CAUTION: External Email. Proceed Responsibly.

I should be able to build a 400 sq ft cottage on my vacant land but existing building codes insist on a minimum of 800sq ft. I do not need or want that much interior room and shouldn't be forced to build that large. Can this issue be addressed? I bought land in the mountains because I want to spend time in the mountains not in a house and would prefer a variance or other permit as opposed to suing the county for the right to build on my own land.

I concur with almost all of the issues being brought up except the manufactured housing, some people may only be able to afford to build or rebuild using manufactured housing and should not be forced to do otherwise.

Thank you for your attention.

Best regards,

Skyler Marshall

fx We do not want to see any new subdivisions, lighting or anything else that affects the natural beauty and serenity of this area. There are plenty of that to be found in the cities of the surrounding communities. It would have been nice if LA county was more interested in helping us restore the water to our lakes or rebuild the community after the fires.
