This memo includes public comments received since May 26, 2022, when the staff report was issued through noon on June 7, 2022. Staff received a total of 833 additional comments on the Oil Well Ordinance (Ordinance).

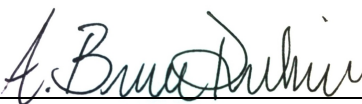

- 2 letters that recommended changes to the Ordinance
- 7 letters in opposition of the Ordinance
- 824 letters in support of the Ordinance
  - 12 letters in support of the Ordinance
  - 812 letters form letters in support of the Ordinance

In addition, due to an oversight, staff omitted comments from the Department of Public Health. These comments are attached to this memo.

Re: Agenda Item No. 5, Project No. 2020-000246-(1-5); Advance Planning Case No. RPPL2020000624 (Proposed Oil Well Ordinance)

Dear Chair Duarte-White, Vice Chair Hastings, and Honorable Commissioners:

On behalf of The Newhall Land and Farming Company, thank you for the opportunity to comment on the County's proposed "Oil Well Ordinance." The draft Ordinance presented by staff appears to have inadvertently omitted language regarding the non-applicability of the Ordinance to the "***Baldwin Hills Community Standards District, areas designated as a specific plan, and uses operating under a valid discretionary permit***" as provided for in the Staff Report (dated 5/26/22), the Draft Resolution (Exhibit B to the Staff Report), and the Notice of Exemption (Exhibit C to the Staff Report). We respectfully request the Commission correct this apparent oversight and direct staff to revise the Ordinance consistent with the Staff Report and other documents.

Specifically, the Staff Report (dated 5/26/22), the Draft Resolution (Exhibit B to the Staff Report), and the Notice of Exemption (Exhibit C to the Staff Report) all state that the proposed Ordinance will not apply to "the Baldwin Hills Community Standards District, areas designated as a specific plan, and uses operating under a valid discretionary permit." For your reference, we are reproducing the applicable language (with emphasis added) below:

~~~~~

#### Staff Report at p. 2 of 6

##### A. Summary

Plan Number RPPL2020000624 is the Oil Well Ordinance (Ordinance), a project that amends Title 22 (Planning and Zoning) of the Los Angeles County Code to prohibit new oil wells and production facilities, designate existing oil wells and production facilities as nonconforming due to use, and establish consistent regulations for existing oil wells and production facilities during the amortization period. The Ordinance applies to the unincorporated areas of Los Angeles County, ***except for the Baldwin Hills Community Standards District, areas designated as a specific plan, and uses operating under a valid discretionary permit.*** The Ordinance (Exhibit

A), Board Resolution (Exhibit B), and Notice of Exemption (Exhibit C) are attached to this report.

Staff Report at p. 3 of 6 (Note 1 in Table "Oil Wells the Unincorporated Areas (January 2022)")

1. ***The Ordinance does not apply to the Baldwin Hills Community Standards District, areas designated as a specific plan, or uses operating under a valid discretionary permit.*** DRP will address these in future efforts.

Draft Resolution at Paragraph 4

4. The Ordinance applies to the unincorporated areas of Los Angeles County, ***except for the Baldwin Hills Community Standards District, areas designated as a specific plan, and uses operating under a valid discretionary permit.***

Attachment to Notice of Exemption

The project location is the unincorporated areas of Los Angeles County. Within the unincorporated areas, ***the project does not apply to the Baldwin Hills Community Standards District, areas designated as a specific plan, and uses operating under a valid discretionary permit.*** A map of the project location is attached.

~~~~~  
We believe the proposed Ordinance can be easily corrected to be consistent with the stated scope with the following revisions (shown in [blue](#)) to proposed section 22.140.400.A.1:

- This Section applies to oil wells and production facilities in all zones, [except for the Baldwin Hills Community Standards District, areas designated as a specific plan, and uses operating under a valid discretionary permit.](#)

We respectfully request you make this technical correction at your meeting on June 8<sup>th</sup>. Thank you for your consideration.

Very truly yours,

George J. Mhlsten

Re: Proposed Oil Well Ordinance – June 8, 2022 Agenda, Item 5 (Project No. 2020-000246-(1-5); Case No. RPPL2020000624)

Dear Chair Duarte-White and Honorable Commissioners:

Southern California Gas Company (“SoCalGas”) respectfully submits these comments on the proposed Oil Well Ordinance (“OWO”). SoCalGas supports the County’s efforts and the Board of Supervisors’ vision to prioritize and protect the public health, safety, and welfare of residents living near oil wells. While we understand the focus of the OWO to be oil wells and oil production facilities, not regulated public utility assets and services, some of the definitions the proposed OWO uses are quite broad and run the potential risk of introducing confusion. We therefore respectfully request that the OWO be clarified with respect to the potential application to public utility assets.

As noted in our prior comments dated September 23, 2020, SoCalGas is a public utility regulated by the California Public Utilities Commission (“CPUC”), and operates four underground natural gas storage facilities in Southern California, including three (Aliso Canyon, Honor Rancho and Playa del Rey) located in part within unincorporated Los Angeles County. As defined in the Public Utilities Code, “public utility” includes gas corporations where the service is performed for, or the commodity is delivered to, the public or any portion thereof.<sup>1,2</sup> Under California law, the CPUC has exclusive jurisdiction to grant certificates of public necessity authorizing gas corporations such as SoCalGas to design, construct, operate, and maintain underground natural gas storage facilities.<sup>3</sup> Utility facilities are ratepayer-based assets under the jurisdiction of the

---

<sup>1</sup> California Public Utilities Code, § 216(a)(1).

<sup>2</sup> Moreover, the California Governor’s March 19, 2020 Executive Order (N-33-20) in response to the threat of COVID-19, designates SoCalGas as critical infrastructure, essential to continuity of functions critical to public health and safety as well as economic and national security, and underscores that safe and reliable delivery of natural gas to our customers is an essential service.

<sup>3</sup> California Public Utilities Code §1002.

CPUC. Under the California Constitution, “[a] city, county, or other public body may not regulate matters over which the Legislature grants regulatory power to the [Public Utilities] Commission.”<sup>4</sup> Thus, under the California Constitution, as to matters over which the CPUC has been granted regulatory power, the CPUC’s jurisdiction is exclusive. As such, SoCalGas requests that the proposed OWO clarify that it does not apply to regulated utility assets.

In addition to the regulatory impacts mentioned above, the interpretation of “well” in the current draft of the OWO to potentially include regulated utility assets may actually impact underground gas storage operations and public utility services. We appreciate that the definition of “well” in the current draft OWO excludes wells used to inject or withdraw gas from an underground storage facility, but public utility storage field operations involve additional activity beyond injecting and withdrawing natural gas. Accordingly, SoCalGas asks and recommends that the definitions of “production facility” and “well” in the proposed OWO be further clarified to exclude all regulated utility assets. We respectfully request incorporation of the edits shown in underline format in Attachment A hereto, which would clarify that “production facility” and “well” exclude any facility or well operated by a public utility for use in and support of the provision of public utility services.

Due to the unique aspects of SoCalGas’ facilities and regulated operations, we appreciate your consideration to provide that OWO requirements do not detrimentally impact critical, regulated, and permitted underground natural gas storage facilities and SoCalGas’ ability to serve Southern California customers in a reliable and safe manner.

SoCalGas looks forward to continuing to engage with LA County Department of Regional Planning to provide additional background and information about why an exemption from the OWO is necessary to avoid impacting SoCalGas’ provision of public utility services to the Los Angeles Basin. SoCalGas appreciates the opportunity to comment on the draft ordinance.

Sincerely,

### **Requested Changes to Draft Oil Well Ordinance (Exhibit A to Department of Regional Planning Report to Regional Planning Commission dated May 26, 2022)**

**SECTION 1.** Section 22.14.150 is hereby amended to read as follows:

...

Production facility. As defined in Section 3010 of the California Public Resources Code, but excluding any facility operated by a public utility.

...

Well. As defined in Section 3008(a) of the California Public Resources Code, but excluding any well operated by a public utility, including any wells used to inject or withdraw gas from an underground storage facility. This term includes any active well, idle well as defined in Section 3008(d) of the California Public Resources Code, and partially plugged and abandoned well.

**Re: Just Transition and Oil & Gas Ordinance**

Dear Planning Commissioners:

The California Independent Petroleum Association (CIPA) provides the following comments relating to the Los Angeles (LA) County proposed Just Transition and pending Oil & Gas Ordinance.

CIPA is a non-profit, non-partisan trade association representing over 300 independent crude oil and natural gas producers, royalty owners, and service and supply companies operating in California. Our members represent approximately 70% of California's total oil production and 90% of California's natural gas production. CIPA members represent nearly all the oil and gas production in LA County.

Strong Demand for Motor Vehicle Fuels Has Not Been Reduced – gasoline consumption among the 13 largest cities in the LA Basin area increased during the 10-year period between 2010-2019 by 5%. <sup>(1)</sup> Consumption in 2020 did see a drop, but that was due to “COVID inspired conservation” as the stay-at-home economy kicked in. 2021 consumption exceed 2020 as economic conditions rebounded after the height of the pandemic. Reducing or eliminating oil production in LA County will hurt consumers by raising prices further and reducing availability of fuel.

Electric vehicles sales have lagged state goals – at the end of 2021 in California, approximately 1,000,000 electric vehicles (EV) were sold in the state. <sup>(2)</sup> It took approximately 15 years to reach that milestone. The state has a goal of selling a total of 5,000,000 EV by the year 2030, with only nine years to reach the remaining 80% of the State’s goal. Several hurdles remain for the state to reach the goal of 5,000,000 in EV sales with three of the highest hurdles being electrical infrastructure to support the EV, an adequate network of charging stations, and the high price point of an EV.

Fossil fuels are necessary for electrical generation – California is one of the largest generators of renewable electricity in the Country; however, natural gas continues to be the number one source of in-state electrical generation. <sup>(3)</sup> Approximately 48% of in-state generation is from natural gas, while only about 33% is derived from all renewable sources (the most being solar, approximately

15%). While solar only functions when the sun shines and wind is only suitable during breezy conditions, the need for natural gas generators will continue until cost effective storage systems are available. Natural gas electrical generation is the best alternative for peak power demands. In fact, Governor Newsom recently allocated over \$5B for providing additional electrical power generated from natural gas.

Growing reliance on imported oil hurts California – California produces only a fraction of the oil consumed by the State. Through the end of 2021 California produced an average of 358,000 barrels of oil per day, <sup>(4)</sup> while consuming more than 1,400,000 barrels per day, requiring over 70% of our oil to be imported. Since California is an “oil island”, meaning that California does not have any pipelines that bring crude into the state, oil must be imported via tankerships over the ocean. The largest exporter of crude oil to California is Ecuador followed by Saudi Arabia and Iraq (65% total from these three countries), with several other countries making up the remaining 35%. California imported 18,000,000 barrels of crude from Russia in 2021, sending \$1 billion to Putin.

Imports exacerbate environmental and social concerns – none of the countries that export oil to California have the strict environmental regulations that in-state oil producers must follow. Ecuadorian oil is produced with minimal environmental regulations that have resulted in the destruction of significant amounts of the Amazon rainforest and the displacement of indigenous peoples. <sup>(5)</sup> Human rights are overlooked in many of the exporting countries, simply not meeting standards established in the United States of America. Countries run by dictators, monarchies or brutal despots are not concerned with human rights or providing strong social programs for the benefit of their citizens that could be achieved with the substantial oil revenues.

Transitioning oil workers to other industries will hurt those workers – in California the average pay for oil field workers is \$130,000/year. This compares to averages annual wages for wind and solar technicians of under \$60,000/year. <sup>(6)</sup> LA County and City have developed an “Oil Extraction Worker Engagement Plan” which outlines potential resources that could be used in transitioning workers into other industries. Proposed options include tuition assistance for re-training, early retirement payouts, relocation assistance and career counseling to transition to other careers/industries. While the proposed steps could aid in starting new careers for oil workers, it is doubtful that even with retraining offered to transitioning oil workers that they will be able to match their existing income stream. Why would we eliminate oil field workers’ jobs in California and send that wealth instead to Ecuador, Russia, or Saudi Arabia. How is that just?

Fewer taxes will be paid – as income streams for workers are reduced the taxes paid by the workers will be reduced proportionately. Likewise, oil operators in the LA Basin pay both ad valorem property taxes on reserves in the ground and severance taxes on production in 14 Southern Californian jurisdictions. These taxes are used by counties and cities to maintain vital services and infrastructure such as police and fire services, road maintenance and schools. Further, as wages are reduced, workers will have less purchasing power resulting in a reduction in state and regional sales taxes being collected.

Philanthropic donations will be curtailed – as oil workers and companies are phased out, a significant amount of charitable donations will be lost. Oil workers and oil companies make donations each year in support of local food banks, school activities, community programs and environmental causes. Many people, especially those the most in need, will be adversely impacted by the loss of such generous charitable support.

The LA Basin's environment will be hurt – air emissions associated with oil production in the LA Basin are minimal as compared to other industries and mobile sources. The Ports of Long Beach and Los Angeles are the largest source of air pollution in the Basin, due primarily to ships queued to offload and load. Reducing oil production in LA County and City will simply result in incremental oil imports, further exacerbating poor air quality in the Basin. Only crude produced in California is completely California Climate Compliant. In-state producers must account for all of their GHG emissions under AB 32 and the State's cap and trade program. Foreign imports are completely exempt from such regulations.

Amortization is an illegal taking – phasing out of oil and gas production operations through an “amortization program” has been discussed by LA County & City and proposed by one municipality in the LA Basin (Culver City). This approach of restricting land use has never successfully been employed by a government entity to “take” real property from an oil producer or mineral rights owner as it is a violation of the US Constitution's 5<sup>th</sup> Amendment. An “amortization program” serves to infringe upon an operator's legally vested rights to recover minerals it owns in fee or through agreements with mineral owners and through their sole capital investment. A government entity (City, County, or State) cannot determine that an oil and gas producer has achieved “an appropriate rate of return” on their investment given future development is an integral part of any mineral acquisition. The valuation of a diminishing asset, such as an oil producing property, is far more complex than a straight-line depreciation and amortization of a fixed asset. Any “amortization program” that might be enacted would face significant and protracted legal challenges that would be very costly and time consuming for all parties involved.

Furthermore, an “amortization program” will not only impact the operating company, but also mineral owners, some that have leased the minerals to an oil producing company, others that have not yet. Many mineral owners rely on royalties as their sole source of income. Loss of these royalties would be considered a “taking” of real property from the mineral owner. How can the City or County “amortize” this real property, particularly when it is undeveloped?

Gas prices will go up – as the supply of domestic crude falls under the county's amortization plan, the demand for foreign crude will rise, making crude bought by California refineries more expensive and conversely gasoline, diesel, jet fuel, and all products made from petroleum more expensive at precisely the time consumers can least afford already record high gasoline prices.

Bonding requirements are duplicative – the proposed ordinance presents several areas that duplicate existing county and state regulations. Specifically, a proposed bonding requirement by the County is excessive in that CalGEM, the State agency that oversees oil and gas operations, currently has bonding requirements in place to ensure compliance with all State regulations relating to operation of oil and gas wells, their attendant facilities and the ultimate plugging of wells and restoration of the surface locations. In certain cases, these bonds may be as much as \$30,000,000. Incremental bonding requirements from the County will result in economic hardships on oil and gas operators.

Signage requirements are duplicative – many of the proposed signage requirements duplicate current requirements that exists under Federal and State regulations relating to oil production operations. CalGEM requires signs to indicate the operator, well name, API number, location of site and emergency contact phone numbers.

“Comment and Complaint Log” is a recipe for abuse– the proposed requirement in the Oil Well Ordinance for a Comment and Complaint Log opens the door for abuse by anti-oil/anti-business activists. A log of this nature would cause an operating company to spend an inordinate amount of time answering unfounded complaints. Concerns originating from regulatory agencies (i.e., County or State) will always be addressed in a timely and effective manner. Companies currently regularly interface with neighbors and address legitimate concerns as might be required to maintain harmony in the area of operations.

Site maintenance should be required equally of all county businesses – oil operators strive to maintain site in aesthetically pleasing conditions, often beyond conditions of other businesses in the immediate area. All businesses should be required to meet a standard that upgrades a neighborhood by maintaining properties that are in good repair and are free of public eyesores.

To summarize concerns expressed above, the following bullet points highlight the county’s failed proposal.

- Motor vehicle fuels will be adversely impacted by reducing or eliminating oil and gas production in the LA Basin.
- Electric vehicles are a solution to air pollution in Southern California; however, many barriers exist for this solution.
- Natural gas is the most reliable and cost-effective source of electrical generation.
- Reducing or ending oil production in LA County and City will place further dependence on foreign oil sources, which is a contradiction to goals tied to global climate impacts and human rights.
- Transitioning of oil workers will be very challenging and expensive for local governments; many hurdles exist for a “just transition” to occur.
- Fewer taxes will be collected at local levels due to reduced property taxes with the elimination of ad valorem and severance taxes along with reduced worker incomes.
- Oil and gas companies, and their workers, are very benevolent with respect to philanthropic giving serving the communities in which they operate. These charitable contributions will be eliminated with the abolition of oil operations.
- Efforts around environmental impacts should be refocused to the larger source of pollution, ports and mobile sources. The impact of oil production is minimal in comparison.
- Amortization programs are simply wrong when applied to oil and gas operations. An attempt to eliminate production via these means will result in lengthy and costly legal actions.
- Amortization schemes will raise the price of gasoline, diesel, jet fuel and all other products made by petroleum.
- An “amortization program” will not only impact the operating company, but also mineral owners that have leased the minerals to an oil producing company. Many mineral owners rely on royalties as their sole source of income. Loss of these royalties would be considered a “taking” of real property from the mineral owner.
- Specific bonding for the County is not needed as the State already has more than adequate bonding requirements in place for oil operations.

- Several items in the proposed County Oil Well Ordinance duplicate regulations currently existing in Federal, State, County and City codes. Duplicate requirements do not enhance safety and environmental matters for the public and create an undue burden on operators.
- A “complaint log” will serve no beneficial purpose in ensuring compliance or strengthening community relations.
- Site maintenance as defined in the proposed ordinance should be a requirement of all businesses that are visible to the public.

Thank you for taking time to review CIPA’s detailed comments on a Just Transition and potential new Ordinances. We look forward to constructive conversations in shaping final policies that will meet the objectives of all stakeholders involved in these endeavors.

Sincerely,

Rock Zierman  
Chief Executive Officer, CIPA

**Re: Just Transition and Oil & Gas Ordinance**

Dear Planning Commissioners:

The California Independent Petroleum Association (CIPA) provides the following comments relating to the Los Angeles (LA) County proposed Just Transition and pending Oil & Gas Ordinance.

CIPA is a non-profit, non-partisan trade association representing over 300 independent crude oil and natural gas producers, royalty owners, and service and supply companies operating in California. Our members represent approximately 70% of California's total oil production and 90% of California's natural gas production. CIPA members represent nearly all the oil and gas production in LA County.

Strong Demand for Motor Vehicle Fuels Has Not Been Reduced – gasoline consumption among the 13 largest cities in the LA Basin area increased during the 10-year period between 2010-2019 by 5%. <sup>(1)</sup> Consumption in 2020 did see a drop, but that was due to “COVID inspired conservation” as the stay-at-home economy kicked in. 2021 consumption exceed 2020 as economic conditions rebounded after the height of the pandemic. Reducing or eliminating oil production in LA County will hurt consumers by raising prices further and reducing availability of fuel.

Electric vehicles sales have lagged state goals – at the end of 2021 in California, approximately 1,000,000 electric vehicles (EV) were sold in the state. <sup>(2)</sup> It took approximately 15 years to reach that milestone. The state has a goal of selling a total of 5,000,000 EV by the year 2030, with only nine years to reach the remaining 80% of the State’s goal. Several hurdles remain for the state to reach the goal of 5,000,000 in EV sales with three of the highest hurdles being electrical infrastructure to support the EV, an adequate network of charging stations, and the high price point of an EV.

Fossil fuels are necessary for electrical generation – California is one of the largest generators of renewable electricity in the Country; however, natural gas continues to be the number one source of in-state electrical generation. <sup>(3)</sup> Approximately 48% of in-state generation is from natural gas, while only about 33% is derived from all renewable sources (the most being solar, approximately

15%). While solar only functions when the sun shines and wind is only suitable during breezy conditions, the need for natural gas generators will continue until cost effective storage systems are available. Natural gas electrical generation is the best alternative for peak power demands. In fact, Governor Newsom recently allocated over \$5B for providing additional electrical power generated from natural gas.

Growing reliance on imported oil hurts California – California produces only a fraction of the oil consumed by the State. Through the end of 2021 California produced an average of 358,000 barrels of oil per day, <sup>(4)</sup> while consuming more than 1,400,000 barrels per day, requiring over 70% of our oil to be imported. Since California is an “oil island”, meaning that California does not have any pipelines that bring crude into the state, oil must be imported via tankerships over the ocean. The largest exporter of crude oil to California is Ecuador followed by Saudi Arabia and Iraq (65% total from these three countries), with several other countries making up the remaining 35%. California imported 18,000,000 barrels of crude from Russia in 2021, sending \$1 billion to Putin.

Imports exacerbate environmental and social concerns – none of the countries that export oil to California have the strict environmental regulations that in-state oil producers must follow. Ecuadorian oil is produced with minimal environmental regulations that have resulted in the destruction of significant amounts of the Amazon rainforest and the displacement of indigenous peoples. <sup>(5)</sup> Human rights are overlooked in many of the exporting countries, simply not meeting standards established in the United States of America. Countries run by dictators, monarchies or brutal despots are not concerned with human rights or providing strong social programs for the benefit of their citizens that could be achieved with the substantial oil revenues.

Transitioning oil workers to other industries will hurt those workers – in California the average pay for oil field workers is \$130,000/year. This compares to averages annual wages for wind and solar technicians of under \$60,000/year. <sup>(6)</sup> LA County and City have developed an “Oil Extraction Worker Engagement Plan” which outlines potential resources that could be used in transitioning workers into other industries. Proposed options include tuition assistance for re-training, early retirement payouts, relocation assistance and career counseling to transition to other careers/industries. While the proposed steps could aid in starting new careers for oil workers, it is doubtful that even with retraining offered to transitioning oil workers that they will be able to match their existing income stream. Why would we eliminate oil field workers’ jobs in California and send that wealth instead to Ecuador, Russia, or Saudi Arabia. How is that just?

Fewer taxes will be paid – as income streams for workers are reduced the taxes paid by the workers will be reduced proportionately. Likewise, oil operators in the LA Basin pay both ad valorem property taxes on reserves in the ground and severance taxes on production in 14 Southern Californian jurisdictions. These taxes are used by counties and cities to maintain vital services and infrastructure such as police and fire services, road maintenance and schools. Further, as wages are reduced, workers will have less purchasing power resulting in a reduction in state and regional sales taxes being collected.

Philanthropic donations will be curtailed – as oil workers and companies are phased out, a significant amount of charitable donations will be lost. Oil workers and oil companies make donations each year in support of local food banks, school activities, community programs and environmental causes. Many people, especially those the most in need, will be adversely impacted by the loss of such generous charitable support.

The LA Basin's environment will be hurt – air emissions associated with oil production in the LA Basin are minimal as compared to other industries and mobile sources. The Ports of Long Beach and Los Angeles are the largest source of air pollution in the Basin, due primarily to ships queued to offload and load. Reducing oil production in LA County and City will simply result in incremental oil imports, further exacerbating poor air quality in the Basin. Only crude produced in California is completely California Climate Compliant. In-state producers must account for all of their GHG emissions under AB 32 and the State's cap and trade program. Foreign imports are completely exempt from such regulations.

Amortization is an illegal taking – phasing out of oil and gas production operations through an “amortization program” has been discussed by LA County & City and proposed by one municipality in the LA Basin (Culver City). This approach of restricting land use has never successfully been employed by a government entity to “take” real property from an oil producer or mineral rights owner as it is a violation of the US Constitution's 5<sup>th</sup> Amendment. An “amortization program” serves to infringe upon an operator's legally vested rights to recover minerals it owns in fee or through agreements with mineral owners and through their sole capital investment. A government entity (City, County, or State) cannot determine that an oil and gas producer has achieved “an appropriate rate of return” on their investment given future development is an integral part of any mineral acquisition. The valuation of a diminishing asset, such as an oil producing property, is far more complex than a straight-line depreciation and amortization of a fixed asset. Any “amortization program” that might be enacted would face significant and protracted legal challenges that would be very costly and time consuming for all parties involved.

Furthermore, an “amortization program” will not only impact the operating company, but also mineral owners, some that have leased the minerals to an oil producing company, others that have not yet. Many mineral owners rely on royalties as their sole source of income. Loss of these royalties would be considered a “taking” of real property from the mineral owner. How can the City or County “amortize” this real property, particularly when it is undeveloped?

Gas prices will go up – as the supply of domestic crude falls under the county's amortization plan, the demand for foreign crude will rise, making crude bought by California refineries more expensive and conversely gasoline, diesel, jet fuel, and all products made from petroleum more expensive at precisely the time consumers can least afford already record high gasoline prices.

Bonding requirements are duplicative – the proposed ordinance presents several areas that duplicate existing county and state regulations. Specifically, a proposed bonding requirement by the County is excessive in that CalGEM, the State agency that oversees oil and gas operations, currently has bonding requirements in place to ensure compliance with all State regulations relating to operation of oil and gas wells, their attendant facilities and the ultimate plugging of wells and restoration of the surface locations. In certain cases, these bonds may be as much as \$30,000,000. Incremental bonding requirements from the County will result in economic hardships on oil and gas operators.

Signage requirements are duplicative – many of the proposed signage requirements duplicate current requirements that exists under Federal and State regulations relating to oil production operations. CalGEM requires signs to indicate the operator, well name, API number, location of site and emergency contact phone numbers.

“Comment and Complaint Log” is a recipe for abuse– the proposed requirement in the Oil Well Ordinance for a Comment and Complaint Log opens the door for abuse by anti-oil/anti-business activists. A log of this nature would cause an operating company to spend an inordinate amount of time answering unfounded complaints. Concerns originating from regulatory agencies (i.e., County or State) will always be addressed in a timely and effective manner. Companies currently regularly interface with neighbors and address legitimate concerns as might be required to maintain harmony in the area of operations.

Site maintenance should be required equally of all county businesses – oil operators strive to maintain site in aesthetically pleasing conditions, often beyond conditions of other businesses in the immediate area. All businesses should be required to meet a standard that upgrades a neighborhood by maintaining properties that are in good repair and are free of public eyesores.

To summarize concerns expressed above, the following bullet points highlight the county’s failed proposal.

- Motor vehicle fuels will be adversely impacted by reducing or eliminating oil and gas production in the LA Basin.
- Electric vehicles are a solution to air pollution in Southern California; however, many barriers exist for this solution.
- Natural gas is the most reliable and cost-effective source of electrical generation.
- Reducing or ending oil production in LA County and City will place further dependence on foreign oil sources, which is a contradiction to goals tied to global climate impacts and human rights.
- Transitioning of oil workers will be very challenging and expensive for local governments; many hurdles exist for a “just transition” to occur.
- Fewer taxes will be collected at local levels due to reduced property taxes with the elimination of ad valorem and severance taxes along with reduced worker incomes.
- Oil and gas companies, and their workers, are very benevolent with respect to philanthropic giving serving the communities in which they operate. These charitable contributions will be eliminated with the abolition of oil operations.
- Efforts around environmental impacts should be refocused to the larger source of pollution, ports and mobile sources. The impact of oil production is minimal in comparison.
- Amortization programs are simply wrong when applied to oil and gas operations. An attempt to eliminate production via these means will result in lengthy and costly legal actions.
- Amortization schemes will raise the price of gasoline, diesel, jet fuel and all other products made by petroleum.
- An “amortization program” will not only impact the operating company, but also mineral owners that have leased the minerals to an oil producing company. Many mineral owners rely on royalties as their sole source of income. Loss of these royalties would be considered a “taking” of real property from the mineral owner.
- Specific bonding for the County is not needed as the State already has more than adequate bonding requirements in place for oil operations.

- Several items in the proposed County Oil Well Ordinance duplicate regulations currently existing in Federal, State, County and City codes. Duplicate requirements do not enhance safety and environmental matters for the public and create an undue burden on operators.
- A “complaint log” will serve no beneficial purpose in ensuring compliance or strengthening community relations.
- Site maintenance as defined in the proposed ordinance should be a requirement of all businesses that are visible to the public.

Thank you for taking time to review CIPA’s detailed comments on a Just Transition and potential new Ordinances. We look forward to constructive conversations in shaping final policies that will meet the objectives of all stakeholders involved in these endeavors.

Sincerely,

Rock Zierman  
Chief Executive Officer, CIPA

Re: Oil Well Ordinance / Project No 2020-000246-(1-5) / Case No RPPL2020000624

Dear Commissioners and Staff,

On behalf of The Termo Company and our 30 Los Angeles area employees, I am writing to express our vehement opposition to the Draft Oil and Gas Ordinance (Ordinance). Termo operates within three designated and zoned oil and gas fields within unincorporated Los Angeles County.

This Ordinance, if adopted, would bring about the phase out of oil and gas production in Los Angeles County and result in the illegal condemnation of private property and a “taking” under the law. We understand, and fully agree, that protecting the public is an important policy goal, however, the need for this Ordinance is not supported by the reality of oil and gas operations in the unincorporated portions of Los Angeles County.

Before adding additional points and addressing some of the underlying assumptions in this proposed policy, I would like to state that Termo is willing to sit down with your staff to discuss in further detail why this Ordinance is unnecessary for all oil and gas operations in the County.

### **Policy Points for Consideration**

#### **Climate Resiliency and Sustainability**

Sustainability and Resiliency means producing locally what we as a society use, and this should include oil and natural gas.

- In 2019 oil production in the unincorporated area of Los Angeles totaled 2.4 million barrels (CalGEM). This is equivalent to two ocean going super-tankers. Taking this local supply away means more imports through the Ports of Long Beach and Los Angeles, further burdening those communities.
- According to the California Air Resources Board (CARB), oil and gas produced in the Los Angeles Basin has a lower Carbon Intensity (CI) than any of the imported crude oil sources brought into California.
- Thus, this policy will result in a net increase in GHG emissions.

Oil and gas production accounts for less than one percent of all emissions in California.

- According to the California Air Resources Board industrial activity related emissions account for 21% of total emissions in the state and emissions related to upstream oil and gas production account for just 4.1% of that 21%, thus less than 1% of all emissions.

## Takings Without Compensation

Condemnation without reason or justification would constitute a taking and require compensation.

- It is reasonable to assume that in the event of an attempt to phase-out of oil and gas production as proposed, trial courts would conclude that a “taking” would occur.
- The mineral estate value (of discontinued hydrocarbon production/operations as proposed) would become due and payable to the affected mineral owners and oil operators. The respective litigation would prove to be exorbitant for the County and taxpayers, notwithstanding the sure judgements as to the net present value of payable lost production and lost revenue to the affected parties.

**The current value of Termo’s Oil and Gas Reserves in Unincorporated Los Angeles County is conservatively valued at \$87 million dollars. Is the County prepared to compensate the company and our mineral owners for that asset which this ordinance revokes the legal right to access?**

## Increasing Reliance on Imports

Imported oil is not subject to the strict air emission regulations that domestic production adheres to nor does this foreign oil employ local labor or pay taxes that benefit the County and citizens.

- As stated previously, this policy action will result in an increase in foreign oil imports into the Ports of Los Angeles and Long Beach increasing the pollution burden on these disadvantaged communities.
- Because foreign oil is not subject to the same environmental regulations as oil regulated under the South Coast Air Quality Management District purview, this policy will have the adverse impact of increasing global emissions while harming local working families.
- This Ordinance and the associated policy making results represent a contradicting philosophy to the proposed legislation. Foreign production is unregulated, exceedingly polluting and dangerous to our environment. The oil industry in California is the most regulated in the world. It represents clean, safe, reliable energy for all its citizens.

## Business Impact on Termo and Other Supporting Businesses

This Ordinance and its potential implementation have an immediate and deleterious impact on Termo’s corporate value.

- One third of our company’s value is derived from production and assets in unincorporated Los Angeles County.
- Companies typically utilize bank financing as a source of funds for ongoing business activity and growth through new projects. Implementation of this policy will result in restricted values of our oil and gas properties thereby reducing the level of financing available to us for additional investment and growth.
- The proposed policy will result in limiting work permitted and available on our properties resulting in less opportunity for local third-party contractors and support businesses.

### **Draft Ordinance Specific Points**

#### **Section D – Comment and Complaint Log**

- This provision may be abused by anti-oil activists and should provide a mechanism for determining the validity of the complaint.

#### **Section E – Site Maintenance**

- This requires that all structures...and equipment shall be maintained free of rust, oil, and stains which seems to selectively target oil infrastructure for penalty. Will this provision be applied to auto body shops, garages, transit maintenance yards, rail yards, and all other industrial activities in the County?

#### **Section F – Bonds**

- This provision duplicates existing (and in current draft form) state and federal bonding requirements for oil and gas operations in the state. LA County already has a “drilling bond” in the existing oil and gas code.

This Ordinance attempts to move forward a poor policy choice by forcing the shutdown of the Oil and Gas Industry in Los Angeles County. This policy goal is naïve at the very least and does a grave disservice to the majority of LA County’s citizens who are already burdened with high energy prices. Additionally, it further destabilizes California’s energy security by increasing our reliance on imported crude oil.

**Since the implementation of this Ordinance will increase imports, contrary to the staff report, it will have a negative environmental impact. A full CEQA analysis should be required for the Ordinance and the impact of foreign production and the importation of crude oil from California’s primary suppliers.**

Sincerely,

Ralph E. Combs  
Manager of Regulatory and Government Affairs  
The Termo Company

**Subject: Los Angeles County Board Agenda Item No 5 – Oil Well Ordinance (Draft)**

Comments are made on the behalf of J. L Vignes Ranch, its employees and shareholders.

For generations, the Vignes Family has contributed to the successful development of the “Pueblo of Los Angeles” and has served as custodians of ranch land in the Santa Susana Mountains. In addition, our properties, located in unincorporated LA County, have been producing oil for use by Southern Californians since 1920. The oil wells and production facilities are in compliance with pertinent regulations and upgraded to meet current environmental regulations.

J. L. Vignes Ranch, Inc. is in total opposition to LA County’s Draft Oil Well Ordinance. There are important issues for further consideration and analysis:

1. The proposed phase-out-and elimination of proven oil resources will eliminate local energy resources and further increase energy prices.
2. The oil and energy industry, a major employer in LA County, will be negatively impacted. Oil field production and down-stream refineries, chemical factories, natural gas and related retail distribution chains will be negatively impacted and likely driven out of business.
3. The oil wells and production facilities have a useful life that greatly exceeds the proposed phase-out period. The Draft Ordinance outlines an unlawful ‘taking’ of property rights.
4. Oil and gas drilling and production practices in California are arguably the cleanest and most environmentally sound operations in the world.

Please delay action on the Draft Oil Well Ordinance until the economic and social impacts are known. The draft ordinance requires detailed study to avoid massive unintended consequences and costs to the general public.

Sincerely,

*O. Sweningsen*

Oliver Sweningsen, Ranch Manager  
J. L. Vignes Ranch, Inc.

**To:** DRP Public Comment <comment@planning.lacounty.gov>

**Subject:** SHAME ON REGIONAL PLANNING AND THEIR OVER-REACHING LEFT WING LIBERAL AGENDA

**CAUTION:** External Email. Proceed Responsibly.

Once again, LA County Regional Planning is attempting another extremely damaging and far over-reaching expansion of the original intent of their position, that further devalues personal property and it's historical uses with their exceedingly obsolete title-22 agricultural designations.

Data from 2018 reported that LA County produces approximately 70% of our annual oil & gas consumption and it imports the majority of the remaining 30% from Ventura and Kern counties.

Limiting local gas & oil production can only increase the damage to the local and global environment and will further increase over-inflated fuel costs by requiring additional transportation and road use, all while incurring local job and income losses to LA County and it's residents.

Electrical vehicles possibly make good sense in large cities, where their ability to reduce local emissions is beneficial, but overall, at this point in technology, electric car batteries and the associated mining and processing costs are far more damaging to the ecology than fossil fuels. In parts of the world, it employs slave and child labor and the open pit mining is far more damaging to the environment than all of the world's drilled oil and gas wells. Battery composition is evolving and as time goes along, they will be less damaging environmentally, but until that happens, our reliance on oil & gas is unarguable.

Is it smarter to produce locally or is LA County adding to the need that we buy oil from Russia, Iran, Iraq, OPEC or Venezuela? In comparison, how bad would it have been to pipe it in from our Canada, our closest oil and gas producing neighbor, economic partner and ally?

Any thoughts on the environmental damage of heavy metals contained in the currently existing batteries and their recyclability? What is the plan to recycle solar panels or the wind mills that cost more physically and environmentally to produce than they will ever generate? They often require the complete scraping of vegetation and animal life on Title-22 land and consume tremendous amounts of diesel and often coal powered equipment to mine, manufacture, transport, erect, maintain, replace and recycle these bird killing blights on the landscape?

The Biden administration in just 16-months has heavily damaged the American economy. The stock market is in a 9-week slide, our dollar has been hugely devalued, the national debt is the largest in history and now we face runaway inflation that is another major blow to our citizenry who was just climbing out of the apparently man-made viral destruction of Covid-19.

One day-one, Biden closed the Keystone pipeline and not long afterwards his administration stopped permitting oil & gas permits on federal land and offshore areas. Now, every commodity required for life has nearly doubled in cost, affecting every citizen negatively, especially those with lower income.

No point in bringing up the disastrous exit of Afghanistan or the open borders that have allowed over 2.2 million illegal immigrants that have infiltrated our cities with disease, crime and drugs that threaten our sovereignty. Drug overdoses are now the leading cause of American deaths and Chinese manufactured fentanyl, delivered through our southern border is the major cause.

The left wing ideologies of the current Democrat political leadership is destroying our economy, our state and our country.

## STOP THE DESTRUCTION AND WAKE UP BEFORE IT IS TOO LATE.

Mike Ryan, American, resident, tax payer, LA County ag property and oil well owner.

Please submit comments regarding the Oil Well Ordinance to: [ordinance@planning.lacounty.gov](mailto:ordinance@planning.lacounty.gov) or leave a voicemail message at: (213) 974-6432. All submitted in a language other than English will be translated. Comments received prior to 12 p.m. on June 7, 2022 will be provided to the Regional Planning Commission. Comments received after 12 p.m. June 7, 2022 before the meeting will not be provided to the Regional Planning Commission, but will be in public record.

**About the Oil Well Ordinance**

The Department of Regional Planning (DRP) prepared the Oil Well Ordinance in response to the September 15, 2021 motion by the Los Angeles County Supervisors. The proposed ordinance will apply only to the unincorporated areas of Los Angeles County and will amend Title 22 – Planning and Zoning of Los Angeles County Code to:

- Prohibit new oil wells and production facilities in all zones.
- Designate existing oil wells and production facilities as nonconforming uses in all zones.
- Establish consistent regulations in all zones for existing oil wells and production facilities.

The proposed ordinance does not apply to the Baldwin Hills Community Standards District, specific plans, nor uses operating under a valid discretionary address these in future efforts.

RE: Strengthening the Draft Los Angeles County Oil Well Ordinance and Aligning the Baldwin Hills Community Standards District with Updated Title 22

To the Los Angeles County Regional Planning Commission,

We are submitting this comment letter to share feedback about the draft Los Angeles County Oil Well Ordinance (“draft Oil Well Ordinance”). As a preliminary matter, we would like to commend Los Angeles County for releasing this draft Oil Well Ordinance, and we are grateful for the Department of Regional Planning’s (“DRP”) continuous work to make the County a healthier place for all, particularly for residents most impacted by the harmful pollution associated with oil drilling. We encourage the Commission to move the draft forward as fast as possible while still maintaining critical public health and remediation standards to best prioritize the health and safety of communities throughout the phase-out process.

As the County makes progress toward amending Title 22, we want to provide several recommendations to strengthen and promptly adopt a final ordinance:

- First, we ask that the County strengthen public health standards in the Oil Well Ordinance, and increase monitoring in frontline communities over the phase-out period.
- Second, we strongly recommend that the County address the growing need for robust clean-up and remediation measures to ensure that oil drilling sites are not only shut down but also properly cleaned and remediated to a standard that is safe for community-driven redevelopment and use.
- Third, we would like to underscore the critical importance of ensuring that the Oil Well Ordinance addresses all oil wells in unincorporated LA County, including wells in specific plan areas and wells operating under discretionary permits.
- Fourth, we urge the County to ensure operations in the Inglewood Oil Field (“IOF”) are consistent with the Title 22 Oil Well Ordinance as soon as possible; the phase-out of operations at the IOF should be on a similar timeline as phase-out across the rest of unincorporated LA County.
- Finally, the County should clearly explain and describe the process it potentially could undertake to shorten the 20-year default amortization period following its amortization study.

The County’s draft Oil Well Ordinance is a great first step in phasing out oil production activities and improving bonding requirements to hold operators to their clean-up obligations. The following recommendations will help ensure that the draft Oil Well Ordinance protects community health and safety and results in a thorough clean up of toxic oil drilling operations.

### **1. The Draft Ordinance Should Include Public Health Standards That Incorporate Recommendations of the Department of Public Health.**

Given that the County’s default discontinuation period for non-conforming land uses is currently set to twenty years, it is essential that Title 22 continues to include standards to protect public health over the phase-out period. Adequate health protections in frontline communities are essential and must remain in place until drilling operations are completely phased out and drill sites are remediated.

The current draft Oil Well Ordinance eliminates various standards from Title 22 that currently provide several key community health protections.<sup>1</sup> To ensure that communities do not risk increased exposure during the phase-out period, we urge the Commission to direct DRP to retain the following standards in Title 22:

---

<sup>1</sup> Draft Oil Well Ordinance (May 5, 2022) at 10-11, 13-15, [https://planning.lacounty.gov/assets/upl/data/EA-2022-05-05-draft\\_oil\\_well\\_ord.pdf](https://planning.lacounty.gov/assets/upl/data/EA-2022-05-05-draft_oil_well_ord.pdf).

- Performance standards for air quality to minimize soot.<sup>2</sup>
- Restrictions for long-term and additional on-site equipment storage.
- Well and site maintenance.

The draft ordinance appears to replace these standards with less robust protections regarding signage, general site maintenance, and the development of a “Comment and Complaint Log.”<sup>3</sup> These revised standards are insufficient to protect public health from current operations, so we urge the County to reinstate and consider improving the eliminated standards.

Additionally, DRP should require the Comment and Complaint Log to be sent to the Office of Oil and Gas within twenty-four hours of receiving a complaint. To increase transparency in reporting, DRP should also publicly post logs after removing sensitive information.

We also urge DRP to consult with and incorporate recommendations from the Department of Public Health (“DPH”) that reflect the most current studies on public health impacts associated with proximity to oil drilling. For example, recent studies have found negative public health impacts up to 2.5 miles from oil operations,<sup>4</sup> which may necessitate more robust public health standards than those previously included in Title 22. DRP should utilize DPH’s recommendations to strengthen public health standards and incorporate these standards into Title 22 to better protect public health in frontline communities over the phase-out period.

## **2. LA County Must Strengthen Requirements for Robust and Swift Remediation at Oil Drilling Sites.**

Second, while our coalition applauds LA County’s efforts to improve bonding requirements to fund clean-up and remediation at drill sites throughout unincorporated LA County, we believe the remediation requirements could be further improved. The County should craft standards and detail timeframes for abandonment, plugging, clean-up, and remediation of oil and gas wells throughout unincorporated LA County. It is within the County’s authority to craft such standards, and the County can look to other jurisdictions that have done so. For example, Culver City’s final oil drilling phase-out ordinance specifies restoration activities and includes language requiring

---

<sup>2</sup> LA County’s Title 22 requirements for soot are focused on the type of engine that is used during oil well drilling, requiring electric engines to “prevent the emission of sound, sparks, or ignited carbon, or soot.” Title 22.140.400(E)(3). We urge LA County staff to keep this provision in Title 22 to ensure oil drilling operations utilize electric engines before they are phased out, and are prohibited from replacing electric engines with non-electric engines before they are phased out.

<sup>3</sup> *Id.* at 17-20.

<sup>4</sup> David J.X. Gonzalez et al., [Upstream oil and gas production and ambient air pollution in California](#), *Science of the Total Environment* 806 (2022).

revegetation “to as near a natural state as practicable.”<sup>5</sup> It is important to note that Culver City’s remediation standard previously required “substantially” returning the site to its “original condition,” and Culver City exercised its authority to strengthen this remediation standard in the final Culver City Oil Well Ordinance. Santa Barbara’s code specifies that after oil cellars are removed, “soil below the cellars shall be tested for hydrocarbon contamination. If contamination is found to be present the area shall be remediated.”<sup>6</sup> Similarly, when equipment, buildings, sumps, pits, and other areas are removed, an “investigation shall be conducted to determine if soil contamination is present. If soil contamination is found, the area will be remediated per the approved plan.”<sup>7</sup> Other jurisdictions have provisions for revegetation and regrading.<sup>8</sup>

Here, the draft Oil Well Ordinance requires site restoration to “as nearly as practicable to its original condition,” but does not specify that the site should be tested for contamination, revegetated, or regraded.<sup>9</sup> Our coalition urges the Commission to direct DRP to specify, at minimum, that operators must test for soil contamination and remediate the drill site if any contamination is detected. We also urge the County to require operators to revegetate drill sites and leave the site uniformly graded and returned to as near a natural state as practicable.

### **3. The Department of Regional Planning Must Address Oil Wells Throughout Unincorporated LA County, Including Those Subject to Discretionary Entitlements.**

Third, we would like to underscore the critical importance of ensuring that the Department of Regional Planning addresses *all* oil wells on unincorporated County land, including wells in specific plan areas and wells operating under discretionary permits. The draft Oil Well Ordinance excludes these wells and wells in the Baldwin Hills Community Standards District.<sup>10</sup> As a result, the draft Ordinance covers just 473 of the 1,547 wells in the unincorporated County. DRP says it will address the 219 wells in specific plan areas or operating under discretionary permits “in future efforts.”<sup>11</sup>

---

<sup>5</sup> Culver City Zoning Code Amendment P2021-0036-ZCA, amending § 17.610.010(D)(1)(d), <https://culver-city.legistar.com/View.ashx?M=F&ID=9901991&GUID=FCD7CE85-332C-443F-A2AE-9A2200FED44B>.

<sup>6</sup> Santa Barbara County Petroleum Code § 25-31(a)(7), [https://library.municode.com/ca/santa\\_barbara\\_county/codes/code\\_of\\_ordinances?nodeId=CH25PECO](https://library.municode.com/ca/santa_barbara_county/codes/code_of_ordinances?nodeId=CH25PECO).

<sup>7</sup> *Id.* § 25-31(b)(2)(c)(i).

<sup>8</sup> See Culver City Zoning Code Amendment (describing revegetation to as near a natural state as practicable); Bakersfield § 15.66.040(A)(19) (well site restoration includes regrading “as nearly as practicable to a uniform grade” within a specified time); Santa Barbara County § 25-31(a)(7) (all excavations and depressions must be filled with clean soil).

<sup>9</sup> Draft Oil Well Ordinance (May 5, 2022) at 20.

<sup>10</sup> Draft LA County Oil Well Ordinance Staff Report pp. 2-3.

<sup>11</sup> *Id.* at 3. This information is different from what was presented in the September 2021 Los Angeles County Oil and Gas Strike Team final report. That report included analysis on the number of “Existing Discretionary Permits” in unincorporated Los Angeles County, noting that “there are seven existing

It is concerning to our coalition and to County residents living on the frontlines of oil drilling that there is no further information about when and how DRP will address wells operating under entitlements. We therefore urge the Commission and the Board of Supervisors to direct DRP to detail a process and timeline for addressing these wells in a future staff or other report to ensure they are phased out as expeditiously as possible. Additionally, DRP should provide information to the public about the specific plans and discretionary permits associated with these 219 wells so there is clarity as to when current entitlements expire. Frontline residents deserve information as well as the fastest amortization and phase-out schedule possible.

#### **4. The County Should Expeditiously Align the Baldwin Hills Community Standards District with Updated Title 22.**

Fourth, as instructed by the Board of Supervisors, DRP must update the Baldwin Hills Community Standards District (“BHCS D”) to be consistent with the final updates to Title 22 for new and existing oil production activities.<sup>12</sup> The County should not wait to begin this update; it should start now so that operations in the IOF are phased out as quickly as possible.

As the UCLA School of Law Clinic explained in a letter to the Board of Supervisors last July (“UCLA letter”), one path that the Board and DRP can take is to amend the BHCS D now, before the next periodic review or update process.<sup>13</sup> There is no need to wait until the ordinance amending Title 22 has been completely codified.

It is fully within the Board’s purview to initiate an ordinance amendment to update the BHCS D.<sup>14</sup> And there is ample precedent for the County to update a Community Standards District (“CSD”) to increase community protections. For example, the County is currently engaged in a process to “repeal and replace” the Santa Monica Mountains North Area CSD. The Board initiated the update to strengthen the CSD’s environmental protections and to ensure land use regulations were applied consistently across the entire Santa Monica Mountains region.<sup>15</sup> The

Regional Planning discretionary entitlements that cover approximately 300 oil wells in the unincorporated LA County area.” [LA County O&G Strike Team Final Report \(Sept. 2021\) at 66.](#)

<sup>12</sup> Motion by Supervisors Mitchell & Kuehl: *Protecting Communities Near Oil and Gas Drilling Operations in Los Angeles County*, Los Angeles County (September 2021) <https://file.lacounty.gov/SDSInter/bos/supdocs/161767.pdf>.

<sup>13</sup> [Letter from UCLA School of Law Clinic to Los Angeles County Board of Supervisors: Information on the Potential Phase-Out of Oil and Gas Production Operations at the Inglewood Oil Field](#) (July 2019).

<sup>14</sup> *Id.* §§ 22.300.020, 22.68.020, 22.244. Amendments can be approved “whenever the Board finds that the public convenience, general welfare, or good zoning practice justifies such action, in compliance with [the County Planning and Zoning Title and the Planning and Land Use Title of the California Government Code].” *Id.* § 22.244.

<sup>15</sup> Letter from Amy J. Bodek, Dir. of the Dep’t of Reg’l Plan., to Board of Supervisors RE: Hearing on the Santa Monica Mountains North Area Plan and Community Standards District Update, at 4 (Nov. 24, 2020), <http://file.lacounty.gov/SDSInter/bos/supdocs/150580.pdf>.

County can follow a similar process to ensure the BHCSO is consistent with the Title 22 Oil Well Ordinance. With over half of the oil wells in unincorporated Los Angeles County located in the IOF, we ask that the County start the BHCSO amendment process now in order to ensure that residents living around the oil field benefit more quickly from the health protection of the County's action to phase-out oil drilling. The Commission should ask DRP to detail a process and timeline for addressing these wells in a future staff or other report.

**5. DRP Should Explain the Process of Amending the 20-Year Default Amortization Period Following Completion of the Amortization Study.**

Finally, it is our hope and expectation that upon completion of the amortization study described in the September 15, 2021 Board motion, the County will amend and shorten the 20-year default amortization period in accordance with the results of the study. In order to ensure that oil drilling phase-out proceeds as expeditiously as possible, we ask the Commission to direct DRP to detail the process to shorten the default amortization schedule based on the results of the pending LA County amortization study in a future staff or other report. Describing this process would increase public transparency and allow community members to better understand how DRP intends to implement the Board of Supervisors' September 2021 motions.

Thank you for your consideration of these comments. We appreciate Los Angeles County's bold leadership in establishing a process to phase-out oil drilling and we look forward to continued collaboration.

**CAUTION:** External Email. Proceed Responsibly.

Hi my name is Ashley Hernandez and I live in Wimington, CA and I am calling in support of item five. I encourage the Department of Regional Planning to swiftly act to ban new oil drilling while still maintaining critical public health standards. More and more research is showing how oil drilling negatively impacts our communities health and we need to ensure that throughout the process, thru remediation, the that the health of our community is prioritized.

### **The Department of Regional Planning Should Work With the Department of Public Health to Ensure health is prioritized throughout the process**

For example, recent studies have found negative public health impacts up to 2.5 miles from oil operations, which may necessitate more robust public health standards than those previously included in Title 22. We urge DRP to consult with and incorporate recommendations from the Department of Public Health (“DPH”) that reflect the most current studies on public health impacts associated with proximity to oil drilling. DRP should utilize DPH’s recommendations to determine how public health standards can be strengthened to reflect available science, and incorporate these standards into Title 22 to better protect public health in frontline communities over the phase out period. Without slowing down the process, we encourage the DRP to include any precious public health protections in the updated ordinance.

**LA County Should Strengthen Requirements for Robust and Swift Remediation at Oil Drilling !** At minimum operators must test for soil contamination and remediate the drill site if any contamination is detected. We also urge the County to require operators to revegetate drill sites and leave the site uniformly graded and returned to as near a natural state as practicable.

Thankyou  
Ashley Hernandez

**Subject:** Public Comment Agenda Item 5

**CAUTION:** External Email. Proceed Responsibly.

My name is Margaret Starbuck and I encourage the Department of Regional Planning to swiftly act to ban new oil drilling while still maintaining critical public health standards. More and more research is showing how oil drilling negatively impacts our communities health and we need to ensure that throughout the process, thru remediation, the that the health of our community is prioritized.

### **The Department of Regional Planning Should Work With the Department of Public Health to Ensure health is prioritized throughout the process:**

- For example, recent studies have found negative public health impacts up to 2.5 miles from oil operations, which may necessitate more robust public health standards than those previously included in Title 22.
- We urge DRP to consult with and incorporate recommendations from the Department of Public Health (“DPH”) that reflect the most current studies on public health impacts associated with proximity to oil drilling.
- DRP should utilize DPH’s recommendations to determine how public health standards can be strengthened to reflect available science, and incorporate these standards into Title 22 to better protect public health in frontline communities over the phase out period.
- Without slowing down the process, we encourage the DRP to include any precious public health protections in the updated ordinance.

### **The Department of Regional Planning Should Expediently Address All Wells in Unincorporated LA County, including the Inglewood Oil Field:**

- **We understand that this ordinance is the part of a much longer process, however, it is necessary that the DRP move as quickly as possible to address *all* oil wells on unincorporated County land, including wells in specific plan areas and wells operating under discretionary permits – most notably the Inglewood Oil Field, which makes up the majority of wells in unincorporated Los Angeles County.**
- As Such the County should not wait to update the Baldwin Hills CSD so that it can align with title 22 as soon as possible.

## **LA County Should Strengthen Requirements for Robust and Swift Remediation at Oil Drilling Sites:**

- At minimum operators must test for soil contamination and remediate the drill site if any contamination is detected. We also urge the County to require operators to revegetate drill sites and leave the site uniformly graded and returned to as near a natural state as practicable.

**Subject:** Item 5 Public Comment

**CAUTION:** External Email. Proceed Responsibly.

To the LA County Planning Commission,

I am writing in regard to Item 5 for the meeting on Wednesday the 8th of June. I support the proposed ordinance to ban new drilling. Oil drilling in California's most populous county is incompatible with a healthy and safe population, and it should be considered a non-conforming use.

I'm grateful for the hard work and expertise of the staff on this effort to protect our health and safety as we make this shift to our oil policy. Please continue to examine public health reports that oil drilling has adverse impacts as much as 2.5 miles from oil operations. These concerns apply to all oil wells in the county -- please don't wait until the Baldwin Hills CSD is updated, but rather continue acting now.

Oil operators should be held to higher standards for testing soils and remediating drill sites -- extracting oil was a privilege granted to oil operators by the people, and that privilege relied on a basic sense of responsibility. Now is the time to remind operators of their responsibility, and your work is key to doing that.

Regards,  
Morgan

Dear Adrienne Ng,

I'm an LA County resident, and I urge you to declare oil drilling a "nonconforming use" by supporting agenda item 5 of the June 8 commission meeting.

The oil industry has been polluting some LA communities for decades. The proposed amendment to Title 22 — prohibiting new drilling and production facilities in most unincorporated areas of LA, designating existing oil production facilities as nonconforming uses, and establishing consistent regulations — is the first step in phasing out toxic wells altogether.

Please help move this ordinance forward.

Sincerely,  
Jimy Tallal

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Carol Gordon  
Los Angeles, CA 90027

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting. This issue is important to me because as a child I suffered from air pollution and now it is even worse.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

CAUTION: External Email. Proceed Responsibly.

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Riley Haythorn  
Inglewood, CA 90302

The fact is, we are already in the middle of the inevitable transition to renewable energies and the richest man in the world makes electric cars.

Any new investments in archaic fossil fuel projects is a step regressive backwards, and a deliberate attempt to stop this inevitable transition.

Sincerely,  
Greg Weiss

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Jeffrey Levicke  
Valley Village, CA 91607

Dear Adrienne Ng,

LA needs to lead by example on the fight against climate change. We need to stop all oil wells in LA, so stopping new oil wells is the right place to start phasing oil out.

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

CAUTION: External Email. Proceed Responsibly.

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Jacklyn Loughbom  
Manhattan Beach, CA 90266  
jacklyn721@roadrunner.com

Dear Adrienne Ng,

Foresight is everything! And we have long known about the toxic pollution perpetrated by the oil industry. As a Los Angeles County resident who cares about the health of my community and the climate, I hope I can count on you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. Banning new oil drilling in the county would begin the process of addressing the harms of decades of fossil fuel infrastructure being built even within a mile of where we live, work, and go to school. I have some personal experience with this, as I was in high school when the blowout at the Aliso Canyon natural gas storage facility occurred, only a mile from my school (Sierra Canyon High School in Chatsworth). I was very fortunate that the air quality in the school itself was deemed safe and that my family lived farther away, but many of my classmates and their families had health issues or had to evacuate from their homes for months. I have attended community meetings in Porter Ranch and know that residents continue to have related health problems even years after the leak.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Benjamin Reicher

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
darynne jessler  
Valley Village, CA 91607  
darynnej@yahoo.com

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Diana Laufer  
Los Angeles, CA 90046

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Angela Vanthaneeyakul  
Arcadia, CA 91006

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Anne Marie Girard  
Pasadena, CA 91104

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Jennifer Yamamoto  
Manhattan Beach, CA 90266  
terryandjen@verizon.net

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. Given the current information about the extent of climate change--and the precipitous pace of its more severe effects, it is beyond time that you declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting. Is California the green leader it so often proclaims to be? Is LA really taking strong steps to meet Mayor Garcetti's stated goal to "reduce our fair share of global emissions by 2030."? How do we meet that goal if we don't stop drilling?

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Jason Brock  
Los Angeles, CA 90045

Dear Adrienne Ng,

This matters to me because I am concerned about the well being of all people especially the youth. There is no way breathing fumes from oil wells can be healthy

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Ashley Meza  
Montebello, CA 90640

CAUTION: External Email. Proceed Responsibly.

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Lollie Ragana  
Santa Monica, CA 90405  
lollieragana@verizon.net

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
SUSAN ROSEN  
Van Nuys, CA 91401

CAUTION: External Email. Proceed Responsibly.

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
o lewis  
Los Angeles, CA 90009

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Ed Wright  
Encino, CA 91316

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Sandra Butler  
Los Angeles, CA 90045

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Anne M. Van Alstyne

CAUTION: External Email. Proceed Responsibly.

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
DAVID SOTO  
Santa Clarita, CA 91390  
dsoto@job-dog.com

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Diane Higgs  
West Hills, CA 91307

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Eileen Karzen

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Clara Halle  
Los Angeles, CA 90006

CAUTION: External Email. Proceed Responsibly.

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Anjanette Caron  
Alhambra, CA 91803  
anjanette\_caron@yahoo.com

CAUTION: External Email. Proceed Responsibly.

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Andi Brittan  
Los Angeles, CA 90019  
andibrittan@gmail.com

Dear Adrienne Ng,

As a life long Los Angeles County resident, born-and-raised, I have deep concerns about the future impacts of drought, wildfire, sea-level rise, and pollution on me, my family, and my neighbors near and far. For this reason, I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Henry Schlinger  
Glendale, CA 91201  
hschling@hankschlinger.com

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Richard Nuno  
Stevenson Ranch, CA 91381

CAUTION: External Email. Proceed Responsibly.

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Kristina Wunder  
Topanga, CA 90290

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Bradley Colden  
Whittier, CA 90602

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
LouAnne Insprucker  
La Canada Flintridge, CA 91011  
lainsprucker@gmail.com

CAUTION: External Email. Proceed Responsibly.

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Steve And Rachael Alvarez-Jett  
Torrance, CA 90501  
alvarezjett@icloud.com

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Vance Arquilla  
Santa Monica, CA 90405

CAUTION: External Email. Proceed Responsibly.

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Cindy Bear  
Los Angeles, CA 90048

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Ed Rowe  
Signal Hill, CA 90755

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Barbara McNulty  
San Dimas, CA 91773

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Vic Bostock

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Benjamin Park  
Los Angeles, CA 90046

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to support agenda item 5 at the June 8 commission meeting.

Families living near oil wells have been enduring unconscionable health damage as the oil industry polluted their communities. The proposed amendment to Title 22 prohibits new oil wells and production facilities in most unincorporated areas of L.A., designates existing oil wells and production facilities as "nonconforming uses", and established consistent regulations. It's a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated L.A. County — especially within the Inglewood Oil Field.

Sincerely,

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Roseanne Costantino  
Los Angeles, CA 90039

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Zane Grant  
Los Angeles, CA 90031

The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Linc Conard

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Serah Mirzaeian  
Sun Valley, CA 91352

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I strongly urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Rosemary Graham-Gardner

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Petite Morrison  
Altadena, CA 91001

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Mehry Sepanlou  
Beverly Hills, CA 90210

I grew up in southwest Los Angeles where there were plenty of oil fields. They were a blight on the landscape. Since then I've learned how polluting they are and harmful to people's health. They must be banned from L. A. County. Please do the right thing by moving the ordinance forward and banning new oil drilling.

Sincerely,  
Linda Love

CAUTION: External Email. Proceed Responsibly.

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Alexander Dunaev  
Marina Del Rey, CA 90292

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
A R  
Los Angeles, CA 90025

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Lisa Gee

Dear Adrienne Ng,

I just read next week you on the county planning commission will consider whether to ban new oil wells in parts of the county!? REALLY?? Why would you even consider it? I thought LA County was going to end ALL oil drilling in residential proximity. Adding new wells is just a stupid expansion of fossil fuel infrastructure at a time we should be CAPPING wells and closing down all oil extraction.

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Levinson Rodriguez  
Mission Hills, CA 91345

CAUTION: External Email. Proceed Responsibly.

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Susan Bogdanovich  
San Pedro, CA 90732

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Paulette Doulatshahi

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Renee Klein

Dear Adrienne Ng,

I'm a Los Angeles County resident who cares about the health of my community and the climate. I urge you to declare oil drilling a nonconforming use by supporting agenda item 5 of the June 8 commission meeting.

Families living near oil wells have been fighting for clean air for generations, enduring unconscionable health harms as the oil industry polluted their communities. The proposed amendment to Title 22 — which would prohibit new oil wells and production facilities in most unincorporated areas of Los Angeles, designate existing oil wells and production facilities as nonconforming uses, and establish consistent regulations for existing oil wells and production facilities — is a good first step toward phasing out toxic wells for good.

I'm counting on you to do everything in your power to not only move this ordinance forward, but ban new oil drilling throughout the entirety of unincorporated Los Angeles County — especially within the Inglewood Oil Field, where most of the county's drilling takes place.

Sincerely,  
Kristy Pace

Department of Public Health

**SUBJECT: OIL WELL ORDINANCE COMMENTS CASE: RPPL2020000624**

Thank you for the opportunity to comment on the 2022 draft Oil Well Ordinance. The Department of Public Health (Public Health) provided the following comments on March 21, 2022, and still has many of the same concerns.

General Comments:

The Department of Regional Planning lead the Oil and Gas Strike Team effort, a multi-year study that ended in September 2017, which provided recommendations for needed health protections, including:

- Air quality and odor monitoring
- Transportation of chemicals in residential areas
- Pipeline monitoring and leak detection
- Abandonment of long idle wells
- Emergency Response Plans
- Communication with surrounding community

Many of the Oil and Gas recommendations for health protections were included in the April 2020 draft ordinance. By removing the additional protections, the current draft poses

a serious disregard for public health and safety and impedes efforts to advance environmental justice in communities heavily burdened with environmental pollution. The current draft further removes the slight protections in the existing ordinance, which at minimum should remain in effect. Public Health does not believe oil and gas facilities should be allowed to operate without additional health protections that minimize environmental impacts and protect sensitive uses and populations for the duration of the amortization period, which could last up to 20 years. Public health and safety protections are needed especially for operations located within 500 feet of sensitive uses.

Public Health urges Regional Planning to consider adding health protections necessary to protect health, including performance standards for air quality and emissions compliance, well maintenance, trucking, motors, lighting, perimeter enclosure and landscaping, fencing, paint, well plugging and abandonment and site restoration, and regular monitoring and oversight.

Specific Comments:

1. Section 22.140.400, Oil Wells and Production facilities, Page #20:

“D. Comment and Complaint Log.

1. The operator shall maintain a written log of all calls and emails registering comments or complaints regarding site operations. The log shall include the date, time, nature of the comment or complaint, and the response or resolution offered.
2. The operator shall respond to each call or email comment or complaint within 24 hours or the next business day, as applicable, with an update on the operator's actions to address the comment or complaint.
3. A copy of the log shall be provided to the Director upon request.”

Public Health comment: The Office of Oil and Gas was established to coordinate the oversight of oil and gas operations and centralize communication between the community, industry, and regulators in the unincorporated County of Los Angeles. The Office and Oil and Gas should oversee the Comment and Complaint Log, as opposed to the operators. In our experience, directing community comments and complaints to the operator is not effective and can make relationships worse.

2. Section 22.140.400, Oil Wells and Production facilities, Page #21:

“6. Restoration Upon Abandonment. Within 90 days after the abandonment of any well, the well site shall be restored ~~as nearly as practicable to its original condition~~ suitably for its subsequent use.”

3. Section 22.140.400, Oil Wells and Production facilities, Page #22:

“G. Well Plugging and Abandonment and Restoration.

1. All California Geologic Energy Management Division requirements related to the plugging and abandonment of a well; removal of equipment, trash,

and other waste materials; and well site and lease restoration shall be fulfilled.

2. All equipment and pipelines which are not necessary for the operation or maintenance of other oil wells or production facilities on the property shall be removed.
3. The well site or lease area shall be restored so that the site is free of oil, rotary mud, oil-soaked earth, asphalt, tar, concrete, litter, and debris.
4. Restoration of the well site shall be completed within 60 days following plugging and abandonment of the well.
5. When the last oil well on a lot is plugged and abandoned or the production facility on the lot is removed, restoration of the lot shall begin within three (3) months and be completed within one year after the plugging and abandonment of the last oil well on the lot, unless the California Geologic Energy Management Division approves a schedule with a longer timeline for restoration. The lot shall be restored in compliance with all California Geologic Energy Management Division requirements and to the satisfaction of the Director.”

Public Health Comment: We urge Regional Planning to require a Conditional Use Permit for plugging and abandonment and to require a Community Safety Plan. We are deeply concerned about not requiring conditions for the plugging and abandonment of wells. We have learned from the site at Rosecrans and Main that ministerial review provides insufficient protection to residents where plugging, abandonment, and redevelopment including grading could happen as close as 30 feet from homes.

We appreciate our partnership with Regional Planning and your efforts to protect the health of communities living near oil and gas facilities. If you have any other questions or require additional information, please contact me at (626) 430-5280 or [chcontreras@ph.lacounty.gov](mailto:chcontreras@ph.lacounty.gov)
