the public realm, improving economic vitality and employment opportunities, and streamlining the environmental review process for future projects.

The Specific Plan would facilitate development by rezoning and amending General Plan land uses to include mixed uses, increased residential densities, and additional neighborhood-serving retail uses. A key part of the Specific Plan is also to preserve existing residential uses and densities in certain areas. The proposed zoning includes: Mixed Use 1 (MU-1); Mixed Use 2 (MU-2); MLK Medical; Drew Educational; Imperial Commercial; Willowbrook Residential 1; Willowbrook Residential 2; Willowbrook Residential 3; and Open Space (O-S). Overall, the Specific Plan would accommodate an additional 1,734 dwelling units and 2,630,306 square feet of non-residential land use.

The Specific Plan would largely maintain the existing street system in its current configuration, with some improvements designed to improve access, circulation, and walkability. Road diets would also be used to aid the circulation system.

The Specific Plan would improve pedestrian circulation by connecting all major activity areas through sidewalk and intersection improvements. In addition, a combination of Class I, Class II, Class III and potentially Class IV facilities would provide a connected and integrated bicycle network throughout the Specific Plan area that connects activity centers and neighborhoods to the Willowbrook/Rosa Parks Station and adjacent communities. Bicycle amenities, such as bicycle stations, would be provided at appropriate locations.

In 2012, Los Angeles County prepared the *MLK Medical Center Campus Master Plan & the Willowbrook MLK Wellness Community Vision* to guide the development of the campus. It is the County's intent that the Specific Plan serve as the regulatory document for the buildout of the campus. Future development within the campus will be required to comply with the provisions of the Specific Plan; all subsequent development within the campus will be subject to the mitigation requirements of the EIR being prepared for the Specific Plan.

The draft Specific Plan is available for viewing at <http://planning.lacounty.gov/willowbrook/tod>.

POTENTIAL PROJECT IMPACTS: Based on the Initial Study determination, an EIR is necessary for the proposed Project. Based on a preliminary assessment of potential environmental impacts that may occur as a result of the Project, the areas of potential environmental impact to be addressed in the Programmatic EIR will include at least the following:

Potential Hazards

- Geology/Soils
- Noise
- Hazards/Hazardous Materials

Potential Impacts to Resources

- Aesthetics
- Air Quality
- Cultural Resources
- Energy
- Greenhouse Gas Emissions
- Hydrology and Water Quality
- Land Use/Planning

Potential Impacts to Services

- Transportation/Traffic

- Public Services
- Recreation
- Utilities/Services
- Population/Housing

The only environmental factors that were not found to be potentially affected are Agriculture/Forest Resources, Biological Resources, and Mineral Resources. There are multiple mandatory findings of significance. In addition, environmental issues that do not rise to the level of significant impacts will be addressed in the EIR in a separate section entitled "Impacts Found to Be Less Than Significant."

NOTICE OF PREPARATION REVIEW AND COMMENTS

The NOP is being distributed to solicit written comments regarding the scope and content of the environmental analysis to be included in the EIR. The County has prepared this NOP in accordance with the State CEQA Guidelines.

The review period for this NOP is from **November 2, 2015 to December 1, 2015**. Due to the time limits mandated by State law, your response must be sent at the earliest possible date, but not later than **December 1, 2015**. Please direct all written comments to the following address:

Connie Chung, AICP
County of Los Angeles
Department of Regional Planning
320 W. Temple Street
Los Angeles, California 90012
Telephone: (213) 974-6417
Fax: (213) 626-0434
Email: cchung@planning.lacounty.gov

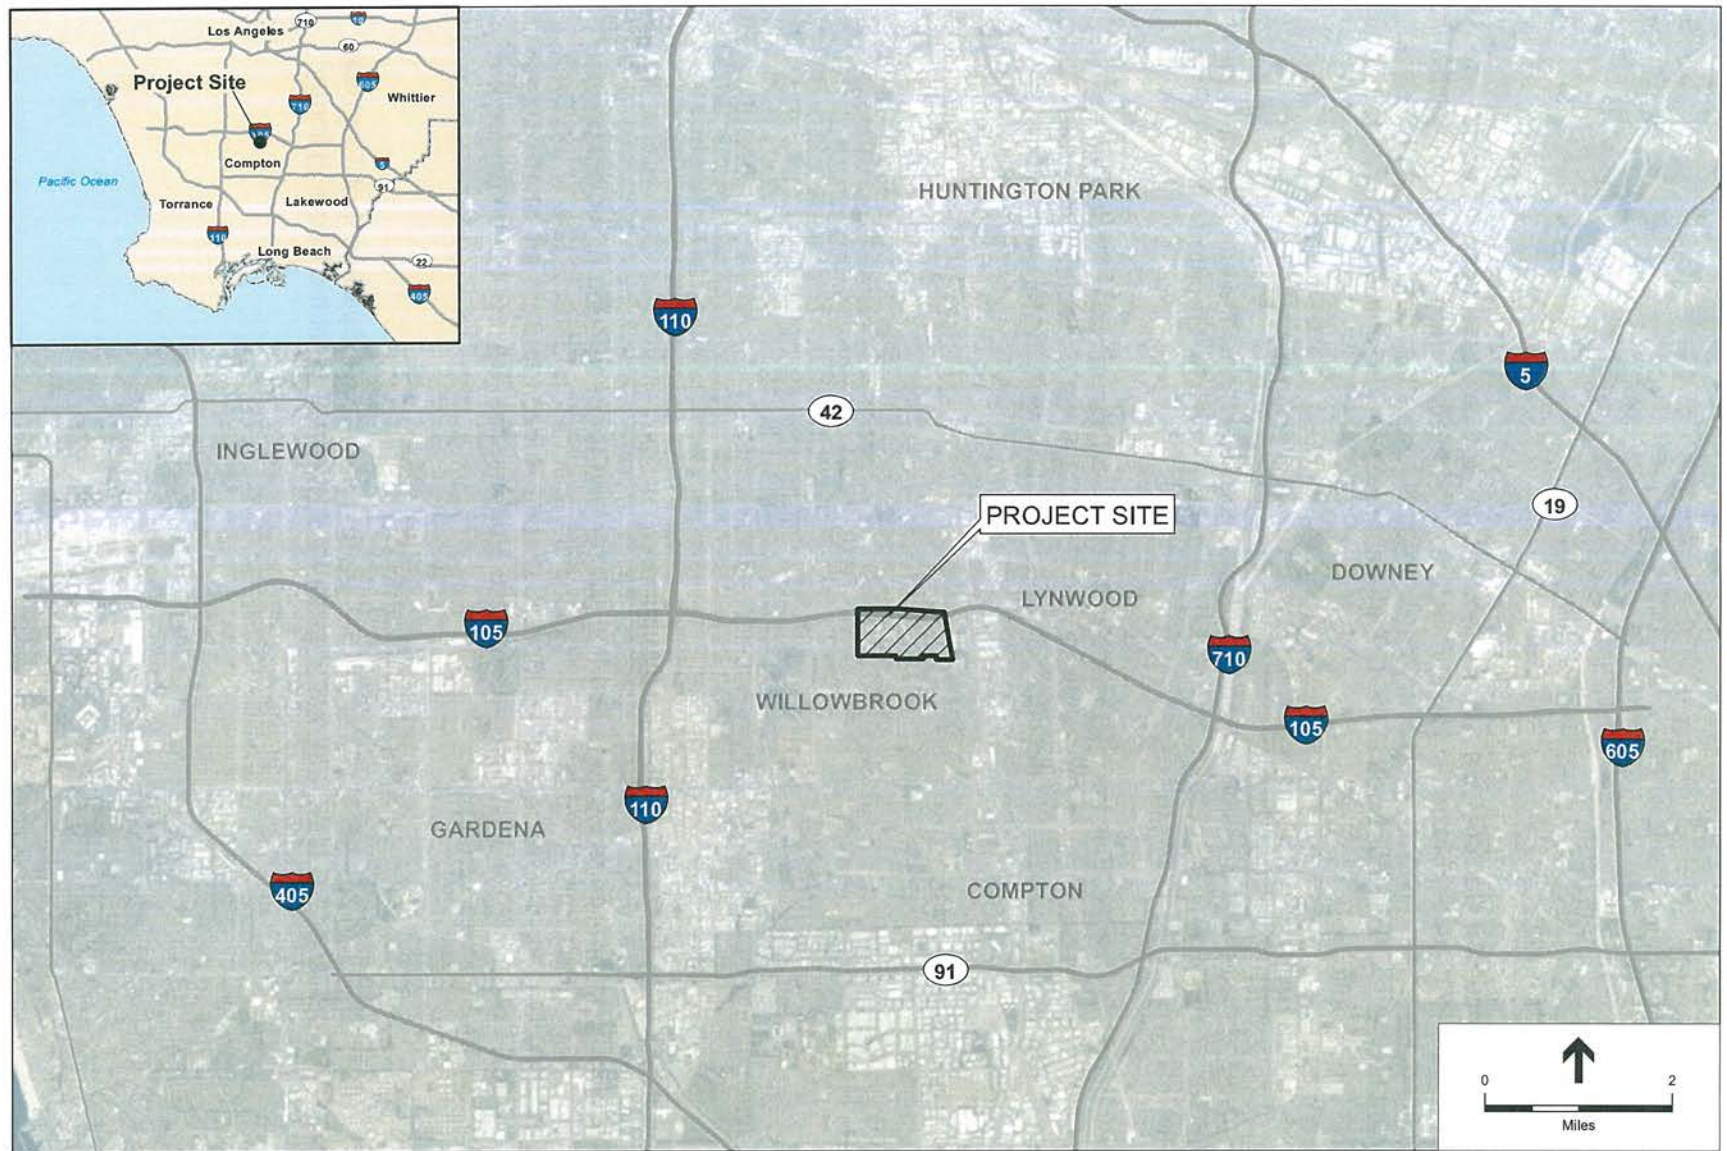

SCOPING MEETING

To assist in local participation, a Scoping Meeting will be held to present the proposed project and to solicit suggestions from the public and responsible agencies on the content of the Draft EIR. The Scoping Meeting will be held at the MLK H. Claude Hudson Auditorium, Martin Luther King, Jr. Medical Center, 12021 S. Wilmington Avenue, Los Angeles, CA, 90059, on **November 21, 2015, from 10:00 am to 12:00 pm**.

REVIEW MATERIALS

Additional copies of this NOP are available for public review on the Department of Regional Planning website: <http://planning.lacounty.gov/willowbrook/tod> as well as at the following library:

Director

NOTICE OF PREPARATION

DATE: October 29, 2015

PROJECT TITLE: Willowbrook Transit Oriented District Specific Plan
County Project Number: R2015-02007
Environmental Review Number: RENV201500136

PROJECT LOCATION: The Specific Plan area is located in the unincorporated community of Willowbrook within Los Angeles County. It is located along the I-105 Freeway and includes the junction of the Metro Blue and Green lines. The project area is approximately 10 miles south of Downtown Los Angeles and is bordered by the City of Los Angeles to the north and the City of Lynwood and the City of Compton to the east.

The County of Los Angeles is the lead agency and, after conducting an Initial Study for the Project, has determined that it will prepare an Environmental Impact Report (EIR). In compliance with Section 15082 of the California Environmental Quality Act (CEQA) Guidelines, the County of Los Angeles is sending this Notice of Preparation (NOP) to responsible agencies, interested parties, and trustee agencies responsible for natural resources that may be affected by the Project.

PROJECT LOCATION AND ENVIRONMENTAL SETTING

The Specific Plan area generally encompasses a half mile radius south of the Willowbrook/Rosa Parks Metro station, which is a major transfer point between the Metro Blue Line and Green Line. At the station, the Green Line is located in the median of the I-105 Freeway (Glenn Anderson). The Specific Plan area totals 312 acres. Major activity centers within the Specific Plan area are the Martin Luther King Jr. Medical Center, Charles R. Drew University of Medicine and Science, Kenneth Hahn Plaza, Willowbrook Library, and Martin Luther King Jr. Center for Public Health. See attached project boundary map.

North of the Specific Plan area is predominantly residential with some commercial uses. The City of Lynwood is directly adjacent to the Specific Plan's eastern border and land uses are manufacturing, public uses and commercial. South and west of the Specific Plan area is predominantly residential.

PROJECT SUMMARY

The Specific Plan has been prepared to introduce a transit oriented development (TOD) pattern to the area, which would promote active transportation and improve quality of life for residents by reducing vehicles miles traveled, improving the public realm, improving economic vitality and employment opportunities, and streamlining the environmental review process for future projects.

The Specific Plan would facilitate development by rezoning and amending General Plan land uses to include mixed uses, increased residential densities, and additional neighborhood-serving retail uses. A key part of the Specific Plan is also to preserve existing residential uses and densities in certain areas. The proposed zoning includes: Mixed Use 1 (MU-1); Mixed Use 2 (MU-2); MLK Medical; Drew Educational; Imperial Commercial; Willowbrook Residential 1; Willowbrook Residential 2; Willowbrook Residential 3; and Open Space (O-S). Overall, the Specific Plan would accommodate an additional 1,734 dwelling units and 2,630,306 square feet of non-residential land use.

The Specific Plan would largely maintain the existing street system in its current configuration, with some improvements designed to improve access, circulation, and walkability. Road diets would also be used to aid the circulation system.

The Specific Plan would improve pedestrian circulation by connecting all major activity areas through sidewalk and intersection improvements. In addition, a combination of Class I, Class II, Class III and potentially Class IV facilities would provide a connected and integrated bicycle network throughout the Specific Plan area that connects activity centers and neighborhoods to the Willowbrook/Rosa Parks Station and adjacent communities. Bicycle amenities, such as bicycle stations, would be provided at appropriate locations.

In 2012, Los Angeles County prepared the *MLK Medical Center Campus Master Plan & the Willowbrook MLK Wellness Community Vision* to guide the development of the campus. It is the County's intent that the Specific Plan serve as the regulatory document for the buildout of the campus. Future development within the campus will be required to comply with the provisions of the Specific Plan; all subsequent development within the campus will be subject to the mitigation requirements of the EIR being prepared for the Specific Plan.

The draft Specific Plan is available for viewing at <http://planning.lacounty.gov/willowbrook/tod>.

POTENTIAL PROJECT IMPACTS: Based on the Initial Study determination, an EIR is necessary for the proposed Project. Based on a preliminary assessment of potential environmental impacts that may occur as a result of the Project, the areas of potential environmental impact to be addressed in the Programmatic EIR will include at least the following:

Potential Hazards

- Geology/Soils
- Noise
- Hazards/Hazardous Materials

Potential Impacts to Resources

- Aesthetics
- Air Quality
- Cultural Resources
- Energy
- Greenhouse Gas Emissions
- Hydrology and Water Quality
- Land Use/Planning

Potential Impacts to Services

- Transportation/Traffic

- Public Services
- Recreation
- Utilities/Services
- Population/Housing

The only environmental factors that were not found to be potentially affected are Agriculture/Forest Resources, Biological Resources, and Mineral Resources. There are multiple mandatory findings of significance. In addition, environmental issues that do not rise to the level of significant impacts will be addressed in the EIR in a separate section entitled "Impacts Found to Be Less Than Significant."

NOTICE OF PREPARATION REVIEW AND COMMENTS

The NOP is being distributed to solicit written comments regarding the scope and content of the environmental analysis to be included in the EIR. The County has prepared this NOP in accordance with the State CEQA Guidelines.

The review period for this NOP is from **November 2, 2015 to December 1, 2015**. Due to the time limits mandated by State law, your response must be sent at the earliest possible date, but not later than **December 1, 2015**. Please direct all written comments to the following address:

Connie Chung, AICP
County of Los Angeles
Department of Regional Planning
320 W. Temple Street
Los Angeles, California 90012
Telephone: (213) 974-6417
Fax: (213) 626-0434
Email: cchung@planning.lacounty.gov

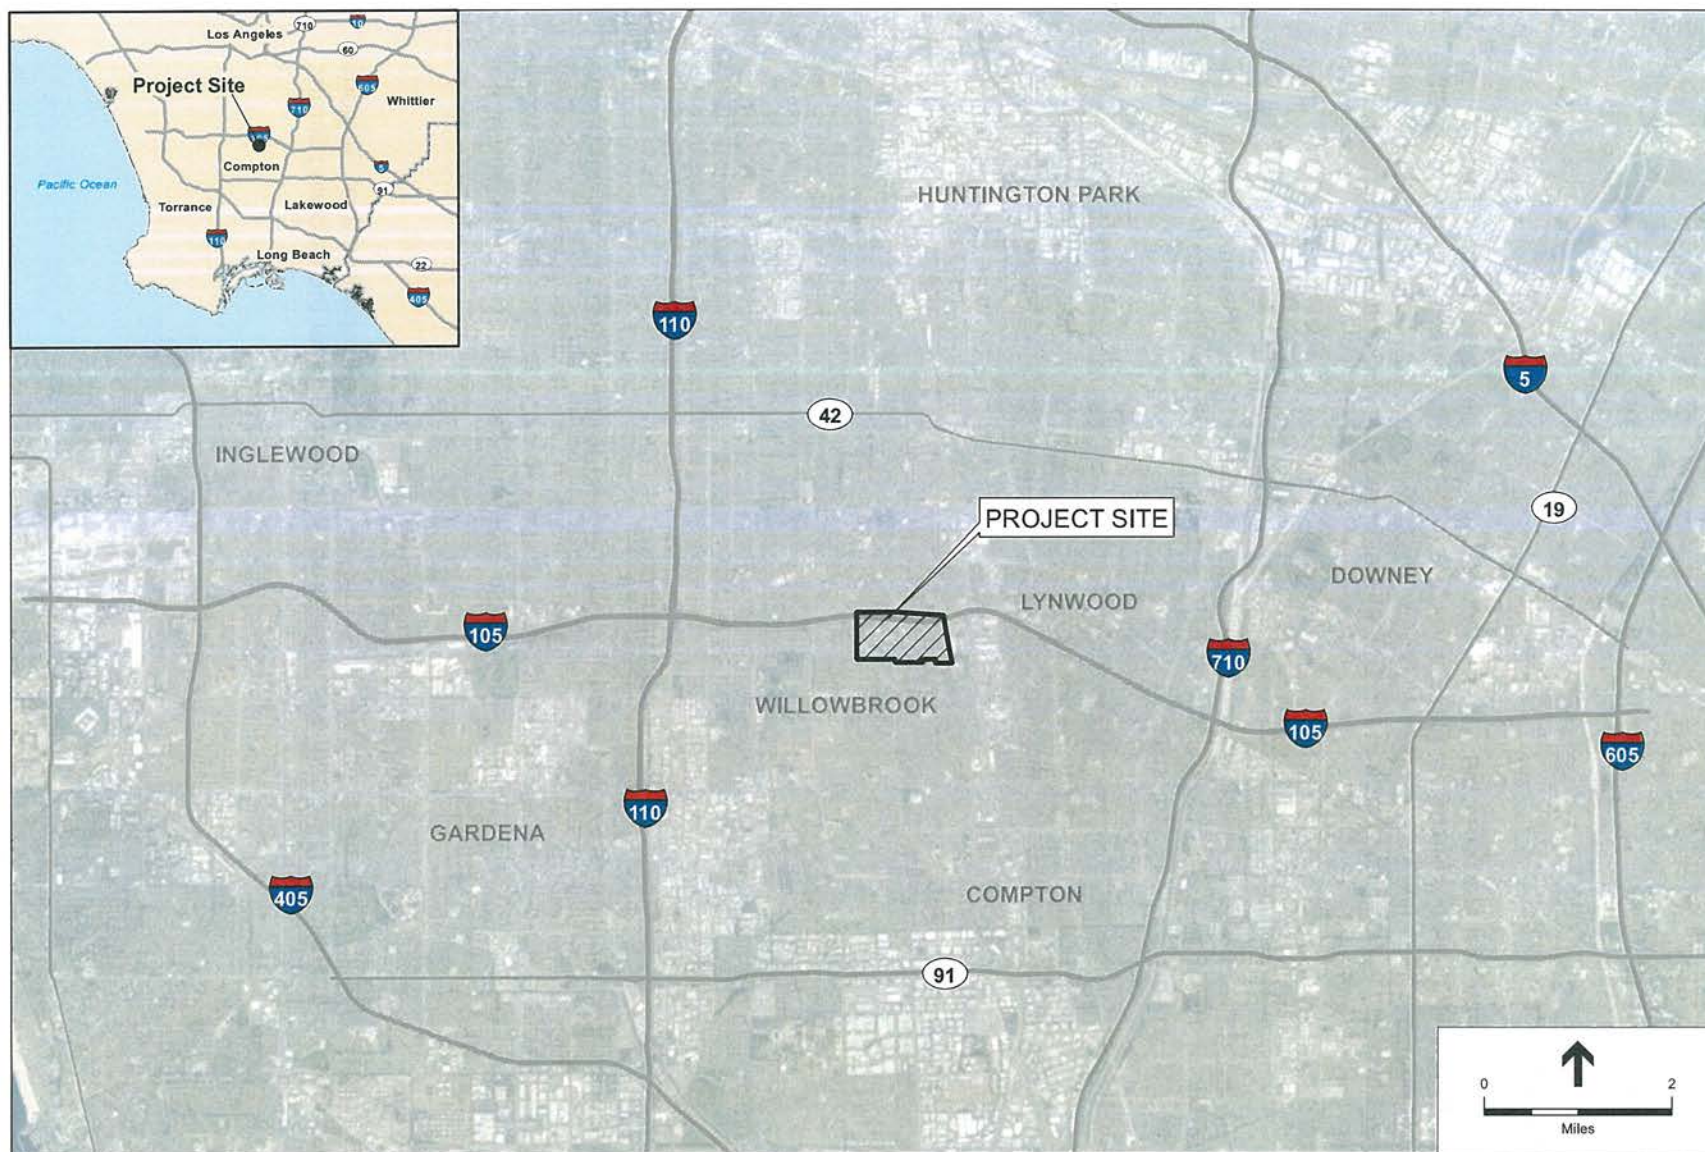

SCOPING MEETING

To assist in local participation, a Scoping Meeting will be held to present the proposed project and to solicit suggestions from the public and responsible agencies on the content of the Draft EIR. The Scoping Meeting will be held at the MLK H. Claude Hudson Auditorium, Martin Luther King, Jr. Medical Center, 12021 S. Wilmington Avenue, Los Angeles, CA, 90059, on **November 21, 2015, from 10:00 am to 12:00 pm**.

REVIEW MATERIALS

Additional copies of this NOP are available for public review on the Department of Regional Planning website: <http://planning.lacounty.gov/willowbrook/tod> as well as at the following library:

Willowbrook Library

**SUBJECT: SENATE BILL (SB) 18 CONSULTATION (GOVERNMENT CODE §65352.3)
WILLOWBROOK TRANSIT ORIENTED DISTRICT SPECIFIC PLAN
PROJECT NO. R2015-02007-(2)**
RSPT201500001 RZCT201500006
RADVT201500004 RENV201500136
RPAT201500005

The Native American Heritage Commission (NAHC) has identified your tribe as one with traditional lands or cultural places located within the proposed boundary of the above-referenced project. Because this project requires the amendment of the General Plan and adoption of a Specific Plan, it is subject to the SB 18 Tribal Consultation requirements (Government Code Section 65352.3). This letter serves as a formal notification and invitation to consult with the County of Los Angeles on the proposed project identified above.

The project area is located in the Willowbrook community, which is an unincorporated community within Los Angeles County. It is located along the I-105 Freeway at the Wilmington Avenue interchange, and at the junction of the Metro Blue and Green lines. The project area is approximately 10 miles south of Downtown Los Angeles and is bordered by the City of Los Angeles to the north and the City of Lynwood and City of Compton to the east. The project area is bounded by Compton Avenue, Imperial Highway, Mona Boulevard and 121st/122nd Streets. A map depicting the project site location is enclosed for your reference.

Project Description: The proposed Specific Plan is a planning document that has been prepared to introduce a transit oriented development pattern to the area, which would promote active transportation and improve quality of life for residents by reducing vehicle miles traveled, improving the public realm, improving economic vitality and employment opportunities, and streamlining the environmental review process for future projects. The proposed Specific Plan would facilitate development by rezoning and amending the General Plan land uses of parcels within a half mile radius south of the Willowbrook/Rosa Parks Station to include mixed uses, increased housing densities, and additional neighborhood-serving retail uses.

A Sacred Lands File Search conducted by the NAHC did not find the presence of Native American cultural resources sites within the area of potential effect (APE) of the project area. In addition, Native American resources are not recorded in close proximity to the project site. The NAHC has also provided the Los Angeles County Department of Regional Planning with a list of Native

CC.103116

American Tribes with traditional lands or cultural places located within the proposed project site. This letter was sent to each of the listed tribes.

Your participation in this local planning process is important. Pursuant to Government Code Section 65352.3(a)(2), you have 90 days from the receipt of this letter to request consultation with the County of Los Angeles. Please submit your request to the contact information listed below.

NOTICE OF PREPARATION

DATE: October 29, 2015

PROJECT TITLE: Willowbrook Transit Oriented District Specific Plan
County Project Number: R2015-02007
Environmental Review Number: RENV201500136

PROJECT LOCATION: The Specific Plan area is located in the unincorporated community of Willowbrook within Los Angeles County. It is located along the I-105 Freeway and includes the junction of the Metro Blue and Green lines. The project area is approximately 10 miles south of Downtown Los Angeles and is bordered by the City of Los Angeles to the north and the City of Lynwood and the City of Compton to the east.

The County of Los Angeles is the lead agency and, after conducting an Initial Study for the Project, has determined that it will prepare an Environmental Impact Report (EIR). In compliance with Section 15082 of the California Environmental Quality Act (CEQA) Guidelines, the County of Los Angeles is sending this Notice of Preparation (NOP) to responsible agencies, interested parties, and trustee agencies responsible for natural resources that may be affected by the Project.

PROJECT LOCATION AND ENVIRONMENTAL SETTING

The Specific Plan area generally encompasses a half mile radius south of the Willowbrook/Rosa Parks Metro station, which is a major transfer point between the Metro Blue Line and Green Line. At the station, the Green Line is located in the median of the I-105 Freeway (Glenn Anderson). The Specific Plan area totals 312 acres. Major activity centers within the Specific Plan area are the Martin Luther King Jr. Medical Center, Charles R. Drew University of Medicine and Science, Kenneth Hahn Plaza, Willowbrook Library, and Martin Luther King Jr. Center for Public Health. See attached project boundary map.

North of the Specific Plan area is predominantly residential with some commercial uses. The City of Lynwood is directly adjacent to the Specific Plan's eastern border and land uses are manufacturing, public uses and commercial. South and west of the Specific Plan area is predominantly residential.

PROJECT SUMMARY

The Specific Plan has been prepared to introduce a transit oriented development (TOD) pattern to the area, which would promote active transportation and improve quality of life for residents by reducing vehicles miles traveled, improving the public realm, improving economic vitality and employment opportunities, and streamlining the environmental review process for future projects.

The Specific Plan would facilitate development by rezoning and amending General Plan land uses to include mixed uses, increased residential densities, and additional neighborhood-serving retail uses. A key part of the Specific Plan is also to preserve existing residential uses and densities in certain areas. The proposed zoning includes: Mixed Use 1 (MU-1); Mixed Use 2 (MU-2); MLK Medical; Drew Educational; Imperial Commercial; Willowbrook Residential 1; Willowbrook Residential 2; Willowbrook Residential 3; and Open Space (O-S). Overall, the Specific Plan would accommodate an additional 1,734 dwelling units and 2,630,306 square feet of non-residential land use.

The Specific Plan would largely maintain the existing street system in its current configuration, with some improvements designed to improve access, circulation, and walkability. Road diets would also be used to aid the circulation system.

The Specific Plan would improve pedestrian circulation by connecting all major activity areas through sidewalk and intersection improvements. In addition, a combination of Class I, Class II, Class III and potentially Class IV facilities would provide a connected and integrated bicycle network throughout the Specific Plan area that connects activity centers and neighborhoods to the Willowbrook/Rosa Parks Station and adjacent communities. Bicycle amenities, such as bicycle stations, would be provided at appropriate locations.

In 2012, Los Angeles County prepared the *MLK Medical Center Campus Master Plan & the Willowbrook MLK Wellness Community Vision* to guide the development of the campus. It is the County's intent that the Specific Plan serve as the regulatory document for the buildout of the campus. Future development within the campus will be required to comply with the provisions of the Specific Plan; all subsequent development within the campus will be subject to the mitigation requirements of the EIR being prepared for the Specific Plan.

The draft Specific Plan is available for viewing at <http://planning.lacounty.gov/willowbrook/tod>.

POTENTIAL PROJECT IMPACTS: Based on the Initial Study determination, an EIR is necessary for the proposed Project. Based on a preliminary assessment of potential environmental impacts that may occur as a result of the Project, the areas of potential environmental impact to be addressed in the Programmatic EIR will include at least the following:

Potential Hazards

- Geology/Soils
- Noise
- Hazards/Hazardous Materials

Potential Impacts to Resources

- Aesthetics
- Air Quality
- Cultural Resources
- Energy
- Greenhouse Gas Emissions
- Hydrology and Water Quality
- Land Use/Planning

Potential Impacts to Services

- Transportation/Traffic

- Public Services
- Recreation
- Utilities/Services
- Population/Housing

The only environmental factors that were not found to be potentially affected are Agriculture/Forest Resources, Biological Resources, and Mineral Resources. There are multiple mandatory findings of significance. In addition, environmental issues that do not rise to the level of significant impacts will be addressed in the EIR in a separate section entitled "Impacts Found to Be Less Than Significant."

NOTICE OF PREPARATION REVIEW AND COMMENTS

The NOP is being distributed to solicit written comments regarding the scope and content of the environmental analysis to be included in the EIR. The County has prepared this NOP in accordance with the State CEQA Guidelines.

The review period for this NOP is from **November 2, 2015 to December 1, 2015**. Due to the time limits mandated by State law, your response must be sent at the earliest possible date, but not later than **December 1, 2015**. Please direct all written comments to the following address:

Connie Chung, AICP
County of Los Angeles
Department of Regional Planning
320 W. Temple Street
Los Angeles, California 90012
Telephone: (213) 974-6417
Fax: (213) 626-0434
Email: cchung@planning.lacounty.gov

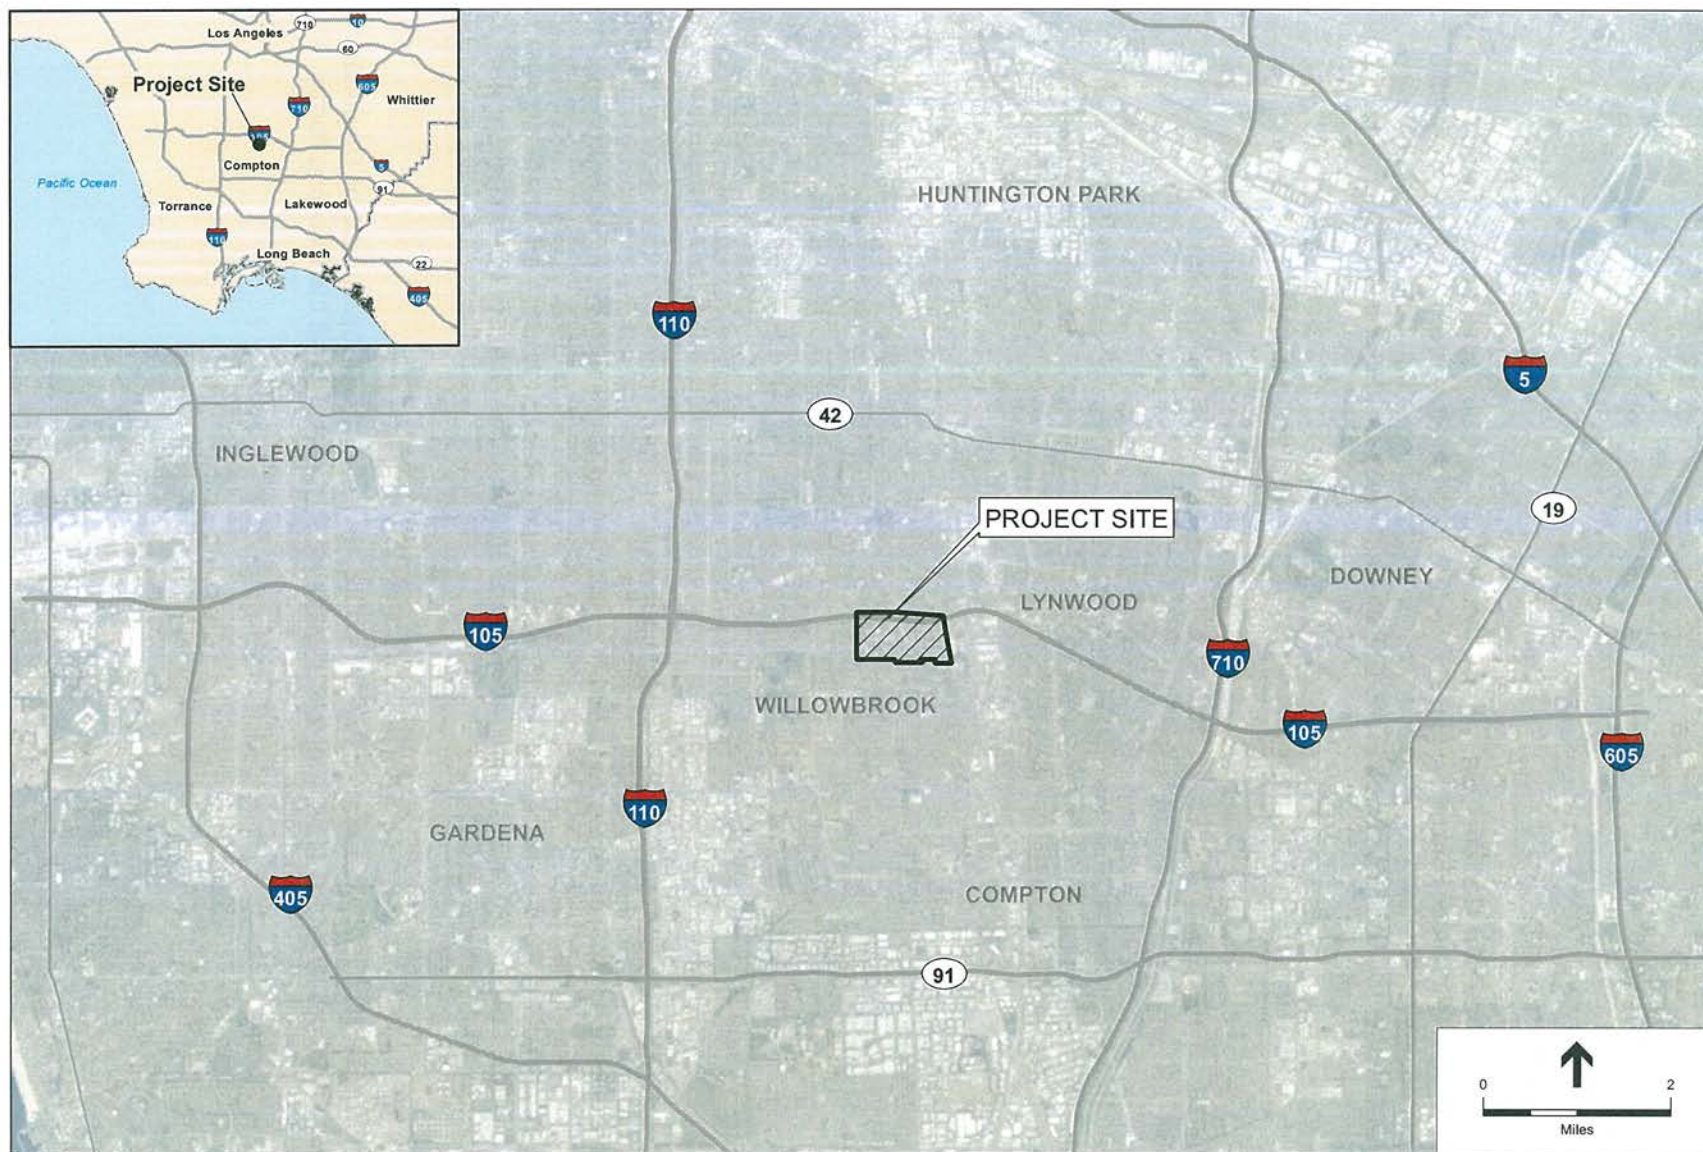

SCOPING MEETING

To assist in local participation, a Scoping Meeting will be held to present the proposed project and to solicit suggestions from the public and responsible agencies on the content of the Draft EIR. The Scoping Meeting will be held at the MLK H. Claude Hudson Auditorium, Martin Luther King, Jr. Medical Center, 12021 S. Wilmington Avenue, Los Angeles, CA, 90059, on **November 21, 2015, from 10:00 am to 12:00 pm**.

REVIEW MATERIALS

Additional copies of this NOP are available for public review on the Department of Regional Planning website: <http://planning.lacounty.gov/willowbrook/tod> as well as at the following library:

Regional Location

GABRIELENO BAND OF MISSION INDIANS - KIZH NATION

Historically known as The San Gabriel Band of Mission Indians

Recognized by the State of California as the aboriginal tribe of the Los Angeles basin

Dear Leon Freeman
Regional Planning Assistant II

Subject: SB18 Formal Notification – Willow brook TOD Specific Plan

"The project locale lies in an area where the Ancestral & traditional territories of the Kizh(Kitc) Gabrieleno villages , adjoined and overlapped with each other, at least during the Late Prehistoric and Protohistoric Periods. The homeland of the Kizh (Kitc) Gabrielenos , probably the most influential Native American group in aboriginal southern California (Bean and Smith 1978a:538 <https://nrmsecure.dfg.ca.gov/FileHandler.ashx?DocumentID=9497>), was centered in the Los Angeles Basin, and reached as far east as the San Bernardino-Riverside area. The homeland of the Serranos was primarily the San Bernardino Mountains, including the slopes and lowlands on the north and south flanks. Whatever the linguistic affiliation, Native Americans in and around the project area exhibited similar organization and resource procurement strategies. Villages were based on clan or lineage groups. Their home/ base sites are marked by midden deposits, often with bedrock mortars. During their seasonal rounds to exploit plant resources, small groups would migrate within their traditional territory in search of specific plants and animals. Their gathering strategies often left behind signs of special use sites, usually grinding slicks on bedrock boulders, at the locations of the resources. Therefore, in order to protect our resources we're requesting one of our experienced & certified Native American monitors to be on site during any & all ground disturbances (this includes but is not limited to pavement removal, pot-holing or grubbing, auguring, boring, grading, excavation and trenching).

In all cases, when the NAHC states there are "No" records of sacred sites" in the subject area; they always refer the contractors back to the Native American Tribes whose tribal territory the project area is in. This is due to the fact, that the NAHC is only aware of general information on each California NA Tribe they are "NOT" the "experts" on our Tribe. Our Elder Committee & Tribal Historians are the experts and is the reason why the NAHC will always refer contractors to the local tribes.

In addition, we are also often told that an area has been previously developed or disturbed and thus there are no concerns for cultural resources and thus minimal impacts would be expected. I have two major recent examples of how similar statements on other projects were proven very inadequate. An archaeological study claimed there would be no impacts to an area adjacent to the Plaza Church at Olvera Street, the original Spanish settlement of Los Angeles, now in downtown Los Angeles. In fact, this site was the Gabrieleno village of Yangna long before it became what it is now today. The new development wrongfully began their construction and they, in the process, dug up and desecrated 118 burials. The area that was dismissed as culturally sensitive was in fact the First Cemetery of Los Angeles where it had been well documented at the Huntington Library that 400 of our Tribe's ancestors were buried there along with the founding families of Los Angeles (Pico's, Sepulveda's, and Alvarado's to name a few). In addition, there was another inappropriate study for the development of a new sports complex at Fedde Middle School in the City of Hawaiian Gardens could commence. Again, a village and burial site were desecrated despite their mitigation measures. Thankfully, we were able to work alongside the school district to quickly and respectfully mitigate a mutually beneficial resolution.

Given all the above, the proper thing to do for your project would be for our Tribe to monitor ground disturbing construction work. Native American monitors and/or consultant can see that cultural resources are treated appropriately from the Native American point of view. Because we are the lineal descendants of the vast area of Los Angeles and Orange Counties, we hold sacred the ability to protect what little of our culture remains. We thank you for taking seriously your role and responsibility in assisting us in preserving our culture.

With respect,

Please contact our office regarding this project to coordinate a Native American Monitor to be present. Thank You

Cell (626) 926-4131

Addendum: clarification regarding some confusions regarding consultation under AB52:

AB52 clearly states that consultation must occur with tribes that claim traditional and cultural affiliation with a project site. Unfortunately, this statement has been left open to interpretation so much that neighboring tribes are claiming affiliation with projects well outside their traditional tribal territory. The territories of our surrounding Native American tribes such as the Luiseno, Chumash, and Cahuilla tribal entities. Each of our tribal territories has been well defined by historians, ethnographers, archaeologists, and ethnographers – a list of resources we can provide upon request. Often, each Tribe as well educates the public on their very own website as to the definition of their tribal boundaries. You may have received a consultation request from another Tribe. However we are responding because your project site lies within our Ancestral tribal territory, which, again, has been well documented. What does Ancestrally or Ancestral mean? The people who were in your family in past times, Of, belonging to, inherited from, or denoting an ancestor or ancestors <http://www.thefreedictionary.com/ancestral>. . If you have questions regarding the validity of the “traditional and cultural affiliation” of another Tribe, we urge you to contact the Native American Heritage Commission directly. Section 5 section 21080.3.1 (c) states “...the Native American Heritage Commission shall assist the lead agency in identifying the California Native American tribes that are traditionally and culturally affiliated with the project area.” In addition, *please see the map below*.

RE: Tribal Cultural Resources under the California Environmental Quality Act, AB 52 (Gatto, 2014). Formal Notification of the Proposed Project pursuant to Public Resources Code (PRC) §21080.3.1.

The Los Angeles County Department of Regional Planning is issuing this formal notification of the proposed project. Below please find a description of the proposed project, a map showing the project location, and our contact information along with the name of our point of contact, pursuant to PRC §21080.3.1(d).

Proposed Project: Willowbrook Transit Oriented District Specific Plan
Project No. R2015-02007-(2)
RSPT201500001 RZCT201500006
RADVT201500004 RENV201500136
RPAT201500005

Project Description: The proposed Specific Plan is a planning document that has been prepared to introduce a transit oriented development pattern to the area, which would promote active transportation and improve quality of life for residents by reducing vehicle miles traveled, improving the public realm, improving economic vitality and employment opportunities, and streamlining the environmental review process for future projects. The proposed Specific Plan would facilitate development by rezoning and amending the General Plan land uses of parcels within a half mile radius south of the Willowbrook/Rosa Parks Station to include mixed uses, increased housing densities, and additional neighborhood-serving retail uses.

Project Location: The Specific Plan area is located in the Willowbrook community, which is an unincorporated community within Los Angeles County. It is located along the I-105 Freeway at the Wilmington Avenue interchange, and at the junction of the Metro Blue and Green lines. The project area is approximately 10 miles south of Downtown Los Angeles and is bordered by the City of Los Angeles to the north and the City of Lynwood and City of Compton to the east (**Figure 1, Regional Location**). The plan area is bounded by Compton Avenue, Imperial Highway, Mona Boulevard and 121st/122nd Streets.

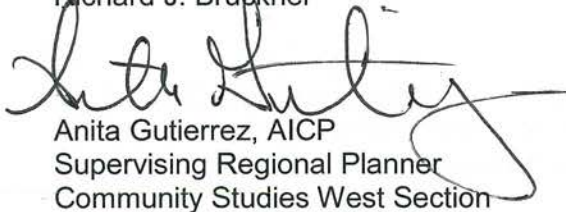

Lead Agency Contact Information:

NOTICE OF PREPARATION

DATE: October 29, 2015

PROJECT TITLE: Willowbrook Transit Oriented District Specific Plan
County Project Number: R2015-02007
Environmental Review Number: RENV201500136

PROJECT LOCATION: The Specific Plan area is located in the unincorporated community of Willowbrook within Los Angeles County. It is located along the I-105 Freeway and includes the junction of the Metro Blue and Green lines. The project area is approximately 10 miles south of Downtown Los Angeles and is bordered by the City of Los Angeles to the north and the City of Lynwood and the City of Compton to the east.

The County of Los Angeles is the lead agency and, after conducting an Initial Study for the Project, has determined that it will prepare an Environmental Impact Report (EIR). In compliance with Section 15082 of the California Environmental Quality Act (CEQA) Guidelines, the County of Los Angeles is sending this Notice of Preparation (NOP) to responsible agencies, interested parties, and trustee agencies responsible for natural resources that may be affected by the Project.

PROJECT LOCATION AND ENVIRONMENTAL SETTING

The Specific Plan area generally encompasses a half mile radius south of the Willowbrook/Rosa Parks Metro station, which is a major transfer point between the Metro Blue Line and Green Line. At the station, the Green Line is located in the median of the I-105 Freeway (Glenn Anderson). The Specific Plan area totals 312 acres. Major activity centers within the Specific Plan area are the Martin Luther King Jr. Medical Center, Charles R. Drew University of Medicine and Science, Kenneth Hahn Plaza, Willowbrook Library, and Martin Luther King Jr. Center for Public Health. See attached project boundary map.

North of the Specific Plan area is predominantly residential with some commercial uses. The City of Lynwood is directly adjacent to the Specific Plan's eastern border and land uses are manufacturing, public uses and commercial. South and west of the Specific Plan area is predominantly residential.

PROJECT SUMMARY

The Specific Plan has been prepared to introduce a transit oriented development (TOD) pattern to the area, which would promote active transportation and improve quality of life for residents by reducing vehicles miles traveled, improving the public realm, improving economic vitality and employment opportunities, and streamlining the environmental review process for future projects.

The Specific Plan would facilitate development by rezoning and amending General Plan land uses to include mixed uses, increased residential densities, and additional neighborhood-serving retail uses. A key part of the Specific Plan is also to preserve existing residential uses and densities in certain areas. The proposed zoning includes: Mixed Use 1 (MU-1); Mixed Use 2 (MU-2); MLK Medical; Drew Educational; Imperial Commercial; Willowbrook Residential 1; Willowbrook Residential 2; Willowbrook Residential 3; and Open Space (O-S). Overall, the Specific Plan would accommodate an additional 1,734 dwelling units and 2,630,306 square feet of non-residential land use.

The Specific Plan would largely maintain the existing street system in its current configuration, with some improvements designed to improve access, circulation, and walkability. Road diets would also be used to aid the circulation system.

The Specific Plan would improve pedestrian circulation by connecting all major activity areas through sidewalk and intersection improvements. In addition, a combination of Class I, Class II, Class III and potentially Class IV facilities would provide a connected and integrated bicycle network throughout the Specific Plan area that connects activity centers and neighborhoods to the Willowbrook/Rosa Parks Station and adjacent communities. Bicycle amenities, such as bicycle stations, would be provided at appropriate locations.

In 2012, Los Angeles County prepared the *MLK Medical Center Campus Master Plan & the Willowbrook MLK Wellness Community Vision* to guide the development of the campus. It is the County's intent that the Specific Plan serve as the regulatory document for the buildout of the campus. Future development within the campus will be required to comply with the provisions of the Specific Plan; all subsequent development within the campus will be subject to the mitigation requirements of the EIR being prepared for the Specific Plan.

The draft Specific Plan is available for viewing at <http://planning.lacounty.gov/willowbrook/tod>.

POTENTIAL PROJECT IMPACTS: Based on the Initial Study determination, an EIR is necessary for the proposed Project. Based on a preliminary assessment of potential environmental impacts that may occur as a result of the Project, the areas of potential environmental impact to be addressed in the Programmatic EIR will include at least the following:

Potential Hazards

- Geology/Soils
- Noise
- Hazards/Hazardous Materials

Potential Impacts to Resources

- Aesthetics
- Air Quality
- Cultural Resources
- Energy
- Greenhouse Gas Emissions
- Hydrology and Water Quality
- Land Use/Planning

Potential Impacts to Services

- Transportation/Traffic

- Public Services
- Recreation
- Utilities/Services
- Population/Housing

The only environmental factors that were not found to be potentially affected are Agriculture/Forest Resources, Biological Resources, and Mineral Resources. There are multiple mandatory findings of significance. In addition, environmental issues that do not rise to the level of significant impacts will be addressed in the EIR in a separate section entitled "Impacts Found to Be Less Than Significant."

NOTICE OF PREPARATION REVIEW AND COMMENTS

The NOP is being distributed to solicit written comments regarding the scope and content of the environmental analysis to be included in the EIR. The County has prepared this NOP in accordance with the State CEQA Guidelines.

The review period for this NOP is from **November 2, 2015 to December 1, 2015**. Due to the time limits mandated by State law, your response must be sent at the earliest possible date, but not later than **December 1, 2015**. Please direct all written comments to the following address:

GABRIELEÑO BAND OF MISSION INDIANS - KIZH NATION

Historically known as The San Gabriel Band of Mission Indians
recognized by the State of California as the aboriginal tribe of the Los Angeles basin

AB 52 - 30-day Consultation Notice

Project name: Tribal Cultural Resources under the California Environmental Quality Act AB 52 (Gatto, 2014). Formal Notification of the Proposed Project pursuant to Public Resources Code (PRC).

Dear Leon Freeman,

February 9, 2017

Please find this letter in response to your request for consultation dated January 30, 2017. I have reviewed the project site and do have concerns for cultural resources. Your project lies in an area where the Ancestral territories of the Kizh (Kitc) Gabrieleño's prominent villages adjoined and overlapped with each other, at least during the Late Prehistoric and Protohistoric Periods. The Kizh Gabrieleño were probably the most influential Native American group in aboriginal southern California (Bean and Smith 1978a:538; <https://nrmsecure.dfg.ca.gov/FileHandler.ashx?DocumentID=9497>). Our homeland was centered in the Los Angeles Basin, and reached as far east as the San Bernardino-Riverside area. The homeland of our neighbors, the Serranos, was primarily the San Bernardino Mountains, including the slopes and lowlands on the north and south flanks. Whatever the linguistic affiliation, Native Americans in and around the project area exhibited similar organization and resource procurement strategies. Villages were based on clan or lineage groups. Their home base sites are marked by midden deposits often with bedrock mortars. During their seasonal rounds to exploit plant resources, small groups would migrate within their traditional territory in search of specific plants and animals. Their gathering strategies of ten left behind signs of special use sites, usually grinding slicks on bedrock boulders, at the locations of the resources.

Due to the project location and the high sensitivity of the area location, we would like to request one of our certified Native American monitors to be on site during any and all ground disturbances (including but not limited to pavement removal, post holing, auguring, boring, grading, excavation and trenching) to protect any cultural resources which may be affected during construction or development. When the Native American Heritage Commission states there are "no records of sacred sites in the project area," they will always refer lead agencies to the respective Native American Tribe. The NAHC is only aware of general information and are not the experts on each California Tribe. Our Elder Committee & Tribal Historians are the experts for our Tribe and are able to provide a more complete history (both written and oral) regarding the location of historic villages, trade routes, cemeteries and sacred/religious sites in the project area. In some instances, the project location may be in an area that has been previously developed and one may question the need for monitoring. Unfortunately, we have numerous examples that we can share where cultural resources including human remains were outright destroyed or at least significantly impacted before a Tribe was present. Please note, if sacred sites haven't been listed with the NAHC, it doesn't mean that they aren't there. Not everyone reports what they know.

The recent implementation of AB52 dictates that lead agencies consult with Native American Tribes who can prove and document traditional and cultural affiliation with the area of said project. Our tribe is connected ancestrally to your project location area. What does "ancestrally" or "ancestral" mean? It simply means the people who were in your family in past times - of, belonging to, inherited from, or denoting an ancestor or ancestors (see <http://www.thefreedictionary.com/ancestral>). Our main priority is to avoid and protect cultural and biological resources that still exist in our ancestral land for the benefit and education of future generations. We hold strongly to the values of accomplishing this goal without delay or conflicts to the lead agency and project manager.

At your convenience, we are available for consultations via phone or in person. Thank you.

Subject: SB 18 and AB 52 Consultation (Willowbrook TOD Specific Plan)

Dear Chairman Salas,

Thank you engaging in consultation with us regarding the proposed Willowbrook Transit Oriented District Specific Plan, as provided for in SB 18 and AB 52.

The Department of Regional Planning received your letters requesting consultation under SB 18 and AB 52, both dated February 9, 2017, in which you provided background reference information and requested a Kizh Nation certified Native American monitor to be on site during any and all ground disturbances (including but not limited to pavement removal, post holing, auguring, boring, grading, excavation and trenching).

Subsequently, we engaged in consultation via telephone on March 13, 2017, and in-person on April 4, 2017. In our meetings, we discussed potential tribal cultural resources that could be present in the area and your suggested mitigation measures. We also discussed the challenges related to a project-level document versus a plan-level document like the Willowbrook Transit Oriented District Specific Plan, which does not authorize actual ground disturbance or construction. While we are not able to incorporate your suggested mitigations for an on-site monitor for every ground disturbance, we can agree to a mitigation measure that provides for Native American tribes to be contacted if resources are encountered in the project area. This language shall be recommended for inclusion in the project environmental document.

During project-level construction, should prehistoric or historic subsurface cultural resources be discovered, all activity in the vicinity of the find shall stop and a qualified archaeologist will be contacted to assess the significance of the find according to CEQA Guidelines Section 15064.5. If any find is determined to be significant, the archaeologist shall determine, in consultation with the County, and local Native American groups expressing interest, appropriate avoidance measures or other appropriate mitigation. Per CEQA Guidelines Section 15126.4(b)(3), project redesign and preservation in place shall be the preferred means to avoid impacts to significant cultural resources. Methods of avoidance may include, but shall not be limited to, project re-route or re-design, project cancellation, or identification of protection measures such as capping or fencing. Consistent with CEQA Guidelines Section 15126.4(b)(3)(C), if it is demonstrated that resources cannot be avoided, the qualified archaeologist shall develop additional treatment measures in consultation with the County, which may include data recovery or other appropriate measures. All significant cultural materials recovered will be, as necessary and at the discretion of the consulting archaeologist and in consultation with local Native American groups expressing interest, subject to scientific analysis, professional museum curation, and documentation according to current professional standards.

We also discussed incorporating some language into the plan document itself that references the historical significance of the early Gabrielinos in Southern California. On April 11, 2017, we provided you with draft text for your input and requested some images to include. The current language is as follows:

Early Peoples

The project site is located within the territory of the native population known as the Gabrielino. Prior to European contact, the Gabrielino occupied a diverse area that included the watersheds of the Los Angeles, San Gabriel, and Santa Ana rivers; the Los Angeles basin; and offshore islands. They were hunter-gatherers and lived in permanent communities located near the presence of a stable food supply and some measure of protection from flooding. Community populations generally ranged from 50-100 inhabitants, although larger settlements may have existed. Houses were made of tule mats on a framework of poles. Basketry and steatite vessels were used rather than ceramics; ceramics became common only toward the end of the Mission Period in the nineteenth century.

The Department of Regional Planning met with representatives of the Gabrielino Band of Mission Indians - Kizh Nation, to determine whether known tribal cultural resources are present in the project area. While specific resources have not yet been identified, the project area is proximate to a known early trade route that connected to the coast at San Pedro. Additionally, its characteristics of being relatively near historical water sources and hunting grounds would have been favorable to settlement. As is common in Southern California, it's possible that artifacts with tribal significance could be discovered in the Specific Plan Area in activities that involve ground disturbance. Therefore, these activities should be undertaken with care to adequately protect potential resources.

Please note that under our current schedule constraints, if we do not receive input from you on the historical language **before Monday, April 24, 2017**, we will plan to include the text as indicated.

This concludes our consultation. If you have any questions or need further information, please feel free to contact me.

Again thanks,
Leon

Subject: SLF Search Request for the Willowbrook Transit Oriented Specific Plan Project, Community of Willowbrook, Los Angeles County, California (D130631.00)

Dear Ms. Tutton:

Environmental Science Associates (ESA) is preparing a Program Environmental Impact Report (PEIR) for the proposed Willowbrook Transit Oriented Specific Plan. The Specific Plan area is approximately 312 acres and is located within the northwestern portion of the unincorporated Willowbrook community. The proposed Specific Plan would amend General Plan Land Use designations of several individual parcels to provide consistency with the General Plan policy direction for mixed use parcels along transportation corridors. In addition, the proposed Specific Plan would facilitate transit oriented development by establishing a new Specific Plan zone for the project area. Within the Specific Plan zone, new designations for land uses would be implemented. Further, minor changes/improvements to the existing street system would be implemented to improve access, circulation, and walkability between the major land uses within the Specific Plan area, such as the MLK Medical Center, CDU, Kenneth Hahn Plaza, Willowbrook Library, Martin Luther King, Jr. Center for Public Health, and the Willowbrook/Rosa Parks Metro Station. The specific plan area is currently developed.

The enclosed map shows the specific plan project area located in:

- Un-sectioned area of the South Gate USGS 7.5' Quadrangle, Township 3 South, Range 13 West.

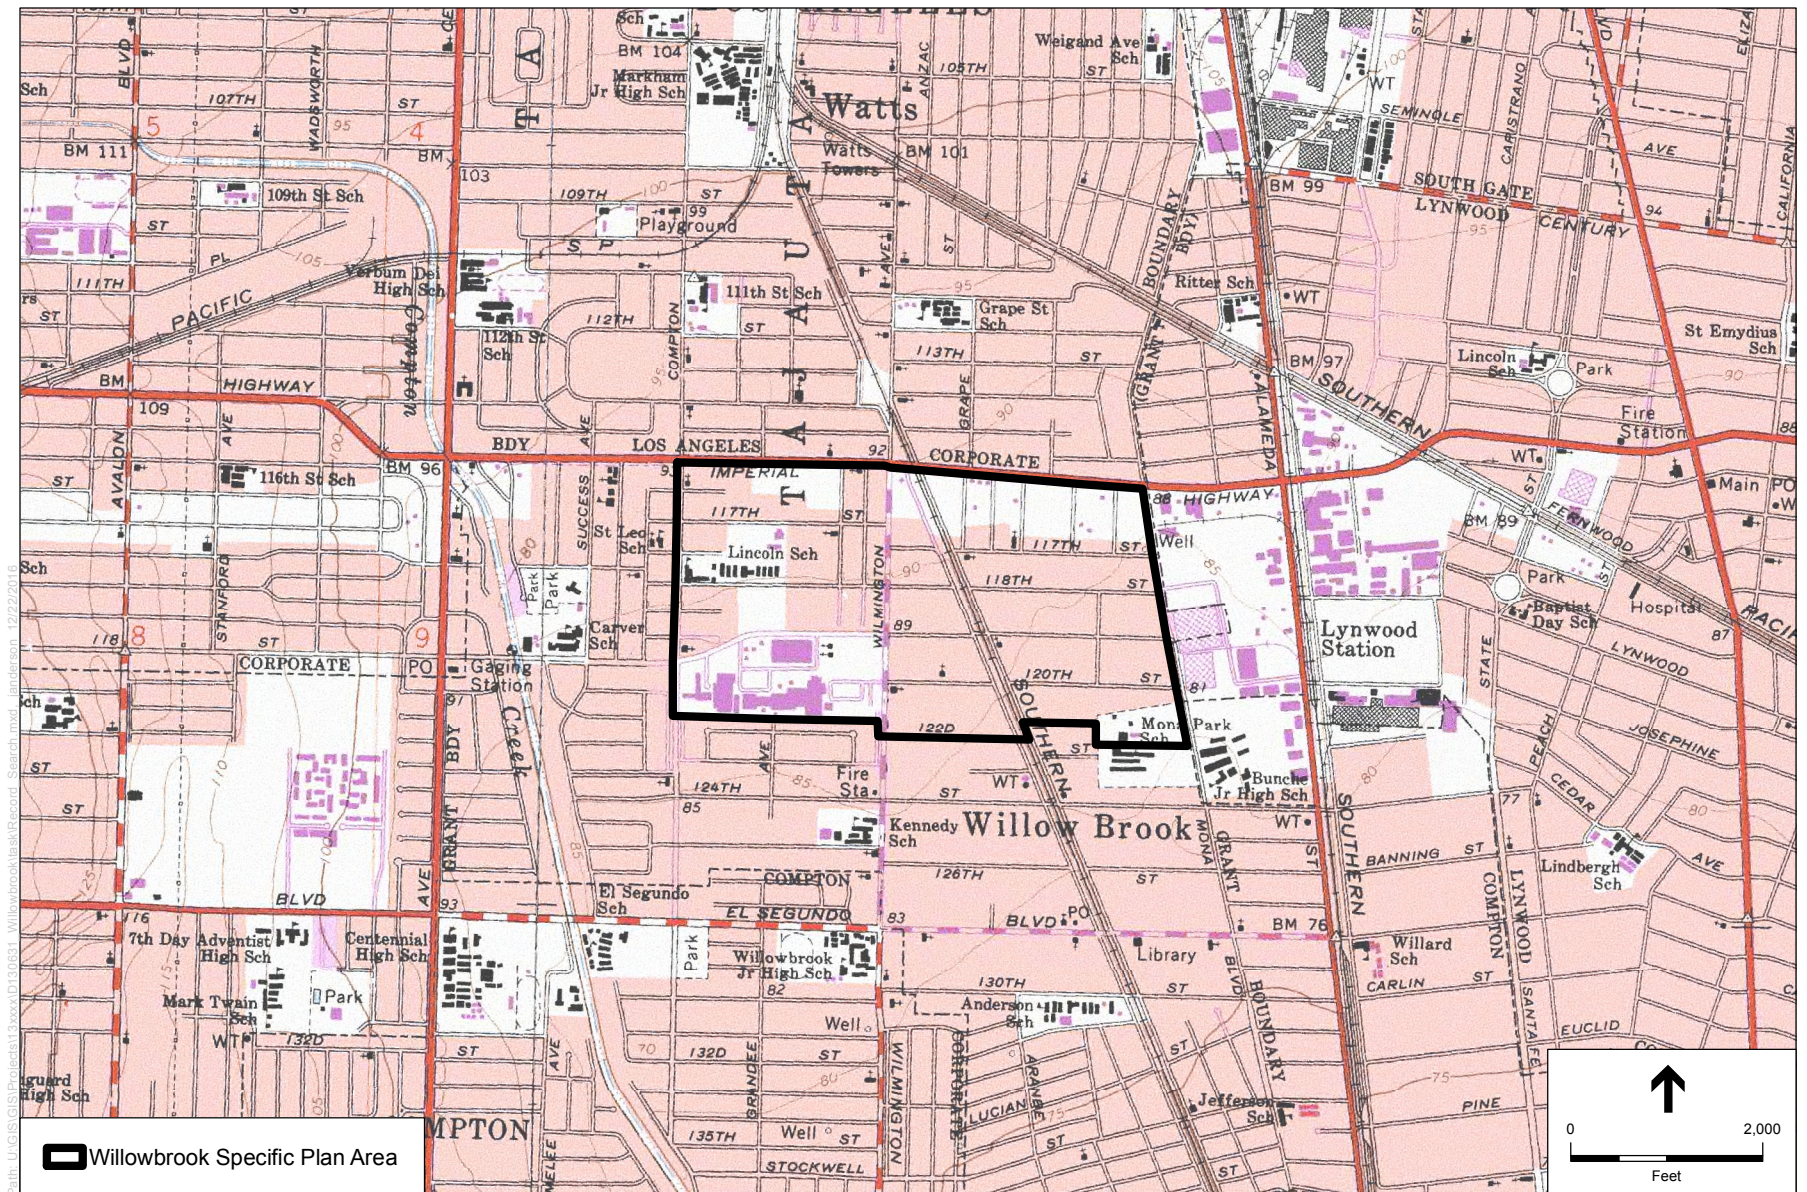

In an effort to provide an adequate appraisal of all potential impacts to cultural resources that may result from the proposed project, ESA is requesting that a records search be conducted for sacred lands or traditional cultural properties that may exist within the specific plan area.

Thank you for your time. To expedite delivery of search results, please email them to aabdelwahed@esassoc.com or fax 949.753.7002. Please contact me at 213.542.6041 or email if you have any questions.

Sincerely,

RE: Proposed Willowbrook Transit Oriented Specific Plan Project, Community of Willowbrook;
South Gate USGS Quadrangle, Los Angeles County, California

Dear Ms. Said-Abdelwahed:

A record search of the Native American Heritage Commission (NAHC) *Sacred Lands File* was completed for the area of potential project effect (APE) referenced above with negative results. Please note that the absence of specific site information in the *Sacred Lands File* does not indicate the absence of Native American cultural resources in any APE.

Attached is a list of tribes culturally affiliated to the project area. I suggest you contact all of the listed Tribes. If they cannot supply information, they might recommend others with specific knowledge. The list should provide a starting place to locate areas of potential adverse impact within the APE. By contacting all those on the list, your organization will be better able to respond to claims of failure to consult. If a response has not been received within two weeks of notification, the NAHC requests that you follow-up with a telephone call to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from any of these individuals or groups, please notify me. With your assistance we are able to assure that our lists contain current information. If you have any questions or need additional information, please contact via email: gayle.totton@nahc.ca.gov.

Sincerely,

A handwritten signature in blue ink that reads "Gayle Totton".

Subject: Request for a Database Search for the Willowbrook Transit Oriented District Specific Plan Project, Community of Willowbrook, Los Angeles County, California (D130631.00)

Dear Dr. McLeod:

Environmental Science Associates (ESA) is preparing a Program Environmental Impact Report (PEIR) for the Willowbrook Transit Oriented District Specific Plan (Project). The Specific Plan is a County-initiated, Los Angeles County Metropolitan Transit Authority (Metro) grant-funded project that is being proposed pursuant to the County General Plan to enhance the transit oriented development pattern, promote active transportation, reduce vehicle miles traveled, and improve the public realm in the Willowbrook area.

The Specific Plan area is approximately 312 acres and is located within the northwestern portion of the Willowbrook community, in unincorporated Los Angeles County. The Specific Plan area generally encompasses parcels located south of Imperial Highway, north of East 122nd Street, east of Compton Avenue, and west of South Mona Boulevard. The Specific Plan contains a range of land uses, including: residential, retail, office, educational, institutional facilities, and service facilities.

The enclosed map shows the Project area located in:

- Un-sectioned area of the South Gate USGS 7.5' Quadrangle, Township 3 South, Range 13 West.

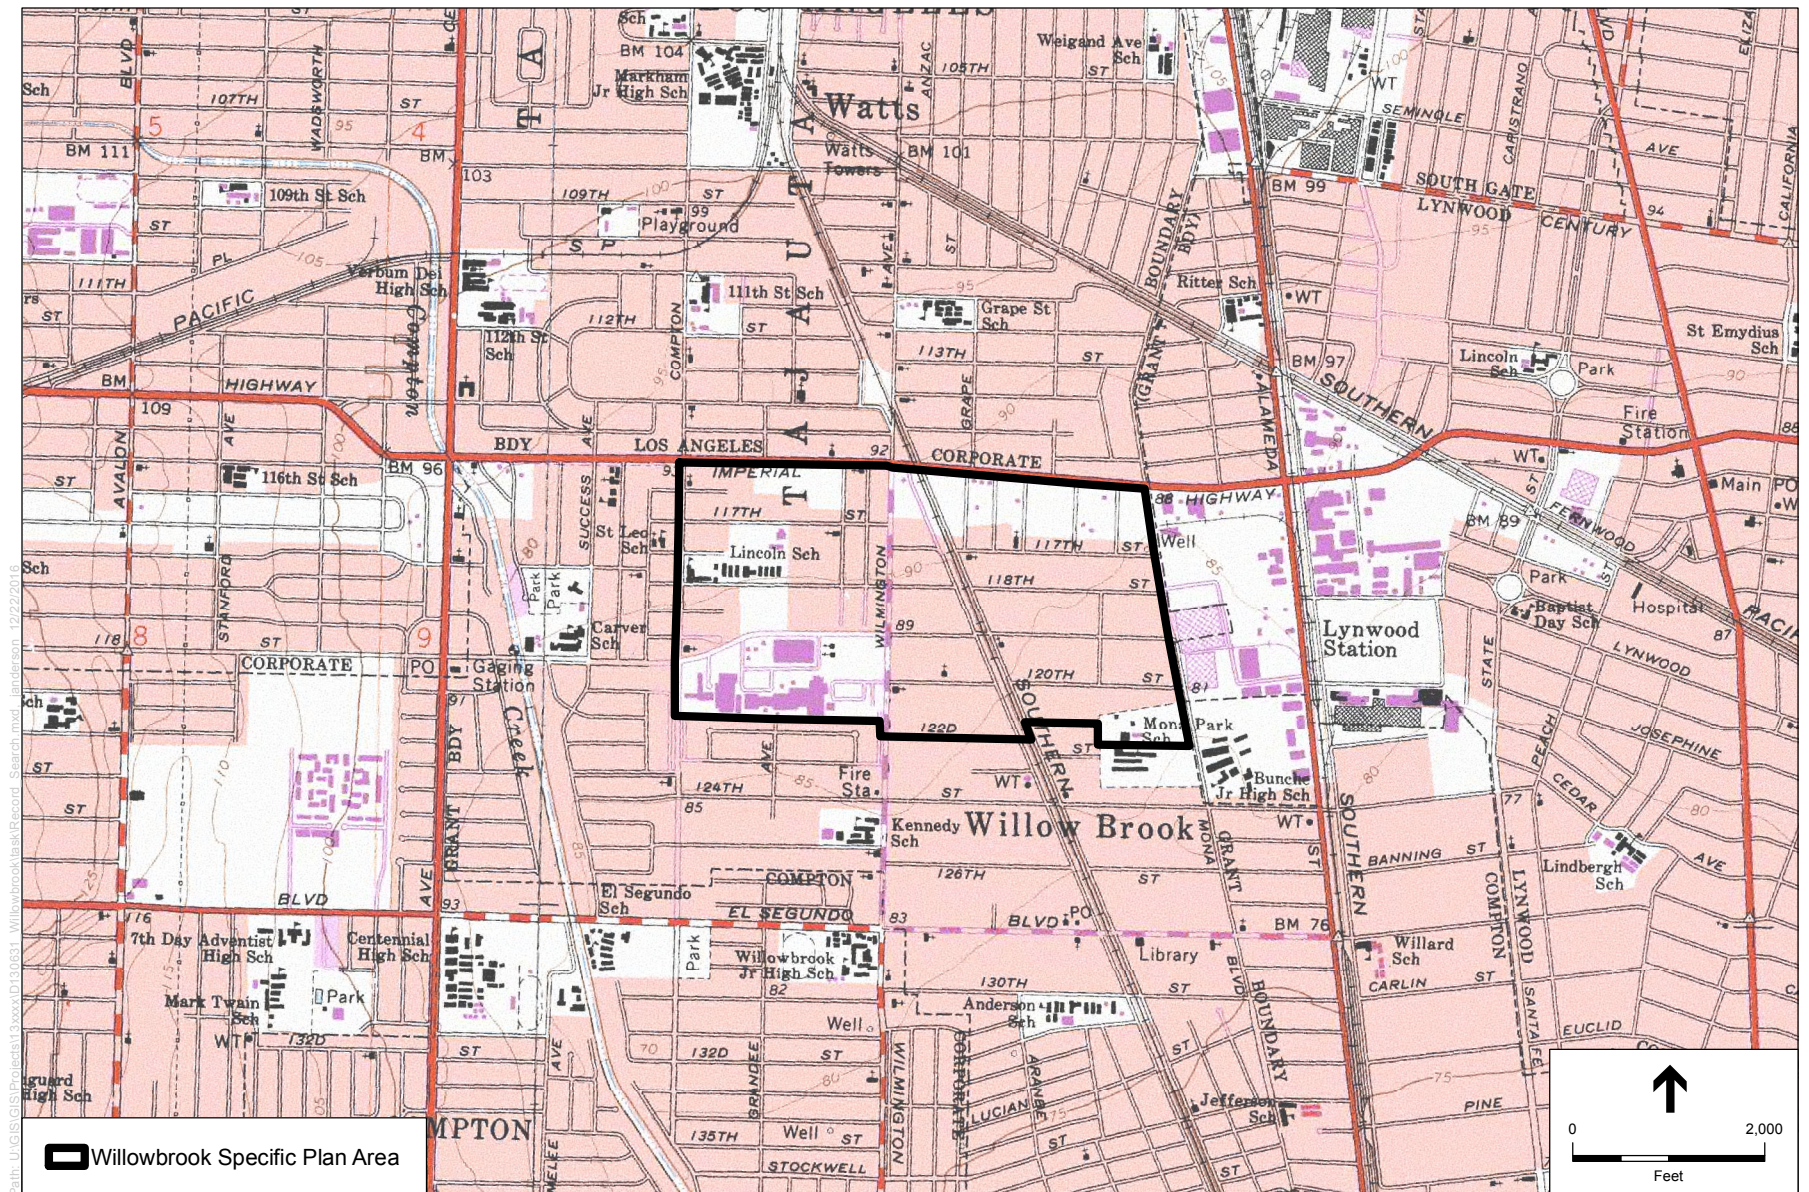

In an effort to provide an adequate appraisal of all potential impacts that may result from the proposed Project, ESA is requesting that a paleontological resource records search be conducted for paleontological resources that may exist within the Project area.

Thank you for your time and cooperation regarding this matter. To expedite the delivery of search results, please email them to aabelwahed@esassoc.com. Please contact me at 213.599.4300 or email if you have any questions.

Sincerely,

A handwritten signature in blue ink, appearing to read "Arabesque Said-Abdelwahed".

re: Paleontological resources for the proposed Willowbrook Transit Oriented District Specific Plan Project, ESA Project # D130631.00, in the Community of Willowbrook, Los Angeles County, project area

Dear Arabesque:

I have thoroughly searched our paleontology collection records for the locality and specimen data for the proposed Willowbrook Transit Oriented District Specific Plan Project, ESA Project # D130631.00, in the Community of Willowbrook, Los Angeles County, project area as outlined on the portion of the South Gate USGS topographic quadrangle map that you sent to me via e-mail on 3 January 2017. We do not have any vertebrate fossil localities that occur directly within the proposed project area, but we do have localities somewhat nearby from the same type of sediments that probably occur as subsurface deposits in the proposed project area.

The entire proposed project site area has surface deposits composed of younger Quaternary Alluvium, derived as fluvial deposits from the floodplain of the Los Angeles River that currently flows in a concrete channel just to the east and from Compton Creek that currently flows just to the west. These younger Quaternary deposits usually do not contain significant fossil vertebrate remains, at least in the uppermost layers, but the underlying older Quaternary deposits found at varying depths may well contain significant vertebrate fossils. Our closest vertebrate fossil locality from these older Quaternary deposits is probably LACM 4685, southwest of the proposed project area between 135th and 136th Streets just east of Avalon

Boulevard, that produced a fossil specimen of undetermined elephantoid, Proboscidea, from an unstated depth.

Our next closest vertebrate fossil localities from these older Quaternary deposits, LACM 1344, 3266 and 3365, all occurring just south of west of the southern portion of the proposed project area around the Harbor Freeway and Athens on the Hill, produced fossil specimens of mammoth, *Mammuthus*, squirrel, Sciuridae, horse, *Equus*, and pronghorn antelope, *Breameryx*, at depths between 15 and 20 feet below the surface. Just north of west of the northern portion of the proposed project area, at the Harbor Freeway (I-110) between 112th and 113th Streets and along Imperial Highway near Main Street, we have additional older Quaternary localities LACM 1295 and 4206 that produced a typical late Pleistocene fauna including fossil specimens of pond turtle, *Clemmys*, puffin, *Mancalla*, turkey, *Parapavo*, ground sloth, *Paramylodon*, mammoth, *Mammuthus*, dire wolf, *Canis dirus*, rabbit, *Sylvilagus*, squirrel, Sciuridae, deer mouse, *Microtus*, pocket gopher, *Thomomys*, horse, *Equus*, deer, *Cervus*, pronghorn antelope, *Capromeryx*, and bison, *Bison*, at unstated but relatively shallow depths. A little further away but directly south of the proposed project area east of Wilmington Boulevard and north of Artesia Boulevard, we have locality LACM 3382 that produced a fossil specimen of mammoth *Mammuthus*, at a depth of approximately five feet below the surface.

Shallow excavations in the younger Quaternary Alluvium exposed throughout the proposed project area are unlikely to uncover significant vertebrate fossils. Deeper excavations that extend down into older Quaternary deposits, however, possibly as shallow as five feet in depth, may well encounter significant fossil vertebrate remains. Any substantial excavations in the proposed project area, therefore, should be monitored closely to quickly and professionally recover any fossil remains discovered while not impeding development. Also, sediment samples should be collected and processed to determine the small fossil potential in the proposed project area. Any fossils collected should be placed in an accredited scientific institution for the benefit of current and future generations.

This records search covers only the vertebrate paleontology records of the Natural History Museum of Los Angeles County. It is not intended to be a thorough paleontological survey of the proposed project area covering other institutional records, a literature survey, or any potential on-site survey.

Sincerely,

A handwritten signature in cursive script, reading "Samuel A. McLeod".

1. Introduction

This report documents a traffic analysis to support a Program EIR for the Willowbrook TOD Specific Plan. The area is located in the unincorporated community of Willowbrook in Los Angeles County. The Specific Plan is focused around the Willowbrook/Rosa Parks Station, which serves the Metro Blue Line and Metro Green Line. The Specific Plan Area generally contains the southern portion of the area within a half mile radius of the station, and extends from Imperial Highway in the north, to 121st/122nd Streets in the south, Mona Boulevard in the east and Compton Avenue in the west. The Specific Plan Area is shown in Figure 1.1.

1.1 Project Description

The proposed project involves the establishment of the Willowbrook TOD Specific Plan, including goals, and establishment of a land use program and circulation system that will provide a pedestrian-friendly, mixed-use environment, in a transit-oriented district around the existing Metro Station. The Specific Plan is fully described in the Draft Willowbrook TOD Specific Plan¹ document.

Some of the key facilities and land uses in the Specific Plan area include (see Figure 1.1): the Willowbrook/Rosa Parks Station, the Martin Luther King Jr. Medical Center, Charles R. Drew University of Medicine and Science, Kenneth Hahn Plaza shopping center, the Willowbrook Library, and the Martin Luther King Jr. Center for Public Health.

The purpose of the Willowbrook TOD Specific Plan is to revitalize the community within the project area and to improve access to all modes of transportation, including transit, walking, and bicycling. Building off the goals and policies outlined in the General Plan, the Willowbrook TOD Specific Plan will encourage transit oriented development, promote active transportation and reduce vehicle miles travelled. The Specific Plan is anticipated to facilitate development, especially residential and employment-generating uses proximate to the Willowbrook/Rosa Parks Station.

The primary objectives of the Specific Plan are to identify land use options that include mixed uses, increased housing opportunities, and neighborhood-serving retail uses. In addition the Specific Plan is intended to foster a healthy community by improving pedestrian linkages between the Willowbrook/Rosa Parks Station, the Kenneth Hahn Plaza, the Martin Luther King Jr. Medical Center, the Charles R. Drew University of Medicine and Science, future mixed use areas, and existing residential neighborhoods.

¹ Draft Willowbrook TOD Specific Plan, County of Los Angeles – October, 2015.

1.2 Study Scope

The scope for the analysis in this study was determined in conjunction with the County of Los Angeles staff including the geographic coverage, input assumptions, and methodologies used in the analysis. The analysis addresses the AM and PM peak hours which are the times of the day when the street traffic volumes in the area are highest. For purposes of analysis a future horizon year of 2035 is assumed.

The study area includes a total of 66 analyzed intersections, which are located in four jurisdictions, as follows:

- 28 in the County of Los Angeles
- 16 in the City of Compton
- 3 in the City of Lynwood
- 19 in the City of Los Angeles

Four of the intersections in the County are shared with the City of Compton, and two are shared with the City of Lynwood. Four of the intersections in the City of Los Angeles are shared with the County.

The study follows the methodology procedures of Los Angeles County as the lead agency. However, the intersections in each jurisdiction were analyzed with the methodology appropriate to that jurisdiction, as described in Chapter 2.

The Traffic Study addresses the following scenarios:

- Existing Conditions
- Existing Plus Project Conditions
- Existing Plus Project Conditions Plus Mitigations
- Existing Plus Project Plus Cumulative Conditions (Year 2035)
- Existing Plus Project Plus Cumulative Conditions (Year 2035) Plus Mitigations

1.3 Organization of this Report

The remainder of this report is organized as follows. Chapter 2 describes the existing transportation conditions in the area of the Project. Chapter 3 describes the transportation characteristics of the Specific Plan Project. Chapter 4 addresses impacts for the Existing Plus Project Conditions. Chapter 5 describes transportation parameter inputs for future conditions (2035). Chapter 6 addresses impacts for the Existing Plus Project plus Cumulative Conditions. Chapter 7 provides an analysis of the freeway system for Caltrans. Chapter 8 addresses mitigations for significant transportation impacts.

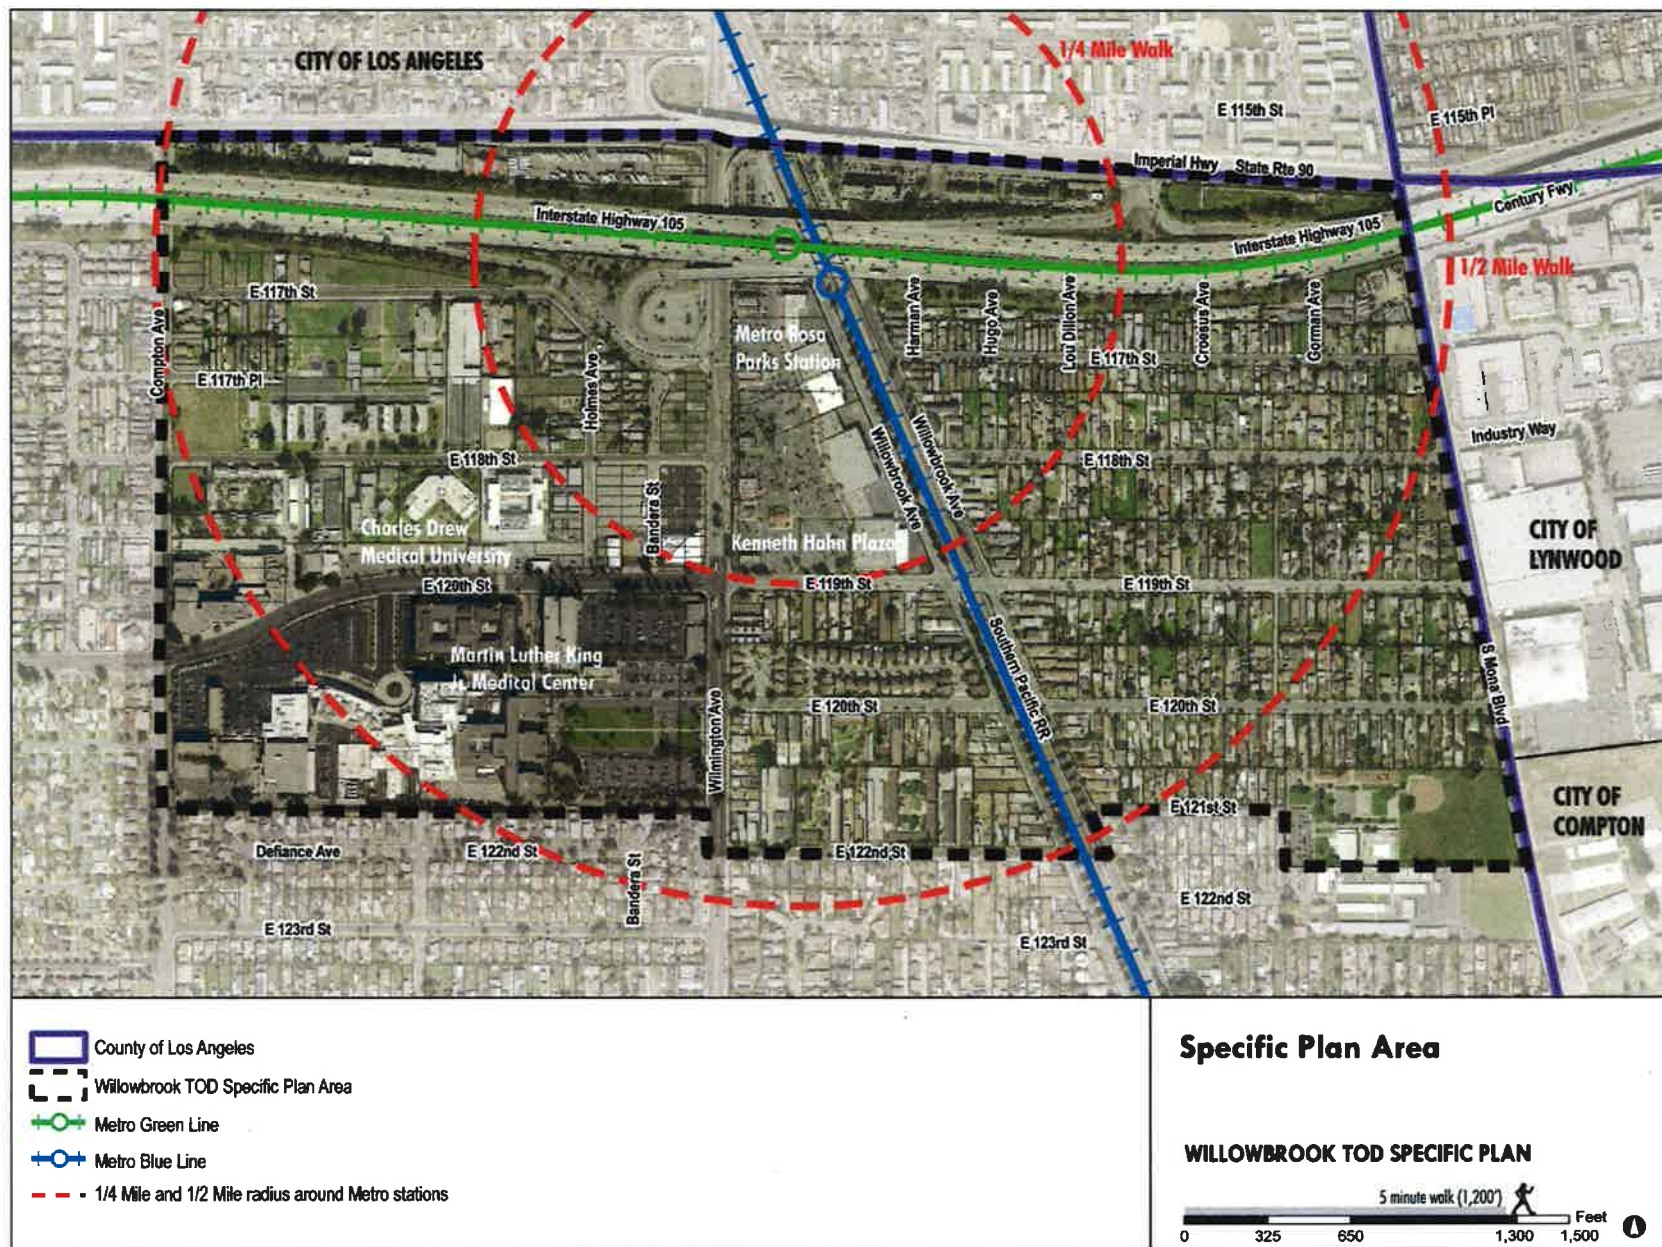

Figure 1.1
Specific Plan Area

Willowbrook TOD Specific Plan EIR Traffic Study

2. Existing Conditions

The Specific Plan is focused around the Willowbrook/Rosa Parks Station, which serves the Metro Blue Line and Metro Green Line. The Specific Plan Area generally contains the southern portion of the area within a half mile radius of the station, and extends from Imperial Highway in the north, to 121st/122nd Streets in the south, Mona Boulevard in the east and Compton Avenue in the west. The Specific Plan Area is shown in Figure 1.1.

The street system in the Specific Plan area is under the jurisdiction of the County of Los Angeles. Some streets and study intersections outside of the Specific Plan area are under the jurisdiction of the City of Compton, the City of Lynwood and the City of Los Angeles.

2.1 Roadway System

Regional access to the Project site is provided by the Century (I-105) freeway which is located immediately to the north and east of the Project Site. The I-710 Freeway runs north-south approximately 3.4 miles east of the Project Site. The I-110 Freeway runs north-south approximately 2.8 miles west of the Project Site, and the SR-91 Freeway runs east-west approximately 3.4 miles south of the Project Site.

The Project site is served by a comprehensive grid system of surface streets, with multiple access points to the I-105 freeway. The key surface streets serving the area of the Specific Plan are described below (street classification references are from the County of Los Angeles General Plan).

North-South Streets

San Pedro Street: San Pedro Street is a two-way street and is classified as a Secondary Highway. South of 120th Street it has two travel lanes in each direction, and north of 120th Street it has one travel lane in each direction with left turn lanes at intersections. North of 120th Street it also has a central left turn lane. North of Alondra Boulevard it connects to Avalon Boulevard. On-street parking is generally allowed on both sides of the street.

Main Street: Main Street is a two-way street and is classified as a Major Highway. South of 120th Street it has two travel lanes in each direction, and north of 120th Street it has one travel lane in each direction with left turn lanes at intersections. North of 119th Street and south of El Segundo Boulevard it also has a central left turn lane. On-street parking is generally allowed on both sides of the street.

Avalon Boulevard: Avalon Boulevard is a two-way street and is classified as a Major Highway. It has two travel lanes in each direction with left turn lanes at intersections, and on-street parking is generally allowed. Between 119th Street and 126th Street it also has a central left turn lane.

Central Avenue: Central Avenue is a two-way street and is classified as a Major Highway. Its configuration varies, but generally has two travel lanes in each direction with left turn lanes at intersections, and on-street parking is generally allowed. Between 121st Street and 127th Street it has local access streets immediately adjacent to it on either side, which each allow travel in both directions with parking permitted on both sides.

Compton Avenue: Compton Avenue is a two-way street and is classified as a Secondary Highway. It has two travel lanes in each direction. On-street parking is generally allowed on both sides of the street.

Wilmington Avenue: Wilmington Avenue is a two-way street and is classified as a Major Highway. North of 119th Street, it has three travel lanes northbound and two travel lanes southbound with left turn lanes at intersections, and on-street parking is generally prohibited. North of Imperial Highway it reduces to one lane in each direction. South of 119th Street it has two travel lanes in each direction, and on-street parking is permitted without restriction.

Willowbrook Avenue - West: Willowbrook Avenue West is classified as a Secondary Highway. It does not connect directly to Imperial Highway, but is accessed from Wilmington Avenue and provides one southbound lane past the Willowbrook/Rosa Parks Station (and adjacent bus bays). From the Willowbrook/Rosa Parks station south to 119th Street it is a one-way southbound street and has two southbound travel lanes. On-street parking is prohibited on both sides of the street. South of 119th Street, it is a two-way street with one lane in each direction. On-street parking is generally allowed on the west side of the street and prohibited on the east side.

Willowbrook Avenue - East: Willowbrook Avenue East is a two-way street and is classified as a Secondary Highway. It has one travel lane in each direction. On-street parking is generally allowed on the east side of the street and prohibited on the west side. It does not extend north of I-105 as a through street, as the section between just north of 117th Street and Imperial Highway is restricted to southbound buses serving the Willowbrook/Rosa Parks Station.

Mona Boulevard: Mona Boulevard is a two-way street and is classified as a Secondary Highway. It has two travel lanes in each direction. On-street parking is generally prohibited.

Alameda Street: Alameda Street is split into an eastern section and a western section, separated by a train line. The western section is a two-way street and is classified as a Secondary Highway. It has two travel lanes in each direction and on-street parking is

generally allowed on both sides of the street. The eastern section of Alameda Street has a single travel lane in each direction and is a local street and parking is generally allowed on both sides of the street.

State Street / Santa Fe Avenue: State Street is a two-way street and is classified as a Secondary Highway north of Lynwood Road. South of Lynwood Avenue it is classified as a Major Highway. It has two travel lanes in each direction with left turn lanes at intersections. On-street parking is generally allowed on both sides of the street.

East-West Streets

103th Street: 103th Street is a two-way street extending between Alameda Street and S Broadway, and is classified as a local street. It has one travel lane in each direction. On-street parking is generally allowed on both sides of the street.

108th Street: 108th Street is a two-way street extending west from Wilmington Avenue past I-110, and is classified as a Secondary Highway. It has one travel lane in each direction. On-street parking is generally allowed on both sides of the street. East of Wilmington Avenue it continues as the southern section of Santa Ana Boulevard South.

Santa Ana Boulevard North: Santa Ana Boulevard North is a two-way street extending between Willowbrook Avenue and Alameda Street, and is a local street. It has one travel lane in each direction. On-street parking is generally allowed on both sides of the street. East of Alameda Street it continues as Fernwood Avenue.

Santa Ana Boulevard South: Santa Ana Boulevard South is a two-way street extending between Wilmington Avenue and Alameda Street, and is a local street. It has one travel lane in each direction. On-street parking is generally allowed on both sides of the street. West of Wilmington Avenue it continues as 108th Street.

Imperial Highway: Imperial Highway is a two-way street and is classified as a Major Highway. The configuration varies by location. It generally has three travel lanes in each direction with left turn lanes at intersections. It is grade separated from Wilmington Avenue and Willowbrook Avenue on an overpass with two lanes in each direction, and one-way frontage roads. On-street parking is allowed in some locations, with some restrictions.

119th Street: 119th Street is a two-way street extending between Wilmington Avenue and Mona Boulevard, and is classified as a Secondary Highway. It has one travel lane in each direction with a central turn lane. On-street parking is generally allowed on both sides of the street. West of Wilmington Avenue it continues as 120th Street.

120th Street: 120th Street, extending west of Wilmington Avenue, is a two-way street and is classified as a Secondary Highway. It has two travel lanes in each direction. On-street

parking is generally allowed with some restrictions. East of Wilmington Avenue, 120th Street extends east to Mona Boulevard, on an alignment south of 120th Street west of Wilmington Avenue, but does not connect across the Metro Blue Line tracks on Willowbrook Avenue. Along this section, it is a Local Street, with one lane in each direction with parking allowed on both sides of the street.

El Segundo Boulevard: El Segundo Boulevard is a two-way street and is classified as a Major Highway. The configuration varies by location. It generally has two travel lanes in each direction with left turn lanes at intersections. On-street parking is generally allowed on both sides of the street.

Rosecrans Avenue: Rosecrans Avenue is a two-way street and is classified as a Major Highway. The configuration varies by location. It generally has two travel lanes in each direction with left turn lanes at intersections. On-street parking is generally allowed on both sides of the street.

West Compton Boulevard: West Compton Boulevard is a two-way street and is classified as a Secondary Highway east of Central Avenue. West of Central Avenue it connects to Redondo Beach Boulevard and is classified as a Major Highway. It generally has two travel lanes in each direction with left turn lanes at intersections. On-street parking is generally prohibited.

Alondra Boulevard: Alondra Boulevard is a two-way street and is classified as a Major Highway. It generally has two travel lanes in each direction with left turn lanes at intersections. On-street parking is generally allowed on both sides of the street.

Greenleaf Boulevard: Greenleaf Boulevard is a two-way street extending between Central Avenue and Atlantic Drive and is classified as a Secondary Highway. It generally has one travel lane in each direction with left turn lanes at intersections and a central left turn lane. On-street parking is generally allowed on both sides of the street.

Walnut Street: Walnut Street is a two-way street extending between Billings Drive and Acacia Court and is classified as a Secondary Highway. Between Avalon Boulevard and Central Avenue it has two travel lanes in each direction with a central left turn lane. West of Avalon Boulevard and east of Central Avenue it has one travel lane in each direction. On-street parking is generally prohibited.

2.2 Study Intersections

A total of sixty-six study intersections were identified, in conjunction with Los Angeles County staff, for inclusion in the traffic analysis. The analyzed locations are shown in Figure 2.1 and were identified as locations where the majority of trips associated with the Project would be focused based on the trip distribution developed for the Project. These locations

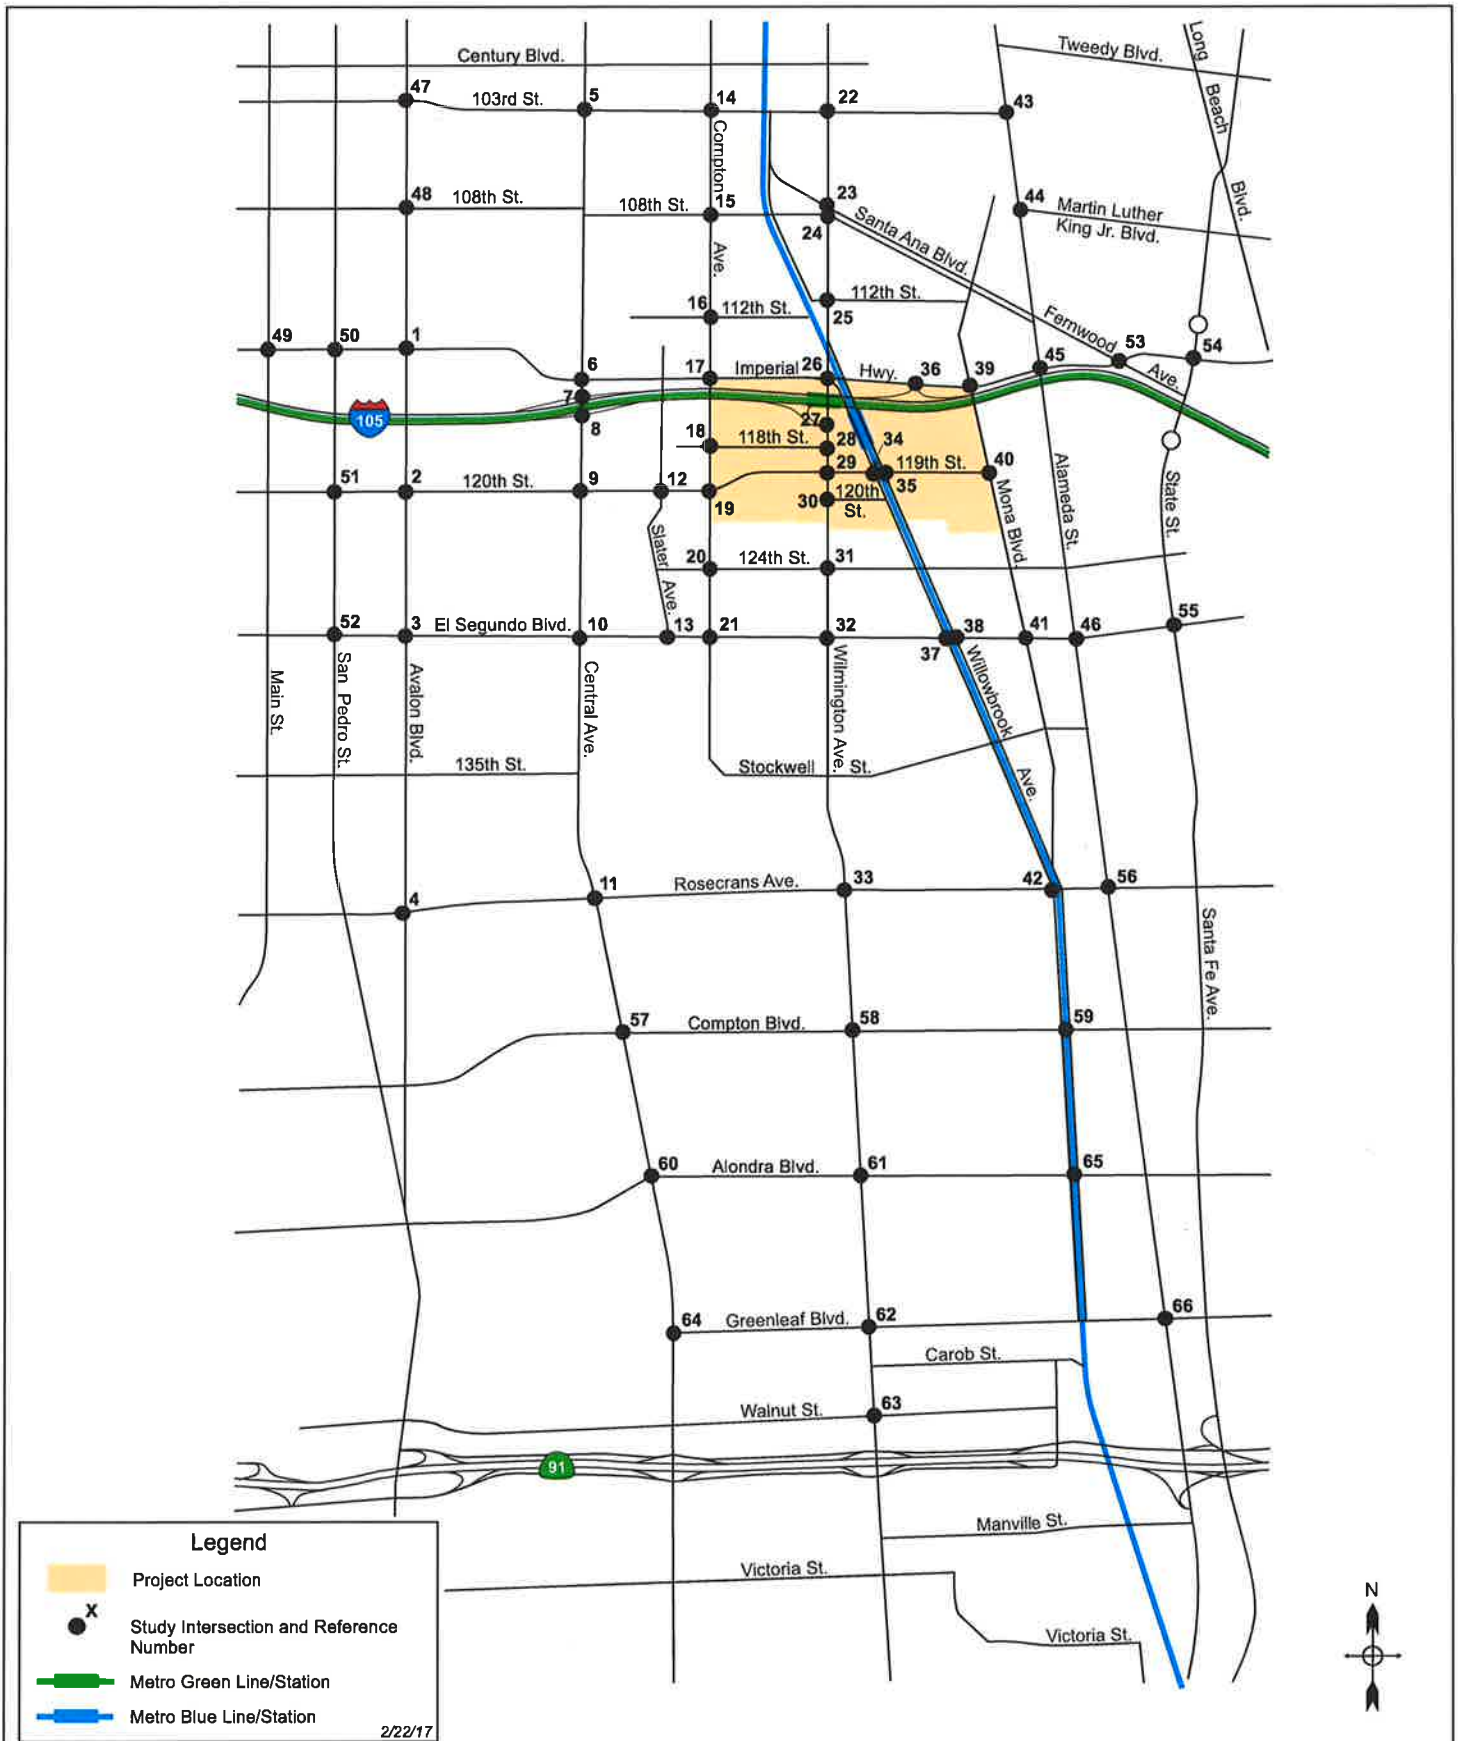

Figure 2.1
Study Intersections

consist of the intersections through which Project trips would travel before dispersing to multiple routes and therefore were the locations where potential traffic impacts were most likely to occur. The intersections identified for analysis are as follows:

1. Avalon Blvd & Imperial Hwy
2. Avalon Blvd & 120th St
3. Avalon Blvd & El Segundo Blvd
4. Avalon Blvd & Rosecrans Ave
5. Central Ave & 103rd St
6. Central Ave & Imperial Hwy
7. Central Ave & I-105 w/b Ramps
8. Central Ave & I-105 e/b Ramps
9. Central Ave & 120th St
10. Central Ave & El Segundo Blvd
11. Central Ave & Rosecrans Ave
12. Slater Ave & 120th St
13. Slater Ave & El Segundo Blvd
14. Compton Ave & 103rd St
15. Compton Ave & 108th St
16. Compton Ave & 112th St
17. Compton Ave & Imperial Hwy
18. Compton Ave & 118th St
19. Compton Ave & 120th St
20. Compton Ave & 124th St
21. Compton Ave & El Segundo Blvd
22. Wilmington Ave & 103rd St
23. Wilmington Ave & Santa Ana Blvd
24. Wilmington Ave & 108th St
25. Wilmington Ave & 112th St
26. Wilmington Ave & Imperial Hwy
27. Wilmington Ave & I-105 e/b Ramps
28. Wilmington Ave & 118th St
29. Wilmington Ave & 120th St West
30. Wilmington Ave & 120th St East
31. Wilmington Ave & 124th St
32. Wilmington Ave & El Segundo Blvd
33. Wilmington Ave & Rosecrans Ave
34. Willowbrook Ave W & 119th Street
35. Willowbrook Ave E & 119th Street
36. Imperial Hwy & I-105 w/b Ramps
37. Willowbrook Ave W & El Segundo Blvd
38. Willowbrook Ave E & El Segundo Blvd
39. Mona Blvd & Imperial Hwy

40. Mona Blvd & 119th St
41. Mona Blvd & El Segundo Blvd
42. Willowbrook Ave & Rosecrans Ave
43. Alameda St & 103rd St
44. Alameda St & Abbott Rd
45. Alameda St & Imperial Hwy
46. Alameda St & El Segundo Blvd
47. Avalon Blvd & 103rd St
48. Avalon Blvd & 108th St
49. Imperial Hwy & Main St
50. Imperial Hwy & San Pedro St
51. San Pedro St & 120th St
52. El Segundo Blvd & San Pedro St
53. Imperial Hwy & Fernwood Ave
54. Imperial Hwy & State St
55. El Segundo Blvd & Santa Fe Ave
56. Alameda St & Rosecrans Ave
57. Central Ave & W Compton Blvd
58. Wilmington Ave & W Compton Blvd
59. Willowbrook Ave & W Compton Blvd
60. Central Ave & Alondra Blvd
61. Wilmington Ave & Alondra Blvd
62. Wilmington Ave & Greenleaf Blvd
63. Wilmington Ave & Walnut St
64. Central Ave & Greenleaf Blvd
65. Willowbrook Ave & Alondra Blvd
66. Alameda St & Greenleaf Blvd

The existing lane configurations for these sixty six analyzed intersections are shown in Figure 2.2.

Intersections in the City of Los Angeles are signalized and currently operate under the City's ATSAC system (Automated Traffic Surveillance and Control) which is a centralized control system that provides for the coordination of traffic signal timing to maximize the street capacities and to minimize traffic delays on City streets. Per the City of Los Angeles, a capacity increase of 7% (0.07 volume/capacity adjustment) was applied for ATSAC at these intersections.

2.3 Existing Intersection Conditions

Existing Traffic Volumes

Recent traffic counts were used for all of the analyzed intersections. AM and PM peak period

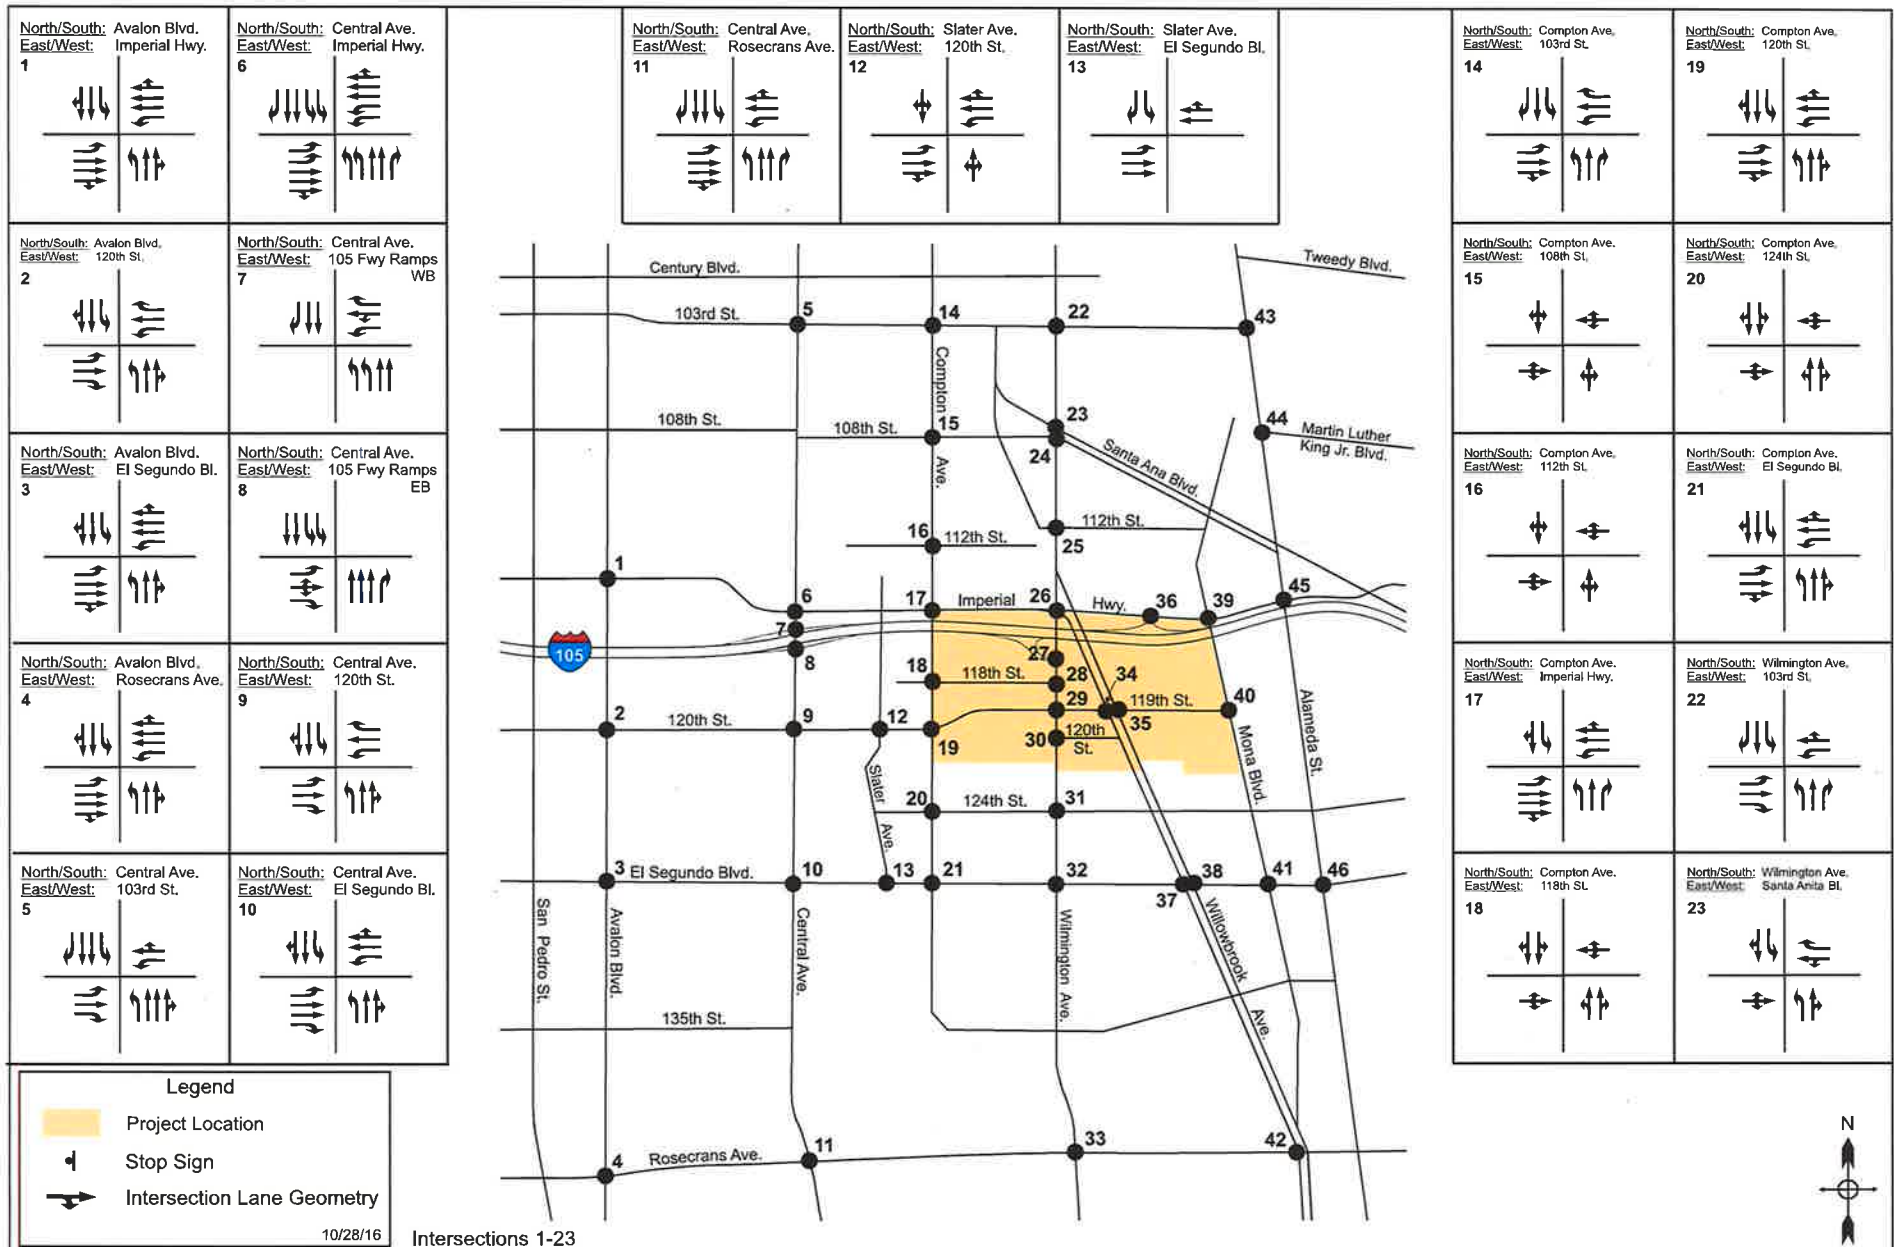

Figure 2.2
Configuration of Analyzed Intersections

Willowbrook TOD Specific Plan EIR Traffic Study

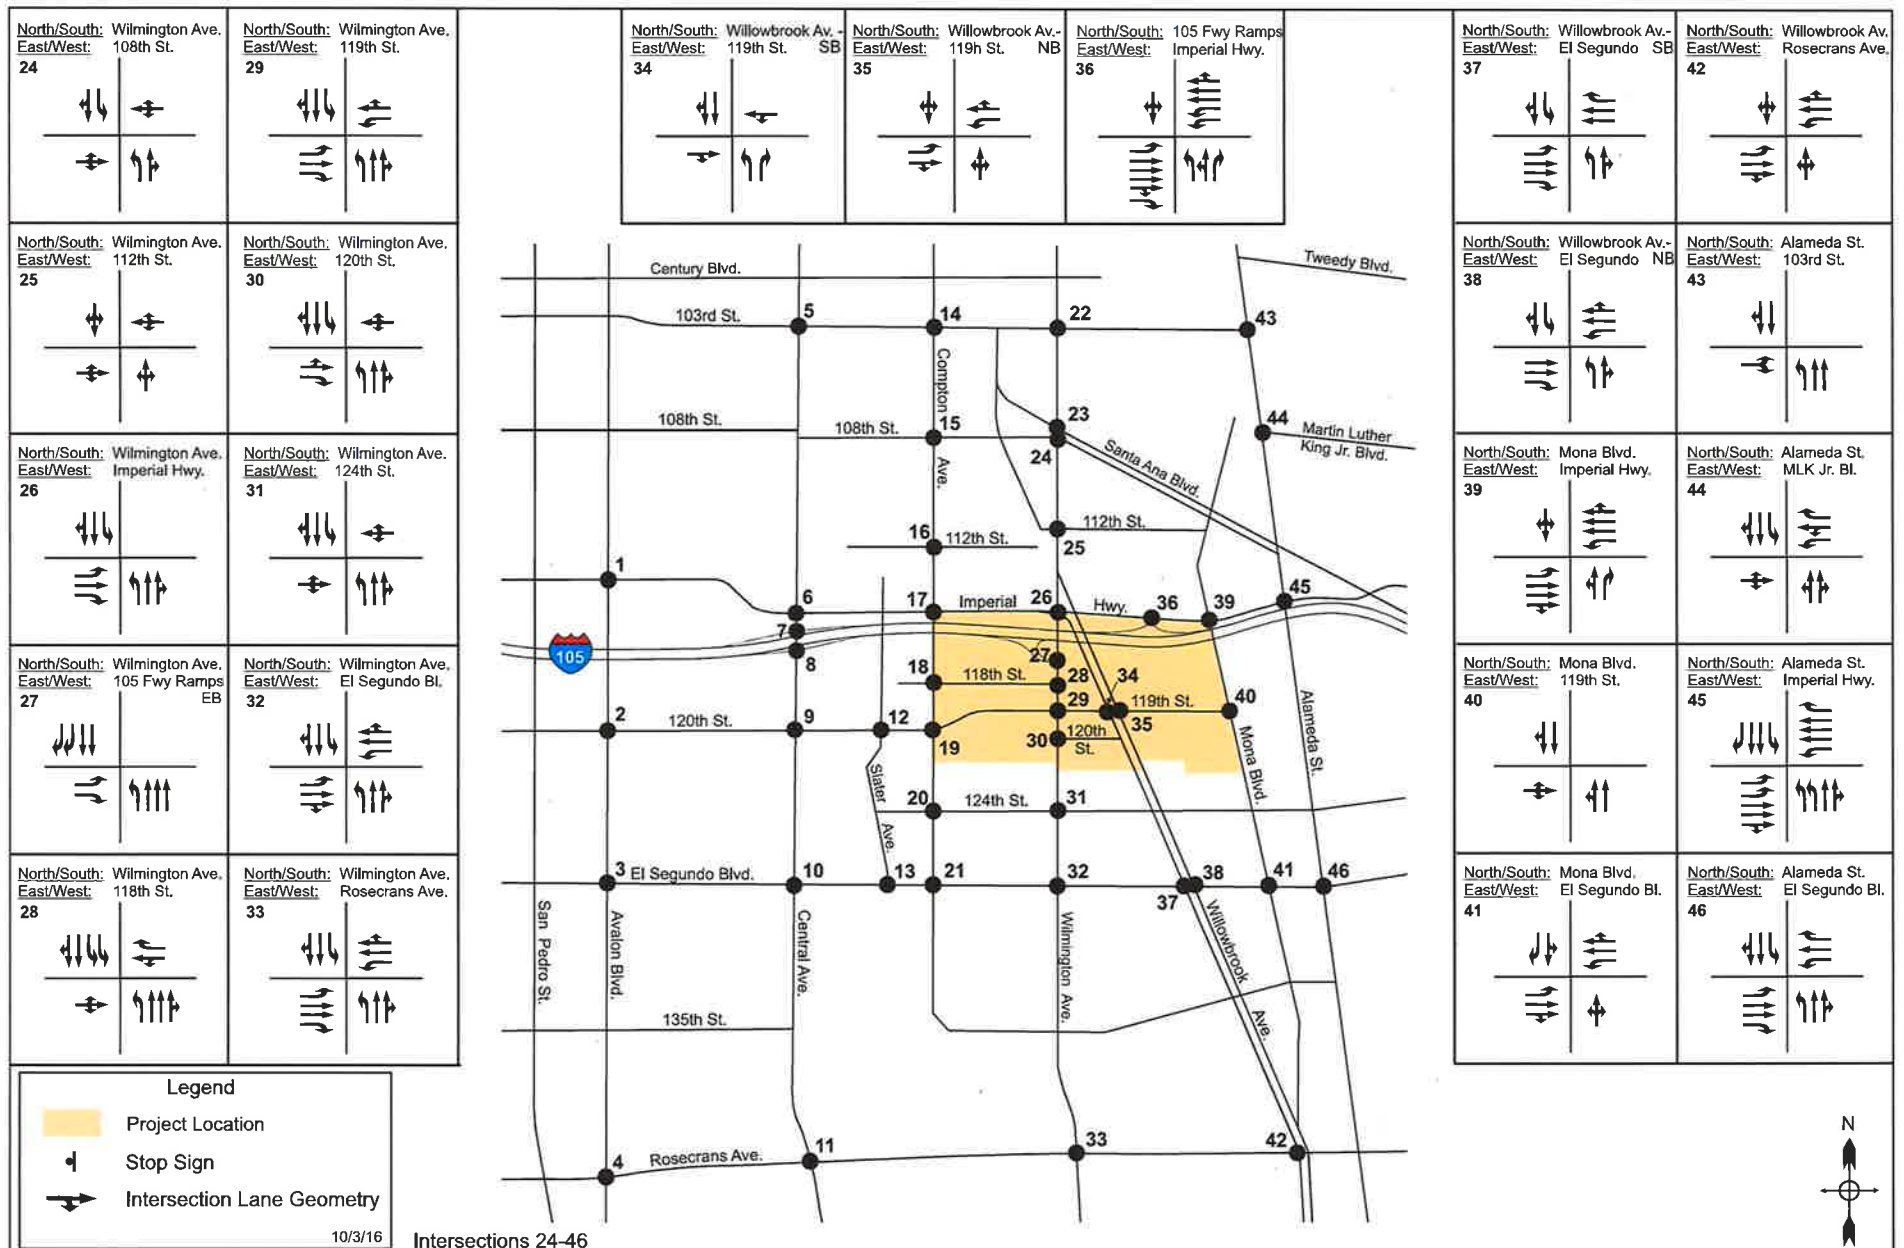

Figure 2.2
Configuration of Analyzed Intersections

Willowbrook TOD Specific Plan EIR Traffic Study

Figure 2.2
Configuration of Analyzed Intersections

Willowbrook TOD Specific Plan EIR Traffic Study

traffic counts (7-10 AM and 3-6 PM) were conducted in May of 2015 for intersections 1-46 and were conducted in December 2016 for intersections 47-66. The 2015 counts were factored by 1% to reflect 2016 conditions. The existing peak hour traffic volumes are illustrated in Figure 2.3 and 2.4 for the AM and PM peak hours respectively, and were used in all subsequent analyses. The traffic volume counts are shown in Appendix C.

Level of Service Methodology

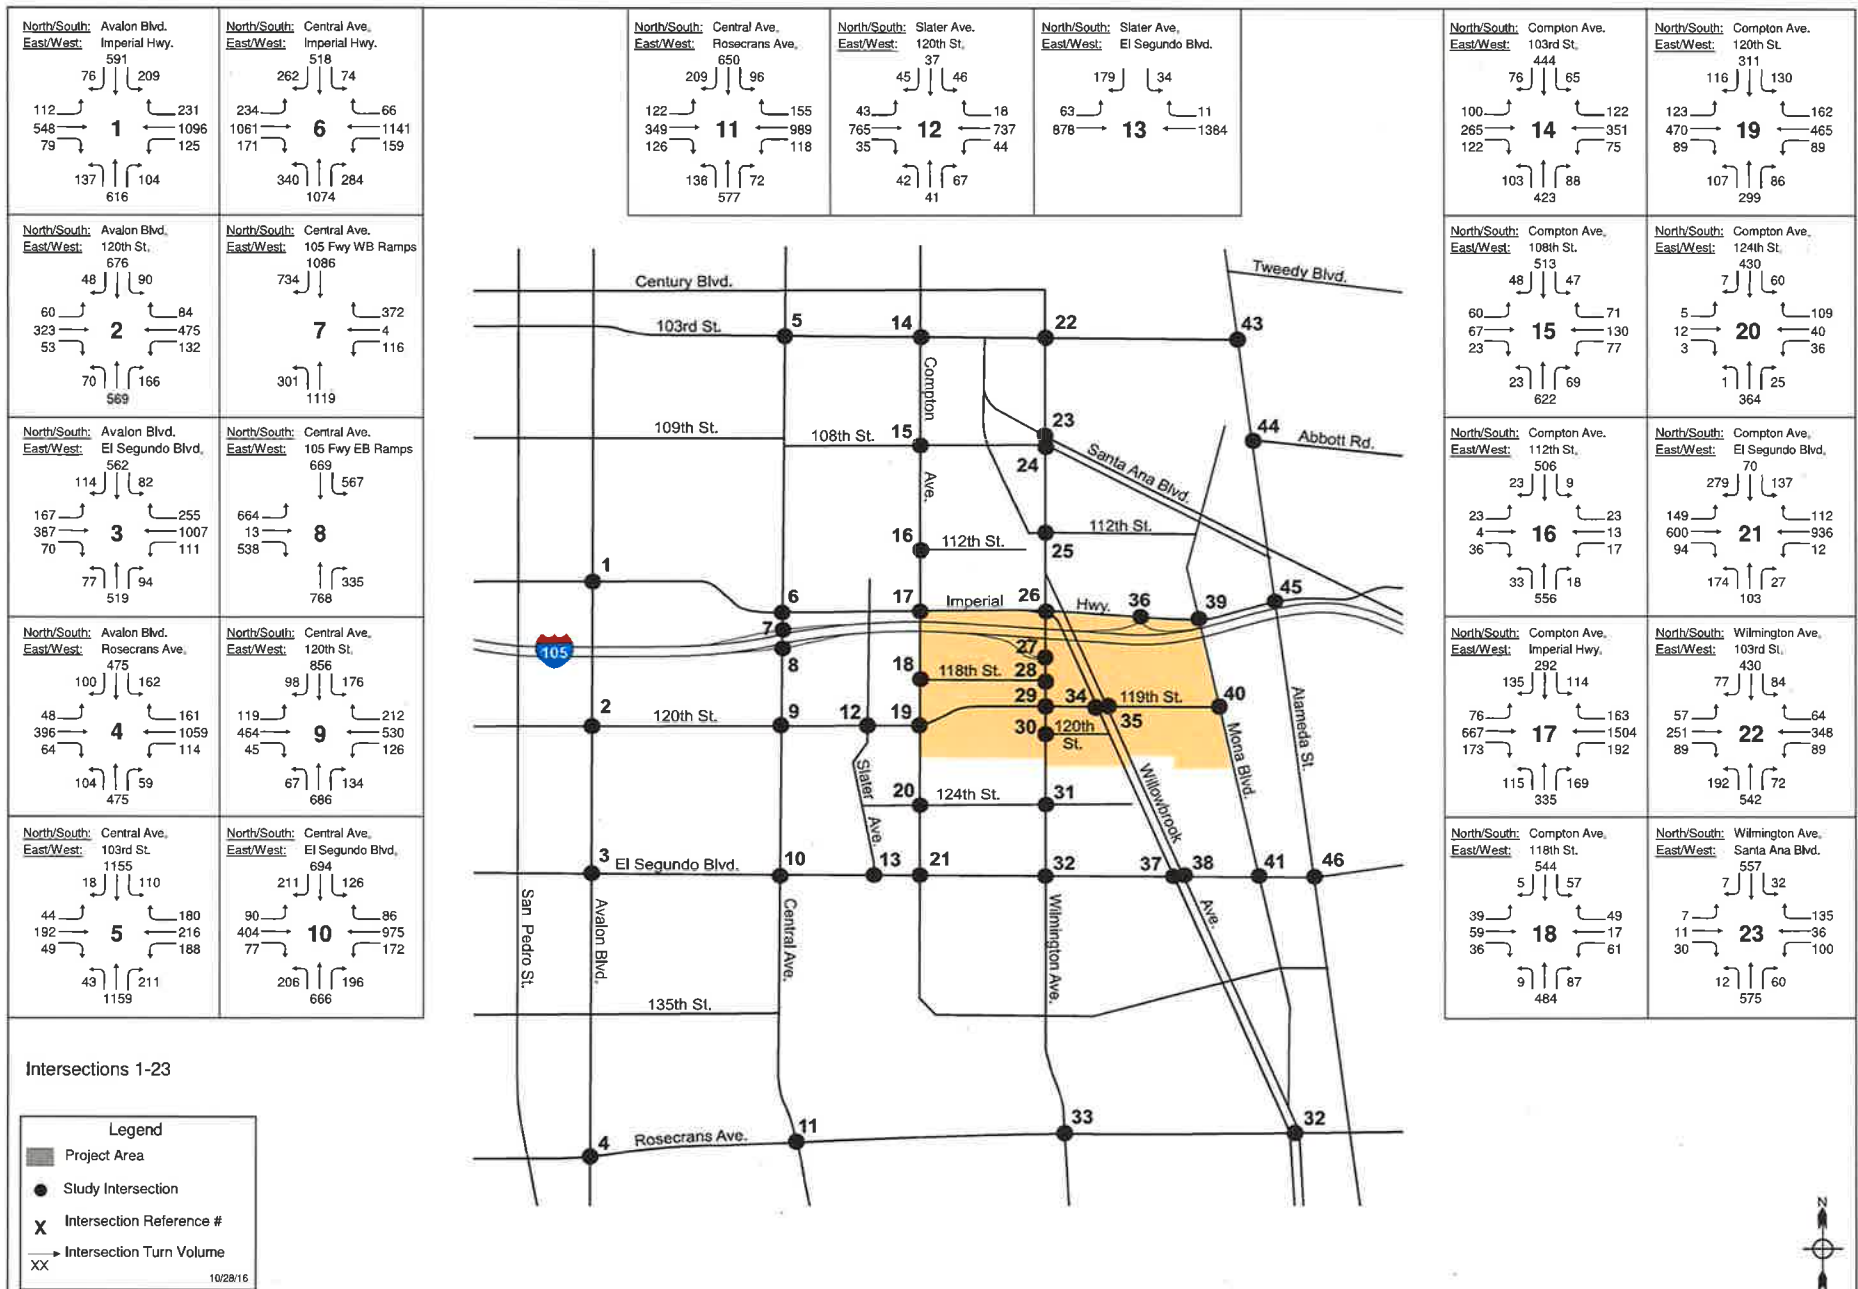

Level of service (LOS) is a qualitative measure used to describe the condition of traffic flow, ranging from excellent conditions at LOS A to overloaded conditions at LOS F, with each level defined by a range of volume/capacity (V/C) ratios. Table 2.1 defines the ranges of V/C ratios and their corresponding levels of service for signalized intersections. Three study intersections are unsignalized. Levels of service for unsignalized intersections are defined instead by the average delay in seconds per vehicle occurring at the intersection. In contrast to signalized intersections, where all approaches to the intersection must stop at a red light and wait for the next green light, at stop-controlled intersections only the minor street traffic controlled by the stop sign is required to stop (at two-way stop intersections). Through traffic movements on the major street do not stop, and turning movements from the major street must stop only if there is conflicting traffic approaching in the opposite direction. At all-way stop intersections, all approaches have to stop. Table 2.2 defines the ranges of delay and their corresponding levels of service for unsignalized intersections. For unsignalized intersections these parameters are reported for the minor movements only and not for the major street through moves or for the intersection as a whole.

SB 743

Senate Bill 743 mandated that CEQA review of transportation impacts of proposed development projects no longer be based on delay and capacity methods such as delay and level of service and instead use another methodology. The Office of Planning and Research (OPR) is currently in the process of updating CEQA guidelines to these ends and has proposed that the impact methodology be based on vehicle miles travelled. At this time, OPR is finalizing its recommendations but no official procedures have been adopted at the statewide level. In anticipation of SB743 being implemented, the County of Los Angeles is in the process of developing procedures and methodologies but similarly has not yet finalized or adopted such procedures. The analysis in this study therefore follows the current County of Los Angeles Traffic Study Guidelines and is based on intersection level of service analysis.

Los Angeles County Methodology

Per the County of Los Angeles Traffic Impact Analysis guidelines, the Intersection Capacity Utilization (ICU) method of intersection analysis was used to obtain volume/capacity (V/C) ratios for each signalized study intersection in the county. A capacity of 1,600 vehicles per hour per lane and 2,880 vehicles per hour for dual left-turn lanes, and a ten percent yellow

Table 2.1 Level of Service Definitions for Signalized Intersections

Level of Service	Description	Volume to Capacity Ratio
A	Excellent operation. All approaches to the intersection appear quite open, turning movements are easily made, and nearly all drivers find freedom of operation.	<0.600
B	Very good operation. Many drivers begin to feel somewhat restricted within platoons of vehicles. This represents stable flow. An approach to an intersection may occasionally be fully utilized and traffic queues start to form.	0.601 – 0.700
C	Good operation. Occasionally drivers may have to wait for more than 60 seconds, and backups may develop behind turning vehicles. Most drivers feel somewhat restricted.	0.701 – 0.800
D	Fair operation. Cars are sometimes required to wait for more than 60 seconds during short peaks. There are no long-standing traffic queues. This level is typically associated with design practice for peak periods.	0.801 – 0.900
E	Poor operation. Some long-standing vehicular queues develop on critical approaches to intersections. Delays may be up to several minutes.	0.901 – 1.000
F	Forced flow. Represents jammed conditions. Backups from locations downstream or on the cross street may restrict or prevent movement of vehicles out of the intersections approach lanes; therefore, volumes carried are not predictable. Potential for stop-and-go type traffic flow.	Over 1.000

Table 2.2 Level Of Service Definitions For Unsignalized Intersections

Level of Service	Average Control Delay (seconds/veh)
A	0 to 10
B	>10 to 15
C	>15 to 25
D	>25 to 35
E	>35 to 50
F	> 50

Source: HCM2010 Highway Capacity Manual 2010, Transportation Research Board, Washington, D.C.

clearance cycle was assumed in conducting the capacity analysis. For unsignalized intersections the Highway Capacity Manual (HCM) 2010 methodology was used.

City of Compton, and City of Lynwood Methodology

The County of Los Angeles methodology of ICU analysis was used to determine volume/capacity (V/C) ratios for each study intersection in the City of Compton and in the City of Lynwood.

City of Los Angeles

For intersections in the City of Los Angeles, intersection analysis was conducted using the “Critical Movement Analysis (Planning Method)” as described in “Transportation Research Circular 212, Transportation Research Board, Washington D.C. 1980”, and as required by LADOT’s Traffic Study Policy and Procedures, to obtain volume/capacity (V/C) ratios for each intersection. The City’s CMA Spreadsheet was used for all intersection LOS calculations. For unsignalized intersections the Highway Capacity Manual (HCM) 2010 methodology was used.

Existing Conditions – Intersection Levels of Service

Table 2.3 summarizes the existing AM and PM peak hour V/C ratios and corresponding levels of service at the analyzed intersections. Intersection worksheets are shown in Appendix D.

AM Peak Hour

All of the studied intersections currently operate at LOS D or better during the AM peak hour, except the following two intersections:

25. Wilmington Ave & 112 th St	LOS E
17. Compton Ave & Imperial Hwy	LOS F

PM Peak Hour

All of the studied intersections currently operate at LOS D or better during the PM peak hour, except the following four intersections:

10. Central Ave & El Segundo Blvd	LOS E
16. Compton Ave & 112 th St	LOS E
25. Wilmington Ave & 112 th St	LOS E
62. Wilmington Ave & Greenleaf Blvd	LOS E

2.4 Existing Transit Service

The Specific Plan area is served by significant levels of transit including two Metro rail lines (Blue and Green Lines), seven regional bus lines, and five local shuttle routes. There are five Metro Local regional bus lines, one Compton Renaissance bus line and 1 GTrans (formerly Gardena Municipal Bus Lines) bus line, and also two LA County The Link shuttle bus lines, one Lynwood Breeze shuttle bus line and one LADOT DASH shuttle bus line, serving the Specific Plan area.

The focus of transit service is the Willowbrook/Rosa Parks Station which serves the Metro Blue and Green Lines and many of the bus lines. Regional rail and regional bus transit lines are shown in Figure 2.5, and shuttle bus routes are shown in Figure 2.6 and all transit lines are listed in Table 2.4 which shows the frequency of service (headways) during the peak periods.

Rail Transit Service

Metro Blue Line

The Willowbrook/Rosa Parks Station is served by the Metro Blue Line, which runs between Downtown Los Angeles and Downtown Long Beach. The Blue Line operates between approximately 4:00 am and 1:00 am, and until about 2:00 am on weekend nights. It operates every 6 to 12 minutes during weekday peak periods and at about 10 to 15 minutes on weekends. There is a transfer to the Metro Green Line at this station.

Metro Green Line

The Willowbrook/Rosa Parks Station is also served by the Metro Green Line, which runs between Redondo Beach and Norwalk. The Green Line operates between approximately 4:00 am and 12:00 am, and until about 2:00 am on weekend nights. It operates every 7 to 10 minutes during weekday peak periods and at about 15 minutes on weekends. There is a transfer to the Metro Blue Line at this station.

The Willowbrook/Rosa Parks Station

The Willowbrook/Rosa Parks station is located on the southeast corner of Wilmington Avenue and Imperial Highway. It is a three-level station where the ground level platform provides access to the Metro Blue Line, the second level is a mezzanine area connecting both platforms, and the third-level provides access to the Metro Green Line.

The station is also directly served by the following bus lines via off-street bus loading bays (the route names refer to communities not street names):

- Metro Local 55/355 - Willowbrook to Downtown Los Angeles.
- Metro Local 120 - Whittier to El Segundo.
- Metro Local 202 - Wilmington to Willowbrook.
- Metro Local 205 - Willowbrook to San Pedro.
- Gardena Municipal Bus Lines Route 5 - Willowbrook to Hawthorne.
- Metro Local 612 – Local Area Circulator Shuttle.
- Los Angeles County Link Route B - Local Willowbrook Shuttle.
- Lynwood Breeze Route A - Shuttle between Willowbrook and Lynwood.

Regional Bus Transit Service Serving the Specific Plan Area

Metro Local 55/355 runs between Willowbrook/Rosa Parks Station and Downtown Los Angeles via Wilmington Avenue in the study area. It operates at about 10-30 minute headways during weekday peak periods and at about 20-60 minute headways on weekends. It operates 24-hours.

Metro Local 120 runs between Whittier and El Segundo via Imperial Highway in the study area. It operates at about 30-40 minute headways during weekday peak periods and at 60 minute headways on weekends.

Metro Local 202 runs between Wilmington and Willowbrook/Rosa Parks Station via Willowbrook Avenue in the study area. It operates at about 50 to 60 minute headways during weekday peak periods and at about 60 minute headways overnight. There is no mid-day service and no service at weekends.

Existing Transit - Regional Lines

Willowbrook TOD Specific Plan

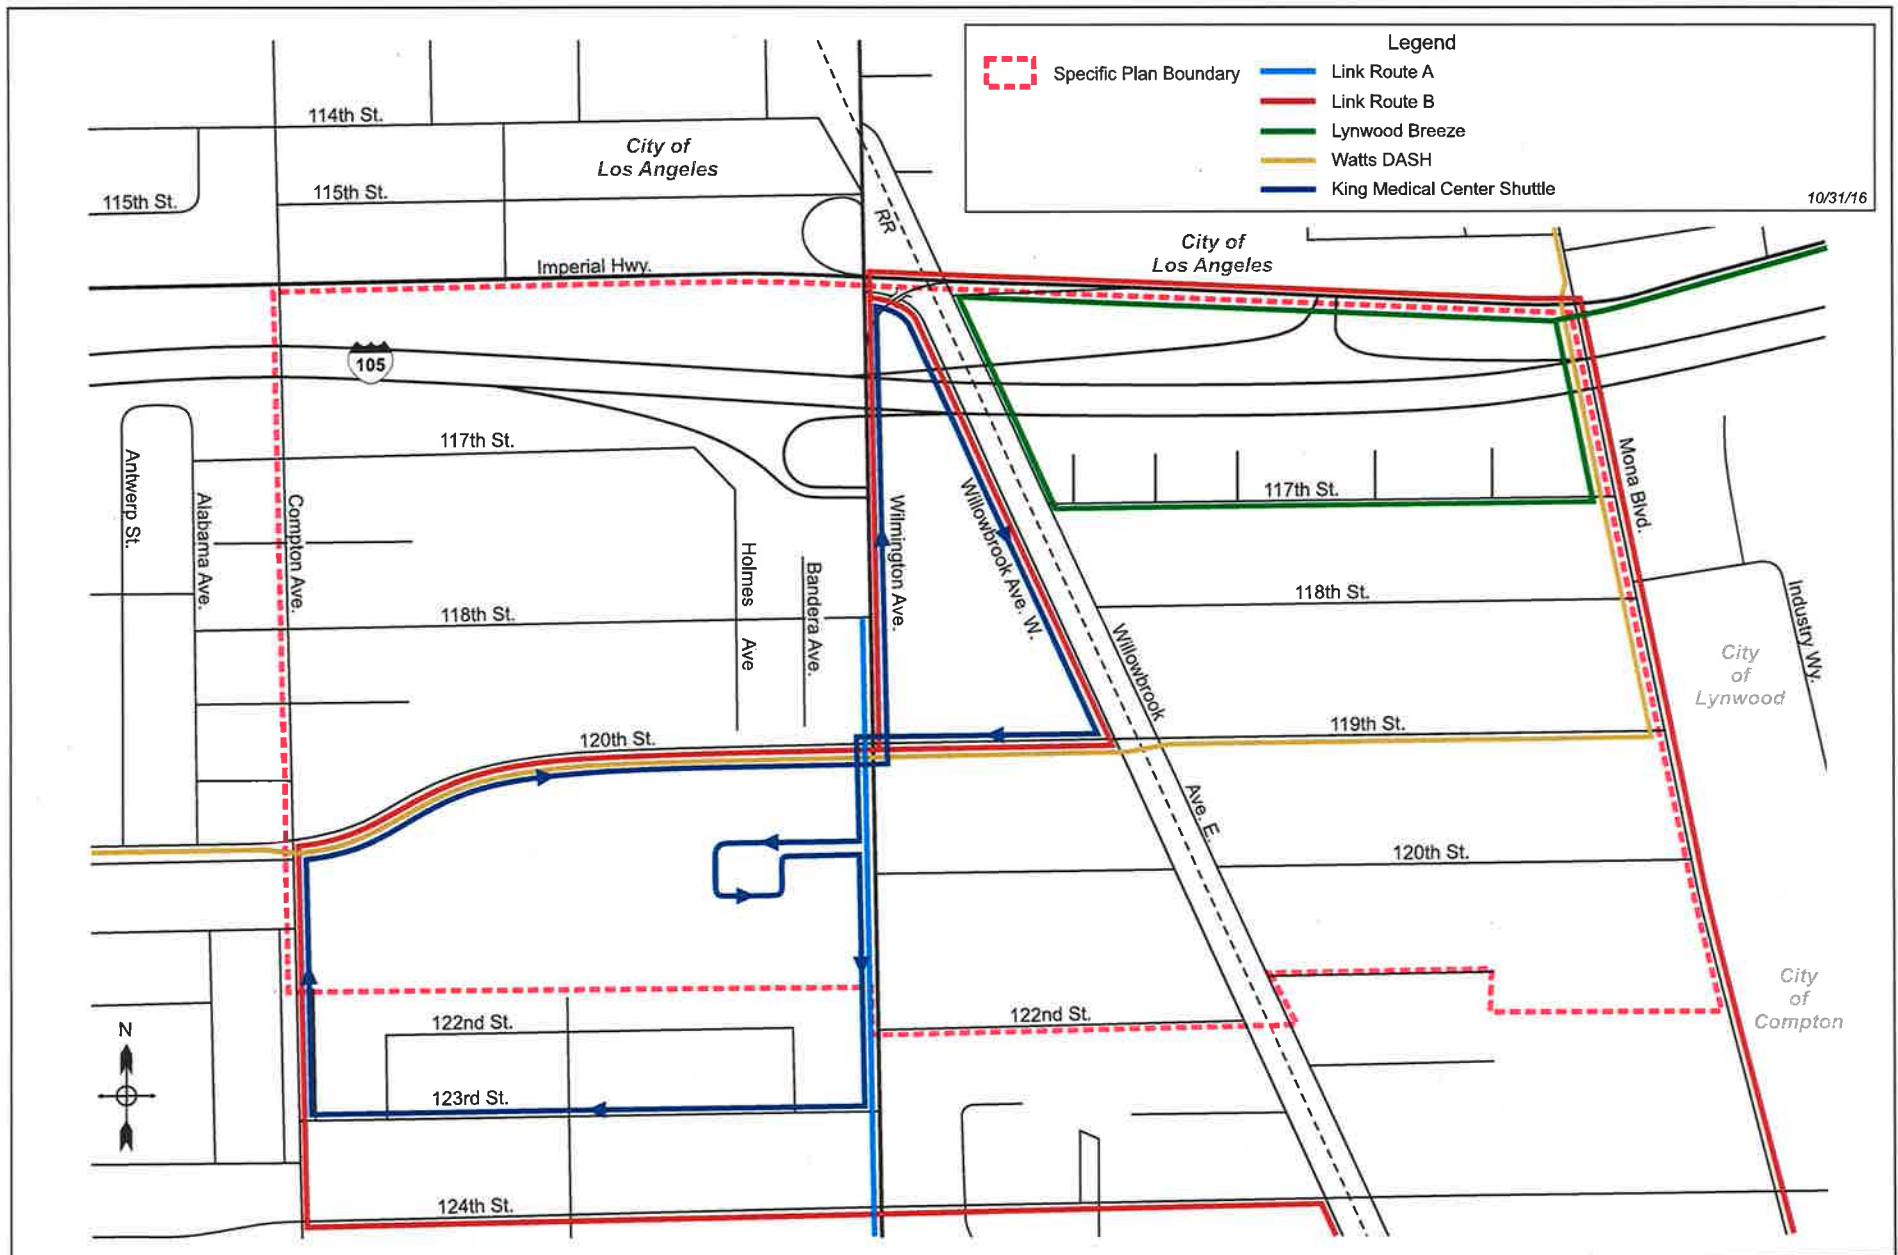

Figure 2.6
Existing Transit - Shuttle Routes

Willowbrook TOD Specific Plan

Metro Local 205 runs between Willowbrook/Rosa Parks Station and San Pedro via Wilmington Avenue in the study area. It operates at about 25 to 50 minute headways during weekday peak periods and at 55-60 minute headways on weekends.

Metro Local 612 runs as a circulator shuttle, connecting the Willowbrook/Rosa Parks Station to Lynwood, South Gate, Cudahy, Bell, Walnut Park, and Watts. It operates at about 60 minute headways every day.

GTrans (formerly Gardena Municipal Bus Lines) Route 5 runs between Willowbrook/Rosa Parks Station and Hawthorne via Wilmington Avenue in the study area. It operates at about 30 minute headways on weekdays.

Compton Renaissance Route 5 operates as a circulator shuttle between Willowbrook (Martin Luther King Jr. Hospital) and Compton. Based on available schedules, it operates at about 60 minute headways between 8am and 3pm on weekdays and between 10am and 3pm on Saturdays.

Shuttle Bus Routes Serving the Specific Plan Area

Los Angeles County

Los Angeles County's The Link Route A is a clockwise loop linking Hahn Plaza, MLK Medical Center via Wilmington Avenue, El Segundo Boulevard, Central Avenue, Rosecrans Avenue, Broadway and Imperial Highway. It provides connections to the MLK Medical Center, Carver Park, the Magic Johnson Park, the Avalon Green Line Station and other points throughout Willowbrook. It operates at about 60 minute headways on weekdays and Saturdays.

Los Angeles County's The Link Route B runs as circulator shuttle throughout Willowbrook, mostly running along Willowbrook Avenue, Mona Boulevard, Wilmington Avenue, 120th Street, 124th Street, 126th Street and 130th Street. It provides connections to the MLK Medical Center, Drew University, Mona Park, Jefferson Elementary school, and the Willowbrook Rosa Parks Metro Station. It operates at about 30 minute headways on weekdays and Saturdays.

Los Angeles County's King Medical Center Shuttle runs between the Medical Center and the Willowbrook/Rosa Parks Station and also served the Hahn Shopping Center. It operates at 20 minute headways on weekdays and Saturdays.

Los Angeles DOT (DASH)

The DASH Watts shuttle (LDWTS) runs as a circulator shuttle connecting Willowbrook to areas throughout Watts, mainly via Mona Boulevard, 103rd Street, Wilmington Avenue, 92nd

Street, McKinley Avenue, Avalon Boulevard, and 120th Street. It operates at 20 minute headways on weekdays and Saturdays.

Lynwood Breeze

The Lynwood Breeze Route D shuttle runs between Willowbrook and Lynwood. It operates at about 30 minute headways on weekdays.

Transit Routes by Key Street

The streets with the most transit service are Wilmington Avenue, Willowbrook Avenue and 119th/120th Street. The lines that run along each street are listed below.

Wilmington Avenue

- Metro Local 202 - Willowbrook to Wilmington.
- Metro Local 205 - Willowbrook to San Pedro.
- Metro Local 612 – Local Circulator Shuttle.
- Los Angeles County Link Route A – Local Circulator Shuttle.
- Los Angeles County King Medical Center Shuttle – Local Circulator Shuttle
- Compton Renaissance Route 5 – Local Shuttle between Willowbrook and Compton.

Willowbrook Avenue

- Metro Local 202 - Wilmington to Willowbrook.
- Metro Blue Line – Downtown Long Beach to Downtown Los Angeles.

Imperial Highway

- Metro Local 120 - Whittier to El Segundo.
- Lynwood Breeze Route D - Shuttle Imperial/Wilmington Station and Lynwood.

120th Street

- Metro Local 55/355 – Willowbrook to Downtown Los Angeles.
- Metro Local 120 - Whittier to El Segundo.
- Gardena Municipal Bus Lines Route 5 - Willowbrook to Hawthorne.
- Los Angeles County Link Route B – Local Circulator Shuttle.
- Los Angeles County King Medical Center Shuttle – Local Circulator Shuttle
- DASH Watts Shuttle – Local Circulator Shuttle.

Routes Connecting the Martin Luther King Jr. Medical Center and the Charles R. Drew University Campus to the Willowbrook Rosa Parks Metro Station

The following transit routes run along 120th Street between Compton Avenue and Wilmington Avenue, and connect the Martin Luther King Jr. Medical Center and the Charles R. Drew University Campus to the Willowbrook Rosa Parks Metro Station.

- Metro Local 55/355
- Metro Local 120
- Gardena Municipal Bus Lines Route 5
- The Link Route B
- King Medical Center Shuttle

Service frequencies for these routes are identified earlier in this section, and generally range from as low as 8-15 minutes in the peak periods for Route 55/355, to 30-60 minutes for the other routes on weekdays, and 30-60 minutes on Saturdays. The Route 5/355 operates 24 hours a day, the Route 120 operates up to about midnight. Only the two Metro Lines operate on Sundays. The Gardena Route 5 does not operate late evenings or weekends. The Link Route B and the King Medical Center Shuttle run 20-30 minute service frequencies, but do not operate evenings after 6pm or on Sundays.

2.5 Bicycle and Pedestrian Facilities

Bicycle Facilities

The Los Angeles County Bicycle Master Plan designates a countywide network of bicycle paths, bicycle-lanes, and bicycle routes in the area of the Project. The following designations are used by type of facility:

- Bicycle Paths (Class I) are paved right-of-way for exclusive use by bicyclists, pedestrians and other non-motorized modes of travel. They are physically separated from vehicular traffic.
- Bicycle Lanes (Class II) have an allocated portion of the roadway exclusive for bicycle travel, defined by pavement striping and signage. Bicycle lanes are one-way facilities on either side of the roadway. They are located adjacent to the curb, where there is no on-street parking and adjacent to the parking lane, where on-street parking exists.
- Bicycle Routes (Class III) provide shared use with motor vehicle traffic within the same traffic lane and are designated by signage.

There are no current bike paths, bike lanes, or bike routes in the Specific Plan area. The existing bicycle facilities in the study area are shown in Figure 2.7. There is a single Bicycle Path which runs along Compton Creek. There are also Bike Lanes on the following streets:

- Central Avenue (Between Century Boulevard and Imperial Highway)
- Central Avenue (Between El Segundo Boulevard and south of Compton Boulevard)

Pedestrian Facilities

Sidewalks exist on all streets in the Specific Plan Area. Pedestrian crosswalks exist at signalized intersections. There is a mid-block crosswalk on 120th Street midway between Compton Avenue & Wilmington Avenue, which is a signalized crosswalk. There are also two unsignalized crosswalks on 118th Street between Compton Avenue & Wilmington Avenue.

Figure 2.7
Existing Bicycle Facilities

3. The Specific Plan - Transportation Characteristics

This section of the report describes the transportation characteristics of the proposed project (the Specific Plan). To set the context, the Specific Plan purpose and objectives are first described, followed by a summary of Specific Plan land uses. The resultant transportation characteristics of the Specific Plan are then discussed.

3.1 Specific Plan Purpose and Objectives

As identified in Chapter 1, the purpose of the Willowbrook TOD Specific Plan is to revitalize the community within the project area and to improve access to all modes of transportation, including transit, walking, and bicycling. Building off the goals and policies outlined in the General Plan, the Willowbrook TOD Specific Plan will encourage transit oriented development, promote active transportation and reduce vehicle miles travelled. The Specific Plan is anticipated to facilitate development, especially residential and employment-generating uses proximate to the Willowbrook/Rosa Parks Station.

The primary objectives of the Specific Plan are to identify land use options that include mixed uses, increased housing opportunities, and neighborhood-serving retail uses. In addition the Specific Plan is intended to foster a healthy community by improving pedestrian linkages between the Willowbrook/Rosa Parks Station, the Kenneth Hahn Plaza, the Martin Luther King Jr. Medical Center, the Charles R. Drew University of Medicine and Science, future mixed use areas, and existing residential neighborhoods.

3.2 Specific Plan Land Uses

For the purposes of the EIR analysis, land use forecasts were developed for the Specific Plan. These comprised land use types and quantities that could be added in the Specific Plan area and land use types and quantities that could be replaced (removed). A total of seven sub-areas were identified and divided into thirteen geographic zones. Land use projections made for each zone, and also aggregated to sub-areas. The sub-areas are shown in Figure 3.1. The thirteen zones are shown in Figure A-1 in Appendix A.

Land Use Changes in the Specific Plan

The Specific Plan includes three key land use areas: the Martin Luther King Jr. Medical Center, the Charles R. Drew University of Medicine and Science, and the remaining areas of the Specific Plan. Land use changes were forecast for all three components. Table 3.1 summarizes the land use quantities by key type of use.

Martin Luther King Jr. Medical Center

An EIR for modification and expansion of the Medical Center was approved in 2010¹. The EIR identified two tiers of construction. Tier 1 is now complete, and is included in the existing traffic counts (comprising the baseline existing conditions for the traffic analysis). The EIR Traffic Study identified Tier 2 development assumptions totaling 1,814,695 sq. ft. with 100 DU's. For this Specific Plan, Tier 2 growth was updated to an amount considered more realistic for the current environment at 1,248,522 sq. ft. and 100 DU's (which represents 75% of the Tier 2 growth assumed in the EIR). This adjustment was made by County staff in coordination with the Second Supervisorial District.

Charles R. Drew University of Medicine and Science (CDU) Master Plan.

The CDU Master Plan is also included in the Specific Plan land use forecasts. CDU provided information on their Master Plan for growth at the university, representing an increase of 825 students from 625 existing to 1,450 total, and an additional 70 dwelling units from 49 existing to 119 total.

Other Specific Plan Land Uses

Land use forecasts were also prepared for the remaining areas of the Specific Plan. These represent an increase of 1,945 residential dwelling units (DU'S), of which the vast majority are multi-family; and approximately 865,770 sq. ft. of commercial uses (comprised primarily of approximately 743,590 sq. ft. of office/R&D/business park/medical uses, and 122,185 sq. ft. of retail commercial uses)².

3.2 Specific Plan Trip Generation

Vehicular trip generation was estimated for the existing land uses and for the projected future land uses, to determine a net increase in trip generation. As described above, for purposes of traffic analysis, the Specific Plan area was divided into 13 geographic zones, and potential changes in land uses were identified for each zone.

Trip generation from the project was estimated using trip rates from *Trip Generation Manual – 9th Edition* (Institute of Transportation Engineers, 2012). However, ITE trip rates are generally for suburban stand-alone land uses with negligible transit use. They were thus adjusted to be more representative of the existing and proposed land uses in the Specific Plan area and a transit oriented district – where the proximity to transit allows some trips to be

¹ Traffic Study for the Martin Luther King Jr. Medical Center Campus Project, County of Los Angeles, July 2010.

² The breakdown of mixed use land use categories to specific land use types was made in consultation with County staff.

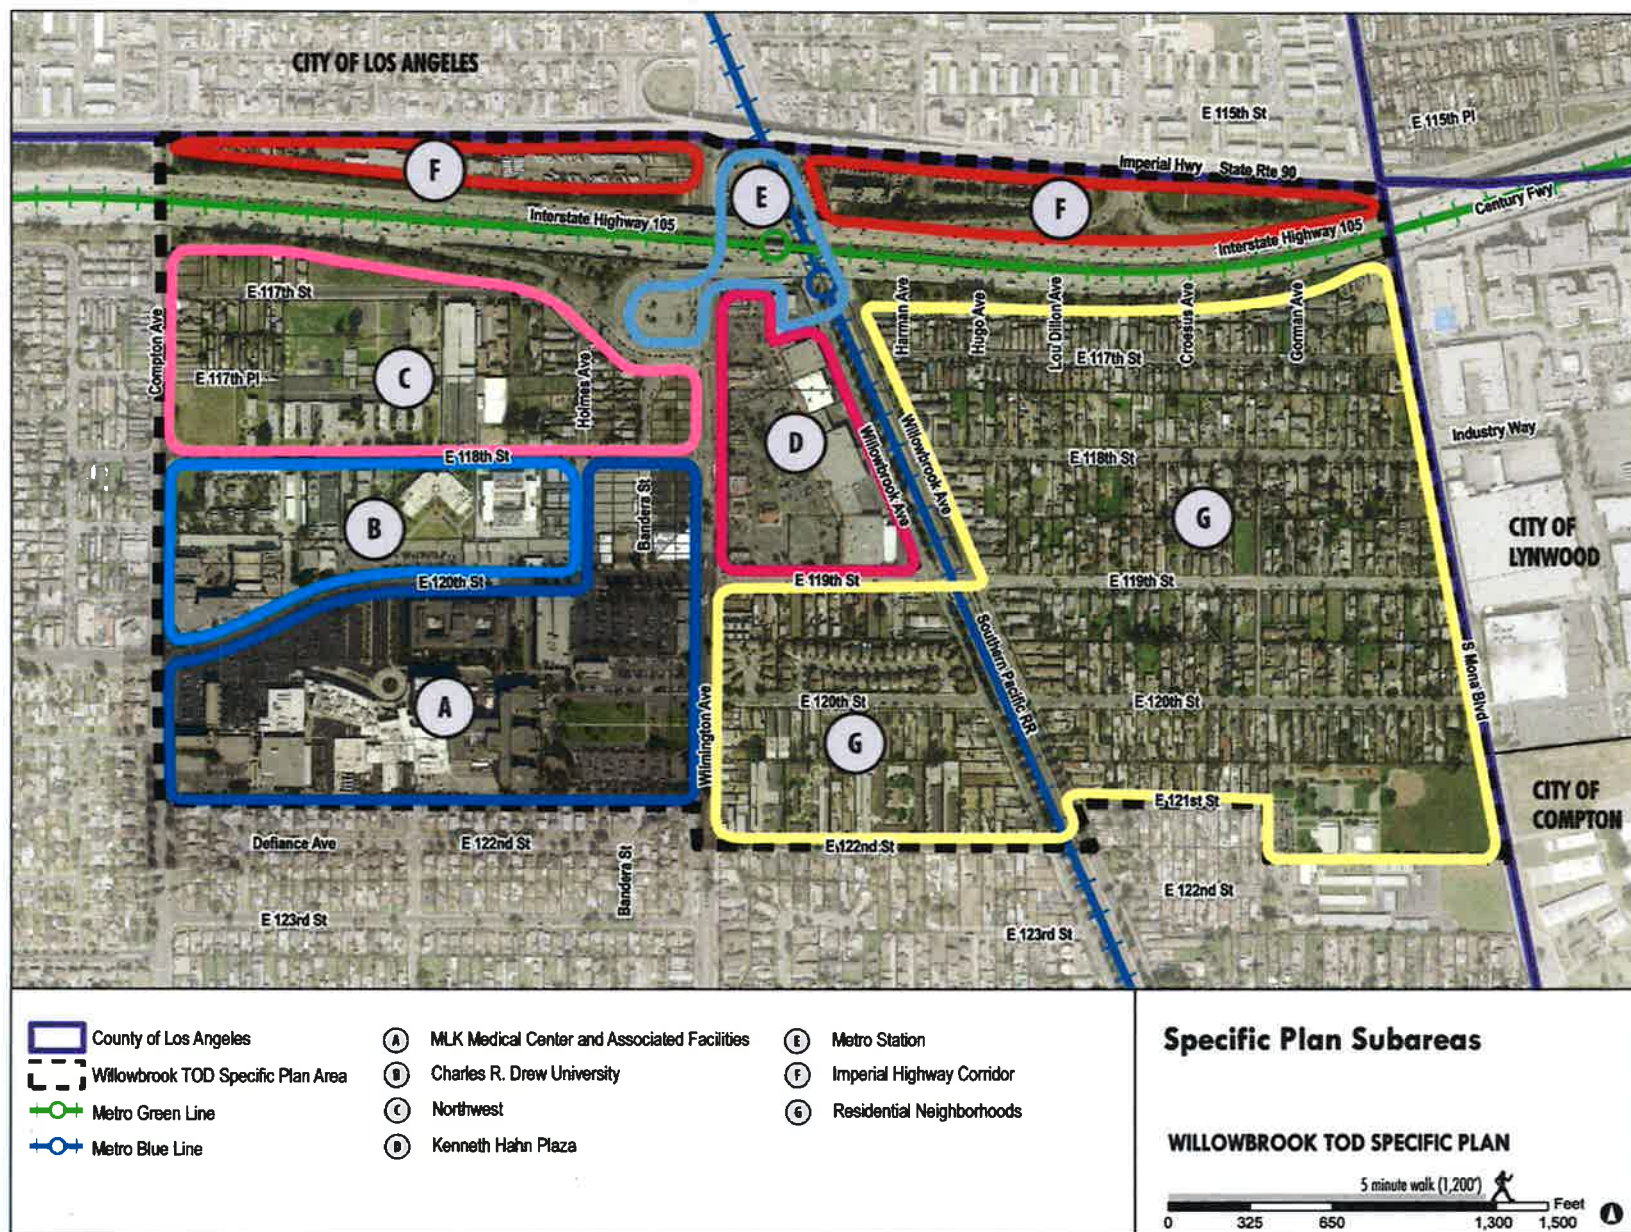

Figure 3.1
Specific Plan Sub-Areas

Table 3.1 Specific Plan Land Use Summary - By Type of Use

Category	Land Use	Existing	Future	Net Change
Martin Luther King Jr. Medical Campus	Single Family Housing (DU's)	0	100	100
	MLK Medical Campus (sf)	890,891	2,139,413	1,248,522
Charles R. Drew University	Multi-Family Housing (DU's)	49	119	70
	University Students	625	1,450	825
		477,842	772,990	295,148
Other Specific Plan Land Uses	Single Family Housing (DU's)	347	609	262
	Multi-Family Housing (DU's)	572	1,987	1,415
	Senior Housing (DU's)	0	105	105
	General Office (sf)	8,408	393,745	385,337
	Business Park (sf)	0	224,317	224,317
	Medical Office (sf)	0	35,427	35,427
	R & D Office (sf)	0	98,506	98,506
	Restaurant-High Turnover (sf)	0	7,086	7,086
	Restaurant-Fast Food (sf)	0	2,696	2,696
	Retail (sf)	0	81,572	81,572
	Shopping Center (sf)	189,286	220,116	30,830
	Other/Miscellaneous/Parking (sf)	344,096	600,691	256,595
Total	Total Residential (DU's)	968	2,920	1,952
	Non-Residential (sf)	1,910,523	4,576,559	2,666,036

made by transit, where the proximity of land uses allows for some trips to be made by walking rather than driving, and where some of the trips are between destinations within the Specific Plan area and thus do not leave the area.

The following methodology was used to calculate trip generation for each of the three separate land use areas in the Specific Plan.

Martin Luther King Jr. (MLK) Medical Center

Trip generation information for the Martin Luther King Jr. Medical Center was taken directly from the approved EIR for that project¹. As the Tier I development has been completed, it is already included in the existing conditions baseline and is reflected in the existing traffic counts conducted for the study. The Approved EIR Traffic Study identified Tier 2 development assumptions totaling 1,814,695 sq. ft. and associated trip generation totals. As discussed above, this Specific Plan assumes Tier 2 growth at 75% of that level. Trip generation was therefore calculated as 75% of the Tier 2 totals in the MLK EIR and input to the impact analyses described in later chapters.

CDU Master Plan

The Specific Plan includes the Master Plan projections for the CDU Master Plan provided by CDU, and totaling an increase of 825 students from 625 existing to 1,450 total, and an additional 70 dwelling units from 49 existing to 119 total. Trip generation estimates were developed for the CDU Master Plan based on *ITE Trip Generation 9th Edition*, with adjustment factors appropriate for the CDU campus and a TOD area (see further discussion below).

Remainder of the Specific Plan area (the “Non-MLK/CDU area”)

The Specific Plan Project includes land use projections for the remainder of the Specific Plan area (the “Non-MLK/CDU area”), as described above.

Trip generation was generally calculated according to trip rates from *ITE Trip Generation 9th Edition*. The base trip rates are shown in Table A-1 in Appendix A. However, the typical methodology of estimating trip generation using trip rates from Institute of Transportation Engineers (ITE) data² does not adequately reflect the mixed use characteristics and the TOD environment of the proposed Project, because those trip rates were derived from data typically collected from stand-alone (single use) suburban sites, rather than sites with the characteristics of the Specific Plan area.

¹ Ibid

² Institute of Transportation Engineers, *9th Edition Trip Generation Manual*, Washington D.C., 2012

The Specific Plan is in a heavily urbanized area with significant levels of transit service. As discussed at the beginning of this chapter, the purpose of the Specific Plan with respect to transportation is to “... *improve access to all modes of transportation, including transit, walking and bicycling.... to encourage transit oriented development, and promote active transportation.... to facilitate development, especially residential and employment-generating uses proximate to the Willowbrook/Rosa Parks Station... identify land use options that include mixed uses, increased housing opportunities, and neighborhood-serving retail uses...and improve pedestrian linkages between the Willowbrook/Rosa Parks Station, Kenneth Hahn Plaza, Martin Luther King Jr. Medical Center, Charles R. Drew University of Medicine and Science, future mixed use areas, and existing residential neighborhoods*”.

The trip rates therefore required the following types of adjustments to reflect the characteristics of the Specific Plan area. These adjustments were developed in consultation with, and approved by, County staff.

Trips Internal to the Project

With a large mixed use Proposed Project area, there is a high potential for internal synergy between land uses, such that some trips will both start and end within the Project area itself – and thus will not leave the Specific Plan area. These will include people who live in the Project going to the retail, restaurant, and/or other commercial uses, or to the office uses if they both live and work in the Project. It will also include people who drive to the Project, but visit multiple destinations within the Project (for example office and retail, or retail and restaurant). Because these people will walk between those multiple destinations in the Project they will make only one vehicle trip rather than driving to each destination.

The adjustment factors to account for trips remaining internal to the Project area were based on a variety of sources. Studies conducted for the Florida Department of Transportation¹ documented internal trip capture rates at mixed use developments of 7% to 24% in the PM peak period. A research report from the Center for Urban Transportation² reported observed internal trip capture rates at mixed use developments of 9% to 14% in the AM peak period and 13% to 16% in the PM peak period. NCHRP Report 684³ observed trip capture rates of 11% to 31% in the AM peak and 33% to 44% in the PM peak .

The trip adjustment factors to be applied in this study are shown in Table A-2 in Appendix A. Internal trip capture rates of 5% to 15% were applied to commercial uses in the Specific Plan

¹ Tindale Oliver & Associates, Inc., *Trip Characteristics Studies of Multi Use Developments*. Report Prepared for Florida Department of Transportation, 1993.

Walter H. Keller Inc., *Districtwide Trip Generation Study, Task 5, Final Report*. Prepared for Florida Department of Transportation, 1995

² Center for Urban Transportation Research Final Report BDK84-977-10, *Trip Internalization in Mixed Use Developments*, April 2014.

³ NCHRP Report 684, *Enhancing Internal Trip Capture Estimation for Mixed Use Developments*, Transportation Research Board, 2011.

area, adjustment rates of 5% were applied to institutional uses, and adjustments of 10% were applied to residential uses. These are modest and conservatively low adjustments for internal capture when compared to the information documented above so are considered very reasonable for the Specific Plan area.

For the MLK Medical Center, this study used the internal trip capture rate of 15% utilized in the EIR for that project. For the CDU Master Plan, this study used an internal capture rate of 50% for the on-campus student housing in the peak hours due to the immediate proximity of the housing to campus facilities.

Trips Using Transit

The Project area is well served by transit, focused on the Willowbrook/Rosa Parks Station which serves both the Metro Blue Line and Metro Green Line. The Specific Plan area is served by three regional bus operators, and numerous shuttle bus routes. These operate a total of six regional bus lines and six shuttle lines. These high levels of transit service will result in a significant number of trips being made by transit.

There is increasing evidence that vehicle trip rates for urban mixed use projects and for transit-oriented developments (TOD's) are much lower than the more suburban based ITE trip rates. TCRP Report 128¹ documents that peak hour vehicle trip rates for residential TOD's are 50% lower than standard ITE rates. A Caltrans study² documented that peak hour trip rates in urban infill developments, including mixed use projects, were 28% lower than standard ITE rates for mid-rise residential uses, 50% lower for office uses, and 25 to 35% lower for quality restaurant uses, due to internal synergy, walkable proximity to other land uses, and proximity to transit.

The transit use adjustment factors that were applied in this study are shown in Table A-3 in Appendix A. These range from 15% to 25% for residential uses and 10% to 25% for the commercial uses, depending on proximity to the rail station and the type of mixed use development. These are conservatively on the low side when compared to the information documented above so are considered very reasonable for the Specific Plan area.

For the MLK Medical Center, this study used the transit use adjustment rate of 15% utilized in the EIR for that project. For the CDU Master Plan, this study used a transit use adjustment rate of 15% in the peak hours consistent with the rate for the MLK Medical Center and the adjustment rates for the TOD uses.

¹ TCRP Report 128, *Effects of TOD on Housing, Parking and Travel*, Transportation Research Board, 2008

² *Trip Generation Rates for Urban Infill Land Uses in California*, Caltrans, 2009

Trip Generation Totals

As shown in Table 3.2, the Project would add 3,139 new AM peak hour trips in the Specific Plan area and 3,832 new PM peak hour trips. (Detailed trip generation calculations are shown in Table A-4 for the AM peak hour and in Table A-5 for the PM peak hour in Appendix A).

As also shown in Table 3.2, approximately 43% of the new trips would be generated by the MLK Medical Center, 3% by CDU, and 54% by the other land uses in the Specific Plan area. Of all new trips, approximately 23% would be from residential uses and 77% from non-residential uses.

Table 3.2 Trip Generation Totals – By Key Land Use Area

<i>Component</i>	<i>AM Peak Hour</i>	<i>AM Peak Hour %</i>	<i>PM Peak Hour</i>	<i>PM Peak Hour %</i>
MLK Medical Center	1,289	41%	1,684	44%
CDU	125	4%	126	3%
Specific Plan Remainder	1,725	55%	2,022	53%
Total	3,139		3,832	
Residential	718	23%	887	23%
Non-Residential	2,421	77%	2,945	77%

Table 3.3 shows the breakdown of trips by subarea of the Specific Plan. This shows that the vast majority of additional trips in the remainder of the Specific Plan area will be generated by the Northwest subarea, with relatively few trips being generated in other subareas.

As identified earlier in Chapter 2, the trip generation estimates are used to project traffic volumes and calculate intersection level of service. Vehicle miles travelled (VMT) are estimated and used in the Air Quality and Green House Gas analyses in other sections of the EIR. In general, the VMT for the Specific Plan is lower than would otherwise be the norm because of the TOD nature of the Specific Plan. As discussed above, proximity to the Metro station and transit and Specific Plan features to enhance bike and walk facilities will encourage and lead to higher use of transit, as well as walk/bike. Also, the land use densities and close proximities will increase internal synergies within the Specific Plan area with respect to trip making and, with some trips remaining inside the Specific Plan area, with less trips leaving the Specific Plan area. As also identified above, the traffic analysis estimated

Table 3.3 Trip Generation by Sub-Area

<i>Sub-Area</i>	<i>Zones</i>	<i>AM Peak Hour</i>		<i>PM Peak Hour</i>	
		<i>Trips</i>	<i>% of Total</i>	<i>Trips</i>	<i>% of Total</i>
A. MLK Medical Center	1, 2A, 2B	1,289	41%	1,684	44%
B. CDU	2C	125	4%	126	3%
C. Northwest	3A – 3G	1,307	42%	1,534	40%
D. Kenneth Hahn Plaza	4B	109	4%	188	5%
E. Metro Station	4A	24	1%	31	1%
F. Imperial Hwy Corridor	12 - 13	153	5%	209	6%
G. Residential Neighborhoods	5 - 11	46	2%	60	2%
<i>Total</i>		<i>3,139</i>	<i>100%</i>	<i>3,832</i>	<i>100%</i>

internal capture within the Specific Plan area of 5% to 15% for commercial uses, 5% for institutional uses, and 10% for residential uses. The traffic analysis also estimated transit use at 15% to 25% for residential uses, and 10% to 25% for commercial uses. Without the TOD features of the Specific Plan, the estimated VMT would be higher.

3.3 Specific Plan Trip Distribution

The trip distribution for the analysis is shown in Figure 3.2 for residential trips and Figure 3.3 for non-residential trips. These were derived from a select zone type analysis of the trip distribution information in the Los Angeles County Congestion Management Plan and are therefore consistent with County of Los Angeles guidelines and regional travel forecasting methodologies. This identified the regional distribution of trip origins and destinations.

However, the regional proportion by freeway (derived from RSA 21 as a whole) was judged to be too high for the Specific Plan land uses (which are located in the southwest edge of the RSA) and which are focused on revitalization for the local community rather than creating a regional destination (see Specific Plan goals discussed earlier). Consideration was also taken of the type of land uses in the project, the likely origins and destinations of project residents and visitors, and the characteristics of the street system in the area of the project. Based on these considerations, the freeway/local split was therefore adjusted to 40% freeway and 60% local street to reflect the more locally oriented characteristics of the Specific Plan area and land uses and more locally oriented trips. This is consistent with the MLK Medical Center

Figure 3.2
Trip Distribution - Residential

Figure 3.3
Trip Distribution - Non-Residential

EIR Traffic Study which forecast approximately 35% to the freeways. The local distribution of trips to local streets was also based on the CMP distribution data as well consideration of the population and employment in adjacent and nearby communities, roadway types serving the Specific Plan area and professional judgment. These distributions were developed in consultation with, and approved by, County staff.

3.4 Transportation Improvements in the Specific Plan

The Mobility Element of the Specific Plan is described in detail in Chapter 4 of the Willowbrook TOD Specific Plan, so only a summary is provided here. The overall mobility goal in the Specific Plan area is to enhance connectivity and the ease of movements for non-auto transportation modes, particularly pedestrians and bicyclists. These enhancements will support healthy transportation options.

Roadway System

The roadway system, shown in Figure 3.4, provides the backbone circulation system for all modes of transportation. While historically street systems have been oriented to serving the automobile, the roadway system should provide a network of complete streets that provides for the safe and efficient circulation of transit, bicycles, and pedestrian as well as automobiles.

The existing street system will be largely maintained in its current configuration, with some changes/improvements designed to improve access and circulation, and walkability. The Major Roadways (as identified in the County General Plan) will continue to be Wilmington Avenue and Imperial Highway. Secondary Roadways (also identified in the County General Plan) will continue to be Compton Avenue, Willowbrook Avenue and Mona Boulevard in the north-south direction, and 120th Street/119th Street in the east-west direction. The number of traffic lanes and roadway lane configurations will generally remain the same, except where otherwise noted in the Specific Plan (for example where road diets will be implemented).

The following street enhancements, shown in Figure 3-5, are intended to improve circulation for bicycles and pedestrians in the Specific Plan area. These are also described in more detail in Sections 4.4 and 4.5 of the Specific Plan. They have been included in the impact analysis in Chapter 4 and Chapter 6 of this report.

Road Diet and Bicycle Lanes on 120th Street

The section of 120th Street between Compton Avenue & Wilmington Avenue, will be reduced from four lanes to three lanes, with a bicycle lane in each direction. This is part of the Willowbrook Area Access Improvement Project.

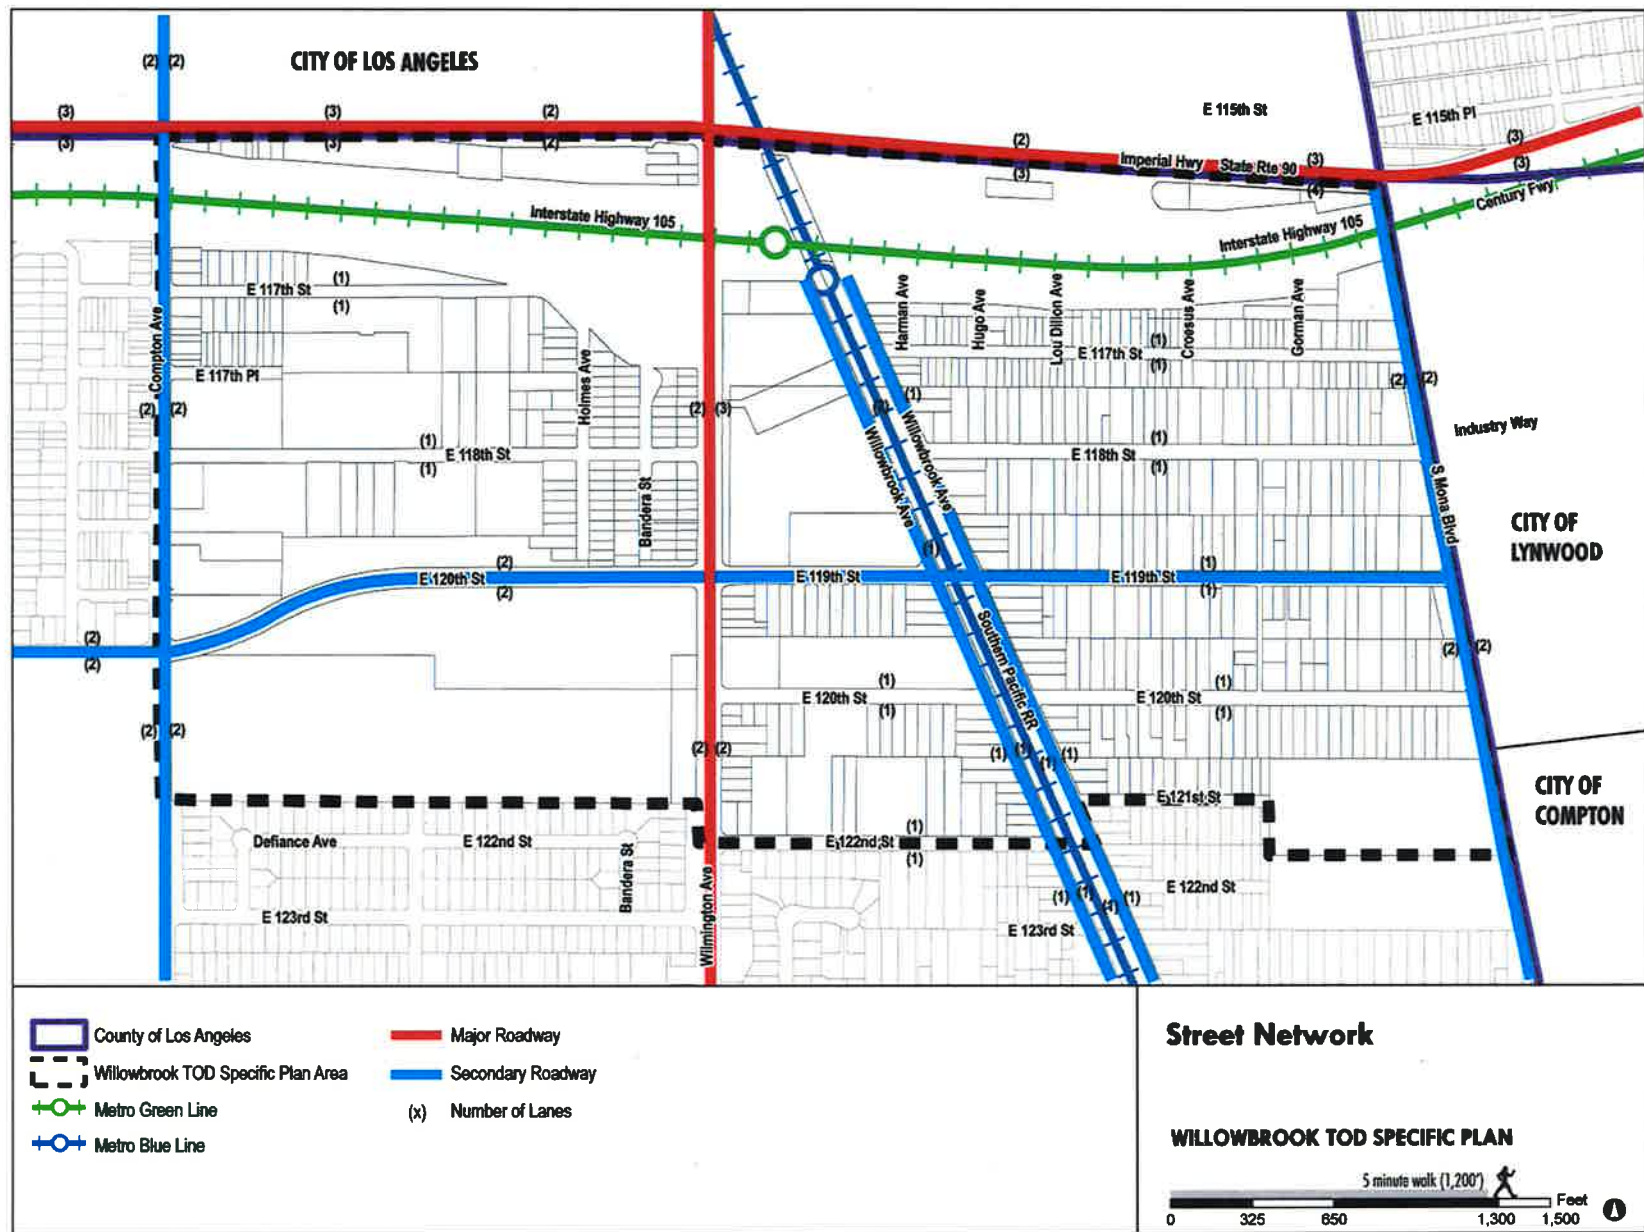

Figure 3.4
Street Network

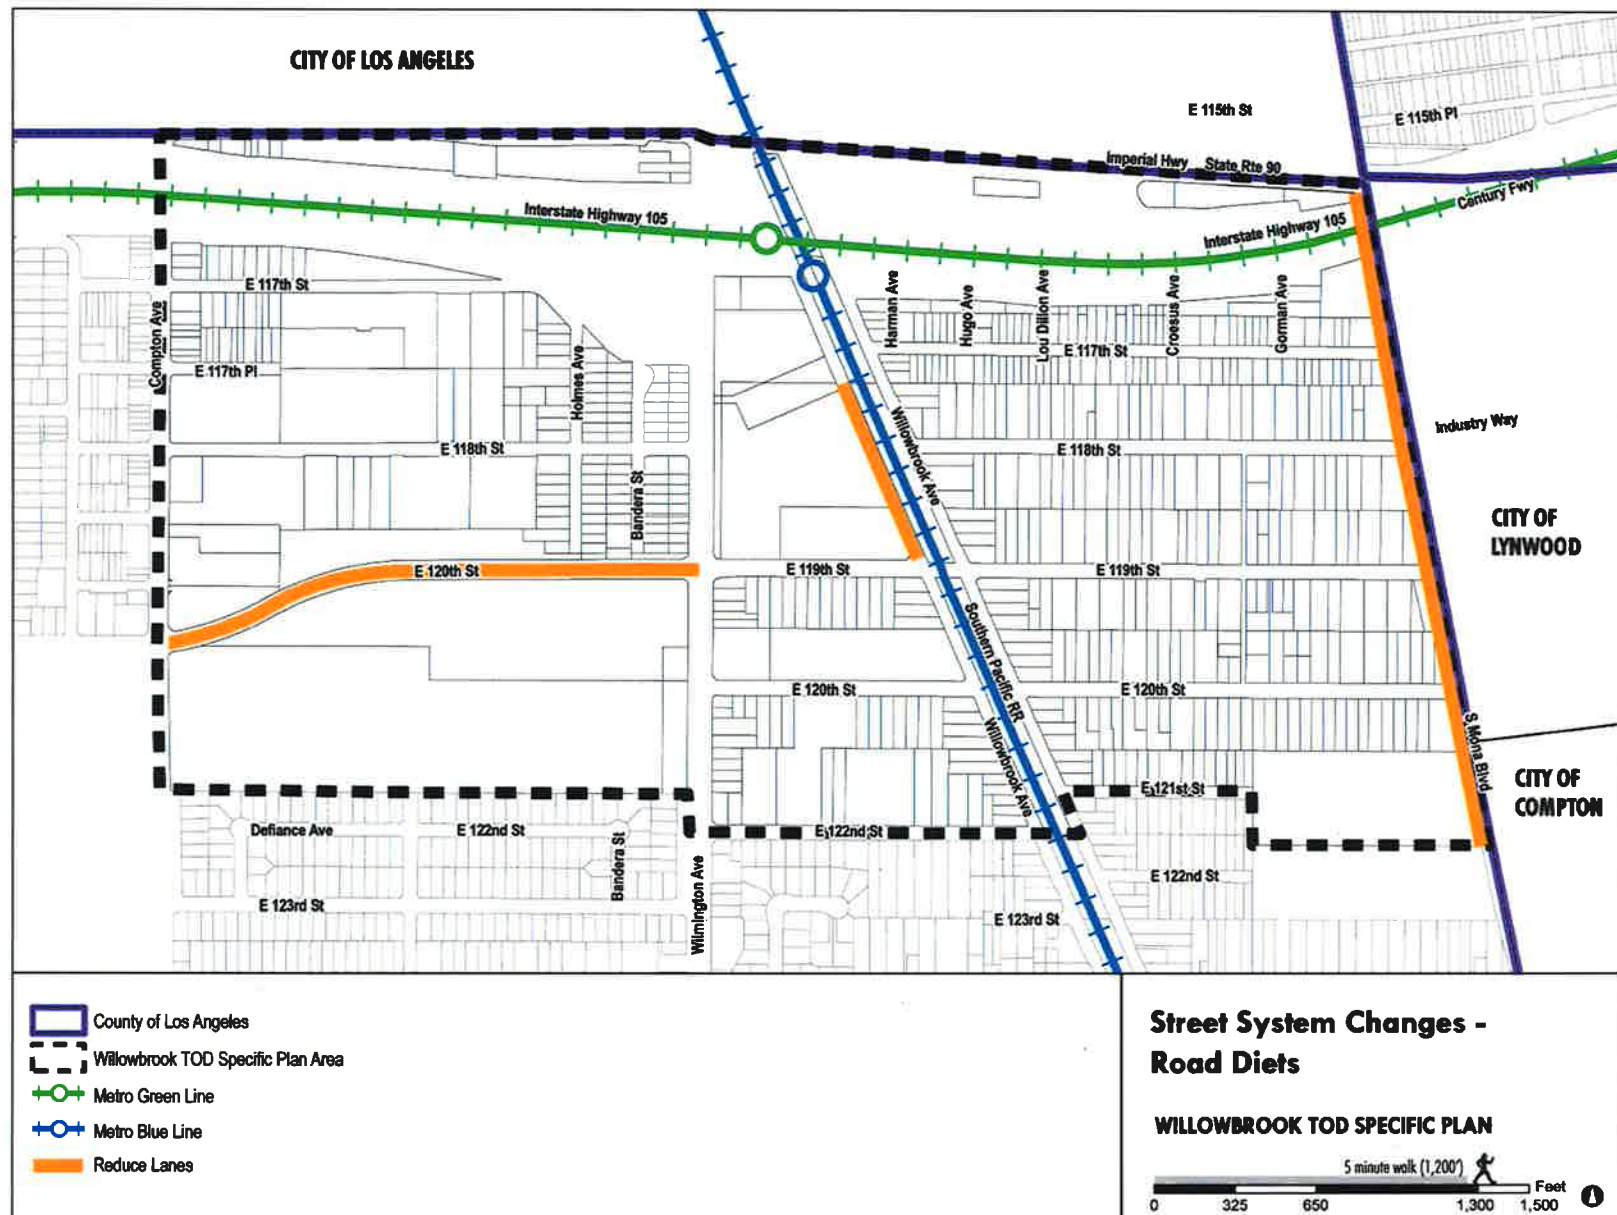

Figure 3.5
Street System Changes – Road Diet

Road Diet and Bicycle/Pedestrian Trail on Mona Boulevard

Mona Boulevard from the I-105 Freeway to 124th Street will be converted from a four lane street to a three lane street, and a pedestrian/bicycle trail installed on the west side of the street.

Willowbrook Avenue West

The section of Willowbrook Avenue West between the Willowbrook/Rosa Parks Metro Station and 119th Street, will be reduced from two lanes southbound to one lane southbound, and a bike path installed on the west side of the street.

Pedestrian Circulation

The key pedestrian routes in the Specific Plan Area are shown in Figure 3-6. The backbone of the pedestrian system is formed by Wilmington Avenue in the north-east direction and 120th/119th Street in the east-west direction. These corridors connect activity centers of the Willowbrook/Rosa Parks Station, the Kenneth Hahn Shopping Plaza, and the Martin Luther King Jr. Medical Center Campus. They also cross at the intersection of Wilmington Avenue and 120/119th Street – which is the functional pedestrian hub of the Specific Plan Area. Additional key elements of the pedestrian system are 118th Street between Compton Avenue and Wilmington Avenue - which connects the Charles Drew University campus to the rest of the Specific Plan Area, Willowbrook Avenue West between 119th Street & the Willowbrook/Rosa Parks Metro Station – providing access from residential areas to the station, and 119th Street between Willowbrook Avenue & Mona Boulevard – which provides access from the residential areas to the activity centers of the Specific Plan Area. Mona Boulevard also provides north-south pedestrian access on the east side of the Specific Plan Area including access to Mona Park, the Martin Luther King Elementary School and the Dr. Ralph Bunche Middle School.

Pedestrian Oriented Intersection Improvements

In order to enhance the pedestrian environment and to calm traffic, a number of pedestrian oriented intersection improvements will be implemented throughout the Specific Plan Area, where feasible. These will be based on a menu of improvements that includes the following:

- Adding high visibility crosswalks at intersections.
- Adding passive pedestrian detection and pedestrian push buttons for crosswalks at traffic signals at intersections.
- Adding pedestrian countdown pedestrian signals and audio signals to crosswalks at intersections.
- Adding advance stop bars to intersection approaches.
- Adding sidewalk bulbouts and extensions, or reducing curb returns, on intersection corners where feasible.

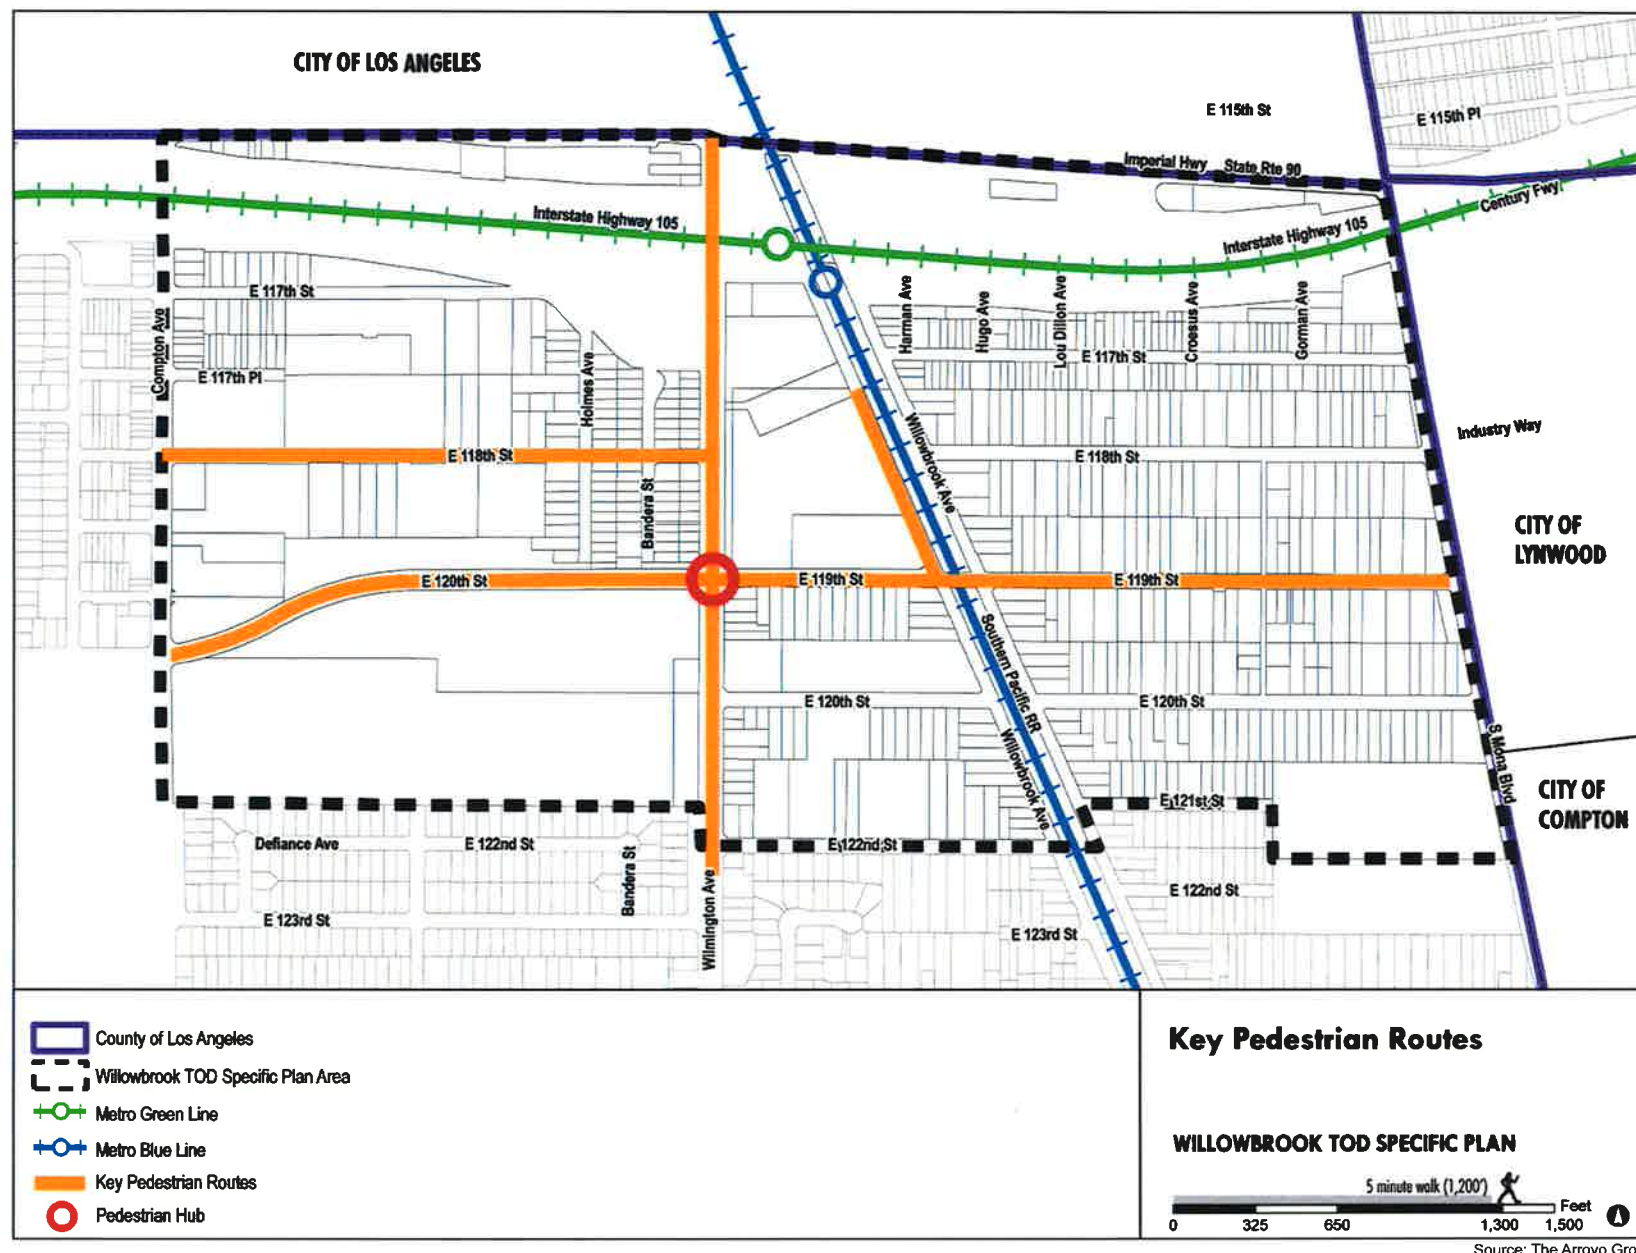

Figure 3.6
Key Pedestrian Routes

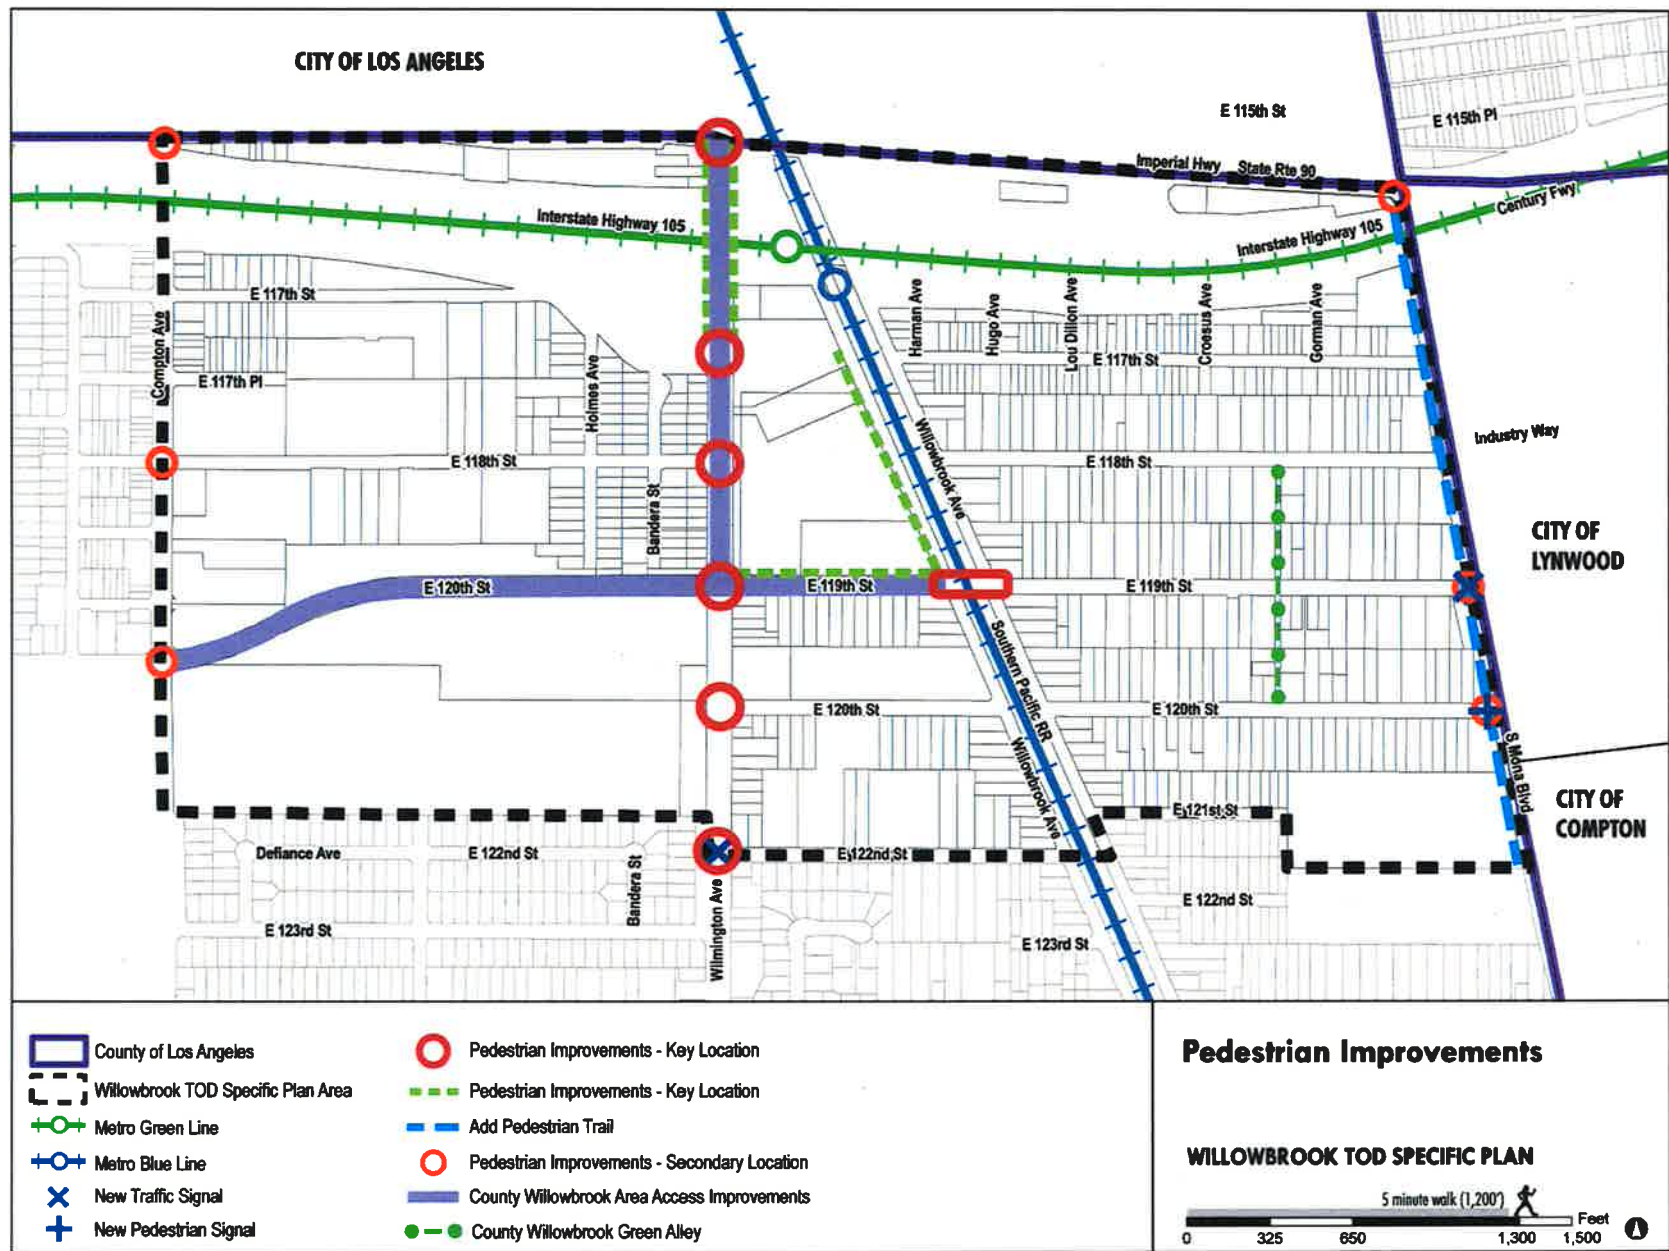

Figure 3.7
Pedestrian Improvements

These measures will facilitate pedestrian circulation by reducing the width of roadway for pedestrians to cross, providing additional sidewalk space, and making pedestrian crossings more visible to both pedestrians and motorists. Figure 3-7 shows the anticipated locations of such improvements. The specific improvements to be implemented at each location will be determined following detailed design studies to determine applicability and feasibility and the ultimate configuration. However curb extensions should not restrict the circulation of buses, trucks, emergency vehicles, and bicycles. As their exact nature is currently undefined, they are not included directly in this traffic study.

Improvements at Wilmington Avenue & I-105 Eastbound Ramps will add a crosswalk across Wilmington Avenue to facilitate access to the Metro Station. This is included in the traffic analysis.

The Specific Plan proposes to add new traffic signals at Wilmington Avenue & 122nd Street, and at Mona Avenue & 119th Street, to facilitate pedestrian crossings on long stretches of both streets currently without signalized crosswalks. Also to install a signalized pedestrian crosswalk on Mona Avenue & 120th Street, to facilitate pedestrians crossing to the Dr. Ralph Bunche Middle School. The specific improvements will be determined following detailed design studies to determine applicability, feasibility, and if warranted. As their exact nature is currently undefined, they are not included directly in this traffic study.

Bicycle Circulation

The Specific Plan Bicycle Network, shown in Figure 3.8, includes a combination of Class I, Class II and Class III facilities that connects activity centers and neighborhoods to the rail station, connects to adjacent communities, and provides a dedicated network for bicyclists to use safely and efficiently. The Bicycle Circulation System includes elements from, and is consistent with, the County's Bicycle Plan and the City of Los Angeles Bicycle Plan.

Class I bike paths will be implemented on Willowbrook Avenue (West) between 119th Street & Imperial Highway — to provide access to the rail station, and on Mona Avenue (east side) between Imperial Highway and 124th Street. The associated lane reductions are included in the following impact analyses, and shown in Figure B-1, in Appendix B.

Class II bike lanes will be implemented on 120th Street between Compton Avenue & Wilmington Avenue. The associated lane reductions are included in the following impact analyses, and shown in Figure B-1, in Appendix B. Class II Bike lanes are also proposed on Wilmington Avenue between 124th Street & 120th Street, but will not require any changes in traffic lanes. Class II Bike Lanes are also proposed on Imperial Highway between Compton Avenue & Mona Avenue. However, there are no design concepts or details available, so no changes to lane configurations have been incorporated into this study.

Not all streets can support bicycle lanes. Either there is insufficient width, or on-street parking is also an important asset to the function and economic well-being of the adjacent commercial uses or neighborhoods, so where there is insufficient roadway width to stripe bicycle lanes and to retain on-street parking, a connected network is achieved through the designation of Class III Bike Routes. Class III bike routes will be implemented on Compton Avenue, Willowbrook Avenue (West) south of 119th Street, 119th Street between Wilmington Avenue & Mona Avenue, and on 124th Street throughout the Specific Plan Area.

Transit Circulation

Key transit streets (with multiple bus routes) in the Specific Plan Area are shown in Figure 3.9. The Specific Plan anticipates that current bus routes will continue to serve the Specific Plan area focusing on the rail station.

Shuttle Routes

The Specific Plan also anticipates that the existing shuttle routes that are operated by the County, the Martin Luther King Jr. Medical Center and Charles Drew University will be continued in order to facilitate alternative modes of transportation, and provide critical access to the Medical Center for those without a car.

Additional shuttle routes are proposed to be added to serve new development in the North West Quadrant and connect the land uses to the Metro Station. These new shuttle services could be provided by the private sector as part of a comprehensive Transportation Demand Management Program (see below).

Transportation Demand Management

The Specific Plan identifies that a Transportation Demand Management Program will be developed by the County, to take advantage of the high level of transit service, and to reduce both vehicle trips and the number of parking spaces provided. Such programs would include the encouragement of use of transit, bicycling, walking, and ridesharing. These types of programs are generally most suitable and most effective for large employers and institutional uses, and office uses and could be attractive to employers in new office type land uses in the the North West Quadrant as they could reduce the capital costs needs of building parking. The Program should include the North West Quadrant, Charles Drew University, and the Martin Luther King Jr. Medical Center.

Transportation demand management and trip reductions strategies could include but not be limited to:

- Encouraging use of transit, including subsidizing transit passes
- Parking cash out programs

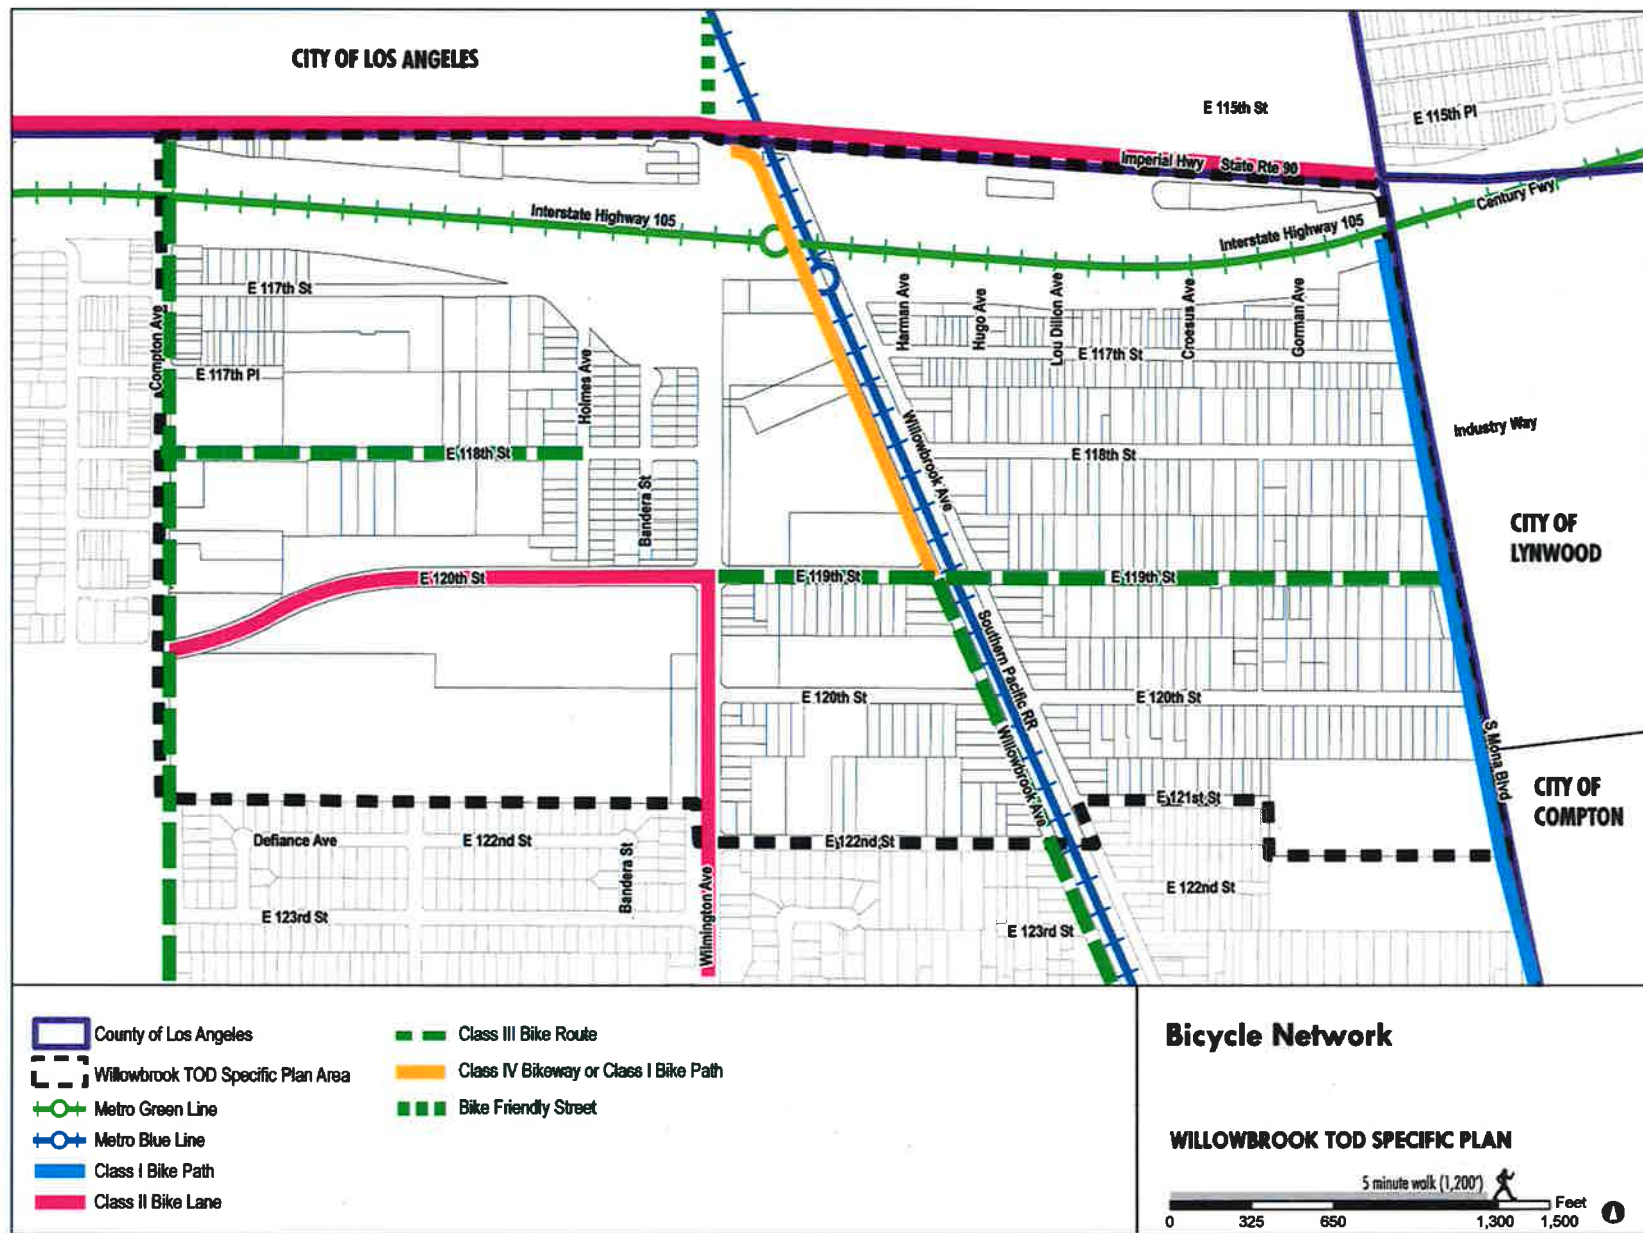

Figure 3.8
Bicycle Network

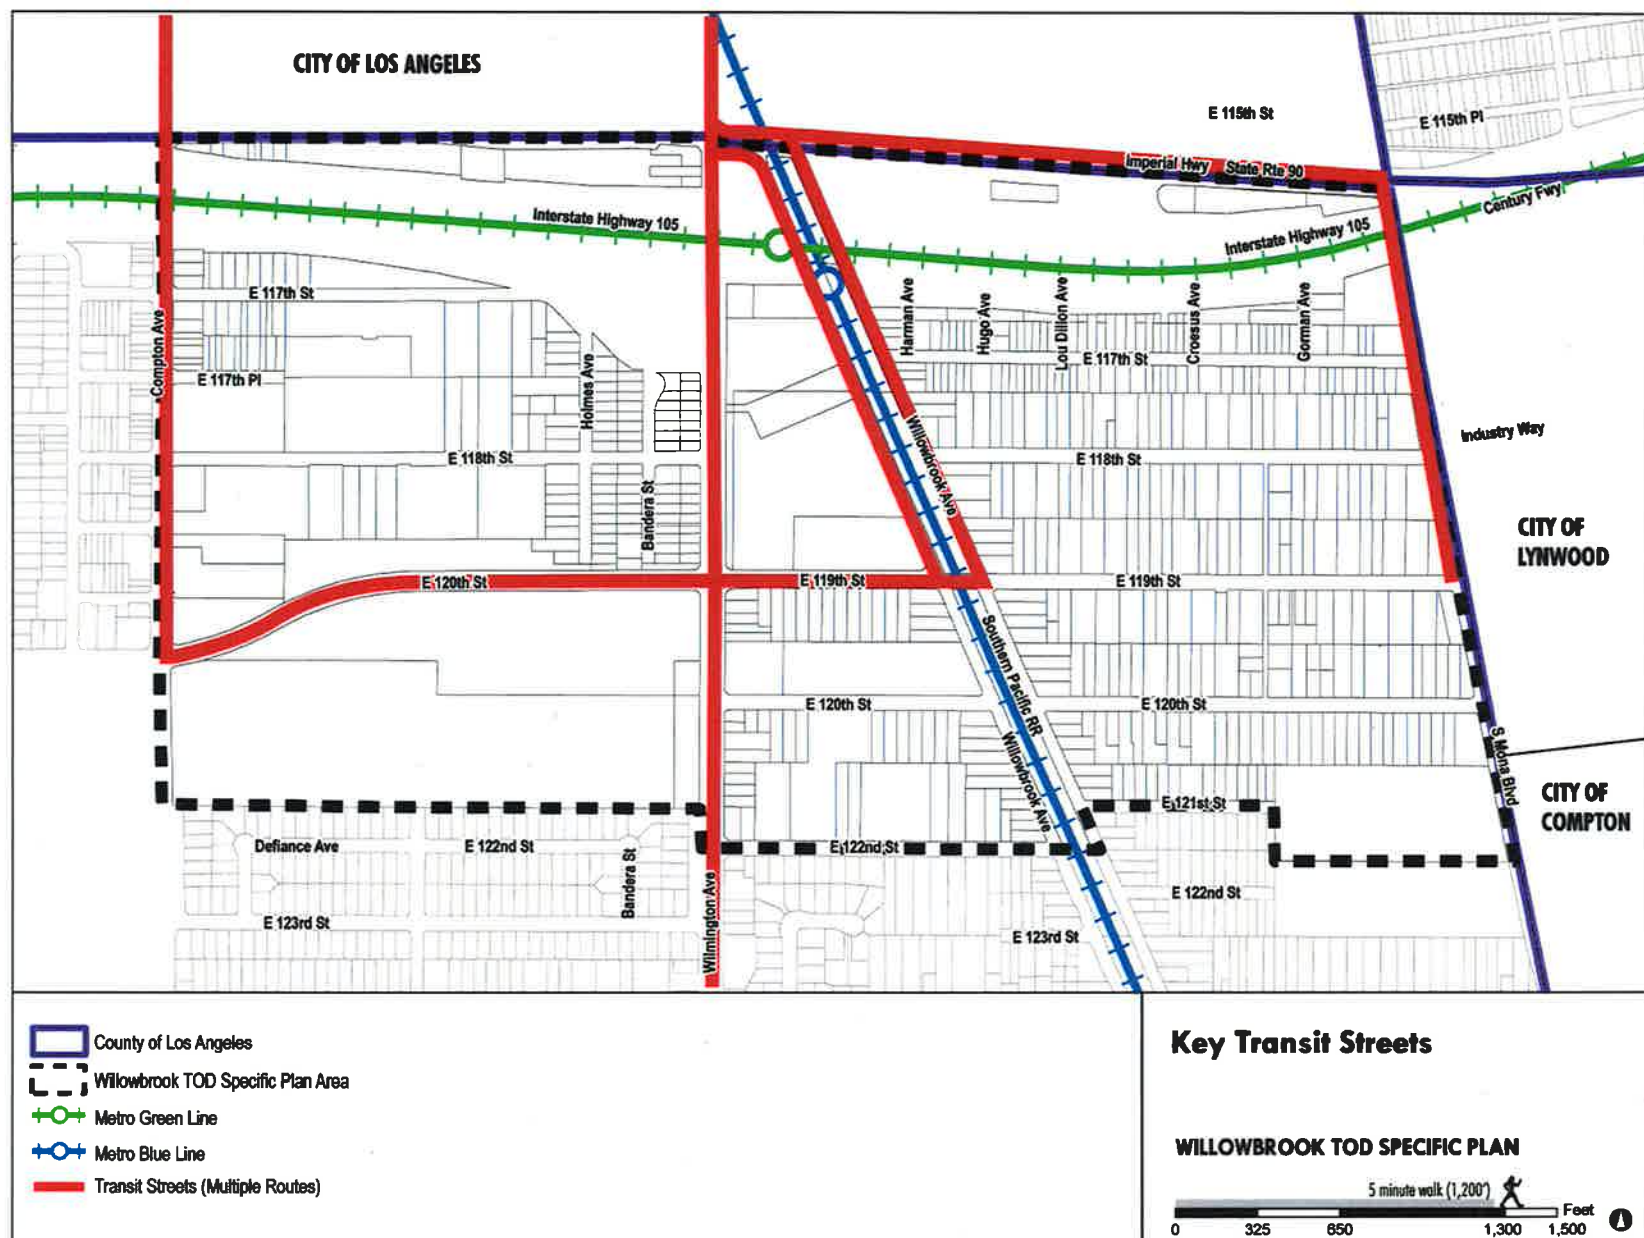

Figure 3.9
Key Transit Routes

- Encouraging rideshare
- Providing preferential parking for carpools
- Facilitating formation of carpools and vanpools
- Site and building design to facilitate use of transit, bicycling and walking

A Transportation Management Organization (TMO) could also be established to facilitate these programs at an area wide level and support individual employers and/or buildings in participating to the fullest extent possible.

3.5 Future Traffic Forecasts for The Specific Plan Project

The trip generation estimates for each zone (and summarized in Table 3.3) were assigned to the roadway network using the trip distribution parameters described earlier, to obtain Specific Plan traffic volumes (Project Only) on the roadway network. The Project Only traffic volumes are shown in Figure 3.10 for the AM peak hour and in Figure 3.11 for the PM peak hour.

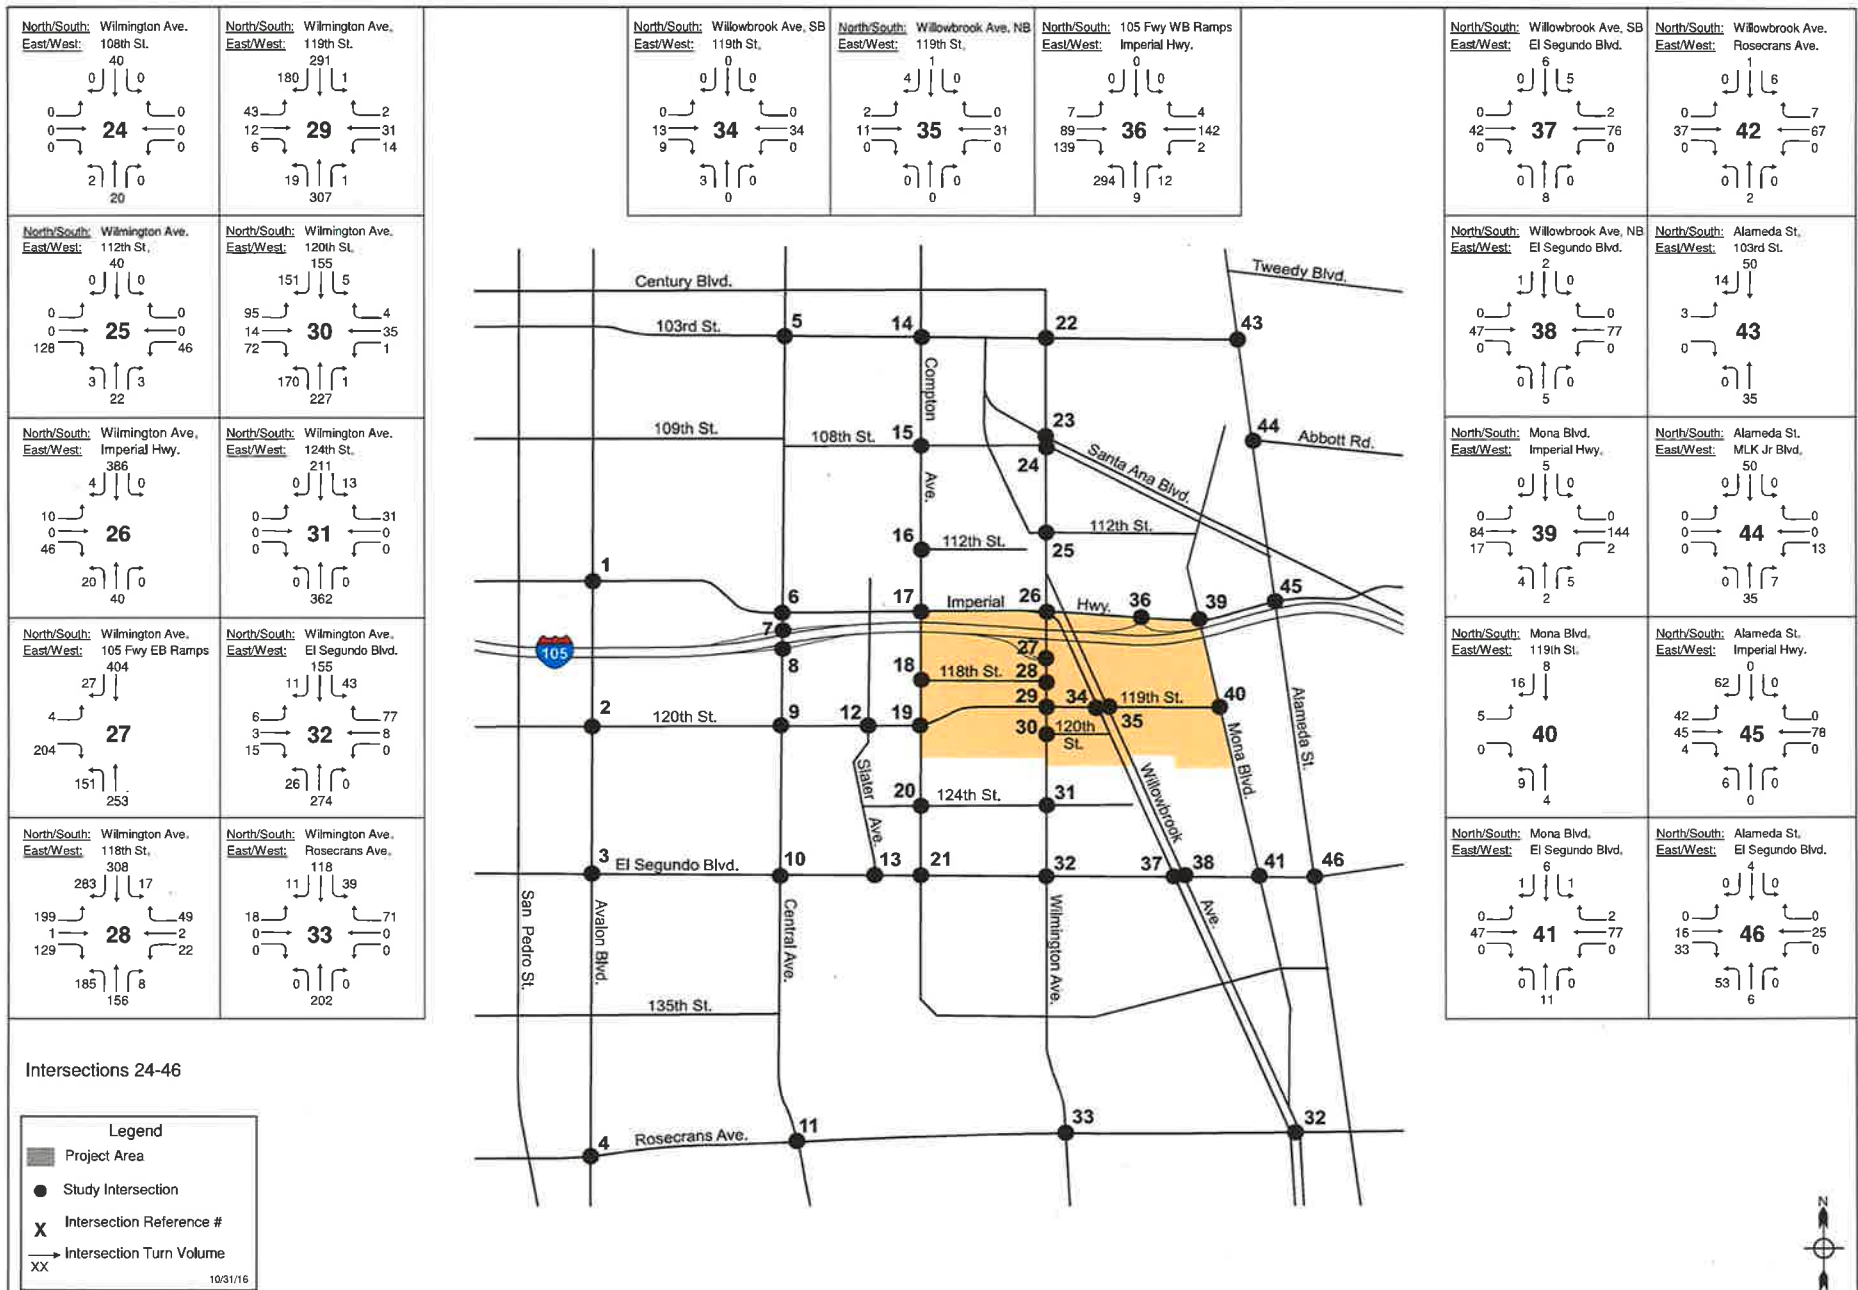

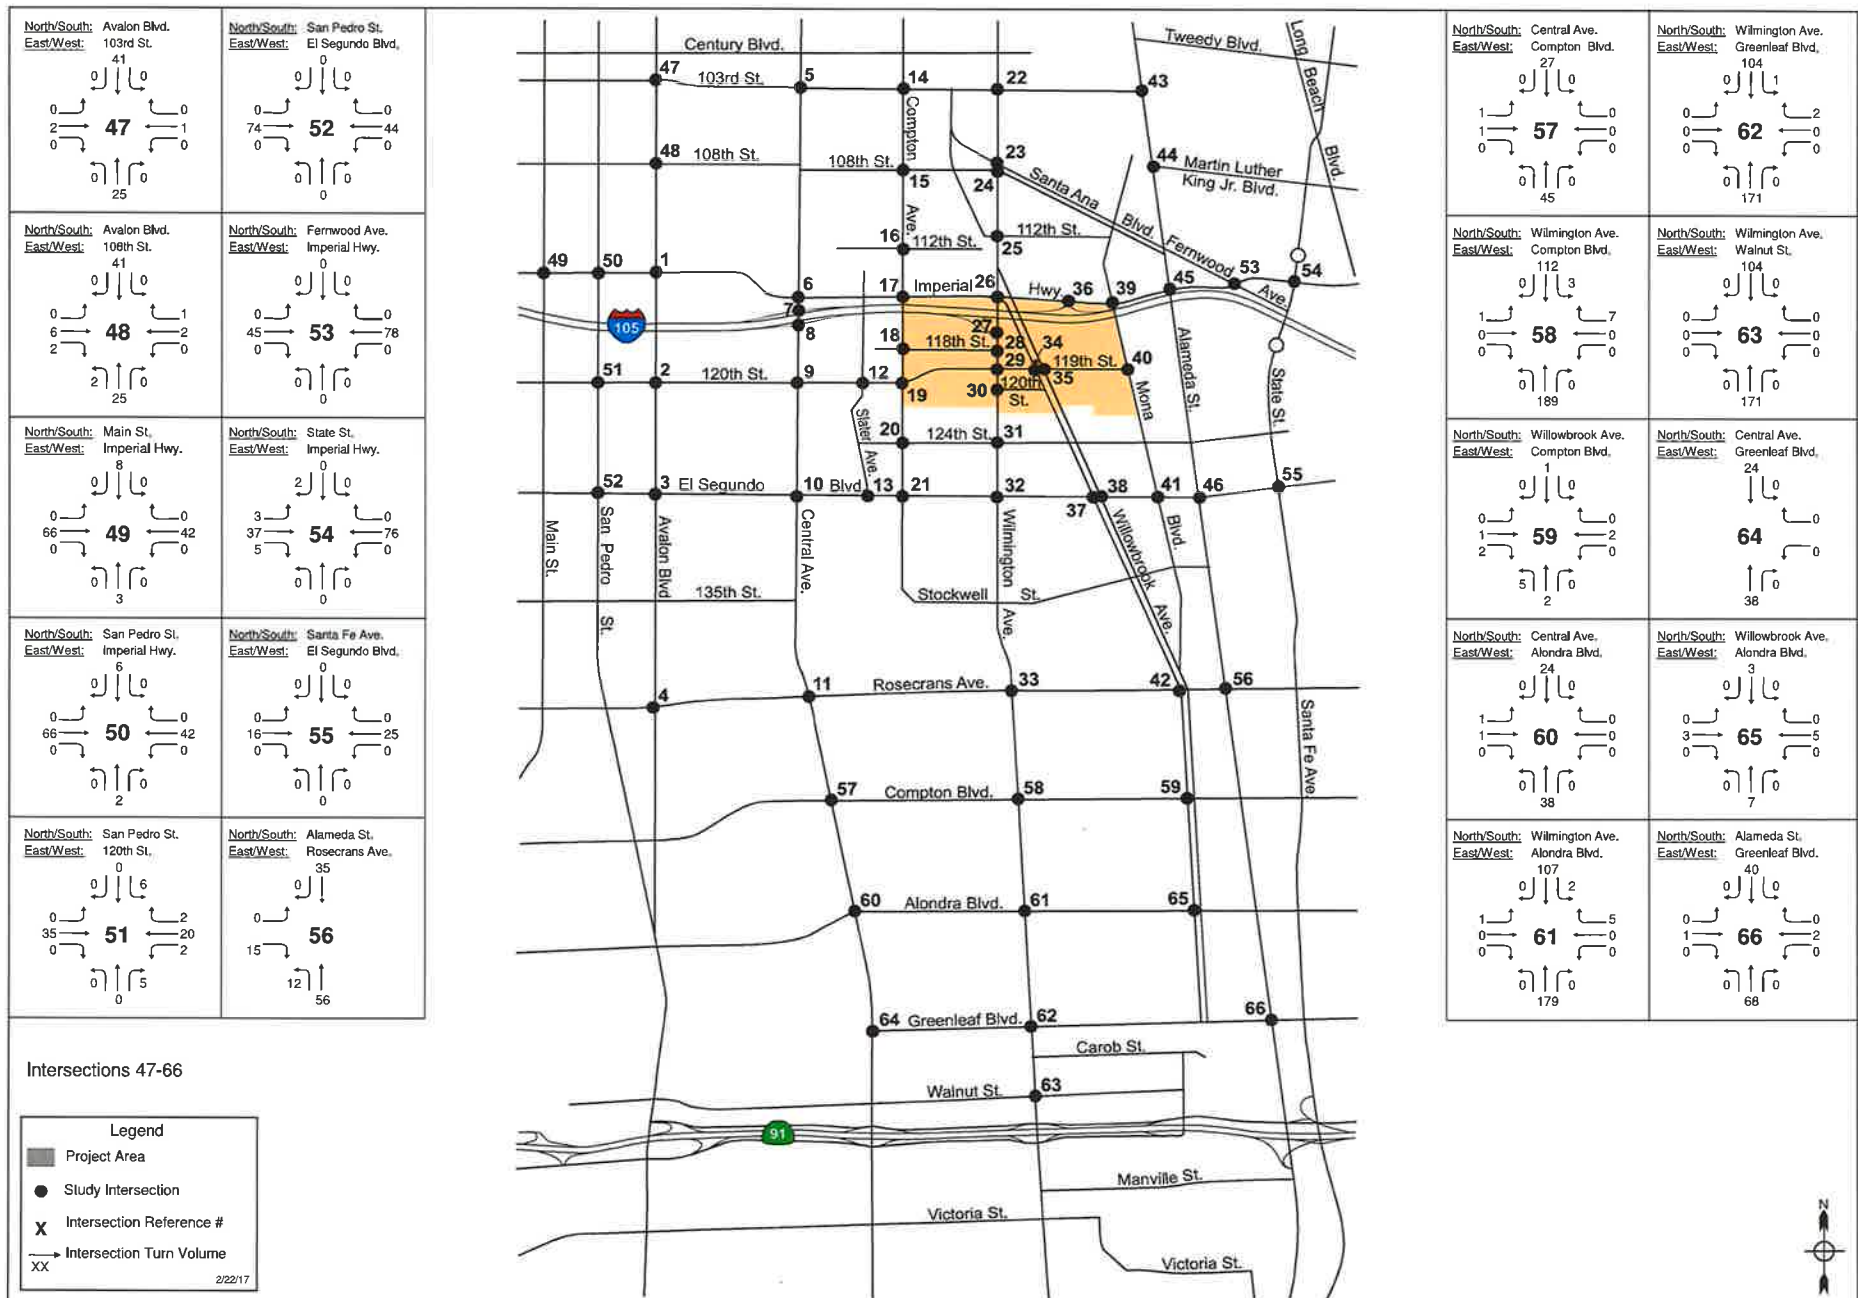

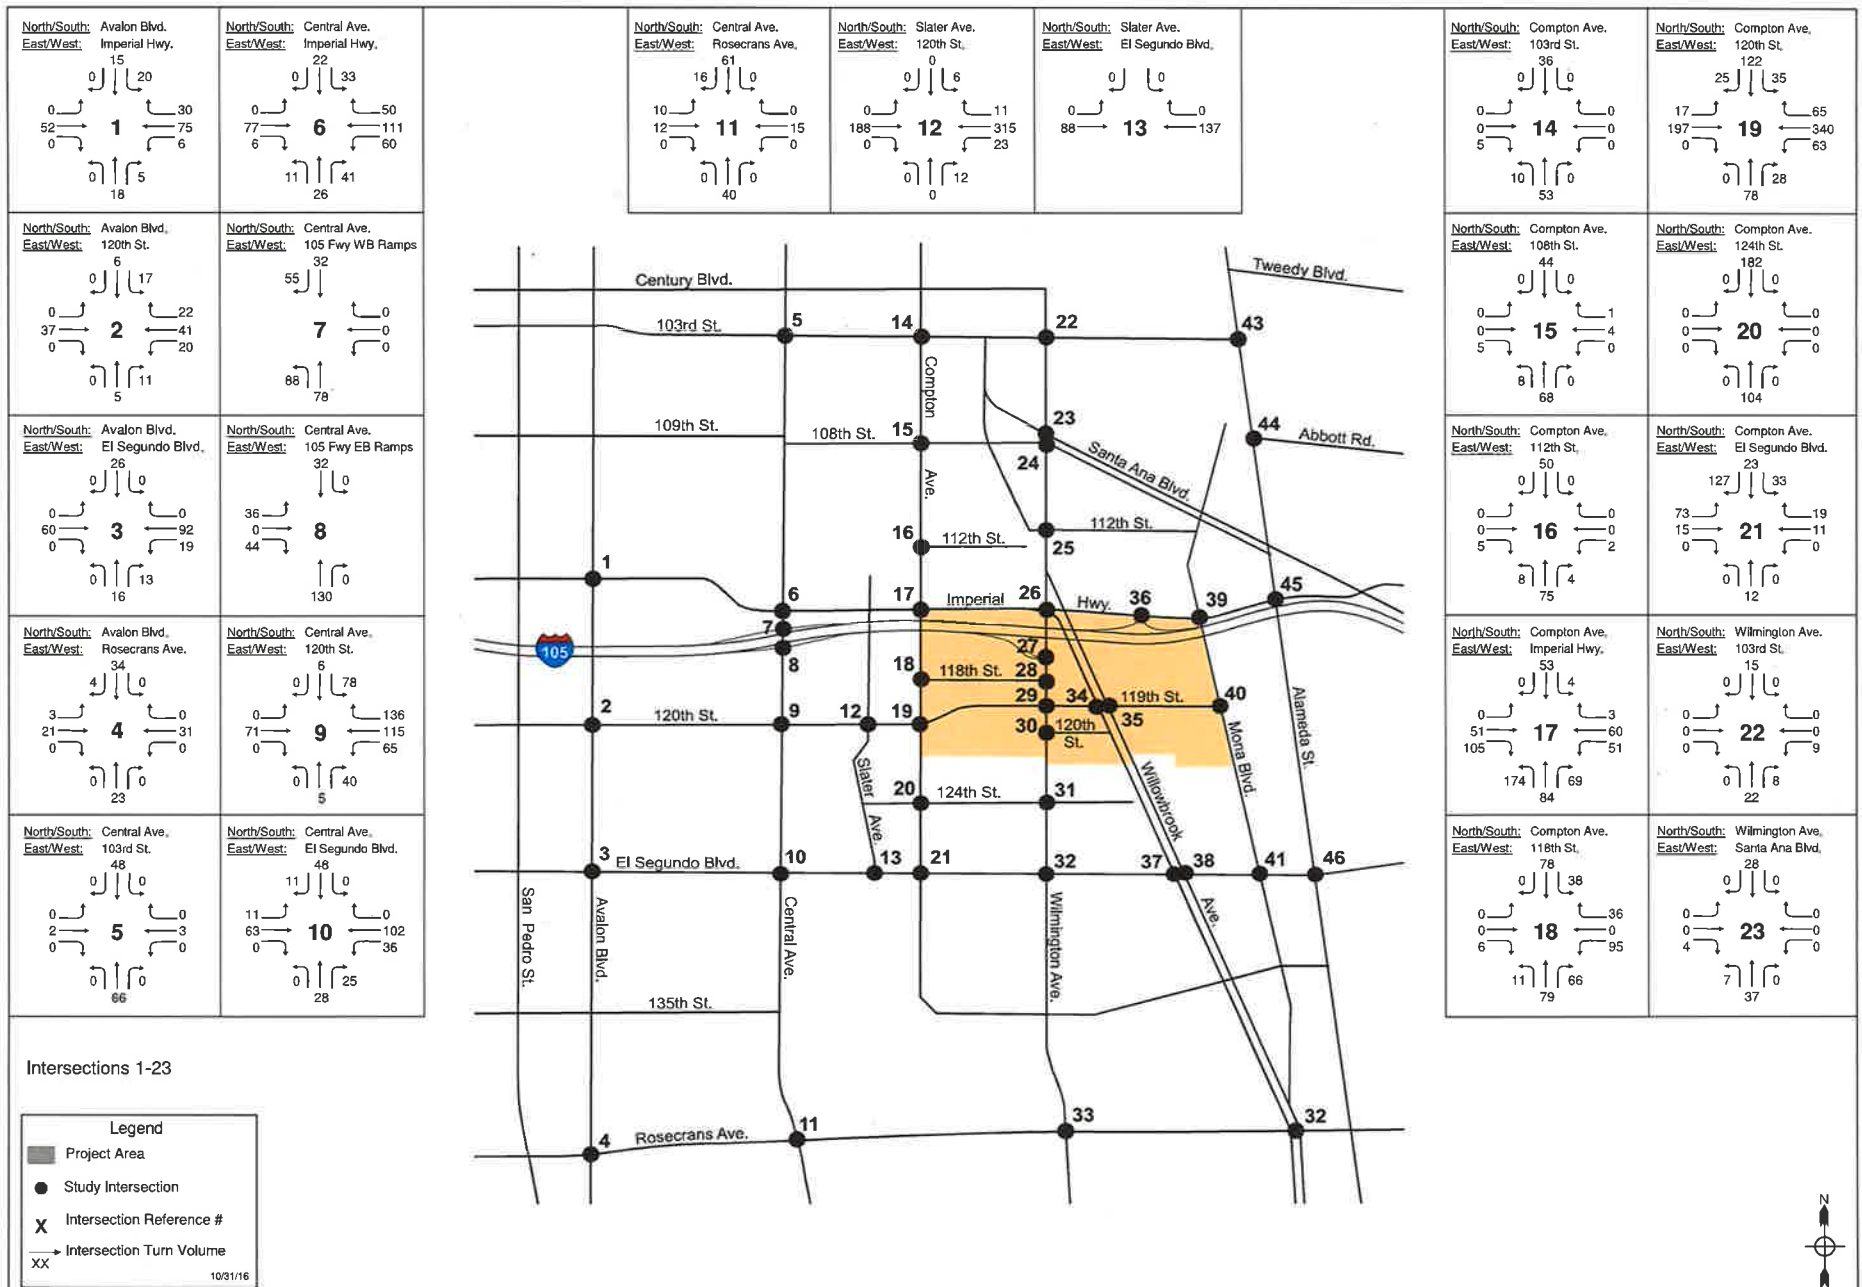

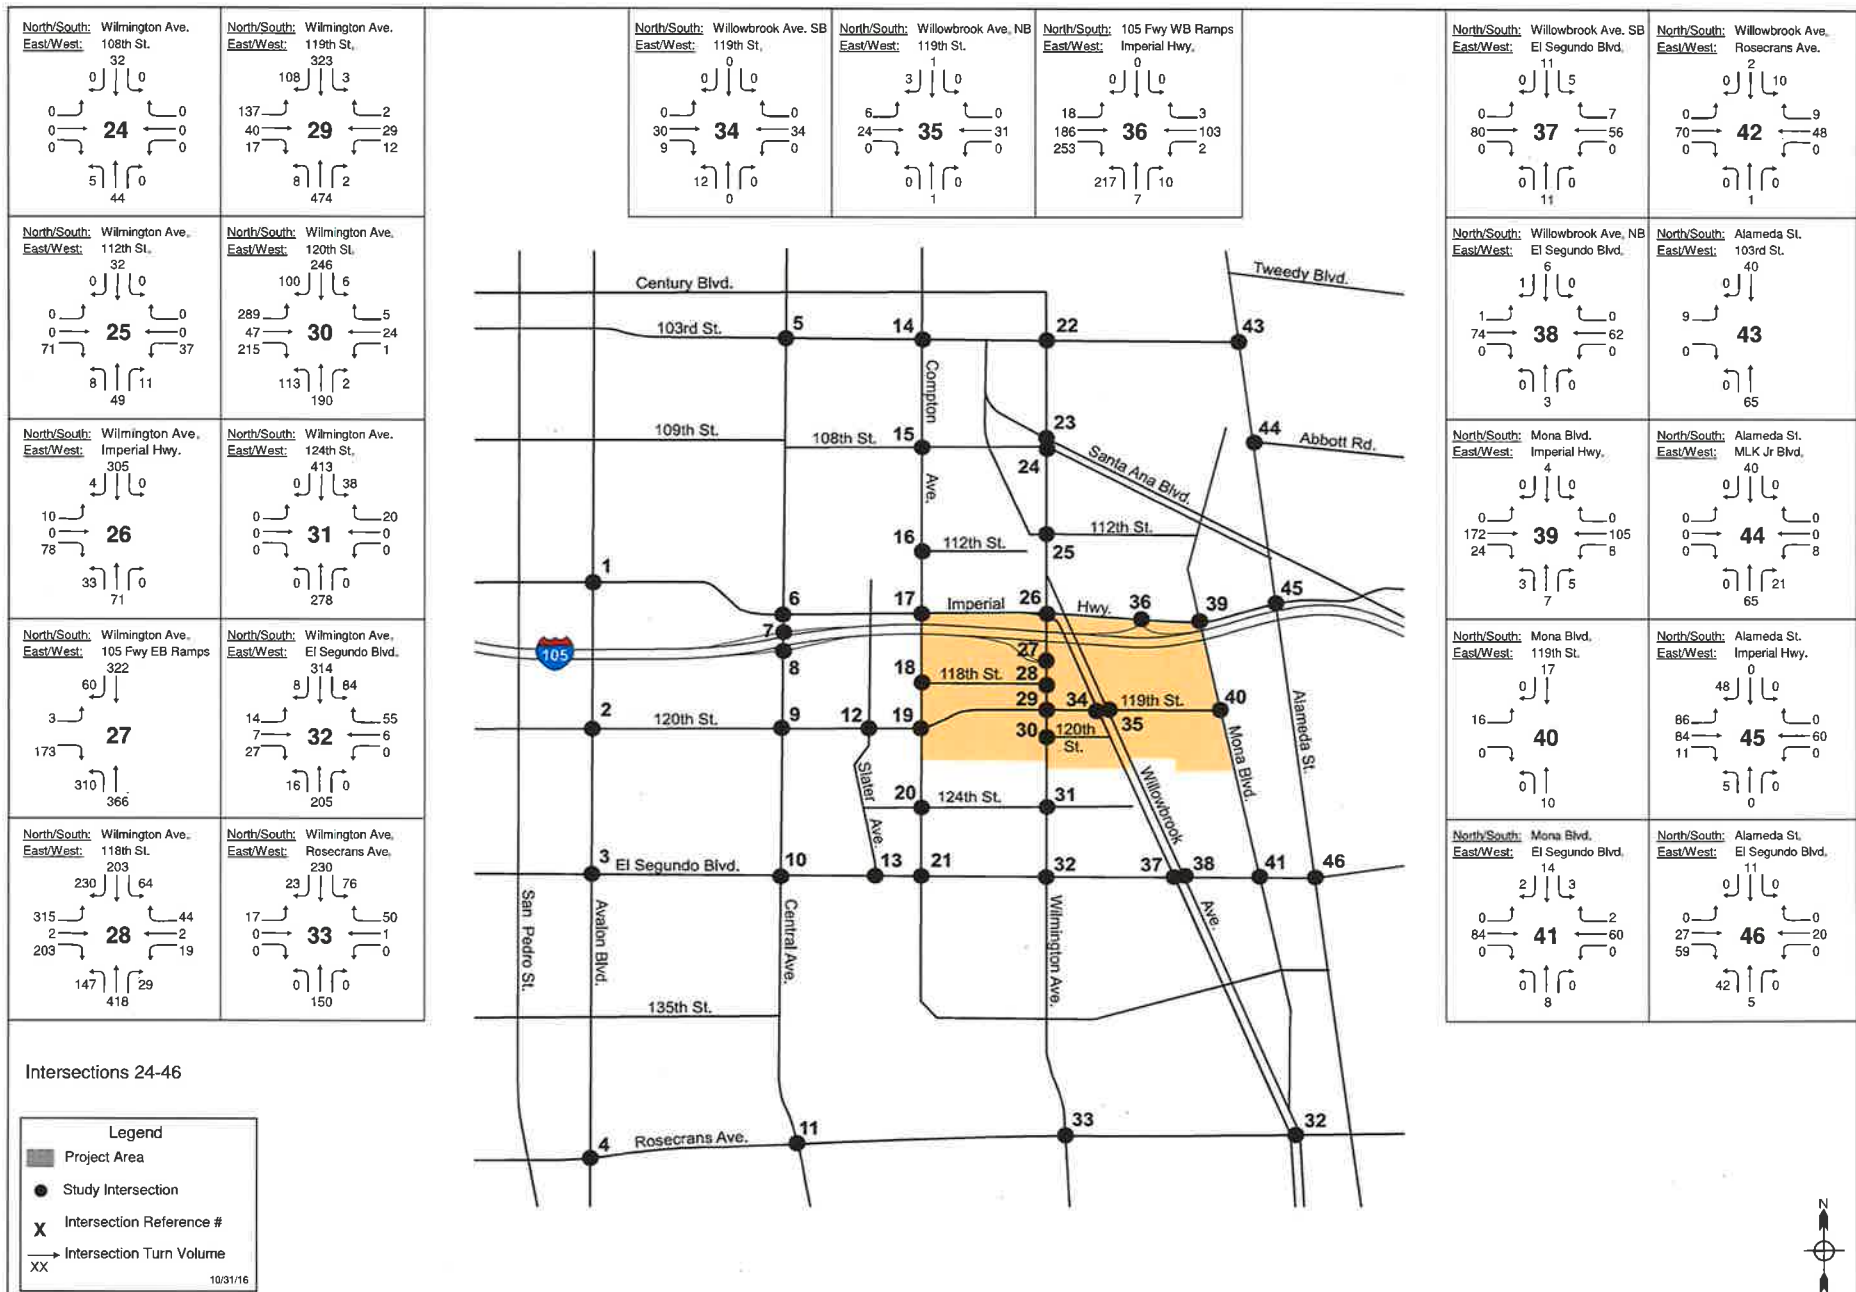

Figure 3.10
Project Only Traffic Volumes - AM Peak Hour

Willowbrook TOD Specific Plan EIR Traffic Study

Willowbrook TOD Specific Plan EIR Traffic Study

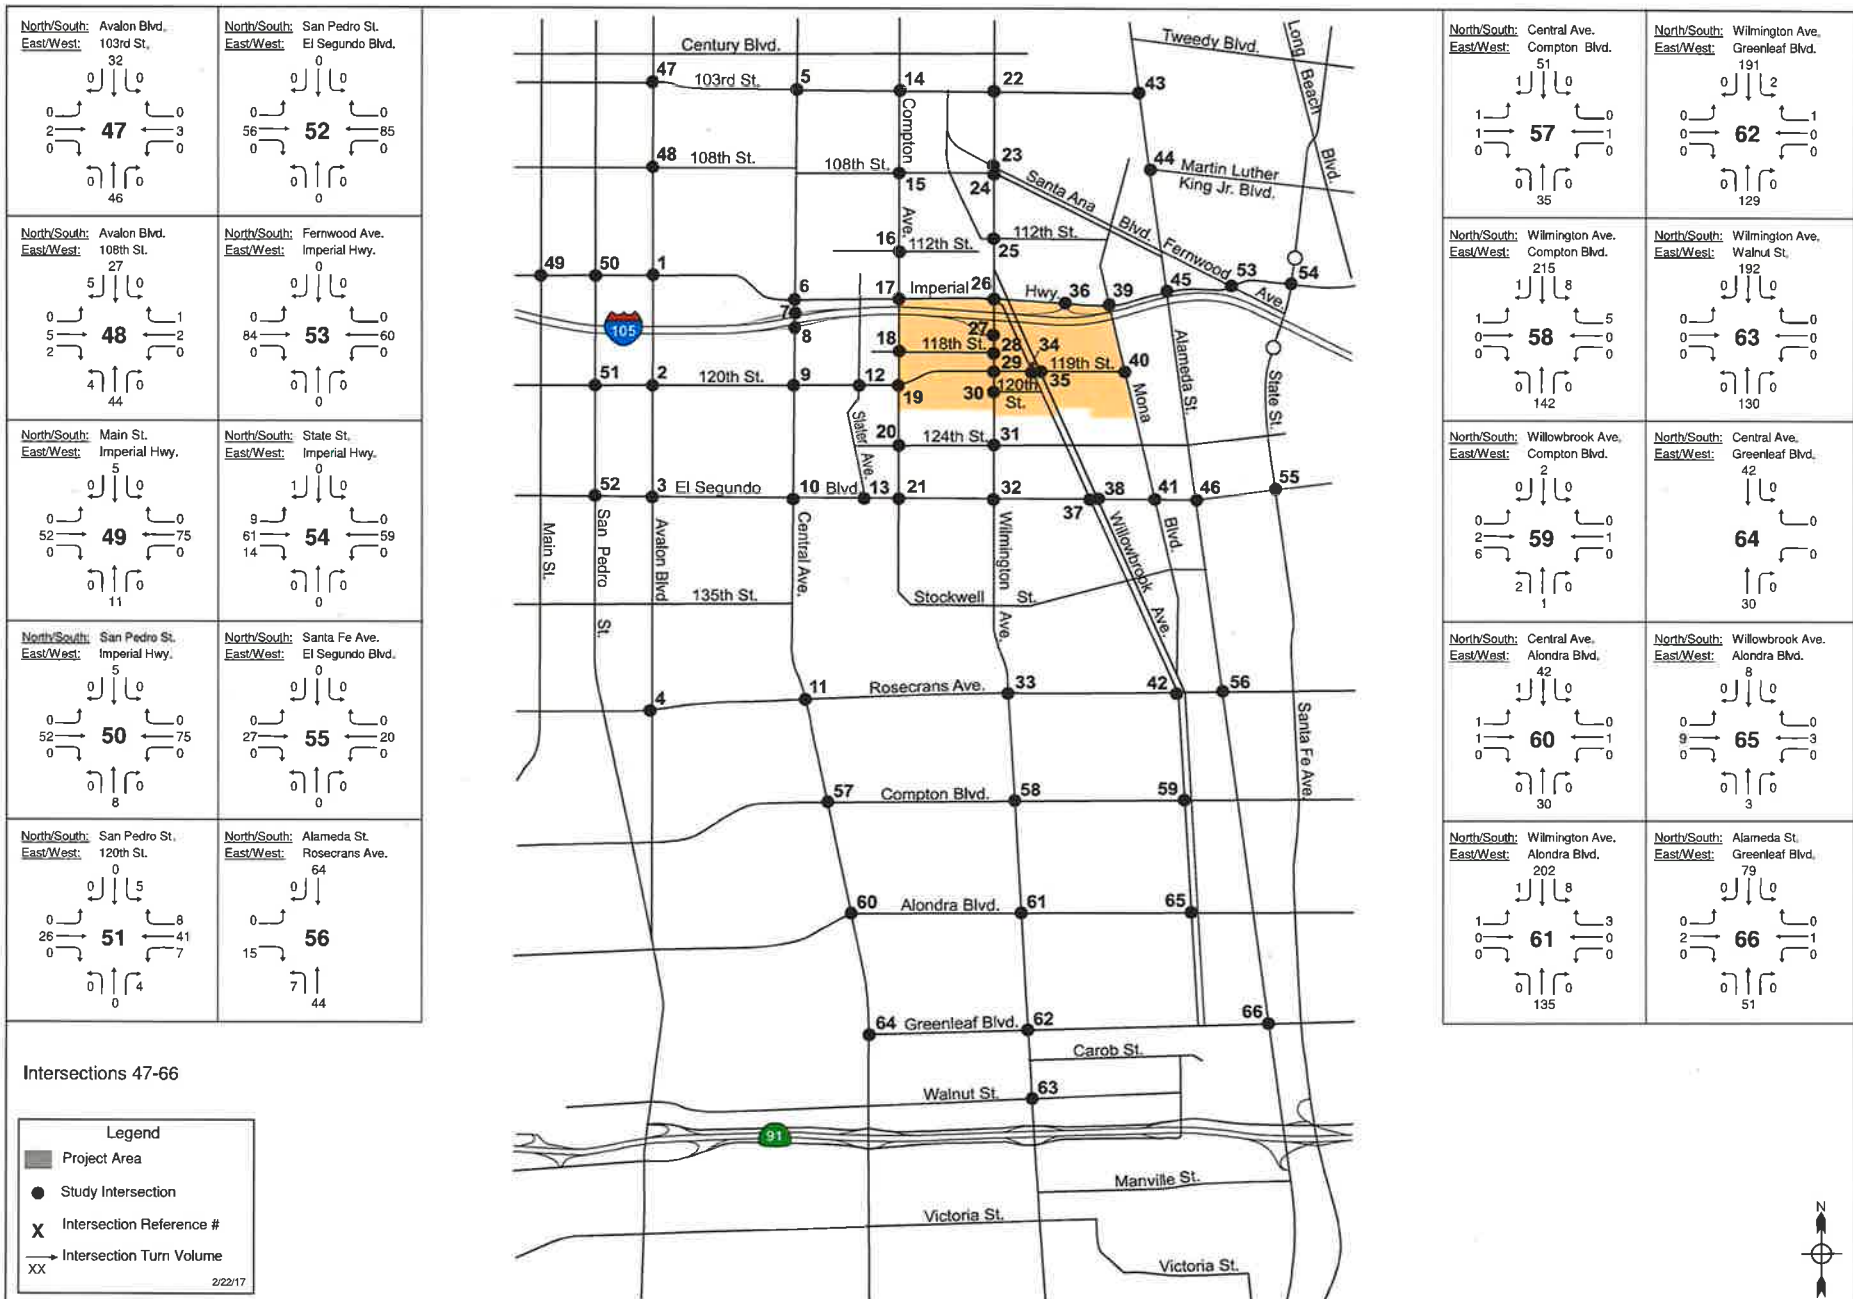

Figure 3.11
Project Only Traffic Volumes - PM Peak Hour

Willowbrook TOD Specific Plan EIR Traffic Study

4. Existing With Project Conditions

This section of the report documents an analysis of potential Project impacts for the Existing With Project Condition. The Project trips estimated and described in Chapter 3, were added to the existing conditions traffic volumes and an impact analysis was conducted. The total Existing With Project peak hour traffic volumes are illustrated in Figures 4.1 and 4.2 for the AM and PM peak hours respectively.

The analysis then used the methodologies (as described in Chapter 2) and thresholds for significant impact appropriate to each of the different jurisdictions, to calculate intersection level of service and potential impacts.

4.1 Significant Impact Thresholds

The analysis used the following thresholds for determining significant traffic impacts.

Significant Impact Thresholds – County of Los Angeles

The County of Los Angeles Department of Public Works has established threshold criteria to determine if project has a significant impact at a study intersection. According to the criteria provided by the County of Los Angeles, a project impact is considered significant if the following conditions are met:

Pre-Project Conditions		Project-Related Increase in V/C Ratio
LOS	V/C Ratio	
C	0.71 – 0.80	equal to or greater than 0.040
D	0.81 – 0.90	equal to or greater than 0.020
E, F	0.91 or more	equal to or greater than 0.010

For example, a project would not have a significant impact at an intersection if it operated at LOS D after the addition of project traffic and the incremental change in the V/C ratio is less than 0.020. However if the intersection operated at LOS F after the addition of project traffic and the incremental change in the V/C ratio is 0.010 or greater, then the project would be considered to have a significant impact.

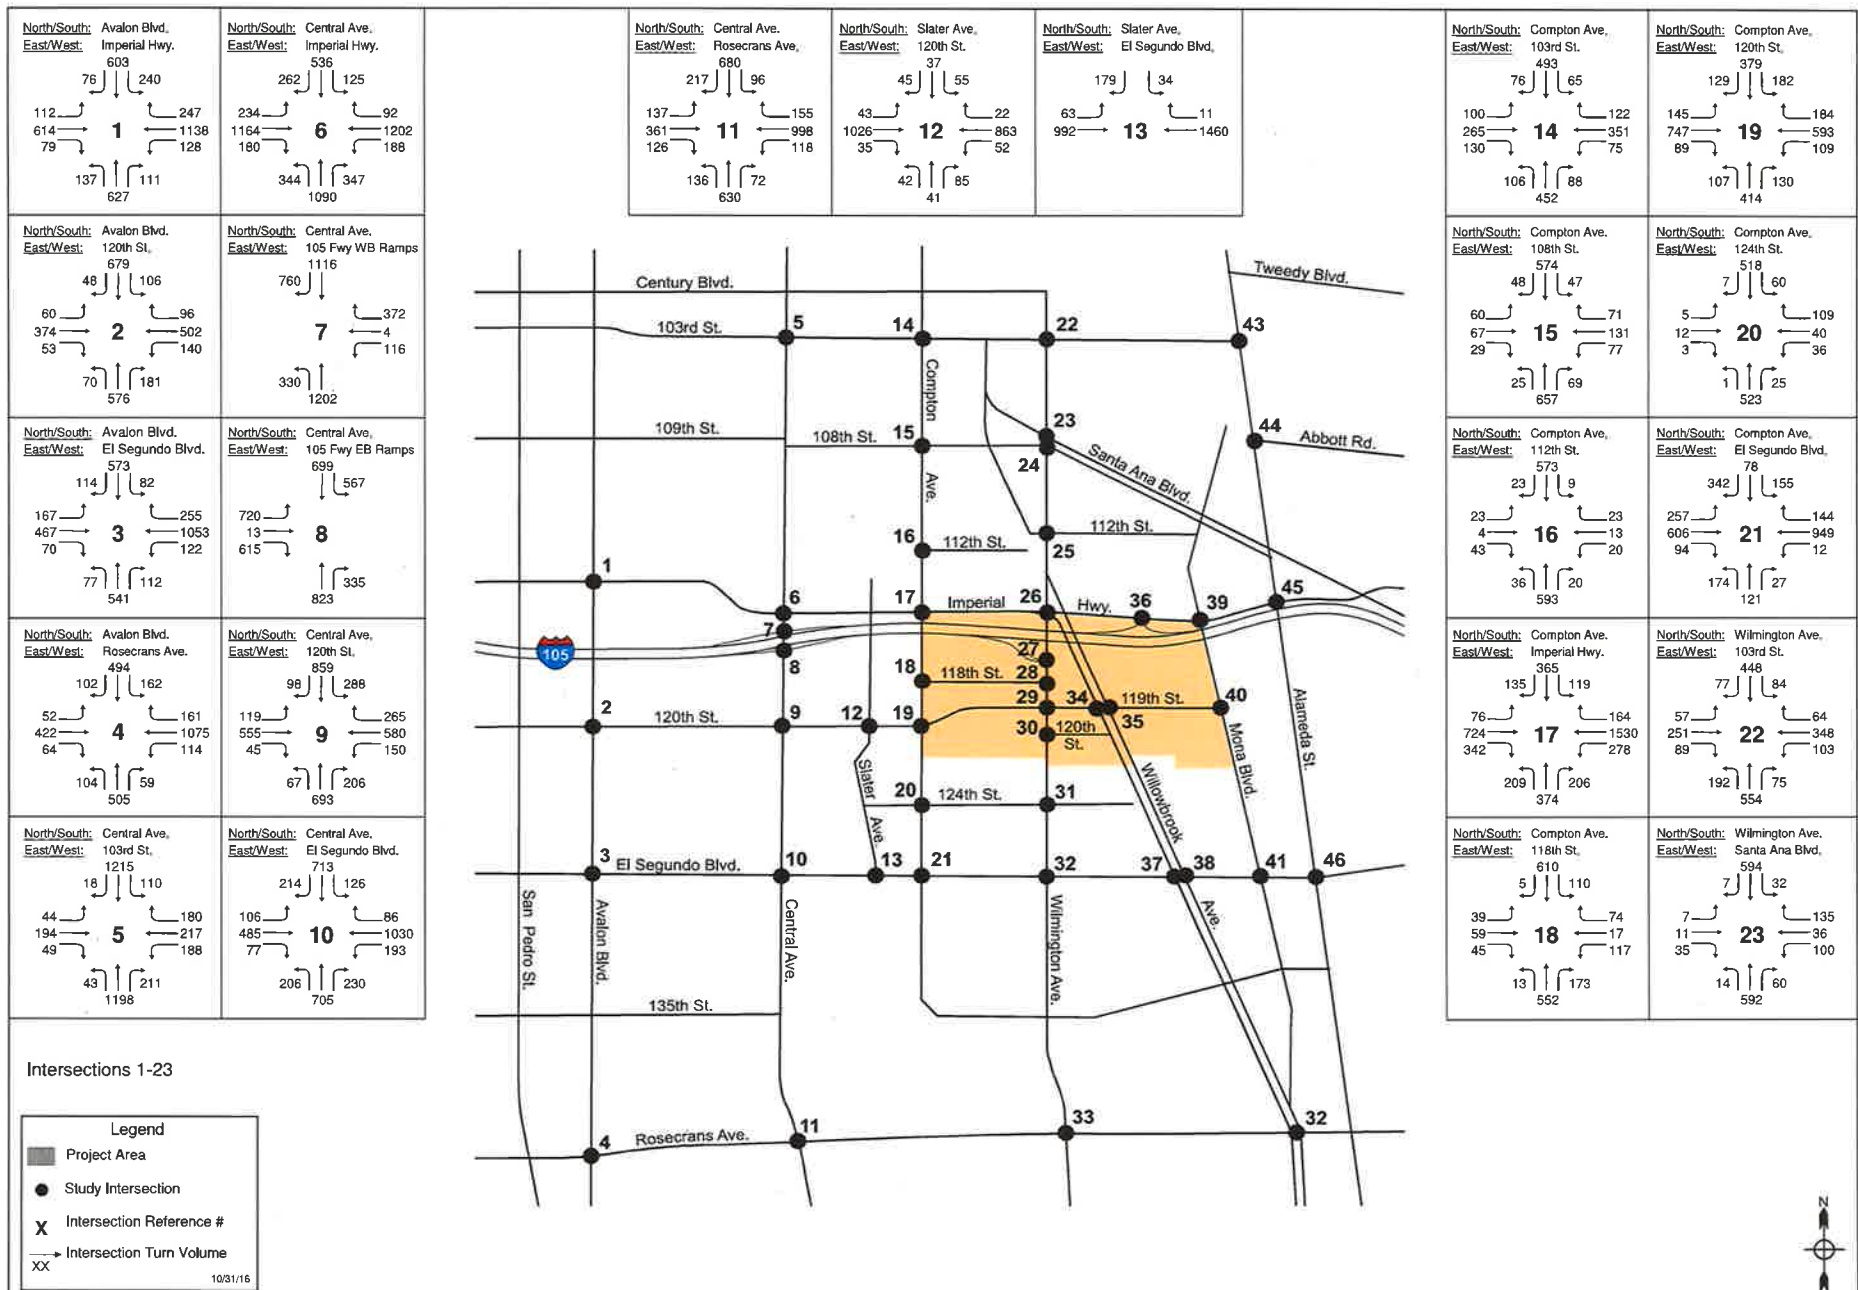

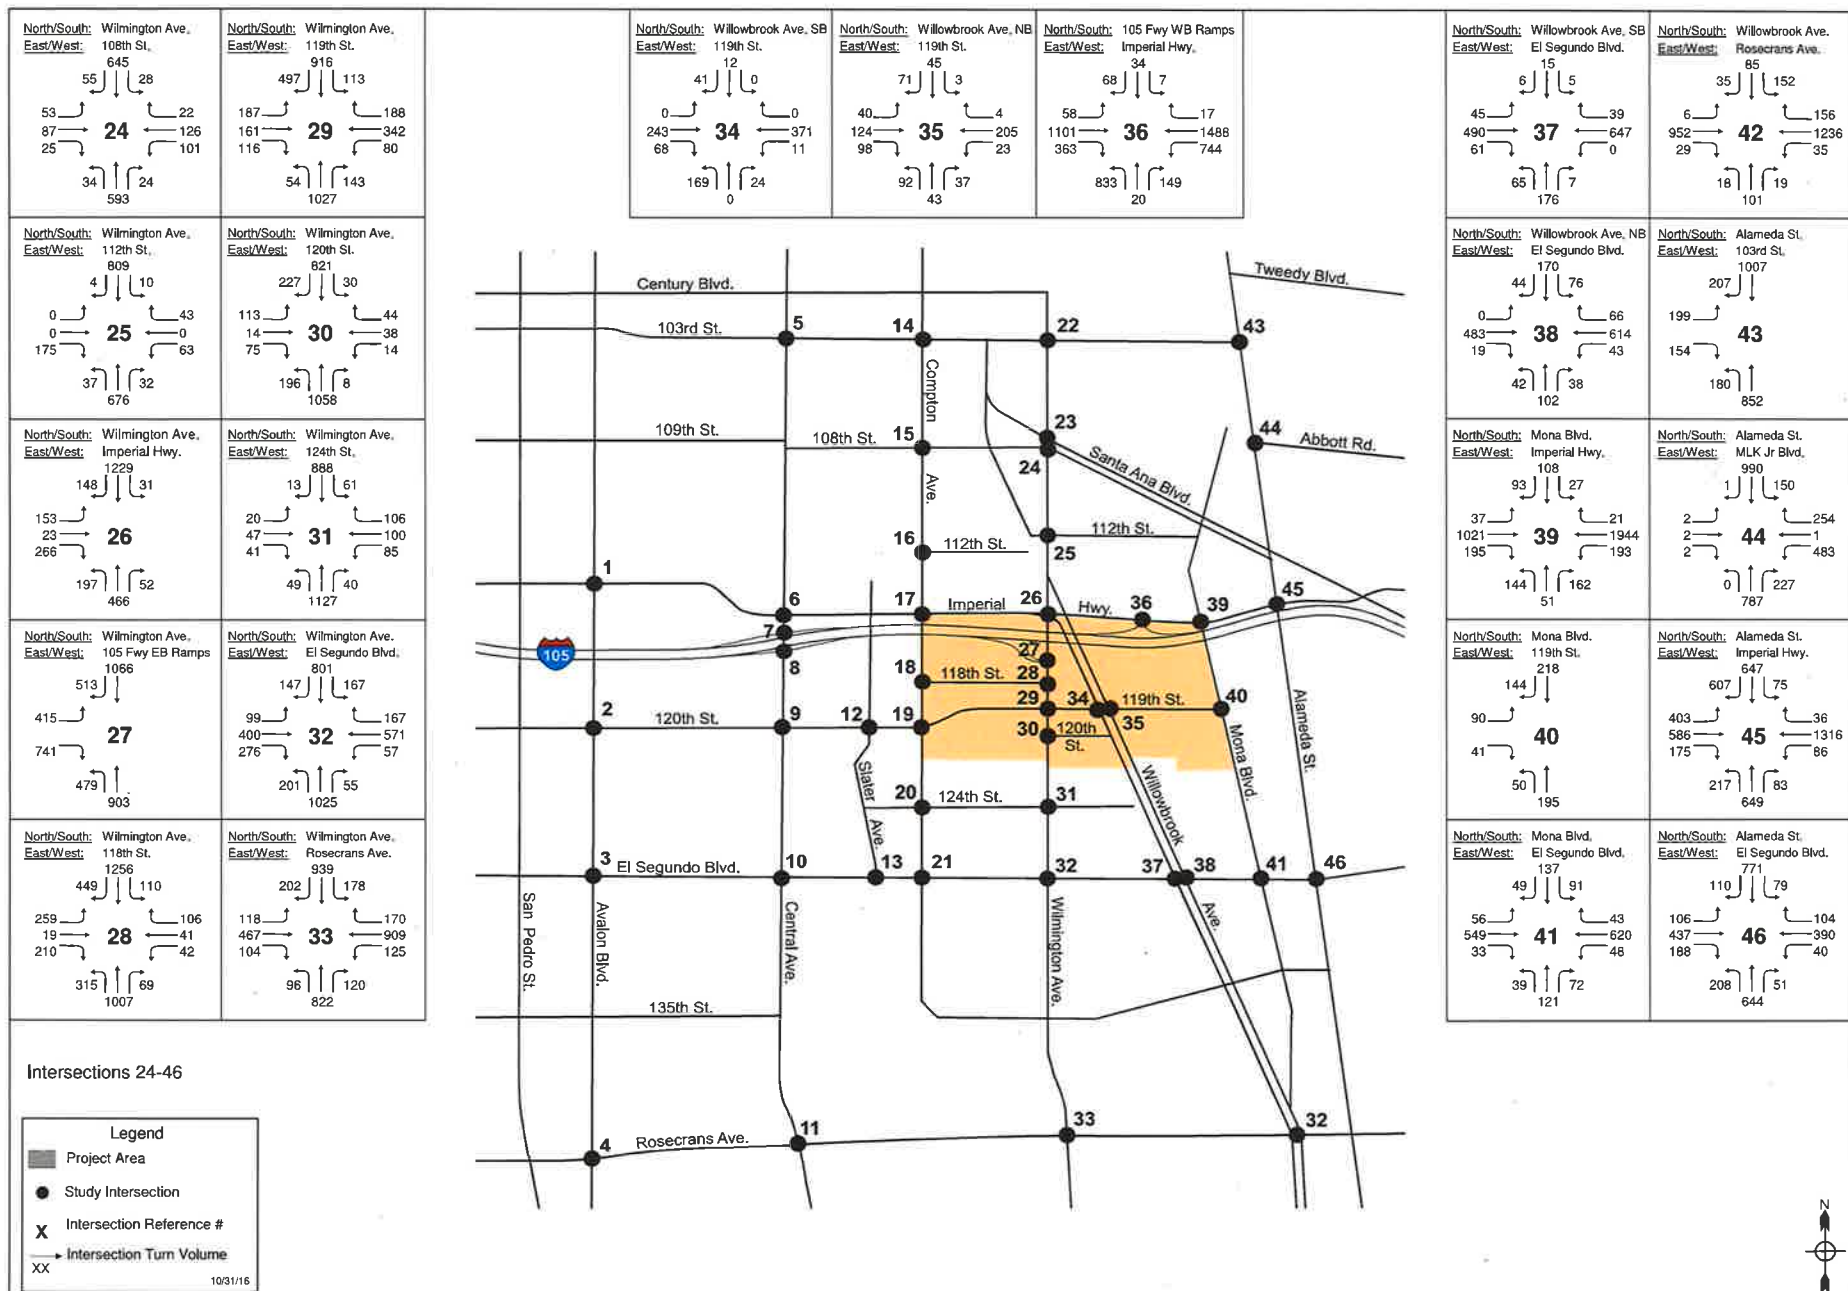

Figure 4.1
Existing With Project Traffic Volumes - AM Peak Hour

Willowbrook TOD Specific Plan EIR Traffic Study

Figure 4.1
Existing With Project Traffic Volumes - AM Peak Hour

Willowbrook TOD Specific Plan EIR Traffic Study

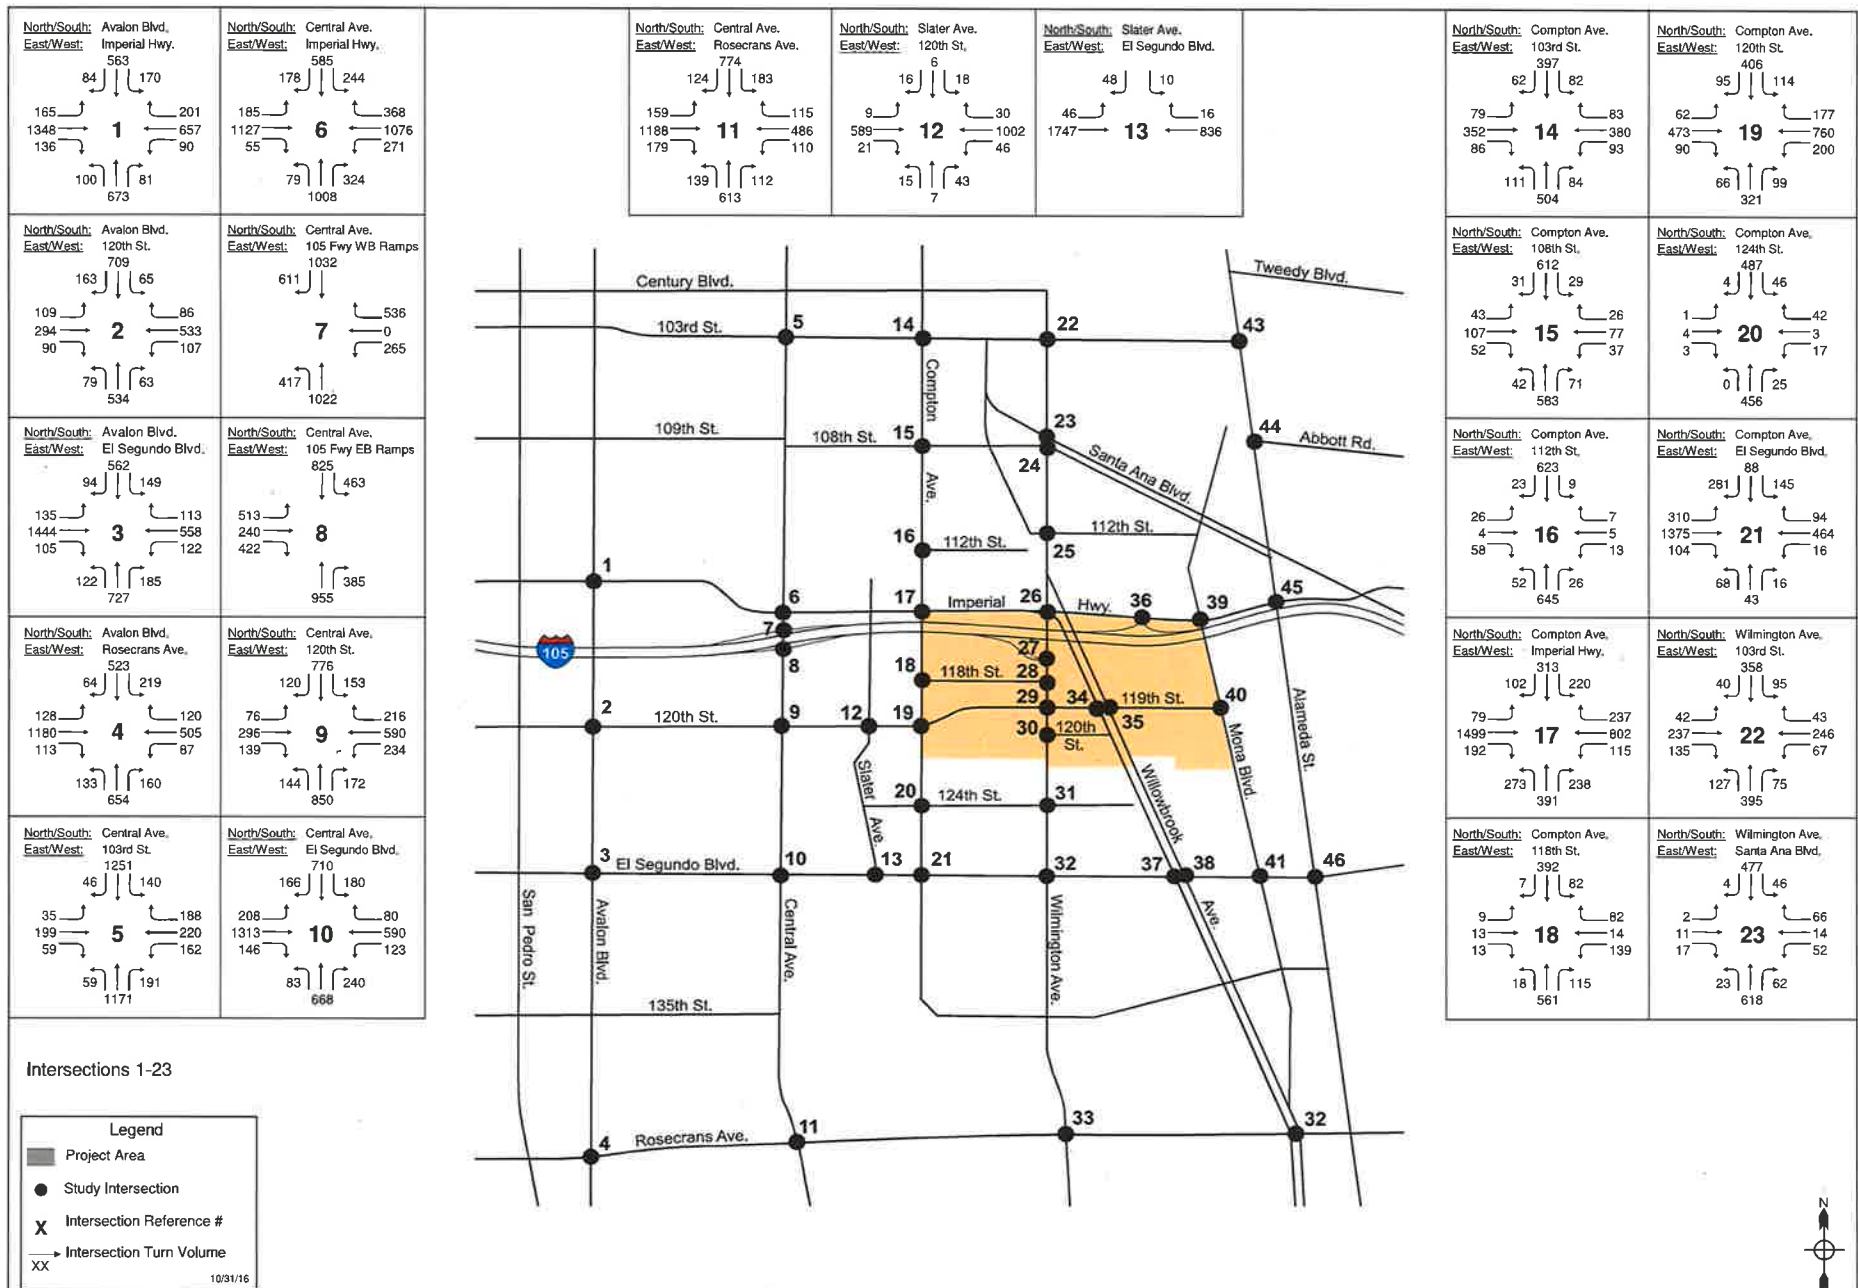

Figure 4.2
Existing With Project Traffic Volumes - PM Peak Hour

Willowbrook TOD Specific Plan EIR Traffic Study

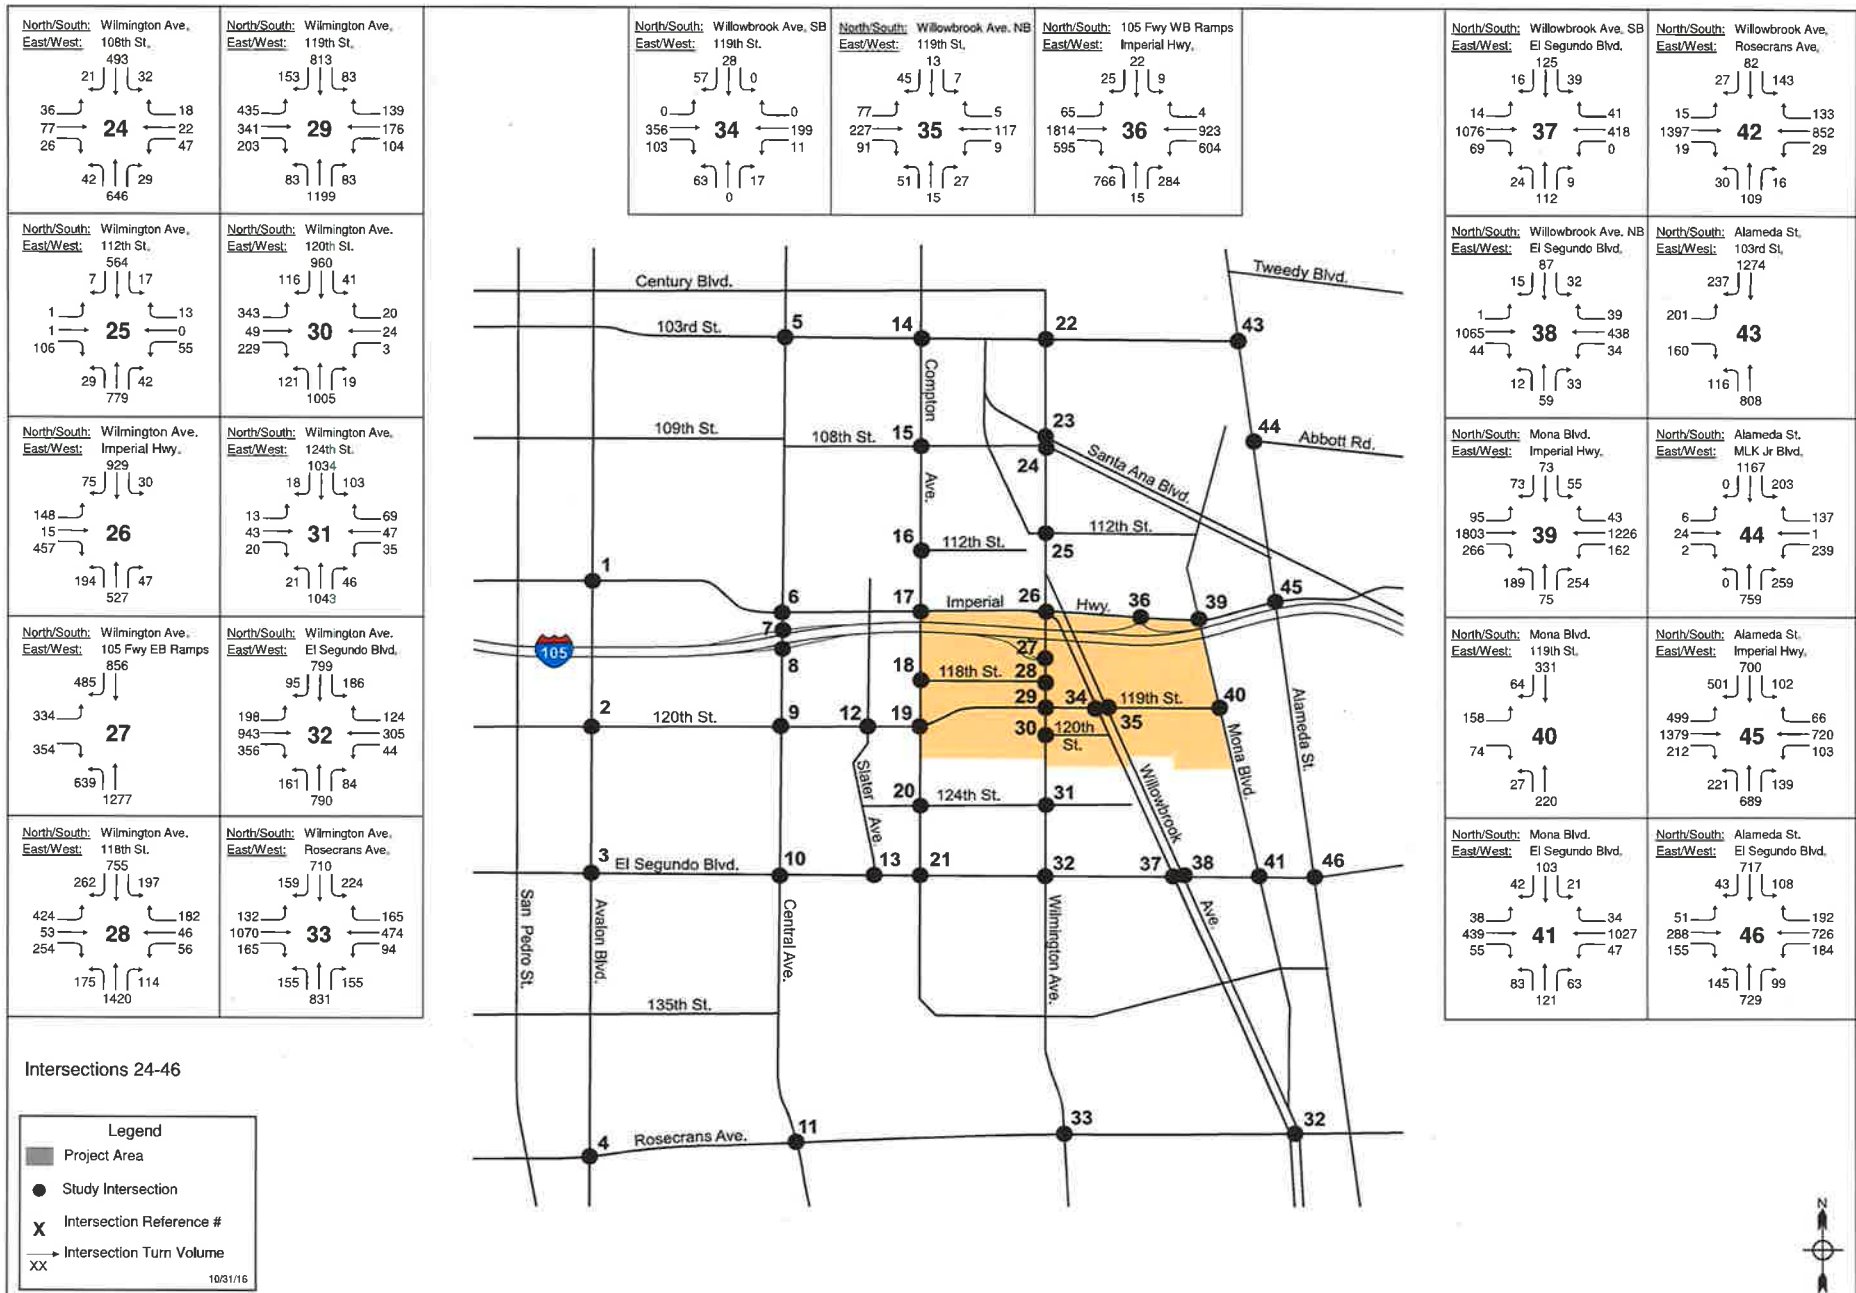

Figure 4.2
Existing With Project Traffic Volumes - PM Peak Hour

Willowbrook TOD Specific Plan EIR Traffic Study

The County of Los Angeles does not have threshold criteria for determining significant impacts at unsignalized intersections. For the purposes of this study, a significant impact was assumed to occur if the Project caused the level of service for the minor (controlled) approach to worsen to LOS F, or if already LOS F to increase the delay by more than 10%, and if installation of a traffic signal would be warranted.

Significant Impact Thresholds - City of Compton and City of Lynwood

The Cities of Compton and Lynwood do not have published thresholds criteria to determine significant impact. The County of Los Angeles threshold criteria were therefore used in the analysis of intersections in Cities of Compton and Lynwood.

Significant Impact Thresholds - City of Los Angeles

LADOT has established threshold criteria to determine if project impacts are significant at an intersection. The City of Los Angeles considers an impact to be significant if the following criteria are met;

With Project Traffic		Project-Related Increase in V/C Ratio
LOS	V/C Ratio	
C	0.701 – 0.800	equal to or greater than 0.040
D	0.801 – 0.900	equal to or greater than 0.020
E, F	> 0.900	equal to or greater than 0.010

Using these criteria, for example, a project would not have a significant impact at an intersection if it is operating at LOS C after the addition of project traffic and the incremental change in the volume/capacity (V/C) ratio is less than 0.040. However, in another example, if the intersection is operating at LOS E or LOS F and the incremental change in V/C ratio is 0.010 or greater, then the project would be considered to have a significant impact at that location.

The City of Los Angeles does not have threshold criteria for determining significant impacts at unsignalized intersections. For the purposes of this study, a significant impact was assumed to occur if the Project caused the level of service for the minor (controlled) approach to be either LOS E or LOS F and if installation of a traffic signal would be warranted.

4.2 Project Impact Analysis - Existing With Project

The intersection level of service analysis compared the V/C ratios at each intersection for the Existing Condition and the Existing With Project Condition, to determine the incremental difference in V/C ratios caused by the Project.

The results of the analysis is summarized in Table 4.1 for the AM peak hour and in Table 4.2 for the PM peak hour. These tables compare the level of service for Existing Conditions and Existing With Project Conditions, show the increase in V/C ratios at each intersection due to the Project, and identifies if the increase constitutes a significant impact. The intersection levels of service are also illustrated graphically in Figure 4.3 for the AM Peak Hour and Figure 4.4 for the PM Peak Hour.

County of Los Angeles Intersections - AM Peak Hour

The analysis summarized in Table 4.1 indicates that for the AM peak hour, with the addition of Project traffic the level of service would remain LOS D or better at 20 of the 28 intersections analyzed in the County of Los Angeles. Table 4.1 also shows that there would be significant impacts at 12 intersections, as listed below.

11. Central Ave & Rosecrans Ave	LOS D
26. Wilmington Ave & Imperial Hwy	LOS D
32. Wilmington Ave & El Segundo Blvd	LOS D
45. Alameda St & Imperial Hwy	LOS D
46. Alameda St & El Segundo Blvd	LOS D
10. Central Ave & El Segundo Blvd	LOS E
19. Compton Ave & 120 th St	LOS E
29. Wilmington Ave & 120 th St (West)	LOS E
36. Imperial Hwy & I-105 w/b Ramps	LOS E
17. Compton Ave & Imperial Hwy	LOS F
27. Wilmington Ave & I-105 e/b Ramps	LOS F
28. Wilmington Ave & 118 th St	LOS F

Five of the impacted intersections would operate at LOS D or better, four would operate at LOS E, and three would operate at LOS F.

County of Los Angeles Intersections - PM Peak Hour

The analysis summarized in Table 4.2 indicates that for the PM peak hour, with the addition of Project traffic the level of service would remain LOS D or better at 19 of the 28 intersections analyzed in the County of Los Angeles. Table 4.2 also shows that there would be significant impacts at 13 intersections, as listed below.

30. Wilmington Ave & 120 th St (East)	LOS C
3. Avalon Blvd & Rosecrans Ave	LOS D
19. Compton Ave & 120 th St	LOS D
26. Wilmington Ave & Imperial Hwy	LOS D
39. Mona Blvd & Imperial Hwy	LOS D
43. Alameda St & 103 rd St	LOS D
10. Central Ave & El Segundo Blvd	LOS E
17. Compton Ave & Imperial Hwy	LOS E
27. Wilmington Ave & I-105 e/b Ramps	LOS E
29. Wilmington Ave & 120 th St (West)	LOS E
36. Imperial Hwy & I-105 w/b Ramps	LOS E
32. Wilmington Ave & El Segundo Blvd	LOS E
28. Wilmington Ave & 118 th St	LOS F

Six of the impacted intersections would operate at LOS D or better, six would operate at LOS E, and one would operate at LOS F.

City of Compton Intersections – AM Peak Hour

The analysis summarized in Table 4.1 indicates that for the AM peak hour, with the addition of Project traffic the level of service would remain LOS D or better at 14 of the 16 intersections analyzed in the City of Compton. Table 4.1 also shows that there would be significant impacts at 4 intersections, as listed below.

61. Wilmington Ave & Alondra Blvd	LOS D
62. Wilmington Ave & Greenleaf Blvd	LOS D
21. Compton Ave & El Segundo Blvd	LOS E
33. Wilmington Ave & Rosecrans Ave	LOS E

City of Compton Intersections – PM Peak Hour

The analysis summarized in Table 4.2 indicates that for the PM peak hour, with the addition of Project traffic the level of service would remain LOS D or better at 13 of the 16 intersections analyzed in the City of Compton. Table 4.2 also shows that there would be significant impacts at 6 intersections, as listed below.

21. Compton Ave & El Segundo Blvd	LOS C
58. Wilmington Ave & W Compton Blvd	LOS D
63. Wilmington Ave & Walnut St	LOS D
33. Wilmington Ave & Rosecrans Ave	LOS E
61. Wilmington Ave & Alondra Blvd	LOS E
62. Wilmington Ave & Greenleaf Blvd	LOS E

City of Lynwood Intersections – AM Peak Hour

The analysis summarized in Table 4.1 indicates that for the AM peak hour, with the addition of Project traffic the level of service would remain LOS D or better at all 3 intersections analyzed in the City of Lynwood, and that the Project would not cause significant impacts at these intersections.

City of Lynwood Intersections – PM Peak Hour

The analysis summarized in Table 4.2 indicates that for the PM peak hour, with the addition of Project traffic the level of service would remain LOS D or better at all 3 intersections analyzed in the City of Lynwood. Table 4.2 also shows that there would be a significant impact at 1 intersection, as listed below.

54. Imperial Hwy & State St	LOS D
-----------------------------	-------

City of Los Angeles Intersections – AM Peak Hour

The analysis summarized in Table 4.1 indicates that for the AM peak hour, with the addition of Project traffic the level of service would remain LOS D or better at 17 of the 19 intersections analyzed in the City of Los Angeles. Table 4.1 also shows that there would be significant impacts at 5 intersections, as listed below.

1. Avalon Blvd & Imperial Hwy	LOS C
6. Central Ave & Imperial Hwy	LOS C
7. Central Ave & I-105 w/b Ramps	LOS D
9. Central Ave & 120 th St	LOS D
25. Wilmington Ave & 112 th St	LOS F

Four of the five impacted intersections would operate at LOS D or better. The intersection of Wilmington Ave & 112th St would operate at LOS F on the minor approach, and a traffic signal would be warranted.

City of Los Angeles Intersections – PM Peak Hour

The analysis summarized in Table 4.2 indicates that for the PM peak hour, with the addition of Project traffic the level of service would remain LOS D or better at 17 of the 19 intersections analyzed in the City of Los Angeles. Table 4.2 also shows that there would be significant impacts at 6 intersections, as listed below.

1. Avalon Blvd & Imperial Hwy	LOS C
2. Avalon Blvd & 120 th St	LOS C

6. Central Ave & Imperial Hwy	LOS D
7. Central Ave & I-105 w/b Ramps	LOS D
9. Central Ave & 120 th St	LOS D
25. Wilmington Ave & 112 th St	LOS F

Five of the six impacted intersections would operate at LOS D or better. The intersection of Wilmington Ave & 112th St would operate at LOS F on the minor approach, and a traffic signal would be warranted.

City of Los Angeles Intersections – Shared With County of Los Angeles - AM Peak Hour

Four of the 28 intersections located in the County of Los Angeles and analyzed above with the County's impact thresholds have common jurisdiction with the City of Los Angeles. These intersections were also analyzed using the City of Los Angeles methodology and significant impact criteria.

The analysis summarized in Table 4.1 indicates that for the AM peak hour, with the addition of Project traffic the level of service would remain LOS D or better at 3 of the 4 shared intersections analyzed for the City of Los Angeles. Table 4.1 also shows that there would significant impacts at 2 intersections, as listed below.

36. Imperial Hwy & I-105 w/b Ramps	LOS D
17. Compton Ave & Imperial Hwy	LOS F

These results are the same as the analysis under the County methodology, except that whereas under the County methodology there would be a significant impact at Intersection #26 at Wilmington Avenue & Imperial Highway, there would not be a significant impact under the City of Los Angeles methodology.

City of Los Angeles Intersections – Shared With County of Los Angeles - PM Peak Hour

The analysis summarized in Table 4.2 indicates that for the PM peak hour, with the addition of Project traffic the level of service would remain LOS D or better at all 4 of the shared intersections analyzed for the City of Los Angeles. Table 4.2 also shows that there would significant impacts at 3 intersections, as listed below.

39. Mona Blvd & Imperial Hwy	LOS C
17. Compton Ave & Imperial Hwy	LOS D
36. Imperial Hwy & I-105 w/b Ramps	LOS D

These results are the same as the analysis under the County methodology, except that whereas under the County methodology there would be a significant impact at Intersection #26 at

Wilmington Avenue & Imperial Highway, there would not be a significant impact under the City of Los Angeles methodology.

Summary - All Intersections – AM Peak Hour

In summary, Table 4.1 shows that for the AM peak hour, with the addition of Project traffic the level of service would remain LOS D or better at 55 of the 66 total intersections analyzed. Table 4.1 also shows that there would significant impacts at 21 intersections.

Summary - All Intersections – PM Peak Hour

In summary, Table 4.2 shows that for the PM peak hour, with the addition of Project traffic the level of service would remain LOS D or better at a 53 of the 66 total intersections analyzed. Table 4.1 also shows that there would significant impacts at 26 intersections.

5. Future Conditions Background

The Traffic Study analyzes future conditions in Year 2035, the year representing build-out of the Specific Plan. This chapter describes data inputs and the development of traffic forecasts for that year.

5.1 Cumulative (Related) Projects

List of Cumulative Projects

The County of Los Angeles methodology requires that the trips from cumulative projects in the area of the Projects be considered in future conditions analyses. The following section of this chapter describes the process of estimating traffic from these related projects.

A list of proposed development projects that could affect traffic conditions in the Project Area by adding traffic volumes to study area intersections was prepared based on information provided by County of Los Angeles staff. The City of Los Angeles, City of Compton, and City of Lynwood were contacted for information regarding related projects and data was received from Los Angeles and Compton which were included in the Study. A total of 12 potential development projects were identified within an approximately 1.5-mile radius from the Project Site that are currently under construction, have received formal approval, or are under formal planning consideration and potentially could be in place by the year 2035 when the Project will be completed, and that could add traffic growth to the roadways in the study area. The locations of the cumulative projects are shown in Figure 5.1 and are listed in Table 5.1.

This approach is conservative in that not all of the related projects may be ultimately built, and for purposes of preparing a conservative analysis, no potential street improvements or transportation mitigation measures that might be associated with any of the related projects were included in the future conditions traffic analysis.

Cumulative Projects Trip Generation and Distribution

Trip generation estimates for the related projects were prepared, as shown in Table 5.1. These were generally taken from the environmental and/or traffic studies prepared for the individual projects. Where the information was not available from previous reports, the trip generation was estimated using trip rates from the Institute of Transportation Engineers (ITE) Trip generation, 9th Edition. These estimates are considered conservative in that they do not account for trip interaction between projects, and they do not in every case account for the possible use of non-auto modes such as transit, walk and bicycling.

Sources:

Los Angeles County data from Los Angeles County's Cumulative Project Report, 9/21/2015.
City of Los Angeles data from Case Logging and Tracking Sysytem - Related Projects, 10/15/2015.
City of Compton data received directly from City of Compton, 10/27/2015.

Similarly, trip distribution estimates were also taken from the environmental/traffic studies conducted for the individual projects where available or were estimated based on an understanding of the type of the project, its location, the geographic distribution of population and employment from which project trips may be drawn, and the surrounding roadway and circulation system. It should be noted that because of the large geographic distribution of these projects, that not all of the related project trips would travel through all of the study area or traverse all of the study intersections.

5.2 Future Traffic Conditions – County of Los Angeles Intersections

The County of Los Angeles procedures require analysis for the following conditions:

- Existing Conditions
- Existing Plus Project Conditions
- Existing Plus Project Plus Cumulative Conditions

The Existing Conditions and Existing Plus Project Conditions have been analyzed in Chapter 2 and Chapter 4 respectively. In order to provide traffic forecasts for the Existing Plus Project Plus Cumulative Conditions, the trip estimates shown in Table 5.1 for cumulative projects were added to the roadway network and combined with existing traffic volumes and project traffic volumes to provide forecasts of Existing Plus Project Plus Cumulative traffic conditions in the study area in 2035, for both the AM and PM peak periods. This process was also conducted for intersections in the Cities of Compton and Lynwood.

5.3 Future Traffic Conditions – City of Los Angeles Intersections

The City of Los Angeles procedures require analysis for the following conditions:

- Existing Conditions
- Existing Plus Cumulative Conditions (Future Without Project)
- Existing Plus Cumulative Plus Project Conditions (Future With Project)

The Existing Conditions have been analyzed in Chapter 2. In order to develop the traffic forecasts for the Existing Plus Cumulative (Future Without Project) Conditions, two steps were required. Per the City's methodology, an ambient traffic growth was first calculated that represents a general growth in traffic volumes due to minor new developments in the Project Area, and regional growth and development outside the study area. A background growth projection was estimated from the Los Angeles Congestion Management Program (CMP) forecasts for the local area. The background growth for RSA 21 – in which the Willowbrook TOP area is located – for 2016 to 2035 growth is 1.097, representing an annual growth of 0.49% per year. The existing traffic counts were therefore adjusted upward by a total of 0.49

% a year for nineteen years (from 2016 to 2035) to represent the ambient growth to the Project completion year.

The trip estimates shown in Table 5.1 for cumulative projects were then also added to the roadway network and combined with the existing plus ambient traffic volumes to provide data for the Existing Plus Cumulative (Future Without Project) Conditions. The final step was then to add the Project trips (from Chapter 3) to the roadway network to obtain the traffic forecasts for the Existing Plus Cumulative Plus Project Conditions (Future With Project) traffic conditions in the study area in 2035, for both the AM and PM peak periods.

5.4 Cumulative Transportation Projects

In addition to the transportation improvements in the Specific Plan, a number of transportation improvements are planned by others for the future in the area of the Specific Plan

Willowbrook Area Access Improvements

This County of Los Angeles project will implement street enhancements on Wilmington Avenue between Imperial Highway & 120th Street (West), and on 120th Street between Willowbrook Avenue & Compton Avenue. Streetscape improvements will including paved crosswalks on Wilmington Avenue. A road diet on 120th Street will add bike lanes in each direction and reduce the number of traffic lanes from four to three between Wilmington & Compton on 120th Street. Left turn lanes will be retained at intersections. This project has been included in the Specific Plan and the roadway lane and configuration changes are incorporated into the future conditions analysis.

Willowbrook/Rosa Parks Station

A Metro Project is designed to improve the functionality, safety, security and circulation at the station. Metro is designing the improvements, and has conducted a separate environmental review¹. All improvements are on-site at the station, and there are no changes to street traffic movements or vehicular circulation patterns on adjacent streets. The station improvements are therefore not included in this study,

County of Los Angeles Bicycle Master Plan

This plan includes the following elements in the Specific Plan area.

¹ Willowbrook/Rosa Parks Station Improvement Project - Initial Study/Documented Categorical Exclusion, Metro, May 2015.

Implement Class I Bike Facility in the Specific Plan area on:

- Willowbrook Avenue West between Metro Station and 119th Street. This would reduce the roadway from two southbound traffic lanes to one southbound traffic lane. Incorporated in study.

Implement Class II Bike Lanes in the Specific Plan area on:

- Wilmington Avenue, south of 119th Street
- Imperial Highway, between Compton Avenue & Wilmington Avenue
- 120th Street, between Compton Avenue & Wilmington Avenue.

These projects are included in the Specific Plan, and their incorporation into the traffic study is described in Chapter 3.

City of Los Angeles Bicycle Master Plan

This plan includes the following elements in the Specific Plan area.

Implement Class II Bike Lanes in the Specific Plan area on:

- Imperial Highway, between Wilmington Avenue & Mona Avenue

This project is included in the Specific Plan, and its incorporation into the traffic study is described in Chapter 3.

Implement Class III Bike Routes in the Specific Plan area on:

- Wilmington Avenue north of Imperial Highway.

This implementation would not affect the number of traffic lanes, so no roadway configuration changes are incorporated in the traffic analysis.

6. Existing With Project With Cumulative Conditions

This section of the report documents an analysis of potential Project impacts for the Existing With Project With Cumulative Condition. The trip estimates generated by related projects shown in Table 5.1 were added to the roadway network and combined with the volumes used for the Existing Plus Project Conditions analyzed in Chapter 4, to forecast Future with Project With Cumulative Conditions traffic volumes, for both the AM and PM peak periods. The total Existing With Project With Cumulative peak hour traffic volumes are illustrated in Figures 6.1 and 6.2 for the AM and PM peak hours respectively.

The analysis then used the methodologies (as described in Chapter 2) and thresholds for significant impact appropriate to each of the different jurisdictions, to calculate intersection level of service and potential impacts. The analysis used the same thresholds described in Chapter 4 for determining significant traffic impacts.

6.1 Project Impact Analysis - Existing With Project With Cumulative

The intersection level of service analysis compared the V/C ratios at each intersection for the Existing Condition and the Existing With Project With Cumulative Condition, to determine the incremental difference in V/C ratios caused by the Project.

The results of the analysis is summarized in Table 6.1 for the AM peak hour and in Table 6.2 for the PM peak hour. These tables compare the level of service for Existing Conditions and Existing With Project With Cumulative Conditions, show the increase in V/C ratios at each intersection due to the Project, and identifies if the increase constitutes a significant impact. The intersection levels of service are also illustrated graphically in Figure 6.3 for the AM Peak Hour and Figure 6.4 for the PM Peak Hour.

County of Los Angeles Intersections - AM Peak Hour

The analysis summarized in Table 6.1 indicates that for the AM peak hour, with the addition of Project and Cumulative traffic the level of service would remain LOS D or better at 21 of the 28 intersections analyzed in the County of Los Angeles. Table 6.1 also shows that there would significant impacts at 13 intersections, as listed below.

39. Mona Blvd & Imperial Hwy	LOS C
11. Central Ave & Rosecrans Ave	LOS D
26. Wilmington Ave & Imperial Hwy	LOS D
32. Wilmington Ave & El Segundo Blvd	LOS D

17. Compton Ave & Imperial Hwy	LOS F
27. Wilmington Ave & I-105 e/b Ramps	LOS F
28. Wilmington Ave & 118 th St	LOS F

Six of the impacted intersections would operate at LOS D or better, four would operate at LOS E, and three would operate at LOS F.

County of Los Angeles Intersections - PM Peak Hour

The analysis summarized in Table 6.2 indicates that for the PM peak hour, with the addition of Project and Cumulative traffic the level of service would remain LOS D or better at 19 of the 28 intersections analyzed in the County of Los Angeles. Table 6.2 also shows that there would significant impacts at 15 intersections, as listed below.

30. Wilmington Ave & 120 th St (East)	LOS C
11. Central Ave & Rosecrans Ave	LOS D
19. Compton Ave & 120 th St	LOS D
26. Wilmington Ave & Imperial Hwy	LOS D
39. Mona Blvd & Imperial Hwy	LOS D
43. Alameda St & 103 rd St	LOS D
3. Avalon Blvd & Rosecrans Ave	LOS E
17. Compton Ave & Imperial Hwy	LOS E
29. Wilmington Ave & 120 th St (West)	LOS E
32. Wilmington Ave & El Segundo Blvd	LOS E
36. Imperial Hwy & I-105 w/b Ramps	LOS E
46. Alameda St & El Segundo Blvd	LOS E
10. Central Ave & El Segundo Blvd	LOS F
27. Wilmington Ave & I-105 e/b Ramps	LOS F
28. Wilmington Ave & 118 th St	LOS F

Six of the impacted intersections would operate at LOS D or better, six would operate at LOS E, and three would operate at LOS F.

City of Compton Intersections – AM Peak Hour

The analysis summarized in Table 6.1 indicates that for the AM peak hour, with the addition of Project and Cumulative traffic the level of service would remain LOS D or better at 14 of

the 16 intersections analyzed in the City of Compton. Table 6.1 also shows that there would significant impacts at 4 intersections, as listed below.

61. Wilmington Ave & Alondra Blvd	LOS D
62. Wilmington Ave & Greenleaf Blvd	LOS D
21. Compton Ave & El Segundo Blvd	LOS E
33. Wilmington Ave & Rosecrans Ave	LOS E

City of Compton Intersections – PM Peak Hour

The analysis summarized in Table 6.2 indicates that for the PM peak hour, with the addition of Project and Cumulative traffic the level of service would remain LOS D or better at 12 of the 16 intersections analyzed in the City of Compton. Table 6.2 also shows that there would significant impacts at 9 intersections, as listed below.

42. Willowbrook Ave & Rosecrans Ave	LOS C
21. Compton Ave & El Segundo Blvd	LOS D
57. Central Ave & W Compton Blvd	LOS D
58. Wilmington Ave & W Compton Blvd	LOS D
63. Wilmington Ave & Walnut St	LOS D
33. Wilmington Ave & Rosecrans Ave	LOS E
60. Central Ave & Alondra Blvd	LOS E
61. Wilmington Ave & Alondra Blvd	LOS E
62. Wilmington Ave & Greenleaf Blvd	LOS E

City of Lynwood Intersections – AM Peak Hour

The analysis summarized in Table 6.1 indicates that for the AM peak hour, with the addition of Project and Cumulative traffic the level of service would remain LOS D or better at all 3 intersections analyzed in the City of Lynwood, and that the Project would not cause a significant impact at these intersections.

City of Lynwood Intersections – PM Peak Hour

The analysis summarized in Table 6.2 indicates that for the PM peak hour, with the addition of Project and Cumulative traffic the level of service would remain LOS D or better at all 3 intersections analyzed in the City of Lynwood. Table 6.2 also shows that there would a significant impact at 1 intersection, as listed below.

54. Imperial Hwy & State St	LOS D
-----------------------------	-------

City of Los Angeles Intersections – AM Peak Hour

The analysis summarized in Table 6.1 compares the Future Without Project and Future With Project Conditions and indicates that for the AM peak hour, with the addition of Project traffic the level of service would remain LOS D or better at 15 of the 19 intersections analyzed in the City of Los Angeles. Table 6.1 also shows that there would significant impacts at 5 intersections, as listed below.

1. Avalon Blvd & Imperial Hwy	LOS D
6. Central Ave & Imperial Hwy	LOS D
7. Central Ave & I-105 w/b Ramps	LOS E
9. Central Ave & 120 th St	LOS E
25. Wilmington Ave & 112 th St	LOS F

Two of the impacted intersections would operate at LOS D or better, and two would operate at LOS E. The intersection of Wilmington Ave & 112th St would operate at LOS F on the minor approach, and a traffic signal would be warranted.

City of Los Angeles Intersections – PM Peak Hour

The analysis summarized in Table 6.2 compares the Future Without Project and Future With Project Conditions and indicates that for the PM peak hour, with the addition of Project traffic the level of service would remain LOS D or better at 15 of the 19 intersections analyzed in the City of Los Angeles. Table 6.2 also shows that there would significant impacts at 6 intersections, as listed below.

2. Avalon Blvd & 120 th St	LOS C
1. Avalon Blvd & Imperial Hwy	LOS D
6. Central Ave & Imperial Hwy	LOS D
7. Central Ave & I-105 w/b Ramps	LOS E
9. Central Ave & 120 th St	LOS E
25. Wilmington Ave & 112 th St	LOS F

Three of the impacted intersections would operate at LOS D or better, and two would operate at LOS E. The intersection of Wilmington Ave & 112th St would operate at LOS F on the minor approach, and a traffic signal would be warranted.

City of Los Angeles Intersections – Shared With County of Los Angeles - AM Peak Hour

Four of the 66 intersections located in the County of Los Angeles and analyzed above with the County's impact thresholds have common jurisdiction with the City of Los Angeles. These intersections were also analyzed using the City of Los Angeles methodology and significant impact criteria.

The analysis summarized in Table 6.1 indicates that for the AM peak hour, with the addition of Project and Cumulative traffic the level of service would remain LOS D or better at 3 of the 4 shared intersections analyzed for the City of Los Angeles. Table 6.1 also shows that there would significant impacts at 3 intersections, as listed below.

26. Wilmington Ave & Imperial Hwy	LOS C
36. Imperial Hwy & I-105 w/b Ramps	LOS D
17. Compton Ave & Imperial Hwy	LOS F

These results are the same as the analysis under the County methodology, except that at Intersection #39 there would be a significant impact under the County methodology but not under the City methodology.

City of Los Angeles Intersections – Shared With County of Los Angeles - PM Peak Hour

The analysis summarized in Table 6.2 indicates that for the PM peak hour, with the addition of Project traffic the level of service would remain LOS D or better at 3 of the 4 of the shared intersections analyzed for the City of Los Angeles. Table 6.2 also shows that there would significant impacts at all 4 intersections, as listed below.

26. Wilmington Ave & Imperial Hwy	LOS C
17. Compton Ave & Imperial Hwy	LOS D
39. Mona Blvd & Imperial Hwy	LOS D
36. Imperial Hwy & I-105 w/b Ramps	LOS E

These results are the same as the analysis under the County methodology.

Summary - All Intersections – AM Peak Hour

In summary, Table 6.1 shows that for the AM peak hour, with the addition of Project traffic the level of service would remain LOS D or better at 53 of the 66 total intersections analyzed. Table 6.1 also shows that there would significant impacts at 22 intersections

Summary - All Intersections – PM Peak Hour

In summary, Table 6.2 shows that for the PM peak hour, with the addition of Project traffic the level of service would remain LOS D or better at 49 of the 66 total intersections analyzed. Table 6.2 also shows that there would significant impacts at 31 intersections

6.2 Project Impacts – CMP Analysis

The Los Angeles County Congestion Management Program (CMP) requires that new development projects analyze potential project impacts on CMP monitoring locations, if an EIR is prepared for the Project. When a CMP analysis is needed, the CMP methodology requires that the Traffic Study analyze traffic conditions at all CMP arterial monitoring intersections where the Project will add 50 or more trips during either the AM or PM weekday peak hours of adjacent street traffic. The CMP also requires that traffic studies analyze mainline freeway monitoring stations where the Project will add 150 or more trips in either direction during either AM or PM weekday peak hours. If, based on these criteria, the Traffic Study identifies no facilities for study, then no further traffic analysis is required.

CMP Arterial Monitoring Locations

A review of the CMP indicated the following arterial monitoring stations that are closest to the Project Site:

- Manchester Ave & Vermont Ave
- Manchester Ave & Avalon Blvd
- Alameda St & Firestone Blvd
- Alameda St & Imperial Hwy
- Alameda St & W Compton Blvd
- Alameda St SR-91 EB Ramps

The additional trips added by the Project at these intersections are shown Table 6.3 below.

The closest monitoring locations to the Project site are at the Alameda St & Imperial Hwy, Alameda St & Firestone Blvd, Alameda St & W Compton Blvd, and Manchester Ave & Avalon Blvd intersections which are located approximately four miles or less from the Project Site. The other monitoring locations at Alameda St & the SR-91 EB Ramps, and at Manchester Ave & Vermont Ave, are located further away from and between four and six miles from the Project Site.

Based on the trip generation and trip distribution characteristics of the Project as described in Chapter 3, the number of Project trips that would be added to these locations was calculated and is shown in Table 6.3. For locations further from the Project site, Project trips will disperse onto an increasing number of roadways so the incremental addition of trips will reduce with distance from the Project.

As can be seen in Table 6.3, the Project will add 50 or more trips to four CMP monitoring locations, which would exceed the threshold to require analysis. Further analysis of these four locations was therefore conducted.

Table 6.3 CMP Arterial Analysis – Number of Trips Added by Project

<i>Monitoring Location</i>	<i>No. of Trips Added by Project</i>	
	<i>AM</i>	<i>PM</i>
Alameda St & Firestone Blvd	77	92
Alameda St & Imperial Hwy	237	294
Alameda St & W Compton Blvd	58	67
Alameda St SR-91 EB Ramps	37	43
Manchester Ave & Avalon Blvd	40	47
Manchester Ave & Vermont Ave	0	0

Significant Impact Thresholds

The impact analysis used the Los Angeles County CMP threshold of significance, which states that a significant impact occurs when the proposed project increases traffic demand on a CMP facility by 2% of capacity ($V/C \geq 0.02$), causing LOS F ($V/C > 1.00$); if the facility is already at LOS F, a significant impact occurs when the proposed project increases traffic demand on a CMP facility by 2% of capacity ($V/C \geq 0.02$).

Impact Analysis

The analysis was based on existing traffic counts, forecasts of Future Without Project traffic volumes using the methodology described in Chapter 5, and the addition of Proposed Project trips as described in Chapter 3, to analyze the Future With Project conditions. The analysis of the four CMP intersections identified above is summarized in Table 6.4. As shown in Table 6.4, while the Project would increase the V/C rates at the intersections, the level of service would not change except at one location, and the incremental increase in V/C ratio would be less than the significant impact threshold of 0.02. Based on this analysis, the Project would not cause any significant traffic impacts at any of the four CMP monitoring intersections.

CMP Freeway Monitoring Stations

A review of the CMP also indicated the following freeway monitoring stations that are nearest to the Project Site.

Table 6.4 Future With Project Conditions - CMP Intersection Analysis - AM Peak Hour

No.	CMP Intersection	Existing Conditions (2016)		Future Without Project Conditions		Future With Project Conditions		Change in V/C	Significant Impact
		V/C	LOS	V/C	LOS	V/C	LOS

Table 6.4 Future With Project Conditions - CMP Intersection Analysis - PM Peak Hour

No.	CMP Intersection	Existing Conditions (2016)		Future Without Project Conditions		Future With Project Conditions		Change in V/C	Significant Impact
		V/C	LOS	V/C	LOS	V/C	LOS		
1	Alameda St & Firestone Blvd	0.924	E	1.003	F	1.018	F	0.015	No
2	Alameda St & Imperial Hwy	0.799	C	0.876	D	0.891	D	0.015	No
3	Alameda St & W Compton Blvd	0.637	B	0.694	B	0.705	C	0.011	No
4	Alameda St & SR-91 EB Ramps	0.829	D	0.899	D	0.899	D	0.000	No

- I-105 East of Crenshaw Blvd, West of Vermont Ave
- I-105 West of I-710, East of Harris Ave
- I-105 East of Bellflower Blvd, West of I-605
- I-110 at Manchester Blvd
- I-710 North of I-105, North of Firestone Blvd
- I-710 North of I-405, South of Del Amo Blvd
- SR-91 East of Alameda St / Santa Fe Ave

None of these locations are located close to the Project Site. The closest (I-105 West of I-710, East of Harris Ave) is located 4.0 miles from the Project Site and the second closest (I-105 East of Crenshaw Blvd) is located about 5.0 miles from the Project Site. The remaining stations are located considerable distances from the Project Site (up to 9.8 miles).

The number of Project vehicle trips expected to pass through these stations was estimated based on the Project trip generation and distribution discussed in Chapter 3. The additional trips added by the Project at these locations are shown in Table 6.5 below.

The incremental volumes are above the CMP threshold of 150 trips at four locations listed in Table 6.5. Further analysis was therefore conducted at those locations.

Significant Impact Thresholds

The impact analysis used the Los Angeles County CMP threshold of significance, which states that a significant impact occurs when the proposed project increases traffic demand on a CMP facility by 2% of capacity ($V/C \geq 0.02$), causing LOS F ($V/C > 1.00$); if the facility is already at LOS F, a significant impact occurs when the proposed project increases traffic demand on a CMP facility by 2% of capacity ($V/C \geq 0.02$).

Impact Analysis

Existing traffic volumes on these freeway segments in the A.M. and P.M. peak hours were obtained from the *2010 Congestion Management Program for Los Angeles County* (LACMTA). Freeway levels of service are determined by calculating demand/capacity ratios per the definitions shown in Table 6.6

Existing Conditions levels of service were calculated for each freeway segment using a capacity of 2,000 vehicles per hour per freeway mainline lane (as per the 2010 Congestion Management Program). The 2035 Future Without Project base freeway traffic volumes were projected by factoring existing volumes by the regional growth factors discussed in Chapter 5. Trips from the Project were assigned to the freeway system using the Project trip generation and the Project trip distribution discussed in Chapter 3. The number of Project vehicle trips

Table 6.5 CMP Freeway Analysis – Number of Trips Added by Project

	SB	17	34
SR-91 e/o Alameda St / Santa Fe Ave	EB	17	32
	WB	31	20

expected to pass through the CMP monitoring locations closest to the Project was estimated based on the methodology described above. The CMP freeway impact analysis at the four locations is shown in Table 6.7 for the AM peak hour and in Table 6.8 for the PM peak hour.

In the AM peak hour, the addition of vehicle trips generated by the Project would cause significant impacts according to CMP criteria at two freeway monitoring locations, at:

- I-105 westbound (West of I-710, East of Harris Ave)
- I-105 westbound (East of Bellflower Blvd. West of I-605)

The Project would cause an increase in V/C of 0.031 and 0.032 at these locations, slightly above the threshold of 0.020 for a significant impact.

Table 6.6 Level of Service Definitions for Freeway Mainline Segments

<i>Level of Service</i>	<i>Demand/Capacity Ratio</i>
A	0.00 – 0.35
B	>0.35 – 0.54
C	>0.54 – 0.77
D	>0.77 – 0.93
E	>0.93 – 1.00
F (0)	>1.00 – 1.25
F (1)	>1.25 – 1.35
F (2)	>1.35 – 1.45
F (3)	>1.45

Source: Draft 2010 *Congestion Management Plan for Los Angeles County, LACMTA, 2010.*

In the PM peak hour, the addition of vehicle trips generated by the Project would cause significant impacts according to CMP criteria at four freeway monitoring locations, at:

- I-105 eastbound (West of I-710, East of Harris Ave)
- I-105 westbound (West of I-710, East of Harris Ave)
- I-105 eastbound (East of Bellflower Blvd. West of I-605)
- I-105 westbound (East of Bellflower Blvd. West of I-605)

The Project would cause an increase in V/C of between 0.023 and 0.038 at these locations, slightly above the threshold of 0.020 for a significant impact. The freeway would be operating at LOS F at these locations without the Project.

CMP Transit Impact Analysis

As an EIR is being prepared for the Project, an analysis of potential Project impacts on the transit system was also performed, per the CMP requirements and guidelines.

Significant Impact Thresholds

For the purposes of this traffic study, the following criterion was established to determine if there would be any significant transit impacts due to the Project:

- The capacity of the transit system serving the Project area would be substantially exceeded.

Transit Analysis

The number of transit trips that would be generated by the Project was estimated based on the trip generation methodology described in Chapter 3. The estimate of base vehicle trips for each Project land use in Table A-4 and Table A-5 (excluding internal trips) was converted to person trips by applying a conversion factor of 1.4, as per CMP guidelines. The person trip numbers were then multiplied by the estimated percent taking transit for each land use, as previously discussed in Chapter 3 and identified in Tables A-4 and Table A-5. These numbers are project specific and more appropriate than the default countywide guidelines in the CMP as they reflect the estimated transit use that would occur for the Project because of its location near numerous transit lines.

The estimated number of transit trips for the CMP analysis is shown in Table 6.9. In the AM peak hour the Project would generate an estimated 873 net additional transit trips (521 inbound trips and 352 outbound trips), and in the PM peak hour approximately 1,094 additional transit trips (462 inbound and 632 outbound), as shown in Table 6.9. The highest number of additional transit trips would therefore occur in the PM peak hour.

Based on the information presented in Chapter 2 on the existing transit services in the Specific Plan area, the peak hour capacity of the transit system serving the Project Site is approximately 7,920 persons per direction. The highest directional volume of peak hour trips added by the Project would be 632 trips, which would represent approximately 8% of the total transit capacity during the peak hour. Based on a discussion with Metro, Project's projected increase in transit ridership of approximately 8% would not exceed the existing capacity of the transit system and the project would result in less than significant impact on transit services¹.

7. Freeway Analysis

This section of the report presents an analysis of the freeway system in the area of the Proposed Project. The analysis of the state highway facilities was conducted according to analysis locations and methodologies agreed with Caltrans, and follows the Caltrans Traffic Study Guidelines and measures of effectiveness.

It addresses freeway mainline locations (segments) and freeway off-ramps in locations that would most likely be affected by Project traffic. The traffic forecasts used in the analysis are consistent with those developed in Chapter 4 and Chapter 6 and use the trip generation and trip distribution information described earlier in Chapter 3. Similarly, the analysis focuses on the Existing With Project and Future With Project Conditions (for the year 2025).

7.1 Freeway Mainline Segments

The analysis addresses ten freeway mainline segments on the I-110, I-105, I-710, and SR-91 freeways that are closest to, and that provide regional access to, the Project site. Figure 7.1 illustrates the location of study locations.

Methodology

Existing traffic volumes on these freeway segments for the AM peak hour and PM peak hour time periods were provided by Caltrans. These 2015 volumes were factored by 1% to represent 2016 volumes. Future Without Project Condition Future year 2035 freeway traffic volumes were developed from the traffic projections described in Chapter 5 including ambient/regional growth and the cumulative projects identified for the area. Future With Project Condition traffic volumes were obtained by adding trips generated by the Project to forecasts for the freeway system for the Future Without Condition, based on the trip generation and trip distribution information described in Chapter 3.

Level of service for freeway segments is based on the total volume of traffic, or demand, traveling along a freeway segment compared to the capacity of that specific location. A lane capacity of 2,000 vehicles per hour per lane (vphpl) for a freeway mainline lane was used. Auxiliary lanes were not included in the analysis. The overall capacity of a specific freeway segment was calculated by multiplying the lane capacity by the total number of lanes in that

Figure 7.1
Freeway Mainline Segment Analysis Locations

segment. Freeway level of service (LOS) was then determined by comparing the total number of vehicles traveling along a specific freeway segment to the capacity of that segment as calculated above. These demand/capacity (D/C) ratios are then rated for levels of service using the definitions shown in Table 7-1.

Freeway Segment Analysis

Caltrans does not have published criteria for determination of significant impacts on freeway mainline segments. Caltrans endeavors to maintain a target LOS at the transition between LOS C and LOS D on State highway facilities, and to maintain the existing LOS in cases where a facility is operating at less than the target LOS. For the purposes of this study, the threshold that was used was that a significant impact would occur if the Project causes a worsening of the level of service to LOS D on a segment, or if the level of service was already LOS D that if the Project causes a change (worsening) in the level of service.

Existing With Project Conditions

The freeway segment analysis is summarized in Tables 7.2 and 7.3, which show the levels of service and demand/capacity (D/C) ratios for Existing Conditions, and Existing With Project conditions for the AM peak hour and the PM peak hour respectively. These tables also show the number of trips that would be added by the Project to each freeway segment. The following discussion refers to a location as one direction (i.e. twenty locations for ten freeway segments).

AM Peak Hour

In the AM peak hour, the Project would add between 12 and 342 trips to the freeway segments analyzed depending on location and direction. The highest volume increases (ranging from 141 to 342 trips) would occur at seven locations on I-105 between Avalon Boulevard and Long Beach Boulevard. At nine of the remaining fourteen locations the volume increase would be less than 50 trips.

The increase in trips due to the Project on freeway segments would range from 0.2 percent to 6.4 percent. The increase would be approximately 4% to 6% at four locations, less than 2% at thirteen locations, and less than 1% at nine locations.

The increase in D/C ratios would range from 0.001 to 0.052. At five locations the increase would be more than 0.025. At nine of the remaining 15 locations the increase would be less than 0.010.

The level of service would not change at any mainline freeway segment due to the Project, except at one location – the I-110 southbound between 135th St & Rosecrans Ave where it

Table 7.1 Level of Service Definitions for Freeway Segments

Level of Service	Demand/Capacity Ratio	Flow Conditions
A	0.00 – 0.35	Highest quality of service. Free traffic flow, low volumes and densities. Little or no restriction on maneuverability or speed.
B	0.36 – 0.54	Stable traffic flow, speed becoming slightly restricted. Low restriction on maneuverability.
C	0.55 – 0.77	Stable traffic flow, but less freedom to select speed, change lanes, or pass. Density increasing.
D	0.78 – 0.93	Approaching unstable flow. Speeds tolerable but subject to sudden and considerable variation. Less maneuverability and driver comfort.
E	0.94 – 1.00	Unstable traffic flow with rapidly fluctuating speeds and flow rates. Short headways, low maneuverability and low driver comfort.
F (0)	1.01 – 1.25	Forced traffic flow. Speed and flow may be greatly reduced with high densities.
F (1)	1.26 – 1.35	Forced traffic flow. Severe congested conditions prevail for more than one hour. Speed and flow may drop to zero with high densities.
F (2)	1.36 – 1.45	Forced traffic flow. Severe congested conditions prevail for more than one hour. Speed and flow may drop to zero with high densities.
F (3)	> 1.45	Forced traffic flow. Severe congested conditions prevail for more than one hour. Speed and flow may drop to zero with high densities.

Notes:

1. Traffic volumes for Existing Conditions from Caltrans, 2015. Growth factor of 1% per annum applied for 2016 volumes.

would change from LOS E to LOS F. The Project would therefore cause one significant freeway mainline segment impact in the AM peak hour under Existing Plus Project Conditions.

PM Peak Hour

In the PM peak hour, the Project would add between 15 and 397 trips to the freeway segments analyzed depending on location and direction. The highest volume increases (ranging from 177 to 397 trips) would occur at seven locations on I-105 between Avalon Boulevard and Long Beach Boulevard. At eleven of the remaining fourteen locations the volume increase would be less than 100 trips.

The increase in trips due to the Project on freeway segments would range from 0.2 percent to 8.0 percent. The increase would be approximately 4% to 8% at four locations, less than 2% at twelve locations, and less than 1% at eight locations.

The increase in D/C ratios would range from 0.001 to 0.062. At five locations the increase would be more than 0.035. At eleven of the remaining 15 locations the increase would be less than 0.010.

The level of service would not change at any mainline freeway segment due to the Project, except at I-110 southbound between 135th St & Rosecrans Ave where it would change from LOS E to LOS F. The Project would therefore cause one significant freeway mainline segment impact in the PM peak hour under Existing Plus Project Conditions

Future With Project Conditions (Includes Cumulative Trips)

The freeway segment analysis is summarized in Tables 7.4 and 7.5, which show the levels of service and demand/capacity (D/C) ratios for Existing Conditions, Future Without Project Conditions, and Future With Project conditions for the AM peak hour and the PM peak hour respectively. The Future With Project conditions include cumulative trips. These tables also show the number of trips that would be added by the Project to each freeway segment.

AM Peak Hour

In the AM peak hour, the Project would add between 12 and 342 trips to the freeway segments analyzed depending on location and direction. The highest volume increases (ranging from 141 to 342 trips) would occur at seven locations on I-105 between Avalon Boulevard and Long Beach Boulevard. At nine of the remaining fourteen locations the volume increase would be less than 50 trips.

Notes:

1. Traffic volumes for Existing Conditions from Caltrans, 2015. Growth factor of 1% per annum applied for 2016 volumes.

The increase in trips due to the Project on freeway segments would range from 0.2 percent to 6.4 percent. The increase would be approximately 4% to 6% at four locations, less than 2% at thirteen locations, and less than 1% at nine locations.

The increase in D/C ratios would range from 0.002 to 0.052. At four locations the increase would be more than 0.025. At eleven of the remaining sixteen locations the increase would be less than 0.010.

The level of service would not change at any mainline freeway segment due to the Project, except at one location - I-105 westbound between State St & Long Beach Blvd where it would change from LOS D to LOS E. The Project would therefore cause one significant freeway mainline segment impact in the AM peak hour under Future With Project Conditions.

PM Peak Hour

In the PM peak hour, the Project would add between 15 and 397 trips to the freeway segments analyzed depending on location and direction. The highest volume increases (ranging from 177 to 397 trips) would occur at seven locations on I-105 between Avalon Boulevard and Long Beach Boulevard. At eleven of the remaining fourteen locations the volume increase would be less than 100 trips.

The increase in trips due to the Project on freeway segments would range from 0.2 percent to 8.0 percent. The increase would be approximately 4% to 8% at four locations, less than 2% at twelve locations, and less than 1% at eight locations.

The increase in D/C ratios would range from 0.002 to 0.062. At five locations the increase would be more than 0.035. At nine of the remaining 15 locations the increase would be less than 0.010.

The level of service would not change at any mainline freeway segment due to the Project, except at three locations:

- I-105 westbound between Avalon Ave & Central Ave
- I-105 westbound between Compton Ave & Wilmington Ave
- I-105 westbound between State St & Long Beach Blvd

At all three locations the level of service would change from LOS D to LOS E with the Project. The Project would therefore cause three significant freeway mainline impacts in the PM peak hour under Future With Project Conditions.

7.2 Freeway Off-Ramps

The analysis reviewed a total of ten freeway off-ramps located along the I-110, I-105, and SR-91 freeways that could potentially be used by Project traffic. As illustrated in Figure 7.2, the following ramps were reviewed:

- I-110 NB off-ramp at El Segundo Blvd
- I-110 SB off-ramp at El Segundo Blvd
- I-105 EB off-ramp at Central Ave
- I-105 WB off-ramp at Central Ave
- I-105 EB off-ramp at Wilmington Ave
- I-105 WB off-ramp at Imperial Hwy
- I-105 EB off-ramp at Long Beach Blvd
- I-105 WB off-ramp at Long Beach Blvd
- SR-91 EB Off-ramp at Wilmington Ave
- SR-91 WB Off-ramp at Wilmington Ave

Methodology

Existing traffic volumes on these freeway off-ramps were obtained from traffic counts conducted as part of the overall traffic count program described in Chapter 2. Forecasts of the off-ramp volumes for Future Without Project Conditions were obtained from the analysis described in Chapter 5 including ambient/regional growth and trips from related projects. Forecasts for the Existing With Project Conditions and Future With Project Conditions were obtained using the analysis of Project trip generation and distribution described in Chapter 3.

The ramp analysis used operational parameters requested by Caltrans. The analysis of ramp traffic conditions is based on a queue analysis at the end of the ramp intersection, using the Highway Capacity Manual (HCM) 2010 Operations methodology, and determining the 95th percentile queue length (the vehicle queue length that would be exceeded only 5% of the time, which is a common measure used to evaluate queues). The analysis used signal timing information provided by Caltrans and the other cities in the study area. The analysis also determined the storage length capacity of an off-ramp and used 85% of the total (to include a Caltrans requested “safety” factor). It applied a passenger car equivalent (PCE) of 3.0 for heavy vehicles, used truck factors of 3% to 5% of the traffic volumes (as supplied by Caltrans), and car lengths of 30 feet. It should be noted that these are all conservative assumptions, and when combined together provide a very conservative worst case analysis.

Freeway Off-Ramp Analysis

Caltrans does not have published criteria for determination of significant impacts on freeway off-ramps. Caltrans’ primary concern is if peak hour traffic queues on an off-ramp exceed the storage length on the ramp and result in queues backing onto the mainline freeway.

Figure 7.2
Freeway Off-Ramp Analysis Locations

For the purposes of this study, the threshold that was used was that a significant impact would occur if the Project caused the overall queue on an off-ramp to exceed the overall storage capacity of the ramp.

Existing With Project Conditions

The freeway off-ramp analysis for the Existing With Project Conditions is summarized in Table 7.6 for the AM peak hour and in Table 7.7 for the PM peak hour. These tables show the ramp storage lengths, and the ramp volumes, and queue lengths for the Existing Condition and the Existing Plus Project Condition.

AM Peak Hour

As can be seen from Table 7.6, queues do not currently exceed the storage lengths on any of the off-ramps during the AM peak hour, except at two locations:

- I-110 SB Off-ramp at El Segundo Blvd
- I-105 EB Off-ramp at Central Ave.

The Project would add between 133 and 315 trips to three ramps in the AM peak hour, and between 0 and 47 trips at the other off-ramps analyzed.

For the Existing With Project conditions, the queues would not exceed the total ramp storage lengths at any of the ramps, except at the same two locations where storage lengths are currently exceeded under existing conditions:

- I-110 SB Off-ramp at El Segundo Blvd
- I-105 EB Off-ramp at Central Ave.

At these two off-ramps, the Project would not cause storage capacities to be exceeded, but would increase the queue lengths.

At a third location, at the I-105 WB Off-ramp at Imperial Hwy, the queue for one movement would exceed the storage length for that movement with the Project, but the overall ramp storage length would not be exceeded.

As the Project would not be the cause of the overall queue lengths exceeding the overall storage capacity of any ramps, the Project would not cause any significant impacts in the AM peak period for the Existing Plus Project Conditions.

PM Peak Hour

As can be seen from Table 7.7, overall queues do not currently exceed the total storage lengths on any of the ramps during the Weekday PM Peak hour.

The Project would add between 80 to 234 trips to three off-ramps in the PM peak hour, and between 0 and 30 trips at the other off-ramps analyzed.

For the Existing With Project conditions, the queues would not exceed the total ramp storage lengths at any of the ramps. For the I-105 EB off-ramp at Central Avenue, the queue for two of the ramp movements would exceed the storage length for those movement, but the overall queue length would not exceed the overall ramp storage capacity. For the I-105 WB off-ramp at Central Avenue, the queue for one movement would exceed the storage length for that movement, but the Project would not add any trips to that movement and the overall queue length would not exceed the overall ramp storage capacity. For the I-105 WB off-ramp at Imperial Hwy, the queue for one movement would exceed the storage length for that movement, but the overall queue length for the ramp as a would not exceed the overall ramp storage capacity. For the SR-91 WB off-ramp at Wilmington Avenue, the queue for the one movement would exceed the storage length for that movement (as it would for the existing condition without the Project), but the overall queue length for the ramp would not exceed the overall ramp storage capacity.

As the Project would not be the cause of the overall queue lengths exceeding the overall storage capacity of any ramps, the Project would not cause any significant impacts in the PM peak period for the Existing Plus Project Conditions.

Future With Project Conditions

The freeway off-ramp analysis for the Future With Project Conditions is summarized in Table 7.8 for the AM peak hour and in Table 7.9 for the PM peak hour. These tables show the ramp volumes and queue lengths for the Existing Condition, the Future Without Project Condition, and the Future With Project Condition.

AM Peak Hour

As can be seen from Table 7.8, queues do not currently exceed the overall storage lengths on any of the ramps under existing conditions during the AM peak hour, except at two locations:

- I-110 SB Off-ramp at El Segundo Blvd
- I-105 EB Off-ramp at Central Ave.

For the Future Without Project Conditions, overall queues would not exceed the overall storage lengths on any of the ramps under existing conditions during the AM peak hour, except at the same two locations as under Existing Conditions.

The Project would add between 133 and 315 trips to three ramps in the AM peak hour, and between 0 and 47 trips at the other off-ramps analyzed.

For the Future With Project conditions, the queues would not exceed the total ramp storage lengths at any of the ramps, except at the same two locations where storage lengths are exceeded under both Existing Conditions and Future Without Project Conditions:

- I-110 SB Off-ramp at El Segundo Blvd
- I-105 EB Off-ramp at Central Ave.

At these two off-ramps, the Project would not cause storage capacities to be exceeded (as they would already be exceeded under Future Without Project Conditions), but would increase the queue lengths.

At a third location, at the I-105 WB off-ramp at Imperial Hwy, the queue for two movements would exceed the storage length for those movements with the Project, but the overall ramp storage length would not be exceeded.

As the Project would not be the cause of the overall queue lengths exceeding the overall storage capacity of any ramps, the Project would not cause any significant impacts in the AM peak period for the Future Plus Project Conditions.

PM Peak Hour

As can be seen from Table 7.9, queues do not currently exceed the total storage lengths on any of the ramps under Existing Conditions during the PM peak hour.

For the Future Without Project Condition, the queue length would exceed the overall storage length at one off-ramp:

- I-105 EB Off-ramp at Central Ave

The Project would add between 80 to 234 trips to three off-ramps in the PM peak hour, and between 0 and 30 trips at the other off-ramps analyzed.

For the Future With Project conditions, the queues would not exceed the total ramp storage lengths at any of the ramps, except at three locations:

- I-110 SB Off-ramp at El Segundo Blvd

- I-105 EB Off-ramp at Central Ave
- I-105 WB Off-ramp at Imperial Hwy

For the I-105 SB off-ramp at El Segundo Blvd, the queue in the Future Without Project Conditions would be very close to the storage capacity. The Project would increase the overall queue length by only 2%, and would cause the queue length for the Future With Project Condition to be very slightly over the overall storage capacity. This would constitute a significant impact.

For the I-105 EB off-ramp at Central Avenue, the queue length for the Future With Project Condition would exceed the overall storage capacity as it would for the Future Without Project Condition. The Project would therefore not cause the overall storage capacity to be exceeded but would increase the queue length.

For the I-105 WB off-ramp at Imperial Highway, the Project would cause the overall queue length for the Future With Project Condition to exceed the overall storage capacity. The capacity would be exceeded by about 4%. This would constitute a significant impact.

At the I-105 WB Off-ramp at Central Ave, for the Future With Project Condition the queue for one movement would exceed the storage length for that movement, and it would also exceed the storage length in the Future Without Condition, but the Project would not add any trips to that movement and the overall queue length for the ramp would not exceed the overall ramp storage capacity.

At the I-105 WB Off-ramp at Long Beach Blvd., for the Future With Project Condition the queue for two westbound movements would exceed the storage length for those movements (as it also would for the Future Without Condition), but the overall queue length for the ramp would not exceed the overall ramp storage capacity.

Also, at the SR-91 WB Off-ramp at Wilmington Ave., for the Future With Project Condition the queue for one movement would exceed the storage length for that movement (as it also would for the Future Without Condition), but the overall queue length for the ramp would not exceed the overall ramp storage capacity.

The Project would therefore be the cause of the overall queue lengths exceeding the overall storage capacity of two ramps, and the Project would cause two significant impacts in the PM peak period for the Future Plus Project Conditions.

8. Project Mitigation

This Chapter of the report explores and identifies mitigation strategies to reduce significant transportation impacts identified in the earlier impact analyses for the Project, and describes a proposed transportation mitigation program.

8.1 Summary of Impacts

Impacts were identified in the following categories.

Intersection Impacts

The analysis in Chapters 4 and 6 (see Tables 4.1, 4.2 and 6.1, 6.2,) identified significant impacts in the Existing With Project and Existing With Project With Cumulative Conditions.

For the Existing With Project Conditions, in the AM peak hour, the Project would result in significant impacts at twenty one intersections, of which eleven intersections would operate at LOS D or better. In the PM peak hour, the Project would result in significant impacts at twenty six intersections, of which fifteen intersections would operate at LOS D or better.

For the Existing With Project With Cumulative Conditions, in the AM peak hour, the Project would result in significant impacts at twenty two intersections, of which ten intersections would operate at LOS D or better. In the PM peak hour, the Project would result in significant impacts at thirty one intersections, of which fifteen intersections would operate at LOS D or better.

CMP Impacts

The analysis in Chapter 6 (see Tables 6.7 and 6.8) identified significant impacts at two freeway mainline monitoring locations in the AM peak hour, and at four freeway monitoring locations in the PM peak hour.

Freeway Impacts

For the Existing With Project Condition, the analysis in Chapter 7 (see Table 7.2 and 7.3) identified that the Project would result in one significant mainline freeway impact in the AM peak hour, and one significant freeway mainline impact in the PM peak hour.

For the Existing With Project With Cumulative Condition, the analysis in Chapter 7 (see Table 7.4 and 7.5) identified that the Project would result in one significant mainline freeway impact in the AM peak hour, and three significant freeway mainline impact in the PM peak hour.

Also, for the Existing With Project With Cumulative Condition, the analysis in Chapter 7 (see Table 7.9) identified that the Project would result in two significant freeway off-ramp impacts in the PM peak hour.

8.2 Discussion of Mitigation Strategy

The Specific Plan (the Project) is for a transit-oriented district focused on the Willowbrook/Rosa Parks rail station. As discussed in Chapter 3, the Specific Plan is in a heavily urbanized area with significant levels of transit service. The purpose of the Specific Plan with respect to transportation is to “... *improve access to all modes of transportation, including transit, walking and bicycling.... to encourage transit oriented development, and promote active transportation.... to facilitate development, especially residential and employment-generating uses proximate to the Willowbrook/Rosa Parks Station... identify land use options that include mixed uses, increased housing opportunities, and neighborhood-serving retail uses...and improve pedestrian linkages between the Willowbrook/Rosa Parks Station, Kenneth Hahn Plaza, Martin Luther King Jr. Medical Center, Charles R. Drew University of Medicine and Science, future mixed use areas, and existing residential neighborhoods*”.

To these ends the Specific Plan focuses on enhancing alternatives to the car and improving access to transit and improving circulation for bicycles and pedestrians in the Specific Plan area. The Specific Plan includes a range of improvements to the bicycle and pedestrian networks in the Specific Plan area (see Chapter 3), including the installation of road diets to reduce traffic lanes in certain locations. Generally then, potential mitigation measures that widen roadways at the expense of the pedestrian and bicycle environment are therefore inconsistent with the goals and objectives of the Specific Plan and are considered to be infeasible. The restriping of traffic lanes within the existing curb-to-curb roadway cross section was however considered to be a feasible mitigation measure to the extent any such measure would not conflict with Specific Plan features or impact the bicycle and pedestrian facilities.

The feasibility of physical intersection improvements was investigated for all intersection locations where the Project would cause significant traffic impacts. This evaluation, which was conducted in conjunction with County staff, looked at the feasibility of re-striping traffic lanes and/or adding traffic lanes to modify intersection lane configurations, roadway widenings, and potential changes to signal timing and phasing. Roadway widenings were generally not feasible (due to the lack of available right-of-way because of existing buildings or lack of control over adjacent right-of-way, or because of inconsistency with Specific Plan

goals and objectives); lane re-stripings were considered to be feasible if they would not result in inadequate lane widths (minimum lane widths of 10' and 12' for curb lanes was maintained); and signal timing/phasing changes were considered to be feasible as long as they would improve and not worsen intersection operations or potentially cause other problems and/or impacts elsewhere. A Transportation Demand Management Program is considered to be a realistic option to reduce vehicle trips, but is not considered to be a quantifiable mitigation measure by the County of Los Angeles.

The Martin Luther King Jr. Medical Campus Tier 2 Expansion is included in the Specific Plan and the traffic study, as discussed in Chapter 3. The Martin Luther King Jr. Medical Campus EIR identified a number of traffic mitigations. All of these mitigations were evaluated in this current analysis, and included where they continue to be feasible. In the Specific Plan area, a number of those mitigations that involved roadway widening are considered to be now infeasible because of the Specific Plan goals, objectives and provisions, and so are not included in the following list of mitigation measures for this study.

8.3 Transportation Mitigation Measures - Intersection Improvements

No feasible mitigation measures were identified at the following intersections:

1. Avalon Blvd & Imperial Hwy
2. Avalon Blvd & 120th St
6. Central Ave & Imperial Hwy
19. Compton Ave & 120th St
26. Wilmington Ave & Imperial Hwy
29. Wilmington Ave & 120th St (West)
39. Mona Blvd & Imperial Hwy
42. Willowbrook Ave & Rosecrans Ave
58. Wilmington Ave & W Compton Blvd
62. Wilmington Ave & Greenleaf Blvd

At these locations, mitigation measures were not feasible due to insufficient roadway width to accommodate restriping for additional traffic lanes and/or the unavailability of additional right of way for roadway widening, as described above.

Feasible mitigation improvements were identified at a number of locations. The Project therefore proposes to implement the following physical mitigation measures.

The results of the mitigation analyses are shown in Tables 8.1 and 8.2 for the Existing With Project Conditions for the AM and PM peak hours respectively. Figure 8.1 shows the levels of service after mitigation graphically.

Tables 8.3 and 8.4 show the results of the mitigation analyses for the Existing With Project With Cumulative Conditions for the AM and PM peak hours respectively. Figure 8.2 shows the levels of service after mitigation graphically.

To address mitigations in jurisdictions outside the County of Los Angeles, individual projects that are developed within the Specific Plan area will perform a traffic impact analysis in accordance with the jurisdictions guidelines, disclose any impacts, and mitigate those impacts.

For mitigations at locations in the County of Los Angeles individual projects will construct the recommended traffic improvements, or equally beneficial improvements approved by the Director of Public Works.

County of Los Angeles Intersections

#3. Avalon Blvd & El Segundo Blvd

As shown in Tables 4.1 and 4.2, in the Existing With Project Conditions there is no significant impact in the AM peak hour, but a significant impact in the PM peak hour at this location.

As shown in Tables 6.1 and 6.2, in the Existing With Project With Cumulative Conditions there is no significant impact in the AM peak hour, but a significant impact in the PM peak hour at this location. The proposed mitigation measure is as follows.

Restripe the northbound approach to add a right turn lane. This would modify the approach from one left turn lane, one through lane, and one through-right turn lane to one left turn lane, two through lanes and a separate right turn lane. This can be accomplished by narrowing the median to 3'. This would need to occur all the way to an alley located approximately 100' south of the intersection. The bus stop at this approach would continue to be located at the same location; however, buses would be allowed to go straight through the intersection. This was a mitigation measure in the Martin Luther King Jr. Medical Campus EIR. In addition restripe the southbound approach to provide a separate right turn lane by narrowing the median to 2'. This would modify the approach from one left turn lane, one through lane, and one through-right turn lane to one left turn lane, two through lanes and a separate right turn lane.

For the Existing With Project Condition, these mitigation measures would fully mitigate the PM peak hour impact at this location.

For the Existing With Project With Cumulative Condition, these mitigation measures would partially mitigate the PM peak hour impact at this location. In the PM peak hour the level of service would improve to LOS D.

#10. *Central Ave & El Segundo Blvd*

As shown in Tables 4.1 and 4.2, in the Existing With Project Conditions there is a significant impact in both the AM and PM peak hours at this location.

As shown in Tables 6.1 and 6.2, in the Existing With Project With Cumulative Conditions there is a significant impact in both the AM and PM peak hours at this location. The proposed mitigation measure is as follows.

Restripe the southbound approach to provide a separate right-turn lane. Restripe the northbound approach by reducing median to 2'. This would modify both approaches from one left turn lane, one through lane, and one through-right turn lane to one left turn lane, two through lanes and a separate right turn lane. Allow buses to go through the intersection from the right-turn lane. This was a mitigation measure in the Martin Luther King Jr. Medical Campus EIR. In addition restripe the westbound approach to provide a separate right turn lane by narrowing the median to 2'. This would modify the approach from one left turn lane, one through lane, and one through-right turn lane to one left turn lane, two through lanes and a separate right turn lane.

For the Existing With Project Conditions these mitigation measures would fully mitigate the impacts in both the AM and PM peak hours.

For the Existing With Project With Cumulative Conditions these mitigation measures would fully mitigate the AM peak hour impact, and would partially mitigate the PM peak hour impact. In the PM peak hour the level of service would improve to LOS E.

#11. *Central Ave & Rosecrans Ave*

As shown in Tables 4.1 and 4.2, in the Existing With Project Conditions there is a significant impact in the AM Peak hour, but no significant impact in the PM peak hour at this location.

As shown in Tables 6.1 and 6.2, in the Existing With Project With Cumulative Conditions there is a significant impact in both the AM and PM peak hours at this location. The proposed mitigation measure is as follows.

Restripe the westbound approach to provide a separate right-turn lane by narrowing the median to 2'. This would modify the approach from one left turn lane, one through lane, and one through-right turn lane to one left turn lane, two through lanes and a separate right turn lane. Allow buses to go through the intersection from the right-turn lane. This was a mitigation measure in the Martin Luther King Jr. Medical Campus EIR.

For the Existing With Project Condition this mitigation measure would fully mitigate the AM peak hour impact.

For the Existing With Project With Cumulative Condition this mitigation measure would fully mitigate the AM peak hour impact, and would partially mitigate the PM peak hour impact. In the PM peak hour the level of service would remain at LOS D.

#17. Compton Ave & Imperial Hwy

As shown in Tables 4.1 and 4.2, in the Existing With Project Conditions there is a significant impact in both the AM and PM peak hours at this location.

As shown in Tables 6.1 and 6.2, in the Existing With Project With Cumulative Conditions there is a significant impact in both the AM and PM peak hours at this location. The proposed mitigation measure is as follows.

Restripe the westbound approach to provide a separate right-turn lane. This would modify the approach from one left turn lane, one through lane, and one through-right turn lane to one left turn lane, two through lanes and a separate right turn lane. This was a mitigation measure in the Martin Luther King Jr. Medical Campus EIR. No other feasible improvements were identified at this location.

For the Existing With Project Condition, this mitigation measure would partially mitigate the impacts in both the AM and PM peak hours. In the AM peak hour the level of service would remain at LOS F. In the PM peak hour it would remain at LOS E.

For the Existing With Project With Cumulative Condition, this mitigation measure would partially mitigate the impacts in both the AM and PM peak hours. In the AM peak hour the level of service would remain at LOS F. In the PM peak hour it would remain at LOS E.

27. Wilmington Ave & I-105 e/b Ramps

As shown in Tables 4.1 and 4.2, in the Existing With Project Conditions there is a significant impact in both the AM and PM peak hours at this location.

As shown in Tables 6.1 and 6.2, in the Existing With Project With Cumulative Condition there is a significant impact in both the AM and PM peak hours at this location. The proposed mitigation measure is as follows.

Provide an additional eastbound lane by widening (reducing the raised median on the ramp) the off-ramp. This would modify the approach from a left-turn lane and a right-turn lane to a left-turn lane, shared left-right turn lane and a separate right-turn lane. In addition, provide an additional northbound left-turn lane by reducing the median width. This would modify the approach from a left-turn lane and three through lanes to dual left-turn lanes and three through lanes. These were mitigation measures in the Martin Luther King Jr. Medical Campus EIR.

For the Existing With Project Condition, these mitigation measures would fully mitigate the impacts in both the AM and PM peak hours.

For the Existing With Project With Cumulative Condition, these mitigation measures would fully mitigate the AM peak hour impact, and would partially mitigate the PM peak hour impact. In the PM peak hour the level of service would improve to LOS C.

#28. Wilmington Ave & 118th St

As shown in Tables 4.1 and 4.2, in the Existing With Project Conditions there is a significant impact in both the AM and PM peak hours at this location.

As shown in Tables 6.1 and 6.2, in the Existing With Project With Cumulative Conditions there is a significant impact in both the AM and PM peak hours at this location. The proposed mitigation measure is as follows.

Restripe the eastbound approach of 118th Street to provide a separate right-turn lane. This would modify the eastbound approach from a shared left-through-right lane to a shared left-through lane and a right turn lane. This was a mitigation measure in the Martin Luther King Jr. Medical Campus EIR.

For the Existing With Project Condition, this mitigation measure would partially mitigate the impacts in both the AM and PM peak hours. In the AM peak hour the level of service would remain at LOS F. In the PM peak hour it would improve to LOS E.

For the Existing With Project With Cumulative Condition, this mitigation measure would partially mitigate the impacts in both the AM and PM peak hours. In the AM peak hour the level of service would remain at LOS F. In the PM peak hour it would improve to LOS E.

#30. Wilmington Ave & 120th St (East)

As shown in Tables 4.1 and 4.2, in the Existing With Project Conditions there is no significant impact in the AM Peak hour, but a significant impact in the PM peak hour at this location.

As shown in Tables 6.1 and 6.2, in the Existing With Project With Cumulative Conditions there is no significant impact in the AM Peak hour, but a significant impact in the PM peak hour at this location. The proposed mitigation measure is as follows.

Widen 120th Street west of Wilmington Avenue (the driveway to the Martin Luther King Jr. Medical Campus) for 250', on the south side by 2' and restripe the eastbound approach to provide dual left-turn lanes. This would modify the approach from a left-through lane and a

right-turn lane to dual left-turn lanes, a through lane, and a right-turn lane. This was a mitigation measure in the Martin Luther King Jr. Medical Campus EIR.

For the Existing With Project Condition, this mitigation measure would fully mitigate the PM peak hour impact.

For the Existing With Project With Cumulative Condition, this mitigation measure would fully mitigate the PM peak hour impact.

#32. Wilmington Ave & El Segundo Blvd

As shown in Tables 4.1 and 4.2, in the Existing With Project Conditions there is a significant impact in both the AM and PM peak hours at this location.

As shown in Tables 6.1 and 6.2, in the Existing With Project With Cumulative Conditions there is a significant impact in both the AM and PM peak hours at this location. The proposed mitigation measure is as follows.

Restripe the eastbound and westbound approaches to add separate right-turn lanes. Allow buses to go through the intersection from the right-turn lanes. These would modify both approaches from a left-turn lane, a through lane, and a through-right lane to a left-turn lane, two through lanes, and a right-turn lane. This was a mitigation measure in the Martin Luther King Jr. Medical Campus EIR.

For the Existing With Project Conditions, these mitigation measures would partially mitigate the impact in the AM peak hour (and the level of service would improve to LOS C), and would fully mitigate the impact in the PM peak hour.

For the Existing With Project With Cumulative Conditions, these mitigation measures would partially mitigate the impacts in both the AM and PM peak hours. In the AM peak hour the level of service would improve to LOS C. In the PM peak hour the level of service would improve to LOS D.

#36. Imperial Hwy & I-105 w/b Ramps

As shown in Tables 4.1 and 4.2, in the Existing With Project Conditions there is a significant impact in both the AM and PM peak hours at this location.

As shown in Tables 6.1 and 6.2, in the Existing With Project With Cumulative Conditions there is a significant impact in both the AM and PM peak hours at this location. The proposed mitigation measure is as follows.

Provide a third northbound left-turn lane by widening the off-ramp by 10' for approximately 150' to 200'. This would modify the approach from a left-turn lane, a left-through lane, and a right-turn lane to dual left-turn lanes, a left-through lane, and a right-turn lane. This was a mitigation measure in the Martin Luther King Jr. Medical Campus EIR.

For the Existing With Project Condition, this measure would partially mitigate the impacts in both the AM and PM peak hours, and the level of service would improve to LOS D in both peak hours.

For the Existing With Project With Cumulative Condition, this measure would partially mitigate the impacts in both the AM and PM peak hours, and the level of service would improve to LOS D in both peak hours.

#43. Alameda St & 103rd St

As shown in Tables 4.1 and 4.2, in the Existing With Project Conditions there is a significant impact in the PM peak hour at this location.

As shown in Tables 6.1 and 6.2, in the Existing With Project With Cumulative Conditions there is a significant impact in the PM peak hour at this location. The proposed mitigation measure is as follows.

Restripe the eastbound approach for a separate left-turn lane. This would modify the approach from a shared left/right lane to a left-turn lane and a shared left/right lane. This was a mitigation measure in the Martin Luther King Jr. Medical Campus EIR.

In the Existing With Project Condition, this mitigation measure would fully mitigate the impact in the PM peak hour.

In the Existing With Project With Cumulative Condition, this mitigation measure would fully mitigate the impact in the PM peak hour.

#45. Alameda St & Imperial Hwy

As shown in Tables 4.1 and 4.2, in the Existing With Project Conditions there is a significant impact in the AM peak hour, but no significant impact in the PM peak hour at this location.

As shown in Tables 6.1 and 6.2, in the Existing With Project With Cumulative Conditions there is a significant impact in the AM peak hour at this location. The proposed mitigation measure is as follows.

Restripe the southbound approach for dual right-turn lanes. This would modify the approach from a left-turn lane, two through lanes, and a right-turn lane to dual left-turn lanes, two

through lanes, and a separate right-right lane. This is a modification of the mitigation measure in the Martin Luther King Jr. Medical Campus EIR.

In the Existing With Project Condition, this mitigation measure would fully mitigate the impact in the AM peak hour.

In the Existing With Project With Cumulative Condition, this mitigation measure would fully mitigate the AM peak hour impact. In the AM peak hour the level of service would improve to LOS C.

#46. Alameda St & El Segundo Blvd

As shown in Tables 4.1 and 4.2, in the Existing With Project Conditions there are significant impact in the AM peak hour at this location.

As shown in Tables 6.1 and 6.2, in the Existing With Project With Cumulative Conditions there are significant impacts in both the AM and PM peak hours at this location. The proposed mitigation measure is as follows.

Restripe the northbound and southbound approaches to provide separate right-turn lanes. This would modify both approaches from a left-turn lane, a through lane, and a through-right lane to a left-turn lane, two through lanes, and a right-turn lane. This was a mitigation measure in the Martin Luther King Jr. Medical Campus EIR.

In the Existing With Project Condition, this mitigation measure would fully mitigate the impact in the AM peak hour.

In the Existing With Project With Cumulative Condition, this mitigation measure would fully mitigate the AM peak hour impact, and would partially mitigate the PM peak hour impact. In the PM peak hour it would remain at LOS E.

City of Compton Intersections

#21. Compton Ave & El Segundo Blvd

As shown in Tables 4.1 and 4.2, in the Existing With Project Conditions there is a significant impact in both the AM and PM peak hours at this location.

As shown in Tables 6.1 and 6.2, in the Existing With Project With Cumulative Conditions there is a significant impact in both the AM and PM peak hours at this location. The proposed mitigation measure is as follows.

Restripe the eastbound and westbound approaches to provide separate right-turn lanes by narrowing the medians to 2'. These would modify both approaches from a left-turn lane, a through lane, and a through-right lane to a left-turn lane, two through lanes, and a right-turn lane.

In the Existing With Project Condition, these mitigation measures would partially mitigate the impact in the AM peak hour (and the level of service would improve to LOS D), and would partially mitigate the impact in the PM peak hour. In the PM peak hour the level of service would remain at LOS C.

In the Existing With Project With Cumulative Condition, these mitigation measures would partially mitigate the impact in both the AM and PM peak hours. In the AM peak hour the level of service would improve to LOS D. In the PM peak hour the level of service would improve to LOS C.

#33. Wilmington Ave & Rosecrans Ave

As shown in Tables 4.1 and 4.2, in the Existing With Project Conditions there is a significant impact in both the AM and PM peak hours at this location.

As shown in Tables 6.1 and 6.2, in the Existing With Project With Cumulative Conditions there is a significant impact in both the AM and PM peak hours at this location. The proposed mitigation measure is as follows.

Restripe the northbound approach to provide a separate right-turn lane by narrowing the median to 2'. This would modify the approach from a left-turn lane, a through lane, and a through-right lane to a left-turn lane, two through lanes, and a right-turn lane.

In the Existing With Project Condition, this mitigation measure would partially mitigate the impacts in the AM peak hour and the level of service would remain at LOS E, and would partially mitigate the impact in the PM peak hour and the level of service would improve to LOS D.

In the Existing With Project With Cumulative Condition, this mitigation measure would partially mitigate the impacts in the AM peak hour and the level of service would remain at LOS E, and would partially mitigate the impact in the PM peak hour and the level of service would remain at LOS E.

#57. Central Ave & W Compton Blvd

As shown in Tables 4.1 and 4.2, in the Existing With Project Conditions there is no significant impact in both the AM and PM peak hours at this location.

As shown in Tables 6.1 and 6.2, in the Existing With Project With Cumulative Conditions there is no significant impact in the AM Peak hour, but a significant impact in the PM peak hour at this location. The proposed mitigation measure is as follows.

Restripe the northbound approach to provide a separate right-turn lane by narrowing the median to 2'. This would modify the approach from a left-turn lane, a through lane, and a through-right lane to a left-turn lane, two through lanes, and a right-turn lane. This mitigation measure requires removal of five on-street parking on the northbound approach.

In the Existing With Project With Cumulative Condition, this mitigation measure would fully mitigate the impacts in the PM peak hour and the level of service would improve to LOS C.

#60. Central Ave & Alondra Blvd

As shown in Tables 4.1 and 4.2, in the Existing With Project Conditions there is no significant impact in both the AM and PM peak hours at this location.

As shown in Tables 6.1 and 6.2, in the Existing With Project With Cumulative Conditions there is no significant impact in the AM Peak hour, but a significant impact in the PM peak hour at this location. The proposed mitigation measure is as follows.

Restripe the northbound and southbound approaches to provide a separate right-turn lane by narrowing the median to 2'. This would modify both approaches from a left-turn lane, a through lane, and a through-right lane to a left-turn lane, two through lanes, and a right-turn lane.

In the Existing With Project With Cumulative Condition, this mitigation measure would fully mitigate the impacts in the PM peak hour and the level of service would improve to LOS D.

#61. Wilmington Ave & Alondra Blvd

As shown in Tables 4.1 and 4.2, in the Existing With Project Conditions there is a significant impact in both the AM and PM peak hours at this location.

As shown in Tables 6.1 and 6.2, in the Existing With Project With Cumulative Conditions there is a significant impact in both the AM and PM peak hours at this location. The proposed mitigation measure is as follows.

Restripe the westbound approach to provide a separate right-turn lane by narrowing the median to 3'. This would modify the approach from a left-turn lane, a through lane, and a through-right lane to a left-turn lane, two through lanes, and a right-turn lane.

In the Existing With Project Condition, this mitigation measure would fully mitigate the impact in the AM peak hour and the level of service would remain at LOS D, and would

partially mitigate the impact in the PM peak hour and the level of service would remain at LOS E.

In the Existing With Project With Cumulative Condition, this mitigation measure would fully mitigate the impacts in the AM peak hour and the level of service would remain at LOS D, and would partially mitigate the impact in the PM peak hour and the level of service would remain at LOS E.

#63. Wilmington Ave & Walnut St

As shown in Tables 4.1 and 4.2, in the Existing With Project Conditions there is no significant impact in the AM Peak hour, but a significant impact in the PM peak hour at this location.

As shown in Tables 6.1 and 6.2, in the Existing With Project With Cumulative Conditions there is no significant impact in the AM Peak hour, but a significant impact in the PM peak hour at this location. The proposed mitigation measure is as follows.

Restripe and modify the eastbound approach from a left-turn lane, a through lane, and a right-turn lane to a left-turn lane, a through lane, and a through-right lane. It requires converting Walnut Street east of the intersection from one lane eastbound to two-lanes eastbound for a minimum of 400 feet providing an 11' lane and a 12' curb lane prior to merging back to one lane, and prohibiting on street parking for the same distance.

In the Existing With Project Condition, this mitigation measure would fully mitigate the impact in the PM peak hour. In the PM peak hour the level of service would improve to LOS C.

In the Existing With Project With Cumulative Condition, this mitigation measure would fully mitigate the impact in the PM peak hour. In the PM peak hour the level of service would improve to LOS C.

City of Lynwood Intersections

#54. Imperial Hwy & State St

As shown in Tables 4.1 and 4.2, in the Existing With Project Conditions there is no significant impact in the AM Peak hour, but a significant impact in the PM peak hour at this location.

As shown in Tables 6.1 and 6.2, in the Existing With Project With Cumulative Conditions there is no significant impact in the AM Peak hour, but a significant impact in the PM peak hour at this location. The proposed mitigation measure is as follows.

Restripe the northbound and southbound approaches to provide separate right-turn lanes. This would modify both approaches from a left-turn lane, a through lane, and a through-right lane to a left-turn lane, two through lanes, and a right-turn lane. These mitigation measures require removal of two on-street parking spaces on each approach.

In the Existing With Project Condition, these mitigation measures would fully mitigate the impact in the PM peak hour. In the PM peak hour the level of service would improve to LOS C.

In the Existing With Project With Cumulative Condition, these mitigation measures would fully mitigate the impact in the PM peak hour. In the PM peak hour the level of service would improve to LOS C.

City of Los Angeles Intersections

#7. Central Ave & I-105 w/b Ramps

As shown in Tables 4.1 and 4.2, in the Existing With Project Conditions there is a significant impact in both the AM and PM peak hours at this location.

As shown in Tables 6.1 and 6.2, in the Existing With Project With Cumulative Conditions there is a significant impact in both the AM and PM peak hours at this location. The proposed mitigation measure is as follows.

Restripe the westbound approach from a left-turn lane, a through-left lane, and right-turn lane, to a left-turn lane, a through-right lane, and a right-turn lane.

In the Existing With Project Condition, this mitigation measure would fully mitigate the impacts in both the AM and PM peak hours. In both AM and PM peak hours the level of service would improve to LOS C.

In the Existing With Project With Cumulative Condition, this mitigation measure would fully mitigate the impacts in both the AM and PM peak hours. In both AM and PM peak hours the level of service would improve to LOS C.

#9. Central Ave & 120th St

As shown in Tables 4.1 and 4.2, in the Existing With Project Conditions there is a significant impact in both the AM and PM peak hours at this location.

As shown in Tables 6.1 and 6.2, in the Existing With Project With Cumulative Conditions there is a significant impact in both the AM and PM peak hours at this location. The proposed mitigation measure is as follows.

Restripe the northbound approach to provide a separate right-turn lane. This would modify the approach from a left-turn, a through lane, and a through-right lane to a left-turn lane, two through lanes, and a separate right-turn lane. This was a mitigation measure in the Martin Luther King Jr. Medical Campus EIR.

In the Existing With Project Condition, this mitigation measure would partially mitigate the impacts in both the AM and PM peak hours. In the AM peak hour the level of service would remain at LOS D and in the PM peak hour the level of service would improve to LOS C.

In the Existing With Project With Cumulative Condition, this mitigation measure would partially mitigate the impacts in both the AM and PM peak hours. In the AM peak hour the level of service would improve to LOS D. In the PM peak hour the level of service would remain at LOS E.

#25. Wilmington Ave & 112th St

As shown in Tables 4.1 and 4.2, in the Existing With Project Conditions there is a significant impact on the stop-controlled approach of this unsignalized intersection in both the AM and PM peak hours at this location.

As shown in Tables 6.1 and 6.2, in the Existing With Project With Cumulative Conditions there is a significant impact on the stop-controlled approach of this unsignalized intersection in both the AM and PM peak hours at this location. The proposed mitigation measure is as follows.

The signal warrant analysis indicated that a traffic signal would be warranted at this location so the mitigation measure is to install a new traffic signal.

In the Existing With Project Conditions, this mitigation measure would fully mitigate the impacts in both the AM and PM peak hours.

In the Existing With Project With Cumulative Conditions, this mitigation measure would fully mitigate the impacts in both the AM and PM peak hours.

Remaining Significant Impacts – Existing With Project

AM Peak Hour

With the proposed mitigation program, there would be 13 remaining significant impacts in the AM peak hour, at the following intersections:

County of Los Angeles:

32.	Wilmington Ave & El Segundo Blvd	LOS C
26.	Wilmington Ave & Imperial Hwy	LOS D
36.	Imperial Hwy & I-105 w/b Ramps	LOS D
19.	Compton Ave & 120 th St	LOS E
29.	Wilmington Ave & 120 th St (West)	LOS E
17.	Compton Ave & Imperial Hwy	LOS F
28.	Wilmington Ave & 118 th St	LOS F

City of Compton:

21.	Compton Ave & El Segundo Blvd	LOS D
62.	Wilmington Ave & Greenleaf Blvd	LOS D
33.	Wilmington Ave & Rosecrans Ave	LOS E

City of Los Angeles:

1.	Avalon Blvd & Imperial Hwy	LOS C
6.	Central Ave & Imperial Hwy	LOS C
9.	Central Ave & 120 th St	LOS D

At these remaining significant impact locations, the level of service would be LOS D or better at 9 locations, LOS E at 3 locations and LOS F at 2 locations.

PM Peak Hour

With the proposed mitigation program, there would be 16 remaining significant impacts in the PM peak hour, at the following locations:

County of Los Angeles:

19.	Compton Ave & 120 th St	LOS D
26.	Wilmington Ave & Imperial Hwy	LOS D
36.	Imperial Hwy & I-105 w/b Ramps	LOS D
39.	Mona Blvd & Imperial Hwy	LOS D
17.	Compton Ave & Imperial Hwy	LOS E
28.	Wilmington Ave & 118 th St	LOS E
29.	Wilmington Ave & 120 th St (West)	LOS E

City of Compton:

21.	Compton Ave & El Segundo Blvd	LOS C
-----	-------------------------------	-------

33.	Wilmington Ave & Rosecrans Ave	LOS D
58.	Wilmington Ave & W Compton Blvd	LOS D
61.	Wilmington Ave & Alondra Blvd	LOS E
62.	Wilmington Ave & Greenleaf Blvd	LOS E

City of Los Angeles:

1.	Avalon Blvd & Imperial Hwy	LOS C
2.	Avalon Blvd & 120 th St	LOS C
9.	Central Ave & 120 th St	LOS C
6.	Central Ave & Imperial Hwy	LOS D

At these remaining significant impact locations, the level of service would be LOS D or better at 11 locations and LOS E at 5 locations.

Remaining Significant Impacts – Existing With Project With Cumulative**AM Peak Hour**

With the proposed mitigation program, there would be 14 remaining significant impacts in the AM peak hour, at the following intersections:

County of Los Angeles:

32.	Wilmington Ave & El Segundo Blvd	LOS C
39.	Mona Blvd & Imperial Hwy	LOS C
26.	Wilmington Ave & Imperial Hwy	LOS D
36.	Imperial Hwy & I-105 w/b Ramps	LOS D
19.	Compton Ave & 120 th St	LOS E
29.	Wilmington Ave & 120 th St (West)	LOS E
17.	Compton Ave & Imperial Hwy	LOS F
28.	Wilmington Ave & 118 th St	LOS F

City of Compton:

21.	Compton Ave & El Segundo Blvd	LOS D
62.	Wilmington Ave & Greenleaf Blvd	LOS D
33.	Wilmington Ave & Rosecrans Ave	LOS E

City of Los Angeles:

1.	Avalon Blvd & Imperial Hwy	LOS D
6.	Central Ave & Imperial Hwy	LOS D

- | | | |
|----|------------------------------------|-------|
| 9. | Central Ave & 120 th St | LOS D |
|----|------------------------------------|-------|

At these remaining significant impact locations, the level of service would be LOS D or better at 9 locations, LOS E at 3 locations and LOS F at 2 locations.

PM Peak Hour

With the proposed mitigation program, there would be 23 remaining significant impacts in the PM peak hour, at the following intersections:

County of Los Angeles:

- | | | |
|-----|--|-------|
| 27. | Wilmington Ave & I-0105 e/b Ramps | LOS C |
| 3. | Avalon Blvd & El Segundo Blvd | LOS D |
| 11. | Central Ave & Rosecrans Ave | LOS D |
| 19. | Compton Ave & 120 th St | LOS D |
| 26. | Wilmington Ave & Imperial Hwy | LOS D |
| 32. | Wilmington Ave & El Segundo Blvd | LOS D |
| 36. | Imperial Hwy & I-105 w/b Ramps | LOS D |
| 39. | Mona Blvd & Imperial Hwy | LOS D |
| 10. | Central Ave & El Segundo Blvd | LOS E |
| 17. | Compton Ave & Imperial Hwy | LOS E |
| 28. | Wilmington Ave & 118 th St | LOS E |
| 29. | Wilmington Ave & 120 th St (West) | LOS E |
| 46. | Alameda St & El Segundo Blvd | LOS E |

City of Compton:

- | | | |
|-----|---------------------------------|-------|
| 21. | Compton Ave & El Segundo Blvd | LOS C |
| 42. | Willowbrook Ave & Rosecrans Ave | LOS C |
| 58. | Wilmington Ave & W Compton Blvd | LOS D |
| 33. | Wilmington Ave & Rosecrans Ave | LOS E |
| 61. | Wilmington Ave & Alondra Blvd | LOS E |
| 62. | Wilmington Ave & Greenleaf Blvd | LOS E |

City of Los Angeles:

- | | | |
|----|------------------------------------|-------|
| 2. | Avalon Blvd & 120 th St | LOS C |
| 1. | Avalon Blvd & Imperial Hwy | LOS D |
| 6. | Central Ave & Imperial Hwy | LOS D |
| 9. | Central Ave & 120 th St | LOS E |

At these remaining significant impact locations, the level of service would be LOS D at 14 locations, and LOS E at 9 locations.

8.3 Transportation Mitigation Measures - CMP

As discussed in Chapter 6 (see Tables 6.7 and 6.8) in the AM peak hour, the addition of vehicle trips generated by the Project would cause significant impacts according to CMP criteria at two freeway monitoring locations in the AM peak hour, and at four freeway monitoring locations in the PM peak hour. The freeways would be operating at LOS F at these locations without the Project. The Project would cause an increase in V/C of between 0.023 and 0.038 at these locations, slightly above the threshold of 0.020 for a significant impact.

No feasible mitigation measures have been identified for these impacts. Freeway mainline improvements are the responsibility of regional agencies such as SCAG, Metro, and Caltrans, and are generally beyond the ability of individual projects to implement. These impacts would therefore remain significant.

8.4 Transportation Mitigation Measures - Freeways

Freeway System - Mainline

As discussed in Chapter 7 (see Tables 7.1 and 7.3), under Existing With Project Conditions the Project would cause one significant freeway mainline segment impact in the AM peak hour, and one significant freeway mainline segment impact in the PM peak hour. The Project would cause the V/C ratio to be 1.006 in the AM peak hour and 1.001 in the PM Peak hour, both just slightly above capacity.

Under the Future With Project Conditions, the Project would cause one significant freeway mainline segment impact in the AM peak hour, and three significant freeway mainline segment impacts in the PM peak hour. The level of service would be LOS E (below capacity) in all cases.

No feasible mitigation measures have been identified for these impacts. Freeway mainline improvements are the responsibility of regional agencies such as SCAG, Metro, and Caltrans, and are generally beyond the ability of individual projects to implement. These impacts would therefore remain significant.

The Caltrans Traffic Impact Study Guidelines provide a methodology for identifying a project's proportionate share of the future traffic growth on freeway facilities. For the Future With Project Condition, in the AM peak hour, the Specific Plan share of total future traffic

growth is approximately 40% (see Table 7.4) and for the PM peak hour it is 32% to 38% (see Table 7.4).

Freeway System – Off-Ramps

The analysis in Chapter 7 (see Table 7.6) identified that the Project would cause two significant impacts at off-ramps in the PM peak hour for Future With Project Conditions. At the I-110 SB off-ramp at El Segundo Blvd., no feasible mitigation measure has been identified, and this would remain a significant impact. However the overall queue length with the Project would be only 1% over the overall storage capacity of the off-ramp. Given the very conservative assumptions that were input to the analysis (see Chapter 7), including the 85% “safety factor” identified by Caltrans, it is unlikely that the queue would actually back onto the freeway mainline.

At the I-105 WB off-ramp at Imperial Highway, the proposed mitigation for the intersection of the off-ramp and Imperial Highway would add storage capacity to the off-ramp. This would increase the overall storage length and the overall queue would no longer exceed the improved overall storage capacity of the ramp. This improvement would fully mitigate the impact at this location.

Table 8.1 Existing With Project With Mitigation Conditions - Intersection Level of Service - AM Peak Hour

3/2/2017

Intersection	Intersection Type	Existing Conditions		Existing + Project Conditions		Change in V/C (Delay)	Significant Impact	Existing + Project + Mitigation Conditions		Change in V/C	Significant Impact	
		V/C or (Delay)	LOS	V/C or (Delay)	LOS			V/C or (Delay)	LOS			
Los Angeles County
