INVASIVE GOLD SPOTTED OAK BORER BEETLES (GSOB) ARE KILLING OAK TREES

Inspect your Oak Trees

What to Do:

Inspect your Coast Live Oaks for ***D-shaped exit holes***—a sign of Gold spotted Oak Borer (GSOB) infestation. GSOB also attack Canyon Live Oak and Black Oak, so inspect your trees well. If you notice symptoms, report them to the County of Los Angeles Fire Department Forestry Invasive Pest Management Unit (IPMU).

Never move firewood, as GSOB can travel in infested wood. Early detection is key to protecting our oaks.

GSOB D-shaped exit hole
