# 1. INTRODUCTION

This Historic Context Statement for the Los Angeles County Westside Planning Area was prepared at the request of Los Angeles County (County). This project will serve as a baseline for historic preservation planning efforts in the County going forward.

The Historic Context Statement is a compilation of existing information – including historic contexts prepared by the County, published histories and historical narratives, as well as previous surveys and property evaluations – supplemented with new research and analysis, providing the County with a general development history of Westside Planning Area's built environment. The Historic Context Statement identifies important periods of development, historical trends and development patterns, and important persons in the history of Westside Plan Area. The period of study for this project dates from the earliest extant built resources in the mid-19<sup>th</sup> century and ends in 1980, allowing for information about development patterns and properties dating to approximately 40 years in the past.

The project follows guidance and standards developed by the National Park Service and the California State Office of Historic Preservation for conducting historic resources studies; specifically, the project is being developed using the National Register of Historic Places (National Register) Multiple Property Documentation (MPD) approach. Guiding documents include:

- The Secretary of the Interior's Standards for Preservation Planning
- *National Register Bulletin No. 15: How to Apply the National Criteria for Evaluation*
- *National Register Bulletin 16A: How to Complete the National Register Nomination Form*
- *National Register Bulletin No. 16B: How to Complete the National Register Multiple Property Documentation Form*
- *National Register Bulletin No. 24: Guidelines for Local Surveys: A Basis for Preservation Planning*
- The California Office of Historic Preservation's *Instructions for Recording Historical Resources*

## 1.1 Purpose

In order to understand the potential historic significance of built resources in the Westside Plan Area, it is necessary to examine those resources within a series of contexts. By placing built resources in the appropriate historic, social, and architectural context, the relationship between an area's physical environment and its broader history can be established.

A historic context statement analyzes the historical development of a community according to guidelines written by the National Park Service and specified in National Register Bulletin 16A. The Bulletin describes a historic context as follows:

Historic context is information about historic trends and properties grouped by an important theme in pre-history or history of a community, state, or the nation during a particular period of time. Because historic contexts are organized by theme, place, and time, they link historic properties to important historic trends. In

this way, they provide a framework for determining the significance of a property.<sup>1</sup>

A historic context statement is linked with tangible, built resources through the concept of “property type,” a grouping of individual properties based on shared physical or associative characteristics. It should identify the various historical factors that shaped the development of the area, which may include historical activities or events; historic personages; building types, architectural styles, and materials; and patterns of physical development.

The historic context statement provides a framework for the continuing process of identifying historic, architectural, and culturally or socially significant resources important within the context of the development of Westside Plan Area, as well as the larger Westside Plan Area Valley region. It may also serve as a guide for citizens, planners, and decision-makers in their ongoing efforts to evaluate the relative significance and integrity of individual properties.

A historic context statement is not a comprehensive history of an area. Rather, it is intended to highlight trends and patterns critical to the understanding of the built environment. This historic context statement is intended to inform planning and land use decisions for the built environment in the Westside Plan Area.

## **1.2 Contributors**

This historic context was prepared by Historic Resources Group. The historic context was authored by Paul Travis, Sian Winship, and Robby Aranguren. All are qualified professionals who meet or exceed the relevant Secretary of the Interior’s Standards Professional Qualification Standards.

## **1.3 Acknowledgment Statement**

The County of Los Angeles recognizes that we occupy land originally and still inhabited and cared for by the Tongva, Tataviam, Serrano, Kizh and Chumash Peoples. We honor and pay respect to their elders and descendants--past, present, and emerging--as they continue their stewardship of these lands and waters. We acknowledge that settler colonization resulted in land seizure, disease, subjugation, slavery, relocation, broken promises, genocide and multi-generational trauma. This acknowledgement demonstrates our responsibility and commitment to the truth, healing and reconciliation and to elevating the stories, culture and community of the original inhabitants of Los Angeles County. We are grateful to have the opportunity to live and work on these ancestral lands. We are dedicated to growing and sustaining relationships with the Native peoples and local tribal governments, including (in no particular order) the

## 2. SCOPE AND METHODOLOGY

### 2.1 Description of the Study Area

The study area for the project reflects the current boundaries of the Los Angeles County Westside Planning Area. The Westside Planning Area is one of the 11 planning areas established as part of the Planning Areas Framework in the Los Angeles County General Plan Update in 2015. The Westside Planning Area is focused on the unincorporated communities of Ladera Heights, View Park – Windsor Hills, Franklin Canyon, West LA Sawtelle VA, West Fox Hills, Marina del Rey, Gilmore Island and Beverly Hills Island.

Communities in the Westside Plan Area. *PlaceWorks*.

### 2.2 Research Methodology

Research collections, archives, and other materials consulted in the preparation of this historic context statement include primary and secondary sources relating to the history and development of the City of Los Angeles, City of Inglewood, Culver City, and Los Angeles

County. Primary sources include annexation records, city building permits, city directories, county tax assessor rolls, Census and voter registration records, oral histories, land use records, and historical newspapers and other periodicals. Secondary sources include published narrative histories and biographies; environmental review documents, such as EIRs and technical reports; previous historic resources surveys and studies; and previous historic evaluations, nominations, and designations. Visual materials included historical photographs (including historical aerial photographs and postcards), and historical maps (including Spanish and Mexican land grant maps, Sanborn Insurance Co. maps, and tract and subdivision maps).<sup>2</sup>

## **2.3 Previous Studies**

Some of the Westside Planning Area is part of the incorporated City of Los Angeles and was studied and surveyed as part of SurveyLA, the 880,000-parcel citywide survey of historic resources. As a result, existing SurveyLA reports that are germane to the Westside Planning Area include: Westchester-Playa de Rey Community Plan Area, West Los Angeles Community Plan Area, Westwood Community Plan Area, Venice Community Plan Area, Palms-Mar Vista Community Plan Area, Bel Air-Beverly Crest Community Plan Area, and portions of the West Adams-Baldwin Hills-Leimert Park Community Plan Area and the Wilshire Community Plan Area.

Additionally, other incorporated municipalities within the Westside Planning Area have conducted historic and cultural resources surveys and have historic context statements. They include Beverly Hills, West Hollywood, and Santa Monica. Culver City has such a study in progress at the time of writing.

## **2.3 Guidelines for Evaluation**

A property may be designated as historic by national, state, and local authorities. In order for a building to qualify for listing in the National Register, the California Register of Historical Resources (California Register), or as a local landmark, it must meet one or more identified criteria of significance. The property must also retain sufficient integrity to continue to evoke the sense of place and time with which it is historically associated.

This Historic Context Statement provides guidance for listing at the federal, state, and local levels, according to the established criteria and integrity thresholds. In general, a higher integrity threshold is needed for listing in the National Register of Historic Places; properties that may not retain sufficient integrity for listing in the National Register may be eligible for the California Register or for local designation. In addition, properties that have achieved significance within the past 50 years must be “exceptionally important” as outlined in National Register Criteria Consideration G.

---

<sup>2</sup> A comprehensive list of resources consulted is listed in the bibliography.

A detailed description of each designation program and the evaluation criteria is included in Appendix B of this report.

In general, evaluation criteria focus on four overarching concepts:

1. Properties associated with historic events.
2. Properties associated with significant people.
3. Properties that are significant for their design, architectural style, or association with a significant architect.
4. Properties that have potential archaeological significance.<sup>3</sup>

These concepts are included in the designation criteria for listing at the federal, state, and local levels. Each theme for which there are extant built resources in the Westside Planning Area includes an “Eligibility Standards” section to assist in the identification and evaluation of potential historic resources from each period of development. Note that these are guidelines that are intended to assist in the evaluation of historic resources; other considerations including additional research, professional expertise, and comparative analysis of similar properties must also be taken into account in the evaluation of historic properties.

---

<sup>3</sup> Archaeological significance is outside of the scope of this project.

INSERT WESTSIDE ISLANDS MAP

### 3. HISTORIC CONTEXT OVERVIEW

This historic context statement is focused on the unincorporated communities that make up the Los Angeles County Westside Planning Area. Specifically, the historic context statement focuses on those communities within the Westside Planning Area that contain significant built fabric and populations: Ladera Heights, View Park – Windsor Hills, Marina del Rey, and West Fox Hills. The West LA Sawtelle Veterans Administration community, though referenced and discussed here, is not further focused on since historic resources in the area have been evaluated and documented previously by the Veterans Administration. Franklin Canyon, Gilmore Island, and Beverly Hills Island are each very small, isolated land areas and have not been investigated for this context beyond a general history.

The historic context statement provides a narrative historical overview of the broad patterns of events and trends that have shaped land use patterns and the development of the built environment of the Westside Plan Area over time.

It should be noted that properties mentioned in the narrative are intended to illustrate development patterns or provide examples of specific property types; however, inclusion in the narrative does not necessarily indicate eligibility for designation. Properties that have been demolished are noted as such, when known.

The historic context statement also provides guidance for identifying and evaluating each property type, including: an overview of eligibility criteria and integrity considerations for listing in the National Register of Historic Places, the California Register of Historical Resources, and local designation by the County of Los Angeles; followed by eligibility standards specific to each type.

Chronological development periods and themes included in the historic context statement are outlined below.

## 4. GENERAL HISTORY

### 4.1 Native American Period (Before 1542)

#### SUMMARY STATEMENT

The Westside Plan Area is located in Los Angeles County. The County boundaries, in total, contain more than four thousand square miles. Los Angeles County is the ancestral territory of the Tongva, Tataviam, Serrano, Kizh, and Chumash Peoples.<sup>4</sup>

This context examines the historical background of Native American groups in the Westside Plan Area. There are no known extant built resources in the Westside Plan Area dating from the pre-colonial period (before 1542). The study of archaeological resources is outside the scope of this project.

#### HISTORICAL BACKGROUND

Tribes based in Los Angeles County have been identified by various names over the past two centuries.<sup>5</sup> The Spanish settlers who colonized the area and developed the Mission San Gabriel Arcángel (San Gabriel Mission) assigned the name “Gabrieliño” to Native Americans associated with the Mission.<sup>6</sup> Tongva, Kizh, and some members of the Cahuilla and Serrano tribes were historically encompassed under this nomenclature. Anthropologists Lowell John Bean and Charles R. Smith note that the term “Gabrieliño” first appeared in a report published by Oscar Loew in 1876 and has been “intermittently applied” to the Indigenous population of the Los Angeles area ever since.<sup>7</sup> Today, some descendants refer to themselves as either Tongva or Kizh because they are terms of Native, rather than Spanish, origin.<sup>8</sup>

This historic context statement acknowledges and respects that each Native American Tribe has the right for self-identification and for that choice to be honored. Because the Westside Plan Area is within the ancestral home of several Native American tribes that identify by different names, this historic context statement adopts the inclusive term “Tongva and Kizh Peoples” when referring to the Plan Area’s original Native American inhabitants.<sup>9</sup>

For more than 7,000 years, the Westside Plan Area First Peoples have served as the traditional caretakers of the Los Angeles Basin, South Channel Islands, San Gabriel and Pomona Valleys, and portions of Orange, San Bernardino, and Riverside Counties.<sup>10</sup> Historically, the present day tribes listed above were not a single tribe, but a collection of lineages (a group of families with a

<sup>5</sup> Jurmain and McCawley, xxvii.

<sup>6</sup> As noted in the Introduction, terms such as “colonization” and similar language will be utilized in this historic context statement in discussions related to the history of the Native American community and their experiences in Southern California. For further information please refer to Los Angeles City Planning, “Guidance for the Preparation of Technical Reports and Studies relating to the Tribal Cultural Resource,” [https://planning.lacity.org/odocument/ab9e5647-1d96-4db7-aab1-2905984fb1e/TechnicalReports\\_Studies-TribalCulturalResources.pdf](https://planning.lacity.org/odocument/ab9e5647-1d96-4db7-aab1-2905984fb1e/TechnicalReports_Studies-TribalCulturalResources.pdf) (accessed November 2021).

<sup>9</sup> Although a somewhat cumbersome term, this name encourages inclusivity in the discussion of Pomona’s original inhabitants.

<sup>10</sup> Bean and Smith, 538.

common ancestor) that shared a common Uto-Aztec language, culture, religion, and lifestyle that distinguished them from neighboring groups. This group did not have a single unifying name, and it was common for a tribe to refer to themselves in their own language simply as “people” or “men,” although they likely would have assigned names to other tribes.<sup>11</sup>

Prior to European contact and colonization, Native Americans in the present-day Westside Plan Area thrived because of their relationship with the land and waters and their stewardship approach to land conservation. Archeological research indicates that habitation sites were hierarchically organized around estuaries, with settlement size dependent upon resource availability. While some larger estuaries could support large settlements, populations at smaller estuaries often practiced a strategy of mobility in which a part of the population foraged during resource scarcity.<sup>12</sup> Research of flora and fauna remains from the Playa Vista/Ballona Creek area evidence that local estuarine, coastal, and near-coast resources provided subsistence for people residing near the estuaries.<sup>13</sup> Fishing was mostly limited to nearshore environments with little deep-sea fishing.

Villages were politically autonomous and largely organized through shared kinship ties.<sup>14</sup> While it is difficult to estimate their population over time, evidence suggests that at the time of European contact in the 16<sup>th</sup> Century there may have been more than fifty to one hundred mainland villages reflecting a range in population sizes.<sup>15</sup> Each village was headed by a chief, who was usually descended from the prevailing lineage of the village. The chief typically spoke multiple languages, negotiated social relations, collected taxes, and directed the community’s seasonal migrations. In addition to the chief, spiritual leaders also had authority over the tribal community.<sup>16</sup>

Surrounding Indigenous communities included the Chumash, the Tataviam, the Serrano, the Cahuilla, and the Luiseño.<sup>17</sup> Interactions with surrounding groups were frequent and generally peaceful, occurring largely through the channels of intermarriage, matrilocal residence, and/or

<sup>17</sup> Terry L. Jones and Kathryn A. Klar, *California Prehistory: Colonization, Culture, and Complexity* (Plymouth, UK: AltaMira Press, 2007).

trade.<sup>18</sup> It appears that the Westside Plan Area First Peoples also shared some rituals with the Chumash to the north, based on the distribution of similar stone effigies in the prehistoric period.<sup>19</sup> With the possible exception of the Chumash, the Westside Plan Area First Peoples were the most populous, and most powerful ethnic nationality in aboriginal Southern California, their influence spreading as far north as the San Joaquin Valley Yokuts, as far east as the Colorado River, and south into Baja California.”<sup>20</sup> Their territory was so expansive, in fact, that it spanned several ecological zones. Consequently, the group’s settlement and subsistence patterns varied slightly within each zone based on micro-environmental conditions, but on the whole, thrived on hunting, gathering, and fishing activities.

The arrival of Spanish explorers in the 1760s ushered in a period during which Native Americans were subjugated to Spanish rule, targets of religious conversion to Catholicism, and enslaved to build and maintain the missions, pueblos, and presidios. Tribes were forced to move from their villages and subjected to violence and cultural genocide.<sup>21</sup> Tribes were named after the missions they were forced into, which are reflected in the names of many local Tribes today.<sup>22</sup>

As described in the report *We Are Still Here. A report on Past, Present, and Ongoing Harms Against Local Tribes*, “in 1542, the first European expedition landed on Catalina Island, home to the Tongva, and made the first recorded contact between the Spanish people and the Native people of modern-day Los Angeles County.”<sup>23</sup> The Spanish returned in 1769 to colonize the present-day Los Angeles area. Local tribes were forcibly displaced from their villages, eroding their language and culture. The Spanish enslaved the Native Americans, forcing them to build and maintain their missions, pueblos and presidios and were subjected to a life of servitude, and in many cases, forced religious conversion.

Successive waves of settlers—the Spanish, the Mexicans and the Americans—resulted in the loss of title(s) to their ancestral lands as well as disenfranchisement of the Native Americans. Spanish colonization of land was governed by the “Recopilación de Leyes de los Reynos de las Indias,” of 1680, which provided that the inhabitants of colonized land included “the rights to their possessions, the right to as much land as they needed for their habitations, for tillage and for the pasturage of flocks.”<sup>24</sup> Under the law, the Spanish held land in trust for the Native

<sup>20</sup> Bean and Smith, 538.

<sup>21</sup> Language used in this document reflects that recommended by the Guidance for the Preparation of Technical Reports and Studies relating to The Tribal Cultural Resource.

<sup>22</sup> This document acknowledges and respects that each Native American tribe has the right for self-identification and for that choice to be honored. Because the area that now comprises the Westside Planning Area includes the ancestral home of Native American tribes that identify by different names, this historic context statement adopts the inclusive term “Tongva/Kizh” when referring to the WSAP’s original and ongoing Native American inhabitants.

## 4.2 Spanish and Mexican Periods (1542-1848)

### SUMMARY STATEMENT

This context examines early European exploration of present-day Southern California (part of “Alta California” under the Spanish and Mexican governments), and its colonialization by Spain and later Mexico. The colonization of Alta California was one of the most transformational events in California’s history. Fueled by geopolitics, the Spanish crown established a permanent presence in Alta California in the 1760s. Colonial presence impacted the physical landscape and environment and subjugated local Native Americans to violence and cultural genocide, significantly changing the region. Spain continued to maintain control of the territory for over 50 years, until it was ceded to Mexico following the War for Mexican Independence in the 1820s.<sup>26</sup> Control of Alta California would be ceded to the United States in 1848 following the Mexican-American War.

During the Spanish and Mexican colonial periods, the important colonial settlements nearest and most influential to the western portions of present-day Los Angeles County were the Mission San Fernando Rey de España located in the present-day Los Angeles community of Mission Hills in the San Fernando Valley, and the pueblo of Los Angeles (El Pueblo de Nuestra Señora la Reina de los Ángeles) which was founded in 1781 and established the urban settlement that would become the present-day City of Los Angeles.

Because there are no known extant built resources in the Westside Plan Area dating from the period of Spanish and Mexican control, no themes were developed for this context. The study of archaeological resources is outside the scope of this project.

### SPANISH EXPLORATION AND COLONIZATION (1542-1821)

In 1542, King Carlos dispatched Portuguese explorer Juan Rodriguez Cabrillo to explore the West Coast of North America on behalf of the Spanish Empire. Cabrillo set sail in June 1542 and arrived in what is now San Diego Bay in September of that year. In doing so, Cabrillo became the first European to set foot on California soil, claiming the territory for the Spanish Empire by right of discovery.

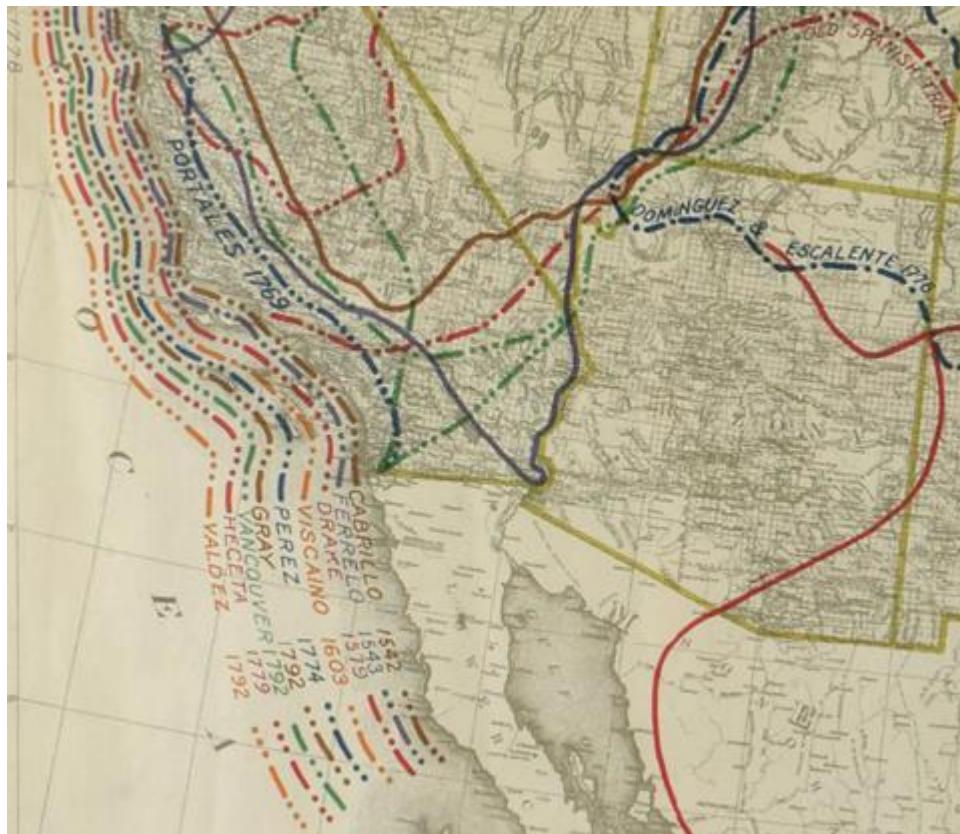

In 1579, a competing claim of the Pacific Coast was made for England by Sir Francis Drake, which prompted two more expeditions to be dispatched by Spain: the first was headed by Sebastián Rodríguez Cermeño, who set sail in 1596 carrying Cabrillo’s writings and revisited some of the same coastline. Another expedition was made by Sebastián Vizcaíno in 1602. None of the three Spanish explorers had been able to identify an ideal harbor from which Spain could facilitate its maritime trade and no significant Spanish settlements were established. As a result, the Spanish Empire made no further effort to explore the Pacific Coast for another 160 years.

By the 1760s, Spain faced greater threats to its American territories from Russia and England, both of whom had already claimed adjacent lands in present-day Alaska and Canada,

<sup>27</sup> Eldredge, 23.

In 1769, the Spanish government dispatched an expedition led by Captain Gaspar de Portolá, the newly appointed governor of Baja California, and Franciscan Father Junipero Serra to establish the first Spanish settlement in Alta California. Portolá established a military outpost at the Presidio of San Diego, thereby claiming Alta California as Spanish territory. Within the month, Serra also founded the Mission San Diego de Alcalá, the first of the 21 missions that would be established in Alta California by the Spanish and the Franciscan Order between 1769 and 1823.<sup>28</sup>

These efforts marked the beginning of a coordinated campaign by the Spanish to impose European religious beliefs and social and cultural ideals upon the existing Native population, leading to the widespread abuse of, and injury to, Native Americans through enslavement, forced religious conversion, and the introduction of infectious diseases.

Following establishment of the Presidio of San Diego, Portolá set out with a small group of explorers on an overland expedition along what would become known as *El Camino Real* (“The Royal Road”). The expedition reached the present-day boundaries of Los Angeles County on July 30, 1769. Franciscan Fray Juan Crespí named the area after “Nuestra Señora la Reina de los Angeles de la Porciúncula” or “Our Lady the Queen of Angels of the Porciúncula.”<sup>29</sup>

### **MEXICAN CONTROL AND GOVERNANCE (1822-1848)**

In 1821, Mexico won its independence from Spain, making Alta California part of Mexico. The Mexican government commissioned several exploration parties following its newfound control of Alta California.

The situation for Native Americans during the early years of Mexican colonial control remained largely unchanged from that of the Spanish era. Many of the Tongva and Kizh Peoples who were forced from their ancestral lands still inhabited the formerly Spanish-controlled areas. However, by the 1830s, the focus on secular agricultural settlement was increasingly overtaking the mission system as more Mexicans migrated and settled in the region.

Consequently, in 1833, the Mexican Congress passed the Act for the Secularization of the Missions of California. Franciscan *padres* abandoned the missions, and the new Mexican government seized most mission lands from the Catholic Church. The secularization law directing the closure of the California missions was passed by the Congress of Mexico on August 17, 1833, with more specific regulations to guide implementation passed on August 9, 1834. According to the 2009 National Park Service study, the regulations were intended to return the land to the Indigenous inhabitants, assigning one half of the mission lands and property to Native Americans along with common land sufficient to pasture their stock. In addition, one half of the mission herds were to be divided proportionately among Native American families. The remaining lands were then available for dispersal by the Mexican government.<sup>30</sup>

<sup>30</sup> Randall Milliken, Lawrence H. Shoup, and Beverly R. Ortiz, “Secularization and the Rancho Era, 1834-1846,” in *Ohlone/Costanoan Indians of the San Francisco Peninsula and their Neighbors, Yesterday and Today*, prepared for National Park Service Golden Gate National Recreation Area, San Francisco, CA, June 2009 (accessed December 2020), 154.

However, the distribution of mission lands did not unfold in the way that the 1834 regulations anticipated, and Indigenous peoples were consistently denied access to former mission lands. During this period, scattered reports indicate that the forcibly displaced Tongva and Kizh Peoples pursued several options available to them. Some moved from the mission to the burgeoning El Pueblo de Los Angeles looking for work, while others intermarried with other tribes, leaving their traditional homeland.<sup>31</sup>

In order to attract settlers to the region, Mexico established a system of land grants that divided the land into large tracts known as *ranchos*. The government granted these *ranchos* to private individuals who were Mexican soldiers, settlers, or financiers. By the time Alta California was given over to Mexico, about thirty land grants throughout the territory had already been presented to Spanish soldiers and government officials by the King of Spain. However, no titles were actually transferred as part of this effort; Spanish governors were authorized to give concession to the individuals, which allowed them to run stock in certain areas without a formal deed.<sup>32</sup> The “rancho system” as it is known today was instead unique to California under Mexican rule as it granted title of land to private citizens. What followed was the period of Southern California history associated with the Rancho era.

The Mexican–American War began in 1845 and ended in 1848 with the signing of the Treaty of Guadalupe Hidalgo, which formally annexed Alta California to the United States. On September 9, 1850, California officially became the 31st state in the Union.

## 4.3 American Control and Settlement (1848-Present)<sup>33</sup>

### GENERAL DEVELOPMENT HISTORY

During the Spanish and Mexican eras, the westside of Los Angeles County was occupied primarily by farms and agricultural lands focused on cattle, sheep and some fruit tree cultivation. This continued for several decades after the annexation of California by the United States. By the 1870s, commercial grain growing had been introduced which proved to be successful.

The arrival of the railroad in 1875 and subsequent regional real estate and population boom opened up westside lands for development and the first residential subdivisions. Despite the development of these early residential tracts throughout the first two decades of the 20th century, large areas of undeveloped land and agricultural fields remained including numerous farms established by Japanese-American growers. More urbanized development did not take

hold until the 1920s.

The development history of the westside is tied to advances in transportation during the first quarter of the 20th century. In the 1900s, settlement had been facilitated by the establishment of the Pacific Electric streetcar. By the 1920s, the popularity of the automobile expanded development across the area. Development was also influenced by economic shifts during the first decades of the 20<sup>th</sup> century. Agricultural land gave way to industrial land uses, as production plants for the aircraft industry were established in the area. During the 1930s, Douglas and Hughes Aircraft relocated to areas bordering Mar Vista. In addition, with the discovery of oil in Baldwin Hills in 1924, then Playa Del Rey and Venice in 1932, the petroleum industry became instrumental in the physical development of the area and oil-related uses such as derricks and oil-industry worker housing began to emerge as part of the landscape.

In the early 1940s, with a healthy employment base to attract new residents, housing subdivisions were constructed at an accelerated rate. This expansion continued throughout the 1940s, as new residential areas were added to accommodate defense industry workers who poured into the region during World War II and returning servicemen and other new residents after the war. After World War II, most of the area's remaining farms and open lands gave way to residential tracts. The late 1950s also saw construction of the San Diego Freeway, or Interstate 405, which increased automobile access to the area.

Significant post-World War II expansion of the aircraft manufacturing industry fueled economic growth and new development. Employers such as Douglas Aircraft in Mar Vista, as well as entertainment industry companies such as MGM Studios in Culver City, attracted many new settlers to the area. Along with more residents came the need for an increase in services and amenities, resulting in significant commercial, civic, institutional, and infrastructural development in the mid-20th century. This is reflected in the area's numerous densely developed commercial corridors, as well as postwar expansion of a variety of building types.

## **ANNEXATION HISTORY OF THE WESTSIDE PLAN AREA**

On a macro level, the development history of the Westside Plan Area consists of a series of incorporations and annexations over the past 100+ years. The largest city in Los Angeles County, and the dominant municipality that surrounds and buffers the Westside Plan Area's unincorporated communities, is the City of Los Angeles. The cities of Santa Monica,<sup>34</sup> Culver City, Beverly Hills, and West Hollywood are virtually surrounded by land annexed into the City of Los Angeles over the last century.

Geographic expansion of the City of Los Angeles through annexation resulted from a combination of government leaders looking for future growth and the concerns of residents regarding power, sewer access, water delivery, and public schools. Although some citizens purposefully located outside city limits to avoid municipal taxes, more often the need for

---

<sup>34</sup> Santa Monica was incorporated in 1888, as an early seaside resort community.

infrastructure and supportive services made annexation attractive to the majority of property owners and residents.

In 1906, Los Angeles annexed the “Shoestring Strip” of 11,000 acres connecting the San Pedro Harbor with the city proper. Annexation of Wilmington and San Pedro soon followed. The physical connection of Los Angeles with its primary port accelerated additional annexations throughout the Westside. Annexation of large portions of the Westside Plan Area land occurred during the first decades of the 20<sup>th</sup> century. The 31,000-acre Westgate Addition west of Beverly Hills and north of Santa Monica in 1915 surrounded the Soldier’s Home to the east and west. The Palms area was added later that same year.<sup>35</sup>

As with much of Southern California history, incorporation and annexation often revolved around the issue of water. William Mullholland’s Los Angeles Aqueduct, bringing water from the Owens Valley, opened in November of 1913. The San Fernando Valley was annexed into the city of Los Angeles just two years later.

Concerns over a potential water shortage, plus a desire to improve the local school system, drove the incorporation of Beverly Hills in 1914. Although the township of Beverly Hills was planned seven years prior, residential development was increasing, and citizens voted to take civic matters into their own hands. Culver City, the brainchild of developer Harry H. Culver, was incorporated in 1917 as a means of providing fire and police services.

In 1917, a major effort to annex some 6,000-7,000 acres<sup>36</sup> of Westside land into the city of Los Angeles was undertaken.<sup>37</sup> Referred to as the “West Coast Annexation,” this effort was largely spearheaded by George H. Dunlop, the former mayor of Hollywood who had led Hollywood’s consolidation efforts with the Los Angeles several years earlier.

One issue motivating annexation was the Hyperion sewer district, which the City of Los Angeles feared losing control over to the bordering municipalities of Venice and El Segundo.<sup>38</sup> Opposition to the annexation came from the nearby municipalities of Santa Monica, Redondo Beach, El Segundo, Manhattan Beach, Hermosa Beach and Inglewood all of whom feared less control and oversight of the sewer nuisance at Hyperion which was geographically closer to the beach cities than to Los Angeles.

The Citizens’ League led by George F. Hays, also lobbied against the West Coast Annexation. They represented the sentiments of several large landowners who had purposely purchased their acreage outside of City limits to avoid taxation of their holdings.

---

<sup>35</sup> Paul R. Spitzzwei, “All Over the Map: “Map Showing Annexations and Boundaries of City of Los Angeles,” January 31, 2020. <https://homesteadmuseum.blog/2020/01/31/all-over-the-map-map-showing-annexations-and-boundaries-of-city-of-los-angeles-31-january-1918/> (accessed October 3, 2023).

<sup>36</sup> Newspaper accounts differ as to the exact amount of acreage, Early articles from 1916 suggest some 4,000 acres. By June 1917, articles from various newspapers refer to 6,000 or 7,000 acres.

<sup>37</sup> “New Annexation Project Is Proposed,” *Los Angeles Evening Express*, February 13, 1917, 13.

<sup>38</sup> An independent city at the time, Venice would not be annexed to the City of Los Angeles until 1926.

According to the regulations of the time, annexation was first voted on by the residents of the territory to be annexed. The Angeles Mesa area, home to the majority of the voting population, voted overwhelmingly in support of annexation.<sup>39</sup> A follow-up election among residents of the City of Los Angeles overwhelmingly approved annexation. The move raised the footprint of the City of Los Angeles to 349.8 square miles, making it the largest city in America geographically.<sup>40</sup> The Citizen's League, however, was successful in keeping their interests from annexation resulting in the unincorporated areas of present-day Ladera Heights/View Park-Windsor Hills. Ultimately, the City of El Segundo incorporated in 1917, at the behest of the Standard Oil Company, being the site of its second largest oil refinery, and an industry town.

A second major wave of annexations occurred during the 1920s. Sawtelle, an agricultural and support community for the nearby Soldier's Home (present-day Veterans Administration) was annexed into the City of Los Angeles in 1922. In 1918, Sawtelle residents voted by a narrow margin to be annexed into Los Angeles but were thwarted in their efforts when City trustees refused to participate. After a brief occupation of Sawtelle City Hall by Los Angeles officials, Sawtelle trustees sued in court and won on a technicality. Four years later, the residents of Sawtelle once again voted for annexation and Sawtelle became the fourth city to be annexed into Los Angeles.

Venice was annexed into Los Angeles in 1925, largely due to an inept government. Resistance to annexation in the seaside community was mounted by the hospitality industry, as they feared Los Angeles laws against gambling, all night dancing, and Sunday commercial activity would negatively impact businesses on and around the Venice pleasure piers. Other sections of the Westside Plan Area, including Laurel Canyon and Beverly Glen were annexed into Los Angeles as hillside residential development became more feasible and growth from nearby Hollywood (previously annexed into the City of Los Angeles in 1910) continued.

Culver City began annexing neighboring land during the 1950s and 60s. During the 1950s, the Culver Crest residential area in the foothills near present-day West Los Angeles College was absorbed into the municipality in order to provide city services. In 1964, Culver City annexed a large section of the Fox Hills area (including the Fox Hills Country Club and Hillside Memorial Park). The owners of the property at the time, the Home Savings and Loan Co., suggested that the Culver City annexation would provide superior city services,<sup>41</sup> however, rezoning issues appear to have factored into the decision as well as the land had been the subject of a rezoning fight while under county jurisdiction.

West Hollywood (formerly known as Sherman) remained unincorporated until 1984, at which time rent control measures were due to expire. This galvanized an incorporation effort by a coalition of LGBTQ activists, Russian immigrants, seniors, and renters. Once a municipal

<sup>40</sup> "New Annexation Gives L.A. Area of 349.8 Square Miles," *Van Nuys News and Valley Green Sheet*, June 8, 1917, 1.

<sup>41</sup> "Looking Back...With Julie Lugo Cerra Fox Hills Connection with Culver City Dates to the '60s," *Culver City News*, November 29, 2018, <https://www.culvercitynews.org/looking-back-with-julie-lugo-cerra-fox-hills-connection-with-culver-city-dates-to-60s/> (accessed October 5, 2023).

government was formed, rent control measures were immediately approved.

Lastly, the unincorporated areas currently in the Westside Plan Area, all have some historical ties to the oil industry, which may have been a factor in their decision to remain unincorporated. From the presence of the Inglewood Oil Field (Ladera Heights/View Park-Windsor Hills), to the site of the Venice Oil Fields (Ballona Creek and Marina Del Rey), Gilmore Oil Field (Gilmore Island), and land previously owned by oil magnate, Edward L. Doheny (Franklin Canyon), these areas mostly defy the patterns of early 20<sup>th</sup> century residential development that encouraged annexation or incorporation.

## 5. COMMUNITY SPECIFIC DEVELOPMENT HISTORIES

### 5.1 Ladera Heights/View Park-Windsor Hills

#### COMMUNITY OVERVIEW

The Ladera Heights/View Park-Windsor Hills area is located approximately 11 miles southwest of downtown Los Angeles. It is an irregularly-shaped area extending from the south side of Glenford Street and Stocker Street to the north as far south as Centinela Avenue at the southwest portion of the area, and a horizontal boundary just north of the Inglewood city limits to the south, and just north of W. Slauson Avenue on the southeastern portion of the area, to the eastern side of Deane Avenue and S. Victoria Avenue to the east, and the west side of S. Wooster Avenue to the west.

The community is served by Windsor Hills Math Science Elementary School, 54<sup>th</sup> Street Elementary School, and Ranklin D. Parent Elementary School. Monteith Park, Ladera Park, and Ruben Ingold Park offer recreational opportunities. Major arteries include S. La Cienega Boulevard, W. Slauson Avenue, Stocker Street, and Angeles Vista Boulevard. The Ladera Shopping Center at La Cienega Boulevard and W. Centinela Avenue and the commercial corridor along W. Slauson Avenue are the primary commercial/retail areas. Industrial development, focused on oil extraction in the area known as the Inglewood Oil Field, spans both sides of La Cienega Boulevard in the northern portion of the area.

The residential community is primarily Black, with very small percentages of White, Asian, and Hispanic/Latino residents.<sup>42</sup> The population of nearly 20,000 is well educated, high-earning, mature, and composed primarily of homeowners.<sup>43</sup>

#### DEVELOPMENT HISTORY

As noted above, the Tongva and Kizh Peoples inhabited the greater Baldwin Hills area, including what is now known as Ladera Heights/View Park-Windsor Hills. The village of Saa'anga was located in the vicinity of Ballona Creek. In the mid-1930s, archeologists recorded eight sites with artifacts in Baldwin Hills, the location of one of which has been “destroyed by housing.”<sup>44</sup>

After colonization, Spanish and Mexican land grants were given to former soldiers and individuals of stature, ushering in the Rancho period and the systematic forced displacement of Native Americans from the area. Ladera Heights/View Park-Windsor Hills was located in the Rancho La Cienega ó Paso de la Tijera, which was granted to Manuel Micheltorena in 1843.

After California was annexed to the United States in 1848, the area continued to be used for ranching. In 1875 and again in 1886, large portions of the Rancho La Cienega were purchased by

Elias J. "Lucky" Baldwin. Baldwin was a pioneering real estate investor, speculator, and businessman who journeyed west after some business success in the Midwest. He arrived in California in 1853, the height of the Gold Rush, where he shrewdly focused on business ventures other than gold. In San Francisco he developed, bought and sold real estate, traded stocks, and started a brick manufacturing business among many ventures. Investments in silver mine stocks on Nevada's Comstock Lode returned millions of dollars in profits. Baldwin soon was known as one of California's richest men and his personal life (replete with multiple wives, divorces, mistresses, and paternity suits) made him one of the most controversial and talked about men of California's early American period. Baldwin relocated to Southern California where, in addition to his Rancho La Cienega holdings, he bought large tracts of ranch land in the San Gabriel Valley (present-day Arcadia). He gained additional notoriety breeding and racing thoroughbred racehorses before his death in 1909.

**Rancho La Cienega 1924, Los Angeles Public Library.**

After Baldwin's death, his heirs subdivided and sold portions of the Rancho La Cienega which became known as "Baldwin Hills." A large expanse of land was sold to the Los Angeles Investment Company (LAIC)—the largest sale in the history of Los Angeles' suburban development at that time.<sup>45</sup> The LAIC was founded in 1898 to take advantage of California's land boom and grew into one of the largest real estate and land development companies of its time.<sup>46</sup> Subsequently, the LAIC developed a network of companies and subsidiaries to support its endeavors including construction companies, lumber companies, a financial institution, and a real estate sales and marketing company. The LAIC also used in-house engineering and architectural services. The LAIC's vertical integration of supporting businesses proved to be

<sup>45</sup> "Six Million Dollar Sale Consummated," *Los Angeles Times*, August 14, 1912, II1.

<sup>46</sup> Kim Hernandez, "The Bungalow Boom: The Working-Class Housing Industry and the Development and Promotion of Early Twentieth-Century Los Angeles," *Southern California Quarterly*, Winter 2010, 354. highly efficient and became a model for other real estate developers.<sup>47</sup> Over time, the LAIC subdivided and improved many tracts within the former rancho.

### **Inglewood Oil Field**

Prior to American settlement in the 19th century, surfacing oil and tar throughout the Los Angeles area provided a variety of uses for area Native Americans, and the oil pools at the La Brea tar pits were well known by Spanish and Mexican explorers and settlers. In 1892, prospectors Edward L. Doheny and business partner Charles A. Canfield discovered what would become the Los Angeles Oil Field. The field was originally located on and around the site of present-day Dodger Stadium and its discovery would foster a boom in oil production throughout the region.

By the first decade of the 20th century, the oil boom spread to exploration in areas all around Downtown Los Angeles. By 1910, local oil production had risen to 70 million barrels per year. Additional oil discoveries in the 1920s caused a second oil boom that made the Los Angeles area a leading oil exporter and led to exceptional economic growth and prosperity in the region. The abundance of local oil fostered the development of several key industries in and around Los Angeles, including automotive, rubber and tires, steel, and paving. Local oil also helped popularize the automobile in Southern California, providing inexpensive fuel and key materials for asphalt roads.<sup>48</sup>

**Inglewood Oil Field c. 1930. *Los Angeles Times Photographic Archives*.**

Oil exploration peaked as demand soared during the economic boom of the 1920s. It was during this time that large portions of the LAIC's Baldwin Hills holdings were leased for oil exploration and would eventually become the Inglewood Oil Field, which extends on both the east and west

<sup>47</sup> National Register of Historic Places Nomination, View Park Historic District, 2015-6, 8-1.

<sup>48</sup> SurveyLA Citywide Historic Context Statement, Industrial Development, 1850-1980, p. 82-84.

sides of La Cienega Boulevard in the northern portions of the Ladera Heights/View Park-Windsor Hills Community Area. Exploration for oil in the area dates back to 1916, but the successful strike that established the Inglewood Oil Field occurred in 1924 by the Standard Oil Company.<sup>49</sup> Demand was reduced during the Great Depression of the 1930s but oil extraction from the Inglewood Oil Field has continued to the present day. Spanning areas east and west of La Cienega Boulevard, the Inglewood Oil Field is currently the largest urban oilfield in the U.S.<sup>50</sup> It is developed with pumpjacks on drilling pads and appurtenant uses. Oil is processed onsite to remove water and gas. It is then moved by pipeline. In addition to Standard Oil, the Inglewood Oil field was home to other smaller operators, all of which have been bought out by Standard Oil (now known as Chevron).

**Baldwin Hills Oil House, undated. [baldwinhillsoilhouse.com](http://baldwinhillsoilhouse.com)**

Curiously, a large house constructed prior to oil exploration is still extant in the Inglewood Oil Field. Variously referred to as the “Baldwin Hills Oil House” and the “Cone Trust House,”<sup>51</sup> this remnant from earlier times is located on a hill west of La Cienega Boulevard and Kenneth Hahn State Recreation Area. The two-story brick home designed in a variant of Dutch Colonial Revival style was built between 1913 and 1915 by a man named Charles Wellington Rand who died in 1917. In 1923, Rand’s family sold the house to Emma and Irving Cone, just one year before oil was discovered. Emma Cone became one of the first private property owners to sell oil leases in the Baldwin Hills area. The Cone family heirs still own the house and several acres of oilfields today.<sup>52</sup>

### **View Park-Windsor Hills**

The LAIC broke ground for the View Park tracts in the early 1920s. Increasing ownership of automobiles by the middle and upper middle classes made hillside residences, desired for the views and sense of privacy they afforded, more accessible. Over the next four decades, the LAIC developed 2,300 parcels.<sup>53</sup>

Beginning in 1924, the company developed the lower and flatter sections of View Park (south and east of Angeles Vista Boulevard) with more modest houses. Most of the homes were built in either the Spanish Colonial Revival or Tudor Revival styles popular at the time. View Park's hillside tracts were developed for more affluent buyers—taking advantage of panoramic views. These residences were designed and built in the popular Period Revival styles of the era, which, in addition to Spanish Colonial Revival and Tudor Revival, included Mediterranean Revival and French Revival. The hillside residences were larger and often included multi-car garages, indicative of the income levels targeted by the developers. Between 1923 and 1927, the LAIC provided the architectural plans and construction services for the residences built in View Park; the names of these staff architects are currently unknown. The LAIC also constructed an 18-hole golf course adjacent to View Park and set aside a small, triangular plot of land for Monteith Park, a pocket greenspace at the intersection of Olympiad Drive, Mullen Place, and S. Mullen Avenue.

<sup>53</sup> National Register of Historic Places Nomination, View Park Historic District, 2015-6, 8-3.

**View Park Model Home 1938. *Los Angeles Public Library.***

As was common practice at the time, the LAIC established restrictive covenants for View Park prohibiting the sale of homes to people of color and those of the Jewish faith. As a result, the 1930 Census shows that the development contained just two Black residents and one resident of Japanese descent—all of whom were employed as domestic workers.<sup>54</sup> Supreme Court decisions in 1948 and 1953 diminished the use of restrictive covenants. They were finally deemed illegal by the 1968 Fair Housing Act of 1968.<sup>55</sup>

**Olympic Village 1932. *Los Angeles Public Library.***

Construction slowed in the early 1930s with the onset of the Great Depression. In 1932, a portion of the Baldwin Hills area was temporarily developed as the “Olympic Village” to house male athletes participating in the 1932 Summer Olympic Games. It was considered the first modern “Olympic Village” in the history of the Olympic Games and set a precedent for housing athletes for future Olympics. The Village consisted of several hundred buildings, including small cabins for the athletes, post and telegraph offices, an amphitheater, a hospital, a fire department, and a bank. The Olympic Village was completely dismantled after completion of the Olympic Games.

Neighboring Windsor Hills was developed by the Marlow-Burns & Company in the late 1930s. Windsor Hills homes were largely designed in the popular Period Revival styles as well as more stripped down “Minimal Traditional” styles. Once again, restrictive covenants and deed restrictions prohibited the purchase or sale of homes in Windsor Hills to people of color. More than 275 homes were built between 1937-39, totaling \$2,500,000 in construction costs.<sup>56</sup> By 1942, 1,200 homes had been built.<sup>57</sup>

Fred W. Marlow and Fritz Burns formed Marlow-Burns & Co. for the development of Windsor Hills. They laid out curvilinear streets and marketed to first-time buyers eligible for the new 90 percent FHA financing.<sup>58</sup> Parcels were sold to both individual buyers who wanted to construct their own homes and speculative home builders. Marlow-Burns & Co also built their own

<sup>58</sup> Greg Hise, *Magnetic Los Angeles* (Baltimore, MD: Johns Hopkins University Press, 1997), 135.

speculative homes in Windsor Hills to attract buyers. Demonstration model homes were constructed and marketed with fanciful names such as the “Town and Country” model. A branded “Windsor-Built System Home” with 18 different plan variations was also offered, all designed by Wardell Engineering and Construction.<sup>59</sup> Five Windsor Hills homes were recognized by the Southern California Gas Company for excellence in home design, including a six-room Norman English cottage designed by architect Charles DuBois.<sup>60</sup>

**Windsor Hills 1938. Huntington Library.**

As originally planned, the Marlow-Burns development of Windsor Hills did not include commercial development. Commercial development, however, soon followed along Slauson Avenue to serve the Windsor Hills residents. This included a cluster of retail buildings at the intersection of Slauson Avenue and Angeles Vista Boulevard that included a Thrifty Drug store constructed in 1941,<sup>61</sup> a Mayfair Market constructed in 1942, and other neighborhood serving stores. Schools, churches, and recreation facilities were also constructed to serve the community.

After World War II, the LAIC began developing the View Park tracts west of Presidio Drive. The LAIC did not design and build residences in these subdivisions, preferring instead to sell groups of parcels to speculative builders and to individuals seeking to build custom homes. The most common style was the Ranch House and its many variations, Mid-Century Modern-style homes, and some Hollywood Regency designs. Development occurred in this section of View Park until the neighborhood was fully built in the late 1960s.<sup>62</sup>

Many notable architects designed homes in View Park including Leopold Fischer, Raphael Soriano, H. Roy Kelley, Charles W. Wong, and Robert L. Earl.<sup>63</sup> It is estimated that builder Homer C. Valentine designed more than 50 residences with Robert L. Earl in View Park.<sup>64</sup> View Park is listed as a historic district on the National Register of Historic Places in 2014 because of its architectural, cultural, and historical significance.<sup>65</sup> The Doumakes House at 4918 Angeles Vista Boulevard in View Park, a Spanish Colonial Revival style house constructed in 1928, was designated Landmark No. 1 by the County of Los Angeles in 2016.

## Ladera Heights

In response to the increased demand for housing after World War II, the LAIC subdivided and developed Ladera Heights. Following its earlier development patterns, the LAIC built many of the houses for sale in Ladera Heights, but also sold parcels to independent building contractors and owners who constructed custom homes. Homes in various post-war styles, from variations on the Ranch style to Mid-Century Modern were developed throughout Ladera Heights. LAIC developed Ladera Heights in phases through the early 1960s.<sup>66</sup>

**Ladera Heights Display Ad 1955. Los Angeles Times.**

As a result, Ladera Heights' neighborhoods have earned colloquial distinctions. "Old Ladera" includes the first tract subdivided by the LAIC, Tract 12650, in 1946, south of Slauson Avenue, east of La Cienega, and west of Ladera Park. The tract was unusual in that the 174 parcels were laid out across three jurisdictions: the City of Los Angeles, the City of Inglewood, and unincorporated Los Angeles County. The initial offering in 1947 included 124 single-family residences on wide lots, facilitating the development of newly popular Ranch-style homes. The LAIC appears to have built some homes on speculation, with unimproved lots also available for purchase. The LAIC also offered 15 duplex lots and 20 triplex lots for multi-family residential

<sup>66</sup> Because Ladera Heights remained undeveloped until the 1960s, the area was not coded on redlining maps.

development.<sup>67</sup> The duplexes and triplexes were advertised as investment properties, where a property owner could live in one unit and rent the other(s). Multi-family garden apartments were also developed in Ladera Heights including Cienega Village at 5710 S. Fairfax Avenue (1950); and the Ladera Townhouse at 6233 S. La Brea Avenue (1950) by architect John C. Lindsay.<sup>68</sup> By 1951, 592 sites had been developed by the LAIC east of La Cienega Boulevard.<sup>69</sup>

Among the independent developers/contractors who built in Old Ladera was Milton Kaufman (1882-1964), a Los Angeles real estate developer whose local real estate developments date back to the 1920s. After World War II, he formed the Milton Kaufman Construction Corporation. His developments included a group of homes on S. Kings Road in Ladera Heights.<sup>70</sup>

The LAIC continued its development activity, moving westward, subdividing tracts north and south of Slauson Avenue in 1952 and 1953, respectively, and concentrating more and more on custom homes. A 1955 ad in the *Los Angeles Times*, promoted Ladera Heights as “sparkling new homes erected by scores of builders who have purchased sites and are building, displaying and offering you their best creative efforts in home construction and arrangement.”<sup>71</sup>

Garth Avenue was one of the first streets in Lower Ladera that the LAIC opened up to builders.<sup>72</sup> Development continued with the subdivision of the tract immediately to the west and south of Slauson Avenue. This was followed by the development of the rest of the area known as “Upper Ladera” in 1956 and 1957. Upper Ladera includes all houses north of Slauson in between La Cienega Boulevard and Shenandoah Avenue. During the 1960s, tracts at the southern end of “Lower Ladera” (houses south of Slauson Avenue in between Wooster Avenue and La Cienega Boulevard) were developed by the LAIC between 1960 and 1964.

Upper and Lower Ladera Heights are home to a large number of Ranch-style homes and Mid-Century Modern homes. Examples include the Linnell Residence at 6443 S. Halm Avenue designed by Charles W. Wong, in 1965, the Engleman Residence at 6440 S. Halm Avenue designed by Paul Bennet, AIA, in 1964, and several other residences designed by these and other architects.

Renowned builder Homer Valentine, built many homes in the Ladera Heights area, including many custom Ranch Style residences. Valentine often worked with architect Robert L. Earl and Charles W. Wong on the design of custom residences. He developed an ongoing relationship with the LAIC leader, Reuben Ingold, and purchased several lots in Ladera (including some on Garth Avenue) to build and sell speculative homes. Valentine’s approach was somewhat unique in that he fully landscaped the homes as well as built them. Parcels along the western-most part of Ladera Heights were particularly attractive, as they overlooked the 36-hole golf course of the Fox Hills Country Club at the time. Valentine built several homes on Wooster Avenue.<sup>73</sup>

<sup>73</sup> Tony Valentine Construction, “History,” <https://tonyvalentineconstruction.com/history/> (accessed October 4, 2023).

Valentine's son remembered, "We tried to start a house every two weeks in Ladera."<sup>74</sup> As a result, Ladera Heights is home to a significant concentration of Mid-Century Modern homes.

In the southeast area of Lower Ladera, along Fairview Boulevard and Springpark Avenue is a grouping of multi-family residential buildings designed in the 1960s. These large complexes (10 to 20 units) are sometimes designed around a swimming pool and patio area. Two of these apartment complexes (6707 Springpark Avenue and 5376 Fairview Boulevard) were designed by architect, Samuel Wacht, AIA.

In 1963, the LAIC constructed a 15-acre neighborhood commercial center at Centinela Avenue and La Cienega Boulevard. The Ladera Heights Shopping Center (now Ladera Center) was designed by renowned Los Angeles architect Stiles Clements. It has been substantially altered since its original construction.

### **Parks and Recreation**

**Ladera Park Amphitheater 1959. *Los Angeles County Library***

With the growth of residential communities, parks and recreational facilities were planned and built to serve them. The Ladera Heights/View Park-Windsor Hills area contains several such facilities. Public parks also often served as locations for community celebrations, athletic competitions, and political demonstrations.

The Los Angeles County Department of Parks and Recreation dates back to the establishment of the Los Angeles Board of Forestry in 1911. The purpose was to beautify County roads. However, in 1929, the Department of Recreation, Camps and Playgrounds was established with jurisdiction over beaches and parks. By 1938, the County consolidated these related programs into one unit. In the 1930s, Los Angeles County collaborated with the Works Progress Administration (WPA) to provide jobs for unemployed people during the Great Depression,

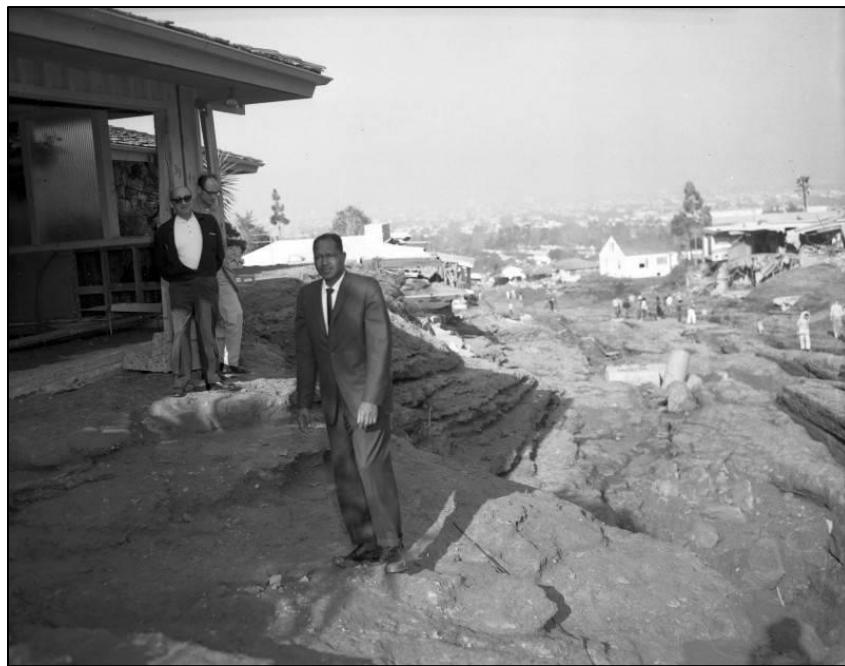

---

<sup>74</sup> Tony Valentine Construction, "History," <https://tonyvalentineconstruction.com/history/> (accessed October 4, 2023).

while also implementing community improvements and infrastructure.

In July 1944, the County of Los Angeles Department of Parks and Recreation was formed. At the time there were 53 parks, but the County continued to acquire land and build amenities. The Ladera Heights/View Park-Windsor Hills area includes several county parks including Reuben Ingold Park, Ladera Park, and Monteith Park, all three of which are incorporated into their respective neighborhood designs.

The northern portion of the View Park-Windsor Hills area is dominated by the Kenneth Hahn State Recreation Area. The park contains the site of the former Baldwin Hills Reservoir which was constructed between 1947 and 1951 by the Los Angeles Department of Water & Power. The reservoir's dam collapsed in 1963 causing catastrophic flooding in the surrounding neighborhoods and five deaths.

**Flood damage in Baldwin Hills 1963. *Los Angeles Public Library***

Investigations determined that the site was not appropriate for a reservoir and Los Angeles County began negotiations to acquire the site for recreational purposes. Fifteen years later, through an effort spearheaded by County Supervisor Kenneth Hahn, a new park, then named the Baldwin Hills State Recreation Area, was opened to the public. It was renamed in 1988 to honor Supervisor Hahn.<sup>75</sup>

Kenneth Hahn State Recreation Area includes hiking trails, gardens, and recreational facilities. A grove of specimen trees, known as the Olympic Forest, was named in recognition of the Olympic Village constructed for the 1932 Summer Olympics. In 2021, the County opened the

Park to Playa Trail, a 13-mile regional trail that connects a network of trails, parks, and open spaces from the Baldwin Hills Parklands to the Pacific Ocean.<sup>76</sup> Artist Kim Abeles created seven sculptures that are placed along the trail in six locations, leading visitors between the Scenic Overlook to the west and the Stocker Corridor in Kenneth Hahn Park to the east.<sup>77</sup>

### Racial Tensions, Intimidation, and Integration

Beginning in the late 1950s, pioneering Black families purchased homes in the View Park-Windsor Hills area. Largely headed by educated professionals (businesspeople, doctors, lawyers, educators, athletes, entertainers, and civil rights activists), these families were often met by racial intimidation from their White neighbors. In one example, teachers Evangeline Woods Johnson and Ella Redmond received death threats and a cross was set on fire in their yard.<sup>78</sup> Hate crimes also occurred in Ladera Heights. In October of 1969, a firebombing occurred at the home of a Black couple, Walter and Bertha Bremond<sup>79</sup> which resulted in thousands of dollars of damage.<sup>80</sup> Incidents of intimidation and racism directed toward new Black residents continued.

Despite these intimidation efforts, Blacks persisted in their efforts to purchase homes and by the 1960 census, Black residents in View Park and adjacent Windsor Hills accounted for 4.2 percent of the area's population, with the majority living in View Park.<sup>81</sup> Integration also came to Ladera Heights, albeit more slowly. The Black population of Ladera Heights was just .7 percent in 1970. By 1980, it was 39.6 percent and Ladera Heights' residents took pride in being a racially integrated community.<sup>82</sup>

The nonprofit organization, United Neighbors, was established in 1961 to address housing discrimination and racism in View Park, Windsor Hills and the neighboring communities of Baldwin Hills and Leimert Park. The intention was to keep these neighborhoods integrated and open to all races while also preventing the irrational exodus of White home-owners referred to as "White flight." This included efforts to curb real estate sales practices – known as "blockbusting" – that persuaded White home-owners to sell their homes at below-market rates by exploiting and inflaming their fears and prejudices regarding people of color, particularly Blacks. The houses would then be re-sold at inflated prices to upwardly mobile people of color.<sup>83</sup>

<sup>82</sup> Jennifer Mandel, "Making a Black Beverly Hills The Struggle for Housing Equality in Modern Los Angeles." (PhD diss; University of New Hampshire, December 2010), 278.

<sup>83</sup> Blockbusting was a common practice in which realtors contributed to panic selling by whites in mixed neighborhoods, by convincing them Blacks moving into the neighborhood would reduce their property values. Realtors would then sell the homes to Black buyers, resulting in multiple commissions.

**Musician Ray Charles and family in Windsor Hills c.1970. *Los Angeles Public Library***

Ladera Heights residents were served by the nearby Inglewood Unified School District. As White flight changed the demographics of Inglewood, schools experienced de facto segregation. As school integration efforts heated up during the 1970s, Ladera Heights' residents found themselves in the throes of a bussing controversy fueling White flight.

The Ladera Heights Civic Association was formed in that community and appears to have played an important role in community relations and political organizing. La Cienega Boulevard, which bisects the Ladera Heights community, was originally planned as a freeway. By 1966, a proposal to fully enclose the community by freeways was defeated.<sup>84</sup> The Ladera Heights Civic Association was also successful in defeating the development of a state college, bus maintenance yard, and a power plant, in the area. It was also instrumental in the fight against the rezoning and redevelopment of the adjacent Fox Hills Country Club, although the fight was ultimately not successful.

By 1970, Black residents in View Park, Windsor Hills, Leimert Park, and Baldwin Hills outnumbered Whites by a ratio of three to one. By the 1980s, the ratio had increased to nine to one.<sup>85</sup> Contrary to the scare tactics of the real estate industry however, the transition to a Black-majority did not result in community decline. On the contrary, Ladera Heights/View Park-Windsor Hills, along with neighboring Baldwin Hills, became a vibrant and proud community exemplifying Black achievement and success. In addition to professional families headed by doctors, attorneys, and academics, many highly successful Black entertainment figures (Ray Charles, Ike and Tina Turner, Marilyn McCoo, Nancy Wilson, Debbie Allen) and athletes (Byron Scott, Ken Norton, Lisa Leslie, Michael Cooper) were residents of the area.

Today, View Park/Windsor Hills and Ladera Heights remain one of the wealthiest majority

<sup>85</sup> National Register of Historic Places Nomination, View Park Historic District, 2015-6, 8-13.

Black communities in the United States. Demographics are shifting, however. Between 2010 and 2020 the Black population has decreased from a majority 83 percent of View Park-Windsor Hills in 2010 to 70.5 percent in 2020. White, Asian, Pacific Islander, Hispanic/Latino, and Mixed or Multi-Racial populations have all increased during that period.

## 5.2 Marina del Rey

### OVERVIEW

The Marina del Rey community is located in what is often referred to as the Playa Vista area. The study area is an irregularly shaped, .89 square mile pentagon roughly bordered by Admiralty Way and Lincoln Boulevard to the north, the main Marina del Rey harbor channel to the south, Fiji Way to the east, and the west side of Via Marina to the west. Access to this maritime community is primarily via Washington Boulevard or Lincoln Boulevard, but Marina del Rey is also located at the terminus of the Marina Freeway/SR 90. Multi-family residential development is located around the southwest periphery of the marina with commercial/retail development concentrated on Admiralty Way and Fiji Way.

The population is approximately 9,300 people who are 77 percent White, 10 percent Hispanic/Latino 8 percent Asian, and 5 percent Black.<sup>86</sup> Marina del Rey residents are typically college educated, high-income, and have a median age of 43.2 years.<sup>87</sup>

### MARINA DEL REY DEVELOPMENT HISTORY

As noted above, the Tongva and Kizh Peoples inhabited the greater Marina Del Rey area. As previously discussed, research of flora and fauna remains from the greater Playa Vista/Ballona Creek area evidence that local estuarine, coastal, and near-coast resources provided subsistence for Native Americans residing near the estuaries.<sup>88</sup> Present-day Marina Del Rey was historically an extension of the Ballona wetlands. After colonization, Spanish and Mexican land grants were given to former soldiers and individuals of stature, ushering the Rancho period and beginning a period of systematic forced displacement of Native Americans. Marina del Rey was located in Rancho La Ballona.

In 1887, developer Moye L. Wicks (1855-1932), working under the auspices of the Santa Fe Railroad, envisioned a commercial harbor at the Playa Del Rey estuary and inlets. By 1890, Wicks' Port Ballona Development Company was bankrupt: the constructed wharf was destroyed by a storm and the company was \$300,000 in debt. Not long after, Abbot Kinney (1850-1920) founded Venice By the Sea north of Marina Del Rey, precipitating the Los Angeles neighborhood of Venice and spurring further coastal development south of Santa Monica.

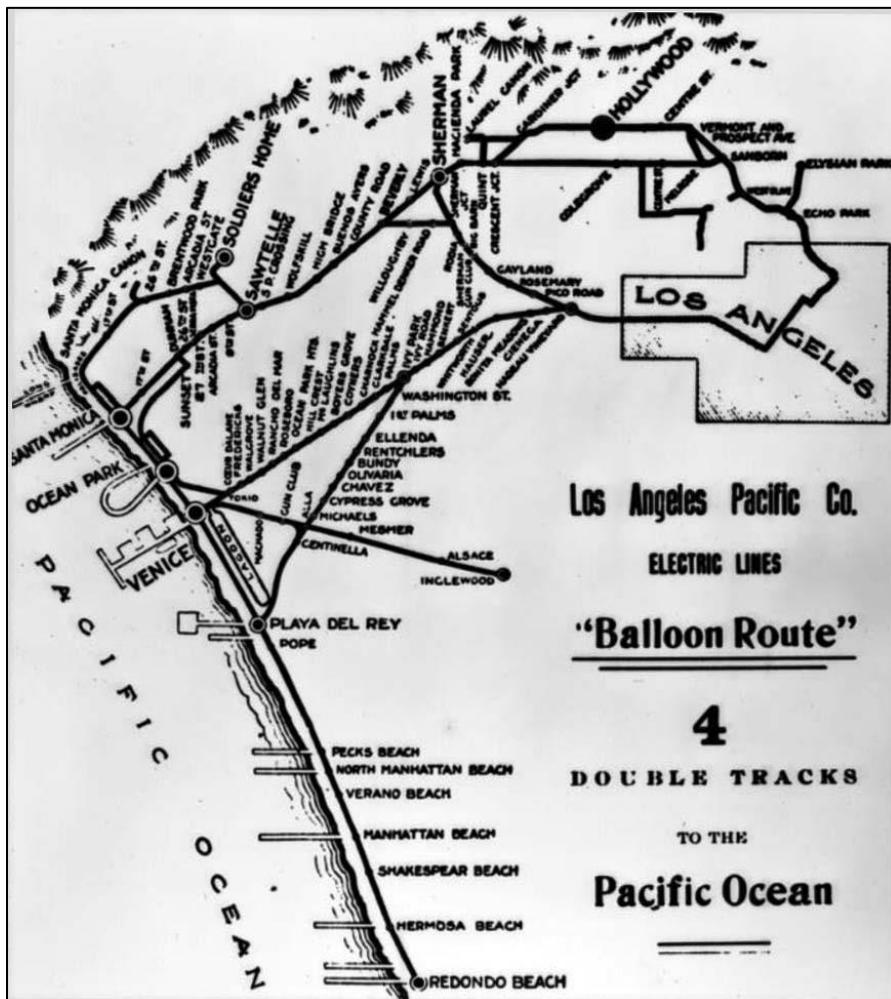

“Playa del Rey” or the “King’s Beach” was a popular stop on the early “Balloon Route” of the

Pacific Electric Railway system. Opened in 1901, the Balloon Route traversed much of the Westside and coastal areas owned by the Pacific Electric Railway with the ulterior motive of enticing property buyers. A three-story tourist pavilion, replete with a dance floor, bowling alley, skating rink and restaurant was constructed by Henry Barbour and his Beach Land Company adjacent to the scenic Playa del Rey lagoon. The lagoon is now part of Del Rey Lagoon Park.<sup>89</sup>

**Playa del Rey Lagoon 1907. *Los Angeles Public Library.***

In 1916, a study by the U.S. Army Corps of Engineers reported that the development of a major shipping harbor at the Playa del Rey estuary was not viable. Ultimately, San Pedro was selected for improvement into the Los Angeles Harbor that we know today. In 1937, Los Angeles County commissioned another feasibility study for the area, but any development efforts were stalled by World War II. In 1949, the U.S. Army Corps of Engineers reported that the construction of a small craft pleasure harbor was feasible at an estimated cost of \$23 million.<sup>90</sup> Interest grew for a harbor as postwar affluence brought an increased interest in leisure activities including boating.<sup>91</sup>

In 1953, the County Board of Supervisors encouraged state legislation to help fund the development of Marina del Rey. A \$2 million loan from state tidelands oil revenues was secured to purchase the site. In 1954, President Eisenhower signed Public Law 780 making Marina del Rey a federal project. The federal government would help fund the development of the “main navigational features” splitting the costs with the County of Los Angeles.<sup>92</sup> Increasing personal sea vessel ownership supported the development. By 1955, there were 93,000 registered small pleasure boats in California; and the figure was expected to top 500,000 by the mid-1970s.<sup>93</sup>

Conceived as a self-contained residential and leisure community, the first master plan for Marina del Rey was designed by Victor Gruen Associates in 1960.<sup>94</sup> As the project progressed, it

<sup>90</sup> Los Angeles County Department of Beaches and Harbors, Marina Del Rey History, <https://beaches.lacounty.gov/marina-del-rey-history/> (accessed July 27, 2023).

<sup>91</sup> Postwar affluence brought an increased interest in leisure activities like boating. In 1955, there were 93,000 registered craft in California; by the mid-1970s the figure was expected to top 500,000 as described in “Water Oriented Homes Find New Acceptance,” *Los Angeles Times*, January 18, 1970, J8.

was determined that construction of a breakwater was needed to better protect the harbor. Construction of the breakwater began in October of 1963 and was completed in January 1965. At a total cost of \$36.25 million (funded by local, state, and federal authorities), the Marina del Rey harbor opened for business.

**Marina del Rey 1964. Los Angeles Public Library.**

The successful 1962 opening of the Huntington Harbour community in Huntington Beach, "...the first residential marina to be built in 30 years," offered proof of concept for Marina del Rey.<sup>95</sup> While Huntington Harbour focused on single-family residential development, Marina del Rey developers opted for multi-family residential and commercial development. The Marina would ultimately become the world's largest small craft harbor.<sup>96</sup> A Design Control Board was established to oversee development in Marina del Rey.<sup>97</sup> Architecture, signage, parking design, etc. was subject to review of the Board. Projects were then approved by the County Board of Supervisors.

The earliest residential development in Marina del Rey was the 30-acre Del Rey Shores Apartments designed by architect Dan Saxon Palmer in 1965.<sup>98</sup> Located on 4269 Via Marina between Washington and Marquesas Way, today the building appears to be extant but has been substantially altered. In 1968, the Bar Harbor Apartments (no longer extant) was constructed at 4242 Via Marina between Washington and Marquesas Way. The complex, described as an eight-structure "country club on the ocean," was designed by Abraham Shapiro & Associates and William Krisel.<sup>99</sup> These developments, multi-family complexes that incorporated recreational amenities such as swimming pools and tennis courts, would set the

tone for residential development in Marian del Rey.

**Marina del Rey 1964, Sheraton Marina Hotel at center. *Los Angeles Public Library*.**

During the early 1970s, the Marina City Club, a resort-style residential complex (DMJM, 1971-1975, Anthony J. Lumsden, project architect) began construction.<sup>100</sup> Marina del Rey's first high-rise construction, it was composed of three pairs of 17-story C-shaped towers and a three-story stepped apartment building. The complex was built in three major phases: west towers in 1971, center towers in 1975, and east towers in late 1975.<sup>101</sup> The residential towers were converted to condominiums in 1986.

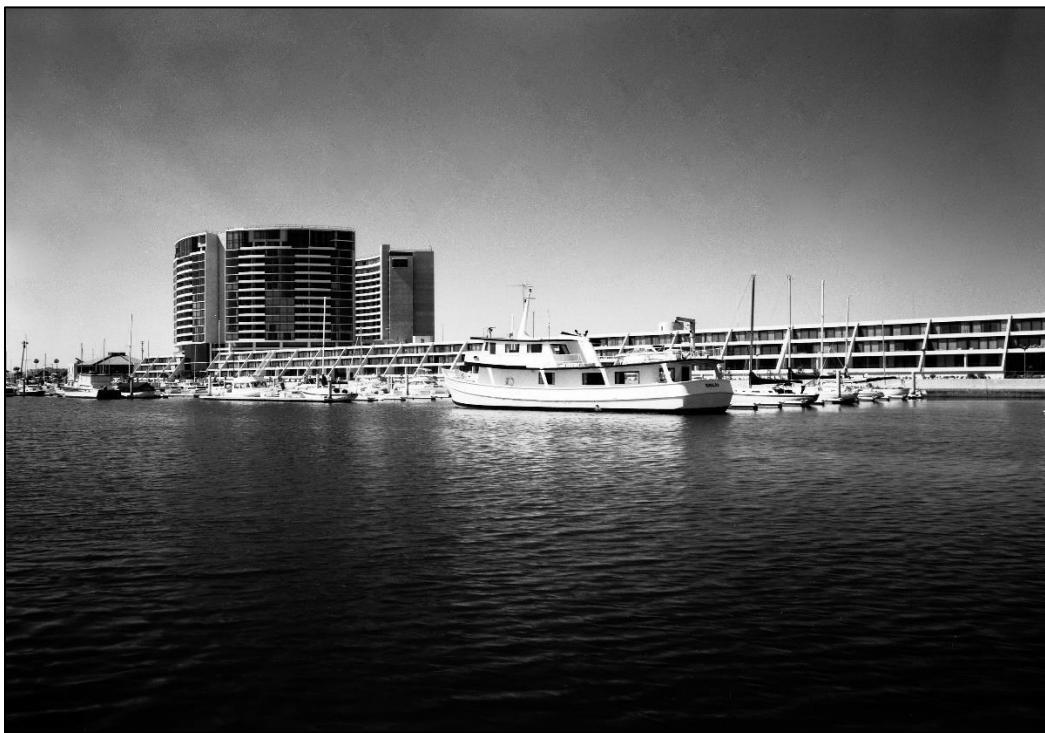

According to a survey of residents, most of the people living in Marina del Rey were middle- to high-income. By 1968, 42 percent of residents owned boats.<sup>102</sup> Marina del Rey was also home to several yacht clubs including: the California Yacht Club, the Del Rey Yacht Club, the South Coast Corinthian Yacht Club, the Venice Yacht Club, Pacific Mariners Yacht Club, and the Windjammers Yacht Club.

<sup>100</sup> A May 28, 1972, *Los Angeles Times* article credits the design of the second phase of towers to W. Frazier Overpeck. It is currently unknown if he was a project architect for DMJM or simply hired to duplicate the original DMJM vision.

**Marina City Club 1972. USC Digital Library.**

Largely dominated by residential development, Marina del Rey relegated most commercial development to the northeast and southeast sections with the exception of handful of bars and restaurants interspersed in the northwestern residential areas.

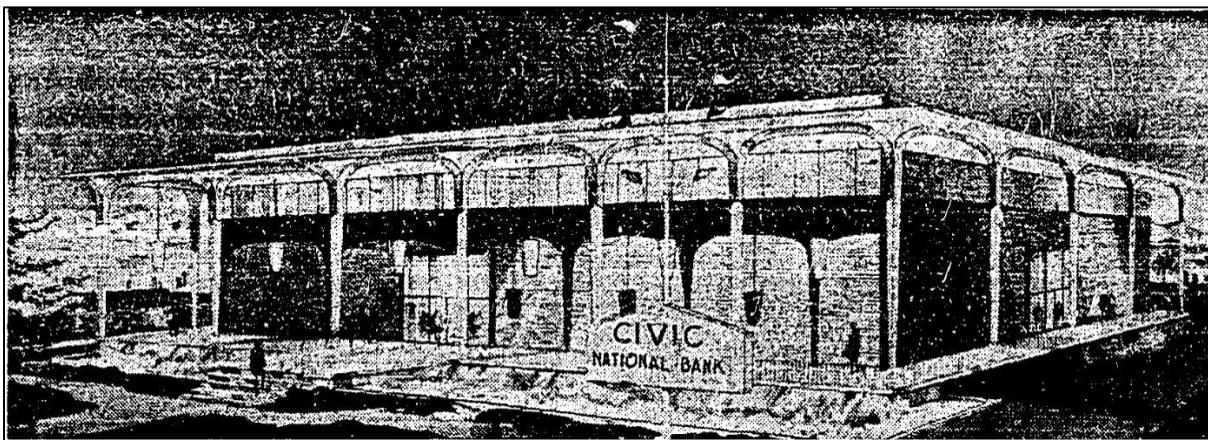

Marina del Rey's first hotel was the Sheraton Marina Hotel constructed in 1963. Located on the east side of the Marina at the end of the pier between Basin F and Basin G, this Y-shaped three-story structure included a pool, restaurant and bar, coffee shop and convention facilities. The hotel, now referred to as the Marina del Rey Hotel, was extensively renovated in 2014.

Located at 4519 Admiralty Way, the Civic National Bank building was constructed in 1965 to house the main offices for that institution and additional office space for other businesses.<sup>103</sup> It was designed in a modest New Formalist architectural style by architect Cejay Parsons. Today, the building continues to function as an office building.

The Marina Shopping Center, located at 4700 Admiralty Way, was developed by Michael Sims and Allan Abramson in 1967 and included a supermarket, drugstore, gourmet liquor store, specialty retail and a bank. Designed by architects Robert Peterson & Associates, it was substantially remodeled in the 1990s.

---

<sup>103</sup> "Bank Office Planned For Yacht Harbor," *Los Angeles Times*, February 7, 1965, J25.

**Civic National Bank Building rendering 1965. *Los Angeles Times*.**

In 1970, “Fisherman’s Village,” a themed shopping and recreation complex designed to resemble a New England fishing village, was constructed on the eastern banks of the main Marina channel along Fiji Way. It became a popular attraction offering restaurants, specialty shops, and commercial boating facilities.<sup>104</sup> Similar to the Oceanside Harbor Village (constructed in 1964) in San Diego County, the design of Marina del Rey’s Fisherman’s Village was based on renderings by San-Pedro based nautical designer Raymond E. Wallace.

**Fisherman’s Village postcard c. 1970.**

The Marina Professional Building at 4560 Admiralty Way was constructed in 1971, with an additional wing added in 1973. Designed by Don Hartfielder as a medical office building, it includes a circular pharmacy building at the front of the parcel. Harbor House, an office building constructed in 1972 at 4500 Via Marina, was designed by Ebbe Videriksen & Associates. It was

<sup>104</sup> Dick Turpin, “Marina Sailing High in Real Estate Boom,” *Los Angeles Times*, December 20, 1970, G11.

honored by the American Institute of Architects, Los Angeles Chapter with an award.<sup>105</sup> The building is no longer extant.

**Marina Towers c. 1990.**

A large commercial office development at 4640-4676 Admiralty Way – the Marina Towers – began construction in 1972. Designed by architect William Krisel in partnership with Abraham Shapiro, the complex consists of two office towers separated by a large parking structure.

By 1970, the number of boat slips in Marina del Rey had risen to 5,500 and the resident population was some 5,000.<sup>106</sup> Projections estimated that the population could grow to 10,000. Gruen Associates continued to consult on development plans in the early 1970s. Anticipated growth was also fueled by the c. 1972 completion of the Marina Freeway and by 1974, approximately 8-9,000 people lived there earning a reputation that the *Los Angeles Times* called “a mecca for swinging singles epitomizing the freedom and ‘anything goes’ lifestyle of the 1970s.”<sup>107</sup>

Civic amenities were also constructed to support the growing community. Burton Chase Park, a 10-acre park constructed on the east side of the Marina between Basins G and H, opened in 1972.<sup>108</sup> Marina del Rey also boasted a post office and a fire station.

## 5.3 Westside Planning Islands

### WEST LA/SAWTELLE VETERANS ADMINISTRATION COMMUNITY

#### Overview

The West LA/Sawtelle Veterans Administration (VA) community is an unincorporated Census Designated Place (CDP) located in western Los Angeles County. It is approximately 14 miles west of downtown Los Angeles and is composed of .90 square miles with 1,075 people.<sup>109</sup> It is an irregularly shaped study area.

The West LA/Sawtelle VA community's boundaries are roughly Chayote Street to the north, Wilshire Boulevard to the south, Veteran Avenue to the east, and Bingham Avenue to the west. The study area is bisected north to south by Interstate 405, also known as the San Diego Freeway. Within the study area, streets are named after noted military heroes: Pershing Avenue, Grant Avenue, Vandergrift Avenue, Nimitz Avenue, Palton Avenue, Bonsall Avenue, Mac Arthur Avenue, Eisenhower Avenue, and Davis Avenue. Access is typically from Wilshire Boulevard.

The West LA/Sawtelle VA Community is the site of the West Los Angeles VA Medical Center and, as such, has a daytime population of 2,230 people, more than double its residents.<sup>110</sup> The resident population is primarily White, but contains 28 percent Black, 23 percent Hispanic/Latino, and 1 percent Asian reflecting the diversity of American armed forces.

Under the auspices of the Veteran's Administration, the West LA/Sawtelle community area has been subject to a substantial historic resources survey and evaluation. In 2014, a historic district, the West Los Angeles Veterans Affairs National Register Historic District (WLA VA NRHD), was listed in the National Register of Historic Places. At the time of the nomination, the district included 66 contributing elements including buildings, sites, structures, and objects. Two buildings, additional buildings, the Wadsworth Chapel (Building No. 20) and the Streetcar Depot (Building No. 66), are listed in the National Register as individual historic resources. A comprehensive building survey of the WLA VA HRHD was completed in 2018.<sup>111</sup> No additional investigation of historic resources within the West LA/Sawtelle Veterans Administration community area was included for the purposes of this historic context.

#### West LA/Sawtelle VA Community History

As early as 400 AD, a communal spring, Kuruvungna, just west of the Community near the intersection of present-day Santa Monica Boulevard and Barrington Avenue was associated with Tongva Peoples and later associated with the Kuruvungna Village.<sup>112</sup> It is now known as the Kuruvungna Village Springs, which is a designated California Registered Landmark Site No. 522.<sup>113</sup> In 1975, human remains were discovered on site during a construction project for what is

now University High School. During the 1980s, archeologists noted that remnants of the village were located throughout the area. In 2013-14, ancestral remains and artifacts were again unearthed and ceremoniously reinterred on the hill north of Kuruvungna.<sup>114</sup> During Spanish and Mexican control, the West LA/Sawtelle VA community, spanned two ranchos: the Rancho San Vicente y Santa Monica on the west and the Rancho San Jose de Buenos Ayres on the east.

**Kuruvungna Village Springs, present day. *Gabrielino-Tongva Springs Foundation*.**

As a result of the American Civil War, a series of Veterans facilities were established throughout the United States to provide homes for Veterans of the Union Army. They were known as the National Homes for Disabled Volunteer Soldiers.<sup>115</sup> In December of 1887, the Pacific Branch of the National Home for Disabled Veteran Soldiers was established on 600 acres of donated land (now the West LA/Sawtelle VA).<sup>116</sup> The acreage was donated by John Percival Jones and Arcadia Bandini de Baker, owners of the Rancho San Vicente y Santa Monica and John Wolfskill, owner of the Rancho San Jose de Buenos Ayres. Wolfskill also offered \$100,000 in cash to be spent improving the grounds.<sup>117</sup> The belief was that the establishment of the Veterans' home would be a catalyst for economic development in the area. The Wolfskill ranch was ultimately unable to pay the \$100,000—instead donating an additional 30 acres.<sup>118</sup> The

<sup>118</sup> U.S. Department of Veterans Affairs, *National Register of Historic Places Nomination for the National Home for Disabled Volunteer Soldiers, Pacific Branch*, 2015, 8:43.

Pacific Branch of the National Home for Disabled Veteran Soldiers was the second branch located West of the Mississippi River.

**Soldiers Home c.1900. California Historical Society.**

Early on, the campus was also known as the “Soldier’s Home.”<sup>119</sup> The first barracks were completed in December 1888, and they filled quickly with additional Veterans living in tents around the property. By 1889, a cemetery had been created for the burial of Veterans at the Pacific Branch. Soon, the community of Sawtelle, directly south of the Soldier’s Home (West LA/Sawtelle VA community), sprang into existence. At the time, Sawtelle was also on unincorporated Los Angeles County land. The area consisted mostly of agricultural land and was occupied by a large number of Japanese and Japanese Americans who participated in the agricultural industry. Sawtelle was incorporated into the City of Los Angeles in 1922.

Railroads and streetcars played an important role in the development of the area generally and the West LA/Sawtelle VA community specifically. In 1896, an interurban rail line that followed present-day Santa Monica Boulevard was established south of the Soldier’s Home. The Pacific Electric “Balloon Route” linked Los Angeles with a number of tourist sites (including Santa Monica, Venice, and the beaches) on a balloon-shaped track. In 1904, the Soldier’s Home became a stop on the Balloon Route.<sup>120</sup> The train depot still stands (Building #66) and is listed on the National Register of Historic Places.

The site was in almost continuous development for the first 20 years. Initial buildings were

<sup>119</sup> It is now known as the Veterans Administration Hospital.

<sup>120</sup> U.S. Department of Veterans Affairs, *West Los Angeles Campus Master Plan 2022*, March 12, 2022, 64.

utilitarian in style. Over time, the Soldier's Home adopted the Queen Anne Style commonly used by branches east of the Mississippi. In 1892, Congress appropriated funds for the construction of two barracks, a new hospital wing, a kitchen, residences for administrators, a guardhouse, barn and corral, two gates, and two gatehouses. By 1908, there were 11 wood-frame barracks.<sup>121</sup> Recreational facilities included Ward Memorial Hall for plays and concerts, a library (Markham Hall) alongside a post office, and a multi-denominational chapel. Large areas of the site served as a working farm supplying grains, vegetables, and fruit for the kitchen.

In 1912, Los Angeles' central artery, Wilshire Boulevard, reached the eastern end of the West LA/Sawtelle VA community. It was around this time that the National Homes for Disabled Volunteer Soldiers Board began negotiations with Los Angeles County to improve Wilshire Boulevard through the land of the Soldier's Home.

Following World War I, the National Homes for Disabled Volunteer Soldiers began designing new facilities as primary care facilities. The Veterans of World War I had been subjected to mustard gas and other war-related injuries that created chronic conditions. Tuberculosis was also a concern for Veterans during this period and the sunny climate of the Pacific Branch made it the natural location of the construction of Tuberculosis wards. In 1930, the National Homes for Disabled Volunteer Soldiers merged with the Bureau of Pensions, creating the Veterans Administration.

Between 1923 and 1952, a time referred to as "Second Generation Veterans Hospitals" in the National Homes for Disabled Volunteer Soldiers (NHDVS) Multiple Property Documentation Form, the aging of Veterans from World War I ushered in a time of expansion for the Pacific Branch. A large capital improvement project between 1921 and 1930 resulted in the construction of a number of new buildings.

During the late 1930s, the Veteran's Administration constructed several buildings in the park-like cemetery grounds: an office, toilet, tool house, incinerator, septic tank, stable, rostrum, terraces and cloisters. New landscaping and grounds improvements were also made. These were often constructed with the help of Works Progress Administration (WPA) crews. A crematorium and columbarium were also constructed. The hospital was also subjected to new waves of construction during the 1930s, as the Veterans Administration (VA) modernized and centralized care.<sup>122</sup> Many existing buildings were demolished and replaced with standardized care facilities.

When advances in combatting Tuberculosis after World War II substantially decreased the need for specialized care, the Tuberculosis Hospital was converted to a Neuropsychiatric Hospital, in concert with the needs of many returning Veterans from World War II.

Over time, medical research became an increasing part of activities at the West LA/Sawtelle VA community VA Hospital site. In 1955, medical research became a formal aspect of its

mission with an appropriation from Congress to fund it.<sup>123</sup> That same year, the hospital began construction of a new wing for Wadsworth Hospital—one of the first Modern-style buildings on the campus. Further modernization projects commenced in 1958 and by 1968, four additional research facilities were constructed. By the late 1960s, a trend of consolidation in health care services was underway and the campus began leasing land to other government agencies. Around this time, the expansion of Interstate 405, the San Diego Freeway, encroached on a southeast corner of the campus.

On February 9, 1971, the Sylmar earthquake struck, and 30 buildings were deemed damaged. But geologic forces were not the only challenges at play. During the 1970s, the Veterans Administration was under public scrutiny for lack of quality care. Overcrowding from a surge of Veterans from the Vietnam War exacerbated the problem, resulting in a long wait list for admission. The Senate Subcommittee on Veterans Affairs called out the West LA/Sawtelle VA Community VA Hospital site as lacking quality staff, facilities and equipment.<sup>124</sup> During the 1980s, the cemetery portion of the campus, now known as the Los Angeles National Cemetery, reached capacity with over 85,000 interments.<sup>125</sup>

The extension of the Purple Line (D Line) of the LA Metro subway is currently under construction along the south end of the campus. A Westwood/VA Hospital station is currently under construction and scheduled to open in 2027.

## **WEST FOX HILLS COMMUNITY**

### **Overview**

The West Fox Hills community is an irregularly shaped area of .07 square miles east of Playa Vista and west of Fox Hills. It is bordered by the Centinela Creek Channel to the north, S. Centinela Avenue to the northeast, W. Jefferson Boulevard to the south, and Grosvenor Boulevard to the west. It is primarily residential with many single-family homes, and some light industrial and commercial development at the southeastern end. The community area includes portions of Arleta Street, Lucile Street, Hammack Street, and Juniette Street. The West Fox Hills Community is served by the Playa del Ray Elementary school directly across Centinela Avenue (not part of the study area). Access is generally via Centinela Avenue or W. Jefferson Boulevard.

The West Fox Hills Community has a population of 425 people, and a median age of 37 years old. Residents are upper-middle class and well educated. The population is 50 percent White, 25 percent Asian, 19 percent Hispanic/Latino and 5 percent Black.<sup>126</sup>

### **West Fox Hills Community Development**

The West Fox Hills Community area (also known as the Alsace County Island or

<sup>125</sup> U.S. Department of Veterans Affairs, *National Register of Historic Places Nomination for the National Home for Disabled Volunteer Soldiers, Pacific Branch*, 2015, 8:59.

<sup>126</sup>Los Angeles County, "West Fox Hills Community Profile," <https://planning.lacounty.gov/wp-content/uploads/2023/05/Unincorporated-West-Fox-Hills.pdf> (accessed August 4, 2023).

unincorporated Del Rey) is located in the Los Angeles Basin, which is the ancestral home of Tongva and Kizh Peoples. In 1931, evidence of a Native American burial ground was unearthed at Jefferson Boulevard and Centinela Boulevard.<sup>127</sup> The discovery included broken mortar and pestles, parts of human skulls and other bones, confirming the importance of the site to Native Americans. After colonization by Spain and later takeover by Mexico, the West Fox Hills Community was located in the Rancho La Ballona that had significant landholdings by the Machado family.

On February 23, 1890, Louis Mesmer (1829-1900), a pioneer Los Angeles patriarch, inherited a large section of Rancho La Ballona from Andres Bristwalter who was a Mesmer business partner and friend of the Machados. Mesmer later purchased additional land of the Rancho La Ballona.<sup>128</sup>

The West Fox Hills Community area, referred to as “Alsace” was a stop on the Venice-Inglewood Line of the Los Angeles interurban electric railway system. The stop name “Alsace” is believed to have been taken from Louis Mesmer’s ancestral homeland. The area remained undeveloped until August of 1927, when it was subdivided as Tract 10038 by The Grosvenor-Inglis Corporation as part of a large development project dubbed “Mesmer City.”

<sup>127</sup> “Stone Utensils Stir Scientist,” *Los Angeles Times*, April 1, 1931, 31.

<sup>128</sup> Tom McMahon, “National Register Nomination: Playa de Rey Commerce Building” <https://archive.org/details/playa-del-rey-commerce-building> (accessed July 30, 2023), No page.

Mesmer City was a large residential development stretching west from Culver City to the Ballona Wetlands, and south from the Pacific Electric Railway line along Del Rey Boulevard to the north to the present-day site of Loyola-Marymount University. It was also adjacent to the Fox Hills Country Club. The Grosvenor-Inglis Corporation, headed by George A. Bray, Howard G. Teale, and Robert A. Randall, focused the new community on the intersection of seven major boulevards: Jefferson, Inglewood, Sepulveda, Ocean Speedway, Florence, Centinela and Slauson Boulevards. Mesmer City was never fully realized — likely a casualty of the Great Depression of the 1930s.

Oil was discovered on land near Alsace in 1929. In 1930, Grosvenor-Inglis purchased the remainder of Joseph Mesmer's land, some 250 acres, being leased to the Shell Oil Company.<sup>129</sup>

**Fox Hills Country Club, undated. *Image appears in “The Captain: George C. Thomas Jr. and His Golf Architecture,”***  
***by Geoff Shackelford, 1996.***

The West Fox Hills Community area was part of a large unincorporated and undeveloped area of the Westside Plan Area including Fox Hills. The present-day Fox Hills area was part of the land holdings purchased by the Louis Sentous family from the Southern Pacific Railroad in 1883.<sup>130</sup> During the late 1920s, a 340-acre parcel in the Fox Hills area was acquired for the development of the Fox Hills Country Club.<sup>131</sup> Opening in 1927, Fox Hills Country Club offered two 18-hole golf courses laid out by renowned golf course designers George C. Thomas and William P. Bell. Additional club amenities included a Spanish Colonial Revival-style clubhouse

<sup>129</sup> "Will Open New Mesmer Lands," *Los Angeles Evening Post*, September 26, 1930, 5.

<sup>130</sup> "Fox Hills Club Rezoning Plan to Be Fought," *Los Angeles Times*, January 15, 1962, B3.

<sup>131</sup> Hillside Memorial Park was founded in 1941 as B'nai B'rith Memorial Park. It was renamed Hillside Memorial Park one year later when it was acquired by Temple Israel of Hollywood.

designed by architect Myron Hunt, riding stables, bridal paths, and tennis courts. Operated as a private club throughout the 1920s and 30s, it was opened to public use in 1939.<sup>132</sup> Fox Hills Country Club was the location of the Los Angeles Open golf tournament in 1954.<sup>133</sup>

In 1959, the property was purchased by the Home Savings & Loan Association. By 1962, the new owner had developed a master plan with architect William Pereira for the development of apartments, a hotel, and retail. The plan to close the golf course was opposed by the residents of Ladera Heights, which overlooked the golf course. By 1962, Home Savings was advocating for high-rise development and light manufacturing, triggering a rezoning fight with the Ladera Heights Civic Association that would last for almost a decade. In 1963, the homeowners group opposed a plan to use some of the land for a California State College. In 1964, Home Savings struck a deal to annex the property into Culver City along with Hillside Memorial Park.<sup>134</sup> The Ladera Heights Civic Association filed suit against the annexation, but ultimately lost. The golf course was removed, development ensued, and ultimately it became the site of Fox Hills Mall in 1975.

The West Fox Hills Community remained undeveloped until the 1950s, when over 100 Minimal Traditional-style homes were constructed by 1953. At the time of construction of these homes, the use of alleys at the rear of each parcel, as appeared on the 1927 subdivision map, was abandoned. Multi-family residences were also developed at the northern part of the tract along Centinela Boulevard.

In 1960, the acquisition of land at the northern tip of the West Fox Hills community commenced to facilitate construction of the Centinela Creek Flood Control Channel and the Marina Freeway.<sup>135</sup> Historic aerial photographs of the area show that much of the land along Jefferson Boulevard remained largely undeveloped until 1980 when light industrial and commercial buildings were constructed.

## **BALLONA WETLANDS**

### **Overview**

The Ballona Wetlands Community Area is a roughly rectangular-shaped area located southeast of Marina del Rey and at the western end of the larger Ballona Creek Wetlands/Playa Vista area. It is undeveloped and access is primarily via Lincoln Boulevard, Culver Boulevard, and the Pacific Coast Highway. As described by the Friends of the Ballona Wetlands, “Ballona contains a complex mosaic of habitats defined mainly by hydrology, including wetland habitats, such as brackish and freshwater marshes, seasonally flooded freshwater wetlands, salt pans, riparian and upland habitats, like coastal sage scrub and sand dunes. Many wildlife species, especially birds, utilize more than one habitat type – thus the juxtaposition of these habitats next to one another, also known as heterogeneity, which is important for biodiversity.”<sup>136</sup>

## Ballona Wetlands History

Archeologists believe the topography of the Ballona Wetlands Community has changed significantly over time. Thousands of years ago the area resembled "...a vast coastal prairie dotted with vernal pools and seasonally filled water depressions that hold and attract a vast array of plants and animals."<sup>137</sup> When sea levels stabilized around 5,000 years ago, the main force shaping the Ballona Creek, and wetlands became the Los Angeles River—eventually transforming the open coast into a freshwater lagoon.<sup>138</sup>

The presence of Native Americans along Ballona Creek and in the Ballona Wetlands has been confirmed by numerous archeological finds. Various archeologists over the years have formed several hypotheses about how the First Peoples occupied and used the site. Evidence suggests that Native people occupied sites both on the neighboring bluff to the south and in the lowlands. Some believe two distinct groups occupied the bluffs and the lowlands while others posit that a single social group moved settlements seasonally to take advantage of the natural resources and food sources and in response to the changing topography. A third hypothesis is that a group of inland Native Americans returned seasonally, possibly even desert tribes fleeing the heat of summer.<sup>139</sup> Around 3,000 B.P./1000 B.C. E., the Ballona Area received an influx of Native American settlers.<sup>140</sup> A prominent inlet located at the mouth of Ballona Creek was known by the name "Pwinukipar," a generic term applied to any estuary or marsh meaning "full of water."<sup>141</sup>

The area has also been subject to much speculation about the existence and location of two Native American villages: Sa'angna and Guaspita. In the report, *At the Base of the Bluff: Archaeological Inventory and Evaluation Along Lower Centinela Creek, Marina del Rey, California*, the authors suggest that "...politics overruled science" when the Los Angeles Cultural Heritage Commission declared a site on Lincoln Boulevard north of the Ballona Wetlands Community to be Sa'angna, Historic Cultural Monument No 490.<sup>142</sup> While archeologists dispute this as the precise location of Sa'angna, the presence of Native Americans in the Ballona Wetlands is undeniable. A map locates Guaspita on the hills overlooking Ballona Creek.<sup>143</sup>

Sixteen years after the founding of the Pueblo in Los Angeles in 1781, Jose Manuel Machado, a soldier guard from Santa Barbara moved his family to the pueblo. The Talamantes family followed shortly thereafter, and the two families raised horses and cattle. Seeking new grazing land for their herds, they found land in the Ballona that was far enough from the mission's claims.<sup>144</sup> Permission to occupy the area was given to the two families (the Machados and the Talamantes) in 1819. Grazing and residential activity was located north of today's unincorporated Ballona Wetlands area.

During Spanish and Mexican control, the Ballona Creek wetlands were part of the Rancho La Ballona. Rancho Ballona became a legal entity under Mexican governance in 1839 when Governor Alvarado granted ownership of the land to Agustin and Ygnacio Machado and Felipe and Tomas Talamantes.<sup>145</sup> By 1858, the Hancock survey of the Rancho Ballona shows the majority of the Ballona Wetlands area (north of Ballona Creek) was owned by members of the Talamantes family.

The land boom of the 1880s resulted in old ranchos being bought up and subdivided, however, the Ballona Wetlands area was largely unaffected by these developments. The area remained marshland with small bodies of standing water and was chiefly known for its good duck hunting. During the 1910s, there was boat racing and sightseeing by tourists who used the Pacific electric interurban railway to Playa del Rey beach.<sup>146</sup>

The 1910 Census documents more than 60 Japanese-born (*issei*) farmers working the land along Ballona Creek near Venice.<sup>147</sup> Although the exact locations of their farms are unknown, their presence was sufficient to inspire the creation of the Venice Japanese Language School (Venice Gakuen) for children of these families in the nearby community. These families leased the land, as they were prohibited by law from owning it. Celery was a favorite crop for the fertile lands adjacent to Ballona Creek and the wetlands. These farmers typically built small, vernacular structures (informal, hand-built shelters, often with found materials) on the land on which they worked. These farmers remained until the early days of World War II when they were forcibly removed by the U.S. government and incarcerated in prison camps.

In 2003, the State of California acquired a portion of the Ballona Wetlands south of the project area as the Ballona Wetlands Ecological Reserve. No additional investigation of historic resources within the Ballona Wetlands area was included for the purposes of this historic context.

## **FRANKLIN CANYON**

### **Overview**

The Franklin Canyon unincorporated area is an irregularly shaped, modified L-shaped area extending from the northern boundary of APN 4386017901 to the north, stepping down-southward three times, to a horizontal boundary at the southern boundary of APN 4387020902 to the south, a vertical boundary to the east, and the east side of Franklin Canyon Drive to the west. It contains part of lower Franklin Canyon Park toward, but not including the Lower Franklin Reservoir. There are many fire roads and hiking trails including the Hastain Trail and Discovery Trail included in the project area. Franklin Canyon Drive is the major street leading through the area.

The Franklin Canyon area contains a large rural area of the canyon. According to the Franklin Canyon Community Profile published by Los Angeles County, there are no residential parcels contained in this project area. According to this document, there is a population of 1 person, however, assumedly an on-site Franklin Canyon Park employee.<sup>148</sup> This area is owned by the National Park Service and operated by the Mountains Recreation and Conservation Authority

(MRCA).

### **Franklin Canyon History**

For centuries, Franklin Canyon was occupied by Tongva Peoples. Dr. Allan E. Edwards a geologist and guide for the Mountains Recreation, & Conservation Authority, posited that the Tongva lived at the base of the canyons and that a community of more than 200 lived at the intersection of Franklin and Coldwater Canyons.<sup>149</sup> After colonization, Spanish and Mexican land grants were given to former soldiers and individuals of stature, ushering in the Rancho period. Franklin Canyon was part of the Rancho Rodeo de Las Aguas.

In 1912, oil tycoon Edward L. Doheny purchased 400 acres of land in Franklin Canyon. Doheny sold large portions of the land to the City of Los Angeles for William Mullholland's water project. In 1914, construction began on a reservoir in upper Franklin Canyon to distribute the water brought from the Owens Valley by Mullholland and the newly created Department of Water and Power (DWP). The reservoir is the "lake" colloquially referred to in place names such as Lake Drive and Franklin Lake Drive. The reservoir itself and the dam keeper's house appear to be just south of the project area.<sup>150</sup>

**Lower Franklin Canyon Reservoir, undated. *Los Angeles Department of Water and Power.***

Doheny reserved portions of the property as a ranch for his cattle and was one of several ranch homes that the oilman and his wife enjoyed. The family built a Spanish Colonial Revival-style home in lower Franklin Canyon in 1935, also outside of the study area.<sup>151</sup> However, the study

area of Franklin Canyon is traversed by a number of fire roads and includes the Franklin Canyon Trailhead parking area. The area is largely covered in chaparral and natural plantings.

In 1954, a large portion of Franklin Canyon Ranch was subdivided. The portion remaining in the Doheny family was retained by them until 1977 when it was purchased by developers. The upper reservoirs had been deemed unsafe after the 1971 Sylmar earthquake.<sup>152</sup>

When the Canyon was subject to development, the National Park Service purchased the Franklin Canyon Ranch. The Franklin Canyon Sooky Goldman Nature Center was constructed in the northern part of the park, outside the study area. However, the William O. Douglas Outdoor Classroom erected c. 1981 is located within the study area. No additional investigation of historic resources within Franklin Canyon was included for the purposes of this historic context.

## **GILMORE ISLAND**

### **Overview**

Gilmore Island is a single parcel identified by Accessor Identification Number 5512002001. It is bordered by Beverly Boulevard on the north, CBS Television Center soundstages on the south, multi-family residential development (the Broadcast Center Apartments) on the east, and Genesee Avenue to the west.

### **Gilmore Island History**

Tongva and Kizh Peoples inhabited the greater area including Gilmore Island. Gilmore Island is 1.3 miles from the La Brea Tar Pits. Tar from the pits was used by Native Americans as a glue or caulk and as waterproofing for baskets and/or canoes.<sup>153</sup> During the rancho period, the Native Americans were systematically dislocated from these ancestral lands. The Gilmore Island Community was located in the Rancho San Rafael that was given to California's first Portuguese settler, Antonio Jose Rocha. In 1877, When Rocha's heirs tried to sell part of the Rancho, they could not produce sufficient documentation to prove ownership. The land was then purchased by James Thompson, with some purchased by the Hancock Brothers. In 1880, Thompson declared bankruptcy and his land was put up for auction.

Arthur Freemont Gilmore (1850-1964) and Julius Carter purchased 256 acres of the Rancho at the auction in 1880. Initially used as a dairy farm, Gilmore struck oil on the property in 1890 and subsequently established the Gilmore Oil Company. Gilmore and his son, E. B. Gilmore ran the company and it became one of the most important independent oil companies in Southern California.

Parts of the Gilmore property were developed over time into the Farmers Market (1934), Gilmore Stadium (1934, demolished) and CBS Television City (1952, Pereira & Luckman, Gin Wong) and annexed into the City of Los Angeles. Gilmore Island remains the last unincorporated parcel of land relating to the Gilmore family legacy. No additional investigation

of historic resources within Gilmore Island was included for the purposes of this historic context.

## **BEVERLY HILLS ISLAND**

### **Overview**

Accessor's Parcel Number 4391036008, referred to as Beverly Hills Island, was subdivided and sold along with an adjacent parcel. It is a small, irregularly shaped area. The address is 1312 Ridgecrest Drive, Beverly Hills.

### **Beverly Hills Island History**

The Tongva and Kizh Peoples who stewarded the greater Beverly Hills area established the area of present-day Beverly Drive and Sunset Boulevard as a sacred site, Gathering of the Still Waters.<sup>154</sup> During the rancho period, the Native Americans were systematically dislocated from these ancestral lands. Beverly Hills Island was located in the Rancho Rodeo de Las Aguas.

Beverly Hills Island was part of the Doheny Ranch Tract purchased by Edward L. Doheny in 1914 (see Franklin Canyon above, also part of the Doheny Ranch Tract). As portions of the Doheny Ranch Tract were sold for development, APN 4391036008 was subdivided and sold along with an adjacent parcel. The parcel is associated with the development of Trousdale Estates by Paul Whitney Trousdale (1915-1990) in Beverly Hills.

No additional investigation of historic resources within Beverly Hills Island was included for the purposes of this historic context.

## **5.4 Westside Plan Area Timeline<sup>155</sup>**

**1834:** Secularization of the California Missions and start of rancho land grants

**1845:** California becomes a U.S. Territory

**1851:** Congress passes the California Land Act

**1862:** Homestead Act passes

**1869:** Southern Pacific Railroad arrives in Los Angeles

**1883:** Atchison, Topeka and Santa Fe Railway arrives

**1886:** Incorporation of the City of Santa Monica

**1888:** Los Angeles County Chamber of Commerce is established

**1888:** Construction of first barracks at the Soldier's Home

**1894:** First Los Angeles County Sheriff is elected

<sup>155</sup> This timeline is adapted from the Los Angeles County Metro Area Plan, Appendix B: Historic Context Statement prepared by Dudek, September 2022.

- 1901:** Pacific Electric Railway forms
- 1901:** Pacific Electric Balloon Route loop promoting Westside real estate and tourism
- 1905:** Union Pacific Railroad opens
- 1906:** Los Angeles annexes the “Shoestring Strip” of land to the port
- 1911:** Great Merger of 1911 between Pacific Electric and the Southern Pacific Railroad
- 1912:** County Free Library Act passes
- 1912:** Construction of Wilshire Boulevard completed to Soldier’s Home
- 1913:** City of Los Angeles Completes the first Los Angeles Aqueduct
- 1914:** Incorporation of Beverly Hills
- 1914:** Annexation of Palms area into city of Los Angeles
- 1915:** Annexation of 31,000 Westgate Addition west of Beverly Hills and north of Santa Monica into Los Angeles
- 1915:** Los Angeles Public Health Department appoints John Larabee Pomeroy as the County’s first health officer
- 1916:** Oil exploration begins on Inglewood Oil Field
- 1917:** Culver City incorporation
- 1924:** Standard Oil Company makes major oil strike at the Inglewood Oil Field
- 1924:** Los Angeles Investment Company begins subdivision of View Park tracts
- 1925:** Annexation of Venice into city of Los Angeles
- 1927:** Fox Hills Country Club opens
- 1932:** County library system is renamed the Los Angeles County Public Library
- 1933:** Long Beach earthquake hits the greater Los Angeles area (March 10, 1933)
- 1934:** Field Act is adopted by the State of California to update seismic building codes
- 1934:** National Housing Act creates the Federal Housing Administration
- 1935:** President Roosevelt creates the WPA
- 1939:** The Home Owners’ Loan Corporation creates redlining map of Los Angeles
- 1941:** The Empire of Japan bombs Pearl Harbor, triggering US involvement in World War II (December 7, 1941)
- 1942:** President Roosevelt issues Executive Order 9066 (February 19, 1942)
- 1944:** the Department of Recreation and the Department of Parks merge to form the County of Los Angeles Department of Parks and Recreation

- 1947:** Subdivision of “Old Ladera” tracts by Los Angeles Investment Company
- 1948:** *Shelley vs. Kraemer* Supreme Court ruling finds that deed restrictions and racial covenants cannot be enforced
- 1949:** The County Board of Supervisors establishes the Consolidated Fire Protection District
- 1954:** President Eisenhower signs federal legislation making Marina del Rey a federally funded project
- 1954:** *Brown v. Board of Education* ruling declares racial segregation in public schools is unconstitutional
- 1959:** California Civil Rights Act is authored by Jesse Unruh
- 1959:** Home Savings & Loan purchases Fox Hills Country Club property
- 1961:** Final run of Pacific Electric Railway
- 1961:** Establishment of United Neighbors
- 1962:** President Kennedy issues Executive Order prohibiting racial discrimination in all housing receiving federal aid
- 1963:** Rumford Act passes in California prohibiting racial discrimination by banks, real estate brokers, and mortgage companies
- 1963:** *Crawford v. Los Angeles City Board of Education* is filed by the ACLU
- 1963:** Construction of Ladera Center by Los Angeles Investment Co.
- 1964:** Annexation of Fox Hills Country Club and Hillside Memorial Park by Culver City
- 1965:** Watts Uprising (August 11-16, 1965)
- 1968:** East Los Angeles Blowouts protesting inequality in the public education system
- 1968:** Civil Rights Act signed by President Johnson
- 1969-70:** Construction of Fisherman’s Village themed shopping center in Marina del Rey
- 1970:** National Chicano Moratorium March (August 29, 1970)
- 1971:** Sylmar earthquake strikes the greater Los Angeles area (February 9, 1971)
- 1984:** Incorporation of West Hollywood
- 1984:** Establishment of Kenneth Hahn State Recreation Area

## **5.5 Historical Events and Responses**

This study identifies historical events and patterns of development that influenced the current conditions within the Westside Plan Area communities. Table 1 presents a summary of the more important events and themes examined in this document. These events and themes were found to

have lasting impacts on the Westside Plan Area communities and their built environment. More detailed discussions of these events and themes are presented throughout the document.

## 6. SIGNIFICANT THEMES AND ASSOCIATED PROPERTY TYPES

Development of the eight unincorporated areas located in the Westside Plan Area exemplify broader patterns of development in Los Angeles, Los Angeles County and Southern California. The following pages identify relevant themes and property types to facilitate further analysis.

### 6.1 Theme: 20th-Century Residential Development

Residential development in the area defined by the Westside Plan Area is chiefly composed of twentieth-century residential property types that reflect broader patterns of development in the region. Streetcar suburbs, suburban neighborhoods, postwar tract development, and leisure-based residential projects characterize residential development in the Westside Plan Area.

#### STREETCAR SUBURBS

The creation of the two interurban railway systems, the Pacific Electric and the Los Angeles Railway, spurred a new form of residential development: the streetcar suburb. Prior to the development of this new transportation infrastructure, residential development in Los Angeles was largely confined to downtown and the areas immediately accessible from the expanded pueblo area.

The advent of the streetcar now made working downtown and living in readily accessible suburbs possible. An early and important example of a streetcar suburb was the development of Glendale, by Leslie Brand. Marketed as just 15 minutes from downtown Los Angeles, this new town offered bucolic bungalow living far from the chaos of the city.<sup>156</sup> Leslie Brand donated land for the station and with it, ushered in a new wave of residential development. Other streetcar suburbs included West Adams, Sawtelle, and Huntington Park.

The bungalow was the key residential property type that typified streetcar suburbs. Custom designed or ordered from a “kit home” purveyor (e.g., the Sears Catalog, Pacific Ready-Cut Homes, etc.), bungalows were easy, fast, and economical to construct resulting in the development of Arcadian suburbs throughout the greater Los Angeles area during the 1910s and 1920s. It was this same transportation system that inspired developers like Moye Wicks to envision Port Ballona.

#### AUTO-ORIENTED SUBURBAN DEVELOPMENT

While the streetcar tracts enabled a predictable pattern of residential development in Los Angeles, ever increasing ownership of automobiles presented new opportunities for residential development at a time when the city’s population was booming. Between 1900 and 1920, the population of Los Angeles County grew from 170,298 to 936,455.<sup>157</sup> During the late teens and

---

<sup>157</sup> Los Angeles Almanac, “Historical General Population,” <http://www.laalmanac.com/population/po02.php> (accessed August 7, 2023).

early twenties, Southern California benefited from the booming economy that drove the nation—especially buoyed by the local oil industry, industrial development generally, and the consolidation of the motion-picture industry in Los Angeles.

Untethered to the interurban railway system, automobile owners had greater access to the suburban developments being constructed across the Southland. While residential development was initially accessible via the interurban railway system, new development soon spread beyond the streetcar system into steep hillsides and vast agricultural areas.

Housing developers were quick to exploit the possibilities of suburban development that was not necessarily reliant on public transportation access. The Frank Meline Co. developed hillside and more remote residential communities aimed at an affluent clientele wherein automobile ownership was assumed. Developments such as Mesmer City were enabled by the automobile; strategically positioned at the confluence of seven boulevards. The Los Angeles Investment Company, one of the oldest developers in the area, built View Park as part of this pattern. Most residential developments were subject to restrictive covenants and deed restrictions that prohibited the sale or resale of these homes to people of color.<sup>158</sup>

**View Park Model Home 1938. *Los Angeles Public Library***

Excluding the few residential estates and multi-family properties of the period, most residential development prior to World War II was for single-family residences, although some multi-family residences, such as duplexes, fourplexes, and bungalow courts, were also constructed. Prevalent architectural styles include Period Revival styles, including Spanish Colonial Revival, Tudor Revival, Mediterranean Revival, English Revival, and American Colonial Revival. It was during the 1920s when many larger residential tracts were plotted. Subsequently, residences developed in the 1920s and 1930s were located on the empty lots in extant tract developments, infilling previously scattered residences. Tracts were typically developed with residences filling in available lots over time, rather than the rapid development of post-World War II tracts.

---

<sup>158</sup> For more on this topic see the section on Civil Rights and Social Justice.

Development of these tracts was partially made possible by the influence of the automobile, as residences were no longer developed at a walkable scale, but could be built farther away from the established town centers. New residential development included features directly related to automobile transportation, including curb cuts, sidewalks, driveways, and detached garages.

The stock market crash of 1929 and the ensuing Great Depression of the 1930s severely restricted new development. While Los Angeles' local economy proved to be more resilient than many other regions of the United States, the boom years had clearly ended. Plans for large developments like Mesmer City were curtailed.

The National Housing Act of 1934 established the Federal Housing Authority (FHA), which helped reignite the construction of single-family homes by establishing mortgage terms that were conducive to the average American family and would regulate the interest rates and terms of interest that had ballooned out of control in the aftermath of the stock market crash. Although the agency's programs would have little impact until the years following World War II, the FHA's efforts to establish a protocol for the construction of single-family dwellings during this period had a lasting impact on both residential design and community planning.

By the 1930s, in addition to the Period Revival styles popularized in the 1920s, residences with a simpler, more restrained use of traditional architectural detailing were prevalent. This includes the simplified Minimal Traditional designs influenced by the FHA's minimum property standards required for receiving a loan. Minimal Traditional houses were immensely popular in large suburban residential developments throughout the United States starting in the 1930s and into the 1940s.

Although residential development rebounded in the late 1930s (Windsor Hills), it was again disrupted after the bombing of Pearl Harbor by Japan in 1941 and the country's entrance into World War II. With the nation's attention turned elsewhere and wartime shortages preventing construction, residential development in Southern California was largely halted save for emergency housing constructed for service members and defense industry workers.

## **POST-WORLD WAR II RESIDENTIAL DEVELOPMENT**

Across the United States, as GIs returned from the frontlines and began to settle back into civilian life, the nationwide demand for housing dramatically increased. The GI Bill provided significant economic benefits to returning veterans, including reasonable loan terms for home purchases, and credit for college tuition.<sup>159</sup> Southern California's population grew exponentially as wartime defense industries successfully transitioned to aerospace and engineering markets and service men returned to settle down and start families. The combination of a strong local economy, available jobs, and Southern California's famously benign climate created an unprecedented demand for housing.

---

<sup>159</sup> Though as with many other government programs, the GI Bill primarily benefitted white veterans, and the "wide disparity in the bill's implementation ended up helping drive growing gaps in wealth, education and civil rights between White and Black Americans." Erin Blakemore, "How the GI Bill's Promise was Denied to a Million Black WWII Veterans," <https://www.history.com/news/gi-bill-black-wwii-veterans-benefits> (accessed April 2022).

**Post-WWII housing development, 1946. Los Angeles Public Library.**

Southern California's modern architects had been thinking about housing design for the duration of the global conflict, ideas about architecture and the California lifestyle were at the forefront of the architectural trade press and women's magazines. From *Arts + Architecture* to *House Beautiful*, the country was rapt with new ideas about housing in Southern California and how it reflected postwar prosperity, a mild climate, and utopian ideals.

Developers now turned to applying ideas of mass production, wartime production efficiency, and prefabrication to housing. Expanses of agricultural land on the periphery of Los Angeles were ripe for development. Speed of construction was essential and soon suburban tract housing began appearing throughout Southern California. This trend is often associated with the postwar development of the San Fernando Valley, but it was ubiquitous. The Los Angeles Investment Company quickly adapted to the new trend, subdividing Ladera Heights and selling parcels for development. The freeway system, which received substantial state and federal funding in the post-War years, was key to facilitating these suburban communities.

Postwar residential development is often characterized by variations on the Ranch and Mid-Century Modern architectural styles. Suburban tracts often offered a continuum of styles designed to appeal to a wide range of buyers. However, custom homes also ranged from the traditional to the Ranch style to post-and-beam Modern designs.

Multi-family residential development also thrived during this period, albeit less so than suburban single-family residences. Garden apartments, a planning idea first developed prior to the war, were a dominant multi-family housing type developed in Southern California during this period.

In many areas, the so called "dingbat" apartment building – a two-story apartment building with

recessed parking bays at ground level – was introduced in the late 1950s and 1960s.

During the late 1960s and through the mid-1970s, several new real estate trends influenced the development of multi-family properties throughout Southern California. These include the widespread adoption of the condominium financing structure, and the introduction of extensive recreational facilities as amenities for residents in large-scale developments. These trends reflected a movement away from single-family residential ownership as empty nesters elected to downsize and eliminate responsibility for property maintenance while some younger adults delayed marriage and starting families to focus on education and career development.

The condominium movement was born out of the earlier cooperative or “co-op” apartment model wherein the building was owned collectively by the owner shareholders who occupied their individual units under long-term leases. Condominiums diverged from co-op apartment arrangements in that each unit was owned individually while common areas were subject to collective ownership. Typically, homeowners’ associations were established, and monthly ownership dues funded maintenance of the common areas. A lack of financing for the new ownership concept, however, suppressed initial development. In 1961, the FHA was only authorized to insure mortgages on condos for 85 percent of the appraised value. It wasn’t until September 1963 that tax appraisal methods for condominiums were settled, and developers began building condominiums in earnest.<sup>160</sup> Condominium development in the Westside Plan Area is not widespread and largely concentrated in Marina del Rey.

## **HOUSING DISCRIMINATION**

Communities of color in the Westside Plan Area were affected by racism and discriminatory practices in housing: from segregation, institutionalized housing discrimination, and predatory housing practices. These issues became topics for the broader Civil Rights Movement of the middle- and late-twentieth century.

In the 1920s and 1930s, private developers participated in institutionalized racism by attaching restrictive covenants to their new residential developments. Restrictive covenants were legal clauses written into property deeds dictating that a property owner could only sell or rent a property to “Caucasians,” otherwise the owner could lose the property. In some covenants, the excluded groups were mentioned by name, and invariably included “African Americans, Mexicans, Asians, and Jews.” A typical covenant lasted for 20 to 50 years.<sup>161</sup> Local, state, and federal jurisdictions all became involved in promoting and enforcing restrictive covenants.

Though restrictive covenants were challenged in the California and U.S. Supreme Courts in 1919 and 1926, they were ultimately upheld as constitutional at both the state and national levels, unleashing their widespread use across the United States. As historian Gene Slater documents in his book *Freedom to Discriminate*, “major realtor-developers and local officials often worked together to ensure that all the subdivisions in entire new cities were covenanted.”<sup>162</sup> The use of restrictive covenants diminished after 1948, when the U.S. Supreme

<sup>160</sup> Dan Mac Masters, “Condominiums—The Most Exciting Housing Development in 15 Years,” *Los Angeles Times*, July 26, 1964, 44.

<sup>161</sup> SurveyLA: African American Historic Context Statement, 38.

<sup>162</sup> Gene Slater, *Freedom to Discriminate* (Berkeley, CA: Heyday, 2021), 64.

Court ruled in *Shelley v. Kraemer* that it was unconstitutional for courts to enforce the agreements. However, many developers left the restrictions in their deeds noting that they might be unenforceable. In 1953, the U.S. Supreme Court's decision in *Barrows v. Jackson* further helped to curb their use. But it was not until the passage of the 1968 Fair Housing Act that restrictive covenants were deemed illegal.<sup>163</sup>

The real estate industry also reinforced discriminatory practices and the “color line.” In 1924, the National Association of Real Estate Boards established a “code of ethics” which prohibited realtors from introducing “members of any race or nationality” to a neighborhood if it would threaten property values. This resulted in the practice known as “steering”—not showing properties in White neighborhoods to people of color. The penalty for not adhering to the ethics code, which stayed in effect until the late 1950s, was loss of license.<sup>164</sup>

During the Great Depression, two New Deal housing initiatives—the Home Owners Loan Corporation (HOLC), founded in 1933, and the Federal Housing Administration (FHA), founded in 1934, were created by the U.S. government to encourage homeownership and protect homeowners at risk of foreclosure. In practice, however, these initiatives only provided protection for White homeowners. The FHA played a significant role in the legalization and institutionalization of racism and segregation through an overt practice of denying mortgages based upon race and ethnicity.

The FHA insured bank mortgages that covered some 80 percent of purchase prices. To be eligible, the FHA conducted an appraisal of the property in order to select properties that had a low risk of default. The guidelines included a “Whites only” requirement. The FHA underwriting manual for its appraisers also recommended against “an infiltration of inharmonious racial or nationality groups,” and discouraged loans in older, urban neighborhoods, largely populated by people of color.<sup>165</sup> The 1936 *FHA Underwriting Manual* recommended “deeds to properties for which it issued mortgage insurance should include an explicit prohibition of resale to African Americans.”<sup>166</sup>

To fulfill their missions of refinancing mortgages and granting low-interest loans to those who had lost their homes, the HOLC began rating neighborhoods as “security risks.” What emerged was a system of ranking of neighborhoods by race, with African Americans and other ethnic minorities at the bottom. While other factors were also considered—such as class, the presence of industry, density, housing stock, and tax blight—a neighborhood’s racial composition was a key factor in determining its ranking. Areas deemed high risk were systematically denied

financial services such as mortgages and insurance loans. These areas were delineated on maps with a red line, a practice known as “redlining”. These areas were also barred from receiving federal assistance, effectively segregated, and plunged into a vicious cycle of decline.

The HOLC's original system (later adopted by the FHA) for appraising risk used letter grades. “A” areas, colored green, indicated places where maximum loans were granted. “B” areas, colored blue, were not as desirable but still considered relatively low risk. “C” areas, colored yellow, were determined to be in decline. “D” areas, colored red, were considered to be in full decline and, therefore, rejected for mortgage insurance. In fact, it was partly the presence of restrictive covenants for View Park, in addition to its recently constructed homes, that resulted in the area being coded green and blue, the first and second grades respectively, which indicated it was considered “desirable” for lending purposes on the “residential security maps” prepared by the HOLC in the 1930s.<sup>167</sup>

**Example of a color-coded property appraisal map. *Los Angeles Public Library***

After World War II, a new predatory real estate practice, referred to as “blockbusting,” pitted racial groups against one another to maximize profits for realtors. Blockbusting was a means of inducing fear-based panic selling in mixed or White neighborhoods. Realtors would suggest

<sup>167</sup> Redlining maps were the maps produced by the federal government's Home Owners' Loan Insurance Corporation between 1925 and 1940. Grades and colors were assigned to neighborhoods, with the red (least desirable) areas occupied by communities of color singled out as being “hazardous” for investment. Because View Park had restrictive covenants and good housing stock, it was assigned green and blue codes.

that recent home sales to African American families was a sign of a “Negro invasion” that would result in declining property values.<sup>168</sup> As a result, White residents would often sell their houses for less than their worth. The realtors would then sell the White homeowners another house in an unthreatened area. Simultaneously, realtors would advertise the vacated house in ads for “colored buyers,” who would then purchase the homes for inflated prices. The result: three commissions for the realtor instead of one.

Another predatory housing practice African Americans were often subjected to was “contract sales.” In areas where Blacks could purchase homes (typically in red-lined areas), the FHA would not insure the homes. This was important because if no organization agreed to insure the loans, a mortgage was unobtainable. As a result, the homes were often purchased on “installment plans,” which unlike a traditional mortgage, provided no accumulation of equity. The contracts typically provided that the equity would transfer to purchasers after 15 or 20 years, but if a single monthly payment was late, the would-be owner could be evicted, thus forfeiting any opportunity to amass equity in their home.<sup>169</sup>

On the rare occasions when African Americans were able to purchase homes and become integration pioneers in White neighborhoods, they were often met with racial violence. Incidents of this nature were carried out in View Park, Windsor Hills, and Ladera Heights as the demographics of those neighborhoods changed.

During the 1960s, the California state legislature passed several bills aimed at combating discrimination in business, employment, and housing. The Rumford Fair Housing Act, passed in 1963, made it illegal for “anyone selling, renting or leasing a residence to discriminate based on race, creed, color or national origin.”<sup>170</sup> As described in the report *Housing Long Beach*, “the law was not universally well received and realtor home association groups in Long Beach collaborated with similar groups around the state to spearhead Proposition 14,” which aimed to repeal the Act.<sup>171</sup> When Proposition 14 passed, the housing advocacy community galvanized often forming fair housing organizations. These fair housing organizations and neighborhood organizations were populated by a variety of races and included activist clergy, lawyers, and other citizen advocates.

At the federal level, the Civil Rights Act of 1964 prohibited discrimination in housing. However, there were no federal enforcement provisions. This necessitated a follow-up piece of legislation: The Civil Rights Act of 1968, commonly known as the Fair Housing Act. The Fair Housing Act, comprising Title VIII of the Civil Rights Act of 1968, was passed by Congress four days after the assassination of Martin Luther King, Jr.

**ELIGIBILITY STANDARDS: PRE-WORLD WAR II RESIDENTIAL DEVELOPMENT****Summary Statement of Significance**

The period from 1920 to 1940 saw a boom in residential development in Los Angeles County, as the automobile allowed greater sprawl away from the central downtown core. While single-family residences remained the primary property type, multi-family residences, including duplexes, fourplexes, bungalow courts, and courtyard apartments are also present. Resources that are eligible under this theme may be significant as the site of an important event, for their association with the increase in tract residential development, or for an association with an ethnic or cultural group or a person important in local, state, or national history.

While individual tract housing is typically not eligible for individual listing under Criterion A/1/1,9, it can be significant as a collection that reflects important development patterns of the period; or as a residential enclave resulting from discriminatory practices, for example, the center of the African American community because of exclusionary practices elsewhere. Properties may also be significant as an example of a style or type; architectural styles are discussed in the Architecture and Design Section.

<b>Period of Significance</b>	1920-1940
<b>Period of Significance Justification</b>	Broadly covers the establishment of residential communities from 1920 to 1940.
<b>Geographic Location</b>	Ladera Heights/View Park-Windsor Hills
<b>Property Type Description</b>	Significant property types are those representing important periods of residential development including single-family residences, multi-family residences, tract features and amenities including street trees/other significant landscape features, streetlights, and street signs.

**Criterion A/1/1 (Events/Patterns of Development)**

Individual residential properties that are eligible under this criterion may be significant:

- As the site of an event important in history; or
- For exemplifying an important trend or pattern of residential development.

Note that in order to be individually eligible for designation for representing a pattern of development, the property must be the first of its type, a rare remnant example of a significant period of development, or a catalyst for development in the city or neighborhood. Merely dating from a specific period is typically not enough to qualify for designation.

Residences that are eligible for an association with a trend or pattern of development from this period may be more appropriately evaluated as part of a historic district.

A collection of residential properties that are eligible under this criterion as a historic district may be significant:

- For representing an important pattern or trend in residential development, such as the establishment of a notable tract.
- As an intact collection of residences that represent population growth during the period.

Note that some residential tract development may span several themes or periods of development. Local designation for historic districts includes Criteria 1 and 3.

**Integrity Considerations:**

In order to be eligible for designation under this criterion, a property must retain sufficient integrity to convey its historic significance.

- Residential properties from this period should retain integrity of location,<sup>172</sup> design, setting, workmanship, feeling, and association, at a minimum, in order to convey their significance.
- An individual property that is eligible for a historic association must retain the essential physical features that made up its character or appearance during the period of its association with an event or historical pattern.
- Note that some properties that may not retain sufficient integrity for listing in the National Register may remain eligible for listing at the state and local levels.

For historic districts:

- The majority of the components that add to the district's historic character must possess integrity, as must the district as a whole.
  - The historic district must retain a majority of contributors that date from the period of significance.
  - A contributing property must retain integrity of location, design, workmanship, setting, feeling, and association to adequately convey the significance of the historic district.
  - Some alterations to individual buildings, such as replacement of roof materials, replacement garage doors, and replacement of windows within original openings may be acceptable as long as the district as a whole continues to convey its significance.
  - Original tract features may also be contributing features.

---

<sup>172</sup> Unless the property was moved during the period of significance.

**Registration Requirements:**

To be eligible under this criterion, an individual property must:

- Date from the period of significance; and
- Have a proven association with an event important in history; or
- Represent an important catalyst for a pattern or trend in residential development; and
- Display most of the character-defining features of the property type or style; and
- Retain the essential aspects of historic integrity.

To be eligible under this criterion, a historic district eligible under this theme must:

- Retain a majority of contributing buildings from the period of significance; and
- Retain significant character-defining features from the period of significance, including any important landscape or hardscape features; and
- Retain the original layout, reflecting planning and design principles from the period; and
- Retain the essential aspects of historic integrity.

**Criterion B/2/2 (Important Persons)**

Individual residential properties eligible under this criterion may be significant:

- For an association with persons significant in our past; or
- For a proven association with a specific significant ethnic or cultural group that made a demonstrable impact on the community.

Note that according to National Park Service guidance, persons significant in our past refers to individuals whose activities are demonstrably important within a local, state, or national historic context. A property is not eligible if its only justification for significance is that it was owned or used by a person who is a member of an identifiable profession, class, or social or ethnic group. In addition, the property must be associated with a person's productive life, reflecting the time period when he or she achieved significance.

**Integrity Considerations:**

In order to be eligible for designation under this criterion, a property must retain sufficient integrity from the period of significance to convey its association with the important person.

- Residential properties from this period should retain integrity of design, workmanship, feeling, and association, at a minimum, in order to convey the property's association with the significant person's productive period.
- A general rule is that the property must be recognizable to contemporaries of the person with which it is associated.

**Registration Requirements:**

To be eligible under this criterion a property must:

- Have a proven association with the productive period of a person important to local, state, or national history; and
- Display most of the character-defining features of the property type or style from the period of significance (i.e., the period when the property was associated with the important person); and
- Retain the essential aspects of integrity.

**Criterion C/3/3 (Architecture and Design)**

Individual residential properties that are eligible under this criterion may be significant as:

- An excellent example of an architectural style, property type, or method of construction; or
- A distinctive work by a noted architect, landscape architect, builder, or designer.

**Integrity Considerations:**

In order to be eligible for designation under this criterion, a property must retain sufficient integrity from the period of significance to convey its architecture.

- Residential properties significant under this criterion should retain integrity of design, materials, workmanship, and feeling, at a minimum.
- A property that is eligible for designation as a good/excellent or rare example of its style or type retains most - though not necessarily all - of the character-defining features of the style.
- A property important for illustrating a particular architectural style or construction technique must retain most of the physical features that constitute that style or technique. A property can be eligible if it has lost some historic materials or details but retains the majority of the essential features from the period of significance. These features illustrate the style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation.
- A property is not eligible if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style.

**Registration Requirements:**

To be eligible under this criterion a property must:

- Date from the period of significance; and
- Represent an excellent or rare example of a style or type; and
- Display most of the character-defining features of the style or type; and

- Represent quality of design and distinctive details; and
- Retain the essential aspects of integrity.

## **ELIGIBILITY STANDARDS: POST-WORLD WAR II RESIDENTIAL DEVELOPMENT**

### **Summary Statement of Significance**

Individual properties or historic districts that are eligible under this theme may be significant as the site of an important event in history; for an association with an ethnic or cultural group or a person important in local, state, or national history; for exemplifying an important trend or pattern of development (typically, as contributors to historic districts). Resources significant under this theme may include single-family residences constructed in residential tracts recorded during the period immediately following World War II, and the multi-family residences that were increasingly popular by the late 1950s and early 1960s. Properties may also be significant as an example of a style or type; architectural styles are discussed in the Architecture and Design Section.

<b>Period of Significance</b>	1946-1980
<b>Period of Significance Justification</b>	Broadly covers post-World War II residential development.
<b>Geographic Location</b>	Ladera Heights/View Park-Windsor Hills, Marina del Rey
<b>Associated Property Types</b>	Residential: Single Family Residence, Multi-Family Residence, Tract Features/Amenity, Historic District.
<b>Property Type Description</b>	Significant property types are those representing important periods of residential development including single-family residences, multi-family residences, such as garden apartments, mid- and high-rise apartment complexes, and tract features and amenities, including street trees/other significant landscape features and streetlights. These properties can be single-family or multi-family residences and may collectively form a historic district.

### **Criterion A/1/1 (Events/Patterns of Development)**

Individual residential properties that are eligible under this criterion may be significant:

- As the site of an event important in history; or
- For exemplifying an important trend or pattern of residential development; or
- As a rare remaining example of a residential development type (ex. garden apartment).

Note that in order to be individually eligible for designation for representing a pattern of development, the property must be the first of its type, a rare remnant example of a significant period of development, or a catalyst for development in the community or neighborhood. Merely dating from a specific period is typically not enough to qualify for designation. Tract homes are typically not eligible individually for representing a period of development, due to widespread residential development during this period. Residences that are eligible for an association with a trend or pattern of development from this period may be more appropriately evaluated as part of a historic district.

A collection of residential properties that are eligible under this criterion as a historic district may be significant:

- For representing an important pattern or trend in postwar residential development, such as the establishment of a notable postwar tract.
- As an intact collection of residences that represent the postwar growth.

District boundaries may represent original tract boundaries, or they may comprise a portion of a tract or neighborhood. The district must be unified aesthetically by plan, physical development, and architectural quality. Historic districts representing post-World War II housing tracts will be eligible if they are excellent and intact examples of residential development representing the growth of the city during this period, for an association with an innovative type of housing development, or for other distinguishing characteristics that differentiate it from other subdivisions from the period. Residences from this period will be eligible as contributors to historic districts. Local designation for historic districts includes Criteria 4, 6, and 8.

**Integrity Considerations:**

In order to be eligible for designation under this criterion, a property must retain sufficient integrity to convey its historic significance.

- Residential properties from this period should retain integrity of location,<sup>173</sup> design, material, setting, workmanship, feeling, and association in order to convey their significance.

---

<sup>173</sup> Unless the property was moved during the period of significance.

- An individual property that is eligible for a historic association must retain the essential physical features that made up its character or appearance during the period of its association with an event or historical pattern.
- Note that some properties that may not retain sufficient integrity for listing in the National Register may remain eligible for listing at the state and local levels.

For historic districts:

- The majority of the components that add to the postwar district's historic character must possess integrity, as must the district as a whole.
  - The historic district must retain a majority of contributors that date from the period of significance.
  - A contributing property must retain integrity of location, design, workmanship, setting, feeling, and association to adequately convey the significance of the historic district.
  - Some alterations to individual buildings, such as replacement of roof materials, replacement garage doors, and replacement of windows within original openings may be acceptable as long as the district as a whole continues to convey its significance.
  - Original tract features may also be contributing features.

**Registration Requirements:**

To be eligible under this criterion, an individual property must:

- Date from the period of significance; and
- Have a proven association with an event important in history; or
- Represent an important catalyst for a pattern or trend in postwar residential development; or
- Display most of the character-defining features of the property type or style; and
- Retain the essential aspects of historic integrity.

A historic district eligible under this theme must:

- Retain a majority of contributing buildings from the period of significance; and
- Retain significant character-defining features from the period of significance, including any important landscape or hardscape features; and
- Retain the original layout, reflecting planning and design principles from the period; and
- Retain the essential aspects of historic integrity.

**Criterion B/2/2 (Important Persons)**

Individual residential properties eligible under this criterion may be significant:

- For an association with persons significant in our past; or
- For a proven association with a specific significant ethnic or cultural group that made a demonstrable impact on the community in the postwar period, for example in the civil rights movement.

Note that according to National Park Service guidance, persons significant in our past refers to individuals whose activities are demonstrably important within a local, state, or national historic context. A property is not eligible if its only justification for significance is that it was owned or used by a person who is a member of an identifiable profession, class, or social or ethnic group. In addition, the property must be associated with a person's productive life, reflecting the time period when he or she achieved significance.

**Integrity Considerations:**

In order to be eligible for designation under this criterion, a property must retain sufficient integrity from the period of significance to convey its association with the important person.

- Residential properties from this period should retain integrity of design, workmanship, feeling, and association, at a minimum, in order to convey the property's association with the significant person's productive period.
- A general rule is that the property must be recognizable to contemporaries of the person with which it is associated.

**Registration Requirements:**

To be eligible under this criterion a property must:

- Have a proven association with the productive period of a person important to local, state, or national history; and
- Display most of the character-defining features of the property type or style from the period of significance (i.e., the period when the property was associated with the important person); and
- Retain the essential aspects of integrity.

**Criterion C/3/3 (Architecture and Design)**

Individual residential properties that are eligible under this criterion may be significant as:

- An excellent or rare example of an architectural style, property type, or method of construction; or
- A distinctive work by a noted architect, landscape architect, builder, or designer.

A collection of residential properties that are eligible under this criterion as a historic district may be significant:

- For an association with an important merchant builder or architect; or

- As a collection of excellent architectural styles associated with the post-War period.

District boundaries may represent original tract boundaries, or they may comprise a portion of a tract or neighborhood. The district must be unified aesthetically by plan, physical development, and architectural quality. Residences from this period will be eligible as contributors to historic districts. Local designation for historic districts includes Criteria 4, 6, and 8.

**Integrity Considerations:**

In order to be eligible for designation under this criterion, a property must retain sufficient integrity from the period of significance to convey its architecture.

- Residential properties significant under this criterion should retain integrity of design, setting, materials, workmanship, and feeling, at a minimum.
- A property that is eligible for designation as a good/excellent or rare example of its style or type retains most - though not necessarily all - of the character-defining features of the style.
- A property is not eligible if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style.

**Registration Requirements:**

To be eligible under this criterion a property must:

- Date from the period of significance; and
- Represent an excellent or rare example of a style or type; and
- Represent quality of design and distinctive details; and
- Display most of the character-defining features of the style or type; and
- Retain the essential aspects of integrity.

## 6.2 Theme: 20th-Century Commercial Development

Commercial development within the Westside Plan Area is focused primarily on “neighborhood-serving” retail and professional services that cater to the needs of nearby residents. Commercial buildings and districts date from the early decades of the 20<sup>th</sup> century to the present day. These resources evidence how neighborhood commercial building types and spatial layouts changed over time to accommodate different modes of transportation as well as prevailing planning and design trends in commercial development. While neighborhood commercial development is also dominant in Marina del Rey, a subset was also developed to cater to the tourist and leisure customers. These include bars and restaurants, limited hotel services, and a themed shopping and leisure destination.

## COMMERCIAL CORRIDORS

Commercial development prior to World War II generally takes the form of commercial corridors, a linear arrangement of buildings along a neighborhood route of transport or through-corridor. These include the Streetcar Commercial Development that lined routes served by rail transit, and Arterial Commercial Development which aligned along automobile traffic routes not served by streetcar. Noticeable concentrations of commercial buildings were generally not constructed in the Westside Plan Area until the late 1920s after large-scale residential developments first appeared.

There was often little architectural difference between the older streetcar and the newer auto-dominated arterial corridors. The most common form was the storefront building which provided easily adaptable retail space for individual tenants who could customize the interior and exterior signs to fit the needs of their business. A typical storefront building could be single- or multi-storied. Single-story buildings were typically called storefront blocks and consisted of one or more shop spaces opening to the street. Each storefront contained an entrance and a display window. Multi-storied buildings were known as business blocks and combined storefronts on the first floor with rental space above. This rental space generally consisted of offices for professionals such as physicians, dentists, and lawyers, although it could also contain residential apartments or communal meeting spaces.

**W. Slauson Avenue Commercial Corridor Development c. 1950. Los Angeles Public Library**

The single-story storefront block was more common, although along some of the more heavily trafficked routes and at intersections the multi-story business block could be found. The single-story form was particularly popular along the newer arterial shopping streets that had no streetcar lines and depended exclusively upon the automobile. Commercial corridors typically displayed the popular architectural styles of the time. These include Spanish Colonial Revival and Mediterranean Revival popular during the 1920s as well as the Art Deco and Streamline Moderne styles more prevalent in the 1930s. Simple vernacular buildings largely devoid of overt

stylistic embellishments were also common. It was also during 1930s, when developers made attempts to employ the concept of rear parking for neighborhood shopping districts, a concept first introduced with commercial development on Wilshire Boulevard west of Downtown Los Angeles. An example of commercial corridor development can be found in the Windsor Hills area on Slauson Avenue between Overhill Drive and Angeles Vista which included a large grocery store, drugstore and other shops.

Although commercial corridors in the Westside Plan Area were first developed prior to World War II, they continued to be developed and redeveloped after the War to provide much-needed services in proximity to the growing residential communities. Individual commercial buildings and groups of buildings therefore display the architectural styles and innovations of their respective periods. Many of the commercial structures built after the war responded to both the growing middle class and suburban leisure culture, and the automobile designed to appeal to the passing motorist. The “Jet Inn,” at 4542 W. Slauson Avenue, a Mid-Century Modern style hotel is one such example. A more exuberant, expressive Modernism emerged in commercial design after the war, capturing both the zeitgeist and playful exuberance of the moment and appealing to the modern, automobile-oriented consumer. The style became known as “Googie,” named after Googie’s Diner in Los Angeles designed by John Lautner in 1949. The style has been described as “Modernism for the masses.” It was widely employed in roadside commercial architecture of the 1950s and 60s, including coffee shops, bowling alleys, and car washes. A standout example is the former Witch Stand Restaurant and Drive-in at 4508 W. Slauson Avenue. Constructed in 1957 and designed by the architectural design team of Armet & Davis, the building is today the home of Simply Wholesome.

**Wich Stand Restaurant and Broom Room Cocktail Lounge c. 1960. *Los Angeles Public Library***

## **POST-WAR NEIGHBORHOOD SHOPPING CENTER**

After World War II and more prominently after the mid-1950s, the Neighborhood Shopping Center became the predominant form of commercial development. This arrangement is characterized by a grouping of commercial buildings that rejects the pre-war spatial orientation to the street and is instead oriented to a parking lot. Neighborhood shopping centers were typically constructed by a developer who specialized in retail and/or a developer who had initiated an adjacent residential tract development. Having retail infrastructure nearby was a selling point for the somewhat isolated homes. Neighborhood shopping centers were typically located on one large parcel with retail buildings arranged in linear, L-shaped, or U-shaped configurations behind a large parking lot.

Tenants in these shopping centers were often a combination of one or more large anchor tenants, flanked by individual retail stores. During the postwar period, chain retailers, although present prior to World War II became more dominant where some expectations of quality and selection were reassuring in a more mobile culture. Anchor tenants were typically grocery stores and/or drug stores, often branches of regional or national retail chains. Ancillary retailers including stationery stores, bakeries, beauty shops, and dry cleaners occupied the neighboring storefronts. Examples of post-war neighborhood shopping centers in the Westside Plan Area include the Ladera Center at La Cienega Boulevard and La Tijera Boulevard and the Marina del

Rey Shopping Center on Admiralty Way between Fiji Way and Mindanao Way. Although they have maintained their original building configurations, both have undergone substantial alterations over time.

### **THEMED RETAIL SHOPPING VILLAGES**

Themed retail centers designed to evoke specific geographic locations, cultures, or historic periods date to the early 20<sup>th</sup> century with the development of Market Square (1917) in Lake Forrest, Illinois and Country Club Plaza (1922) in Kansas City. Master planned, architecturally cohesive, and constructed to accommodate the automobile, both evoked fantasy versions of European villages. Los Angeles proved particularly receptive to themed shopping and entertainment developments. Olvera Street reconstructed as a Mexican marketplace in conjunction with the preservation of the Avila Adobe between 1928 and 1930 became an instant tourist attraction. Similarly, the “New Chinatown” development, a Chinese themed commercial and residential development opened in 1938, established a new commercial center for Los Angeles’ Chinese community recently displaced by the construction of Union Station. Crossroads of the World, a Streamline Moderne and Period Revival-style fantasy of European and North African destinations was constructed in Hollywood in 1936.<sup>174</sup>

During the 1950s, the success of Disneyland and other theme parks inspired commercial developers to apply similar approaches to shopping centers. These themed “shopping villages” typically featured dining as well as shopping options, and often offered limited attractions such as on-site rides and entertainment. The natural attraction of coastal locations appeared particularly well-suited to these developments. The Ports O’ Call entertainment venue in San Pedro was developed in 1963 by restauranteur David C. Tallichet Jr. and designed by Vernon Leckman to evoke international port cities. Developed in conjunction with the Los Angeles Harbor Commission, the project drew upon world famous ports and included specialty restaurants, shops, and the “SS Sierra Nevada” ferryboat among other attractions.<sup>175</sup> “Mary’s Gate Village,” a Tudor Revival-style shopping village next to the moored Queen Mary attraction in Long Beach was constructed in 1977,<sup>176</sup> and “Seaport Village” on San Diego Bay was built in 1978.

In 1969-70, “Fisherman’s Village” in Marina Del Rey joined the ranks of Southern California’s themed shopping and entertainment attractions.

## **PROFESSIONAL OFFICE BUILDINGS**

During the postwar period, a wide range of professional office buildings were constructed to house the ever-growing professional service sector of medical doctors, lawyers, accountants, and other professionals. Often designed in Mid-Century Modern, Corporate Modern and New Formalist architectural styles, these buildings were located on major arterial streets already zoned for commercial development. Office buildings of the mid-20<sup>th</sup> century typically incorporated parking facilities and some ground-floor retail. Examples of professional office buildings in the Westside Plan Area include the Park Mesa Pharmacy building in Ladera Heights/View Park-Windsor Hills constructed in 1961 at 4314 W Slauson Avenue. In Marina del Rey examples include the former Civic National Bank building at 4159 Admiralty Way constructed in 1965, the Marina Professional Building at 4560 Admiralty Way constructed in 1971, and the Marina Towers at 4640-4159 Admiralty Way construction beginning in 1972.

## **ELIGIBILITY STANDARDS: PRE-WORLD WAR II COMMERCIAL DEVELOPMENT**

### **Summary Statement of Significance**

During the 1920s and 1930s, the commercial corridors developed to support growing residential development influenced by the availability of the automobile. Resources that are eligible may be significant for a proven association with an event important in history, an important pattern or trend in commercial development, or for an association with an ethnic or cultural group or a person important in local, state, or national history. Properties may also be significant as an example of a style or type; architectural styles are discussed in the Architecture and Design Section.

<b>Period of Significance</b>	1920-1942
<b>Period of Significance Justification</b>	Broadly covers the period of commercial development from 1920 to 1940, between World Wars I and II.
<b>Geographic Location</b>	Ladera Heights/View Park-Windsor Hills. Most commercial activity is intermittently concentrated along Slauson Avenue.
<b>Associated Property Types</b>	Commercial: One-story Building; One-story Commercial Storefront Block; Mixed-use Building; Mixed-use Commercial Block; Retail store; Commercial Office; Bank; Restaurant; Hotel; Recreational Facility; Shopping Center.
<b>Property Type Description</b>	Commercial property types include office buildings, movie theaters, restaurants,

automobile showrooms, garages, and service stations. Shopping centers that amalgamate multiple buildings. Buildings may be individual resources and/or contributing features to a historic district.

#### **Criterion A/1/1 (Events/Patterns of Development)**

Individual commercial properties that are eligible under this criterion may be significant:

- As the site of an event important in history; or
- For exemplifying an important trend or pattern of commercial development, such as the establishment or rapid expansion of a new commercial corridor; or
- For association with a longtime business or commercial use; or
- As an excellent and rare example of a commercial building type from the period (ex. automobile showroom, garage, service station, movie theater).

Commercial buildings that are eligible for an association with a trend or pattern of development from this period may be more appropriately evaluated as part of a historic district.

A collection of commercial properties that are eligible under this criterion as a historic district may be significant:

- For representing an important pattern or trend in commercial development.
- As an intact collection of buildings that represent commercial growth during the period.

Note that some commercial development may span several themes or periods of development. Local designation for historic districts includes Criteria 4, 6, and 8.

#### **Integrity Considerations:**

In order to be eligible for designation under this criterion, a property must retain sufficient integrity to convey its historic significance.

- Commercial properties from this period should retain integrity of location, design, workmanship, feeling, and association, at a minimum, in order to convey their significance.
- An individual property that is eligible for a historic association must retain the essential physical features that made up its character or appearance during the period of its association with an event or historical pattern.

- Note that some properties that may not retain sufficient integrity for listing in the National Register may remain eligible for listing at the state and local levels.
- A property that has lost some historic materials or details can be eligible if it retains the majority of the features that illustrate its style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation. Changes to signage and replacement of storefronts are common, and typically acceptable, alterations to commercial buildings from the early- to mid-20<sup>th</sup> century.
- Setting may have changed (surrounding buildings and land uses).

For historic districts:

- The majority of the components that add to the district's historic character must possess integrity, as must the district as a whole.
  - The historic district must retain a majority of contributors that date from the period of significance.
  - A contributing property must retain integrity of location, design, workmanship, setting, feeling, and association to adequately convey the significance of the historic district.

**Registration Requirements:**

To be eligible under this criterion, an individual property must:

- Date from the period of significance; and
- Have a proven association with an event important in history; or
- Represent an important catalyst for a pattern or trend in commercial development; or
- Display most of the character-defining features of the property type or style; and
- Retain the essential aspects of historic integrity.

To be eligible under this criterion, a historic district eligible under this theme must:

- Retain a majority of contributing buildings from the period of significance; and
- Retain significant character-defining features from the period of significance, including any important landscape or hardscape features; and
- Retain the original layout, reflecting planning and design principles from the period; and
- Retain the essential aspects of historic integrity.

**Criterion B/2/2 (Important Persons)**

Individual commercial properties eligible under this criterion may be significant:

- For an association with persons significant in our past; or

- For a proven association with a specific significant ethnic or cultural group that made a demonstrable impact on the community.

Note that according to National Park Service guidance, persons significant in our past refers to individuals whose activities are demonstrably important within a local, state, or national historic context. A property is not eligible if its only justification for significance is that it was owned or used by a person who is a member of an identifiable profession, class, or social or ethnic group. In addition, the property must be associated with a person's productive life, reflecting the time period when he or she achieved significance.

**Integrity Considerations:**

In order to be eligible for designation under this criterion, a property must retain sufficient integrity from the period of significance to convey its association with the important person.

- Commercial properties from this period should retain integrity of design, workmanship, feeling, and association, at a minimum, in order to convey the property's association with the significant person's productive period.
- A general rule is that the property must be recognizable to contemporaries of the person with which it is associated.

**Registration Requirements:**

To be eligible under this criterion a property must:

- Have a proven association with the productive period of a person important to local, state, or national history; and
- Display most of the character-defining features of the property type or style from the period of significance (i.e., the period when the property was associated with the important person); and
- Retain the essential aspects of integrity.

**Criterion C/3/3 (Architecture and Design)**

Individual commercial properties that are eligible under this criterion may be significant as:

- A good/excellent or rare example of an architectural style, property type, or method of construction; or
- A distinctive work by a noted architect, landscape architect, builder, or designer.

**Integrity Considerations:**

In order to be eligible for designation under this criterion, a property must retain sufficient integrity from the period of significance to convey its architecture.

- Commercial properties significant under this criterion should retain integrity of design, materials, workmanship, and feeling, at a minimum.

- A property that is eligible for designation as a good/excellent or rare example of its style or type retains most - though not necessarily all - of the character-defining features of the style.
- A property important for illustrating a particular architectural style or construction technique must retain most of the physical features that constitute that style or technique. A property can be eligible if it has lost some historic materials or details but retains the majority of the essential features from the period of significance. These features illustrate the style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation.
- A property is not eligible if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style.
- Replacement of storefronts is a common and acceptable alteration.

**Registration Requirements:**

To be eligible under this criterion a property must:

- Date from the period of significance; and
- Represent a good/excellent or rare example of a style or type; and
- Display most of the character-defining features of the style or type; and
- Represent quality of design and distinctive details; and
- Retain the essential aspects of integrity.

**ELIGIBILITY STANDARDS: POST WORLD WAR II COMMERCIAL DEVELOPMENT**

**Summary Statement of Significance**

In the post-World War II era, economic activity in the Westside Plan Area expanded to serve a growing population. Resources that are eligible under this theme may be significant as an excellent example of post-war commercial development and expansion, as the site of a significant event, or for an association with an ethnic or cultural group or a person important in local, state, or national history. Properties may also be significant as an example of a style or type; architectural styles in the Westside Plan Area are discussed in the Architecture and Design Section.

<b>Period of Significance</b>	1946-1980
<b>Period of Significance Justification</b>	Broadly covers the period of commercial development from 1946 to 1980.
<b>Geographic Locations</b>	Ladera Heights/View Park-Windsor Hills,

## Marina del Rey, West Fox Hills

<b>Associated Property Types</b>	Commercial: One-story Building; One-story Commercial Storefront Block; Mixed-use Building; Mixed-use Commercial Block; Retail store; Commercial Office; Bank; Restaurant; Theater; Hotel; Recreational Facility; Historic District.
<b>Property Type Description</b>	Commercial property types include malls and shopping centers, department stores, supermarkets, coffee shops, fast-food restaurants, office buildings, and automobile showrooms.

**Criterion A/1/1 (Events/Patterns of Development)**

Individual commercial properties that are eligible under this criterion may be significant:

- As the site of an event important in area history; or
- For exemplifying an important trend or pattern commercial development, such as an iconic business within the community, a long-term business, or community gathering place; or
- As an excellent and rare example of a commercial building type from the period (ex. shopping center, retail stores, grocery stores and supermarkets, coffeeshops, fast-food restaurants).

A collection of commercial properties that are eligible under this criterion as a historic district may be significant:

- For representing an important pattern or trend in commercial development.
- As an intact collection of businesses that represent the growth of during the period.

Note that some commercial development may span several themes or periods of development. Local designation for historic districts includes Criteria 4, 6, and 8.

**Integrity Considerations:**

In order to be eligible for designation under this criterion, a property must retain sufficient integrity to convey its historic significance.

- Commercial properties from this period should retain integrity of location, design, materials, workmanship, feeling, and association, at a minimum, in order to convey their significance.

- An individual property that is eligible for a historic association must retain the essential physical features that made up its character or appearance during the period of its association with an event or historical pattern.
- Note that some properties that may not retain sufficient integrity for listing in the National Register may remain eligible for listing at the state and local levels.

For historic districts:

- The majority of the components that add to the district's historic character must possess integrity, as must the district as a whole
  - The historic district must retain a majority of contributors that date from the period of significance.
  - A contributing property must retain integrity of location, design, workmanship, setting, feeling, and association to adequately convey the significance of the historic district.
  - Some alterations to individual buildings, such as replacement of roof materials and windows within original openings may be acceptable as long as the district as a whole continues to convey its significance.

**Registration Requirements:**

To be eligible under this criterion, an individual property must:

- Date from the period of significance; and
- Have a proven association with an event important in history; or
- Represent an important catalyst for a pattern or trend in commercial development; or
- Display most of the character-defining features of the property type or style; and
- Retain the essential aspects of historic integrity.

To be eligible under this criterion, a historic district eligible under this theme must:

- Retain a majority of contributing buildings from the period of significance; and
- Retain significant character-defining features from the period of significance, including any important landscape or hardscape features; and
- Retain the original layout, reflecting planning and design principles from the period; and
- Retain the essential aspects of historic integrity.

**Criterion B/2/2 (Important Persons)**

Individual commercial properties eligible under this criterion may be significant:

- For an association with persons significant in our past; or
- For a proven association with a specific significant ethnic or cultural group that made a demonstrable impact on the community.

Note that according to National Park Service guidance, persons significant in our past refers to individuals whose activities are demonstrably important within a local, state, or national historic context. A property is not eligible if its only justification for significance is that it was owned or used by a person who is a member of an identifiable profession, class, or social or ethnic group. In addition, the property must be associated with a person's productive life, reflecting the time period when he or she achieved significance.

**Integrity Considerations:**

In order to be eligible for designation under this criterion, a property must retain sufficient integrity from the period of significance to convey its association with the important person.

- Commercial properties from this period should retain integrity of design, workmanship, feeling, and association, at a minimum, in order to convey the property's association with the significant person's productive period.
- A general rule is that the property must be recognizable to contemporaries of the person with which it is associated.

**Registration Requirements:**

To be eligible under this criterion a property must:

- Have a proven association with the productive period of a person important to local, state, or national history; and
- Display most of the character-defining features of the property type or style from the period of significance (i.e., the period when the property was associated with the important person); and
- Retain the essential aspects of integrity.

**Criterion C/3/3 (Architecture and Design)**

Individual commercial properties that are eligible under this criterion may be significant as:

- A good/excellent or rare example of an architectural style, property type, or method of construction; or
- A distinctive work by a noted architect, landscape architect, builder, or designer.

**Integrity Considerations:**

In order to be eligible for designation under this criterion, a property must retain sufficient integrity from the period of significance to convey its architecture.

- Commercial properties significant under this criterion should retain integrity of design, materials, workmanship, and feeling, at a minimum.

- A property that is eligible for designation as a good/excellent or rare example of its style or type retains most - though not necessarily all - of the character-defining features of the style.
- A property important for illustrating a particular architectural style or construction technique must retain most of the physical features that constitute that style or technique. A property can be eligible if it has lost some historic materials or details but retains the majority of the essential features from the period of significance. These features illustrate the style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation.
- A property is not eligible if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style.
- Replacement of storefronts is a common and acceptable alteration.
- Setting may have changed (surrounding buildings and land uses).

**Registration Requirements:**

To be eligible under this criterion a property must:

- Date from the period of significance; and
- Represent a good/excellent or rare example of a style or type; and
- Display most of the character-defining features of the style or type; and
- Represent quality of design and distinctive details; and
- Retain the essential aspects of integrity.

## **6.3 Theme: 20th-Century Civic and Institutional Development**

In areas of Southern California where residential development flourished, civic and institutional buildings to house schools, libraries, post offices and fire stations were created to serve these communities. Religious and social institutions also expanded to meet the needs of growing populations. In the latter decades of the 20<sup>th</sup> century, changing demographics introduced new institutions as well. The Westside Plan Area contains a number of these institutional buildings.

### **SCHOOL DEVELOPMENT**

In the early twentieth century, the Progressive Education Movement came to influence educational methods and school designs, particularly for elementary schools. Shunning traditional teaching philosophies, the Progressive Education Movement eschewed the rigid and authoritarian traditional methods for a more “hands-on” approach that allowed children to explore and learn to the best of their own individual abilities. This simultaneously influenced thinking about more appropriate environments for learning. Architects and designers began experimenting with more flexible and adaptable school designs to accommodate the new

methods of teaching.

**54<sup>th</sup> Street Elementary School 1927. USC Library Collection**

In California, with its mild climate and readily available land, this resulted in a move away from the monolithic Beaux-Arts and Classical Revival architectural styles toward the period-eclectic styles commonly used in domestic architecture. School architects drew on the heritage of the region, including the Arts and Crafts movement and Spanish Colonial past, to forge a unique architectural identity. Spanish and Mediterranean influences allowed for more variable massing and direct access to the outdoors. Fenestration became more prevalent, to access readily available natural light.

In 1933 an estimated 6.4 magnitude earthquake struck Southern California, its epicenter just offshore of Long Beach. Damage was widespread throughout the region, with much of it focused on multi-story school buildings that were largely of unreinforced masonry construction. Within thirty days of the earthquake, the California State Legislature passed the Field Act, one of the first pieces of legislation that mandated earthquake-resistant construction in the United States. The Field Act required a statewide overhaul of building codes and practices, particularly for school buildings, and mandated state oversight to ensure proper implementation and enforcement of regulations.<sup>177</sup> Thus, the Long Beach Earthquake ushered in a period of widespread school renovation, reconstruction, and replacement that would transform Los Angeles area schools.

Beginning in 1934, local, state, and federal funds were made available to reconstruct, modernize, and expand area schools, not only to meet new seismic requirements, but also to address the changing school needs. As reported in the Los Angeles Times at the time, new and

---

<sup>177</sup> *Los Angeles Unified School District Historic Context Statement, 1870 to 1969*. Sapphos Environmental, Inc., March 2014. (63)

repaired buildings would be designed for “absolute safety with simplicity and beauty of architecture in harmony with the atmosphere and traditions of Southern California.” Brick construction was largely replaced by reinforced concrete and wood frame construction, which could better withstand lateral forces.

California’s moderate climate lent itself to passive heating and cooling designs that employed full-length sliding doors and operable windows at varying heights from different directions to draw in cool breezes and release warmer air. Exterior shaded corridors replaced interior central corridors giving direct access to the outdoors. New buildings would be “free of needless ornamentation,” since it was often applied decoration that had failed during the earthquake. Thus, early-20th century schools that were substantially repaired or rebuilt after the earthquake commonly reflect the architectural trends of the 1930s, as decorative period revival designs were replaced with a more simplified, modernist aesthetic.<sup>178</sup> Much of the reconstruction activity that took place between 1935 and 1940 was accomplished with the assistance of federal “New Deal” programs implemented to relieve the economic hardships of the Great Depression. These included funding from the Public Works Administration (PWA) and Works Progress Administration (WPA) supplemented by local funds.

With the advent of World War II, the Los Angeles region experienced an immediate increase in population as military personnel, and defense industry workers were imported to California. After the war, returning GIs found work in the expanded aerospace and defense industries, married, and started families. The growing population put enormous pressure on the limited local resources. New school buildings and the expansion of existing campuses was the result of these pressures. After the war, the child-centered school plant first championed in the 1930s was generally adopted as standard design. Postwar schools were designed to “feel decentralized, nonhierarchical, approachable, informal, and child-centered.”<sup>179</sup> Specifically, many schools were designed to have one-story massing, ample lighting and ventilation, and an indoor-outdoor spatial feeling. These design elements, which were ubiquitous in the post-war era, were first introduced in the 1930s. Construction materials were revised to reflect wartime innovations and post-war mass production and standardization.

In addition to style and material, schools from this period continued to evolve in site plan, design, and layout. One new design principal in the postwar years was the finger-plan school. The finger-plan design featured a central corridor from which wings projected; this maximized the amount of fresh air and light for each wing. Over time, the simple finger-plan school adopted several variations including double-loaded hallways and zigzag building plans. In the 1950s, contrastingly, school plants increasingly adopted the cluster-plan style. The cluster-plan continued the prevailing emphasis on low massing and indoor-outdoor accessibility but grouped wings as modular units surrounding a common courtyard. This helped compact the campus and provided cost savings in construction.<sup>180</sup> The 54<sup>th</sup> Street Elementary School (now

<sup>180</sup> Sapphos Environmental, Inc., *Los Angeles Unified School District Historic Context Statement, 1870 to 1969*, 80-84.

54<sup>th</sup> Street Charter School) at 5501 S. Eileen Avenue in Windsor Hills is a product of both the pre- and post-war periods having been first constructed in the late 1920s and subject to continued expansion and modification after World War II.

One technique for spurring development in the open lands west Los Angeles County was to offer institutions of higher education land for new campuses, and college and university campuses were firmly established institutions in Los Angeles Westside prior to World War II. The development of Westwood was largely instigated by the construction of UCLA in the late 1920s and Mount St. Mary's College would establish itself in Brentwood just a few years later. The Loyola College campus (later Loyola Marymount University) was one of the first developments in Westchester. The westside also benefited from the establishment of the California "Jr. College" system, (later referred to as "community colleges) when Santa Monica College was established in 1929. West Los Angeles College, located on a hillside location at the Culver City border, was opened in 1969. It is one of nine community college campuses in the Los Angeles Community College District.

## **LIBRARIES**

The City of Los Angeles established public collections for loans as early as the 1870s. Over time, the Los Angeles Public Library collection grew, as did the need for a central library, and ultimately a branch library system that would serve the new streetcar suburbs and automobile suburbs that emerged in the early twentieth century.

During the 1910s, tycoon and philanthropist Andrew Carnegie began building a legacy of funding community libraries all over the United States. Carnegie funded six branch libraries for the Los Angeles Public Library system. The branch libraries were especially important for children as local places of learning and fellowship.

In 1912, under the County Free Library Act, the LA County Library system was established. It was designed to serve the unincorporated portions of the county where residents did not live within the Los Angeles (or other city limits) that municipal libraries required for loan privileges. The Bebe Moore Library in View Park was founded in 1940 to serve unincorporated View Park-Windsor Hills residents. Library service was provided through a leased facility located at 5400 S. Harcourt Avenue at 54th Street. The library moved to its present location at 3854 54<sup>th</sup> Street in 1977.<sup>181</sup> The Lloyd Taber library at 4533 Admiralty Way in Marina del Rey was originally constructed in 1976; a wing was added in 1999.

## **RELIGIOUS INSTITUTIONS**

The development of houses of worship in Southern California dates to back to early European settlement with the founding of the missions by the Catholic Church. As Los Angeles developed and was settled by those who moved from the east coast and Midwest, the

---

<sup>181</sup> AARP Los Angeles CA website, accessed September 13, 2023.  
<https://local.aarp.org/place/view-park-bebe-moore-campbell-library-los-angeles-ca.html>

establishment of churches of a variety of religious denominations flourished in downtown Los Angeles. St. Vibiana's Catholic Church was joined by houses of worship for Presbyterians, Baptists, Lutherans, Jews, and Muslims.

During the 1910s and 1920s, as the population grew and expanded its footprint into new suburban communities outside of downtown, churches of various denominations were established in those communities. During the prosperous 1920s, the number of parishioners increased, new churches were built, and older sanctuaries were expanded. Examples of pre-World War II churches in the Westside Plan Area include the Spanish Colonial Revival style Angeles Mesa Presbyterian Church at 3571 W. 54<sup>th</sup> Street which was constructed in 1928. A small Spanish Colonial Revival sanctuary at 3868 W. 54<sup>th</sup> Street is today the Robbins Memorial Church of God in Christ.

After World War II, the strong postwar economy and relative political stability allowed Americans to focus on domestic concerns such as marriage and starting families. As communities were formed, particularly suburban communities, religious membership, church funding, and traditional faith practice all increased during the 1950s.<sup>182</sup> The new houses of worship that were built in the post-war period were often designed in Mid-Century Modern, and Late Modern architectural styles that reflected the optimism and prosperity of postwar Southern California. Examples in the Westside Plan Area include the University Christian Church at 5831 W. Centinela Avenue which was designed by Robert D'Arcy Bolling, Deasy & Bolling Architects and constructed in 1965; the Thirtieth Church of Christ, Scientist (now Mt. Sinai Missionary Baptist Church) at 3663 W. 54<sup>th</sup> Street and constructed in 1949; the Sephardic Hebrew Center at 4911 59<sup>th</sup> Street constructed in 1966; and the Knox Presbyterian Church at 5840 La Tijera Boulevard constructed in 1967, and designed by architect Sidney Eisenstat.

The Roman Catholic Archbishop of Los Angeles established an aggressive and organized building program during the postwar period. Suburban Catholic churches were constructed throughout Los Angeles, usually by a member of a pre-approved list of architects. Catholics from the Westside Plan Area were served by St. Jerome's Catholic Church, built in the early 1960s in Westchester.

Changing demographics in the Westside Plan Area resulted in the establishment of new churches as well as the transition of older houses of worship to new congregations. For example, The Sephardic Hebrew Center built in 1966 later became the Calvary Baptist Church of Los Angeles.

### **AFRICAN AMERICAN INSTITUTIONS**

As described in the *SurveyLA Citywide Historic Context Statement: African American History of Los Angeles*, “Churches were crucial anchors of the African American community. They represented spaces of racial autonomy and freedom...where people could freely express themselves.”<sup>183</sup> Of Black churches in Los Angeles, historian Doug Flamming writes, “Black churches were their pride and joy, their haven in racist America.”<sup>184</sup> In addition to their religious

<sup>183</sup> *SurveyLA Citywide Historic Context Statement: African American History of Los Angeles*, February 2018. 104.

<sup>184</sup> Doug Flamming, *Bound for Freedom: Black Los Angeles in Jim Crow America* (Berkeley, CA: University of California Press, 2006), 110. Quoted in *SurveyLA Citywide Historic Context Statement: African American History of Los Angeles*, February 2018. 104.

purpose, Black churches often served as centers of social life, business networks and civil rights activism.

The First AME (FAME) Church and Second Baptist Church were the two leading Black churches in Los Angeles. Over time, new congregations split off from these churches—often in response to their very conservative natures. Splinter groups included the People's Independent Church of Christ, Church of Christ, Church of God in Christ, and Assemblies of God. While all of these churches housed Christian worshipers, some African Americans practiced Islam and the Nation of Islam rose to prominence during the 1930s—some three decades prior to its association with Malcolm X.

Churches also often provided meeting facilities for social and civil rights organizations such as the NAACP, fair housing organizations, the Urban League and women's clubs.<sup>185</sup> In the Westside Plan Area, a variety of religious denominations replaced earlier religious groups—reflecting the changing demographics of the residential neighborhoods in Windsor Hills, View Park, and Ladera Heights.

Outside of churches, social and civil rights organizations also maintained local offices within the Westside Plan Area. The Los Angeles Urban League offices were located for many years at 3450 W. Mt. Vernon Drive in View Park. The building was originally constructed as a hotel in 1945.<sup>186</sup> The Urban League is a historic civil rights organization founded in 1910 with affiliates in over 300 communities throughout the United States which promotes the economic empowerment of African Americans and other underserved communities. The Los Angeles Urban League is today located at 4401 Crenshaw Boulevard in Los Angeles.

## **ELIGIBILITY STANDARDS: PRE-WORLD WAR II INSTITUTIONAL DEVELOPMENT**

### **Summary Statement of Significance**

Population growth in the Westside Plan Area led to the establishment of schools, churches, and social and cultural clubs. Services also expanded to meet the demand of the growing population. During the 1930s, New Deal-era funding programs enabled civic and institutional growth. This includes CWA, WPA, and SERA programs, which enabled infrastructure improvements and the construction of schools and other facilities. Resources that are eligible under this theme may be significant for specific events, as examples of growth during the 1920s and New Deal programs during the 1930s, as the site of an important organization, or for an association with an ethnic or cultural group or a person important in local, state, or national history. Properties may also be significant as an example of a style or type; architectural styles are discussed in the Architecture and Design Section.

**Period of Significance**                            1920-1942

**Period of Significance Justification**            Broadly covers the period of civic and institutional development during the 1920s and

1930s.

<b>Geographic Location</b>	Ladera Heights/View Park-Windsor Hills
<b>Associated Property Types</b>	Institutional: Post Office, Fire and Police Station, School, Library, Hospital, Religious Building, Social Club, Cultural Institution, Fraternal Organization, Park, Civic Building, Civic Amenity, Public Art.
<b>Property Type Description</b>	Institutional property types include schools, hospitals, religious buildings (including churches, convents, rectories, and schools), clubhouses associated with social clubs or fraternal organizations, parks, civic buildings like post offices and police/fire stations, and civic amenities.

### **Criterion A/1/1 (Events/Patterns of Development)**

Individual civic/institutional properties that are eligible under this criterion may be significant:

- As the site of an event important in history; or
- For exemplifying an important trend or pattern of civic or institutional development during this period of expansion and growth; or
- For an important association with New Deal era programs; or
- As an excellent and rare example of an institutional building type from the period (ex. library, church, school, fire or police station, hospital, civic/government building).

#### **Integrity Considerations:**

In order to be eligible for designation under this criterion, a property must retain sufficient integrity to convey its historic significance.

- Civic/institutional properties from this period should retain integrity of location, design, workmanship, feeling, and association, at a minimum, in order to convey their significance.
- An individual property that is eligible for a historic association must retain the essential physical features that made up its character or appearance during the period of its association with an event or historical pattern.
- Note that some properties that may not retain sufficient integrity for listing in the National Register may remain eligible for listing at the state and local levels.

#### **Registration Requirements:**

To be eligible under this criterion, an individual property must:

- Date from the period of significance; and
- Have a proven association with an event important in history; or
- Represent an important catalyst for a pattern or trend in civic/institutional development; or
- Display most of the character-defining features of the property type or style; and
- Retain the essential aspects of historic integrity.

#### **Criterion B/2/2 (Important Persons)**

Individual civic/institutional properties eligible under this criterion may be significant:

- For an association with persons significant in our past; or
- For a proven association with a specific significant ethnic or cultural group that made a demonstrable impact on the community.

Note that according to National Park Service guidance, persons significant in our past refers to individuals whose activities are demonstrably important within a local, state, or national historic context. A property is not eligible if its only justification for significance is that it was owned or used by a person who is a member of an identifiable profession, class, or social or ethnic group. In addition, the property must be associated with a person's productive life, reflecting the time period when he or she achieved significance.

#### **Integrity Considerations:**

In order to be eligible for designation under this criterion, a property must retain sufficient integrity from the period of significance to convey its association with the important person.

- Civic/institutional properties from this period should retain integrity of design, workmanship, feeling, and association, at a minimum, in order to convey the property's association with the significant person's productive period.
- A general rule is that the property must be recognizable to contemporaries of the person with which it is associated.

#### **Registration Requirements:**

To be eligible under this criterion a property must:

- Have a proven association with the productive period of a person important to local, state, or national history; and
- Display most of the character-defining features of the property type or style from the period of significance (i.e., the period when the property was associated with the important person); and
- Retain the essential aspects of integrity.

### **Criterion C/3/3,5,7 (Architecture and Design)**

Individual civic/institutional properties that are eligible under this criterion may be significant as:

- A good/excellent or rare example of an architectural style, property type, or method of construction; or
- A distinctive work by a noted architect, landscape architect, builder, or designer.

#### **Integrity Considerations:**

In order to be eligible for designation under this criterion, a property must retain sufficient integrity from the period of significance to convey its architecture.

- Civic/institutional properties significant under this criterion should retain integrity of design, materials, workmanship, and feeling, at a minimum.
- A property that is eligible for designation as a good/excellent or rare example of its style or type retains most - though not necessarily all - of the character-defining features of the style.
- A property important for illustrating a particular architectural style or construction technique must retain most of the physical features that constitute that style or technique. A property can be eligible if it has lost some historic materials or details but retains the majority of the essential features from the period of significance. These features illustrate the style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation.
- A property is not eligible if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style.
- Setting may have changed (surrounding buildings and land uses).

#### **Registration Requirements:**

To be eligible under this criterion a property must:

- Date from the period of significance; and
- Represent a good/excellent or rare example of a style or type; and
- Display most of the character-defining features of the style or type; and
- Represent quality of design and distinctive details; and
- Retain the essential aspects of integrity.

## **ELIGIBILITY STANDARDS: POST-WORLD WAR II INSTITUTIONAL DEVELOPMENT**

### **Summary Statement of Significance**

In the post-World War II era, civic or institutional development increased to serve the growing

population. Properties that are eligible under this theme may be significant as the site of an important event in history; as an example of notable post-World War II civic or institutional development in proximity to new residential neighborhoods, as the site of activity related to the fight for civil rights, or for an association with an ethnic or cultural group or a person important in local, state, or national history. Properties may also be significant as an example of a style or type; architectural styles in the Westside Plan Area are discussed in the Architecture and Design Section.

<b>Period of Significance</b>	1946-1980
<b>Period of Significance Justification</b>	Broadly covers the period of civic and institutional development following World War II.
<b>Geographic Location</b>	Ladera Heights/View Park-Windsor Hills, Marina del Rey
<b>Associated Property Types</b>	Institutional: Post Office, Fire and Police Station, School, Library, Hospital, Religious Building, Social Club, Cultural Institution, Fraternal Organization, Park, Civic Building, Infrastructure Improvement, Civic Amenity, Public Art.
<b>Property Type Description</b>	Institutional property types include schools, hospitals, religious buildings (including churches, convents, rectories, and schools), clubhouses associated with social clubs or fraternal organizations, parks, civic buildings like post offices and police/fire stations, and civic amenities.

#### **Criterion A/1/1 (Events/Patterns of Development)**

Individual civic/institutional properties that are eligible under this criterion may be significant:

- As the site of an event important in history, such as an important community gathering place; or
- For exemplifying an important trend or pattern in civic/institutional development, such as expansion of services in proximity to new residential neighborhoods, or postwar school planning principals, or civil rights related movements; or
- As an excellent and rare example of a civic or institutional building type from the period (post-war school plants).

**Integrity Considerations:**

In order to be eligible for designation under this criterion, a property must retain sufficient integrity to convey its historic significance.

- Civic/institutional properties from this period should retain integrity of location, design, workmanship, feeling, and association, at a minimum, in order to convey their significance.
- An individual property that is eligible for a historic association must retain the essential physical features that made up its character or appearance during the period of its association with an event or historical pattern.
- Note that some properties that may not retain sufficient integrity for listing in the National Register may remain eligible for listing at the state and local levels.

For historic districts:

**Registration Requirements:**

To be eligible under this criterion, an individual property must:

- Date from the period of significance; and
- Have a proven association with an event important in history; or
- Represent an important catalyst for a pattern or trend in civic/institutional development; or
- Display most of the character-defining features of the property type or style; and
- Retain the essential aspects of historic integrity.

**Criterion B/2/2 (Important Persons)**

Individual civic/institutional properties eligible under this criterion may be significant:

- For an association with persons significant in our past; or
- For a proven association with a specific significant ethnic or cultural group that made a demonstrable impact on the community, such as a leader in the Civil Rights Movement.

Note that according to National Park Service guidance, persons significant in our past refers to individuals whose activities are demonstrably important within a local, state, or national historic context. A property is not eligible if its only justification for significance is that it was owned or used by a person who is a member of an identifiable profession, class, or social or ethnic group. In addition, the property must be associated with a person's productive life, reflecting the time period when he or she achieved significance.

**Integrity Considerations:**

In order to be eligible for designation under this criterion, a property must retain sufficient integrity from the period of significance to convey its association with the important person.

- Civic/institutional properties from this period should retain integrity of design, workmanship, feeling, and association, at a minimum, in order to convey the property's association with the significant person's productive period.
- A general rule is that the property must be recognizable to contemporaries of the person with which it is associated.

**Registration Requirements:**

To be eligible under this criterion a property must:

- Have a proven association with the productive period of a person important to local, state, or national history; and
- Display most of the character-defining features of the property type or style from the period of significance (i.e., the period when the property was associated with the important person); and
- Retain the essential aspects of integrity.

**Criterion C/3/3 (Architecture and Design)**

Individual civic/institutional properties that are eligible under this criterion may be significant as:

- An excellent or rare example of an architectural style, property type, or method of construction; or
- A distinctive work by a noted architect, landscape architect, builder, or designer.

**Integrity Considerations:**

In order to be eligible for designation under this criterion, a property must retain sufficient integrity from the period of significance to convey its architecture.

- Civic/institutional properties significant under this criterion should retain integrity of design, materials, workmanship, and feeling, at a minimum.
- A property that is eligible for designation as a good/excellent or rare example of its style or type retains most - though not necessarily all - of the character-defining features of the style.
- A property important for illustrating a particular architectural style or construction technique must retain most of the physical features that constitute that style or technique. A property can be eligible if it has lost some historic materials or details but retains the majority of the essential features from the period of significance. These features illustrate the style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation.
- A property is not eligible if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style.

- Setting may have changed (surrounding buildings and land uses).

**Registration Requirements:**

To be eligible under this criterion a property must:

- Date from the period of significance; and
- Represent an excellent or rare example of a style or type; and
- Represent quality of design and distinctive details; and
- Display most of the character-defining features of the style or type; and
- Retain the essential aspects of integrity.

## 6.4 Theme: Twentieth-Century Industrial Development

From its reputation as the “Queen of the Cow Counties” to its Cold War role in aerospace, Los Angeles and the Westside Plan Area include large and small pockets of industrial development including agriculture, oil and petroleum, manufacturing, aviation, and aerospace.

### AGRICULTURE

Agriculture in Los Angeles dates back to the pueblo days when settlers established agricultural parcels along the Los Angeles River and east of the residential area in accordance with Spain’s Laws of the Indies. During the late Eighteenth and Nineteenth century, farming expanded. Water remained the chief problem for agricultural pursuits and those who chose to farm in the San Fernando Valley during these early days practiced dry farming techniques. Irrigation came from subterranean sources such as springs. The City of Los Angeles retained exclusive rights to the Los Angeles River.

With the arrival of the Southern Pacific Railroad in 1877, the population of the city increased significantly, and the iron horse offered opportunities to ship agricultural bounty to other regions. Southern California became a hotbed of fruit cultivation and earned a national reputation for its oranges. The Los Angeles-Owens River Aqueduct opened in 1913, spurring more agricultural development for crops including walnuts, oranges, lemons, sugar beets, wheat, and barley.

The presence of Centinela Creek and Ballona Creek encouraged farming activity east of the Ballona Wetlands. Early in the twentieth century the area was home to Japanese and Japanese American farmers who cultivated celery and other crops. Japanese also farmed land in the Sawtelle area, south of the Soldiers’ Home. After World War II, population growth in the region created a demand for housing that was often met with the sale of farmland and development of tract homes. This was true for areas throughout Los Angeles County and Southern California.

It does not appear that any industrial property types associated with the agricultural industry

remain in the Westside Plan Area.

## OIL AND PETROLEUM

Discovery of oil in the Los Angeles basin can be traced back to the Tongva and Kizh People who used “la brea” or tar to waterproof their canoes. The modern oil industry in the area begins with the discovery of oil by Edward L. Doheny and Charles A. Canfield in 1892 in what was to become the Los Angeles Oil Field. By 1895, Doheny’s Los Angeles City field produced over half the 1.2 million barrels produced in the state.<sup>187</sup> The discovery sparked an oil boom in the region with the Los Angeles Oil Field producing 830,000 barrels per day by 1901.<sup>188</sup>

The increasing popularity of the automobile helped fuel a second oil boom during the early 1920s that fueled economic growth, prosperity, and more speculation. The largest discovery, on Signal Hill, was followed by the Torrance Oil Field, the Wilmington Oil Field and many others. The Inglewood Oil Field, discovered in 1924, is located in the Ladera Heights/View Park-Windsor Hills community area. The second oil boom fueled speculation and drilling from Ventura to Bakersfield to Huntington Beach. Rigorous exploration led to a supply glut and when the Great Depression hit and demand abated, oil prices dropped. Despite this, the oil business helped sustain the greater Los Angeles area as a recession-proof industry. The presence of oil in Southern California supported industrial development more broadly. Automobiles, rubber, tires, steel and paving were all a direct result of an abundant oil industry.

Oil extraction typically used lattice-framed oil derricks or the “pump jack,” an above ground drive that mechanically pumps oil out of the well when the natural pressure is no longer sufficient.<sup>189</sup> Pump jacks are also known by a number of nicknames including the “nodding donkey,” the “grasshopper,” the “horse-head” or the “thirsty bird.”<sup>190</sup>

## AVIATION AND AEROSPACE

Southern California’s climate, prosperity, population growth, and wide-open spaces uniquely suited it to aviation. By 1929, Southern California was home to 40 percent of all planes and pilots licensed by the federal government.<sup>191</sup> Boosterism played a significant role in attracting aviators and manufacturers. The Los Angeles Chamber of Commerce proactively recruited aviation-related businesses and movie stars who were often called upon for coast-to-coast travel often shunned the old-fashioned train for more modern, air-minded airplane travel. By 1929, 53 airfields were located within 30 miles of Downtown Los Angeles.<sup>192</sup> Glendale, Mines

<sup>189</sup> City of Los Angeles, Department of City Planning, Office of Historic Resources, *SurveyLA: Industrial Development 1850-1980*, February 2018, 85.

<sup>190</sup> City of Los Angeles, Department of City Planning, Office of Historic Resources, *SurveyLA: Industrial Development 1850-1980*, February 2018, 86.

<sup>191</sup> City of Los Angeles, Department of City Planning, Office of Historic Resources, *SurveyLA: Industrial Development 1850-1980*, February 2018, 171.

<sup>192</sup> City of Los Angeles, Department of City Planning, Office of Historic Resources, *SurveyLA: Industrial Development 1850-1980*, February 2018, 172.

Field (present-day Los Angeles International Airport), Long Beach, and Burbank were the main passenger hubs serving Southern California.

By the end of World War II, Southern California manufacturers accounted for 60 to 70 percent of the nation's aircraft industry.<sup>193</sup> After World War II, Southern California remained home to some of America's largest aircraft manufacturers: Douglas Aircraft, Lockheed Aircraft Corporation, Hughes Aircraft Company, Northrop Corporation, North American Aviation and Vultee Aircraft.

A long-time aviator, Howard Hughes established Hughes Aircraft. In 1940, he purchased 380 acres of the Ballona Wetlands and constructed a 60,000 square foot aircraft plant with an adjacent grass runway.<sup>194</sup> The company, which also had early facilities at the Glendale airport used this site to design and assemble a variety of aircraft and helicopters.

Defense spending showed no sign of abating during the 1950s and soon the Cold War drove innovation in aerospace and other defense technologies. Companies like Lockheed, Northrop and North American repositioned themselves for the aerospace market. Innovators like Simon Ramo (1913-2016), who had integrated radar systems with wing-gun controls and air-to-air missiles while at Hughes Aircraft formed his own company, Ramo-Wooldridge, which became TRW, Inc.

Like in aviation, the aerospace manufacturing industry required the manufacturing of electronic and other component parts spawning the growth of large and small manufacturing around Southern California. In the 1980s, 40 percent of American missile and aerospace firms were based in Southern California, as were one-third of all aerospace engineers.<sup>195</sup> The industry fueled suburban residential growth throughout the region. The Westside of Los Angeles, with its proximity to aerospace manufacturing in the South Bay and in Santa Monica, benefited from the boom. When the Cold War ended in the 1980s, government defense spending dried up and with it went many of the businesses and jobs associated with the aerospace industry.

Industrial property types associated with the aerospace industry do not appear to be present in the Westside Plan Area.

## **ELIGIBILITY CRITERIA: OIL AND OTHER PETROLEUM PRODUCTS**

**Summary Statement of Significance:** Oil exploration and processing had a profound and far-reaching impact on the development of Los Angeles County, from fueling emerging industries in the early 20th century to financing the construction of high-style residential and commercial architecture. The decline of the industry in the late 20th century, combined with technological

<sup>194</sup> City of Los Angeles, Department of City Planning, Office of Historic Resources, *SurveyLA: Industrial Development 1850-1980*, February 2018, 178.

<sup>195</sup> City of Los Angeles, Department of City Planning, Office of Historic Resources, *SurveyLA: Industrial Development 1850-1980*, February 2018, 184.

improvements in petroleum exploration and processing, has caused historical remnants of this industry to largely vanish from the built environment.

<b>Period of Significance</b>	1924-1980
<b>Period of Significance Justification</b>	Date range encompasses the early period of use of pump jacks to the present as many are still operating.
<b>Geographic Location</b>	Ladera Heights/View Park-Windsor Hills
<b>Associated Property Types</b>	Oil Pump Jack, Oil Derrick, Oil Industry Production and Repair Facility
<b>Property Type Descriptions</b>	<p><i>Oil Pump Jacks</i> are installed as above-ground drive to mechanically pump oil out of an oil well when the natural pressure is no longer sufficient. They are typically powered by an electric motor or a natural gas or gasoline engine and reflect a variety of the models such as those nicknamed “nodding donkey,” “grasshopper,” “horse-head,” and “thirsty bird.” May be found in clusters.</p> <p><i>Oil Derricks</i> are usually square lattice work towers that taper at top. The earliest examples are made of wood. Towers housed a pump that extracted oil from a well site located directly underneath the derrick. Extant oil derricks are typically obscured by soundproofing.</p> <p><i>Oil industry Production and Repair Facilities</i> are similar in physical character to other industrial shops from the early and mid-20th century. The facility may be composed of one or more one-story utilitarian shop buildings. At least one of the buildings may be a metal shop and there might also be a garage for truck repairs.</p>

#### **Criterion A/1/1.9 (Events/Patterns of Development)**

Properties that are eligible under this criterion may be significant:

- For exemplifying an important trend or pattern in the oil and petroleum products industry; or

- Is a rare extant example of an oil and petroleum product industry property type from the period.

**Character-defining Features**

- May be in groupings or individual examples
- Retains most of the essential character defining features from the period of significance
- Oil Derricks characterized by a wooden or steel latticework tower
- Pump Jacks and Oil Derricks may be partially or entirely obscured by sound-proofing materials, as long as the original structure is intact underneath
- Production/Repair Facilities may contain one or more utilitarian buildings housing shops or garages

**Integrity Considerations:**

- Industrial properties associated with the oil and petroleum products industry should retain integrity of location, design, materials, feeling, and association
- An individual property that is eligible for a historic association must retain the essential physical features that made up its character or appearance during the period of its association with an event or historical pattern.
- Note that some properties that may not retain sufficient integrity for listing in the National Register may remain eligible for listing at the state and local levels.

**Registration Requirements:**

To be eligible under this criterion a property must:

- Date from the period of significance; and
- Represent an excellent or rare example of the type; and
- Display most of the character-defining features of the type; and
- Retain the essential aspects of integrity.

## 6.5 Theme: Arts and Culture

The Westside Plan Area study area enjoys a rich history of African American artistic expression and cultural celebration. The following provides background on public art, formal and informal cultural celebrations, and the use of public parks for community cultural activities and expression.

During the later decades of the twentieth century, wall murals emerged as one of the more expressive forms of public art advocating for and celebrating communities of color. Early wall murals were generally private efforts initially, and not officially recognized by public institutions. In response to advances in the civil rights movement and a growing recognition of the experiences and achievements of underserved and marginalized communities, the Los Angeles

County Arts Commission (LACAC) and the Los Angeles County Metropolitan Transportation Authority (LACMTA) began sponsoring murals depicting Chicano and Black history.<sup>196</sup> These murals were typically located at civic institutional buildings such as schools and libraries, within public parks, or metro stations.

Examples of local murals include for example, a 1975 mural depicting the diverse student body of John Adams Junior High School painted by Richard Wyatt Jr., who was, at the time, a second-year art student at UCLA.<sup>197</sup> Wyatt Jr. would go on to become an internationally renowned painter, portraitist, muralist, and multi-media artist. A mural that addressed Black history was painted at the Holmes Avenue Elementary School in 1978, and Los Angeles Southwest College included a mural project as part of its 1979 Black History Extravaganza.

The dissemination and celebration of Black culture was typically centered in the homes, businesses, churches, and community centers of Black neighborhoods. The Aquarian Spiritual Center and Bookshop, in South Central Los Angeles, established in 1941 by Dr. Alfred Ligon was one such institution. The Aquarian Center collected books, journals, media, art and related materials representing the history, culture, philosophy and daily life of African Americans and African Diaspora in Los Angeles. In 1964, the Aquarian Spiritual Center held a series of events dedicated to historic Negro spirituals, African cultural history, Black ideals of beauty, and African American resistance movements.

Public celebrations of African American culture gained momentum as a result of the Civil Rights Movement in the late 1950s and early 1960s and after the Watts Uprising of 1965. In 1965, County Supervisor Kenneth Hahn signed a proclamation for “Negro History Week.” The *Los Angeles Sentinel* notes that Black Culture Week was celebrated by the Los Angeles Unified School District in May of 1969.<sup>198</sup> The contribution of African Americans in art, drama, industry, literature, music, government and science were showcased across the city’s school system.

During the 1970s, celebrations became more widespread and college campuses established their own annual festivals at East L.A. College, Cal Poly Pomona, UCLA, West Los Angeles College, and Loyola Marymount. In 1972, the City of Inglewood collaborated with the Watts Mafundi Foundation Institute, St. Elmo’s Village, and the Communicative Arts Center in Compton on a Black Culture Festival.<sup>199</sup>

Institutions celebrating Black culture and the arts, such as the Inner City Cultural Center (ICCC), were established in direct response to the Watts Rebellion. C. Bernard Jackson, a playwright and Dr. J. Alfred Cannon, a UCLA neuropsychiatrist conceived of ICCC in the early 1960’s as a vehicle for increasing cross-cultural communications among the various minority

<sup>198</sup> “LA Schools to Celebrate Culture Week, May 19-23,” *Los Angeles Sentinel*, May 15, 1969, A4.

<sup>199</sup> “Inglewood to Host Black Culture Fest,” *Los Angeles Sentinel*, February 17, 1972, C7.

groups in Los Angeles.<sup>200</sup> The ICCC staged its inaugural production in 1967.

The ICCC was housed in three locations between 1965 and 1996: the Washington Boulevard Theater, the Masonic Temple at New Hampshire Avenue and Pico Boulevard, and the Ivar Theater in Hollywood. In addition to its theatrical productions, the ICCC offered gallery space featuring Black artists. In 1979, Southwest College celebrated “Black History Extravaganza ’79,” a month-long celebration featuring concerts, lectures, plays and a festival. The event was co-sponsored by W.E. Conglomeration Inc., a nonprofit institute in fine art and sciences.<sup>201</sup>

In the Westside Plan Area, Ladera Park and its recreational center have hosted cultural events and festivals over the last 70 years. The park featured a wooden picnic pergola, an amphitheater, restrooms, and a community building. Fashion shows in the 1950s gave way to alumni and family picnics in the 1960s and 1970s and to celebrations of multi-culturalism in the 1980s. Celebrations of Juneteenth “...started in backyards, then moved to Lincoln Park and Ladera Park...”<sup>202</sup> By 1999, the celebration was officially moved to the neighboring Los Angeles community of Leimert Park—the acknowledged hub of the Black community.<sup>203</sup>

In recent decades, Ladera Park has become home to the Ladera Heights Cultural Fair, the Ladera Heights Dance Showcase, the Ladera Heights Jazz Fest, the Ladera Heights Art Walk, and the Ladera Heights Comedy Night. The Ladera Heights Cultural Arts Association and Ladera Heights Civic Association remain strong presences at these events.

#### [Eligibility Criteria]

#### **ASSOCIATED PROPERTY TYPES**

Associated property types for the Westside Plan Area include parks, purpose-built and other community centers, theaters, and galleries. Wall murals are also associated under this theme.

<sup>203</sup> “Juneteenth Gala Set for Leimert Park,” *Los Angeles Sentinel*, June 17, 1999, A15.

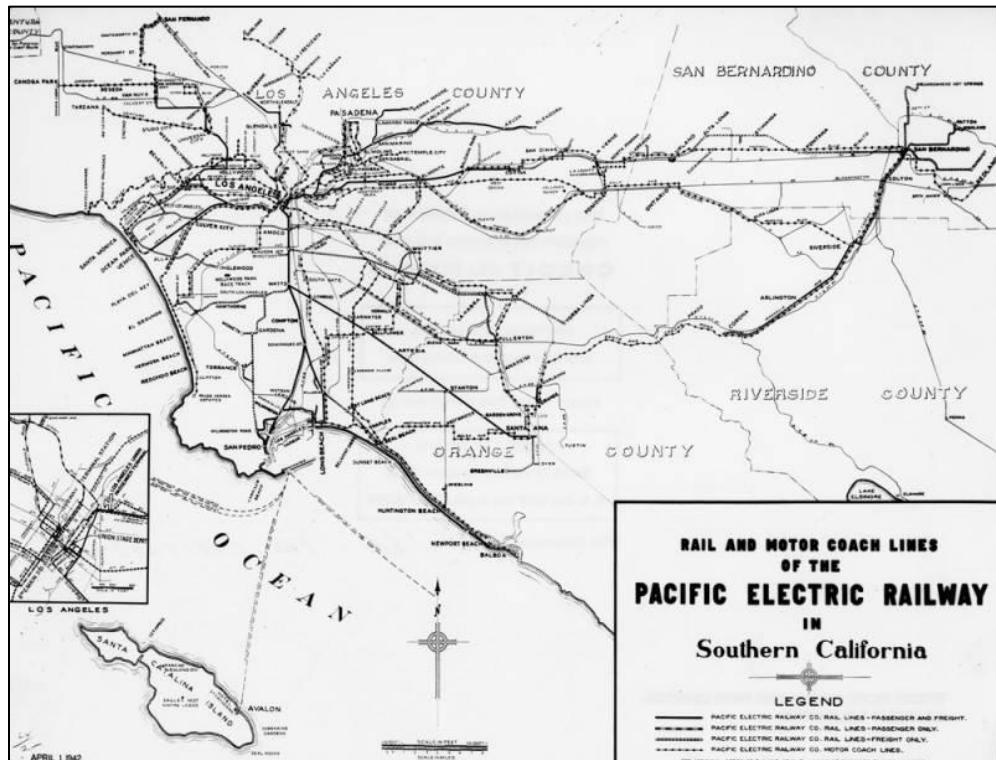

## 6.6 Theme: Infrastructure and Transportation

Development in the area defined by the Westside Plan Area was driven by the development of infrastructure and public transportation. The following offers a brief discussion of the interurban railway systems, the freeway, and flood control efforts.

### THE INTERURBAN RAILWAY SYSTEMS

The growth of Los Angeles and Southern California more generally, was directly related to the growth of its streetcar systems. Although there were many different companies and lines, the two most dominant players were the Los Angeles Railway (a.k.a., LARy or the Yellow-cars) and Pacific Electric system (a.k.a., the Red Cars). LARy mostly operated within the City of Los Angeles, whereas the Pacific Electric cars linked Los Angeles with far-flung places such as Orange, Riverside, and San Bernardino County.

The Los Angeles Railway operated between 1895 and 1963. The 1895 purchase of a group of smaller railways, some of which were horse-drawn railways, by a syndicate of investors would drive the region's development. The new owners immediately began electrifying the railway. It served such neighborhoods as Crenshaw, West Adams, Leimert Park, Hancock Park, Boyle Heights and Vernon. LAR carried more passengers than Pacific Electric and was so successful that it was purchased by Henry E. Huntington in 1898 and held in the family until its sale in 1944.

Pacific Electric Railway Map 1942. *Los Angeles Public Library*

The Pacific Electric Railway was established in 1901 by Henry E. Huntington (he had been an executive with the Southern Pacific Railroad) and Isaias Hellman. Huntington provided the railroad experience and Hellman provided the money. Hellman also owned a substantial amount of property in Southern California and saw the railway as a vehicle for its future development. Their first project was the line to Long Beach, which opened in 1902. They finished the line to Glendale in 1904, Newport Beach in 1905, and Sierra Madre in 1906.

Eventually, there were four districts: the northern, southern, eastern and western districts. The western district served the Westside Plan Area. Of special interest to many Angelenos was the “Balloon Route” (also known as the Air Line) a tourist route to the beach communities established in 1896. According to one author, “the trolley excursions...ran almost continually during the summer” with crowds of riders heading for the seaside.<sup>204</sup> The stop for the “Soldiers’ Home” was on the Balloon Route.

In 1911, railway operations of a variety of regional companies were consolidated under the Pacific Electric Railway Company. The system continued to operate into the 1950s when some routes were replaced by motor coach service.

### **THE FREEWAY SYSTEM**

As the private automobile became the preferred mode of transportation in Southern California, the freeway system supplanted the interurban railways. Separated from the general street grid and free of at-grade intersections, freeways promised a solution to the congestion that plagued inner- and intra-city traffic. Initially planned in the 1930s, the construction of a regional freeway system did not begin in earnest until after World War II.

In his book *Golden Dreams*, historian Kevin Starr describes Southern California’s creation as “socially, culturally, spatially [shaped] by automobiles and freeways.”<sup>205</sup> The construction of the freeway system paralleled significant population growth in postwar Southern California—and frequently enabled it. It created new communities, provided direct links to old ones, and destroyed existing neighborhoods where people of color often lived. Wealthy communities like Beverly Hills resisted the incursion. Ladera Heights was also successful in mounting community-based opposition to proposals that would have bordered the community with freeways. Boyle Heights and East Los Angeles were not so fortunate.

Freeway construction would slow considerably by the late 1960s. Beginning in the mid-1950s in San Francisco and later spreading to other jurisdictions throughout the state, public opposition to freeway construction intensified as many of the proposed freeway routes were determined without considering local interests, and the negative effects of neighborhood disruption and displacement by freeways became known. These “freeway revolts” resulted in the abandonment or significant reduction of proposed freeways due to widespread public opposition. Today, abruptly terminating freeway alignments, and isolated short stretches of freeway remain in evidence of larger projects which were never completed.

---

<sup>204</sup> Fred A. Basten, *Santa Monica Bay* (Santa Monica, CA: Hennessey + Ingalls, 2001), 35.

<sup>205</sup> Kevin Starr, *Golden Dreams: California In An Age of Abundance, 1950-1963* (New York, NY: Oxford University Press), 2009, 245.

La Cienega Boulevard as it traverses Ladera Heights/View Park-Windsor Hills is one such remnant as it was originally planned as part of the “Laurel Canyon Freeway” which would have been aligned through West Hollywood, the Mid-City West area, and western Inglewood enroute to its terminus at the San Diego Freeway (I-405) near Los Angeles International Airport.

SR 90, also known as the Marina Freeway, was originally planned as a freeway across the southern portion of Los Angeles County, the northern part of Orange County ending at the Riverside Freeway. Community opposition prevented it from coming to fruition. The small stretch that does exist connects Marina del Rey with the San Diego Freeway, increasing accessibility of the harbor development.

### **TAMING THE RIVERS**

The founding of the Los Angeles pueblo was strategically located near the Los Angeles River. Since 1781, the city and its surrounding area has had a tortured relationship with the river. Reports from the California missions indicate that severe flooding was a regular occurrence from the 1770s through the 1840s. The first recorded flood of the Los Angeles River was in 1811. But soon afterward, in 1815, with 10 days and nights of rain, the river again overflowed its banks. In 1818, Governor Pablo Vicente de Sola (1761-1826) moved the location of the Plaza to higher ground where it is located today. Floods in 1825 and 1861 affected the river's path near the ocean and the San Fernando Valley, respectively. During the late nineteenth and early twentieth Centuries when development in the basin was expanding, the flooding became more destructive.

**Ballona Creek Flood Control Channel 1958. *Los Angeles Public Library***

In 1915, the Los Angeles Flood Control District was established by the state legislature and James R. Reagan was named as head. Taxpayers approved bond issues in 1917 and 1924 to build the initial major dams; however, they were not willing to approve funding for the construction of infrastructure downstream of the dams, and implementation of the plan languished. Work was also delayed by the onset of World War I. In 1934, destructive flooding spurred the introduction and passage of the Flood Control Act in 1936—allowing the United States Army Corps of Engineers (USACE) to take a lead role in supervising permanent future flood control plans. The Los Angeles Flood Control District requested assistance from Congress, which passed the Flood Control Act of 1938, authorizing the Army Corps of Engineers to prepare a revised plan for the entire Los Angeles County Drainage Area. This was the first comprehensive flood control effort—superseding what had been a haphazard, unscientific, and fragmented approach by cities, individual landowners and the railroads. Channelization became the major strategy for flood control.

The 1934 flooding affected Ballona Creek and forced the closure of many small wooden bridges that spanned the creek. As a result, the above-ground portion of the Creek was lined with concrete between 1935 and 1939. The nearby Centinela Creek was also channelized, although some portions of a more natural canal remain.

## **ELIGIBILITY STANDARDS: INFRASTRUCTURE AND TRANSIT**

### **Summary Statement of Significance**

The establishment of infrastructure signaled the Los Angeles region's growth, providing important infrastructure to support the growing population. Resources that are eligible under this theme may be significant as the site of an important event in history, as a rare or remnant example of early infrastructural growth, or for an association with an ethnic or cultural group or a person important in local, state, or national history. Properties may also be significant as an example of a style or type; architectural styles are discussed in the Architecture and Design Section.

<b>Period of Significance</b>	1900-1980
<b>Period of Significance Justification</b>	Broadly covers the period of infrastructural development from the turn of the 20 <sup>th</sup> century to the mid-20 <sup>th</sup> century.
<b>Geographic Location</b>	Westside Plan Area-wide
<b>Associated Property Types</b>	Infrastructural properties related to the development of communication and transportation systems, public and private utilities, and other service requirements as technology expanded.

<b>Property Type Description</b>	Public and private amenities or infrastructure improvements, such as transit depots, roadways and bridges, flood control systems, and buildings housing communication systems (telegraph, telephone), utilities (water, power, gas).
----------------------------------	--

### **Criterion A/1/1,9 (Events/Patterns of Development)**

Individual infrastructural properties that are eligible under this criterion may be significant:

- As the site of an event important in history; or
- For exemplifying an important trend or pattern of development in infrastructure or new infrastructural developments (ex. communication system, transportation system, utility); or
- As a rare remaining example of an infrastructural type from the period (ex. bridge, telephone building, streetcar depot, power station).

#### **Integrity Considerations:**

In order to be eligible for designation under this criterion, a property must retain sufficient integrity to convey its historic significance.

- Infrastructure from this period should retain integrity of location, design, workmanship, feeling, and association, at a minimum, in order to convey their significance.
- An individual property that is eligible for a historic association must retain the essential physical features that made up its character or appearance during the period of its association with an event or historical pattern.
- A property that has lost some historic materials or details can be eligible if it retains the majority of the features that illustrate its style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation.
- The setting may have changed (surrounding buildings and land uses).
- Note that some properties that may not retain sufficient integrity for listing in the National Register may remain eligible for listing at the state and local levels.
- Since very few examples remain, any intact example should be considered.

#### **Registration Requirements:**

To be eligible under this criterion, an individual property must:

- Date from the period of significance; and
- Have a proven association with an event important in history; or

- Represent an important catalyst for a pattern or trend in infrastructural development; or
- Display most of the character-defining features of the property type or style; and
- Retain the essential aspects of historic integrity.

### **Criterion C/3/3,5,7 (Architecture and Design)**

Individual infrastructural properties that are eligible under this criterion may be significant as:

- A good/excellent or rare example of an architectural style, property type, or method of construction; or
- A distinctive work by a noted architect, landscape architect, builder, or designer.

#### **Integrity Considerations:**

In order to be eligible for designation under this criterion, a property must retain sufficient integrity from the period of significance to convey its architecture.

- Infrastructure significant under this criterion should retain integrity of design, materials, workmanship, and feeling, at a minimum.
- A property that is eligible for designation as a good/excellent or rare example of its style or type retains most - though not necessarily all - of the character-defining features of the style.
- A property important for illustrating a particular architectural style or construction technique must retain most of the physical features that constitute that style or technique. A property can be eligible if it has lost some historic materials or details but retains the majority of the essential features from the period of significance. These features illustrate the style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation.
- A property is not eligible if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style.

#### **Registration Requirements:**

To be eligible under this criterion a property must:

- Date from the period of significance; and
- Represent a good/excellent or rare example of a style or type; and
- Display most of the character-defining features of the style or type; and
- Retain the essential aspects of integrity.

## 7. ARCHITECTURE AND DESIGN (1890-1980)

### 7.1 Summary Statement

The Westside Plan Area is home to a variety of residential, commercial, and institutional buildings representing architectural styles and building types popular during each period of development. Buildings with little or no distinguishing decorative features may be described as “vernacular” in style. The term “Residential Vernacular,” for example, is used to describe simple houses or cottages. These buildings are characterized by their simplicity and lack of any characteristics of recognizable styles.

Buildings that are significant for the embodiment of the distinguishing features of an architectural style and/or as a significant work of a master architect or designer will be evaluated under this context.

For each significant architectural style there is a discussion of the origins and a list of character-defining features intrinsic to each. A property that is eligible for designation as a rare, or good/excellent example of its architectural style retains most - though not necessarily all - of the character-defining features of the style and continues to exhibit its historic appearance. A property that has lost some historic materials or details can be eligible if it retains the majority of the features that illustrate its style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation. The property is not eligible, however, if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style.<sup>206</sup> A property important for illustrating a particular architectural style or construction technique must retain most of the physical features that constitute that style or technique.<sup>207</sup>

For guidance on the proper treatment of historic resources and appropriate alterations to specific architectural styles, refer to *The Secretary of the Interior’s Standards for the Rehabilitation of Historic Buildings*. In general, acceptable alterations to historic resources of all architectural styles may include:

- Replacement roofing, when necessary, that matches the original as closely as possible in material, profile, color, and pattern.
- Structural reinforcement or infrastructure upgrades that are compatible and do not result in the loss of distinctive materials or features that characterize the property.
- Repair, rather than replacement, of deteriorated historic features.
- Replacement of severely deteriorated or missing features with new that match the old in design, color, texture, and where possible, material.
- New additions that are compatible with, differentiated from, and subordinate to the original and do not damage or destroy historic materials, features, and spatial relationships

---

<sup>206</sup>National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation.

<sup>207</sup>National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation.

that characterize the property.

Properties significant as a good/excellent or rare example of particular type or architectural style are evaluated under the following criteria:

- National/California Register Criterion C/3 (embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values)
- County of Los Angeles Criteria 3 (It embodies the distinctive characteristics of a type, architectural style, period, or method of construction, or represents the work of an architect, designer, engineer, or builder whose work is of significance to the nation, State, County, or community in which it is located; or possesses artistic values of significance to the nation, State, County, or community in which it is located)<sup>208</sup>

## 7.2 Architectural Styles

### 20<sup>th</sup> Century Revival Styles

#### TUDOR REVIVAL

The Tudor Revival style is loosely based on a variety of late medieval English building traditions including Perpendicular Gothic, Tudor, Elizabethan, and Jacobean. It has its origins in the late 19th-century English Arts and Crafts movement, whose leaders drew inspiration in part from English domestic architecture of the 16th and 17th centuries because of its picturesque qualities and sympathetic relationship to the natural landscape. The earliest examples of the style appeared in the United States in large estates of the 1890s. The Tudor Revival style grew in favor after World War I and reached its peak of popularity in the 1920s and 1930s, as architects and developers adapted it to the country's rapidly growing suburban residential communities and advancements in masonry veneering techniques allowed even the most modest examples to emulate the brick and stone exteriors of English prototypes.

High style Tudor Revival houses are typically two and sometimes three stories in height with steeply-pitched, multi-gable roofs; slate roof shingles are found in the finer examples, but wood shakes and composition shingles are also common. At least one front-facing gable is almost universally present as a dominant façade element. The buildings are usually rambling compositions of multiple volumes in a variety of sizes and shapes. Exterior walls are veneered in brick or stone, or feature decorative half-timbering, sometimes in elaborate patterns, with plaster between, which mimics the appearance of medieval construction techniques. Tall, narrow casement windows, sometimes with leaded diamond-shaped lights, are frequently set in horizontal groupings or projecting bays. Main entrances are frequently set in crenellated turrets or under secondary gables with catslides, and feature paneled wood doors framed by four-centered pointed arches. Projecting exterior chimneys with multiple flues and elaborate

---

<sup>208</sup> Specific eligibility standards under Criterion C/3/3 are included under each theme.

brickwork are sometimes located on the primary façade.

Sub-types of the Tudor Revival style include the Storybook cottage. The Storybook cottage is a more whimsical version of the Tudor Revival style, derived from the quaint medieval cottages of the Cotswold region of southwestern England. Storybook cottages typically feature very steeply-pitched roofs with composition shingles laid in irregular patterns and rolled eaves to suggest thatching, eyebrow dormers, and exterior walls veneered in a rough, irregular plaster finish. The Storybook style was particularly popular in Hollywood where motion picture set designers sometimes moonlighted as architects.

Character-defining features include:

- Asymmetrical façade and irregular massing
- Steeply-pitched multi-gabled roof with a prominent front-facing gable and slate, wood shake, or composition roofing
- Brick or plaster exterior wall cladding, typically with half-timbering and decorative details in stone or brick
- Tall, narrow divided-light windows, usually casement, often grouped horizontally or in bays; may have leaded diamond-shaped lights
- Entrance with pointed arch, set in turret or under secondary gable
- Prominent chimney with elaborate brickwork

***Tudor Revival: Extant Examples***

## **ENGLISH REVIVAL**

The English Revival style is a sub-type of the Tudor Revival style, which is loosely based on a variety of late medieval English building traditions including Perpendicular Gothic, Tudor, Elizabethan, and Jacobean. It has its origins in the late 19th-century English Arts and Crafts movement, whose leaders drew inspiration in part from English domestic architecture of the 16th and 17th centuries because of its picturesque qualities and sympathetic relationship to the natural landscape. The earliest examples of the style appeared in the United States in large estates of the 1890s. The Tudor Revival style grew in favor after World War I and reached its peak of popularity in the 1920s and 1930s, as architects and developers adapted it to the country's rapidly growing suburban residential communities and advancements in masonry veneering techniques allowed even the most modest examples to emulate the brick and stone exteriors of English prototypes.

English Revival houses are simpler than their high-style Tudor Revival counterparts. They are typically two stories in height with steeply-pitched, multi-gable roofs usually clad in wood shakes or composition shingles. The buildings are usually rambling compositions of multiple volumes in a variety of sizes and shapes. Exterior walls are usually veneered in plaster, with brick or stone used only at the chimney or around the primary entrance. Half-timbering, if used at all, is usually limited to a primary front-facing gable if featured. Tall, narrow casement windows, sometimes with leaded diamond-shaped lights, are frequently set in horizontal groupings or projecting bays. Projecting exterior chimneys, usually brick or stone, are frequently used as prominent design features.

Character-defining features include:

- Asymmetrical façade and irregular massing
- Steeply-pitched gable roof with wood shake or composition roofing
- Plaster exterior wall cladding; decorative half-timbering or brick details are usually limited or omitted
- Tall, narrow divided-light windows, usually casement, often grouped horizontally or in bays; may have leaded diamond-shaped lights
- Prominent chimney

## SPANISH COLONIAL REVIVAL

The Spanish Colonial Revival style attained widespread popularity throughout Southern California following the 1915 Panama-California Exposition in San Diego, which was housed in a series of buildings designed by chief architect Bertram Grosvenor Goodhue in the late Baroque Churrigueresque style of Spain and Mexico. The Churrigueresque style, with intricate ornamentation juxtaposed against plain stucco wall surfaces and accented with towers and domes, lent itself to monumental public edifices, churches, and exuberant commercial buildings and theaters, but was less suited to residential or smaller scale commercial architecture. For those, architects drew inspiration from provincial Spain, particularly the arid southern region of Andalusia, where many young American architects were diverted while World War I prevented their traditional post-graduate “grand tour” of Great Britain, France, Italy, and Germany. The resulting style was based on infinitely creative combinations of plaster, tile, wood, and iron, featuring plaster-clad volumes arranged around patios, low-pitched tile roofs, and a sprawling, horizontal orientation. It was a deliberate attempt to develop a “native” California architectural style and romanticize the area’s colonial past, though it drew directly from Spanish and other Mediterranean precedents and bore little resemblance to the missions and rustic adobe ranch houses that comprised the state’s actual colonial-era buildings.

The popularity of the Spanish Colonial Revival style extended across nearly all property types, and coincided with Southern California’s population boom of the 1920s. It shaped the region’s expansion for nearly two decades, reaching a high point in 1929 and tapering off through the 1930s as the Great Depression gradually took hold. Like other revival styles, the Spanish Colonial Revival style was often simplified, reduced to its signature elements, or creatively combined with design features of other Mediterranean regions such as Italy, southern France, and North Africa, resulting in a pan-Mediterranean mélange of eclectic variations (see Mediterranean Revival Style). It was sometimes combined, although much less frequently, with the emerging Art Deco and Moderne styles.

Character-defining features include:

- Asymmetrical façade
- Irregular plan and horizontal massing
- Varied gable or hipped roofs with clay barrel tiles
- Plaster veneered exterior walls forming wide, uninterrupted expanses
- Wood-sash casement or double-hung windows, typically with divided lights
- Round, pointed, or parabolic arched openings
- Arcades or colonnades

- Decorative grilles of wood, wrought iron, or plaster
- Balconies, patios or towers
- Decorative terra cotta or glazed ceramic tile work

## MONTEREY COLONIAL REVIVAL

The Monterey Colonial Revival style is based upon the distinctive style of residential architecture that developed in California beginning in the 1830s, as more and more Yankee merchants and settlers arrived in Alta California and adapted the Anglo building traditions of the East Coast to local Hispanic customs. As its name implies, the style developed in and around Monterey and combined vernacular adobe construction with elements of American Federal and Greek Revival architecture, including multi-light sliding sash windows, louvered shutters, paneled doors, and Classical details executed in wood. The style's most distinguishing characteristic is a second-floor covered wood balcony, often cantilevered, extending the length of the primary façade and sometimes wrapping one or two sides. The best-known example of the style, and one of the earliest, is the Thomas Larkin adobe, constructed beginning in 1834 and one of the first two-story dwellings in Monterey.<sup>209</sup>

The style was revived beginning in the mid- to late 1920s and was favored by architects and homeowners who perhaps found the fantastical Spanish and Mediterranean revivals too exotic and too different from the building traditions familiar to most Americans. It reached the height of its popularity in Southern California in the 1930s, with some examples constructed in the early 1940s. The Monterey Colonial Revival style replaced adobe construction with wood framed walls veneered in smooth plaster and devoid of surface ornament, and featured second-story balconies, low-pitched gable or hipped roofs, and double-hung wood windows.

Character-defining features include:

- Usually asymmetrical façade
- Two-story height
- Rectangular or L-shaped plan
- Low-pitched hipped or side gable roofs with wood shakes or clay tiles
- Plaster-veneered exterior walls devoid of surface ornament
- Second-floor covered wood balcony, sometimes cantilevered, across primary façade and occasionally wrapping one or more sides, with simple wood posts and wood or metal railing
- Wood-sash double-hung windows, typically with divided lights
- Louvered or paneled wood shutters

## **AMERICAN COLONIAL REVIVAL**

American Colonial Revival describes a varied style that combines a number of architectural features found throughout the American Colonies, particularly in New England. The style has neither the strict formality of the Georgian Revival nor the decorative embellishments of the Neoclassical, although it sometimes incorporates elements of both. It also adapts elements of Dutch colonial architecture, such as the gambrel roof. American Colonial Revival buildings are typically one or two stories in height, and are sometimes symmetrical but frequently asymmetrical, with rectangular, L-shaped, or irregular plans. They typically feature side gable or cross gable roofs, sometimes with gabled dormers; exterior walls clad in horizontal wood siding and occasionally brick; prominent brick chimneys; double hung, divided light wood sash windows, usually with louvered wood shutters; paneled wood doors, sometimes with sidelights, transom lights, or fanlights; and restrained use of Classical details. Some American Colonial Revival houses have small, pedimented porches, while others have shed-roofed porches supported on wood posts extending the length of the primary façade.

The U.S. Centennial Exposition of 1876 inspired a sense of patriotism in Americans and fostered an interest in the styles of the Colonial era. Early examples of a revival style in the late 19th century were rarely accurate reproductions, but were instead free interpretations with details inspired by colonial precedents, while later examples shifted to more historically correct proportions and details. The American Colonial Revival style was popular for grand homes in the early 20th century, and by the 1920s was being applied to more modest homes. The restoration of Colonial Williamsburg in the 1930s refueled interest in the style, and it remained popular into the post-World War II era. Local examples primarily date from the 1930s and early 1940s, and often are a simplified version of the style.

Character-defining features include:

- Side gable or cross gable roof, sometimes with dormers
- Asymmetrical composition (occasionally symmetrical)
- Horizontal wood siding at exterior walls
- Paneled wood entry door, sometimes with sidelights, transom light, or fanlight
- Double hung, divided light wood sash windows, usually with louvered wood shutters
- Projecting front porch
- Prominent brick chimney

## FRENCH REVIVAL

French Revival style architecture in Southern California often consists of two sub-types, Chateauesque and French Provincial. The Chateauesque style is loosely modeled on the 16<sup>th</sup> century chateaux of France's Loire Valley and combines features of French Gothic and Renaissance architecture. The style gained popularity in the United States in the late 19<sup>th</sup> century and is most closely associated with Richard Morris Hunt, the first American architect to study at the École des Beaux-Arts in Paris. The style did not gain popularity in Southern California until the 1920s; it was most frequently used there for luxury apartment buildings and only occasionally for large single-family residences. Chateauesque style buildings are typically two or more stories in height and feature multiple, steeply-pitched hipped roofs with towers, turrets, spires, tall chimneys, and highly ornamented dormers. Exterior walls are usually veneered in stone, brick, or scored plaster, and are ornamented with classical pilasters, stringcourses, and cornices. Windows are typically divided light wood casements and are frequently paired or grouped with prominent mullions.

The more modest French Provincial style was popularized after World War I and is based upon country houses of the French provinces, including Normandy. Although it shares several basic features with the more elaborate Chateauesque style, the French Provincial style is much simpler in its composition and detailing. It is characterized by a prominent, steeply pitched hipped roof with flared eaves and a classical eave cornice; simple rectangular plan and massing; exterior walls veneered in smooth plaster; and divided light, wood sash casement or double-hung windows, usually with louvered wood shutters. Second floor windows sometimes break the cornice line with shallow dormers. The Norman variation usually features decorative half-timbering and a circular entrance tower with a conical roof.

Character-defining features of the Chateauesque style include:

- Multiple, steeply pitched hipped roofs
- Complex massing
- Stone, brick, or scored plaster veneer at exterior walls
- Towers, turrets, spires; and highly ornamented dormers
- Tall chimneys
- Divided light wood casement windows, paired or grouped, with prominent mullions
- Classical pilasters, stringcourses, and cornices
- Detached garage at rear of property

Character-defining features of the French Provincial style include:

- Steeply pitched hipped roofs with flared eaves and eave cornice
- Rectangular plan and simple massing
- Smooth plaster veneer at exterior walls
- Divided light, wood sash casement or double hung windows that sometimes break the cornice line
- Louvered wood shutters
- Decorative half-timbering and circular entrance tower with conical roof (Norman variation)

## Early Modernism

### STREAMLINE MODERNE

The constraints of the Great Depression replaced Art Deco architecture with a purer expression of modernity, the Streamline Moderne. Characterized by smooth surfaces, curved corners, and sweeping horizontal lines, Streamline Moderne is considered to be the first thoroughly Modern architectural style to achieve wide acceptance among the American public. Inspired by the industrial designs of the period, the style was popular throughout the United States in the late 1930s, particularly with the Federally-funded projects of the Works Progress Administration; buildings executed under those programs are often referred to as PWA Moderne. Unlike the equally modern but highly-ornamental Art Deco style of the late 1920s, Streamline Moderne was perceived as expressing an austerity more appropriate for Depression-era architecture, although aspects of Art Deco and Streamline Moderne were often combined.

The origins of the Streamline Moderne are rooted in transportation design, which took the curved form of the teardrop, because it was the most efficient shape in lowering the wind resistance of an object. Product designers and architects who wanted to express efficiency borrowed the streamlined shape of cars, planes, trains, and ocean liners. Streamline Moderne architecture looked efficient in its clean lines. It was in fact relatively inexpensive to build because there was little labor-intensive ornament like terra cotta; exteriors tended to be concrete or plaster. The Streamline Moderne's finest hour was the New York World's Fair of 1939-40. Here, the "World of Tomorrow" showcased the cars and cities of the future, a robot, a microwave oven, and a television, all in streamlined pavilions. While the style was popular throughout Southern California during the 1930s, there are relatively few examples simply because there was so little construction activity during the Depression.

Character-defining features include:

- Horizontal emphasis
- Asymmetrical façade
- Flat roof with coping
- Smooth plaster wall surfaces
- Curved end walls and corners
- Glass block and porthole windows
- Flat canopy over entrances
- Fluted or reeded moldings or stringcourses

- Pipe railings along exterior staircases and balconies
- Steel sash windows

*Streamline Moderne: Extant Examples*

3602 Homeland Drive

4405 W. Slauson Avenue

## LATE MODERNE

The Late Moderne style incorporates elements of both the Streamline Moderne and International styles. While the earliest examples appeared in the late 1930s, the style reached its greatest popularity in large-scale commercial and civic buildings of the late 1950s and 1960s. The Late Moderne style is frequently identified by the use of the bezeled window, where horizontal groupings of windows are outlined in a protruding, bezel-like flange, often in a material and color that contrasts with the surrounding wall surface.

Character-defining features include:

- Horizontal emphasis
- Exposed concrete or cement plaster veneer
- Flat roofs
- Horizontal bands of bezeled windows, sometimes with aluminum louvers
- Operable steel sash windows (casement, awning, or hopper)
- Projecting window frames

### *Late Moderne: Extant Examples*

3450 W. Mt. Vernon Drive

## Post-World War II Modernism/Regional Modernism

### MID-CENTURY MODERN

Mid-Century Modern is a term used to describe the post-World War II iteration of the International Style in both residential and commercial design. The International Style was characterized by geometric forms, smooth wall surfaces, and an absence of exterior decoration. Mid-Century Modern represents the adaptation of these elements to the local climate and topography, as well as to the postwar need for efficiently-built, moderately-priced homes. In Southern California, this often meant the use of wood post-and-beam construction. Mid-Century Modernism is often characterized by a clear expression of structure and materials, large expanses of glass, and open interior plans.

The roots of the style can be traced to early Modernists like Richard Neutra and Rudolph Schindler, whose local work inspired “second generation” Modern architects like Gregory Ain, Craig Ellwood, Harwell Hamilton Harris, Pierre Koenig, Raphael Soriano, and many more. These postwar architects developed an indigenous Modernism that was born from the International Style but matured into a fundamentally regional style, fostered in part by Art and Architecture magazine’s pivotal Case Study Program (1945-1966). The style gained popularity because its use of standardized, prefabricated materials permitted quick and economical construction. It became the predominant architectural style in the postwar years and is represented in almost every property type, from single-family residences to commercial buildings to gas stations.

Character-defining features include:

- One or two-story configuration
- Horizontal massing (for small-scale buildings)
- Simple geometric forms
- Expressed post-and-beam construction, in wood or steel
- Flat roof or low-pitched gable roof with wide overhanging eaves and cantilevered canopies
- Unadorned wall surfaces
- Wood, plaster, brick or stone used as exterior wall panels or accent materials
- Flush-mounted metal frame fixed windows and sliding doors, and clerestory windows
- Exterior staircases, decks, patios and balconies
- Little or no exterior decorative detailing

- Attached carport or garage
- Expressionistic/Organic subtype: sculptural forms and geometric shapes, including butterfly, A-frame, folded plate or barrel vault roofs

*Mid-Century Modern: Extant Examples*

*5410 Senford Boulevard*

*6443 S. Halm Avenue*

*3435 S. Halm Avenue*

*4542 W. Slauson Avenue*

## **GOOGIE**

Googie has been described as Modernism for the masses. With its swooping lines and organic shapes, the style attempted to capture the playful exuberance of postwar America. Named for the John Lautner-designed Googie's Restaurant in Los Angeles, the style was widely employed in roadside commercial architecture of the 1950s and 60s, including restaurants, drive-ins, bowling alleys, and car washes.

Character-defining features include:

- Expressive rooflines, including butterfly, folded-plate, and cantilevers
- Organic, abstract, and parabolic shapes
- Clear expression of materials, including concrete, steel, asbestos, cement, glass block, plastic, and plywood
- Large expanses of plate glass
- Thematic ornamentation, including tiki and space age motifs
- Primacy of signage, including the pervasive use of neon

### *Googie: Extant Examples*

4508 W. Slauson Avenue

## RANCH

The Ranch style emerged from the 1930s designs of Southern California architect Cliff May, who merged modernist ideas with traditional notions of the working ranches of the American West and in particular, the rustic adobe houses of California's Spanish- and Mexican-era ranchos. The resulting architectural style – characterized by its low horizontal massing, sprawling interior plan, and wood exterior detailing – embodied the mid-20th century ideal of "California living." The Ranch style enjoyed enormous popularity throughout the United States from the 1940s to 1970s. It epitomized unpretentious architecture and dominated the suburbs of the post-World War II period. It was more conservative than other modern residential architecture of the period, often using decorative elements based on historical forms and capitalizing on the national fascination with the "Old West." The underlying philosophy of the Ranch house was informality, outdoor living, gracious entertaining, and natural materials.

The most common style of Ranch house is the California Ranch. It is characterized by its one-story height; asymmetrical massing in L- or U-shaped plans; low-pitched hipped or gabled roofs with wide overhanging eaves; a variety of materials for exterior cladding, including plaster and board-and-batten; divided light wood sash windows, sometimes with diamond-shaped panes; and large picture windows. Decorative details commonly seen in California Ranch houses include scalloped bargeboards, false cupolas and dovecotes, shutters, and iron or wood porch supports. The California Ranch house accommodated America's adoption of the automobile as the primary means of transportation with a two-car garage that was a prominent architectural feature on the front of the house, and a sprawling layout on a large lot. Floor plans for the tracts of Ranch houses were usually designed to meet the FHA standards so that the developer could receive guaranteed loans.

Another variation on the Ranch house is the Modern Ranch, which was influenced by Mid-Century Modernism. Modern Ranches emphasized horizontal planes more than the California Ranch, and included modern instead of traditional stylistic details. Character-defining features included low-pitched hipped or flat roofs, prominent rectangular chimneys, recessed entryways, and wood or concrete block privacy screens. Other stylistic elements resulted in Asian variations.

Character-defining features include:

- One-story
- Sprawling plan
- L- or U-shaped plan, often with radiating wings
- Low, horizontal massing with wide street façade

- Low-pitched hipped or gable roof with open overhanging eaves and wood shakes
- Plaster, wood lap, or board-and-batten siding, often with brick or stone accents
- Divided light wood sash windows (picture, double-hung sash, diamond-pane)
- Wide, covered front porch with wood posts
- Attached garage, sometimes linked with open-sided breezeway
- Details such as wood shutters, attic vents in gable ends, dovecotes, extended gables, or scalloped barge boards
- Modern Ranch sub-type may feature flat or low-pitched hipped roof with composition shingle or gravel roofing; metal framed windows; wood or concrete block privacy screens

5616 S. Holt Street

5519 Shenandoah Avenue

5829 S. Halm Avenue

## **NEW FORMALISM**

New Formalism is a sub-type of Late Modern architecture that developed in the mid-1950s as a reaction to the International Style's strict vocabulary and total rejection of historical precedent. New Formalist buildings are monumental in appearance, and reference and abstract classical forms such as full-height columns, projecting cornices, and arcades. Traditional materials such as travertine, marble, or granite were used, but in a panelized, non-traditional form. In Southern California, the style was applied mainly to public and institutional buildings. On a larger urban design scale, grand axes and symmetry were used to achieve a modern monumentality. Primary in developing New Formalism were three architects: Edward Durrell Stone, who melded his Beaux Arts training with the stark Modernism of his early work; Philip Johnson; and Minoru Yamasaki. All three had earlier achieved prominence working within the International Style and other Modernist idioms.

Character-defining features of New Formalism include:

- Symmetrical plan
- Flat rooflines with heavy overhanging cornices
- Colonnades, plazas, and elevated podiums used as compositional devices
- Repeating arches and rounded openings
- Large screens of perforated concrete block, concrete, or metal

### *New Formalism: Extant Examples*

*Former Civic National Bank, 4519 Admiralty Way,  
Marina del Rey*

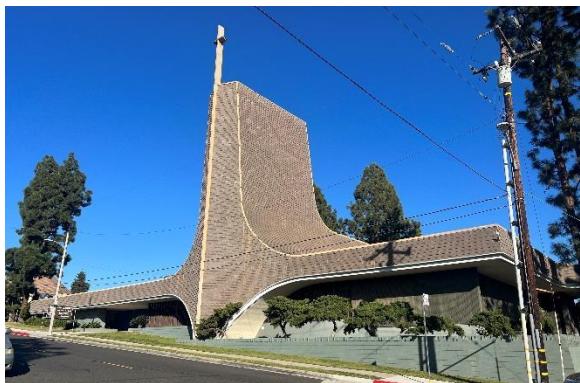

## LATE MODERNISM

Late Modern is a blanket term used to describe the evolution of Modern architecture from the mid-1950s through the 1970s. It is typically applied to commercial and institutional buildings. Unlike the straightforward, functionalist simplicity of International Style and Mid-Century Modernism, Late Modern buildings exhibit a more deliberate sculptural quality with bold geometric volumes, uniform surfaces such as glass skin or concrete, and a sometimes exaggerated expression of structure and systems.

Character-defining features of Late Modern style include:

- Bold geometric volumes
- Large expanses of unrelieved wall surfaces
- Uniform use of cladding materials including glass, concrete, or masonry veneer
- Exaggerated expression of structure and systems
- Hooded or deeply set windows
- Little or no applied ornament

## **ELIGIBILITY STANDARDS**

### **Summary Statement of Significance**

Properties significant for their architectural merit are evaluated under this context, which includes separate themes for the predominant architectural styles found in the county. Properties eligible under the Architecture and Design context may be significant as an excellent or rare example of an architectural style, property type, or designed landscape; or as an important example of the work of a notable builder, designer, landscape architect, or architect. Many resources that are eligible under this context may also be significant under other contexts as well.

<b>Period of Significance</b>	1890-1980
<b>Period of Significance Justification</b>	Reflects the extant built landscape in the Westside Plan Area from the earliest known resource through the close of the period of significance for this study, which may be extended over time.
<b>Geographic Location</b>	Westside Plan Area-wide
<b>Associated Property Types</b>	Properties eligible under this context may be any property type: Residential, Commercial, Institutional, or Industrial.

### **Integrity Considerations:**

- Should retain integrity of design, setting, materials, workmanship, and feeling
- Additions may be acceptable if not within public view, do not alter the original roofline, and are subordinate to the original design intent
- Replacement of some windows may be acceptable if the openings have not been changed or resized
- If it is a rare surviving example of its style or type, a greater degree of alteration may be acceptable

### **Registration Requirements:**

To be eligible under this criterion a property must:

- Date from the period of significance; and
- Represent a good/excellent or rare example of a style or type; and
- Display most of the character-defining features of the style or type; and
- Retain the essential aspects of integrity.

## **APPENDIX A: RECOMMENDATIONS FOR FURTHER STUDY**

Study lists were compiled for Ladera Heights/View Park-Windsor Hills, and Marina del Rey including important events, people, and buildings/structures/spaces/art. These lists were completed using two methods. The first method was during the development phase of the Westside Area Plan Historic Context Statement where Historic Resources Group identified important aspects of each community through research. The second method was through community outreach during the stakeholder engagement process. Stakeholders identified including important events, people, and buildings/structures/spaces/art within their communities through the Historic Resource Mapper and sending information to project staff. This list is not intended to be exhaustive rather serves as a base for future study.

### **Ladera Heights/View Park-Windsor Hills**

#### **TOPICS FOR FURTHER STUDY**

- Black institutions and social history in Ladera Heights/View Park-Windsor Hills.
- Mid-century Modern architecture with a focus on Ladera Heights.
- Intensive historic resources survey of each neighborhood to identify potential historic districts and/or individual properties eligible for historic listing. Potential historic significance may include but is not limited to architecture, urban planning, events and trends, Black history, and community identity.

#### **INDIVIDUAL AREAS, PROPERTIES, AND SITES**

- Ladera Heights neighborhood
- View Park neighborhood
- Windsor Hills neighborhood
- The Cone Trust House, aka “Baldwin Hills Oil House” located in the Inglewood Oil Fields west of La Cienega Boulevard and Kenneth Hahn State Recreation Area. (c. 1915)
- Commercial corridor on Slauson Avenue between Overhill Drive and Angeles Vista.
- “Simply Wholesome” (former Wich Stand Restaurant and Drive-in) at 4508 W. Slauson Avenue. (1957)
- The “Jet Inn,” at 4542 W. Slauson Avenue
- Park Mesa Pharmacy building at 4314 W Slauson Avenue (1961)

## **DRAFT**

- The Bebe Moore Campbell Library at 3854 54<sup>th</sup> Street (1977)
- The 54<sup>th</sup> Street Elementary School (now 54<sup>th</sup> Street Charter School) at 5501 S. Eileen Avenue
- Angeles Mesa Presbyterian Church at 3571 W. 54<sup>th</sup> Street (1928)
- Robbins Memorial Church of God in Christ at 3868 W. 54<sup>th</sup> Street
- University Christian Church at 5831 W. Centinela Avenue (1965)
- Mt. Sinai Missionary Baptist Church (former Thirtieth Church of Christ, Scientist) at 3663 W. 54<sup>th</sup> Street (1949)
- Calvary Baptist Church (former Sephardic Hebrew Center) at 4911 59<sup>th</sup> Street (1966)
- Knox Presbyterian Church, 5840 La Tijera Boulevard (1967)
- Outdoor Products (former offices of the Los Angeles Urban League), 3450 W. Mt. Vernon Drive (c.1945)
- Kenneth Hahn State Recreation Area
- Reuben Ingold Park
- Ladera Park
- Monteith Park

## **Marina del Rey**

### **TOPICS FOR FURTHER STUDY**

- Comprehensive development history of Marina del Rey.
- Intensive historic resources survey to identify potential individual properties eligible for historic listing. Potential historic significance may include but is not limited to architecture, urban planning, events and trends, and community identity.

### **INDIVIDUAL AREAS, PROPERTIES, AND SITES**

- The Lloyd Taber library, 4533 Admiralty Way (1976, 1999 addition)
- Marina del Rey Hotel, 13534 Balie Way (1963)
- Former Civic National Bank building, 4519 Admiralty Way (1965)
- Fisherman's Village, 13755 Fiji Way (1969-1970)
- Marina Towers, 4640-4159 Admiralty Way (1972)
- Marina City Club, 4333 Admiralty Way (1975)

### **PEOPLE**

- Victor Gruen
- Abraham M. Lurie

## APPENDIX B: ARCHITECTS & BUILDERS

### **Armét, Louis L.** (1914-1981), AIA

Born: St. Louis, MO  
 Education: University of Southern California, B.Arch. (1939)  
 Firm: V.F. Ribble (1940); Laurence Test (1940-1941); Spaulding & Rex (1946-1947); Armét & Davis (1947-1972); Armét, Davis & Newlove, AIA, Inc. (1972-1981)

Born in St. Louis, Louis L. Armét, AIA, moved to Los Angeles when he was 13. After graduating from Los Angeles High School and Loyola Marymount University, he went to architecture school at the University of Southern California and graduated in 1939. Armét worked for the Navy Department of Design at Pearl Harbor from May 1941 to February 1943, where he designed warehouses and buildings for ship repair. He worked from 1943 to 1946 for the Seabees. Armét became a licensed architect in 1946. He met Eldon C. Davis while the two of them were working at the architecture firm of Spaulding and Rex. They founded Armét & Davis in 1947. They worked together until 1972 designing churches, banks, bowling alleys, schools, and more. They are best known for their many Googie-style coffee shops including Clock's in Inglewood (1951), Norm's on South Figueroa in Los Angeles (1954), Huddle's Cloverfield in Santa Monica (1955), Pann's in Westchester (1956), and the Holiday Bowl and Coffee Shop in Los Angeles (1957). In Pomona, they designed Danny's Donuts in 1958. Armét died in 1981.

### **Becket, Welton** (1902-1969), FAIA

Born: Seattle, WA  
 Education: University of Washington, B.Arch. (1927); École des Beaux Arts, Fontainebleau, France (1928)  
 Firms: Chief designer for C. Waldo Powers (1929-1932); Partner, Plummer, Wurdeman & Becket, (1933-1938); Partner, Wurdeman & Becket (1930-1933; 1938-1949); Principal, Welton Becket Associates (1949-1988)

Welton Becket, FAIA, was born in Seattle, Washington, and studied architecture at the University of Washington. He completed a year of graduate study at the École des Beaux Arts in Fontainebleau, France, and arrived in Los Angeles in 1931. In 1933, he formed a partnership with his former classmate, Walter Wurdeman, and an established Los Angeles architect, Charles F. Plummer. They specialized in small commercial buildings and residences.

In 1935, the partners won a design competition for the Pan Pacific Auditorium in Los Angeles; the distinctive Streamline Moderne landmark was constructed north of the Miracle Mile district for the 1935 National Housing Exposition. After Plummer's death in 1939, the firm incorporated as Wurdeman and Becket. Wurdeman and Becket's design for Bullock's Pasadena, completed in 1947, established the prototype for the postwar suburban department store. When Wurdeman died unexpectedly in 1949 Becket bought out his partner's heirs and assumed sole leadership of the firm, changing its name to Welton Becket and Associates. Headquartered in Los Angeles, the firm grew to be one of the largest in the world with more than 400 employees and offices in San Francisco, New York, Houston, and Chicago.

In addition to Bullock's Pasadena, Becket's retail projects included some two dozen other Bullock's stores including locations in Palm Springs, Westwood (Los Angeles), Sherman Oaks (Los Angeles), Lakewood, La Habra, and Northridge (Los Angeles); Buffum's Department Store in Santa Ana; Seibu of Los Angeles; and malls such as Fashion Island in Newport Beach. Other notable works include the Pomona Civic Center, circular Capitol Records tower in Hollywood, the Cinerama Dome, the Music Center in downtown Los Angeles, the Santa Monica Civic Auditorium, and the Beverly Hilton Hotel in Beverly Hills.

Becket is credited with transforming the cityscape of postwar Southern California with his many commercial and institutional designs. He was one of the most influential architects in the development of Los Angeles and founded a practice that became one of the nation's largest architectural firms. He died in 1969 at the age of 66.

## DRAFT

**Bolling, Robert D'Arcy (1923 ), FAIA**

Born: Los Angeles, CA  
Education: University of Southern California, Los Angeles, CA, 1951  
Firms: Draftsman, architect, job captain, C. M. Deasy Architect, Los Angeles, 1951-1959; partner, Deasy & Bolling Architects, Los Angeles, 1960-1976; partner, Deasy, Bolling & Gill Architects, Los Angeles, 1976-1977; partner, Bolling and Gill Architects, Los Angeles, 1977-1978; president, Bolling and Gill Architects, 1978-1985; president, Bolling, Gill, Allen, McDonald, Architects, Los Angeles, 1985-1988; Chairman of the Board, since 1988. Managing principal Bolling and Gill, Architects -Atomic Energy Commission Joint Venture, Los Angeles, since 1983. Consultant in field, since 1988.)  
Married Nona Loretta Lewis, July 19, 1947.  
Served with United States Naval Reserve, 1943-1946.  
Recipient Governor's Design award State of California, 1966, Military Housing Design award American Institute of Architects NavFac, 1974, Excellence in Contracts Performance award W. Division Naval Facilities, 1974; research grantee Educational Facilities Laboratories, 1972-1974.

**Daniel, Philip James (1912-?), AIA**

Born: Los Angeles, CA  
Education: Los Angeles Junior College, Los Angeles, CA, 1931-1932; University of California, Los Angeles, Los Angeles, CA, 1932-1934; B.Arch., University of Southern California, Los Angeles, CA, 1937  
Firms: Crawford and Daniel Architects; DMJM Daniel, Mann, Johnson, Mendenhall 1946-

**Davis, Eldon C. (1917-2011), AIA**

Born: Anacortes, WA  
Education: University of Southern California, B.Arch. (1942)  
Firms: William H. Knowles, Architect (1942-1943); Spaulding & Rex (1945-1947); Armét & Davis, Inc. (1947-1972); Armét, Davis & Newlove, AIA, Inc. (1972-1991)  
Eldon C. Davis graduated from the University of Southern California with a degree in architecture. Davis worked with Army engineers, Phelps-Dodge Mines in Arizona, and Navy Design Office on Terminal Island.  
Davis met Louis Logue Armét while the two of them were working at the architecture firm of Spaulding and Rex. They founded Armét & Davis in 1947 and worked together until 1972 designing churches, banks, bowling alleys, schools, and more. They are best known for their many Googie-style coffee shops including Clock's in Inglewood (1951), Norm's on South Figueroa in Los Angeles (1954), Huddle's Cloverfield in Santa Monica (1955), Pann's in Westchester (1956), and the Holiday Bowl and Coffee Shop in Los Angeles (1957). Davis passed in 2011.

**Eisenshtat, Sidney (1914-2004), FAIA**

Born: New Haven, Connecticut  
Education: University of Southern California, B.Arch. (1935)  
Firms: Arthur Froehlich and Associates; United States Dept. of Defense; Sidney Eisenshtat and Associates, Principal  
Sidney Eisenshtat was a prolific architect in Southern California, and an influential architect of modern synagogues. Born in New Haven, Conn., in 1914, Eisenshtat settled in Los Angeles in 1926. He married Alice Brenner in 1937.

## DRAFT

An observant Orthodox Jew, Eisenshtat established an international reputation based on the expressive design of synagogues built in the 1950s through the 1970s. He designed his first major religious structure, Temple Emanuel in Beverly Hills, in 1951, in the first flush of a national reinvention of traditional synagogue design. Eight years later, he designed Sinai Temple in the Westwood neighborhood of Los Angeles.

He also designed Jewish educational buildings and community centers, as well as synagogues across the U.S. His other religious structures in Southern California include Knox Presbyterian Church in Los Angeles and House of the Book in Simi Valley.

Eisenshtat's commercial buildings included two significant structures in Beverly Hills, the Union Bank Building and the Friars Club (now demolished). After a long and prolific career, Eisenshtat retired in the 1980s. He passed away in 2004 at the age of 90.

### **Emmons, Frederick E., Jr. (1907-1999)**

Born: Olean, NY

Education: Cornell University, B.Arch. (1929)

Firms: Frederick E. Emmons (1946-1950); Jones & Emmons (1950-1969)

Frederick E. Emmons, Jr. was born in Olean, New York. After graduating from Cornell University with a degree in architecture in 1929, he joined the New York firm of McKim, Mead & White. He moved to Los Angeles in 1932.

Before World War II, Emmons became friends with A. Quincy Jones through their mutual employment at Allied Engineers in San Pedro. During the war, Emmons spent four years in the Navy. Emmons founded Jones & Emmons in 1951; the partnership continued until Emmons' retirement in 1969. Jones & Emmons utilized new building technologies that decreased costs and production time. The firm favored structural innovations including lightweight post-and-beam construction with pre-assembled parts. Their work included large-scale commissions, including religious buildings, educational facilities, and civic spaces. In addition, the firm designed office, restaurant, and factory buildings throughout California. The firm designed numerous buildings on the University of California campuses at San Diego, Santa Barbara, Irvine, and Riverside.

Emmons died at age 91 in Beverly Hills.

### **Earl, Robert (Unknown-present)**

Born: Unknown

Education: Unknown

Firms: Robert Earl & Associates (c. 1975-present)

Robert Earl is an award-winning architect who began practicing in Los Angeles in the 1950s. Earl has specialized in home design for more than 50 years.

During the 1960s, 1970s and 1980s, the firm designed tract housing for various developers. His subdivisions included Sunset Pacific in San Clemente, Sunset Terrace in Redlands, Island View in Palos Verdes, and Seacliff on the Greens in Huntington Beach. In each of these developments, the firm designed elevations in various consumer-pleasing styles such as Cape Cod, Traditional, French Revival, and English Revival. At this time, Earl's office was located in Century City; he eventually added a satellite office in Irvine c. 1984. The firm continued to design tract homes and win awards for them well into the 1990s.

Earl also designed custom homes, including an avant-garde modern home for himself in West Los Angeles in 1963 and through these efforts earned a reputation for his custom homes in Bel-Air and Brentwood.

### **Krisel, William (1924-2017), AIA**

Born: Shanghai, China

Education: University of Southern California, B.Arch. (1949)

## DRAFT

Firms:

Victor Gruen (1946-1949); Palmer and Krisel, A.I.A. Architects (1950-1966); William Krisel, AIA (1966- 2017)

William Krisel, AIA, was born in Shanghai, China, where his father had moved the family for his work for the United States' State Department. In 1937, the family returned to California. Following his graduation from Beverly Hills High School in 1941, 16 year-old Krisel enrolled at USC's School of Architecture, only to be interrupted by the United States' entry into World War II.

During the war, Krisel worked in Army Intelligence, served as the Chinese-language interpreter for General Stillwell, and earned the Bronze Star for Valorous Service. Following the war, in 1946, Krisel returned to his studies, making use of the GI Bill, and graduated in 1949. Alongside his studies, Krisel worked in the offices of Paul Laszlo and Victor Gruen.

Krisel obtained his architect's license in 1950 and went into partnership with Dan Saxon Palmer. Palmer and Krisel, A.I.A. Architects designed custom homes and commercial projects prior to investing their time in Los Angeles area tract homes. As early as 1952, Palmer & Krisel's system of modular post and beam construction proved popular and effective. After years of success in Los Angeles, Palm Springs, and Borrego Springs, the firm designed the Loma Palisades Apartments and a number of residential tracts throughout San Diego. By 1961, Krisel began his efforts in local high-rise developments with the 24-story Kahn Building, within which the firm would house their San Diego office. They also expanded their work throughout Southern California. Krisel studied landscape architecture under Garrett Eckbo and became a licensed landscape architect in 1954. Palmer and Krisel dissolved their partnership in 1966, and Krisel renamed the firm William Krisel, AIA.

Krisel's experience in design and construction includes nearly every kind of structure, including high- and low-rise office and apartment buildings, shopping centers, industrial buildings, factories, schools, hospitals, religious buildings, hotels, motels, and restaurants. He claims credit for over 40,000 housing units as he pioneered the use of innovative, modern design for affordable tract housing, commercial and multi-unit residential architecture. Krisel's work has garnered numerous awards for design excellence, including AIA Lifetime Achievement and "Tribal Elder" Awards, as well as the Palm Springs Lifetime Achievement Award, and recognition from ASLA, NAHB, the City of Beverly Hills, and West Los Angeles.

Krisel passed away in 2017.

### **Palmer, Dan Saxon (1920-2007), AIA**

Born:

Budapest, Hungary

Education:

New York University, B.Arch. (1942)

Firms:

Morris Lapidus; Victor Gruen; Palmer and Krisel (1950-1964)

Dan Saxon Palmer was born in Budapest, Hungary, and moved to New York with his family at age 2. After earning a bachelor's degree in architecture from New York University in 1942, Palmer served in the Army Corps of Engineers as a mapmaker, draftsman and photographer in England and France. He then worked for architects Morris Lapidus in New York and Victor Gruen in Los Angeles, and, in 1950, formed a Los Angeles-based partnership with William Krisel, who also had worked at Gruen's office.

Beginning in 1950, Palmer and Krisel designed contemporary houses with post-and-beam construction, open floor plans in which the living room, dining room and kitchen flow together, lots of glass and clean, simple lines inside and out. In the early 1950s, they won a commission for their first major housing tract, Corbin Palms, in the western San Fernando Valley.

By 1955, Palmer was overseeing work in Orange and Ventura counties, Krisel in San Diego and Riverside counties. George Alexander, Harlan Lee and other developers built more than 20,000 houses designed by Palmer and Krisel in Southern California, Arizona, Nevada, Texas and Florida by the end of the 1950s. Palmer and Krisel collaborated on projects in the Los Angeles area until dissolving their partnership in 1964. Palmer continued designing tract homes and also commercial developments, including the City National Bank building (1968) on Pershing Square in downtown Los Angeles. He died in Santa Monica at age 86.

## DRAFT

### **Rible, Ulysses Floyd (1904-1982), AIA**

Born: Chicago, IL  
Education: University of Pennsylvania Certificate of Proficiency (1929); University of Southern California, B.Arch. (1943)  
Firms: Draftsman, John C. Austin (1923-1926); Draftsman, Allison & Allison (1929-1930); Parkinson & Parkinson (1934-1935); Principal, Ulysses Floyd Rible (1935-1943); Partner, Allison and Rible, Architects (1944-1969); Partner, Allison, Rible, Robinson and Ziegler, Architects, Los Angeles (1969-); Partner, Leo A. Daly (c. 1970)

Rible was born in Chicago, Illinois but spent most of his life in Wisconsin, where he worked as an office manager. Rible moved to Washington state before relocating to Southern California in the 1920s, first to San Luis Obispo then to Los Angeles. In Southern California, Rible worked for several notable architectural firms, including John C. Austin, Allison & Allison, and Parkinson & Parkinson before opening his own practice. Rible returned to his education in the 1940s and received a bachelor's degree from the University of Southern California in 1943. The following year, he joined with George Allison to form Allison & Rible. The firm specialized in master planning for schools and universities. Notable projects included the Goodyear Memorial Hospital in Ventura (1951) and Goodyear Memorial Hospital (1954). Rible joined the American Institute of Architects, Southern California Chapter, in 1940 and became a Fellow in 1957. Rible died in 1982.

### **Soriano, Raphael, FAIA (1904-1988)**

Born: Rhodes, Greece  
Education: College Saint Jean Baptiste, Rhodes (1922) University of Southern California, B.Arch. (1934)  
Firms: Richard J. Neutra, Architect, Los Angeles, CA, 1931-1934; Rudolph Schindler, Architect, Los Angeles, CA, 1934; County of Los Angeles, Works Projects Administration (WPA), Los Angeles, CA, 1935-1936; Raphael Soriano, Architect, Los Angeles, CA,

Raphael Soriano was born on the island of Rhodes, Greece in 1904 into a Sephardic Jewish family. After attending College Saint Jean Baptiste in Rhodes, Soriano emigrated to the United States in 1924 where he joined extended family members in Los Angeles.

While working various jobs Soriano studied architecture at the University of Southern California beginning in 1929 and received US citizenship in 1930. He graduated USC in 1934.

He worked as a draftsman in the office of pioneering modernist architect Richard Neutra alongside Harwell Hamilton Harris and Gregory Ain. He also briefly worked for Rudolph Schindler. Soriano also worked for the County of Los Angeles, Works Projects Administration (WPA) before starting his own firm in 1936. His first residential commission, the International Style Lipetz House in Los Angeles' Silver Lake neighborhood, was chosen for the 1937 International Architecture Exhibition in Paris and was awarded the prestigious Prix de Rome. With virtually no building construction taking place during World War II, Soriano lectured at USC and developed proposals for post-war housing designs to various competitions and publications. After the war, Soriano received many commissions, and gained significant recognition and awards for his built projects. He was invited to participate in Arts & Architecture Magazine's Case Study Houses program. His Case Study 1950 was pioneering in its use of steel in residential design.

A disagreement with a client resulted in an official complaint before the Ethics Committee of the AIA, Southern California Chapter and Soriano was banned from practicing architecture in Los Angeles in 1953. He relocated to the Bay Area where he continued his practice designing homes in Marin County and working with developer Joseph Eichler on a prototype for a mass produced steel frame house.

Soriano was made a Fellow of the American Institute of Architects (FAIA) in 1961. In 1965, he launched Soria Structures, Inc. to design and build prefabricated houses, marketed as "All-

## DRAFT

Aluminum Homes." His last realized designs were eleven All-Aluminum Homes on the island of Maui, Hawaii, built in 1965.

After 1970 Soriano focused on architectural writing, lecturing, and research. In 1986, he was recognized by the AIA and by USC for distinguished achievements in architecture. He died in 1988.

### **Videricksen, Ebbe (?)**, AIA

Born: Denmark  
Education: Horsens Technical College, Denmark, Danish Royal Academy?  
Firms: Richard Neutra  
Immigrated to the United States in 1958

### **Williams, Paul R.** (1894-1980) FAIA

Born: Los Angeles, California  
Education: Los Angeles School of Art and Design, New York Beaux-Arts Institute of Design (Los Angeles branch); University of Southern California School of Engineering  
Firms: Reginald Johnson, Architect, Pasadena, CA 1914-1917; Arthur Kelly, Architect, Hollywood, CA 1917-1921; Chief Draftsman for John C. Austin, Architect, Los Angeles, CA 1921-1924; Paul R. Williams and Associates, Los Angeles, CA 1922-1974.

Williams received his architecture license in 1921, becoming the only licensed African American architect west of the Mississippi. Williams became well-known for his modern interpretations of the period revival styles that were popular at the time, including examples of the Tudor Revival, Colonial Revival, Spanish Colonial Revival, and French Country styles. He had gained prominence for designing homes for wealthy clients with unlimited budgets, including many high-profile members of the Entertainment Industry.

While he continued to design expansive private residences, in the middle years of his career Williams turned his attention to other housing types, publishing two books on "the Small House" in the mid-1940s. In developing these more modest residential designs, Williams incorporated Modern elements, such as open floor plans, connection to the outdoors through integrated patio spaces and large windows, and simplified ornamentation, into traditional building forms.

Beginning in the 1930s, he received numerous commissions for prominent commercial and institutional work. He also worked as an architect for the United States Navy during World War II and served on multiple municipal, state, and national commissions. Williams was an influential member of the African American community in Los Angeles. He designed the First AME Church, and the headquarters for Golden State Mutual Life, the largest African American-owned insurance company in the western United States, and the 28<sup>th</sup> Street YMCA in South Los Angeles.

In 1957, Williams became the first African-American member of the College of Fellows of the American Institute of Architects. Williams retired in 1974 and filed for emeritus status with the AIA. He died in Los Angeles in 1980 at the age of 85.

### **Wong, Charles W.** (1929-2019), AIA

Born: Canton, China  
Education: University of Southern California School of Architecture (1951)  
Firms: C.W. Wong & Associates (1956-?)  
Charles W. Wong was born in Canton, China in 1929. He immigrated to the United States in the 1930s with his family settling in Los Angeles. He graduated from Polytechnic High School in 1946 and graduated college through USC's School of Architecture in 1951. He formed his own

**DRAFT**

architectural firm, C.W. Wong & Associates in 1956, specializing in residential, commercial, and institutional projects. He died in 2019 at the age of 90.

## APPENDIX B: GUIDELINES FOR EVALUATION AND REGISTRATION PROGRAMS

A property may be designated as historic by National, State, and local authorities. In order for a building to qualify for listing in the National Register of Historic Places or the California Register of Historical Resources, it must meet one or more identified criteria of significance. The property must also retain sufficient historic integrity to evoke the sense of place and time with which it is historically associated. This historic context statement will provide guidance for listing at the federal and state levels, according to the established criteria and integrity thresholds.

### GUIDELINES FOR EVALUATION

#### Historic Significance and Periods of Significance

The definition of *historic significance* used by the California Office of Historic Preservation (OHP) in its administration of the California Register is based upon the following definition used by the National Park Service for the National Register.<sup>210</sup>

Historic significance is [defined as] the importance of a property to the history, architecture, archaeology, engineering, or culture of a community, State, or the nation. It is achieved in several ways:

- Association with important events, activities or patterns
- Association with important persons
- Distinctive physical characteristics of design, construction, or form
- Potential to yield important information

A property may be significant individually or as part of a grouping of properties. In addition to the above criteria, significance is defined by the area of history in which the property made important contributions and by the period of time when these contributions were made.<sup>211</sup> The National Park Service defines this period of time as the *period of significance*.

The *period of significance* is the length of time when a property was associated with important events, activities or persons, or attained the characteristics which qualify it for...listing. The period of significance usually begins with the date when significant activities or events began giving the property its historic significance; this is often a date of construction.<sup>212</sup>

The period of significance usually begins with the date when significant activities or events began giving the property its historic significance; this is often a date of construction.<sup>213</sup> The period of significance can be as brief as a single year; many, however, span many years and consist of

<sup>210</sup> U. S. Department of the Interior, National Park Service, *National Register Bulletin 16A: How to Complete the National Register Nomination Form* (Washington, DC: 1997), <https://www.nps.gov/subjects/nationalregister/upload/NRB16A-Complete.pdf> (accessed April 2018.)

## DRAFT

beginning and closing dates.”<sup>214</sup> Identification and definition of the period is based on “specific events directly related to the significance of the property,” for example, the date of construction, years of ownership, or length of operation as a particular entity.<sup>215</sup>

### **Integrity**

*Historic integrity* is the ability of a property to convey its significance and is defined as the “authenticity of a property’s historic identity, evidenced by the survival of physical characteristics that existed during the property’s historic period.”<sup>216</sup> The National Park Service defines seven aspects of integrity: *location, design, setting, materials, workmanship, feeling, and association*. These qualities are defined as follows:

- *Location* is the place where the historic property was constructed or the place where the historic event took place.
- *Design* is the combination of elements that create the form, plan, space, structure, and style of a property.
- *Setting* is the physical environment of a historic property.
- *Materials* are the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property.
- *Workmanship* is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory.
- *Feeling* is a property's expression of the aesthetic or historic sense of a particular period of time.
- *Association* is the direct link between an important historic event or person and a historic property.<sup>217</sup>

While it is not necessary for a property to retain all seven aspects of integrity, or indeed, “all its historic physical features or characteristics,”<sup>218</sup> the National Park Service notes that the property must retain “the essential physical features that enable it to convey its historic identity. The essential physical features are those features that define both *why* a property is significant and *when* it was significant.”<sup>219</sup>

### **Character-Defining Features**

Every historic building is unique, with its own identity and its own distinctive character. *Character-defining features* are those visual aspects and physical features or elements, constructed during the property’s period of significance, that give the building its historic character and contribute to the integrity of the property. Character-defining features should be

<sup>219</sup> National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation.

## **DRAFT**

considered in the planning and design of a project to preserve them to the maximum extent possible. Character-defining features can identify the building as an example of a specific building type, usually related to the building's function; they can exemplify the use of specific materials or methods of construction, or embody a historical period or architectural style; and they can convey the sense of time and place in buildings associated with significant events or people.

In order to be considered *eligible* for designation as a historic resource, a property must possess both sufficient historic significance to meet at least one of the above criteria, *and* sufficient historic integrity to convey its significance through the physical features that reflect the property's character and identity.

Programs under which a property may be designated at the Federal or State level are described below.

### **REGISTRATION PROGRAMS**

#### **National Register of Historic Places**

The National Register of Historic Places is an authoritative guide to be used by Federal, State, and local governments, private groups, and citizens to identify the Nation's cultural resources and to indicate what properties should be considered for protection from destruction or impairment.<sup>220</sup> The National Park Service administers the National Register program. Listing in the National Register assists in preservation of historic properties in several ways, including: recognition that a property is of significance to the nation, the state, or the community; consideration in the planning for federal or federally assisted projects; eligibility for federal tax benefits; and qualification for Federal assistance for historic preservation, when funds are available.

To be eligible for listing and/or listed in the National Register a resource must possess significance in American history and culture, architecture, or archaeology. Listing in the National Register is primarily honorary and does not in and of itself provide protection of a historic resource. The primary effect of listing in the National Register on private owners of historic buildings is the availability of financial and tax incentives. In addition, for projects that receive Federal funding, a clearance process must be completed in accordance with Section 106 of the National Historic Preservation Act. State and local regulations may also apply to properties listed in the National Register.

The criteria for listing in the National Register follow established guidelines for determining the significance of properties. The quality of significance in American history, architecture, archeology, engineering, and culture is present in districts, sites, buildings, structures, and objects:

- A. That are associated with events that have made a significant contribution to the broad patterns of our history; or
- B. That are associated with the lives of persons significant in our past; or

---

<sup>220</sup> 36CFR60, Section 60.2.

## DRAFT

- C. That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
- D. That have yielded, or may be likely to yield, information important in prehistory or history.<sup>221</sup>

### **Historic Districts**

Standard preservation practice evaluates groups of buildings from similar time periods and historic contexts as *historic districts*. The National Park Service defines an historic district as “a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development.”<sup>222</sup>

A historic district derives its significance as a single unified entity. The National Park Service guidelines continue to say that “the identity of a district results from the interrelationship of its resources, which can convey a visual sense of the overall historic environment or be an arrangement of historically or functionally related properties.”<sup>223</sup>

### **Integrity**

In addition to meeting any or all of the designation criteria listed above, the National Park Service requires properties to possess historic integrity. Historic integrity is the ability of a property to convey its significance and is defined as “the authenticity of a property’s historic identity, evidenced by the survival of physical characteristics that existed during the property’s historic period.”<sup>224</sup>

The National Register recognizes seven aspects or qualities that comprise integrity, which are also referenced in the City’s local ordinance: location, design, setting, materials, workmanship, feeling, and association. These qualities are defined as follows:

- *Location* is the place where the historic property was constructed or the place where the historic event took place.
- *Design* is the combination of elements that create the form, plan, space, structure, and style of a property.
- *Setting* is the physical environment of a historic property.
- *Materials* are the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property.
- *Workmanship* is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory.

---

<sup>221</sup> 36CFR60, Section 60.3. Criterion D typically applies to archaeological resources.

<sup>224</sup> *National Register Bulletin 16A: How to Complete the National Register Nomination Form*.

## DRAFT

- *Feeling* is a property's expression of the aesthetic or historic sense of a particular period of time.
- *Association* is the direct link between an important historic event or person and a historic property.<sup>225</sup>

In assessing a property's integrity, the National Park Service recognizes that properties change over time. *National Register Bulletin 15* provides:

To retain historic integrity a property will always possess several, and usually most, of the aspects. It is not necessary for a property to retain all its historic physical features or characteristics. The property must retain, however, the essential physical features that enable it to convey its historic identity.

A property that has lost some historic materials or details can be eligible if it retains the majority of the features that illustrate its style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation. The property is not eligible, however, if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style.<sup>226</sup>

A property that has sufficient integrity for listing at the national, state, or local level will typically retain a majority of the identified character-defining features and will retain sufficient integrity to convey its significance. The required aspects of integrity are dependent on the reason for a property's significance. Increased age and rarity of the property type are also considerations when assessing integrity thresholds. For properties that are significant for their architectural merit (Criterion C), a higher priority is placed on integrity of design, materials, and workmanship. For properties that are significant for their association with important events or people, integrity of feeling and/or association may be more important.

For properties which are considered significant under National Register Criteria A and B, *National Register Bulletin 15* states:

A property that is significant for its historic association is eligible if it retains the essential physical features that made up its character or appearance during the period of its association with the important event, historical pattern, or person(s). A property important for illustrating a particular architectural style or construction technique must retain most of the physical features that constitute that style or technique.<sup>227</sup>

### **Criteria Considerations**

Certain kinds of properties are not usually considered for listing in the National Register. These include religious properties, moved properties, birthplaces or graves, cemeteries, reconstructed properties, commemorative properties, and properties achieving significance within the past 50

---

## DRAFT

years.<sup>228</sup> These properties can be eligible for listing, however, if they meet special requirements, called Criteria Considerations, in addition to being eligible under one or more of the four criteria and possessing integrity. The National Park Service has defined seven Criteria Considerations; those that are the most relevant to this study include:

### *Criteria Consideration A: Religious Properties*

A religious property is eligible if it derives its primary significance from architectural or artistic distinction or historical importance.

A religious property requires justification on architectural, artistic, or historic grounds to avoid any appearance of judgment by government about the validity of any religion or belief. Historic significance for a religious property cannot be established on the merits of a religious doctrine, but rather, for architectural or artistic values or for important historic or cultural forces that the property represents. A religious property's significance under Criterion A, B, C, or D must be judged in purely secular terms. A religious group may, in some cases, be considered a cultural group whose activities are significant in areas broader than religious history.<sup>229</sup>

### *Criteria Consideration B: Moved Properties*

A property removed from its original or historically significant location can be eligible if it is significant primarily for architectural value or it is the surviving property most importantly associated with a historic person or event.<sup>230</sup>

The National Register Criteria for Evaluation limits the consideration of moved properties because significance is embodied in locations and settings as well as in the properties themselves. Moving a property destroys the relationships between the property and its surroundings and destroys associations with historic events and persons. A move may also cause the loss of historic features such as landscaping, foundations, and chimneys, as well as loss of the potential for associated archeological deposits. Properties that were moved before their period of significance do not need to meet the special requirements of Criteria Consideration B.<sup>231</sup>

### *Criteria Consideration G: Properties that have Achieved Significance within the Past 50 Years*

A property achieving significance within the past fifty years is eligible if it is of *exceptional importance*. The National Register Criteria for Evaluation excludes properties that achieved significance within the past 50 years unless they are of exceptional importance. 50 years is a general estimate of the time needed to develop historical perspective and to evaluate significance. This consideration guards against the listing of properties of passing contemporary interest and ensures that the National Register is a list of truly historic places. The phrase "exceptional importance" does not require that the property be of national significance. It is a measure of a property's importance within the appropriate historic context, whether the scale of that context

is local, State, or national.

### **California Register of Historical Resources**

The California Register of Historical Resources is an authoritative guide in California used by State and local agencies, private groups, and citizens to identify the State's historical resources. The California Register was established in 1998, with eligibility criteria based upon National Register criteria. The criteria for listing in the California Register are:

1. Associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States.
2. Associated with the lives of persons important to local, California or national history.
3. Embodies the distinctive characteristics of a type, period, region or method of construction or represents the work of a master or possesses high artistic values.
4. Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California or the nation.<sup>232</sup>

The California Register consists of resources that are listed automatically and those that must be nominated through an application and public hearing process. The California Register includes the following:

- California properties formally determined eligible for (Category 2 in the State Inventory of Historical Resources), or listed in (Category 1 in the State Inventory), the National Register of Historic Places.
- State Historical Landmarks No. 770 and all consecutively numbered state historical landmarks following No. 770. For state historical landmarks preceding No. 770, the Office of Historic Preservation (OHP) shall review their eligibility for the California Register in accordance with procedures to be adopted by the State Historical Resources Commission.
- Points of historical interest which have been reviewed by the OHP and recommended for listing by the commission for inclusion in the California Register in accordance with criteria adopted by the commission.

Other resources which may be nominated for listing in the California Register include:

- Individual historical resources.
- Historical resources contributing to the significance of an historic district.
- Historical resources identified as significant in historical resources surveys, if the survey meets the criteria listed in subdivision (g) of Section 5023.1 of the Public Resources Code.
- Historical resources and historic districts designated or listed as city or county landmarks or historic properties or districts pursuant to any city or county ordinance, if the criteria for designation or listing under the ordinance have been determined by the office to be consistent with California Register criteria.

---

<sup>232</sup> Criterion 4 typically applies to archaeological resources, which is outside the scope of this project.

- Local landmarks or historic properties designated under any municipal or county ordinance.<sup>233</sup>

### **California Points of Historical Interest**

The California Point of Historical Interest Program was established in 1965 to accommodate an increased interest in recognizing local historic properties not able to meet the restrictive criteria of the State Historical Landmarks program. The criteria for the Points are the same as those that govern the Landmark program but are directed to local (city or county) areas. California Points of Historical Interest do not have direct regulatory protection but are eligible for official landmark plaques and highway directional signs.

### **Los Angeles County Landmarks**

The Los Angeles County Historic Resources Ordinance allows for the designation of structures, sites, objects, trees, landscapes, or natural features as individual local landmarks and for the designation of historic districts. Chapter 22.124 of the County Code of Ordinances applies to all historic resources that are at least 50 years old, or of exceptional quality if less than 50 years old. It allows for the designation of historic landmarks and historic districts by the Board of Supervisors upon the recommendation of the Landmarks Commission.

#### *Criteria for Designation*

A. A structure, site, object, tree, landscape, or natural land feature may be designated as a landmark if it is 50 years of age or older and satisfies one or more of the following criteria:

1. It is associated with events that have made a significant contribution to the broad patterns of the history of the nation, State, County, or community in which it is located;
2. It is associated with the lives of persons who are significant in the history of the nation, State, County, or community in which it is located;
3. It embodies the distinctive characteristics of a type, architectural style, period, or method of construction, or represents the work of an architect, designer, engineer, or builder whose work is of significance to the nation, State, County, or community in which it is located; or possesses artistic values of significance to the nation, State, County, or community in which it is located;
4. It has yielded, or may be likely to yield, significant and important information regarding the prehistory or history of the nation, State, County, or community in which it is located;
5. It is listed, or has been formally determined eligible by the United States National Park Service for listing, in the National Register of Historic Places, or is listed, or has been

**DRAFT**

formally determined eligible by the State Historical Resources Commission for listing, on the California Register of Historical Resources;

6. If it is a tree, it is one of the largest or oldest trees of the species located in the County; or
7. If it is a tree, landscape, or other natural land feature, it has historical significance due to an association with a historic event, person, site, street, or structure, or because it is a defining or significant outstanding feature of a neighborhood.

B. Property less than 50 years of age may be designated as a landmark if it meets one or more of the criteria set forth in Subsection A, above, and exhibits exceptional importance.

C. The interior space of a property, or other space held open to the general public, including but not limited to a lobby, may be designated as a landmark or included in the landmark designation of a property if the space qualifies for designation as a landmark under Subsection A or B, above.

D. Historic Districts. A geographic area, including a noncontiguous grouping of related properties, may be designated as a historic district if all of the following requirements are met:

1. More than 50 percent of owners in the proposed district consent to the designation;
2. The proposed district satisfies one or more of the criteria set forth in Subsections A.1 through A.5, above; and
3. The proposed district exhibits either a concentration of historic, scenic, or sites containing common character-defining features, which contribute to each other and are unified aesthetically by plan, physical development, or architectural quality; or significant geographical patterns, associated with different eras of settlement and growth, particular transportation modes, or distinctive examples of parks or community planning.
